Although the three branches of the Caucasian family are very distinct they have a number of features in common. One is the richness of their consonant structures. Georgian, for example, has 29 consonant phonemes, including aspirated and glottalized voiceless stops and affricates, t, t, k, p, q, t, c, h, g, f, b, q; a similar contrast is found in Armenian, Ossetic and Northern Kurdish. Some North Caucasian languages have well over 50 consonant phonemes, including labialized and nonlabialized pairs. In contrast to this, vowel phonemes are few; Georgian has five vowels and both Abkhaz and Circassian have systems reducible to two vowel phonemes. A syntactic feature widespread among Caucasian languages is the "passive construction" of transitive verbs, wherein the agent of such a verb is expressed in an oblique case and the patient is the subject of the verb. This type of construction does occur, but only with the past tenses of transitive verbs, in many Iranian languages, including Northern Kurdish, and it is so restricted in Kartvelian, but in other Caucasian languages it applies to all tenses of the verb; thus "I am doing the work" is expressed as "by-me the work is-being-done". The distinction between transitive and intransitive verbs is absolute; a transitive verb must involve an object, so that, in Georgian for example, the sixth commandment can only be expressed "thou shalt not kill men". In the North-Western, and to a lesser extent the Southern, languages there is a multiple attachment of pronominal particles to the verb, each taking an appropriate position; for example, "the bread which the mother gives her daughter" is expressed in Abkhaz as "mother her-daughter which-to-her-by-her-give bread", the pronominal particles representing subject, indirect object, and agent in turn. In modern Georgian many of these pronominal forms are elided, leaving the unambiguous minimum; e.g. g-b¢a "(I)-you-kill", m-b¢a "(you)-me-kill", k¢a "(You-him)-kill", k¢a "(he-him)-kills". The North-Eastern branch alone has a system of noun classes, whereby signs indicating the class of thing involved (e.g. male, female, inanimate, material) run through the sentence; cf. Avar be-ca-w 6 ro-¢0-w u-ugo: be-ca-y iu ru fo-¢0-y y-ugo: be-ca-b ru ro-¢0-b b-ugo "the blind man/woman/horse in-the-house is". In combinations with the passive construction this system produces such intricate concord as (Cechen) "I work it-being-done I-am" for "I work", "by-me work it-is-done" for "I am working", and "by-me it-being-done it-is work" for "I am (actually) working". Although these and other features more or less common to the Caucasian languages can be matched both in languages of the ancient Near East and, among other modern languages, in the Basque of the Pyrenees and the Burushaski of Hunza [g.], no valid connexion between these and the Caucasian family has yet been shown.

KABOU, a locality in Togo (9°25'N., 0°50'E.), 24 km. to the north of Bassari, an important market whose prosperity, in pre-colonial times, was based
partly on the barter of crude iron given to the Kabre iron-smiths of Lama-Kara in exchange for slaves, and partly on its function as a halting place on the kola-caravan routes. The presence in Kabou of Muslim outsiders (particularly Häwsa and Djërma) was therefore not unusual.

It was a certain Oukpane, a native of Kalanga (about ten km. to the west of Bassari), who founded the village of Kabou, probably during the first third of the 19th century. Shortly afterwards Biramia, a Tykossi of Sansanè Mango, arrived, becoming the first Muslim actually to settle there; to some extent, no doubt, he was the representative of the authority of the Tykossi sovereigns, which extended over Bapure (20 km. to the west of Kabou), of which Kabou was probably a dependency at that time. After Oukpane, the supreme chief was Outoune, who reigned for thirty-five years. At that period, Kabou had its third imâm, Baba Toma (in succession to Biramia and Saliya). In Outoune's reign, the surviving members of the communities of Kalanga settled round Kabou.

Karaka, a younger brother of Outoune, received the French explorers Baud and Vermeersch in April 1895, and Baud for the second time in January 1896, before the Treaty of Paris (23 July 1897), which left Kabou in the Schutzgebiet of Togo. At the time the Europeans arrived a Muslim quarter already existed, containing several dozen Djërma mercenaries.

The leaders of this pagan country, for many years a vassal of the Tykossi warlords of Sansanè Mango, had appealed for help to the Muslim warriors of the Dogon chief of Yendi. The prestige of Islam was so great that Mama Bonfoh, the first of the Bassari chiefs to be converted to Islam, was nominated as chief by the German administration at the beginning of the century. The pro-Muslim policy of the German administration brought about the conversion of large numbers of the inhabitants, following the chief's lead.

Although the town (whose various districts comprise 4000 to 5000 inhabitants) is predominantly Muslim, the surrounding country is inhabited by Kabre and also from the over-populated regions of Lama Kara. Very few of these "immigrant settlers" appear to have been converted to Islam. (R. Cornevin)

KABR (A.), tomb was first applied to the pit used as a burial place for a corpse, as was the term darâk, giving rise to its habitual use in the text of numerous epitaphs containing the expression kâhâ kabru... "this is the grave of...". Originally distinguished from the term sandâk, "cenotaph" (cf., J. Sauvaget, "Les perles choisies" d'Ibn ach-Chîkhâa, Beirut 1933, 212 and "Les trésors d'or" de Sibt al-'Ajamî, Beirut 1950, 184), it had the more general meaning of the tumulus or construction covering the grave to bring it to notice, a custom current in Islamic countries from early times. Contrary to the formal injunction in hadîth to practise taswîrât al-kabûr, that is making the tomb level with the surrounding earth (cf. G. Wiet, CIA Egypte, ii, 64 f.), which was the outcome of juridical discussions and was linked with doctrinal controversies concerning "saint-worship" and the various rites of veneration of tombs (including that of the "pious pilgrimage" or siyâra [q.v.]), funerary monuments of all kinds, ranging from a simple heap of pebbles or mound of earth, with perhaps also a raised stone, to a mausoleum occasionally reaching monumental scale and forming part of a veritable architectural complex, in fact always constituted a significant portion of Islamic art.

Without going into the legal prescriptions and customary practices associated with the notion of "burial place" and therefore "tomb" in the Muslim world, we find that the word kabr designates a definite archaeological reality, though one which is sometimes difficult to define. In part this is due to lack of documentation, as regards both eras and regions, of the available monuments. To a greater extent it stems from a reluctance to group under the same heading the greatly differing remains covered by a variety of terms not only to differences in language and dialectal usage but more especially to distinctions in appearance and architectural style (e.g., radjam, hâkîr [q.v.], hawâq, tábîl, hawaâl, mkâbrîyya, hûbba [q.v.], kâsr [q.v.], gunbâddî, gîr, turbâ or turbaq [q.v.]), or even qualitative differences applying to the dead man and therefore to the value of the sanctuary (e.g., raâdîs, masjîd, imâm-säde [q.v.], shâk-säde, wâli, marbûs, masûr, makhâm and even makhân). Nevertheless, it is permissible to make a preliminary distinction in the midst of such confusion, following the usage proposed by Max van Berchem and justified by Arabic texts (cf. M. van Berchem, CIA Egypte, i, 286, note, and 293; CIA Jérusalem, i, 6, 124), between the tomb itself, treated here under the word kabr, and the "mausoleum" (hûbba or turbâ), that is "the construction consecrated to the tomb, either free-standing or to another time which is sometimes confused with those indeterminate structures that can be grouped under the heading of "commemorative monuments".

This article therefore excludes the many funerary edifices which constitute one of the most representative categories of ancient Islamic art and include notably the open-air funerary enclosure, the domed cubic monument and the funerary tower—the most widespread interpretations of the functional theme of the mausoleum. Yet the tomb situated directly over a real or assumed burial place is far from conforming to a simple, uniform type varying according to the time and region discussed. The existence of an original primitive element that can easily be recognized in many cases—hummock of earth, tombstone or stone-work bench, rectangle defined by pebbles or low walls, raised block or mound at the head or feet of the corpse—does not alter the fact that in detail of forms and even in decoration and inscription, Muslim tombs reveal a great variety to be seen in the archaeological remains from various epochs; it is to be regretted only that there does not yet exist an exhaustive catalogue of these monuments.

Such a lack is made even more apparent by the fact that cemeteries preserved intact for centuries on the outskirts of town and containing truly venerable tombs in the midst of more recent ones—in cities as diverse as Salé, Kayrawân, Cairo, Damascus and Istanbul, for example—have often had to give way to urban development and the extension of dwelling-areas. At the same time some popular and traditional customs or regular visits to particular sites are disappearing (for such religious attitudes before "our secularization of urban cemeteries" see L. Massignon, La cité des morts au Caire, Darâfa—Darb al-'Akhmar, in BIFAO, lvii/viii, 25-79). However, many groups of tombs situated in places that are protected or difficult of access still provide a rich documentation which should be submitted to detailed study. In the light of a broadened perspective and on more solid chronological and statistical bases, we must look again at the sole systematic study of this kind, the fifty-year-old study of old, decorated stèles in the cemeteries of Salé and Rabat which lends itself to comparisons with examples as far
In the absence of any new studies, research on the tombs erected throughout the Islamic world is dependent on a paucity of information and on data gathered in the course of some other research, mainly epigraphic. The first necessity is to sift the basic compilations of Arabic inscriptions made by town or by region (such as the series of *Materias pour un Corpus Inscriptionum Arabicarum* impressively begun by Max van Berchem, or the several volumes, ordered according to slightly varying norms, which have appeared under the title *Corpus des Inscriptions arables de Tunisie*) and the vast inventories of the epigraphic productions of a given region such as Sicily or Spain (see the section *Epigraphes sepulcrales* by M. Amari, *Le epigraphes arabiche di Sicilia*, in the new edition, corrected and published by F. Gabrieli, Palermo 1971; and see especially E. Lévi-Provençal, *Inscriptions arables d'Espagne*, Leiden-Paris 1951, in which pages xxiii-xxv the introduction are devoted to the form or embellishment of epitaph stones).

Interesting descriptive notes may also accompany the presentations of series of steles, or of isolated examples, preserved in museums (the documentation of the Arab steles of Egypt contained in *Catalogue du Musee arabe du Caire, Les stèles funéraires*, i and iii by H. Hawary and H. Rached, Cairo 1932 and 1938, ii, iv-x by G. Wiet, Cairo 1936-42 is of particular interest, as are also G. Wiet's comments on Iranian steles of the 6th/12th century in *L'exposition persane de 1932*, Cairo 1933). They are also found, with more accuracy, in the papers of a given region such as Sicily or Spain (such as the series of *Arab steles recently published by B. Karamagarali, *Akhlaq mesartaşları*, Ankara 1972). Finally a few rare studies attempt to trace the stylistic evolution of tomb decorations or inscriptions (see, e.g., J. Styrgowski, *Ornamenti allabisscher Grabsteine in Cairo*, in *Isl.,* ii (1921), 305-36, or J. Sordel-Thomine, *Epitaphes coutiques de Bâb Saâhih apud Le monument auxibles de Damas*, bk. iv, Paris 1950, or the series of articles relating to the tombs bearing figurative representations in Anatolia, the latest of which is B. Karamagarali, *Sivas ve Tokat'taki figürlü mezar taşlarının mahiyeti hakkında*, in *Selçuklu Arastirmalar Dergisi*, ii (1971), 75-109).

However, such notations as we have are so ill-assorted that in the present state of our knowledge it is impossible to draw up even an approximate chart showing the development of a funerary art and epigraphy which gave birth to true works of sculpture in stone and contributed to a large extent to the rise of the most elaborate kinds of ornamental Arab scripts. At this moment no more can be said than that in Islamic civilization—setting aside temporary periods of austerity—as in many others tombs present a true reflection of the wealth and degree of refinement of a society in any one era; they also register the cultural and religious climate in which the epigrams were composed, with their information about the personality, circle and opinions of the deceased.

Inscriptions of a greater or lesser length are a constant characteristic of the majority of tombs, apart from those rustic ones which stand in humble anonymity. While here we will deal only with those in Arabic, it must not be forgotten that a number of important epitaphs were composed in later times in other languages. Such inscriptions appear on steles, cippi or cenotaphs and are inscribed on surfaces of a variety of shapes (most frequently rectangular panels or bandeaux), but in both style and disposition they always occupy the foreground of the tomb's layout. The prime purpose of such inscriptions being to record the name of the person buried there and to bear witness to his faith (through a variable use of *kurban* quotations) by calling blessings down on him, they are above all epitaphs. They are classified in Arabic under the vague term *kiāb* and follow a classical schema apparent from the end of the 2nd/8th century (more exactly from 1274/990, the date of the oldest stele in the Cairo museum).

From this date the inscriptions generally include, after the obligatory *basmâla*, either commonplace introductory phrases, such as the *tausīya* or less frequently the *hamdāla*, or a series of stereotyped fashions and accompanied by a varying amount of detail on his genealogy or titles. Usually this is followed by eulogies in his honour, ranging from one to many and sometimes including "transferred eulogies": the verb which was employed earliest to introduce the name of the deceased was *shâhida*, "has testified", found on the first Arab epitaphs in Egypt. The parallel usage of *tuwâfiya*, "X is deceased", which was first used especially to introduce the date of death, was later sometimes used alone in brief funerary texts (e.g., in the 6th/12th and 7th/13th century in northern Syria). Likewise the verb *isâb* noted above, which appears on a third of the earliest Islamic steles in Egypt, became the sole formula used without exception in later epitaphs from Ifrîqiya, al-Andalus, Syria, Anatolia and even eastern Iran.

Another important element, at least in the early period, was the confession of faith, with or without the *risâlia*, sometimes supported by quotations from the Kur'ān such as verse IX, 33. Later, the absence of the *shahâda* can be noted in some regions (rural epitaphs cut in Syria in the 6th/12th and 7th/13th centuries or contemporary ones from Anatolia) and in some types (epitaphs of children, for example, as attested by examples from Ḫayrāwān). Likewise verse IX, 33 was used less frequently in Egypt from the Fatimid era; although still popular in the same period in Ḫirīkiya and al-Andalus, it no longer appeared in Syria or the eastern provinces, nor in Anatolia from the 6th/12th century. This evolution parallels that observed in the case of other verses from the Kur'ān which were put to different use according to place and period. In Egypt, for example, verse XXII, 7, stressing the necessary advent of the final hour, was in vogue until the 4th/10th century and was also found in Ḫirīkiya. In al-Andalus, XXXV, 5, on the vanity of earthly life, was widely used, as was the phrase "every soul testifies", taken from Kur'ān III, 182 or XXIX, 7, in the whole of the mediaeval east from the 6th/12th century. Depending on period or region, basic religious texts
enjoyed greater or lesser favour, although verses II, 256, III, 16-18, and Sūrā CXII were always popular.

Also to be taken into account is the presence or absence of religious maxims whose precise meaning is known to us through studies like those done on the saying, "reliving the mourning for the Prophet" (cf. L. Massignon, La Rave de Ma’dîne, cadre de la méditation mausoléenne sur la destinée du Prophète, among others in BIFAO, cv (1960), 267-79), and also those moral maxims, complementary invocations and poetic texts which constitute, along with information on the date of death, the "accidental" portions of the funerary inscription. As a general rule, the wealth of doctrinal allusion and religious sentiment revealed by the epiphaṭs of the first four centuries of the Hīdgra are contrasted with the later poverty of traditional formulas, compensated for by new tendencies such as the development of the titular description of the deceased according to new customs of society, the abundance of quotations from the Kurâ as a feature of ornamental design (as in some Iranian steles in mihrāb form from the beginning of the 6th/12th century), the progressive introduction of "literary" customs leading to an increasingly bomastic style and multiplying the occasional verses or snatches of rhythmical or assonant prose (see examples of epitaphs of Maltese or Sicilian origin).

The epigraphic decoration of the most sumptuous tombs—not always those most venerated, for popular devotion was often given to graves marked by a simple heap of stones—cannot be separated from their form, material used, nor from the other decorative elements of which it was an intrinsic and harmonious part. It is not fortuitous, for example, that a particular type of ornate inscription, associated in Syria from the 6th/12th century with artistic influences from Upper Mesopotamia, was developed on a class of tombs which were also highly specialized in origin and in the circumstances of their appearance (see J. Sauvaget, La tombe de l'Orthôide Balâk, in Ars Islamica, v (1938), 207-15; cf. J. Sauvaget, La naderâ du Jakhkārīya, spâl Les monuments aybîdes de Damas, 41-50); a number of comparable cases could be cited, especially with reference to the arched steles whose stylistic evolution was parallel to the flat mihrāb and contemporary door frames.

However, the various currents which joined forces to give rise to the curious parallelism of methods of constructing funerary monuments from one end of the Islamic world to the other cannot yet be determined with any precision and we must confine ourselves to the following observations. Firstly, it would appear that the tabular steles used "to create that which is known in Arabic as ākād, the witness" constitute the oldest type of Muslim funerary stones (cf. E. Lévi-Provençal, Inscriptîons arabes d'Espagne, xxiii), a type which is attested in Egypt from the 2nd/8th century and endured until the Ottoman era, many specimens of the latter being known. These variously carved slabs, sometimes bearing the name of jburdr or lahm, were most frequently set at one or sometimes at either end of the tombs, being classified as archaic since they are in the shape of "boxes without lids" found in backward regions and isolated rural districts.

These steles vary greatly in appearance. They may consist of double rectangular steles, rounded or disc-shaped, of moderate size and quite simple decoration, sometimes without inscriptions, as in Spain and northern Syria. They may also be single, monumental steles, frequently remarkably ornamented, sometimes with abundant and finished inscriptions; these latter may still be seen in situ at Sa'd or Aqbat, for example, and are exemplified in museums by the so-called Almerian steles of the early 6th/12th century and by a no less interesting series of Iranian slabs of the same period. At times they consist of a rectangular framework surrounding inscriptions which are incised or sculpted in relief on a hallowed ground; this is the most dominant pattern in the first centuries of the Hīdgra from Egypt to Spain. At others the central motif is the inscribed arch, single or double, around which are arranged beautifully patterned ornamental compositions; this type appears in both east and west. Yet sometimes the tabular steles give way to shafts of columns embalished with inscriptions (ṣāmiydr ẖabra and sâyyiyyat ḫabra), which predominated in cemeteries in Toledo and Kayrawân in the 4th/10th and 5th/11th centuries and still indicate Ottoman graves, where the cylindrical stele is usually crowned by a "urban" carved in marble.

On the other hand, from the 5th/11th century scaled-down sarcophagi were also popular. These consisted of strips of stone laid in tiers or of "long, low steles of white marble forming a prism standing on a pedestal", which are often given the Maghrībi names mihrābīyya, dānumūkriyya or ẓanam, and are generally recognized as schematic imitations of the primitive pile of earth. These stones or low constructions may also be accompanied by raised slabs, a hybrid style which appears in a number of regions. Examples are the old Syrian tomb of al-Ma'ārī (cf. J. Sourdel-Thomine, Inscriptions du mausolée d'Abū l-Ālāʾ à Ma'arrat al-Nu'mān, in Arabica, il (1955), 289-94) and especially the various combinations seen in the tombs of Aqbat. But in this case too there is a great diversity of shapes enabling the tombs to be allotted to different categories, limited by neither place nor period, from the earliest archaeological evidence furnished by the tomb of Subuktâk in Ghazna, most probably c. 367/977 (cf. S. Flury, Le décor épigraphique des monuments de Ghazna, in Syria, 1925, 61-90). Ayyūbid examples from Syria can be interpreted as imitations in stone of the sculptured wood cenotaphs well known elsewhere (Mesopotamian, Syrian and Egyptian examples cited by J. Sauvaget, Le cénotaphe de Saladin, in Revue des Asiatiques, vi (1929-30), 168-75, or by G. Wiet, Les inscriptions du mausolée de Shāfi'ī, in Bull. Inst. Eg., xv (1933), 167-85). Other prismatic steles are closer to the type of stepped platform identified by D. S. Rice in a papyrus preserved in Vienna and attributed to the 3rd/9th century by A. Grohmann, of which he found later representatives modelled in brick and stone-work in the miniatures accompanying many copies of al-Harîrî's Mâkâmat (cf. D. S. Rice, The oldest illustrated Arabic manuscript, in BSOAS, xxii (1959), 207-20 and fig. on p. 219). A whole new chapter could be written on the funerary stones bearing representations of animals in relief which forms part of an even more original chain of tradition. The popularity of this style in Turkey has been the subject of many studies (see the most recent, noted above).

(J. Sourdel-Thomine)

In works of fiṣḥ (usually in the chapter dealing with obsequies) two problems connected with tombs are discussed. May they be decorated to a certain extent? Is it permitted to visit them? On the first point it is surprising to observe the complete unanimity of the fukāhā (no matter what school they belong to) in disapproving of all ornamentation on tombs, however...
simple it may be. To mark the site of the tomb the more lenient among them permit at the most the construction of a lowly erection of unfired brick (labbin); the use of fired brick (diggur) is firmly advised as it would be the first step towards ornamentation. This modest construction must not be rough cast (though this is permitted by the Hanafis only) and must bear no inscription relating to the deceased (paradoxically enough, Ibn Hazm allowed his name to be inscribed) nor even passages from the Korân.

It is blameworthy to build a dome or any monument whatsoever above a tomb. It is obvious that this teaching, which the jukharâb based on traditions that they traced back to the Prophet, was never respected, except in impoverished villages. In the presence of the considerable number of richly decorated tombs found in all Muslim countries, it must be admitted that there are few areas where the divorce between theory and practice was so marked. No doubt this was the result of the nature of the condemnation formulated by the legal scholars: the decoration of tombs is blameworthy, reprehensible (makrâh), but not haram, that is, categorically forbidden; this has given rise to the almost general belief that their decoration does not actually infringe religious law. The permissibility of visiting tombs (ziyarat al-kubur) was admitted very early on by the schools, including the Hanbals and Zahirîs, even went so far as to recommend the practice, while foreseeing the faithful to shun the behaviour characteristic of Christian pilgrimages (carrying candles, chanting, distributing alms).

(Y. LIMANT DE BELLEFONDS)

**KABRA,** in Spanish Cabra, a town in a mountainous region of Andalusia to the south-east of Cordoba, situated at an altitude of 448 m. on the slopes of the Sierra de Cabra; at present it is the centre of a partido judicial of the province of Cordoba and has a population of 20,000.

The Muslim town of Kabra, which succeeded the Roman Igburum — one of the principal cities of Baetica according to Pliny — ranked as one of the fortresses of Andalus. Colonised by the gândar of Wâsît in Irâk in the time of the governor Abu l-Khaṭṭâb al-Kalbi (125/743-127/745) under the Umayyads it was the centre of a relatively small district (kfore) which took in Ecija. A single kâdi had jurisdiction over both these towns. The bishopric of Kabra, which date from the 4th century A.D., continued to exist under the Umayyad caliphate. Some rare, and unfortunately too brief, descriptions by Arab geographers speak of the equable climate, the abundance of running water, the profusion of olive groves and the luxuriant vegetation of Muslim Kabra; they bear witness to the existence of a great mosque with three aisles and a busy street-market. Not far from the town some lead mines were worked.

Mu'âkaddâm b. Muâlut (d. 299/310/912 [q.v.]), the originator of the muwaštâhâh, was a native of Kabra. He was involved in the frontier disputes between the Castilians and the Andalusian Muslims. Habîb b. Mâksân, the Zidîr dynasty of Granada, captured it in 419-20/1029-30. Conquered by Ferdinand III (the Saint) in 641/1244, the town belonged successively to the Council of Cordoba and to the Order of Calatrava. In 1333 the Nasrid Muhammad IV seized Kabra, destroyed the ramparts and part of the castle, and sent the inhabitants to captivity in Granada. Re-populated shortly afterwards by the Master of the Order of Calatrava, Kabra subsequently reverted to the Crown of Castile. In 849/1445 Henry IV gave the town to Diego Fernandez of Cordoba in reward for his services and granted him the title of Count of Cabra.

Various remains dating from the time of the Muslim occupation, in particular a ruined castle, can still be seen in Kabra.

(R. ERIÉ)

**KABR** [see BARD (IIa), YÜKÜK, ZAKât, and SİLÂ].

**AL-KABTAWRî,** Abu l-Kâsim Kalâbî b. 'Abî al-'Azîz al-Ghâfîkî, poet and letter-writer, from the island in the Guadalquivir called Kabtawa or Kabtûra (formerly Caput Tauri, Ibn Khaldûn—Tunis in 696/1297. Subsequently he settled in Medina, d. 788/1388. His students included Ibn Sayyid al-Nasî, Ibn Djabir al-Wadiyâshî, ibn Khallî b. 'Isâfîk, ibn Taymîyya, Mukhtasar, Cairo 1326, iv, 302-6; today Isla Mayor, of the Sierra de Cabra; at present it is the centre of a partido judicial of the province of Cordoba and has a population of 20,000. The Muslim town of Kabra, which succeeded the Roman Igburum — one of the principal cities of Baetica according to Pliny — ranked as one of the fortresses of Andalus. Colonised by the gândar of Wâsît in Irâk in the time of the governor Abu l-Khaṭṭâb al-Kalbi (125/743-127/745) under the Umayyads it was the centre of a relatively small district (kfore) which took in Ecija. A single kâdi had jurisdiction over both these towns. The bishopric of Kabra, which date from the 4th century A.D., continued to exist under the Umayyad caliphate. Some rare, and unfortunately too brief, descriptions by Arab geographers speak of the equable climate, the abundance of running water, the profusion of olive groves and the luxuriant vegetation of Muslim Kabra; they bear witness to the existence of a great mosque with three aisles and a busy street-market. Not far from the town some lead mines were worked. Mu'âkaddâm b. Muâlut (d. 299/310/912 [q.v.]), the originator of the muwaštâhâh, was a native of Kabra. He was involved in the frontier disputes between the Castilians and the Andalusian Muslims. Habîb b. Mâksân, the Zidîr dynasty of Granada, captured it in 419-20/1029-30. Conquered by Ferdinand III (the Saint) in 641/1244, the town belonged successively to the Council of Cordoba and to the Order of Calatrava. In 733/1333 the Nasrid Muhammad IV seized Kabra, destroyed the ramparts and part of the castle, and sent the inhabitants to captivity in Granada. Re-populated shortly afterwards by the Master of the Order of Calatrava, Kabra subsequently reverted to the Crown of Castile. In 849/1445 Henry IV gave the town to Diego Fernandez of Cordoba in reward for his services and granted him the title of Count of Cabra.

Various remains dating from the time of the Muslim occupation, in particular a ruined castle, can still be seen in Kabra.
Marluid). From a literary point of view these letters, models of the type prevailing at the period, are characterized by affectation, sadifa, and a wealth of metaphors, antitheses and borrowings from the Kūrān and hidūk. At times the striving for literary effects transforms some sentences into punning riddles. There is one striking oddity in this correspondence: a letter addressed to the Prophet, which is a sort of panegyric expressing an ardent desire to visit him at Medina. This letter is probably the oldest of its kind still in existence, for it antedates the two known letters of Ibn al-Khaṭīb (Ṣubh al-ʿaḍīkā, vi, 459).

KĀBUL [see BAV].

KĀBUL. A river of Afghanistan and the North-West Frontier region of Pākistān, 700 km. long and rising near the Unai Pass in lat. 34° 21′ N. and long. 68° 20′ E. It receives the affluents of the Panjgūr, Aīngar, Kunār and Swat Rivers from the north, and the Lōgar from the south, and flows eastwards to the Indian plain, joining the Indus at Ataq (Attock). The Ḫudūd al-ʿSām (end of 4th/10th century) calls it the River of Lōgar, the name of the region of Lōgar and Dunpūr, passing by Nangrāhrā (sc. the Djalābād district) and running down to Multān and the ocean. Bīrūnī calls it “the River of Ghorwand”, because one of the arms of the Panjgūr River rises near the Ghorwand Pass. From these and other statements in the geographers, it is clear that the Kābul River was at this time considered as the main course of the Indus. It is probable that the Kābul River (in Sanskrit Kukhā, one of the seven rivers of the Rigvīd) gave its name to the town and eventually the town of Kābul, see below.

Bibliography: J. Humlum et al., La géographie de l’Afghanistān, étude d’un pays aride, Copenhagen 1959, 46; Pauly-Wissowa, Real Encyclopädie, Reihe 1, xi, 1961-2, s.s. Kophen, Kophes.

2. The name of a town, in eastern Afghanistan, the city of Kābul being now the capital of that kingdom. The city lies in lat. 34° 30′ N. and long. 69° 13′ E. At an altitude of 1,750-1,800 m. on the Kābul River in a fertile and well-watered plain surrounded by chains of mountains and hills. Its excellent position as a communications centre, where the route up the Kābul River valley meets the various routes across the Hindū Kush and the route from Ghaznā and the south, made it a place of importance at an early date.

In pre-Christian times, the Kābul region formed part of the Hellenized Bactrian states-system, but early in the Christian era it was overrun by invaders from the steppes to the north such as the Kushtans and Kidarites and then the Hephthalites [see ḤAYRATA]. Buddhism flourished there and in the whole of the Gandharan region, as the numerous stupas surviving in the Kābul valley attest, and as the travel narrative of the Chinese Buddhist pilgrim, Hiuen-Tsang, who knew Kābul as Kao-fu, likewise shows. Yet the diffusion of cultural influences from the Hindū Gandharan kingdom, based on Udabhan-dapar or Waynīd, favoured the Indianisation of the Hephthalite rulers of Kābul and the replacement of Buddhism by Indian culture. At this period, Kābul remained the name of the whole district of the upper Kābul River valley rather than a specific town [see KĀBULISTĀN]. Hence a Muslim geographer like Yaʿqūbī, Buldān, 290-1, tr. Wiet, 106-7, gives as the chief town of the region the cryptic term Kābul-Shāh, possibly to be identified with the citadel of Kābul itself (Wiet reads these names as applying to a single place, Djarwln, following Marquart’s Djarwln in ErBdahsahr, 277-89).

The name Kābul was known to the Arabs even in pre-Islamic times. The Ẓanjān and Muḥṣarām poets (sc. those of the intermezzo between the pre-Islamic and Islamic periods) use the phrase Turk wa-Kābul as a synonym for remoteness, an Ultima Thule; see T. Kowalski, Die ältesten Erwähnungen der Türken in der arabischen Literatur, in KCSA, ii (1926-32), 38-41. However, first-hand knowledge of eastern Afghanistan came only with the expansion of the Arābs from their basins in Sīstān and at Bost eastwards into Zāmdāwar and Zābulistān [qq.v.], the territories of the Zunbils, epitome of the southern branch of the Hephthalites. These local rulers strongly resisted the Arabs for over two centuries, barring the way to the Kābul valley, and the fact that these Zunbils seem to have been related to the Kābul-Shāhs made for solidarity against the Muslim raiders.

During Muʿawīya’s caliphate, the governors of Sīstān, ‘Abd al-Raḥmān b. Samūra and al-Raḥbā b. ‘Aṣwān, raided as far as Kābul b. Niyād, described as flowing from the mountains bordering on Langhān and Dūnūr, passing by Nangrāhrā (sc. the Djalābād district) and running down to Multān and the ocean.

The main product yielded by the raids through these inhospitable regions was, of course, slaves. ‘Abd al-Raḥmān brought back slaves captured at Kābul to his house at Baṣra, where they built for him an oratory in the Kābul architectural style (Balāḏūr, Fuṭḥ, 397). The famous Syrian masūd scholar Maḥkūm al-Din Maḥmūd, teacher of al-ʿAwaḍ (d. 1182, 736), had been captured at Kābul during the first Muslim raid there (Ibn Saʿd, vii/2, 161; Ibn Ḧabīl-ḵān, tr. iii, 437). Yet the political effects of these and subsequent raids were invariably transitory, and in ‘Abd al-Malik’s caliphate, a Muslim army under Uḥayy Allāh b. Abī Bakr suffered a grievous defeat in the Kābul region (98/697-8); it was to retrieve the Muslim position that the famous “Peacock Army” was sent out under the command of al-ʿAwaḍ [see ʿAbd al-Malik].

During the rule of the Turk-Shāh dynasty, and under al-Maʿmūn there was a further raid entailing the capture of the ruler of Kābul and his adoption of Islam. For some time under the governorship in Khurāsān of ʿAbd Allāh b. Tāhir (213/828-30/843), the Kābul-Shāh paid tribute to the Muslims in the form of 1½ million dirhams annually plus 2,000 Oḡuz Turkish slaves (Ibn ʿUṯūraḏāḏgihīb, 36).

Only under the ʿĀrifīs of Sīstān [qq.v.] was real headway made by the Muslims. Thus Yaʿqūb b. Layykh’s expedition of 256/870 via Baḏḵh to Bāmīyān, Kābul and the silver mines of Panjgūr brought about the presence of elephants and pagan idols from the Kābul valley forwarded by the ʿĀrifīs (Tabari, iii, 1841; cf. Masʿūdī, Murūdī, viii, 125-6). The Islamisation of the Kābul region progressed considerably under Alpīḏān and the Turkish settlers of Ghaznā in the later decades of the 4th/10th century; under the Ghaznawids [qq.v.], Kābul seems to have been a depot for the army’s force of elephants.
(Bosworth, *The Ghaznavids*, 116-17). It now begins to be considered as administratively within the orbit of Ghazna rather than in that of the Bāmīyān-Ghīrband area, cf. Makdisi, 297.

The geographers of the 3rd/9th and 4th/10th centuries give a somewhat vague and confused account of the Kābul region, especially since it was peripheral to the experience of most of them. Long before it became Islamised, Muslim merchants resorted to Kābul, primarily because it was an entrepôt for the products of India: in the enumeration of Ibn Khurradābīhī, 38, for inferior aloes wood, coconuts, saffron, and above all, myrobalan (āṭhīlāḏī, ḥallī-āḏī), the astringent medicament, of which a special Chebuli or Kābulī variety was distinguished (see Yule and Burnell, *Hobson-Jobson*, a *glossary of Anglo-Indian colloquial words and phrases*, 607-10, and Laufer, *Sino-Iranica*, 378). Towards the beginning of the Ghaznawid period, Kābul begins to be distinguished as a town, with a mixed Muslim and Indian population (the Indians regarding Kābul as a pilgrimage centre), a strong citadel and a prosperous rabād or commercial quarter (Mūkaddasī, 304; *Huddād al-‘ilmām*, i11.

The dominance of the capitals Ghazna and then Fīrūz-kūh [q.v.], under the Ghaznavids and Ghūrids respectively, inevitably, and contemporary sources do not have a great deal to say about it at all. Such destructions of Ghazna as those of ‘Allā al-Dīn Ghūri and Timūr favoured the gradual rise once more of Kābul, although the traveller Ibn BatṬtāštīf still found there in 733/1333 a mere village, with nothing there of note save a sāʿīyā or hermitage of the Sūfī Shāykh Ismā‘īl al-‘Afgānī (*Rīhla*, iii, 89-90). After the death of Timūr (591-607, 1192), the eastern half of Afghanistan formed part of the Timurid empire, and after Timūr’s death it became an apnanage (sawrīḡdāl) for Timurid princes. Thus Abū Sa‘īd’s son Ulūgh Beg (not to be confused with the famous Timurid prince) reigned in Kābul and Ghazna from 865/1459 to 907/1507. After his death, Kābul temporarily came under the control of the Aḡhnūd Mūshagīdīs, who had married Sa‘īd’s daughter, and until in 910/1504 Bābur came from Transoxania and took over Kābul, compelling Muḥtamīn to retreat to Kandahār. Kābul now flourished under Bābur, who is eloquent in his memoirs about the climate and natural beauties of the region, its amenities and its products, and the fact that it was a mecca for trading caravans, bringing thither the products of India, China, Central Asia and Persia; and it was at Kābul that Bābur laid out numerous gardens. He made it his centre for campaigns against Kandahār and into northern India, and his successors the Mughal Emperors of India kept it firmly within the orbit of their dominions. For the first time, Kābul becomes a mint centre for gold and silver coinage, and Mughal coins were produced there down to the reign of ‘AẒīz al-Dīn Ālmagīr (652/1254-673/1765). It was to his favoured centre of Kābul that Bābur’s body was brought, in accordance with his express desire, some years after his death at Āgra in 937/1530; his tomb is now a pleasant spot on the slopes of the Shīr Dāwāzī mountain on the west side of modern Kābul (see *Bābur-nāma*, tr. Beveridge, 188 ff., 705-6).

Nādir Shāh captured the citadel of Kābul in 1557/1738, en route for his Indian campaign, but after his death in 1160/1747, the Kheīlbsāḫ garrison of Kābul yielded it up to Ahmad Shāh Durrānī of Kandahār [q.v.]. Under Ahmad’s son and successor Timūr Shāh, it became clear that the Durrānī empire in northwestern India could not be satisfactorily held from Kandahār, so Kābul became the capital. In this way began Kābul’s modern rôle as capital of Afgānīsṭān, even though at times in the 19th century the authority of the amirs of Kābul was geographically fairly circumscribed [for the history of the period, see *Afgānīsṭān*, v]. The town suffered during the first two Afgān-British Wars and the civil strife between rival members of the Sadozay and Muḥamnadzay or Bārakzay families. Thus when British forces returned to Kābul in autumn 1842, they burned the great bazaar of Kābul in retaliation for the murder of Macnaghten and the sufferings of the British forces during their retreat from Kābul at the beginning of that year. In recent decades, Kābul has expanded to a city of 435,000 people (1965 estimate), has acquired paved roads and has become a considerable industrial centre; in particular, it has expanded northwards in the Shahr-i Naw suburb towards the British Embassy and southwestwards towards the University of Kābul and King Amān Allāh’s former palace of the Dār al-‘Āmān.

(C. E. Bosworth)
KABYS B. WUSHMAGIR B. ZIYAR — KABYLIA

388-403/998 to 1012-13), fourth ruler of the Ziyarid dynasty which had been founded by Mardawlid B. Ziyar [g.v.] and which ruled in Tabaristan and Gurgan (Qjurdan). Like other families rising to prominence in the “DaylamI interlude” of Persian history, the Ziyarids endeavoured to attach themselves to the pre-Islamic Iranian past, and Kabus’s grandson KAY KABUS makes Kabus’s ancestors rulers of Gilan in the time of Kay Khusrav (Kabus-nama, Preface). As under his predecessors, suzerainty over the Caspian region and lands continued to be disputed by the Samanids in Khurasan and the Buyids of western Persia. It seems to have been support from the Buyid ‘Aqbud al-Dawla [g.v.] which enabled Kabus to succeed his brother Zahir al-Dawla Bistutan in 366/977, for the great Amur’s overlordship is acknowledged on Kabus’s first coins; it was also at this point that he received the honorific of ‘Shams al-Ma’alim’ from the Caliph at-Tahawi.

However, Kabus soon afterwards gave help to his son-in-law Fakhr al-Dawla [g.v.], the Buyid ruler of the Kurdish region of Djibal, against the latter’s brothers ‘Aqbud al-Dawla and Mu’ayyid al-Dawla. This course proved disastrous for Kabus. He lost control of much of Tabaristan by 369/979-80, and in 371/981-2 the remainder of his kingdom was in the hands of Fakhr al-Dawla returned from Nishapur and with the support of Asfarabadd, Kabus and Fakhr al-Dawla were compelled to seek refuge in Nishapur with the Samanid general Husam al-Dawla Tash. Despite Samanid aid, the two fugitives were unable to stage a revanche as long as ‘Aqbud al-Dawla lived. The Caspian region remained under Mu’ayyid al-Dawla’s control until his death in 373/984, when after a defeat at Astarabad, Kabus and his brothers Tash. Despite Samanid aid, the two fugitives were unable to stage a revanche as long as ‘Aqbud al-Dawla lived. The Caspian region remained under Mu’ayyid al-Dawla’s control until his death in 373/984, when after a defeat at Astarabad, Kabus and his brothers

Kabus agreed to abdicate in 1006-7, may still be seen outside the modern town of Gurgan [see Gunbad-i Kabos]. After Kabus’s death, the Ziyarid kingdom fell increasingly under the influence of the Ghaznavids, heirs to the Samanids in Khurasan.

Despite his reputation for cruelty, Kabus achieved a great contemporary renown as a scholar and poet in both Arabic and Persian. His long exile among the Samanids brought him into close contact with the luminaries of the brilliant Buja-shahr court culture. In the Yatimat al-dahr, Tha’alibi calls him “the seated rulers, the outstanding figure of the age, and the fountainhead of all equity and beneficence”, whilst Ibn Shuhayd, cited in Ibn Bassam’s Dhakhira, i, 202 (cf. Ch. Pellar, Ibn Shuhayd, Haydithu wa-atharhu, Amman 1966, 132), links him with Badi’ al-Zamam al-Hamadhani as the leading figures in the new wave of rhymed-prose writers. The extant Arabic works of Kabus comprise a collection of rasul and a work on adab and proverbs, but ‘Askari gives high praise to a Risala fil-istikbhar wa’il-Salib, now lost (see Brockelmann, S I, 154). Kabus was also an expert calligrapher and authority on astro-logy. As a patron of the arts, he received the dedication of verses by several of the great poets of the time, but the greatest lure in the dedication of verses by several of the great poets of the time, but the greatest lustre accruing to him came from his association with Ibn Sinaj (Avicenna), who fled from Khwarizm for refuge at Kabus’s court before going on to Rayy, and also from his association with Biruni, who came to Gurgan shortly after Kabus’s restoration in 388/998. He was named amir al-Alfar al-bahiya.

KABUS B. WUSHMAGIR B. ZIYAR — KABYLIA

KABYLIA, a mountainous region in the Algerian Tell. The word Kabyla, coined by the French, means “land of the Kabyles” (bild al-Kabili). This term is of fairly recent origin, however, for it is not found in the works of Arabic historians and geographers; it is probably of oral origin and intended for use by foreigners, i.e., Europeans; it seems to have been introduced into geographic nomenclature by European writers from the 16th century onwards. The word “Kabyle”, the etymology of which is sometimes questioned, seems to correspond to the Arabic word kabili, plural of kabila “tribe”, which certain Arabic writers used as a synonym for the Berbers. It was already employed with this meaning by the author of the Rawd al-Kirds with this meaning by the author of the Rawd al-Kirds, who, in various passages enumerating the contingents of the Marinid armies (notably pp. 217 and 238 of the Rawd al-Kirds), carefully distinguishes between the Kabylia and the Arabs.

Geography and Economy. To the plain of Mitidja a barrier of high land extends which in all probability constitutes the geological basis of North Africa, rises and forms a coastal rim, outcropping as plateaux, deeply dissected by erosion...
into long parallel projections: such are the massifs of the Arbaa, n-Ath-Iraten (formerly Fort National), Collo, and Edugh. The crystalline rocks have more recent strata, of which two are of great geographic importance: the secondary calcareous rocks were folded into long ranges spiked with peaks; the highest point of one of them, the Djurdjura, is the Lalla Kjadidja at 2,305 m.; the Djebel Babor rises to 2,004 m. The tertiary sandstones spread out in an increasingly continuous surface layer from the west to the east, and because of the nature of the soils deriving from them are forested. Near the sea, torrents plunge over the Kabylian rim, where they gouge out virtually inaccessible vertical gorges; the gorges of Palestro and Kerrata and the canyons of Rhumel have a certain grandeur.

The northern flanks of the Kabylia are exposed to the masses of humid air originating in the Atlantic, thus receiving heavy rainfalls. One of the highest annual average rainfalls in Algeria, 1,773 mm., was recorded at Bess职业在the in the Collo massif. By reason of the altitude the precipitation can take the form of snow in midwinter, even reaching the depth of one metre at the ‘Ayn al-Hammam station (formerly Michellet). Abundant humidity and the predominance of siliceous soils favour the spread of forests. Here they cover vast areas; in the main they are of oak, carpeting the middle slopes: the cork on the Numidian sandstones, the zaid (chênes liens, quercus Mirbeckii), the afares (quercus castaneafovia) and ballat or hazelnut oak. Above 1,500 m. the cedar takes over; it used to grow on the scree on the slopes of the Djurdjura. Trees are important in the everyday life of the people of Kabylia: ash trees close to their houses are used to support vines; their leaves are used as fodder for cattle in summer and the wood is used in the manufacture of agricultural tools and domestic utensils. Olives and figs, which flourish as high as 600 m. and 1,000 m. above sea level respectively, are important components of the diet of the mountain dweller.

All these geographical elements, relief, humidity, low temperatures, and forests, contribute to making the Kabylia an unproductive mountainous environment which became the refuge of a population determined to preserve its identity in the face of invaders. The Berber ethos has been maintained for centuries; it has kept its essential characteristics: its old social organization and its customs. Islam may have been accepted, but it was wholly vested with beliefs peculiar to Berber traditions. Arabic has not wholly supplanted Berber dialects, which are still in use throughout Great Kabylia.

The Kabylia mountains are closely kin to those of the western Mediterranean, their landscape bearing the imprint of the same ancient civilization. This is borne out first by the type of dwelling. In the Arbaa n-Ath-Iraten massif the village predominates: it runs along a single central street which follows the line of the ridge. Stone houses roofed with round tiles are inhabited by a group of families, the harrarba, who refer to each other as brothers; each conjugal family occupies one room divided in two by a bench: on one side the people, on the other the livestock. The rooms are arranged around a central courtyard shut off on the outside by a double wooden door. In contrast to the collective village or tyifik, which is made up of scattered hamlets. Such dwelling places, perched high up and reached by winding paths, seem to have been imposed by the concern common to the populations of the Mediterranean world for protection against the attacks of neighbours or strangers. Another possible explanation is that they meet the requirements for working a soil which is particularly difficult to utilize. Threshing floor and oil presses are installed at the entrance to the village. Under the walls of the houses the women cultivate small vegetable gardens. The slopes, rarely terraced, support groves of olive and fig trees, and fields of barley. The valley bottoms, where the wadis flow between steep banks covered with brushwood, are chilly, narrow, damp and gloomy, and it is easy to see why they remain uninhabited. The people are concentrated on the high land, moving from ridge to ridge. Where the valleys widen out into alluvial plains, the population abandons the high land, spreading out into tyifiks among the barley fields. As in Lesser Kabylia, people are occasionally so dispersed that family huts are isolated in the midst of grazing for the oxen.

The geographer will be surprised at the almost total absence of terrace agriculture and the pastoral movement of flocks which have enabled other Mediterranean mountain dwellers to turn their environment to the best account. Instead, the Kabylia works silver, copper and wood to make coarse jewellery, carved tables and engraved dishes, while his wife weaves woollen carpets and makes pottery decorated with geometrical patterns. Pedlars travel beyond the Mediterranean to sell these objects. Such ingenuity does not suffice to explain the great densities of population concentrated in such an unfavourable geographical environment: more than 140 inhabitants to the square kilometre in the major part of the Great Kabylia of Tizi Ouzou, with a maximum of 250 inhabitants in the district of Arbaa n-Ath-Iraten; between 95 and 140 in the Lesser Kabylia of Bidjâya (formerly Bougie); between 70 and 95 in the Lesser Kabylia of Collo and the districts of Skikda (formerly Philippeville) and ‘Annâba (formerly Bône). These extraordinary population densities characterize a strongly structured human environment, appearing to be an instinctive defence to ensure the survival of a population which believes itself constantly threatened.

Be that as it may, the Kabylians could not have survived in such numbers if they had been reduced to living off the produce of their mountains. To these scanty resources they added the far more abundant ones available through emigration. The massifs are reservoirs of manpower from which the plains, settled at an early date, and the developing towns tapped a supply of workers when they needed them. Algiers is in part a Kabylian city; the outskirts constitute a waiting zone where those who still dare not face the unknown of the city crowd together: Afn Taya has grown at the fastest rate, increasing from 2,910 inhabitants in 1954 to 21,906 in 1966. The urban centres of the mountains are also growing: in 12 years the population of Tizi Ouzou has risen from 6,056 to 25,852; that of Bidjâya from 29,748 to 59,991; that of Constantine from 111,315 to 240,672.

Since the beginning of the 20th century mountain dwellers from the east of Algeria have even crossed the sea to look for jobs in France and neighbouring countries. The 1966 census brings the number of emigrants living abroad who have remained in touch with their families by sending letters and money up to 268,000; according to the 1968 French census there were 612,000 natives of all regions of Algeria living in France. The two Kabylia départements of Tizi Ouzou (Great Kabylia) and Setif (Lesser Kabylia) account for 20.77% and 25.99%, i.e., over 46% of all Algerian emigrants, which represents 16.9% and
14.5% of their total populations: thus one in six of those born in Great Kabylia lives abroad. The sums (savings and allowances) remitted by workers to their families have risen annually to 900 million Algerian dinars, a currency contribution exceeding that derived from the export of wine or citrus fruit. Almost half of this income is sent to the Kabylia, whose basic resource is now their labour force of young men.

The results of emigration have not all been happy. This special environment permits emigration, further, an emigrant's settlement has been upset. Several regions in Great and Lesser Kabylia have temporarily lost 20-50% of their adult male population. Old people, women and children predominate: there are not enough workers to cultivate the fields and shrub plantations. Agriculture is reduced to gardening on the outskirts of the villages and is declining. The wasteland gains more ground each year. Goats or poultry are reared on a small scale at the expense of flocks, which are decreasing in size.

Traditional society has been disturbed, with a monetary economy supplanting the exchange of goods in kind. As food and clothes are bought from the local trader, the number of shops increases: the old pedlar has settled down. Often the standard of living has risen: foodstuffs such as sugar, tea, coffee and bread baked from wheat are becoming part of the regular diet. The return of the emigrant often brings back luxury goods like cameras and transistor radios as presents. On his lavishly celebrated arrival, he introduces new ideas, tastes and desires which transform the outlook of his people. It is difficult for a young worker from a Renault factory to accept the absolute authority of an old man whose experience owes nothing to the modern world; breaking with tradition, he leaves the paternal roof and settles with his wife and children in a more open house, equipped with chimneys. Thus conjugal families often leave the kharriba.

The Algerian government is aware of the dangers involved in emigration: if France should refuse to take in these workers, the economic and social consequences in Kabylia would be extremely grave. To put an end to this dependent state, the establishment of new jobs is envisaged in the region to help ensure their reintegration into the national economy by 1985. This goal can be reached only through large-scale industrialization of the mountain regions. For several years the number of newly-created jobs there has been increasing. The largest textile complex in Algeria, which will employ 2,200 workers, has been established in Great Kabylia at Drâ ben Khedda (formerly Mirabeau). In Lesser Kabylia, Bigjaya today is an oil port capable of handling 14 million tons a year. Further to the east Constantine has a textile factory. Skikda will soon have a huge factory producing methane. The region of Annaba, which houses the leading metallurgical complex of al-Hadjjar (formerly Duzerville), is tending to become a focal point of development, the centre to their own language and customs, resisting changes brought by Islam and French colonization.

Beyond the forested borderland of Yakouren, the Kabylia is populated by Arabic-speaking Berbers. The Lesser Kabylia of Bigjaya, comprising the lower valley of the Soummam and the Babor mountain range, is occupied by small communities who make a living by tilling the soil and raising oxen. The Kabylia Collo massif shelters wild peoples in the heart of its dense forests. Eastern Kabylia is a region of mixed agriculture and livestock. It is a region where richer agriculture and facilities for transport have allowed towns to develop; Skikda, Constantine, Annaba, Guelma and Souk Ahras are poles of attraction for the mountain dwellers.

(H. Isnard)

Ethnography. A significant proportion of the inhabitants of Kabylia, though the precise number is impossible to determine, is Berber-speaking, occupying Kabylia of the Djurdjura or Great Kabylia in particular. Although the inhabitants of Lesser Kabylia or Kabylia of the Babors are Berber-speaking to a slight degree only, Berber customs are firmly rooted among them. However, the Kabyles cannot be considered as constituting one true ethnic group, for all the evidence points to their being ethnically different, although their origins are obscure. They form part of the relative ancient, pre-Carthaginian peoples of North Africa who probably arrived from different directions, but at least some from the Maghrib. Living together for centuries in the Maghrib, they eventually built up a common civilization with a single language, which was not written down in the majority of cases and diversified into a great number of dialects with many features in common.

This essentially rural civilization has lasted until the present day in spite of historical vicissitudes and the other civilizations—Carthaginian, Roman, Arabic, Turkish and French—which confronted it. Perhaps the Kabyles became more closely attached to their ancestral way of life the humbler and more rustic they perceived it to be; at any rate, they had no wish to sacrifice it for the elaborate civilization of the Arabs, for example. That the latter has been accommodated to a greater extent than any other was the result of a long association, it is true, but also because of the numerous eastern elements in Berber civilization and the affinities established at an early date. Much has been written on the customs of the Kabyles which, generally speaking, vary from community to community. Their rule of law, which until practically the present day was hardly ever written down but was preserved in the memory of all, differs on several points, notably the disinheriting of women, from Muslim law. Under French occupation a number of customs were recorded in French for the benefit of the magistrates, and French law gradually came to modify local custom and Muslim law.

That the Kabyles have been Muslims for a very long time is certain. Perhaps they embraced Kharidjism during its greatest expansion (from the middle of the 2nd/8th century), but no information is available on this point. At the time of the French occupation it was apparent that Kabylarian society professed an Islam more pietist than dogmatic, and that numerous holy men and women were venerated in the country. Religious figures, members of religious brotherhoods, and marabouts or shaykhs enjoyed great esteem, often using their influence to settle differences arising between families or tribal groups, and had such privileges as exemption from tax. They
were almost the sole bearers of the written, that is Arabic, culture, which on the evidence of the work of Shaykh al-Warbahli (12th/13th century) was fairly rudimentary. They were however capable of teaching the basics of Arabic and a smattering of theology and Muslim law. Significant also were the religious brotherhoods, that founded by Sidi Muhammad 'Abd al-Raḥmān Abū Kābrayn (Ṣūl Kābrīn) (1126/1175-1206/1296) being by far the most important. Alongside God, the Prophet and the saints, the Kabyles believed firmly in the existence of maleficient and beneficent forces closely interwoven with man's existence.

Finally, we must consider the oral tradition in the Kabyle language, as distinct from the limited literature written in Arabic. Numerous specimens from this very rich field have been collected, transcribed and very often translated by orientalists or Kabyles. It was handed down within the framework of the family or village and subject to all the hazards inherent in a purely oral transmission. The tradition was also preserved by professionals who travelled from village to village singing the praises of God and the saints and recounting the struggles of tribes and the exploits of warriors. Others were practitioners of a more earthy, robust style. Verse was more important, for it was more easily remembered than prose, and pious, moral and humorous tales were popular. This largely unexplored treasure is in great danger of disappearing, for the young are no longer interested in such old ways.

History. It is more or less established that neither the Carthaginians nor the Romans penetrated deeply into the Kabylia block. There are significantly few Roman ruins in Djurdjura, except in some coastal settlements. Arab civilization reached Kabylia by the end of the 3rd/9th century, as evidenced by the welcome given by the Kutāma to the Fāṭimid missionary Abū 'Abd Allāh al-Shīrī, but seems to have reached Kabylia of the Djeurjura only in the shape of Islam, which was probably introduced at an early date though in superficial fashion. In fact, throughout the Middle Ages little is heard of Kabylia. It was subject to the Almohads, but we have no idea under what conditions it then came under the authority of the Hāfsids or of the Zayyānids of Tiemcen, and sometimes, for very short periods, even the Marinids of Fez. Kabylia seems rather to have survived these vicissitudes than to have played a prominent rôle, and it may be supposed that during this period of more than two centuries it was largely autonomous.

It is not until the 10th/16th century that the Kabyles, perhaps unwittingly, took an active part in the history of the Maghrib. The Barbarossa brothers, 'Arūḍi and then Khayr al-Dīn, made the Djeurjul region their first base of operations, with Algerians as their final objective. Since the Kabylarian masses constituted a screen between Djeurljul and Algiers, the Turks were forced to take account of the local inhabitants who could cut off their route, and the latter had to adopt attitudes which obviously influenced subsequent events. At that time the Kabyle peoples were divided between three powers, which Western writers called the kingdom of Kūkō, the kingdom of Lābbes (Banū 'Abbās) and the principality of the Banū Djeurljul. The last-named held sway over the tribes inhabiting the coastal zone to the east of Bigjāya. The kingdom of Lābbes was situated to the west of the Wādī 'l-Sāḥul or Sūmmān, and spread over at least part of Kabylia of the Babors; that of Kūkō stretched from Djeurljura to the sea and was served by the port of Azeffūn: in other words it included the major part of Kabylia of the Djeurljul. At the time of 'Arūḍi, the leader of Kūkō was named Ahmad b. al-Kāḍī; 'Arūḍi concluded an alliance with him, obtaining contingents of mountain fighters as reinforcements for his scantly Turkish army. During this time the Banū Djeurljul and the Banū 'Abbās usually sided with the Spaniards from Bigjāya. Under Khayr al-Dīn the scene changed: having quarrelled with him, Ibn al-Kāḍī went so far as to attack him, and played no small part in his short-lived surrender of Algiers (1520-25). The Turks then turned back towards the Banū 'Abbās and regained the upper hand. A similar state of affairs must have obtained during almost the whole of Turkish domination, with the different Kabyle groups sometimes allying themselves with the rulers of Algiers, then rebelling against them for a time, until, besieged in their mountains, they were obliged to negotiate in order to gain breathing space. Occasionally a matrimonial alliance strengthened the bonds between the Kabyles and Algiers, (the marriage of Hasan Pasha to a daughter of the king of Kūkō in 1560); often Kabyle contingents arrived to reinforce the Turkish troops (during the Turkish expedition against Morocco in 1574). This did not prevent the Kabyles from continuing their intermittent relationship with Spain nor from welcoming Christian prisoners who escaped from Algiers: it was in this way that in 1559 the chief of the Banū 'Abbās had at his disposal "a good troop of musketeers" (Halédo, Histoire des Rois d'Alger, 119) and that for about ten years, from 1598 to 1608, the leader of Kūkō maintained close relations with Phillip III of Spain, who at one point thought of taking Algiers with the help of the Kabyles (Carlos Rodríguez Joulis Saint Cyr, Felipe III y el Rey de Cuco, Madrid 1954). These vicissitudes sometimes brought in their wake internal political changes, such as the disappearance of the kingdom of Kūkō and its transformation into a federation of the Zwawā, or the birth of a new federation of the Geššālī (Iqas'dal) in the western part of the Djurdjura at the instigation of a shaykh named Gassem (Kāsim).

Right up to the end, Turkish authority remained very shaky. The theoretically subject tribes were split into two Kaidates, Boghi and Seboua plus the town of Bigjāya. To maintain law and order and to raise taxes the Kais had at their disposal several hundred janissaries, stationed at fortified posts, and troops of auxiliaries, some black ('ābūd). They intervened as little as possible in local affairs and held the country by the constant threat of a blockade which it could not withstand, for the resources brought from outside were indispensable. In addition the Turks fostered local discord and gave their support to religious personalities by helping them erect sacred buildings. On the whole Turkish rule left no bitter taste in Kabylia since it was not rigidly enforced: "In popular songs the Turk is represented as a brave, dignified character; when the poet wishes to praise one of his compatriots, he compares him to a Turk" (Hanoteau, Poesie populaire de la Kabylie du Djurdjura, 63 4, n. 3).

During the Turkish period the Kabyle populations preserved their political and administrative institutions intact. These constituted an aggregated of small republics grouped into a federation extending over a small area. The political and administrative unit was the village (shaddar), which was subdivided into groups, called adrum, tharifth, takherubt and kharruba according to locality. A collection of several
villages bound by reciprocal obligations constituted a tribe, 'arsh. At the time of the French conquest there were 1,400 villages divided among 120 tribes. A federation of several tribes was called thabhilth (Arabic kabilah). In certain cases several confederations united as a temporary measure for communal military action, but any alliance outside the tribe was very unstable.

The whole seems to have been a municipal republic subject to the authority of the citizens' assembly (thajlima'stih, Arabic dijama'stih), which had very far-reaching powers. It appointed a president (amokhrin, amghar, amin) charged with carrying out its decisions, and temmân (sing. jaman, Arabic jāmin) as his deputies, or perhaps his supervisors. The dijama'stih assessed the quota and allocation of taxes, decided on war and peace, regulated relief funds and modified local customs if the need arose. It was composed of all the male inhabitants old enough to observe the fast of Ramadan, but in reality decisions were made by an oligarchy of rich and influential men who laid down the law. The authority of the dijama'stih was limited by the respect it owed to the rights of individuals and families, and by customs in force. Tribes and confederations employed the same type of organization, but the grouping the looser the bonds of solidarity between its members. Moreover this solidarity was restricted by the existence within all the groups of sof, or parties, of whose origins and methods of functioning little is known. In short, Kabylia was made up of very small units whose relations with each other were perpetually unstable, and as the traveller al-Warthali bear witness, the country lived in a state of endemic anarchy.

Such was the situation in Kabylia when the French disembarked at Algiers in 1830. They immediately came into contact with the Kabyles, since the latter were numerous in the capital, but had no thought of occupying their country, because, for several years, they were not even sure if they would remain in Algiers. After the departure of the Turkish garrisons, Kabylia enjoyed a period of complete independence which was hardly conducive to the cohesion of the country. Nevertheless an immediate understanding was reached between the new Kabyles and the French observers, since from August 1830 onwards Bourmont contemplated establishing military units of Zwawa (Zouaves); the chequered career of these units opened on 1 October 1830.

Before the French took any real interest in the Kabyles the amir ʿAbd al-ʿKadir made approaches to them, since he considered them part of his sphere of influence as defined by the treaty of Taifa, and since he knew they were hostile to French domination. He appointed a khalifa of Sebaou, but was not recognized as sultan by the Kabyles. When Bugueaud was appointed governor-general and commander-in-chief, he was too absorbed in his struggle against ʿAbd al-ʿKadir to attend to Kabylia; this he did in 1844, when, as soon as he gained a slight reprieve, he occupied Delfy. In 1847, in spite of French government opinion, he embarked on a fresh campaign and had some successes on the periphery of the territory, but the problem of the Kabyle massif remained more or less untouched. It was only after the election in France of Prince-President Louis Napoleon Bonaparte that the Kabylies, but the most important action against the supposed qarfi Abū Bāghla opened in 1851. Following another in Kabylia of the Babor led by General de Saint Arnaud which resulted in the decisive occupation of Djidjelli.

Kabylia of the Djurdjura remained unconquered, however, and disturbances were frequent, especially at the instigation of the Rahmāniyya brotherhood. On each occasion the French reacted, finally deciding to occupy the Kabylian massif completely, under the leadership of Marshal Randon, the governor-general. After a campaign, made difficult by the nature of the terrain and the tenacity of the tribes, the latter submitted at the beginning of July 1857. In return for hostages and a war tax the Kabyl tribes secured the preservation of their municipal regime, but the great native commands which had continued to exist in the face of many vicissitudes progressively disappeared.

The two Kabylias played an active part in the 1871 insurrection, and were harshly punished by confiscation of land and heavy fines; the municipal assemblies were theoretically suppressed, but the amins of the communities were maintained; French magistrates were introduced into the Djurdjura, charged with preserving Kabyle custom. Later, from 1880 onwards, Kabylia of the Djurdjura was divided into four "communes mixtes" and four judicial districts, and for several years gallicization was pursued with a measure of success. With the agreement of his principal councilors, Jules Dumarçay then clamoured for Kabyle politics, which he considered illusory. At the time of the creation of the Financial Delegations (1898), the Kabylies provided six (four for Kabylia of the Djurdjura) out of 21 native delegates. This mark of favour was followed by a new tendency to gallicize Kabylia, especially through the schools, which were relatively well-developed in this part of Algeria. At about the same period Kabyle emigration to France began. At first it was slight, but it conformed to a very ancient Kabyle tradition and need, and increased in volume during World War I. It produced quite a considerable rush of capital into the country with the workers sending all their savings to their families.

Thus it is not surprising after that that the Kabyles took a large part in the development of the "North African Star", founded in Paris in 1926 at the instigation of the French Communist Party and largely composed of Kabyles. As this group, which from 1927 was led by Mustāhi Badjī, soon clamoured for the independence of Algeria, a number of Kabyls found themselves at the head of the Algerian independence movement, although in the country itself tradition remained strong. It was on the border of Kabylia or in Kabylia of the Babor that the 1945 Algerian insurrection broke out; like that of 1871, it was firmly punished. From 1947 onwards a small group of Kabyles under the leadership of Belkāsem Krim (Ibn al-Kāsim Karīm) decided, for political reasons, to live as outlaws: this group became the core of the 1954 revolt in Kabylia.

Individual Kabyles, like Krim, Aīt Ahmad, Bouâdiaf, Quamran, etc., played a decisive role in triggering the Algerian War, whether they were directing action on the spot or living outside Algeria and travelling the world over to promote the Algerian cause. There was even a period (1955-7) when the action undertaken in Algeria was directed by the Kabyle Ramdān Aban. The apogee of this period came in August 1956 with the Soummam Valley Congress, inspired and brought into being by Aban and Krim. Of the death of the former in 1959 little is known; the other second was one of the negotiators of the Evian Agreement, which, in March 1962, put an end to the Algerian War. Not content with providing several influential leaders, a very large part of the population of Kabylia partici-
pated in the war, and the entire population maintained silence about the movements of the members of the National Liberation Army. At the end of the war the sector of Kabylia of the Djurdjura (Wilâya III) was under the command of a Kabyle, Colonel Mofcand u l-Hâdji. After the war and the referendum instituting independence, a fierce struggle for power began in Algeria, especially between the members of the N.L.F. who arrived from abroad and certain resistance groups (Wilâya III and IV); among the latter were the Kabyles of Wilâya III, including Belkassem Krim. On several occasions (July and the end of August) they united in their mountain stronghold, and then matters were settled, at least on the surface. But the uneasiness continued, as witness the referendum and presidential election of September 1963 in which a great many abstentions were recorded in the electoral constituencies of the Djurdjura.

Not long afterwards, on 29 September 1963, Kabylia of the Djurdjura rose under the leadership of Ait Ahmed and Colonel Mofcand u l-Hâdji, seemingly on the pretext of the government's dissolution of the Socialist Forces Front, founded by Ait Ahmed. The actual hostilities were insignificant, and the Algerian Moroccans fought which broke out on October 11 was made the occasion of smoothing over the conflict; everything returned to normal after October 20, although Ait Ahmed remained underground. This general protest by the Kabyles had an important consequence: the meeting of the N.L.F. Congress of April 1964, where, for the first time since the end of the war, it was possible to speak freely in outlining a common programme for the new Algerian state. In spite of this, outrages still took place in several places in Kabylia from April to June 1964 and Kabyle participation in the legislative election of 20 September was small: 57.38% voters and an appreciable number of blank papers.

Subsequently Ait Ahmed was arrested (17 October 1964), condemned to death and reprieved (22 April 1965). Escaping on 30 April he went to swell the opposition group living outside Algeria. Belkassem Krim founded an opposition movement abroad on 15 October 1967. For the moment all this is of little consequence. On the spot, the local elections of February 1967 were still marked by a large percentage of abstentions in Kabylia. But the government of Colonel Boumedienne (Abû Madyan) has ensured that Kabylia is peaceful, and in October 1968 published an economic and social development programme for Great Kabylia, matched by a sizeable number of millions of Algerian dinars.
KABYLIA — KADA**

KADÅ (a.), originally meaning "decision", has in the Kur'ān different meanings, according to the different contexts: e.g., "doomsday" (XLV, 17; X, 93), "jurisdiction" (XXVII, 78; XXXIX, 69; XL, 20), "revelation of the truth" (XXVIII, 44) and "predestination, determination, decree" (XL, 68) (cf. E. Tyan, Histoire de l'organisation judiciaire en pays d'Islam, Leiden 1960, 65). In A Dictionary of Islam (London 1885, 479), T. F. Hughes gives the following concise definitions of the word: (1) the office of a kāfīf (q.v.), or judge; (2) the sentence of a kāfī; (3) repeating prayers to make up for having omitted them at the appointed time; (4) making up for an omission in religious duties, such as fasting, etc.; (5) the decree existing in the Divine Mind from all eternity, and the execution and declaration of a decree at the appointed time; (6) sudden death. In the EI¹, D. B. Macdonald gives as the first "technical" meaning: "the office and functioning of a judge (kāfī), although this may not be the original (first formed) conceptual sphere of the word. D. S. Margoliouth has pointed out, in refuting J. Hammer's incorrect interpretation, that had the kada? been a kur'ānic institution, the word would be found in this sense in the Kur'ān (Omar's Instructions to the Kadi, JFRS (1910), 312-3).

On the basis of the Kur'ān the word kada? can be understood as God's "eternal decision or decree" concerning all beings. It is given different interpretations, especially when contrasted with another term, kādar (see al-kada? wa-kada?), meaning "destiny, predestination". For the reason of the word's kādar, kada? is the eternal, universal and all-embracing decree of God, while kada denotes the details of His eternal, universal decree. Contrary
to the appointed time; (4) making up for an omission in religious duties, such as fasting, etc.; (5) the decree existing in the Divine Mind from all eternity, and the execution and declaration of a decree at the appointed time; (6) sudden death. In the EI¹, D. B. Macdonald gives as the first "technical" meaning: "the office and functioning of a judge (kāfī), although this may not be the original (first formed) conceptual sphere of the word. D. S. Margoliouth has pointed out, in refuting J. Hammer's incorrect interpretation, that had the kada? been a kur'ānic institution, the word would be found in this sense in the Kur'ān (Omar's Instructions to the Kadi, JFRS (1910), 312-3).

On the basis of the Kur'ān the word kada? can be understood as God's "eternal decision or decree" concerning all beings. It is given different interpretations, especially when contrasted with another term, kādar (see al-kada? wa-kada?), meaning "destiny, predestination". For the reason of the word's kādar, kada? is the eternal, universal and all-embracing decree of God, while kada denotes the details of His eternal, universal decree. Contrary
to this, al-Raghib [q.v.] interprets kadār as predes-
tination and kadā as the detailed, definite decree. 
Akhtarl (in the middle of the 10th/16th century)
may have been influenced by him when he concluded
that: "Kadār devolit-i 'aliyye deferter-i iştimal ve 
kadā anıık terdi ve takısimi mensilindendir" (Kâmas 
terjümesi, iv, Istanbul 1305/1888, 1356). He also
quotes a saying which is highly relevant to this dif-
ferration; when the caliph 'Umar on his way to
Damascus turned back for fear of plague, Abū
'Ubayya al-Dairrāb [q.v.] asked him: "Are you run-
ing away from the kadā?", to which the caliph
answered: "I am fleeing from Almighty God's 
kadā to His kadār". The meaning of this, according
to Akhtari, is that "insofar as the kadār does not 
appear in the form of kadā, there is a chance of 
averting it" (op. cit., 1356). The essential point in 
all interpretations, however, is that the kadā is the 
"decree or decision" of God that must be fulfilled in 
all circumstances. This sense of the word was related
to the neglected performance of religious duties 
(salāt, sawm [qq.v.]), which was therefore also called kadā (Th. W. Juyboll, Handbuch des islamische 
Gesetzes, Leiden 1910, 68, 122). This concept of the 
word later passed into legal terminology, so that 
kadār came to mean "purposely, by decree". (Schacht, 

As well as this, it also acquired a more important 
legal interpretation: the judgement of the kadār, 
which he could never withdraw once it had been 
uttered, was also called kadār (Schacht, op. cit., 196 
and Tyan, op. cit., 445). The kadār announced by the 
kadār was always binding while the fatwā [q.v.] given 
by the muftis was not. In forming his kadār the 
kadār could rely not only on the fatwās but also on the 
"urf, for when some local customs grew stronger, the 
"urf gained ground alongside the kadār (M. Fuad Köprüli, 
Fikhi, IA, iv, 614).

In the Ottoman empire kadār meant not only 
the judgement of the kadār but also the district which 
its administrative authority covered. The extent of the 
kadās, however, varied, for local circumstances (the 
importance of a place, density of its population, etc.) 
dictated whether a city was made a separate 
kadā or how many kadās a liwa contained. For instance, 
in 1396/1390 in Rumelia the liwa of Aladağ 
Ḥiş(ar) was divided into five kados and the liwa of 
Hersek into four; the liwa of Izzonik contained only 
one kada, while the liwa of Bosna consisted of six, 
and so on (T. Gökbelgin, XV-XVI asırlarda Edirne ve 
Papa Livası, Istanbul 1952, 8-12). The term kadār, 
denoting an administrative district, has remained in 
use in the Turkish republic.

AL-KADAR1 WA'L-KADAR. When combined into 
one expression, these two words have the overall 
meaning, the Decree of God, both the eternal 
Decree (the most frequent meaning of kadā) and the 
Decree given existence in time (the most frequent 
sense of kadār). Other translations are possible: 
for example, kadār predetermination (usually eternal, 
but according to some schools operating within time); 
kadār, decree (usually operating within time but 
according to some schools eternal) or fate, destiny, in 
the sense of determined or fixed. It is also possible 
to use kadār alone for Decree in its broadest sense and 
define kadār more precisely as existential 
determination. The expression combining them is in 
general use and has become a kind of binary technical 
term of 'ilm al-kalām.

A.—Analysis of the terms.—1. al-kadā. The 
dictionary meaning of this is judgement, decision 
(from which comes the corresponding technical 
sense of this in the "science of law"). In 'ilm al-kalām 
(and secondly falsafa) it means a "universal" judge-
ment or divine decree operating from all eternity 
and for eternity on whatever has existence (cf. al-
Djurjâni, Ta'rifât, ed. Flügel, Leipzig 1845, 185).

The verb kadā recurs frequently in the text of the 
Kur'an, usually referring to an act of God. How-
ever in XXXIII, 36 Muhammad's name is joined to 
Him ("when God and His Prophet have resolved..."). 
On four occasions (II, 117, III, 47, XIX, 35, XL, 
68) kadā indicates the absolute power of God, free 
from any type of intermediary, allied to the single 
creative Word: "Whenever He has decreed (kadā) 
something, He says 'Be it (kun)' and it is so'. 

Understandably, in order to magnify the transcen-
dent Will of the Almighty, the Ash'arī school laid 
stress on this sovereign Decree. Two references 
will suffice: a) In the Luma (ed. and Eng. tr. by 
R. McCarthy, The Theology of Aš'ārī, Beirut 
1953, 45-6/65), al-Ash'ārī distinguishes two aspects 
of kadā. In so far as it is (realized within) creation 
(kadā), it relates as much to the true as to the false, 
to acts done in obedience to the Law as to impious 
acts. Nothing escapes it: the decree and its 
object coincide. But in so far as it is the Command 
amer of God, the Decree is simply rectitude and 
justice, for it is distinguished from that which 
is decreed.—b. Al-Bâkîlînî's Tamhîd (ed. McCarthy, 
Beirut 1957, 325-6) takes up these themes almost 
word for word, substantiating them with kūrān 
proofs. For the Aš'ārī as a whole, kadā was the 
very expression of the Divine Will. Like Will it is "an 
attribute of essence" and thus eternal. 

Those of Māturīdī tendencies, however, understood 
kadār as the bringing into being of things in time, 
and therefore as "an attribute of action". Because 
of this, the Aš'ārīs accused the Māturīdī of making 
kadār a "contingent" attribute, while the latter re-
torted that in their view "attributes of action" had 
an eternal nature and that kadār, allied not only to 
the Divine Will but also to the Prescience, was the 
eternal attribute which dictates the production of 
things, takwîn. (Cf., for example, al-Taftzânî, 
Ṣarîh al-'ashâr'id al-masâfîyya, ed. Cairo 1321, 95; 
also 'Abd al-Rahîm b. 'Ali, Nasîr al-jarî'î, ed. 
Cairo 4 n.d., 28-30).

2. al-kadar has the meaning of measure, eval-
uation, fixed limit (cf. Ibn Ḥasan, K. al-Fiqh fi-
miyl, ed. Cairo 1347, iii, 37). "God distributes widely 
and measures out (yaḥdîr) His gifts to whom He 
pleases" says the Kur'an in several places (XIII, 26, 
XVII, 30, XXVIII, 82, XXIX, 62, XXX, 37). In its 
1st and 2nd form the root k-d-r has the general sense 
of to determine, to establish, to decree. God is "He 
who established [the fate of men] (kadâr) and 
directed them on the straight road" (idem, LXXXVII, 
3). There is a great number of kadâs on the subject 
(cf. khab al-kadar in al-Bukhârî's Sahîh). The Decree 
of God "for good or evil, weal or woe", which is 
storessed by several kadîls, is presented as one of 
the articles of faith which must be explicitly professed.
In its technical sense kādār therefore designates the divine decree in so far as it sets the fixed limits for each thing, or the measure of its being. It is often practically synonymous with the maḍṣar of the 2nd form, takdīr, the act of determining or decreeing. Two of al-Djurjānî's definitions (Taʿrīfāt, 181) summarize the Aṣḥābī conception of kādār, singly and in its relationship with kadd*: "kādar: the relationship of the essential Will with things in their particular realization", and "kadd*: the passage of possible entities from non-being into being, one by one, in accordance with kādār. Kadd* pertains to pre-eternity, while kādar belongs to the present order of things".

Thus Aṣḥābī traditions stresses: a) both kādār and kadd* belong to the eternal Divine Will; and b) that the former, the determining principle of contingent entities, is no longer "an attribute of essence", like kadd*, but "an attribute of action", itself designated "contingent" by reason of its end. In al-Aṣḥābī's Luma† (ed. cit., 37-53), the chapter dealing with the Divine Decree and its relationship with men's actions is entitled al-kādar, with questions concerning kadd* forming only one rather short section. Here too the Māturīdī line relates kādar not to the Will but to the eternal Frensce and considers it (unlike kadd*) "an attribute of essence".

Right from the first century of the issue, the Decree was one of the most frequently debated. According to Nallino (Raccolta, Rome 1940, ii, 176-80), all the thinkers who centred their discussions around kādar, no matter to which tendency they belonged, were termed Kaddariyya from the outset. Yet al-Aṣḥābī, in the Iḥāba and the Luma†, intends this term to be reserved for those early trends of Tim al-Kadariyya which, affirming human free choice, were confronted with the absolute divine Decree. These are the Māturīdī, as we have seen, the precise meanings of these two terms differ, as does their relationship with one another and their relationship with the Divine Decree and man's responsibility, which latter has been seen, the precise meanings of these two terms differ, as does their relationship with one another and their relationship with the Divine Decree and attributes. Yet every time that Tim al-kalām deals with the acts of the Almighty, one of the most frequently asserted instances is the problem of kadd* and kādar. At the wish of a school or writer, it is constantly allied with conceptions of "contingent power" (kudra bātīla), the "capacity" for action (istiṣ̱ā'ā, the "acquisition" of his deeds by man (kābīr, istiṣ̱āb). In Tim al-kalām it is the very expression of the aporia of divine Omnipotence and the absolute freedom of God in comparison with freely chosen human action (istiṣ̱āyā).

It was occasionally kadd* but often kādar (or both together) which was compared with human freedom. The Aṣḥābī and Māturīdī mutakallimūn endeavoured to affirm both the existence of the Divine Decree and man's responsibility, which latter is dependent on the Decree itself, through the kābīr, the relationship, created by God, between acts and the subjects who performed them. (Cf. L. Gardet, Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme, Paris 1967, 116-20, 128-32).

Agreeing with this, Ibn Taymiyya upheld the absolute nature of the Decree (kādar) and the human faculty of free choice, but considered it pointless and futile to resort to the conception of kābīr or istiṣ̱āb, the "acquisition" or "endorsement" of acts in R. Brunschwig's translation. (See Ibn Taymiyya, Miskāf al-Sunnā, ed. Cairo 1382/1962, i, 85-7, and R. Brunschwig, Dessein et Pouvoir, in St. Isl., xx, 40-1 and refs.). This "pragmatic" attitude is found once more among the modern salafīyya, such as

---
2. Must man give his consent (ridā) to the Decree of the Almighty? The question was clearly put by the Muḥaddiths. If every thing that exists comes under the divine kadaḍ, they said, then the acceptance of the impiety of the ungodly (an acceptance which is itself impious) is obligatory... (Cf. ʿAbd al-Diāḥār, ʿAṣār al-ʿusul al-khatima, ed. 'Uthmān, Cairo, 1342/1965, 777 ff.), which we may cite a short chapter of the Iḥšād al-ṣaṣṣa, a text of the Taḥrīr of al-Bāqillānī and the Mafāṭīḥ al-rāḥib of Fāṭḥ al-Dīn al-ṣaṣṣ al-Kurān XXXIII, 37-8 ("God's Command must be carried out", XXXIII, 37... "God's Command is an enacted Decree", ibid., 38).

This recourse to the action of the stars on human destiny—which is in no way independent of Divine Knowledge but emanates from it—and the affirmation that all that happens occurs for the good of the soul are points of view belonging to the Ismāʿīlī atmosphere of the Iḥšād al-ṣaṣṣ. Other points of reference can be found among Shiʿī scholars which, like the Fāṣalmā's conception of Providence, are always dominated by an emanistic view of the world. This is the sense in which we should understand, for example, Mulla ʿṢāda Shīrāzī's statement in his Kādāb al-Maṣṣāṣīr mentioning among the central themes of his thought "knowledge of the kadaḍ and the kadaḍr," "du Dērēt prééternel et de la Destinée" in H. Corbin's translation (Arab. and Pers. ed. and Fr. tr. by H. Corbin, Tehran 1342/1964, 5-50).

Here, in comparison, are two Sunni elaborations:

—b) "We give our consent to and acceptance of God's Decree taken as a whole and for each single thing" (Taḥrīr, 327). But what if it is a case of kufr and sin? Here al-Bāqillānī makes a distinction between kadaḍ in the aggregate and its particularization. Assent is not given to kufr, even though every thing in existence and every accomplished act come under the Divine Decree, just as child, companion, wife and partner are not ascribed to God, though all that exists belongs to Him.

c) As far as vocabulary is concerned, Fāṭḥ al-Dīn al-ṣaṣṣ al-Kurān distinguishes more clearly between kadaḍ and kadaḍr, which are both understood in the Ašḥāraī sense. Consent and acceptance are given, with no difficulty, to kadaḍ, the eternal Decree. The existentialization of existing things, one by one, belongs to kadaḍr, and here the question becomes delicate. Every Muslim must adhere to both kadaḍ and kadaḍr together, but it is difficult for the ordinary man to reconcile such an admission, which is ordained by the Law, with condemning evil and wicked deeds, as the Law also demands. The solution sought by al-ṣaṣṣ lay in extending the distinction which al-Ašḥāra had already made between kadaḍ understood as the sovereign Command of God and what is enacted in the order of creation; or, in more precise terminology, between kadaḍ, the attribute of action which determines every contingent thing, and makdār, the enacted object: it is not kadaḍ but makdār, once placed by God in being or contingent action, which can be the object of reward or punishment, of praise or blame.

After having commanded the aporta of divine Omniscience and human freedom, al-kadaḍ wa'l-kadaḍr is as it were in the centre of the problem of good and evil, and of the moral qualification of actions. Bibliography: in the text; to this may be added all the chapters on 'ilm al-kadaḍ which deal with the question, among which we can quote Fārābī and again, for example in the manuals of "set conservatism", such as those of Sanūsī of Tiemcen, Lākānī, Fūḍjārī, Bāḍūrī, etc. (L. Gardet)

KADAM SHARIF (KADAM RASUL ALLĀH). Among the miracles (muḥāṣṣātāt) popularly attributed to Muhammad was the fact that when he trod on a rock, his foot sank into the stone and left its impress there. This miracle is usually referred to along with others, e.g., that he cast no shadow, that if one of his hairs fell in the fire, it was not burnt, that flies did not settle on his clothes etc. (cf. al-Halabī, al-Sira al-Halabīyya, Būlāk, 1292, iii, 407), or that his sandals left no imprint on the sand (cf. Ibn Ḥaḍjar al-Ḥaytamī, commentary on al-Qaṣīda al-Hamāyya, 1, 176. (Ind. Off., Ms., Loth, no. 826, fol. 94). No early authority refers to such a miracle, nor any kadaḍ be quoted in connection with it, as Djalal al-Dīn al-Suyūṭī himself pointed out (see al-Halabī, loc. cit., i, 497). But sufficient evidence of this miracle is considered to be provided by the numerous impressions of one or both of the feet of the Prophet, which are venerated in different parts of the Muslim world. The most famous of these footprints is that in the Masjid al-Ṣaṣṣ, at Jerusalem, on the rock from which Muhammad mounted Burūk [q.v.] for his journey to heaven [al-Suyūṭī, Iḥāf al-Akṣīṣā fi Fādāʾ al-Maṣṣijid al-ahdā, in JRS, n.s. xix (1887), 258-9]; this footprint is on a stone separated from the Rock at the extremity of the southwest corner; Sultan Ḥaḍram ordered an iron grill inlaid with silver to be placed over it in 1918/1909 (Maḏnj al-Dīn al-Hanbalī, al-Uṣn al-gaḥūl, Būlāk 1285, 375, tr. H. Sauvaire, Histoire de Jérusalem, Paris 1876, 106).

In the ancient village of Kadam, which lies to the west of the present district of the same name in the south of Damascus, there still exists a masjīd al-kadaḍ which seems to have been connected originally with the memory of Moses then transferred to that of Muhammad; the latter's foot also left an imprint on a black stone that was carried from Hawrān and preserved in the Muḥāṣṣāt al-kadār in the desert of al-Harawī (Ziyārāt, 14/36) and today is in the library of the oratory of Sitt Rukayya (A. Talas, Mosques de Damas, Beirut 1943, 230; J. Sourdel-Thomine, in B. Él., xiv (1952-4), 76). According to popular belief, the first footprint was made by the Prophet, when he half-alofted from his camel, but was warned by the angel Gabriel that God had given him the choice between the Paradise of this world and that of the next; whereupon he relinquished his intention of entering Damascus (W. G. Paulgrave, Journey through Central and Eastern Arabia, London 1865, ii, 19).

In Cairo there are two footprints, one in a mosque called Ašḥāra al-nabī (Rev. des Trad. Pop., ix, 689), the other at the tomb of Rāḥūt Bāy [q.v.] (Badeker's Egypt, 1914, 113), who, according to Abī Ḥālān [q.v.], purchased it for the sum of 20,000 dinars; in Taṭī, there are impressions of both the feet of the Prophet, in the shrine of Sayyid Ḥaḍram al-Badawi (Rev. des Trad. Pop., xxii, 410), as also at Istanbul in the tomb of Sultan ʿAbd
al-Ḥamīd I, in the tomb of Abū Ayyūb al-Anṣārī [q.v.], and (six) in the Khirfca-i Șahed room of the Topkapı Palace [see șarâk] (Reşad Ekrem Koçu, Topkapı Saray, Istanbul n.d., p. 79; for a colour photograph of one of these see Kemal Çiğ, Al-ʾAnṣārī Al-Muḥaddassā, Istanbul (Tanzimat ve Tarih Materyalleri 1966, p.[9]).

Closely connected with the veneration of the footprints of Muhammad, is that paid to representations of his sandals. Copies of these are hung up in the houses of the pious, as a protection against the assaults of Satan, the evil eye, the depredations of robbers, etc.; they are also said to relieve the pang of childbirth (al-Kaššālān, al-Musâhīb al-ladunyya, Cairo 1281, i, 337). Such representations are common in Algeria, Egypt, India and Syria.

India and Pakistan: The footprints of the Prophet, whether accepted as genuine relics or fraudulently admitted as mere token representations, are accorded special veneration in India and Pakistan. One may suspect here an Islamization of an old Indian reverence for the footprints of gods and sages; the Buddha was represented symbolically by the soles of his two feet, often embellished with auspicious marks, before representations of his person appeared in Buddhist iconography; and similar representations of the footprints of the god Vīghou continue that tradition in Hindu ēfus. Literary references (bowing to or touching the feet in homage, the sanctity of the dust of the teacher’s feet, etc.) are commonplace. The accepted genuine relics may be placed in mosques, as at Gawf [see LAKHNAWTI], or be housed in special buildings, as in the Ḳadam Rasīl building at Lakhnāwī (Lucknow) whence the relics disappeared in 1857, or in the best known example, the Ḳadam Sharīf at Dihlī [q.v.], where the prints, imported from Arabia with great ceremony by Frūz Shāh b. Ṛadbī, were placed over the grave of his son Faṭḥ Khān who predeceased him in 1776/1774; here the relics are kept constantly covered by water and garlanded with marigolds, and the relic shrine, with its accompanying graveyard, is contained within a fortified enclosure.

Both relics and token representations are accorded special ceremonies at the Bābās Wafāt, i.e. 12 Rahḷ Ḳaʿ, the ʿurs of the Prophet’s death; for a description of these in India see DiyarSharīf, Khānān-ī Islām, tr. G. A. Herklots as Islam in India and ed. W. Crooke, Oxford 1921, s.v. Bābās Wafāt. (J. Burton-Page *)

**KADAR** [see al-ʾkadar ʿawʾl-kadar].

**KADARIYYA,** a name commonly used by Islamists to denote a group of theologians, not in itself homonymous, who represented in one form or another the principle of *liberum arbitrium* (free will) in the early period of Islam, from about 70/690 to the definitive consolidation of the Muʿṭazila [q.v.] at the beginning of the tenth century. In Islamic sources the notion is ambivalent; only authors of a determinist standpoint use it in the above sense (in later works the term can also refer to the Muʿṭazila). Authors of a non-determinist standpoint, on the other hand, apply it (apparently synonymously with *muḍjibna*) to defenders of divine omnipotence (the earliest examples at present are the title *Ḳiṣâb al-rādī sāḥe al-Kadariyya* of *Anbūr* b. ʿUbayy [q.v.] d. 197, 134/716, p. 597] and a passage in Ibn al-Mukaffaʾs [q.v.] d. (after?) 135/756 translation of the Middle Persian Letter of Tansar, cf. the New Persian version in Ibn Isfandiyār, Tārīḵ-i Tabbārīn, ed. Iqbal, Tehran 1954, i, 40, 4). The word was always derogatory, never applied to oneself. Even sources fundamentally of the same tendency may therefore differ as to the scope of the notion, according to the rigour of their polemical intention. Conversely it may happen that one and the same phenomenon may be described with differing terminologies in different sources (for example Kadarites are often called "Murdjiʾites" in Muʿṭazila texts, and also elsewhere). Regional differences of meaning also seem to have played a part. The term apparently arose in Ḳarḵ; previously such locutions are found in *Ḳiṣâs al-mukaddasīn* (bi-makadār) or allâghīn yahalūna Ṭādūsh were used. Cf. C. Nallino, Il nome di ʿQasasīs*, in RSO, vii (1916-18), 461 ff. (= Scritti, ii, 176 ff.). W. M. Watt, *Free Will and Predestination in early Islam,* London 1948, 48 ff.; J. van Ess in *Oriens,* xvi-xix (1965-6), 127 ff.

**Sources:** 1) Hasan al-Baʿrī’s *Kadarītī* Risāla to the caliph Abū al-Malik (ed. H. Ritter, in I, xxi (1933), 67 ff.; for the content cf. J. Oermber in JAOS, lv (1935), 138 ff., and M. Schwarz in *Oriens,* xx (1967), 15 ff.). 2) Several references in the anti-Kadarite composition (genuine?) of al-Ḥasan b. Muḥammad al-Hanāfiyya (d. c. 100/18), which we know through its refutation by the Zaydī *mādūm* al-Ḥādhī Yawbī b. al-Husayn (d. 298/1010; cf. GAS, i, 595). 3) The Risāla of the caliph ʿUmār II against a more extreme faction of Ṭādūsh (bi-makadār) or allâghīn yahalūna Ṭādūsh were used. Cf. Abū Nuʿaym, Ṣulā, v, 346 ff. (cf. GAS, i, 594; for its genuineness, A. Ṣabrīn, xii (1921), 19 ff.). 4) The heresiographical report of Ḳhushayḥ (d. 253/867), preserved in Malāṭ, Tābīnī, ed. Dederer, 126 ff. (cf. Watt, *Free Will,* 51 ff.). 5) Lists of Kadarites, mainly traditionists, in Ibn Kutayba (Maʿṣūrī, ed. ʿUkāḥa, Cairo 1960, 625, 8 ff.; repeated with several corrections and supplements, by Ibn Rusta, al-ʿAṣkāl al-mawṣūfa, BG, vii, 220, 7 ff.), in Ibn Ḥadījī (Ḥady al-sārī, Cairo 1347/1928, ii, 112 ff.), in Suyūṭī (Tadbīr al-rāwī, Cairo 1385/1966, i, 328 ff.), in Ibn al-Muṭaḍār (Ṭabarānī al-Muṭassīla, ed. Diwald-Wilzer, 133 ff.) etc.; in addition the corresponding biographical details in Ḳhāhī, Miṣḥ al-Ṭadhīl, Ibn Ḥadījī, Ṭadbīr al-taḥdīl, etc. 6) Scattered historical data, especially in Tabarī. 7) Counter-polemical in the standard collections of Ḳhādīh (e.g., the *Ḳiṣâb al-Kadar in the Ṣahīḥ of Muslim*), in the works dealing with *mawṣūla* (Ibn al-Djawi, ʿḲiṣâb al-mawṣūla, Suyūṭī, al-Ladīl al-maṣnūwa, etc.), in other books of traditionist outlook (cf., e.g., the *Ḳiṣâb al-Shārīʿa* by Abū Bakr al-Adhīrī, Cairo 1369/1950, 149 ff.; the material of the relevant chapter is obviously mainly taken from the *Ḳiṣâb al-Kadar* by Fīrābīf, cf. GAS, i, 160, and finally also in works of *adab* (e.g., Ibn ʿAbd Rabīh, Ṣṭd, ii, 376 ff.).

**Historical development:** The sources mentioned...
under 5) list 40 certain names for Basra, about fifteen for Syria, six for Mecca, five to seven for Medina, about five for Kūfa, three for Yemen, and not a single one for Egypt and the whole of the East. These figures, however, express only part of the reality; they mirror above all the variable state of our information. The interest in a biographical listing of the Kadariyya apparently arose in Basra, where the pupils of Ḥasan al-Ḵadr, and their pupils in turn, began to quarrel over the correct interpretation of his doctrine. Therefore, contemporaries were classified in accordance with a particular understanding of the idea, and for the past relevant material was most systematically collected. Elsewhere fuller information existed only for Syria, where, in the last twenty years of Umayyad rule, Kadarites played a part in history through their revolutionary activity. It is possible that in many other areas, for example in Egypt, the doctrine never became a problem. According to the nature of the information, the Kadariyya is seen in Syria primarily as a political movement; in Basra on the other hand it is viewed as a school of theology. The political argument developed from the principle that a ruler is answerable for his actions, and in the case of unrighteousness should therefore be deposed or should abdicate; the theological stance arises from the idea that one must choose between evil and good. In the consequences which were drawn from this latter interpretation, a moderate and an extreme wing can be discerned.

The earliest document of the movement is the Ṣīdāl of Ḥasan al-Ḵadr; it was certainly composed between 75/694 and 106/723, the arrival of ʿAdī al-Qādirī in 75/694, and 80/699, the beginning of the revolt of Ibn al-ʿAsīrī. From it one can see how the kadarite doctrine is again encountered in the work of a group called by Khushaysh (in Malātī, Tābābāl, Muṣṭawī, 15, 3 ff.).

 Probably two decades after Ḥasan’s Ṣīdāl, Kadariyya doctrine is again encountered in ʿIrāk in a group called by Khushaysh (in Malātī, Tābābāl, Muṣṭawī, 133, 5 ff.). Shabibiyya, the adherents of the Khāridjītes Shabīb al-Nasqānī who lived about 100/718 (cf. Asghārī, Makālāt, 300, 10 ff.; also Asghārī, Makālāt, 93, 7 ff. concerning the Maymūnīyya who seem to have borrowed from them).

This comes very close to—and is perhaps identical with—the Kadariyya “innovations” attacked by ʿUmar II (reigned 96/715—99/717), who, in his treatise preserved in Abū Nuʿaym, God knows that one will sin, but also that one could abstain from sin (ḥaḍīth; cf. Malātī, ib., and Shahrastānī, Milātī, ed. Cureton, 94, 5 ff.; also Asghārī, Makālāt, 93, 7 ff. concerning the Maymūnīyya who seem to have borrowed from them). This is confirmed by the fact that among Ḥasan’s contemporaries are found other Kadarites, all of whom could hardly have been his followers: in the Yemen Ṭabīb b. Munabbih (c. 34/655–114/732 [q.s.]), whose non-deterministic sayings (in his Ṣīr’a and in his Ṣīdāl al-Ḵadr) could not be disregarded, even in later times; in Syria the ascetic ʿAlī b. Maḥdī b. ʿAbd al-Kurayb al-Ḵalīfī, (d. between 103/722 and 108/727; a Kadarite according to Ibn Ḥarīma, Maʿṣūrī, 625, 134) and the famous jurist Makbūl b. ʿAbd al-Malik (d. perhaps 113/731; at any rate he first came to Damascus as a prisoner of war from the region of Ḳābul); in Basra itself, amongst others, the ascetic ʿAbū al-Ḥaithām ʿUṣayrā al-Ḥilālī (d. 103/722 or 104/723). In its moderate form the Kadariyya doctrine was a rule of practical piety.

The absence of earlier theoretical formulations prevents our going back beyond Ḥasan’s treatise. We are given to understand that the purport of divine predestination had been “first” discussed when, at the siege of Mecca by the troops of Yazīd I in 64/683, the Ḳaʿba caught fire (cf. Sirā Ḳalābīyā, Cairo 134/I942, 1, 185, 15), or, conversely, that Muṣṭawī was the first to justify his use of force by divine “compulsion” (dīwān al-Kaʿba al-Ḍībār, 4, 3 ff., cf. Dūḥābī, 4, 3 ff., added in addition of ʿAmr b. Saʿd, the rebel against ʿAbd al-Malik, in Tābābāl, ii, 224, 18 ff.). But these are only answers to the wrong question. There was never a point in time when ʿKadaʿ was spoken of “for the first time”; there are only particular moments at which theological solutions emerge for the first time, or become generally significant or controversial. The alleged Kadariyya beliefs of the last Sufyānīd, Muṣṭawī ʿII (reigned 64/684; cf. Makdisī, al-Budīsī, ʿIltifā, vi, 16, 13 ff. and Lammens, Etudes sur le siècle des Omeyyades, 181 ff.) probably derive from the belief that he abdicated of his own accord, not because of his early death, which was perceived to be in accordance with the political programme of the Kadariyya (cf. Lammens, Etudes, 183, 192 ff.; Wellhausen, Arabisches Reich, 106). The letter from Ḥasan b. ʿAlī (d. probably 49/669-70) to Ḥasan al-Ḵadr on the question is manifestly a forgery (cf. the determinist version in Ḥarrānī, Tabābāl al-ʿAbdī, Ṣīr’a, 135/695, 162, 8 ff., and, shorter, in ʿAlī b. Muḥammad al-Walīd, Tābābāl al-Ṣīdālī, ed. Tamīr, Beirut 1967, 180, 1 ff.; a Kadariyya version in Ibn al-Muʾtaṣīm, Tābābāl al-Muṣṭawīk, 13, 5 ff.).

24

Encyclopaedia of Islam IV
him: 'Umar b. Hāni' al-安卓, who in 273/74-5 was put to death on the orders of Marwān II on account of his participation in Yazid III’s revolt against Walid II, was governor of Batanaea and Ḥawrān under 'Umar (cf. Buḫdhār, Taʾrīḵ habīr, ii/2, 335), and Ghiyān al-Dimāqī [q.v.], whose critical opinions he knew throughout (cf. Ghiyān’s Risāla to him in Ibn al-Murtadā, Taḥdīr al-Wusāsia, 25, 9 ff.) was in this time actively in the financial administration (cf. i. ‘Abdāb in al-Abbādī, ix (1956), 329 after Baladhurī, and Ibn al-Murtadā, Taḥdīrī, 26, 9). It was known that the Kadārites were not conformists; several of them had taken part in the revolt of Ibn al-Asbāḥī, and Maʿbad al-Dhuhānī, a friend of Ḥasan al-exaoīrī, was executed for this reason under ‘Abd al-Malik.

But Ghiyānī was the first to develop a political programme, not indeed under ‘Umar II, but first under Hīšām, when ‘Umar’s measures to give the same to the Kādārīyya in the direction of freedom of action (cf. Taḥdīr Taʾrīḵ Dimāqī, iii, 177, 11 ff., and Dāhābī, Taḏkīrat al-Sūfīyā, Hyderabad 1955, i, 147, 3 f.).

Walid II kept up Hīšām’s anti-Kadārīyya policy (cf. Taḥbīrī, ii, 1777, 15 ff.). Yazid III, on the other hand, took over Ghiyān’s political programme in his declaration from Damascus when he proclaimed the revolt against Walid (cf. Taḥbīrī, ii, 1835, 6 ff., etc.). Therefore his supporters are called Ghiyānīyūs, and often also Kadārites. The latter is perhaps precipitate; it is not always easy to decide whether those who took up this position because of the political programme were also Kadārites in the theological sense. Many of them were Kābbītīs, particularly from Mīzā near Damascus; thanks to the political development by which the Kābīs saw themselves increasingly neglected in favour of the Kāddfīs, the former māsādī party now received support from the indigenous Arabs. After Yazid’s premature death, the hopes of the Kadārites were transferred to his brother Ibrāhīm; when the latter capitulated before Marwān II they were again persecuted (cf. Marwān’s letter in Taḥbīrī, ii, 1831, 7 ff.). The names of several traditionists who took up a position in favour of Yazid III are known to us; with the assumption of power by Marwān, they had to flee to Syria, one of them being killed at the instigation of the caliph (cf. in detail in Ess in Stud. Isi., xxxi, 1970, 277 f.). With that the political role of the Kadārīyya was played out; it remained confined to Syria.

In Baṣra, apparently, the movement remained confined to personal statements: ‘Amr b. ‘Ubaydī is mentioned (cf. Ibn al-Murtadā, Taḥbātī, 120, 12 ff., and Shahrastānī, Miṣlīn, 17, 15); his “orthodox” opponent ‘Ayyūb al-Saḥḥīfīyī censured it (cf. ‘Aḥānī vii, vii, 82, 10 f.). The political development in the town proceeded differently (cf. Caetani, Chronographia, 1591). The quietistic Kadārīyya in the style of Ḥasan al-exaoīrī was continued by his pupil Kāṭābī d. Dīnā (d. 1177/755) and henceforth predominant. Militant characters, especially refugees from Syria, were finally integrated with the arrival of the ‘Abbāṣīds. Instead, theological antagonisms intensified. For a long time there survived a moderate wing, which, following Ḥasan and Kāṭābī, exempted sin from predestination, and obviously derived its argumentation from kūrānic exegesis; it was represented among the muḥaddithūn and others by Saʿdī b. ‘Abī Ṭabīb al-ʿAlawī (d. 136/753) and his school, Hīšām b. ‘Abī Allāh al-Dastuwayī (d. 153/770 or 154/771) with his son Muḥammad b. ʿAbī al-ṣaḥābī b. ʿAbī al-Adawī (d. 156/773) and his school, Hīšām b. Aḥānī b. ‘Abī Allāh al-Dastuwayī (d. 153/770 or 154/771) and his son Muḥammad b. Sālim b. Miskīn al-Namari (d. 164/778), Abū Hālīl Muḥammad b. Sulaym al-Rasībī (d. 167/784), Abū ʿAlī b. ʿAbd al-Wahhāb b. Ṭāḥfād (d. 204/820 or 205/821-2) and, furthermore, by numerous ascetics and ṭawhīdīs, whose names we learn particularly from Ibn al-Murtadā, Taḥdīrī, and certainly by many others in whose deeds the authors of lists of Kadārites have no interest (cf., e.g., for the grammarians of Baṣra, Ṭawḥīdī, Ṣawdāʾīrī, ed. Kaylanī, iii, 592, 8 f.; Kīfī, Inbāb al-ruwādī, ed. Abū ʿAbd Allāh ibn ʿAbd al-Rahmān ibn ʿAbd al-Muʿtāzī, al-Baṣrī, (d. 180/796), perhaps also the Kāddfīs. They took as their starting point divine justice in—
Instead of human "freedom to do evil": God must keep His word (cf. the anecdote in van Ess, *Traditionistische Polemik gegen ‘Amr b. ‘Ubayd*, Beirut 1967, 31 ff.; wa’d here still covers the later Mu’tazill wa’d wa-wa’id); a takhīl bimāl lā yuṣfik is impossible (cf. Tawhīdī, *Baṣāʾir*, iii, 223, 1 ff.). Here, too, the consequences for kūr’ānic exegesis are for the moment in the forefront: verses of the Kūrūn in which someone is explicitly given over to damnation (cf. Sūra LXXIV, 10; for Abū ʿUbayd’s lectures (cf. on his circle Dhāhahbī, *Mīzān*, ii, 515, 10 f.); one of his adherents, Zakariyya b. ʿIshākh al-Makkī, was banned from lecturing on account of his doctrine (at the time of Ḥishām or Marwān II? cf. Ibn Ḥadjar, *Tahārī*, iii, 329, 7 f.). In Medina several Kadarīyya obviously supported the revolt of Muhammad al-Nafs al-Zakriyya (145/652; cf. Madelung, *Qāsim ibn ʿIbrāhīm*, 72 f.); that there were still Kadarīyya in the town at the time of the Caliph al-Mahdī, to be precise during the governorship of Dāʾīṣār b. Sulaymān b. Ἂ (All 160/777-166/783), is testified by an account in Ṭabarī (iii, 534, 11 ff.). In the ši’īite circles of Medina and Kūfah opinions about the problem were divided: Ḥasān b. Muḥammand b. al-Hanafiyya (d. c. 100/718) had been a supporter of predestination, and so too were the immediate disciples of Zayd b. Ἂ (fell 122/710) as he himself was probably a supporter of predestination (cf. Madelung, *Qāsim ibn ʿIbrāhīm*, 55 ff.); otherwise they frequently steered a middle course, which while coming near to that of the moderate Kadarīyya did not give anyone occasion to call them Kadarīyya (the formula: lā ḍjab wa-lā taʾfalad). The term taʾwil was almost always rejected or at least avoided (cf. the otherwise rather contradictory sayings of the ḫalīms in Kūhlin, *Kifṭ, Tehran 1334/1955*, i, 150 ff.). Here there was no necessity for a political Kadarīyya, since the ḫalīms had their own political motivations to offer.

Occasionally in polemic the Kadarīyya doctrine was attributed to Christian influence (in fact much more rarely than one would expect; the Ḥadīthīs speak of the "Magians" instead of the "Christians" of this community). This was expressed in the anecdote that ʿAbd b. Ḫujāna al-Ḥasān b. Iṣḥāq, the "first" Kadarīyya, had taken over from an (earliest) Christian: Ṣanḥūya, the husband of Umm Mūsā (cf. Ibn Saʿād, *Ṭabāhāt*, vii/2, 27, 1 ff., perhaps a former concubine of Ἂ (cf. Dhāhahbī, *Mīzān*, no. 11036), or from Abū Yūnūs Ṣansūya al-Usfūrī, who perhaps was the same person (cf. Makrīzī, *Khiṭīṣ*, iv, 181-6 f.), or a certain Ṣūnān (cf. Dhāhahbī, *Ṭabāhāt*, iii, 305, 14 f. etc.). The theological relationship is in fact unmistakable: for John of Damascus sin arises ἀν τῆς ἡμετέρας ῥεμπρομας καὶ τῆς διαβολοῦ πανουργίας (Migne, *PG*, 94, 1589), and in that respect he takes his place in a tradition for which we already find models in Efrem and Theodore of Mopsuestia (cf. e.g., representatives in the *Vööbus, History of the School of Nīṣibīn*, 2nd ed.). Ḥayyān al-Dimāgḥī, as a mašūla of Coptic origin, built upon Christian ideas (cf. Madelung, *Qāsim ibn ʿIbrāhīm*, 239, and M. S. Seale, *Muslim Theology*, 18 ff.). The Ḫārijī judge of the Shābībiyya came from Nāṯrān, the Christian centre of the Arabian peninsula. But it must not be concluded from that that the Kadarīyya had been engendered by Christian polemic against Muslim predestination (as in the thesis of C. H. Becker, *Christliche Polemik und islamische Dogmenbildung*, in ZA, xxvi (1921), 175 ff. = *Islamstudien*, i, 432 ff., especially p. 441; cf. against the argument of W. M. Watt, *Free Will*, 58, n. 27, and the counterargument of W. Thomson in *MW*, xl (1950), 209). Predestination is "earlier" only in the sense that it is strongly connected with certain dichotomies (cf. H. R. Ringgren, *Studier i arabiskt falsam*, Upsala 1951, passim, especially 116 ff.; in the Kūrūn determinist and non-determinist sayings stand side by side, on the basis of the idea of a personal God (cf. Watt, *Free Will*, 12 ff.). There was nothing to prevent Muslim neo-plutists, at least after the conquest of Syria (cf. Subkī, *Ṭabāhāt al-Ḥadīthīyya*, i, 50, 4 ff.), from naively solving the theological problem posed by the ambiguity of the Scriptures with categories familiar to themselves; we have no evidence to show that at the time this was thought strange or un-Islamic. How far
the interdependence of the two religions could go is best shown by the well-known argument based on the child born of adultery. Christian theologians have from the earliest times cited adultery as an example of the sins that man may not ascribe to God (cf. the Nestorian Bâbâi in Vööbus, School of Nîsibis, 260), and the Kadarites said the same thing later (cf. Laoust, La profession de foi d'Ibn Bâjja, 92, n. 1). Muslim determinists counter with the question, inspired by the Kur'an, who then created the focus engendered by adultery, in the mother’s womb? (cf. Sûrâ XCVI, 3; XXII, 5 etc.). To that question Hasan al-Bâṣîfi (cf. Schwarz in Orientis, xx (1967), 19) and, diverging somewhat, John of Damascus a generation later (cf. Becker in Islam- studien, i, 440, and G. C. Anawati in L’Oriente cristiano nella storia della civiltà, Rome 1964, 542 f.) provide an answer; the latter’s argument agrees with the Kadarite position reported in Khûhâysh (in Malajj, Tamthil, 134, 8 f.). John of Damascus was active in Damascus at the time of Hîshâm; when he as a Christian assailed the predominant Islamic belief of his time, it was natural for him to use the same arguments as the Kadarites. Only later, when, as a result of the internal development of Islam, the Kadariyya was forced from a moderate to an extreme position, did this plausible but accidental “aliens” cause offence.

KADÂSA (الکادسی), a neologism of comparatively recent creation, generally understood in the sense of holiness. The word does not occur either in the Kur’ân or in hadîth, and the LA ignores it. On the other hand, the root k-d-s is well known to the Arab lexicographers; the Kur’ân (II, 30, 87, 253; V, 21, 110; XVI, 102; XX, 72; LIX, 23; LXXI, 1; LXIX, 161) and hadîth (Wensink, Concordance) use it sporadically. Basically, it is used to denote beings and objects that are pure, wholly unsullied or in touch with the divine.

This religious meaning seems to be alien to Arabic and borrowed from Aramaic (A. Jeffery, The foreign vocabulary of the Qur’ân, 1938, 232; however, cf. Lagrange, Études sur les religions sémitiques, 1905, 145 n. 7, where the religious meaning is regarded as original in Arabic). But the borrowing would have taken place before Islam, as might be concluded from a verse of Isra’il al-Rays who speaks of the garment of a pilgrim to Jerusalem (musktaddîs) torn to pieces by the children (LA, root k-ds).

As a manifestation of purity, kadâsâ is not merely the negation of impurity, magâsa, it is also its antonym. It does not indeed signify the absence of any impure element in persons and things, a condition denoted by fahrâ, in the current sense of the word; it implies also the presence in them of supernatural forces, of celestial origin, which might make them dangerous to the profane. Nevertheless, with the help of certain precautions it would be possible to approach them: “I am thy Lord”, said Allah to Moses, “take off thy sandals for thou art in the sacred (musktaddîs) valley of Tuwa” (Kur’ân, XX, 12).

In the ethnological meaning of the word, kadâsâ represents the positive pole of the sacred, harâm. This last word is applied in fact to everything that is forbidden to the profane and separated from the rest of the world. The cause of this prohibition could be either impurity (temporary or intrinsic) or holiness, which is a permanent state of sublime purity. kadâsâ, in short, is merely the manner of existence of what is pure and sacred, that is to say of the divine, of that which contains a divine breath, of that which is the immanence of divinity, in touch with it or rightfully belonging to it. In its ordinary manifestations, it takes the form of baraka.

Bibliography: The sacred has been the subject of a very large number of studies which cannot be listed here. Some bibliographical outlines on this question will be found in J. Chelhod, Les structures du sacré chez les Arabes, Paris 1964, ch. 1. (J. CHELHOD)

KADDûR AL-ÂLAMI, the name by which is known the famous Moroccan popular poet, ‘Aab al-Kadîr b. Muhammad b. Ahmad b. ‘AbÎ-‘Kâsim al-Irûfî al-Âlami, al-Hamdânî al-‘Âlami, ‘Aab al-Sâlim b. ‘Abî-‘Ali al-Sâlimî, Abd al-Rahmân, al-Mawlay al-Wazzânî, Muhammad b. ‘Abd al-Šîkilî, and other eminent masters of his time. He gained numerous disciples no less famous, amongst whom were the Sultan Mawlây ‘Abî al-Rahmân, Muhammad b. ‘Abî al-Hafiz al-Dabbâgh, the imâm Muhammad Şâhî al-Râdiî, al-Ârabî b. al-Sâwî al-Šarkî and Muhammad Gharrît. Sayyîd Kaddûr al-Âlami, although unable to read or write, composed poems in the neo-classical and popular language, with astonishing skill and eloquence. These poems, which were long believed to have largely disappeared, or to have been burnt according to his wishes, have fortunately survived. Whether they were composed in sajjîl or in mahâmîn, almost all deal with the glorification of God, the praise of the Prophet, and of the saints and important people of Islam. As for wine, beauty and love, of which they sing, these are to be interpreted allegorically, recalling thereby the mystical works of Ibn al-Fârîd and Ibn al-Ârabî. The poem which had the most success is the one devoted to the saints of Meknes, and which begins thus: dhî man išrâlhum a râjîl Mkhâsa? mskhâ dârî fî hmâhum yâ hî lhrâyûm’ About four years before his death, which took place at Meknes on 25 Ramadan 1266/4 August 1850, he went into a trance, and never again set foot in the Djimi al-Zaytuna, where he had been accustomed to perform the Friday prayer.
He is said to have lived 112 hijra years, i.e., 109 Gregorian years, which would give as the date of his birth 1154/1741.

**KADDÎR AL-DIZZÂ'IRI.** Of Tunisian ancestry, but settled in Algeria, Aûb 'Abd Allâh Muhammâb b. Sa'd was, like his father, Sa'd b. Ibrâhîm (d. Shîbâl 1066 [July-Aug. 1656]), the most learned man and greatest mujtâdî of Algeria of his time. Amongst his most brilliant disciples was Abu 'l-Kâsim Muhammâb Ibn Zakûr al-Fâsî, to whom he was the last to grant an idjâda (beginning of Radjab 1094/26 June 1683). He died at Algiers on 15 Dhû 'l-Hijjâda 1098/12 Oct. 1687.

**KADHF (A.), slanderous accusation of fornication (sinâd [q.v.]), or of illegitimate descent;** in this latter case, it amounts to accusing the mother of fornication. The guilty party is punished by a fixed penalty (kâdhî) of 80 lashes, laid down by the Kur'ân (XXIV, 4). A slave guilty of the same crime therefore receives only 40 lashes, on account of the general principles of fiqh. According to the majority of fiqhîs, kâdhî only occurs if the expressions used by the slanderer expressly relate to the fornication or illegitimate descent of the person who is slandered. The Malikîs alone consider as kâdhî an accusation expressed by allusion (ta'îrid) or by preterition, which considerably extends the scope of the crime amongst them. It is necessary to make clear at once that if, on account of the very restrictive interpretation put upon kâdhî by the majority of schools, certain slanderous accusations are not of a kind to warrant punishment by the kur'ânîc penalty, the judge may in such a case, by virtue of his discretionary powers (ta'îsr [q.v.]), inflict on the guilty party another penalty less than the kur'ânîc kâdhî (but in Malikî law it may be greater).

Any person having attained puberty and being in possession of his reason, whether he be slave or free, Muslim or not, may be punished for committing kâdhî. The only ones to escape, apart from those who can produce four witnesses to prove the truthfulness of their statements, are the progenitors (except in the Malikî school which admits no exceptions) and the husband if, after formulating an accusation of adultery against his wife, he has recourse to the procedure of isâm [q.v.]. But, on the other hand, kâdhî in the technical sense only occurs if the slandered person is muhsân. This expression in the context of kâdhî (unlike that of sinâd) can only be applied to a person who has reached puberty (except in Malikî law, which protects even people below the age of puberty against the accusation of illegitimate descent, for example); this person, being in the possession of reason, must, moreover, be free, Muslim, and have no previous conviction for fornication. If the slandered person lacks one of the qualities set out above, the author of the crime may only be given a punishment by ta'îsr, and not by the kur'ânîc kâdhî. The slandered person need not be alive at the time of the action; all his heirs, according to the majority of the fiqhîs, or certain of them (according to the minority), may instigate a court action to punish for the kâdhî if the dc cujus had not done it in his lifetime.

**Bibliography:** All the works of fiqh include a chapter on kâdhî. See, for example, Kâsûnî, Badâ'î al-sanâ'î, Cairo 1327, xvii, 40-65; Khâlî b. Išâkî, Mûkalâsîr, tr. Bousquet, Algiers 1964, iv, 50-1. For comparisons between schools: Ahmad Fâlî Bahnâsî, al-Dârâmîs fi 'l-fîsh al-islâmî, Cairo 1959, 125 ff.; L. Bercher, Les Délits et les peines de droit commun prévus par le Coran, Tunis 1926, 119-28; J. Schacht, An Introduction to Islamic Law, Oxford 1964, 179.

(Y. LINANT DE BELLEFONDS) **KÂDI (A.), "judge", a representative of authority, invested with the power of jurisdiction (kâdashî).** In theory, the head of the community, the caliph, is the holder of all powers; like all other state officials, the kâdi is therefore a delegate (na'âbî) — direct, if appointed by the Caliph in person, and indirect and in varying degrees according to the situation if nominated by intermediate representatives (tezzîr, governor of a province, etc.). But in all cases the delegate retains the power to do justice in person (the principle of "retained justice.")

There is a kâdi in the capital and a kâdi in the leading town of each of the great territorial divisions. But each of these can appoint direct delegates. The kâdi's justice has always been exercised by a single kâdi. At the most he may be instructed to consult qualified jurists (ghariî). In the Muslim West, particularly in Spain, this practice was even elevated into a system; alongside each kâdi was a consilium of jurists, whose role was purely consultative. The collegiate system was applied only in the extraordinarily justiciable of the mazâlim [q.v.]. Moreover, there were no degrees of jurisdiction; every kâdi, although delegated by another, pronounced judgement without appeal, apart from recourse to the mazâlim.

The objective being the application of the sharî'ah, which is essentially religious law, the function of the kâdi is of this same character.

In theory, the competence of the kâdi is general, embracing both civil and penal cases. The religious nature of his office has led to the acquisition of administrative functions of the same nature, such as the administration of mosques and wafrfs [q.v.]. However, his competence in penal matters is extremely limited; being responsible for enforcing the sharî'ah, he is restricted solely to the very few crimes envisaged by that law, while their repression is currently undertaken by the shurja [q.v.], the organiser responsible for enforcing the public order. In fact, it is this organism which undertakes repressive jurisdiction in general, a function which it fulfills officially, and outside the constraints and limitations of the sharî'ah (the discretionary punishment of crimes).

In those Islamic states — such as the Ottomâni empire — which in the middle of the 19th century set out to modernize their structure, the office of kâdi had been maintained until that time. Thereafter, it has survived only within the limited sphere of personal status and certain other specialised questions (inheritance, wafrfs).

The institution of the kâdashî al-khâdî (the holders'
The kādi 'l-dījamā'a. In its origins, the institution of the kādi 'l-dījamā'a of Muslim Spain differs considerably from the kādi 'l-budāt of the East. At that time it was merely a matter of a new title which Ābd al-Rahmān gave, between 1358/755 and 1414/788, to the kādi of the Spanish territory already conquered, until then known as kādi 'l-dījund (kādi of the military district). No doubt it was to indicate that the territory over which he had just asserted his independent authority was no longer merely a province of the Caliphate, that Ābd al-Rahmān rejected the old name; and moreover that, in place of dījund, he substituted the term dījamā'a (community of Muslims), both to signify that henceforward he was the sole legitimate authority of the Muslim world, and also as a mark of distinction from the judges of the native populations, the vast majority of whom remained strangers to Islam. Thus, in the particular circumstances, it was not a question of borrowing some foreign institution; nor was it a matter of new duties coming to be added to the jurisdictional function, properly speaking. Moreover, the term dījamā'a had already been in use for a long time, in Arabo-Muslim circles, to denote the holder of an office concerned with these circles, when the Muslim were still in a minority. Thus, the judge of the group of Muslims at the battle of Yarmūk (15/636) had been called kādi 'l-dījamā'a. However, by reason of the general conditions under which he had to perform his duties, the new kādi 'l-dījamā'a, a confidant of the sovereign who for his part was absorbed by his other occupations, was naturally bound to play the part of counsellor to the sovereign, as far as judicial administration was concerned.

Having once started upon this path, the institution was not slow to coincide with the kādi 'l-budāt. Moreover, at some period after the 3rd/9th century which cannot however be defined more precisely, it is known that the kādi 'l-dījamā'a directly exercised powers of judicial administration and nominated provincial kādīs. From the beginning of the 5th/11th century, the name kādi 'l-budāt was applied indiscriminately to the kādi 'l-dījamā'a. Moreover, as was the case in the East, the small kingdoms which came into being as a result of the decline of the Umayyad Caliphate showed their independence by each creating on its own account the office of kādi 'l-dījamā'a, also called kādi 'l-budāt. It should be added that the institution did not remain peculiar to Muslim Spain, but became general throughout the Muslim West.

Ottoman Empire. According to the Turkish chronicles the appointment of the first kādi can be related to the events that made 'Othmān independent. Karadžić was occupied as early as about 1290 A.D., but 'Othmān did not appoint a kādi there until around 1300; it was then that the fāthib Dursun, who became jointly kādi and kādī̂b, first read the khutba (q.v.) in the name of 'Othmān as the sign of sovereignty (Ashkhabād, German tr., ed. R. Kreutel, 39-40; Neghr, ed. F. R. Unat, 108-10). With the expansion of the Ottoman empire the number of the bādis increased so quickly that a new office soon had to be set up to supervise them. Therefore when Murad I appointed the first kādi 'askar (q.v.) in Bursa around 764/1363, he put him in charge not only of the military jurisdiction but also of the supervision of the bādis.

The bādis were already paid under 'Othmān (Neghr, op. cit., 186) but the amount was so inconsiderable that Bayazid—although he was on the point of punishing them severely for corruption—on discovering this, ordered that they should be given two per cent of every inheritance and two akbes for each written document (Ashkhabād, op. cit., 104 and Neghr, op. cit., 338). Their salary was reviewed on later occasions, and according to Mehmed II's code they were authorized to receive seven akbes for a sidjidet (record), 12 for a copy of the sidjidet, 32 for a hādisidet (certificate), 12 for their signature, 30 akbes on the marriage of a maiden and 15 on that of a widow, and two per cent of every inheritance. Besides this, they also received a daily allowance, fixed at between 10 and 500 akbes in the time of Mehmed II.

The district of which a kādi had jurisdiction was called a kādī̂ (q.v.) or kādī̂b, consisting of one or more nākīyeh (q.v.). According to the event of the kādī̂, the bādis had a certain number of deputies, called nākīyeh (q.v.). Next in rank to the bādis of the kādī̂b was the kādī̂iŝ (of the inland lands), then the eydletis (q.v.). The bādis districts of the larger or more important places were called mevleviyets (q.v.). In the 9th/15th century the districts of the bādis in Istanbul, Edirne, Bursa, Salonik, Filibe and Sofia were mevleviyets; their number increased greatly as the empire expanded.

The bādis were appointed by the kādi 'askar if their daily allowance was less than 150 akbes; otherwise their appointment was proposed to the sultan by the grand vizier, on the basis of the kādi 'askar's opinion. From the end of the 10th/16th century, however, the increased influence of the ālīsh al-Islām (q.v.) was reflected in the appointment of the bādis. The latter were appointed to the bādis for 20 months and to the mevleviyets for one year, and after the expiry of their term they became unpaid ex-office-holders (ma'sūl bādis) until their term came round again. In the meantime, the number of the free schools, supported by the waṛf (q.v.) (religious foundations) increased so much that in the reign of Sulaymān I the number of applicants for the offices greatly exceeded the number of the posts available in the empire. Therefore from 965/1557 on, on the advice of the grand muftī Abu 'l-Su'ūd, all who graduated from higher schools and passed their final examination were officially listed in order that they would be granted posts in due course. At the beginning of the 11th/17th century there were ten applicants waiting for one kādi post to fall vacant (Koči Bey Rıseteli, ed. A. A. Aksu̇, 108). The ma'sūl system which resulted reduced not only the bādis but all the functionaries to idleness, thus affecting basically the whole administration of the Ottoman empire.

Only after the tausımāt (q.v.) was it decided that beside officials of higher ranks (e.g., the bādis of Istanbul) every ex-office-holder should receive according to his merits a half, a third or a quarter of his pay while he was unemployed. This system was called ma'sūliyet ma'sūlî.

The authority of the bādis covered such a large area of responsibility that the full meaning of the title cannot be accurately rendered by the word "judge". Besides the legal matters, they held confidential posts to which they were appointed by the government, which expected them to report from time to time on the activities of high ranking officials, the general situation and the mood of the people. They had to see that craftsmen were attached to the army before it set off to war, that roads were safe, and that goods needed for domestic consumption were not exported. As well as this they had to supervise the public affairs of the cities, the suitability of buildings, the quality of goods and their prices. They were also responsible for seeing that foodstuffs were sold at officially fixed prices and the devshirme (q.v.) conducted properly. They were important as public notaries; their function was to issue different kinds of certificates and documents concerning sales, contracts, loans and the occasional manumission of slaves, to attest private and public documents, and to supervise the accounts of the waṛf incomes and endorse them with an authentication clause.

This extended authority of the bādis was restricted in the 19th century by the endeavours of reformers, and after the proclamation of the Turkish republic the very title was abolished. Thus the institution became a thing of the past, but the vast written material pertaining to it is of great interest to historians. The bādis recorded in their sidjidets the directives of the central government and the judicial and notarial affairs brought before them and these records are one of the most valuable sources of Turkish history.

KĀDI 'ASKAR (A.), "judge of the army". The first data relating to the institution of the bādis 'askar date from the 2nd/8th century: Kindl mentions that after Şalih b. 'All had become the governor of Egypt (c. 132/750), he organized a military expedition and appointed a judge over each unit of his army (E. Tyan, Histoire de l'organisation judiciaire en pays d'Islam, ii, Leiden 1960, 529-30). In the Ayūbid state the office of the kādi 'askar (i.e., bādis 'askar) first came into being in Saladin's time (1178-93) (İ. H. Uzunçarşı, Osmanlı devleti teşkilâtı, 375).
In the Ottoman empire Murād I appointed the first kādi 'asker in Bursa in 765/1363, with authority for military jurisdiction and also supervisory powers over all kādīs. Later, in 886/1481, Mehmed II established a second office of kādi 'asker with the wide range of functions, thereby dividing the empire into two parts each containing a kādi 'asker, one for Anatolia and the other for Rumelia; the latter was the more important of the two. As a result of further conquests, in 922/1516 Selim I set up a third kādi 'asker office in Diyarbekir with the title Ṭārīkh ve ʿAjdīm ṭārīkhī, but soon after the occupation of Syria and Egypt he abolished it.

Up to the 16th/17th century the kādi 'asker was appointed on the advice of the grand vizier, and later that of the mufti of Istanbul, although it was considered desirable that both should be in agreement. The kādi 'asker, like the kādīs [q.v.] of higher rank, was appointed for an annual term, but this could be prolonged if it seemed necessary. Their daily payment (500 ʿā.Rendering) was not more than that of the kādīs; their income, however, was a great deal higher because they were awarded 15 per thousand of the soldiers' wages (recorded separately). The influence of the Anatolian and Rumelian kādī 'askers was greatly increased by the fact that both were members of the imperial council (diwan-i humāyûn [q.v.]). Besides this, they were authorized to appoint kādīs who received less than 150 ʿā Render as well as to fill vacancies in schools and mosques. However, they began to lose their influence and leading position after the middle of the 16th century when, as a result of the activity of Abu ʿl-Suʿûd, power passed into the hands of the spiritual leader of Islam, the mufti of Istanbul. The kādi 'askers, however, remained members of the diwan-i humāyûn until the middle of the 19th century. The offices of the Anatolian and Rumelian kādī 'askers existed until 1914, when the two were united. However, the reorganized office of the Anatolian kādi 'asker was short-lived, for it was abolished under the Turkish republic.

**AL-KÂDI 'ASKAR — AL-KÂDI AL-FÂDIL**

Al-ʿÂli al-ʿAbd al-ʿRahîm b. ʿAli b. Muḥammad b. ʿAlāʾ al-Lârîmî b. Baysânî al-ʿAskâlînî, Muḥîyî (Muqâirî) al-Dîn, the famous counsellor and secretary to Saladin, was born on 15 Dîjmâdâ II 549/3 April 1153 at ʿAskalânî [q.v.], where his father, a native of Baysân, known as al-Kâdi al-ʿArâfî, was the judge. He was put by his father into the Diwan al-ʿînqâdî at Cairo as a trainee, about 545/1152-3. Already before 548/1153 he entered the service of the kādi of Alexandria, Ibn Ḥadîdî, as a secretary. As the elegant reports he drafted there brought him to the attention of the Cairo authorities, he was recalled to Cairo by the last representative of the family of viziers, the BâSH Ruzikî, al-ʿÂli Ruzikî b. al-Ṣâliḥ Ṭalîfî, as head of the Diwan al-Dîyyâ [see Diwan]. A little later, when Ruzikî had been set aside by Shâwar, the prefect of Kûs, al-Kâdi al-Fâdîl entered the service of Shâwar's son Kâmil as secretary, and, after the murder of Shâwar, the service of Shîrkhî, his successor as vizier. In 563/1167-8 his brother, Ibn al-Kâhîlî, the director of the Diwan al-ʿînqâdî under whom he had begun his career, in his functions, and, after the death of the latter on 23 Dîjmâdâ II 566/4 March 1171, he became his successor, Saladin having meanwhile taken over the functions of vizier. The following year, after the death of the last Fâqîmîd, when Saladin himself became ruler of Egypt, al-Kâdi al-Fâdîl was his right-hand man in the execution of the necessary reforms in the fiscal and military administration. He then accompanied the sultan on his expeditions to Syria; from 585 to 586/1189-90 he remained in Egypt to control the administration of finance and reorganize the army and the fleet. Subsequently he returned to Syria and stayed with Saladin until his death on 27 Şâfar 589/5 March 1193.

When al-Malik al-ʿĀdîl, who had seized power in Damascus, rapidly compromised his position by imprudent actions, al-Kâdi al-Fâdîl went to Egypt to serve al-Malik al-ʿAzîz. Soon afterwards war broke out between the two brothers, but al-Kâdi al-Fâdîl, through his mediation, brought it to an end in 591/1195. After this he returned to private life. He died suddenly on 6 or 7 Rabîʿ II 596/26 or 27 January 1200.

Of the official writings of al-Kâdi al-Fâdîl while at the Diwan al-ʿînqâdî, many examples have survived, in manuscript form (Helbig, see below), in early collections such as that of his emulator a century later, Muḥîyî al-Dîn b. ʿAbd al-Ẓâhir, al-Durr al-naṣîm min tarâsul ʿAbd al-Rahîm, ed. Cairo 1959, in the works of chroniclers such as, in particular, his colleague and friend ʿImâd al-Dîn al-Īṣâbihânî [q.v.], or at a later date Abu ʿAbâma, in collections of ʿînqâdî such as that of al-Kâlahshandî [q.v.], in particular, and lastly in various works such as the Kharîda of the same ʿImâd al-Dîn (for a correspondence with Usâma b. Münqûd see H. Deroenbourg, *Vie d'Ousama*, 383 ff.). While he was in office, he also edited an official diary known by the name of Mutadîdîdîdî (according to Mâqûdî) or Muḥâzîdîdî (according to Kamâl al-Dîn b. al-ʿAdîm, according to the latter the compilation of the historian of the same period Abu ʿGhâlib al-Īṣâbihânî), of which considerable extracts have been preserved by these writers. Al-Kâdi al-Fâdîl was also the author of a considerable volume of poetry in part mingled with his correspondence. It has often been said that al-Kâdi al-Fâdîl was vizier as well as vizier of the Fâqîmîd, never took a vizier himself. Al-Fâdîl was, however, a counsellor whose advice was heeded, and the director of his chancellorcy. The personal prestige he enjoyed in his old age was considerable; but it was not so much to the loftiness of his moral purpose, as to the exceptional quality of his private and official epistolary style that he owed his extraordinary reputation among his contemporaries and his emulators in subsequent generations. This style, which can be compared to that of his collaborator and friend ʿImâd al-Dîn al-Īṣâbihânî, combines richness (perhaps a little less prolix) and suppleness of form with a realistic treatment of the facts, a lesson too often forgotten by later writers, which makes his correspondence a valuable historical source. It is all the more strange to note that the work, which was considered to be a model by thousands of secretaries, has not yet found an editor in modern times. The Diary is lost, the Diwan has been published recently.
(by Ahmad A. Badawi and Ibrahim al-Ibyarl, Cairo 1961, 2 vols.), but the correspondence is still only accessible in the form of extracts found in the works mentioned above. The ideal would be to establish a concordance of all these extracts and manuscript collections; a long, exacting, but indispensable task, which was begun but by no means finished by Helbig, and which will be taken up again.

Bibliography: Almost everything said by the numerous authors who devote a monograph to al-Kādī al-Fādil goes back to the chroniclers of Ṣālah al-Dīn and to the account given by his friend ʿImād al-Dīn, who died a few months later, and reproduced by Abū Shāma s.a. 596. In addition, see in particular Ibn Khallīkān, no. 384, and Ibn ʿAbd al-Zāhir, op. cit. In modern literature the fundamental work is still that of Ad. Helbig, Al-Qādī al-Fādil, Diss. Heidelberg, 1908. See also Walther Björkman, Beiträge zur Geschichte der Staatskantes im islamischen Ägyptien, 1928, and Horst-Adolf Hein, Beiträge zur Ayyubidischen Diplomatik, Diss. Freiburg/Br. 1968, with bibliography; GAL, I, 315, S.I, 549; Hilmy M. Ahmad, in Historians of the Middle East, ed. Holt and Lewis, 95-6 and n. 16; A. E. Ehrenkreutz, Saladin, Albany N. Y. 1972, index. (C. Brockelmann [CL. CAHEN])

AL-KADĪ AL-HARRAWĪ [see AL-ʿABBĀDI].

KĀDĪ KĀHN, FAKHR AL-DĪN AL-HASAN B. MANŞŪR AL-FARGHĀNĪ, 6th/12th century Hanafi jurist (d. Ramadan 592/August 1196), a native of Transoxania, who wrote commentaries on those works of Muhammad al-Shaybānī, Abū Hanīfa’s disciple, recognized as ẓāhir al-ruʿidya (authentic version). A few manuscript copies of his commentaries are extant, notably a Sharh al-Dīdmiʿ al-saghir and a Ẓahr al-Ziyādīdī, which was another collection of practical decisions but was rather a theoretical work, analogous in form and in substance, to the Ẓahr al-riʿaḍyā of al-Māʾṣūrī. Nevertheless, Kādī Kāhn was less preoccupied than the other jurists with abstract explanations and methodological cāzās; this was perhaps the reason for the success of the Fatāwā in the eyes of practitioners, especially in India, where the first printed editions of the work appeared (Calcutta 1835). Nowadays the preferred text is the Būlāk one, where the text is printed on the margin of the first three volumes of Fatāwā hindīyya (1310).

Kādī Kāhn was one of those men whom the Hanafi school agreed should be classed as qualified to handle iḍīthād [q.v.] and to put forward new solutions in legal matters. He was the last jurist of the classical period of Hanafi law, a time when a measure of legislative creativity was still possible.

(Th. W. Juynholl — Y. LINANT DE BELLEFONDS)

KĀDĪ L-KUDĀT [see KĀDĪ].

KĀDĪ MUHAMMAD, a Sūfī of the Shāfiʿī madhhāb, b. c. 1395, was head of the leading aristocratic and religious family of Mahābāb [q.v.] (the principal town of the Kurdish part of the province of Ādharbaydān since separated as the Third Ostān), where there was a tradition of lively Kurdish cultural activity. After succeeding his father, ʿĀlī, as kādī he quickly established a reputation for outstanding competence and incisiveness alike as judge, orator and practical man of affairs.

In August 1941 the Anglo-Russian invasion of Persia was followed by a general rising of the Kurdish tribes and the total breakdown of the machinery of government. At Mahbāb a committee of townspeople, headed by the kādī and supported by the tribal chiefs, took over the local administration. A political party, the Society for the Revival of Kurdistan, formed by a group of young nationalist intellectuals, later co-opted the kādī as president. Kurdistan was introduced as the language of instruction in the schools, and nationalism became aroused by theatrical productions, the publication of anthologies of patriotic verse, and other journalistic activities in that tongue. Although the last vestiges of government authority had long disappeared, it was not until 22 January 1946 that the Autonomous Kurdish Republic was proclaimed with Kādī Muḥammad as president.

The withdrawal of the Soviet forces four months earlier had opened the way for the central government to reassert its authority. With the reoccupation of Tabriz on 13 December both the Mahbāb Republic and the larger Communist “Democratic Republic” of (Persian) Ādharbaydān, set up in the Turko-Kurdish-speaking parts of the province, collapsed. Kādī Muḥammad surrendered four days later and, after trial on a charge of treason, was hanged on 31 March 1947.

Although the Kurdish Republic, as such, lasted only eleven months, on the committee led by the kādī had administered the district with commendable efficiency and success for over five years.

AL-KĀDĪ NUḤMĀN [see NUḤMĀN].

AL-KĀDĪ AL-TAḤARĪ [see IBN AL-RAḤĪB].

KĀDĪZĀDĒ RŪM [see SUPPLEMENT].

KĀDĪB, rod, one of the insignia of sovereignty of the caliph. As early as the Umayyad era, the rod (kādīb) or staff (ʿāṣa) was already in use, along with the seal, one of the badges of rank which was conveyed to the next of the caliph's lineage and supported by the tribal chiefs, who had administered the district. There was a tradition of lively Kurdish cultural activity. After succeeding his father, ʿĀlī, as kādī he quickly established a reputation for outstanding competence and incisiveness alike as judge, orator and practical man of affairs.

A like appurtenance of sovereign dignity is also attested in Muslim Spain, where the Umayyad caliphs possessed, along with other badges of rank, a rod called ẓāhir al-riʿaḍyā. On the other hand, the ʿAbbāsid caliphs of Cairo in the Mamluk era had lost the rod, but even so it did not pass into the hands of the sultans.
and seems no longer to have figured in the Ottoman ceremonial. Nevertheless the rod or staff (ṣapā) of the sovereign became in later literature the symbol of power, as is demonstrated in a passage from Ibn Khaldūn (Muhadadīna, part iv, ch. 4).

KADIM [see KIDAM].

KADIN [see MAR'A, SARAY].

AL-KADIR [see AL-AMIS AL-HUSNA].

AL-KADIR BİLLAH, 25th caliph of the 'Abbāsid dynasty, who reigned from 381/991 to 392/1002. Born in 336/947-8, Abu'l-ʿAbbās Ahmad b. Ishāk was the grandson of the Caliph al-Muqtadir [q.v.] and cousin of the Caliph al-Tāḥī, who was deposed in 381/991 by the amir Bahā' al-Dawla. Called to assume the caliphate by the latter, Abu 'l-ʿAbbās received the regnal name of al-Kadir bi'llah. The amir, who had met with some vestiges of resistance in al-Tāḥī, hoped to find a more tractable ruler in the person of al-Kadir, who had had to flee from the capital to escape the violence of his cousin after a family quarrel. In fact, the new caliph at first appeared to make common cause with the amir and seemed disposed to support his policies. Moreover, the proclamation was not initially recognized by the amirs in the eastern provinces; it was not until around 390/1000 that the Sāmānids and Ghaznavids decided to recognize the new caliph installed by their Buwayhid amirs, and obtained the amir's intervention in the matter of Kirwash, who re-established the 'Abbāsid khilâfa soon afterwards. He played his part by having read publicly in the palace, in Rabi' II 402/August 1011, a manifesto condemning the Fatimid doctrine, criticizing the genealogy of the Fātimid caliphs, and numbering the Isma'īlīs among the enemies of Islam. The manifesto was signed by Imāmī as well as Sunnī scholars.

The death of Bahā' al-Dawla in 403/1012 and the succession of his son Sultan al-Dawla made no great change in the political situation. It should not be forgotten that for a number of years the agitation of the Arab and Kurdish elements in Irāq had progressively weakened Buwayhid power, while the long-standing rivalry between Daylamites and Turks was ignited again in the course of any local disturbances, and incidents between Sunnīs and Shī'īs in Bagh̄dād and other towns could break out at any moment. Al-Kadir's main preoccupation was the struggle against any doctrines deemed pernicious and especially those which constituted a danger to the caliphate. From 408/1017 he demanded that the Ḥanafī jurists who held that certain doctrines of Imāmī as well as Mu'tazilī beliefs made an act of penitence; at the same time he forbade the teaching of Mu'tazilī and Shī'ī doctrines. Then, in 409/1018, he had a reading given in the palace of the text called al-risāla al-kadiriyya, a profession of faith defining the official doctrine which also conformed to the ideas of the Men of Old (Ibn al-Djawwī, Muntazam, viii, 109; A. Mez, Renaissance, 198-201; G. Makdisi, Ibn 'Asqalī, 299 ff.). Inspired by Hanbalite ideas, this text condemned not only Shī'ism in all its forms but also Mu'tazilism and even ṣaṭārīsm, which was denounced for taking a stance that was a dangerous compromise with Mu'tazilism, and also put forward the veneration of the Companions as a genuine obligation. In the same period the chief amir Sultan al-Dawla appeared in Bagh̄dād for the first time: soon after, he retired to Iran and ceded his position to Musharrīf al-Dawla, who turned up in Bagh̄dād in Muharram 414/March 1023 and demanded that the caliph come to meet him. Al-Kadir complied, but he protested soon afterwards when, without seeking the caliph's authorization, the chief amir wanted to renew the Turkish chieftains' oath of allegiance and procure the amir's vow of submission and fidelity.

The rivalry which broke out between the Buwayhid princes after the death of Musharrīf al-Dawla in 416/ 1025 gave the caliph the opportunity to play a truly political role once more. Opposed were Djalāl al-
Dawla, the brother of Musharrif al-Dawla, who at once secured the proclamation in the name of his name, and Abû Kâldjîr [q.v.], his nephew, who had himself proclaimed chief amir by the troops, an announcement ratified by the caliph until those same troops were deserting Abû Kâldjîr and rallying to Djâlî al-Dawla. The latter arrived in Baghdad in 418/1026, installed himself in the amiral palace and assumed certain caliphal prerogatives, but less than a year later the troops clamoured for his dismissal. Al-Kâdîr despatched the chief notables, the two nakibs and the kâdîb, to inform him that he must withdraw; he did so and was prohibited from returning to the capital for some time afterwards.

The caliph devoted the last years of his reign to reinforcing 'Abbâsîd propaganda. During 420/1029 three letters were solemnly read aloud from the palace: the first denounced Mu'tazzism anew; the second attacked in particular the doctrine of the "created Qur'în"; while the third proclaimed the superiority of the early caliphs and affirmed the obligation to "command good and forbid evil". At the same time doctrines favourable to Mu'tazzism had to be duly amended and the preacher at the mosque of Barâkh was dismissed as a Shi'i extremist. Moreover the caliph received frequent reports of events in the eastern provinces, where Mahmûd of Ghazna harassed the Shi'is and further extended Islamic power by settling out on the conquest of India, while at the same time engaging in battle against the Buwayhids, seizing Rayy in 420/1029 then attacking Kirmân in 422/1031. In 421/1030 the ageing caliph secured the succession by declaring his own son Abû Shâfar his heir without any reference to the chief amir. On his death in 422/1031, though it had not regained its traditional power, the caliphate had won a considerable amount of prestige. Above all Al-Kâdîr had worked effectively for the restoration of threatened Sunnis and in this way achieved ends as much political as religious. Al-Kâdîr's activities were reflected by the redaction of two treatises on public law, the two works entitled Al-Ikhbâm al-sulâîniyya, the one by the Sharîf al-Mawâridi, and the other by the Hanbali Ibn al-Fârâbî [q.v.].

Bibliography: The basic sources are: Abû Shudjî, Dâyî tadârîj al-îmam, passim; Ibn al-Djâwâl, Munîtâzîm, viii-viii; Ibn al-Athîr. Other sources are mentioned in the following: M. Kabir, The Buwayhid Dynasty of Baghdad, Calcutta 1963, passim; H. Busse, Chalif und Grosskonig, Die Buwayiden im Iran, Beirut 1966, passim; see also H. Laoust, La pense et l'action politiques d'al-Mawarînidî, in REI, xxxvi (1968), ii-ii; C. E. Bosworth, The Ghassânids, Edinburgh 1963, passim. (D. Sourdell)

Al-Kâdîr, Abû 'Abbâs Allâh Mu'mmânî, Al-Tabyîn b. Al-Sâlim al-Masani al-Kâdîrî, Sharîf, Moroccan historian and biographer, born in Fâs on 7 Rabî' I 1256/14 April 1712, died in the same town on 25 Shâhîbân 1197/11 November 1773. He was a pupil of the leading scholars of his time or, unlike them, throughout his life revealed an almost complete detachment from the good things of this world. Quite early he turned to Sûfism and, to make his living, was content to act as an 'âddî (legal witness to a deed). Al-Kâdîr left a fairly considerable number of writings. In the list of works, compiled by himself, Al-durar, fol. 104 v.), some of the most noteworthy of these (apart from works relating to Muslim learning) are a monograph relating to the saint Kâsim al-Khâsîsî, a short work devoted to the aṣbâfî of Sicilian origin, an obituary in râsatî on the family of the Fâsiyyûn [q.v.], an appendix to the Kifâyât al-mu'âjadîj of Ahmad Bûbâ [q.v.], etc.: but the most important of Al-Kâdîr's works is his dictionaries of the celebrities of the 11th/12th and 12th/13th centuries, the Ilkhbât al-âdâr and the Nashîr al-mathânî. The first exists only in a few manuscripts. The second, thanks to the lithographed edition (2 vol., Fâs 1310/1892 with an error of pagination in vol. ii between pages 161 and 249) and the French translation (vol. i, tr. A. Graulle and Maillard, in Arch. Maroc., xxii (1913); vol. ii, tr. E. Michaux-Bellaire, ibid., xxiv (1917)) is well known. These two works, probably the last written by the author, fulfilled the same purpose. While the hagiographic record compiled by Ibn 'Askâr [q.v.] had been continued for the 11th/12th century by al-Ifrînî [q.v.], for this same century there existed no dictionary of Muslim celebrities of all types. It was this gap that Al-Kâdîr set out to fill, although he seems to have been unaware of the existence of the Sâfawî man inatâshar of al-Kattânî [q.v.], written at about the same time. The first results of his researches were recorded in the Ilkhbât al-âdâr wa-mustâfâd al-ma'âsidîj wa'l-âhmar min ahbâb a'îdân al-mîsî al-dhâniyya wa'l-hidâya 'ashâr (in which also contained autobiographical elements). In a revised, completed and often abridged form, this work was presented under a new title, Nashîr al-mathânî la-mi'-al-khâm al-khdîr wa'l-khâmî. The two works thus resemble each other closely. They possess an original feature in that, following the obituaries for each year, they almost always give a résumé of the outstanding political and military events of that year. It seems that Al-Kâdîr also produced another version of the Nashîr al-mathânî, aside from the one lithographed at Fâs; this is slated by al-Kattânî (Salwat al-anfîsî, iii, 361), who had in his possession a more complete Nashîr, covering the period until 1183/1769. This more extensive edition was said to be entitled Al-Asbâr al-nâdiyya fi ahbâb aîdân al-mîsî al-dhâniyya wa'l-thânîsî. Al-Kâdîr was familiar with the whole body of literature relating to the Sa'dids [q.v.]; but his sympathies lay primarily with Muslim scholars, whether they were like himself Moroccan or not.

Bibliography: In addition to the references given in the text, see: Kattânî, Salwat al-anfîsî, lith. Fâs, 1310/1898, ii, 351 (Graille in the introduction of his translation), without regard to the original order has translated Kattânî's note on Al-Kâdîr; E. Levi-Provençal, Chorfa, 319-26 (indispensable); 'Abî al-Sâlim b. Sûdâ, Dâlî mu'ârîkh al-Maghrib al-âksî, Tetuan 1369/1950, no. 3; I. Allouche and A. Regragui, Catalogue des manuscrits arabes de Rabat, 2nd series, Rabat 1958, nos. 2306-8 and 2161; M. Lakhdar, La vie litteraire au Maroc sous la dynastie 'alawite, Rabat 1971, 240-1 and index. (G. Derendorf)
'l-Abbas (it deals with Abnab b. Muhammad b. 'Abd Allah Ma'm al-Andalusi, in whose company he had visited the Holy Places). He is also the author of the following works: 
_Djuubād fi 'l-nasab al-Hasāni wa l-ḥusaynī;_ 
_Taḥīf fi nasab al-aṣrāfī_ fi 'l-Ala'wisīyyīn;_ 
three poems in _rajdā_ metre: one on the Companions of the Prophet who had emigrated to Abyssinia, the second on the mosques in which the Prophet had prayed, and the third in _yād_ rhyme on the masters of his time. He passed the rest of his days in the odour of sanctity, devoting himself to the perusal of works of mysticism, and associating only with saints, such as Kāsim al-Khaṣṣā, Muhammad al-ʿArabī Barqalla, and the aforementioned Abnab b. Muhammad b. 'Abd Allah Ma'm. Previously at Fez, he had followed the courses of al-ʿUsī and 'Abd al-Ḳādir al-Ṭāḥī. He died at Fez, Monday 19 Djuumada I 1133/18 March 1721, and was buried outside the Bab al-Futūh near the oratory of ʿAdwāt al-Andalus.

Muhammad al-ʿArabī, who wrote the draft of this, when he was about to travel to the Holy Places). He is also the author of the following works: 

signified that he subordinated his will to that of the former (al-Suhrawardi, i, 192). A long list is given in the Bakdja of men who attained various degrees of distinction who had received the khirka from 'Abd al-Kâdir, two of them at the age of seven and one at the age of one. These persons were said to “ascribe themselves” (intasaba or intamad or even tasammd) to 'Abd al-Kâdir, and could bestow the khirka on others as from him; in doing so they would stipulate that the murid was to regard 'Abd al-Kâdir as his shaykh and director after the Prophet. In a tradition which is likely to be apocryphal (Bakdja, p. 101, dated 592/1196), 'Abd al-Kâdir declared that assumption of his khirka was not absolutely necessary for entry into his Order; personal attachment to himself was sufficient. It would appear that during his lifetime several persons carried on propaganda in favour of his system; one 'Ali b. al-Haddâd obtained proselytes in Yemen, and one Muhammad al-Bâti'î, resident in Baalbek, did likewise in Syria; one Ta'ki al-Din Mu'mammad al-Yûnînî, also of Baalbek, was another propagandist, and one Muhammad b. 'Abd al-Samad in Egypt “ascribed himself to 'Abd al-Kâdir and in treading the Path relied on him after God and His Apostle” (Bakdja, pp. 109, 110). Since all who ascribed themselves to him were promised Paradise, the Order is likely to have been popular; and even in recent times missionaries in Africa appear to have little difficulty in obtaining fresh adherents to it (cf. O. Lenz, Timbuktû, ii, 33).

That 'Abd al-Kâdir’s sons had some share in spreading it is likely, though Ibn Taymiyya (d.728/1328) mentions that he had associated with one of his descendants who was an ordinary Muslim and not a member of it, and so did not agree with those who held fanciful views about him (Bukhayt al-Murtad, i, 124). The Bakdja however does not bear out Le Chatelier’s assertion (Confréries Musulmanes du Hâdjas, p. 35) that in 'Abd al-Kâdir’s life-time some of his sons had been preaching his doctrine in Morocco, Egypt, Arabia, Turkestan and India. It says much of 'Abd al-Razzaq, but nothing of the “mosque now in ruins, whose seven gilded domes have often served as the subject of foundation inscriptions recorded by J. P. Brown, the candidate could recognize him among a thousand. The form of Kâdirism which means the worship of ‘Abd al-Kâdir seems to prevail in North Africa, where it is called Djalilism (or Djilanism), and whole communities are called Djalil. Their system has been described as the application of Sâ'î mysticism to beliefs that are certainly pre-Islamic, and the materialization of that mysticism under the form of a cult of hidden subterranean powers (Michaux-Bellaire, in Archives Marocaines, xx, 235). Here the word khâlûs is used for a heap of stones where women attach rags to reeds planted between the stones and where they burn benzoin and styrax in pots with which they treading the Path relied on him after God and His Apostle. Nor does it confirm the statement that this 'Abd al-Razzaq introduced the use of music in the ritual, and indeed the employment of this was earlier than 'Abd al-Kâdir’s time, and is discussed by al-Suhrawardî (ii, 116) without allusion to 'Abd al-Razzaq. E. Mercier (Histoire de l’Afrique Septentrionale, iii, 14) asserts that the Kadiriyya Order existed in Berbery in the 6th/12th century and was closely connected with the Fâtîmins (whose rule terminated 567/1171), but he gives no authority for these statements.

Al-Suhrawardî holds that the exercises of each murid should be determined by his shaykh in accordance with his individual needs, whence it is unlikely that 'Abd al-Kâdir instituted any rigid system of dhikr, wîrd and ḫisti, and indeed those in use among different Kadiri communities differ (Rinn, Marna- bous et Rkouan, p. 185 ff.). The initiation ceremonies given on Turkish authority by J. P. Brown (The Dervishes, p. 98) are quite different from those furnished by Rinn on Native African authority. In one of these latter there is a tendency to set 'All above Muhammad and to insist on the importance of Hasan and Husayn, which cannot well represent the views of the Hanbalite 'Abd al-Kâdir. The wîrd of 'Abd al-Kâdir in al-Fuyûdî al-Rabbânîyya is given on the authority of one 'Abd Allâh b. Muhammad al-Adjamî, who lived 185 years (536-731) and may be regarded as mythical.
KADIRIYYA

Hanball, membership is by no means confined to
that school, and the Order is theoretically both toler-
ant and charitable.

3.—Geographical Distribution. Since his-
torical and geographical works rarely distinguish
between the different jiruk in their accounts of re-
ligious buildings, little can be said with certainty of
the date at which the first Kadirī zawiyas or khandān was
established in any country save al-‘Irāk. The Order is
said to have been introduced into Fez by the
posterity of two of ‘Abd al-Kadir’s sons, Ibrāhīm (d.
592/1196 in Wāsiṭ) and ‘Abd al-‘Azīz (who died in
Qīyāl, a village of Sindiār); they had migrated to
Spain and shortly before the fall of Granada (897/
1492) their descendants fled to Morocco. The full
genealogy of the Shurāfā al-Jiliyya of Fez is given in
Arch. Maroc., iii, 106-114, on the authority of al-Durr
al-Sani of al-Kadiri al-Hasanī (1090/1679), who
claims to have used a series of authentic documents.
The khalīfa of ‘Abd al-Kadir in Fez is mentioned as
early as 1104/1692-3 (ibid., xi, 319). The order was
introduced into Asia Minor and Istanbul by
īsmā‘īl Rūmī, founder of the khandān known as the
Kadiri khanānah at the Topkhane. This personage
(d. 1041/1631), who is called Fīr sohīn, “Second
shaykh,” is said to have introduced certain tekhīs in
these regions (Kāmūs al-A‘lam). A Kadirī ribāḥ in
Mecca is mentioned by Sālib b. Mahdī in al-‘Ālam
al-Shāmīkh, p. 381, about 1180/1767, but the
assertion that a branch was established there during
the lifetime of ‘Abd al-Kadir (Le Chatelier, op. cit.,
p. 44) is not improbable, since Mecca has a natural
attraction for the Šūfīs. In the A’in-i-Abkhar (about
1600; tr. Jarratt, iii, 357) the Kadiariyya Order is
mentioned as one that is highly regarded but is not
included among those recognized in India; nor does
there appear to be any allusion to it in the list of
Indian Šūfīs in the Maṭādīr-i Kirmān (1752), though
some other Orders are mentioned, and ‘Abd al-Kadir
himself is mentioned. Yet see Khāfī Khān, Muntak-
bhat al-Lubāb, ii, 604 and art, hind, p. 432.

Some statistics (to be received with caution) of
the Kadirīs and their zawiyas are given by Deport
et Coppolani (Confréries Religieuses Musulmanes, pp.
301-18). Much of its development is admittedly re-
cent, and may be due to the fame won by the name-
sake of ‘Abd al-Kadir [p.v.] who for so many years
resisted the French occupation of North Africa. It is
doubtless represented in all Islamic countries, though
it would appear that certain derived jiruk enjoy
greater popularity in many places. Thus the Kadrism
of Touba in Guinea, which has become a distinct sign
whereby the Diakanke tribe can be recognized, is
derived through the Sidia from the Kadirism of the
Kounta of Timbuctu (P. Marty in Revue du Monde
Mussulman, xxxvi, 183). These Kouta however form
a filiale of the Kadiriyya, and some of them prefer
to call themselves Shāhījlīyya (ibid., xxxi, 414).

4.—Organization. The Kadirī community ac-
knowledges nominal allegiance to the keeper of ‘Abd
al-Kadir’s tomb in Baghdād, and the deeds of invest-
ture published by Rinn, p. 179, and in the Revue du
Monde Mussulman, ii, 513 and ix, 290, are from this
source. It would seem however that the actual
authority of this personage is chiefly recognized in
‘Irāk and Pakistan. The latter periodically send
gifts which form the main source of the revenues of
his establishment; the members of this family find
it worth while to learn Urdu. The Meccan zawiyas
were subjected to the Shaykh al-Turuk, who had the right
to nominate their muhammad. The Egyptian branch
was under the control of the Sayyid al-Bakrī, who was
also Shaykh al-Turuk; All Pasha Mubārak (iii, 129,
see also P. Kahle in Der Islam, vi, 154) reckons the
order as one of the four which go back to a kub, but
asserts that it has neither jiruk nor buyūl. In
Africa, according to Rinn, each muhammad names
its successor; in the event of one dying without hav-
ing nominated anyone, an election is made by the
sheikhs at a bafrā. The approval of the head of the
Order in Baghdād is then solicited, and has never been
refused. The organization of the Order in North
Africa is described somewhat fully by Rinn, Deport
and Coppolani, in the works cited. The system appears
to be in general congregational, i.e., the zawiyas are
independent, and the relation between them and the
central institution in Baghdād is very loose. The
principle whereby the headship of a zawiyas is hered-
tarily is generally recognized.

5.—Symbols and rites. The sign of the Turkish
Kadirīs was said to be a rose which is green, having
been adopted by Īsmā‘l Rūmī. The candidate for ad-
mission to the Order after a year brought an arasiyya
or small felt cap, to which if the candidate be accepted
the Shaykh attached a rose of 18 sections, with
Solomon’s Seal in the centre. This cap is called muqābīl.
The symbolism of this is explained by
J. P. Brown, The Dervishes of Touba in Guinea, and shrines of
the saint (Rinn, p. 177). The Maisūm of the Dijlāla at Salé is described at length by L. Mercier in
Arch. Maroc., viii, 137-9; it commences the seventh day of the Mūlūd (Mawsīm), i.e., the Feast of the Prophet’s
Birthday, and lasts four days 17-20 Rabi‘ II. Sheep
and oxen are presented to the descendants of ‘Abd
al-Kadir. Michaux-Bellaire distinguishes in Morocco be-
tween the ceremonies of the Kadiariyya, who recite the
hīb, and the Dijlāla, who recite the ḍikr to the accompaniment of instruments; and again between the
Dijlāla of the country, whose instruments are the
bendar (a sort of big tambourine without bells) and
‘awdā wa ‘awdā, and those of the town, whose instruments are the ḥub, ḥalab and ḡayāq (Arch. Maroc., vi,
330 and xvii, 60). A description of the bahārat
malālikh, a performance executed with these last in-
struments, which leads to ecstasy, is given by him in
the first passage cited. He further records some special ceremonies connected with the Awlād Khālīfah
in the Gharb (ibid., xx, 287). All the Hālīfah of the
Gharb are Dijlāla, and in all the bahārat (services)
of the Dijlāla the presence of at least one Khālīfah is
necessary for the direction of ceremonies, and when
no actual Khālīfah is present, someone there takes the
name in order to perform the priestly duty. The
origin of the name Awlād Khālīfah is obscure (p. 284);
it may be noticed that the Bahārī mentions one Khā-
līfah b. Mūsā al-Nahramliki as having played a leading
part in the propagation of ‘Abd al-Kadir’s system.
The bahārat of the Dijlāla of the country contains
neither the hīb nor the ḍikr instituted by the
Shaykh, but a plain ḍikr of improvised words in the
ceremonial rhythm of the banādīr (plur. of bender).
These improvisations always terminate with the

...
words 'Thus spoke Mawlay 'Abd al-Kadir' or 'O Mawlay 'Abd al-Kadir.'” (Michaux-Bellaire, p. 288).

Various collections of rituals supposed to have been recommended by 'Abd al-Kadir have been published in Egypt, Turkey and India. In al-Fuyûdî fi al-Rabbâniyya he who is about to enter upon khâlwa (retreat) is advised to fast in the day and keep vigil at night. The khâlwa lasts forty days. 'If a figure reveals itself to him saying 'I am God', he should say 'No, it is not thou art in God' and if it be for prostration, it will vanish; but if it remain, then it will be a genuine revelation (taqaddî).'” (Dîhî 1330, p. 60). Reduction of food during the 40 days should be gradual till for the last three fasting is complete. At the end he returns by degrees to his former diet.

Some practices peculiar to the Dilâla of Tangier are recorded by G. Salmon (Arch. Maroc., ii, 108). Those who make vows to 'Abd al-Kadir are in the habit of depositing in the zauïya white cocks, which are called muharrar (Sûra III, 31); they do not kill them, but leave them free to rove about the zauïya, where however they do not long survive; the sharîf who lives hard by takes them for his food. The four daughters of a deceased sharîf continued to live on the revenues of the zauïya and carry away the muharrar fowl. The muhaddam at this zauïya was the sharîf, who conducted the ceremonies at which the kûrân is repeated without the khêt of 'Abd al-Kâdir being pronounced, and where dances similar to those of the Īsâwî (q.v.) are performed. Circumcisions are performed at the zauïya on the first day of the mauisî. A nightly meeting called layla is held on the eve of this day, at which the khêt of 'Abd al-Kâdir is recited. At El-Qsar, where there are also some local practices, all the potters belong to the Dilâla, among whom the richer members of the community are to be found (ibid., ii, 165).

The first time that the Kâdirîs appear to have played a political part was during the French conquest of Algeria, when the chief of the Kâdirîyya, Muhîyî 'l-Dîn, having been offered the leadership in the war against the infidel, permitted his son 'Abd al-Kâdir to accept it. This person was able to utilize the religious organization of his Order in order to establish the sovereignty which the French had accorded him, and when his sovereignty was threatened could fall back on his rank as muhaddam of his Order to win fresh recruits (H. Garrot, Histoire générale de l'Algérie, Algiers 1910, p. 800, 863 ff.). After his fall and exile it seems that the Kâdirîs in Africa lent their support to the French government. "In 1879 when there was a local insurrection in Aurès the shaykh of the Kâdirîyya of Menâsî, Si Muhammad b. 'Abbâs, displayed unimpeachable loyalty [see AWRAS]; and the same Order helped the French government to extend their influence in the Sahara at Wargla and El-Wad. Their nânîh, Si Muhammad b. 'Tayyîb, fell on the French side at the battle of Charouin, March 2, 1901." (Israël Hamet, Les Musulmans Français du Nord de l'Afrique, Paris 1906, p. 276).

Bibliography: Oriental editions cited: 'All b. Yusuf al-Šârāna, Baḥǧat al-Aṣrâr, Cairo 1904; al-Fath al-Rabbâni, Cairo 1902; Šâlîh b. Mahdî, al-Šâmîkî b. Ibrâhîm b. Ṣâhîh al-Baḥǧat, Cairo 1916. Established of these being the sanam Hirkî or mandrát Hirkî. Thanks to the geographer of Almeria who is known by the name al-Zuhri, we have some idea of the appearance of the tower at Cadiz, since we possess the eye-witness account of a writer who saw it on several occasions before its demolition in 1540/1145 and who states that the building in question was not the temple of Hercules with which it has often been confused, notably by the author of the Rawd al-mu'âdîr. This square manâra, 100 cubits and three storeys high, was constructed of dressed granite (kadhîkhân); the second storey was about one-third the size of the first, and the third, triangular in shape, was surmounted by a statue of a man looking towards the East, from the ocean, with his left arm outstretched and his fingers curled, except for the index finger, which pointed the way to the straits of Gibraltar. His right hand held a baton which seemed to indicate the sea (the author states explicitly that it was not a key). The date of construction of the Cadiz tower is unknown, but we must assume that it goes back to a period before the official introduction of Christianity to Spain, since the account refers solely to a statue, a purely Roman sign.

A member of the celebrated family of the Banû Maymûn of Denia became amîr of Cadiz at the end of the Almoravid period. Having been led to believe that the manâra, erroneously called the Tower of Hercules, had been constructed on top of a vast treasure, 'All b. 'Isâ b. Maymûn summoned a force of stone-masons and labourers who set to work removing the outer stonework; each time a block of stone was removed, a wooden beam was inserted into the empty space, with the result that in the end the vast mass of the tower rested only on wood. Then, after the spaces had been filled with wood, this support caught fire and the tower collapsed with a stupendous crash; all that could be found in the rubble were the lead that had served to bind the blocks of stone together and the brass from which the statue had been made. Ibn Maymûn's vain pretensions were thus exposed, and shortly afterwards he was assassinated by 'Vâlkâ, the grandson of the founder of the Almoravid dynasty.

KADIS — AL-KADISIYYA

Cadiz has been published by Dozy in his Recherches, appendix xxxv; it will be found in §§ 239-40 of the K. al-Dja'afriyya, published by M. Hadji-Sadok in BEO, xxi (1968), 7-312; cf. al-Rawd al-mufràd, ed. Lévi-Provençal, 145 in the text, 173-8 in the tr.—The Arabic and mediaeval sources on legends relating to the temple of Cadiz and the pillars of Hercules have been collected by Dozy, Recherches, ii, 311-4; see also R. Basset, Hercule et Mahomet, in Journal des Savants, 1903; Mados, Diccionario, v, 191004.

(A. HUICI MIRANDA)

AL-KADISIYYA, the name of several places in ’Irāk and al-Djazira. The Mu'tamar of Yākūt (337) lists five places of that name of which the two most important were situated near Sāmarrā and al-Kūfa. The history of these places is most difficult to trace.

1. A town in ’Irāk, on the Eastern bank of the Tigris, 8 miles S.E. of Sāmarrā. It seems to have been closely connected with the latter in its period of prosperity. We do not know what special part al-Kadisiyya played at that time. Herzfeld, (Reise, i, 107) suggests it is really identical with the town of al-Kâtūl which Ḥārūn al-Rašīd or the Caliph al-Mu'taṣim began to build before the foundation of Sāmarrā. Yākūt and other Arab geographers mention the glass-works of al-Kadisiyya, and it is reported to have been a large village (karya kabira) but little is known of its history. It is probable that it ceases to be of any importance shortly after the abandonment of Sāmarrā towards the end of the ninth century, for the 10th century geographers al-İstakhrl and Ibn Hawkal make no mention of it. It is found in al-Mu'kaddasī, but the reference seems to indicate the existence of a single structure, presumably the octagonal building which still survives today. In the middle ages the important Djedjail Canal left the Tigris opposite the town. The ruins of al-Kadisiyya lie in Lat. 34°5' N., between the two canals still existing out of the former three Tigris canals, called al-Kâtūl. They are a short quarter of an hour distant from the bank of the Tigris. The old name has survived and is now popularly pronounced Djasīsiyya (occasionally corrupted to Djaṣṣīyya, Djaṣṣīla). We owe full accounts of these ruins particularly to Ross and Jones; E. Herzfeld also investigated the ruins. Jones gives a plan of the ruins of the town, which Herzfeld says is entirely correct.

The enclosing walls, which measure about 6000 paces, form a regular octagon. They are flanked by towers at the corners and defended by 16 bastions at intervals. They were built of bricks which in technical terms are reputed to be of the best kind. A. Musil, on his journey of exploration in 1912, was the first to discover the real site of al-Kadisiyya and identify it with the early Islamic ruins of al-Ukhaybīr, a station on the Baghdad-Mecca road. The exact location of al-Kadisiyya was unknown until quite recently. An attempt had been made to identify it with the early Islamic ruins of al-Ukhaydir (25 miles S.S.W. of Kūfa)—for example by Ritter, Erdkunde, ix, 956, Loftus, Travels in Chaldaea and Susiana, London 1857, 64 note, and Justi in the Gr. i. Ph., ii, 540. This identification, however, is definitely to be rejected as erroneous (cf. the article of W. Cosek, Ukhâdir, in Is., xxix (1964), 28-37, which calls for an ’Abbāsī date for these ruins).

Besides, Ritter, op. cit., x, 186 places al-Kadisiyya much too far north, while the locations of al-Kadisiyya and al-'Udhaybīyīn given by Wagn. (Nachr. d. Göt. Gesellsc. d. Wiss., 1902, 257-9) are fairly correct. A. Muṣil, on his journey of exploration in 1912, was the first to discover the real site of al-Kadisiyya, cf. his report, in Is., xxxix (1960), 248-7-37, which calls for an ’Abbāsī date for these ruins). Musil there remarks that the spring al-Śawdd rising above the cultivated land and to the south-south-west of the plain where al-Kadisiyya stands was known as the find-spot of a statue some consider to be a statue of an important deity. This victory was of no small importance to the Muslims for it gave them the power to cross the Zagros and undertake the conquest of the whole of Persia.

Tigrisgebiet, 1, 1911, 105-107 (where the references to Rich, Ross and Jones are given).

(M. STRACK, J. LASSNER)

2. A place lying to the south-west of al-Hira [q.v.] and to the south-south-west of the plain where al-Kūfa was later found. This al-Kadisiyya is famed as the site of the resounding victory of the Muslims over the army of the Sasanian king Yazda-gird III [q.v.] at a date between 14/635 and 16/637. This victory was of no small importance to the Muslims for it gave them the power to cross the Zagros and undertake the conquest of the Arabian desert. Al-Kadisiyya was situated in the western part of the Taff, that steppe region rising above the cultivated land (al-Sawdd) and characterized by springs (e.g. that of al-Ughâyībī) which is the transitional area to the high plateau of the Arabian desert. In the Sasanian period the Taff was protected by a series of watch-houses (maslahas) and a great fortified ditch (khandak) from the raids of Arab tribes. The last village of the Taff, just before the desert, was al-Ughtaybīyīn, later a station on the Baghdād-Mecca road.

The locality of Kāides, which in his excursion to the ruins of Babylon in 1790 Beauchamp visited and reported as the find-spot of a statue somewhat similar (the report of his account of his journey in the Revue d'Assyriologie, x, 190), is perhaps also identical with the remains of al-Kadisiyya discovered by Musil. Kāides probably = Kādis, the shorter form of the name, which is occasionally found alongside Kādisiyya, as for example in an old Arab poet (see al-Bakrl, ed. Wūstenfeld, 226), in al-Tabārī, etc. Firdawsl writes Kādisī and Kādiyya. In the neighbourhood of al-Kadisiyya there was a village called al-Kudays, "little Kadis". The poets give the whole district round al-Kadisiyya the collective name al-Kawadīs.

The Arab geographers of the 4th/10th century (al-İstakhrl, Ibn Hawkal, al-Muḳaddasī) describe al-Kadisiyya as a small town with two gates and a mud
fortress, in the midst of cultivated fields and groves of date-palms, watered by a canal led from the Euphrates, the last running river in Irāk. In ancient times the Persian Gulf seems to have stretched up to the region of al-Kādisiyah. The main arm of the Euphrates once flowed, as al-Mas'ūdī notes (Munājīd, ed. Paris, i, 215 = § 229), towards al-Ḥira, where its ancient bed was still visible and was called al-ʾAtīk “the old (river)”. It flowed between al-Kādisiyah and al-ʿUghayb; at al-Kādisiyah there was a bridge across it called Ḫisr al-ʾAtīk or Ḫisr al-Kādisiyah.

The battle. To this one single battle of al-Kādisiyah al-Tabarī has devoted around one hundred pages and nearly another hundred pages to the preceding and subsequent events which must be taken into account for an understanding of this vitally important occurrence. The greater part of his account, however, is based on traditions of Sayf b. ʿUmar, whom some Islamists have accused of falsification. This is not the place for a detailed discussion of such accusations: it is sufficient to observe that Sayf’s account also forms the basis of the story related by the majority of Arab and Persian historians to such an extent that we have no alternative but to make use of this traditionalist for any account of the battle, expecting him where possible with the help of other accounts.

After the disastrous defeat of the Muslims at the Bridge [see Dīsr] (Ṣabʾābān or Ramādān 13/October or November 634) the campaign in Irāk suffered a setback, despite the arrival of reinforcements from Medina, the victory of al-Buwayh (Ramādān 13/Nov. 634 or Ṣafar 14/April 635, or one year after the Battle of the Bridge) and several subsequent and razzias. Al-Muthanna [q.v.], fearing that the hostilities would take a dangerous turn since Yazdāqird III was preparing to react vigorously, believed it prudent to withdraw to the outskirts of the desert, to disperse his warriors to various spots where there were watering places and to limit his actions to razzias. So as to be able to seize the offensive once more, he appealed to Medina for help. Makrūz, the general levy in Medina (Mubarram = ʿUmar, however, is based on traditions of Sayf b. ʿUmar to leave for Irāk.

En route Saʿd was joined by other contingents sent by ʿUmar, then halted at the beginning of winter (Ṣabʾābān 14/Dec. 635 or 15/Dec. 636?) in the Nadīd at Zarūd (or al-Thaʾlabiyah, near Zarūd) to call to arms the tribes of the surrounding area. He then made his way to Sharaf, which was at the western end of the Arab plateau near al-ʿAbsaʾ and was well supplied with waterholes. While waiting in a well-organized camp for the arrival of several thousands of other Bedouins (who, at times, included some Christian bands), he divided his men into deccuries, established a hierarchy of command and sent al-Mughira b. Ṣuḥra [q.v.] to occupy various localities in order to secure his forces against a possible attack. It was at Sharaf that Saʿd was to meet up with al-Muthannā, but the latter died during the winter of the wounds he had sustained at the Bridge. At last Saʿd had advanced as far as ʿUghayb al-Hijānāt, leaving there the women who had followed the expedition and gone on to strike camp in the plain of al-Kādisiyah. While awaiting the enemy—for a month it is said—he carried out razzias to secure his supplies.

Meanwhile, Yazdāqird had assembled a large army and compelled his marshal, Rustam [q.v.], to advance, taking no heed of the latter’s reluctance to face the Arabs on ground he considered unfavourable. At last the Persians pitched camp, separated from the Muslims by the channel called al-ʾAtīk. Hostilities did not open immediately; on the contrary, they entered into negotiations, which proved fruitless. During the month of Muḥarram Rustam built a kind of dyke with reeds, earth, straw and pack-saddles in this way he enabled his army to cross the channel and the following day battle commenced; this occurred on a Monday in Mubarram 15/Dec. or 16/Dec.; the date given by Sayf, 14/Dec. (al-Tabarī, i, 2289 and 2298) is undoubtedly an error. The Persians had behind them the channel and the Muslims the moat of a fortress named al-Kūdās. Saʿd, who suffered from abscesses (ḥabān) on the thighs and hips and could neither mount a horse nor remain upright, remained lying down and relayed his orders from the top of the fortress to his lieutenant, Khālid b. ʿUrtufa, by means of notes. According to Sayf the battle lasted three days and one night; as the latter was drawing to a close the Persian retreat began and by the fourth day they were completely and irreparably routed. Rustam fell in the melee; killed by an uncle, Arab warrior. Each day of the combat and the night of the third to fourth day have been given special names: 1) Yaum ʿArmadh = Day of the Rafts (perhaps a reference to the dyke on the channel?); 2) Yaum Aḥwaḏ = Day of Help (an allusion to the arrival of reinforcements from Syria?); 3) Yaum ʿAmāṣ = Day of the Hard War and Laylād al-Harīr = Night of the Cries of Sorrow (maybe a reference to the relentless savagery of the fray); 4) the last part of this night: Laylād al-Kādisiyah = the Night of al-Kādisiyah and the fourth day: Yaum al-Kādisiyah = the Day of the Battle of al-Kādisiyah (perhaps so called because the decisive hours of this night and the next day truly merited the name?).

Caetani, in his Annali, gives a detailed summary of al-Tabarī’s traditions. Noteworthy among the interesting details are: the Muslims were very badly equipped; the Persians made use of a number of elephants but their adversaries discovered a method of extricating themselves from this difficulty; some Syrian reinforcements arrived on the second and third day; the poet Abū Mihdjan [q.v.], who had been put in irons, succeeded in playing a valiant part in the fray; Ṣulaymān b. Khawwaylid [q.v.], the “false prophet” who had been defeated by Khālid b. al-Walīd [q.v.] during the ridda and later joined the Muslim ranks, proved himself to be a brave defender of Islam; for the first two days fighting took place during the day only—the night was employed in burying the corpses, giving water to the dying and carrying away the wounded Muslims, enemy wounded being despatched with blows of a staff; 30,000 (?) Persians, who had chained themselves to one another so that they could resist to the bitter end, fled when defeat was inevitable but were drowned in the channel, which the pursuing Muslims were able to cross using their bodies as a bridge; the Muslims seized the great Persian royal banner known as Dirāsh-i Kāvīyān.

Subsequent events. Saʿd sent a section of his forces in pursuit of the fugitives and remained at al-Kādisiyah for a month longer. One of the Persian commanders, Dhīllūn, was killed while trying to protect his retreating forces; other attempts to reassemble the fleeing troops, in the district of
Bābil for example, and to resist the Muslim advance became no more than a few battles which in no way altered the situation. Finally Sa’d marched on al-Madā’in and, after having besieged and conquered Bahūsdr, one of the seven or ten towns which made up the al-Madā’in ("the towns") group, was even able to ford the Tigris; this remarkable occurrence was regarded as the result of divine favour. After reaching the east bank of the river the Muslims occupied the other towns of al-Madā’in, which had been abandoned without a struggle by Yazdagird (Dhu ’l-Hidjja 15 or 167). Another battle of some importance took place on Irāḵi soil, at Djalālā’ (on Safar 16 or 17; other dates are also mentioned in the sources), marking the definitive overthrow of Sasanid dominion in Irāḵ by the Muslims.

Problems associated with the battle. There are two such problems which, in all probability, must remain insoluble: 1) The total strength of the forces which met at al-Kādisiyya, for there is too great a difference between the figures given in the sources and every attempt to arrive at an evaluation comes up against the impossibility of finding any solid foundation to build on; 2) the chronology of the events preceding the battle and following it and thus of the battle itself—dates given in the sources for the battle vary between the years 14 and 16, but the earlier date must be rejected since there is too much circumstantial evidence against it. Islamists working on the chronological problem, such as Wellhausen, Caetani and S. M. Yusuf, have looked for an answer by reasoning from the facts, and since it has proved impossible to reconcile the data given in the sources have chosen those which support their own beliefs. They consider it impossible that the Muslims could have recovered their strength almost immediately after the defeat at the Bridge and have dated the battle of al-Buwayb in 14 (according to Caetani no earlier than Ramadān), which obliges them to date the battle of al-Kādisiyya at the beginning of 16 (Wellhausen adds further considerations of the superimposed events which occurred between this battle and the battle of Djalālā’). In addition, Caetani and S. M. Yusuf consider the relationship between the campaign in Syria and that in Irāḵ and decide that the caliph ʿUmar could not have concerned himself with the second until after the end of the first, that is after the battle of Yarmūk: as this celebrated victory of the Muslims over the Byzantines took place on 12 Rādjab 15/20 August 636, the battle of al-Kādisiyya could not have been fought before the early months of the year 16. S. M. Yusuf places it a little after Rādjab 15, i.e. a month after Yarmūk.

After a fresh examination of the facts as they developed and as they are set down in chronological accounts in the sources, the author of the present article has concluded that Mufcarram is/February-March 636 is the date to be preferred for the battle of al-Kādisiyya. The Muslim success at al-Buwayb soon after their defeat at the Bridge is not to be considered impossible for the following reasons: 1) the troubles which broke out at al-Madā’in stopped the Persians from capitalizing on their victory at the Bridge; 2) Muslim reinforcements from Medina arrived immediately. Nor is it necessary to suppose that ʿUmar could not have been the battle and following it with the Irāḵ campaign until after the battle of Yarmūk, for such a view makes it extremely difficult to determine the date when the caliph resolved to send a fighting army into Irāḵ; in fact, 1) if ʿUmar did not take his decision until after Yarmūk, there is not a sufficient interval of time between the great battles of Yarmūk and al-Kādisiyya for Sa’d’s march, with the halts he made and his waiting period for the enemy (which the sources describe with too great detail for them to be ignored); it was perhaps this difficulty which led Caetani to propose that the battle did not take place in Muharram 16 but some months later; 2) if, to allow the necessary time for Sa’d’s march and his waiting for the enemy, the caliph were presumed to have taken his decision in 15 during the month preceding the battle of Yarmūk, then ʿUmar would have directed his forces towards Irāḵ precisely at the moment when he must have been greatly preoccupied by the news of the Byzantine emperor’s preparations for the offensive. On the contrary, if we concede that Sayf has given an exact account of the assemblage of the army at Šīrāz during Muharram 14 and of Sa’d’s long march, then it follows that ʿUmar decided at the end of the year 13 to renew with vigour the campaign in Irāḵ, that is during the period when his victories in Syria were following one after the other. These considerations, which are also supported by other circumstances—which the author of this article intends to set down in another work—lead us to decide on the date of Muharram 15/February-March 636 for the battle of al-Kādisiyya.

KADJAR, Turcoman tribe, from which sprang a ruling dynasty of Persia (see next article). There is no foundation for the statements of later historians that the Kadjar tribe entered Iran with Hülagü (q.v.). In the 9th/10th century they formed part of the Boz Türk tribe; in the 12th/13th century the Kadjar settled in the Karabagh fortress of Alindjak, where they had been held captive.

In the 12th century the Kadjars entered Iran, and settled in northern Adharbaydjan (Arrân) they were joined by an important clan called Igirmi (= Yirmi) Dört. The defeat of the Kara Koyunlu by the Ak-Koyunlu, who thenceforth ruled much of Iran, prompted important branches of the Kadjar dynasty to move to Persia. The Kadjars of Persia belonged; also a village between the 16th and 20th centuries.

Bibliography: F. Sümer, Öğuzlar, Ankara 1967, 152, 154, 155, 228, 234, 286, 287, 358, 366; idem, Savaş devletinin kurulus ve gelişmesi (in press). F. Sümer, KADJAR (kaçar), Lubb al-tawdrikh, cf. J. Wellhausen, Sasaniden und Araber, ed. Wüstenfeld, 337. Ibn al-Athîr also mentions in 1497. Although the Kadjars supported Rustam, the latter was defeated again and killed. Soon afterwards a member of the Kadjar rallied to Shah Isma'îl, and like so many other Anatolian Turkish tribes, contributed to the establishment of the Safavid dynasty. For the next two centuries, however, they were not held in such esteem by the shahs as were, e.g., the Ustadjlû (Ustadji), Tekelî, Şâmulu and Dîlûkdr (Dilkadr). At this period the Kadjars were again dwelling in north Adharbaydjan. At the end of the 10th/11th century İmmâm Kûll Kân, who was beglerbegi of Karâbâgh, was a member of the Yalta oba of the Kadjars. But during Safavid times the Kadjars were administered mostly by the Ziyâd Oghlu family from which sprang the future ruling Kadjar dynasty. At the time of Şâh 'Abbâs some of the Kadjars were transferred to the district of Astârâbâd, to be a barrier against the raids of the Yaqa Turcomans.

In the 12th/13th century, whereas some tribes— Şâmulu, Dîlûkdr, etc.—broke up and lost their power, the Afsâhr (Afsâh) and Kadjars remained numerous and strong. Thus under Nâdîr Şâh the Afsâh were able to put an end to the Safavid dynasty and seize power, and at the end of the century the Kadjars could succeed the Zand. In the 18th century the Astârâbâd Kadjars were divided into two branches: the Ashâğa Bâsh and the Yûkhârî Bâsh. The Ashâğa Bâsh were formed by the Kowânû (or Kowânî), 'Izz ad-dînî, Şâm Bayâyt, Karâ Mûsânû (Mûsâû?), Washlû (Ashlu?) and Ziyâdî subtribes. The Kadjar dynasty belonged to the Kowânû (or Kowânî) subtribe of the Ashâğa Bâsh. As for the Yûkhârî Bâsh, they were formed by the other six subtribes, i.e., Dâwûlû, Şâpûnî, Köhnûlû, Közhûnû, Yâkûkûlû, and Kerîlû(?). The chief subtribe of this branch was the Dâwûlû.

The Kadjar rulers never forgot that they were Turks. They were even proud of it. Thus, some members of the Kadjar dynasty bore the names of Iilmânî and even Ottoman rulers, Arghun, Ilîdîrîn Bayâzîd etc. We see also some Kadjars claus (oynak) in Anatolia in the Ottoman period, between the 16th and 20th centuries.
SIMPLIFIED GENEALOGICAL TREE OF THE KÂDIR RULING HOUSE

Fath 'Ali Khan

Muhammad Hasan Mirzā
(b. 1808)
the followers of the Safawid Shaykh Haydar, and Sultan Câli nominated Isma'il (later Shah Ismail I) his successor and sent him to Ardabil, where he was accompanied, among others, by Karâ Petr Beg Kâdjâr (W. Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin 1936, 79, 96). Later, when Isma'il defeated the Aq Koyunlu Ahmad at the battle of Sharur in 907/1501, the Kâdjârs were among his supporters and formed one of the Kizilbash tribes. Kâdjâr khans held important offices under Tahmâsp I and his two sons Abbas I (Iskandar Munshî, Ta'rikh-i 'alamârâ-yi 'Abbâsî, Tehran 1959-60, i, 140, ii, 1085). One, Shah Kull Kâdjâr, was sent by the former in 952/1547 to treat for peace with the Turks (Pecewî, i, 327, 334; v. Hammer, *Histoire de l'Empire ottoman*, French tr., vi, 69, 320; Rical Kull Khan, *Diahdngushd-yi nadir* ed., ed. Müller, Wiesbaden 1966, 33-7, 40-2). The offices of beglerbegi of Karâbâh was held by various Kâdjâr khans. Muhammad Khan b. Khalîl Khan b. Shahverdî Sultan Ziyâdoghli, who succeeded Imâm Kull Khan on his death in 996/1587-8, was later appointed governor of Gandja in 1015/1606 (ibid., i, 385, ii, 716). The offices of beglerbegi and amir al-umûr of Karâbâh appear to have remained in the hands of the Ziyâdoghli family (ibid., i, 165). Another Ziyâdoghli khan, Hasan, was made dârâgha [q.v.] of Shirz in 998/1590 (Ahmad Kummî, *Khuldsat al-tawârijî*, ed. H. Müller, Wiesbaden 1964, Persian text, 68). Amir Gûna Khan Kâdjâr became governor of Erivan in 1011/1603 (Farâbî, ii, 652), and his son Tahmâsp Kull Khân was governor of Erivan and Çuğur Şâ'd in the reign of Shah Šâtî (Iskandar Munshî and Muhammad Yusuf, *Dâ'iri-i tâ'rikh-i 'alamârâ-yi 'Abbâsî*, eds. Suhaylî Khanansârî, Tehran 1938-9, 293). Kâdjâr khans also held governorships in Astarabad and Marv. Husayn Khan Ziyâdoghli is mentioned as being governor of Astarabad in 1010/1601-2, and in 1011/1602-3 when he was recalled to Karâbâh to take part in operations against the Ottomans (Farâbî, ii, 604, 657). Mirhân Khan Kâdjâr became governor of Marv on behalf of Shah Šâtî in 1042/1632-3 (Dhokî-i tâ'rikh-i 'alamârâ-yi 'Abbâsî, 103), became sipahsâhî to Shah Abbas II in 1057/1647-8. (See further K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 33-7, 40-2). Kâdjâr historians attribute the dispersal of the Kâdjârs in the frontier areas of the empire to the deliberate policy of Shah 'Abbâs, aiming on the one hand at reducing their power because they had by this time become very numerous in Karâbâh, and on the other at protecting the empire against inroads made by the Uzbeks and Tatars. By the end of the 11th/17th century the main concentration of Kâdjârs appears to have been in Astarabad, and they played a prominent part in the struggles of power in northern Persia on the fall of the Safavids. They were divided in Astarabad into two main groups, the Koyunlû, who were flock-keepers, and the Develû, who were camel-herders. According to Rîdâ Kull Khân the Koyunlû, 'Izz al-Dînî, Shâhâbâyâtî (name which suggests some those of the Kâdjârs who had sojourned for a period in Syria), Karâmîsâlî, Ishlû, and Ziyâdûlû had pastures below the Mubârâkâbâh fortress of Astarabad and so were called Ashâkâbâh, while the Develû, Sîpâlû, Kuhânû, Khaaznadâlû, Kîyûkîlû and Karlû had pastures above the fortress and were therefore called Yûkâhârâbâh. He adds that according to another tradition the source of these terms is to be sought in the period before the Kâdjârs settled in Astarabad (ix, 7-8, 49). In the 12th/18th century the Aghâkâbâh and the Yûkâhârâbâh were split by internecine strife.

During the reign of the Safawid Shâh Sultan Husayn, Muhammad Khân, a Turcoman from Kazvin, was appointed governor of Astarabad. He was subsequently induced by the Uzbegs and Tatars. By the end of the Path Khan the Koyunlu, who were flock-keepers, and the Develû, Sîpâlû, Kuhânû, Khaaznadâlû, Kîyûkîlû and Karlû had pastures above the fortress and were therefore called Yûkâhârâbâh. He adds that according to another tradition the source of these terms is to be sought in the period before the Kâdjârs settled in Astarabad (ix, 7-8, 49). and the intrigues of Muhammad Husayn Khan Develu, who had been appointed beglerbegi of Astarabad, retired to the Turkoman steppe. Muhammad Husayn Khan was later responsible for the murder of Tahmâsp and his two sons in or about Dhu 'l-Ka'da 1152/Febuary 1740 during Nâdir's absence in India (Lockhart, Nadir Shah, 177-8). Muhammad Hasan Khan in due course gathered together a force of Yamût Turcomans, Kadjârs and others and in Dhu 'l-Hijjah 1156/January 1744 took Astarabad from Muhammad Husayn Khan (see I. Hanway, An historical account of the British trade over the Caspian Sea, London 1762, i, 129 ff., for an eyewitness account of this event). Nâdir Shâh ordered Bihbûd Kâhan, the sardâr of the Atâk, to punish Muhammad Hasan Kâhan. An engagement took place to the east of Astarabad. Initially the Kadjâr army had the advantage, but after defections to Bihbûd Kâhan, Muhammad Hasan Kâhan fled. Some months later he appeared in Khâwarism with Yamût allies. In a battle with Nâdir's forces under the latter's nephew, 'Ali Kull Khan, and Bihbûd Kâhan, during which Muhammad Hasan Khan engaged Bihbûd Kâhan in single combat and wounded him, the Kadjâr forces were defeated a second time and Muhammad Hasan forced to flee for his life (Ri'la Kuli Khan, ix, 48-9). After about a month, the Kadjâr force encamped round Shâhrûkh and many of their livestock were captured by the enemy (Ri'la Kull Khan, ix, 48-9).

The internecine strife between the Aghâkâbâb and the Yukhârâbâb, which had been temporarily checked after Muhammad Hasan Khan had established his authority and included khâns from both factions among his followers, broke out again, and when a group of Afghans defected in Shawwâl 1171/June-July 1758, disorders ensued and the army began to dis perse. Meanwhile Muhammad Husayn Khan Develû, who had remained in Isfâhan, seized the opportunity offered by the absence of Muhammad Hasan Khan in the south to return to Astarabad and take possession of it, but Nâdir Shâh prevented it when the latter returned. He retired to Dâmghân, where Muhammad Hasan Khan besieged him. Karim Kâhan, hoping to benefit from the renewal of internecine strife among the Kadjârs, sent an army under Shaykh 'Ali Kâhan Zand to Mâzûdarân, where several of the local tribes joined him. Muhammad Hasan Khan raised the siege of Dâmghân and proceeded to Mâzûdarân to meet this new threat. Disorders among the Turcomans and Kadjârs in the neighbourhood of Astarabad, however, forced him to return there, and he took with him the Safawid, Ismâ'îl III, who was then living in Sâfâr (ibid., ix, 58). Muhammad Husayn Khan Develû now joined Shaykh 'Ali, while Karim Kâhan himself advanced from Tehran towards Astarabad. Muhammad Hasan Khan, who had been joined by 'Ali Muhammad Kâhan, Ta'âkhârî and his brothers and relations to Shâhrûkh, of the Ashakâbars, though keeping with himself the Safawid puppet, had been with Karim Kâhan. In 1168/1754-5 Ahmad Shâh Durrânî, who had taken possession of Mashhad, made a bid to extend his power over northern Persia, but was defeated by Muhammad Hasan Kâhan near Sabzavâr in the summer of 1169/1755. The Kadjâr leader, after taking Kázvin and reasserting his power in Gilân, marched on Isfâhan and in 1169/1756 inflicted a second defeat on Karim Kâhan, who retired to Shirâz. At this point Muhammad Hasan Kâhan was forced to return to the north to deal with the incursion of 'Âzâd Kâhan, the Atâk, and to quell the Kadjârs of Ashak-bar in the Lâhârdâyân, and also by some Shâdûllû Kûrds from Khurâsân, Girayîlûs and Hadjidjîlûs, joined battle with Karim Kâhan near Ashraf. Victory went to the Zand army and Muhammad Hasan Kâhan was killed in flight in 1172/1759 (or according to some sources 1171). Muhammad Kâhan Kûyûnûlû, who had been made beglerbegi of Astarabad by Muhammad Hasan Kâhan, escaped with 'Âzâd Muhammad, his full brother Husayn Kull Kâhan and various other members of the family to the Gûrân steppe to the aebra of Murâd Kâhan Diâfarâbîya of the Yûmût (ibid., ix, 73). Shaykh 'Ali Kâhan Zand reappointed Muhammad Husayn Khan Develû governor of Astarabad. These events further exacerbated relations between the Aghâkabâb and the Yukhârâbâb, and in due course Muhammad Husayn Khan captured Muhammad Kâhan Kûyûnûlû and the sons of Muhammad Hasan Kâhan who were with him. Later he persuaded Karim Kâhan to take 'Âzâd Muhammad Kâhan and various of his brothers and relations to Shirâz to attempt any attempt by them to reassert the supremacy of the Aghâkabâb, though keeping with himself 'Âzâd Muhammad's half-brothers, Murta'da Kull and Muş'tafû Kull, whose khanates, in particular the Ziyûdûghlû khâns of Gandja, joined him. He left his eldest son 'Âzâd Muhammad (whose mother was a daughter of Sulâyman Kâhan Koyûnûlû and who, as a child, had fallen into the hands of 'Âdû Shâh, but was castrated by him), then aged about sixteen, as his deputy in Tabrîz and returned himself to Mâzûdarân (Ri'la Kull Khan, ix, 39-40). If, however, Sir John Malcolm's statement that 'Âzâd Muhammad Kâhan was aged sixty-three at his death is correct, he would have been about twenty-two at this time. (See History of Persia, London 1829, ii, 203). From there Muhammad Hasan Khan set out for Isfâhan and Shirâz, where he besieged Karim Kâhan in 1171/1758. After about a month, the Kadjâr force encamped round Shirâz experienced difficulty in provisioning itself and many of their livestock were captured by the enemy (Ri'la Kull Khan, ix, 48-9).
of Astarābād by his younger brother Muḥammad Ḥasan.

Āḵā Muḥammad Khan and his brothers, together with other local leaders, were held by Karim Khan in Šīrāz as hostages for the good behaviour of their respective tribes. Khādijah Begum, Āḵā Muḥammad-mad's paternal aunt, was married to Karim Khan. His brother, Husayn Kūl Khan, was made governor of Dāmghān in 1182/1769, and from then until his death in 1191/1777 he had a turbulent career in northern Persia (hence his title Dīvānāmān). Seeking revenge for the death of his father, he made war on the Develū and also on the Zand governors of Māzandarān, Bīstān and elsewhere, in spite of Āḵā Muḥammad's advice to him to adopt a peaceful policy. Astarābād changed hands several times but remained, for the most part, in Develū hands. In or about 1188/1774, Husayn Kūl sent his son Fatḥ ʿAll (b. 1173/1759-60 of an ʿīz al-dīnī ʿAbdul-Malik Khan mother and known as Bābā Khan) (p. 68) to Šīrāz to conciliate Karim Khan. He was well received and sent back to his father and given Dāmghān as a sāyūrgādī (Rīdū Kūl Khan, ix, 90 ff.).

Āḵā Muḥammad Khan appears to have been treated with favour and consulted by Karim Khan on affairs of state (ʿAbd al-Razzāk, Maʿārif-i sultānī-yā, entitled Dynasties of the Kajars, tr. by Sir Harford Jones, 2 ed. London 1853, 1 ff.; Riḍū Kūl Khan, ix, 78; Rustam al-Hukama, 338; Malcolm, ii, 176). He was not, however, reconciled to captivity, and the death of Karim Khan in 1193/1779 enabled him to escape. He proceeded to Māzandarān, where he was occupied for some years in contests with rival khāns of the Aḵāḵābābābāb and the Yuḵāhīrābāb, the latter of whom held Astarābād and the country extending from there to Khūrāsān and Vārāmīn. Various of the khāns, including Āḵā Muḥammad's half-brothers, Murtadā Kūl Khan and Riḍū Kūl Khan, co-operated with the Zand forces in the north (Rīdū Kūl Khan, ix, 127 ff.; Rustam al-Hukama, 444 ff.; Malcolm, ii, 93 ff.). In 1194/1780-1 Āḵā Muḥammad Khan came into conflict with the Russians, who had established a settlement in Ašrafāf, and expelled them (J. McN. Stuart, Progress and present position of Russia in the East, 2nd ed. London 1836, 33-4).

By 1199/1785 Āḵā Muḥammad Khan had made himself master of Gurgān, Māzandarān and Gīlān, and on the death of ʿAll Murād Khan in that year, he set out for Isfahān, which Diqāfār Khan had besieged. He defeated a Zand force near Kūm and entered Isfahān. Reappointing as governor Bākīr Khan Khūrāskānī (whom Diqāfār Khan had turned out), he retired again to the north. In 1200/1786 he made Tehran his capital (cf. Riḍū Kūl Khan, who wrongly states that he was crowned in Tehran in that year, ix, 200). From this time onwards Tehran continued to be the capital, and the importance of northern Persia relative to southern Persia for strategic and economic reasons and because of its more numerous population increased.

In 1201/1786-7 Diqāfār Khan recovered possession of Isfahān, but was again dispossessed by Āḵā Muḥammad, who on this occasion appointed his half-brother Diqāfār Kūl Khan governor before retiring to the north again (Riḍū Kūl Khan, ix, 188 ff.; Rustam al-Hukama, 448 ff.; Malcolm, ii, 102-3). Lutf ʿAll Khan succeeded Diqāfār Khan Zand in 1203/1789-90 and in the following year Āḵā Muḥammad made another expedition to the south. Lutf ʿAll fled to Šīrāz. Āḵā Muḥammad besieged the city, but raised the siege after about three months and returned to Tehran. In the following year Āḵā Muḥammad was occupied in asserting his authority in Aḏharbāyjān, where a number of local khāns had been virtually independent since the death of Karim Khan. In 1205/1792 Lutf ʿAll Khan made an abortive attempt to recover Isfahān, leaving Hādīdī ʿĪbrāhīm, the khāṭānār, together with one of the Zand khāns, in charge of Šīrāz. During the absence of Lutf ʿAll, Hādīdī ʿĪbrāhīm seized the city. Lutf ʿAll turned back but failed to regain possession and retired to the south. Hādīdī ʿĪbrāhīm meanwhile entered into negotiations with Āḵā Muḥammad Khan, whose elder a Kāḏār force had suffered a reverse at the hands of Lutf ʿAll, marched in person on Šīrāz. A surprise attack near Persepolis by Lutf ʿAll failed, and Šīrāz was handed over to Āḵā Muḥammad Khan. Renewed disorders by the Gūṭkān and Yāmūt, however, forced him once more to return to Tehran and Astarābād. Lutf ʿAll who had fled to the east, after various vicissitudes, took Kūrmān in 1208/1794. Āḵā Muḥammad set out once more for the south and laid siege to Kirmān. The city fell after some months and large numbers of the inhabitants were massacred.

Lutf ʿAll, who escaped before the city actually fell, was eventually captured near Narmāshārā and sent to Āḵā Muḥammad, who killed him (Malcolm, ii, 110 ff. HādīdīMirza Ḥasan Fasāʾī, Fārsānā-i nāṣīrī, l.c., Tehran 1846-6, i, 232 ff.). Having thus disposed of his Zand rivals and established his authority over the greater part of Persia except Khūrāsān, Āḵā Muḥammad Khan planned to restore to Persia Georgia, the ruler of which, Heraclius, had placed himself under Russian protection in 1783, renouncing all dependence on Persia. He reached Ardabil in the spring of 1209/1795 and on Heraclius' refusal to return to the status of a tributary of Persia (which had been Georgia's position under the Safawids), he invaded Georgia and sacked Tiflis. He spent the winter in Mūghān and then returned to Tehran, where he was crowned in the spring of 1796 (Riḍū Kūl Khan, ix, 273-4). His next step was directed to the reestablishment of Persian control over Khūrāsān, which was nominally ruled by Shāhrukh, the blind grandson of Nadīr Shāh, and to the prevention of raiding by the Uzbek khāns. In 1207/1792 he restored to Persia Georgia, the ruler of which, Shāhāb Khan, who held the post of kābul, proposed joint operations for the conquest of Bukhārā. A Russian force meanwhile marched against Persia in retaliation for the sack of Tiflis. Although this was withdrawn on the death of the Empress Catherine in the same year, Āḵā Muḥammad abandoned his Khūrāsān plans, returned to Tehran in the autumn, and in the spring of 1211/1797 set out again for Georgia. Crossing the R. Aras, he took Shūḡā. A few days later, on 21 Dhu ’l-Hijja 1211/19 June 1797 he was murdered in camp by two slaves, who, although under sentence of death for some misdemeanour, had been left free overnight. His nephew, Fatḥ ʿAll Khan (Bābā Khan), who at the time of his uncle's death was governor of Fārs, succeeded as Fatḥ ʿAll Shāh.

Āḵā Muḥammad Khan, realizing the weakness brought about by internecine strife, had been much concerned to heal the breach between the Kojūnūt and the Develū. Accordingly he married Fatḥ ʿAll to one of the daughters of Fatḥ ʿAll Khan Develū, and laid down that the crown should pass to ʿAbdāss Mirzā (b. 1203/1780), Fatḥ ʿAll's third son, and the eldest of his sons born to Fatḥ ʿAll Khan Develū's daughter (Nādīr Mirzā, Taʿrikh wa diwārāfīyā-yī
The Kadjar dynasty, Tehran lith., 1905, 190-1; Fath 'Ali Shah in 1240/1824 and the succession passed in 1250/1834 to his son Muhammad Mirzâ (b. 1222/1807), whose mother, Ásíyâ Khánum, was also a Develâ, being the daughter of Muhammad Kháñ Develâ and granddaughter of Fath 'Ali Kháñ Develâ. Malik Dâhân Khánum, the mother of Nâsir al-Dîn (b. 1247/1831-2), who succeeded his father Muhammad Shâh in 1264/1848, was a granddaughter of Sulaymân Kháñ Koyunlû, Aḵâ Muḥammad Kháñ Kháñ’s maternal uncle. Nâsir al-Dîn’s son and successor Muẓaffar al-Dîn (b. 1265/1853, reg. 1856-1907) was the son of Shukâh al-Saltâna, the daughter of Šu’dâ al-Saltâna b. Fath ‘All Shâh. Although not all of Nâṣir al-Dîn’s sons who were successively declared to be his wâlî ‘ādâd were the sons of Kâdâr mothers, the normal convention was for the mother of the wâlî ‘ādâd to be a Kâdâr. One of the arguments raised against the possible succession of Zîl al-Saltâna, the eldest son of Nâṣir al-Dîn, who became for a period the virtual ruler of southern Persia, was that his mother, Iḥfâl al-Saltâna, was not a Kâdâr. The mothers of Muḥammad ‘All Shâh (b. 1265/1848, reg. 1907-9) and his son Aḥmad Shâh (b. 1314/1898, reg. 1909-25) respectively were Kâdârs. Failure to establish a stable system of succession proved a weakness and led to repeated intrigues over the appointment of the wâlî ‘ādâd, and Fath ‘All, Muhammad Shâh and Nâṣir al-Dîn all faced some degree of armed opposition by various Kâdâr princes when they severally assumed the throne.

On the death of Aḵâ Muḥammad, Hâdîdî Ibrâhîm, his chief minister, put himself at the head of the troops and returned to Tehran, where Muḥammad Kháñ Kâdâr had closed the gates pending the arrival of Fath ‘All from Fârs. The new shah had to contend with a number of rebellions, including one led by his brother Huṣayn Kull Mirzâ, but none of them were of any magnitude. He continued the practice of appointing princes of the royal house to the provincial governments which the Šafâwîs had abandoned but the Zandás had largely resumed. In 1799 ‘Abbâs Mirzâ, then about four years of age, was governor of Ardâr-bâyduñ, and from 1815, when he was appointed wâlî ‘ādâd, the province was normally held by the wâlî ‘ādâd. Its good order and security was considered crucial to the safety of the Persian state because of the critical nature of Perso-Russian relations and the fear that disorders would invite Russian intervention. From 1810 onwards Fath ‘All’s Shah entrust foreign relations to ‘Abbâs Mirzâ and for that reason foreign envoys resided from then until his death at Tabrîz and not Tehran. Ardâr-bâyduñ was one of the largest and richest of the Persian provinces, and its capital Tabrîz rapidly became politically and commercially the second city of the empire. There were, however, certain disadvantages in making Tabrîz the seat of the wâlî ‘ādâd: on the one hand he became more vulnerable to Russian influence and on the other the faction between Turks and Persians heightened since his entourage in Tabrîz tended to be composed largely of Ardâr-bâyduñ Turks, many of whom accompanied him when he came to Tehran to assume the crown.

When ‘Abbâs Mirzâ was made governor of Ardâr-bâyduñ his eldest brother Muḥammad ‘All Mirzâ, whose mother was a Georgian, was confirmed as governor of Kirmânshâh. This province was also of considerable importance in view of the repeated disputes between the Persian and Ottoman empires.

Huṣayn ‘All Mirzâ Farmandârmandâr, whose mother was the daughter of an Arab chieftain of Khurâsân, was made governor of Fârs, Muḥammad Wâli Mirzâ governor of Khurâsân, and Muḥammad Kull Mirzâ governor of Mâzândarân. In due course several other princes, too young to administer their governments themselves, were sent to other provinces accompanied by viziers who carried on the administration for them, much as had the atabegs for their wards in Sâldîdî times. The Kâdârs never succeeded in establishing family solidarity, and this in view of the numerous progeny of each of the shahs is, perhaps, not surprising. Rivalry between the sons of Fath ‘All Shâh, especially Muḥammad ‘All Mirzâ and ‘Abbâs Mirzâ, several times threatened to break into open conflict. When ‘Abbâs Mirzâ died in 1833, Fath ‘All delayed until June in the following year before he declared Muḥammad Mirzâ wâlî ‘ādâd, for fear that a nomination would give rise to civil war.

Under the Treaty of Gulistân the way to the intervention of foreign powers in the matter of the succession to the throne was opened. By Art. 4 the Russian tsar undertook for himself and his heirs to recognize the prince who should be nominated as heir apparent and afford him assistance in case he should require it to suppress an opposing party.

When Fath ‘All nominated ‘Abbâs Mirzâ in 1818 he took steps to secure the appointment of the tsar to his nomination because he suspected that Yermolov, the Russian viceroy of the Caucasus, was preparing to intrigue with Muḥammad ‘All Mirzâ. Fath ‘All, to assure ‘Abbâs Mirzâ’s accession, also granted him the revenues of Gilân as well as Ardâr-bâyduñ for the support of his army, placed the governors of Khâmsa and Kâzvin, through which he would have to pass on his way to Tehran, under his orders, and sent a battalion of ‘Abbâs Mirzâ’s troops to Tehran to garrison the capital. In 1828, under Art. 7 of the Treaty of Turkomânčây, the Russian tsar recognized ‘Abbâs Mirzâ as successor to the throne and undertook to consider him the legitimate sovereign from the moment of his accession. This limited Fath ‘All’s freedom of action, raised the possibility of ‘Abbâs Mirzâ waging war on his own government with the support of Russian troops, and endangered his personal and political independence. The appointment of Muḥammad Mirzâ as wâlî ‘ādâd was recognized by the British and Russian governments in an exchange of notes expressing their mutual desire to act together over the matter of his succession and in the maintenance of the internal tranquility, independence and integrity of Persia.

So far as the provincial governments were not held by Kâdâr princes they were, for the most part, entrusted to tribal leaders, though Fath ‘All, in so much as he was able, decreased the power of the tribes apart from the Kâdârs [see ILAT]. There was, however, no clear dividing line between the provincial governor, the tribal leader, the landowner and the military commander. This facilitated rebellion and made the shah’s control almost always precarious. The provincial governors were required to remit to the central government annually a definite sum, based on the tax assessment prepared by the muṣtaṣaff’s office in the capital together with a new year present (piştâk) and to provide troops when called upon to do so. The cost of the provincial administration in addition to the regular assessment was collected locally. At each major provincial capital there was a replica of the court at Tehran. This, in the absence of financial control, imposed an added burden upon
the local people. Ambitious princes, moreover, were encouraged to use the provincial resources to rebel. The remission of provincial taxes was frequently in arrears, and their collection often necessitated a military expedition. Fath 'Ali Shah had, in fact, set out on such an expedition to collect arrears from Husayn 'Ali Mirza Farman-farmā, the governor of Fārs, when he died, en route for Shirāz, in Isfahān on 23 October 1834. Husayn 'Ali Mirza thereupon read the kāda in Shirāz in his own name and marched on Isfahān. Muhammad Mirzā was in no state to set out from Tabriz. His treasury was empty and his troops mutinous. The means to make the troops march were collected largely owing to the initiative and energy shown by the British envoy, Sir John Campbell. On 10 November a force set out, and Muhammad Mirzā followed shortly afterwards. Tehran, where 'Ali Mirzā Zīlī al-Saltānā had proclaimed himself shah, was taken in December, and an expedition despatched to the south. Farmān-farmā's forces, led by his brother Hasan 'Ali Mirzā and his three sons, Riḍā 'Kull Mirzā, Taymūr Mirzā, and Wall Mirzā, were defeated near Kumīshā. Farmān-farmā surrendered and later died. Hasan 'Ali Mirzā was blinded and imprisoned at Ardabil. Farmān-farmā's sons escaped, finding their way via the Ottoman Empire to England, whence they returned in 1836 to the Ottoman Empire and spent the rest of their lives in exile (see Riḍā 'Kull Mirzā, Safar-nāma-i Riḍā 'Kull Mirzā, nasa'i Fath 'Ali Shah, ed. Asghar Farmān Farmān-i Kādjar, Tehran 1963-4; J. B. Fraser, Narrative of the residence of the Persian princes in London, in 1835 and 1836, 2 vols., London 1838).

Several other Kādjar princes were seized by Muḥammad Shah and kept in captivity in Ardabil, lest they became rebels. About the same time it broke out in Tehran. Farmān-farmā's forces, led by his brother Hasan 'Ali Mirzā and his three sons, Riḍā 'Kull Mirzā, Taymūr Mirzā, and Wall Mirzā, were defeated near Kumīshā. Farmān-farmā surrendered and later died. Hasan 'Ali Mirzā was blinded and imprisoned at Ardabil. Farmān-farmā's sons escaped, finding their way via the Ottoman Empire to England, whence they returned in 1836 to the Ottoman Empire and spent the rest of their lives in exile (see Riḍā 'Kull Mirzā, Safar-nāma-i Riḍā 'Kull Mirzā, nasa'i Fath 'Ali Shah, ed. Asghar Farmān Farmān-i Kādjar, Tehran 1963-4; J. B. Fraser, Narrative of the residence of the Persian princes in London, in 1835 and 1836, 2 vols., London 1838).

Several other Kādjar princes were seized by Muḥammad Shah and kept in captivity in Ardabil, lest they became rebels. About the same time it broke out in Tehran. Farmān-farmā's forces, led by his brother Hasan 'Ali Mirzā and his three sons, Riḍā 'Kull Mirzā, Taymūr Mirzā, and Wall Mirzā, were defeated near Kumīshā. Farmān-farmā surrendered and later died. Farmān-farmā's sons escaped, finding their way via the Ottoman Empire to England, whence they returned in 1836 to the Ottoman Empire and spent the rest of their lives in exile (see Riḍā 'Kull Mirzā, Safar-nāma-i Riḍā 'Kull Mirzā, nasa'i Fath 'Ali Shah, ed. Asghar Farmān Farmān-i Kādjar, Tehran 1963-4; J. B. Fraser, Narrative of the residence of the Persian princes in London, in 1835 and 1836, 2 vols., London 1838).

The Kādjarān, having established themselves as the rulers of Persia, ceased to be tribal leaders and, like earlier rulers, became absolute monarchs. To impress their subjects with their power, they sought to emphasize the high, almost sacred, character of their rule. The pomp and circumstance of the royal court after the reign of Āḵā Muḥammad Khān, and the exercise of power, were still, in theory at least, accessible to the lowest of his subjects. Similarly, after the death of Āḵā Muḥammad Khān, the administration, based on the pattern of the Ṣafavīd empire, became more elaborate. All officials were the shah's deputies, elevated and degraded at his pleasure. He was the sole executive. In circumstances in which intrigue and corruption were rife, and the exercise of power depended on the personal influence of the intrigues of rivals, bribery and nepotism were almost inevitable.

The chief minister was the sadr-i aʿṣam (sometimes known as the Muʿtamid al-Dawla). His functions were much the same as the wasir-i diwān-i ʿālī of Ṣafavīd times [see Dāwān]. His main duty was to provide money for the administration and defence of the state. The three chief officials under him were the musawwir al-mamlūk, the wasir-i lāğkhār and the munṣiq al-mamlūk. The minister for foreign affairs (wasir-i khāridji), because of the increasing import-
ance of Persia's foreign relations, also became an influential official. From the reign of Nāṣir al-Dīn onwards various attempts were made to modernize the administration [see HUKŪMA]. Aḵā Muḥammad Ḵān was well served by Ḥādīḏī Ibrāhīm, who became sadr-i ʿażam in 1209/1794. He was also joint vizier with Mīrzā Ṣafī to Fath ʿAllī. His power and nepotism led to intrigues, which aroused Fath ʿAllī's suspicions against him, and he was blinded and killed in 1801. Many of his relatives were also executed and his political enemies confected. Various ministers subsequently attempted without success to assert control over Fath ʿAllī. ʿAbbās Mīrzā as wali ʿābd was served with distinction by Mīrzā ʿĪsā Mīrzā Buzurg (d. 1822), who was succeeded by his son, Abū-ʾl-Kāsim Kāhm Maḵām, also a talented man. He later became minister to Muhammad Mīrzā, over whom he established his ascendancy. When Muḥammad Mīrzā succeeded to the throne, Kāhm Maḵām became sadr-i ʿaẓam. His rule, reputedly corrupt, was extremely unpopular and he fell from power in 1835 and was executed on 26 June 1835. Ḥādīḏī Mīrzā ʿĀkīstān, a Georgian from Erivan, who had been Muḥammad Mīrzā's tutor in ʿĀḏarbāyjān, succeeded him. He, too, eventually concentrated power in his own hands, holding a number of offices in addition to that of sadr-i ʿaẓam. This also brought unpopularity upon him, and on the death of Muḥammad Shāh, in fear for his life, he took refuge in Russia. Nāṣir al-Dīn on his accession made Mīrzā Ṭakī Ḵān ʿĀmīr Nīẓām, who had been deputy-governor of ʿĀḏarbāyjān since 1843, sadr-i ʿaẓam. He, partly because of the youth and inexperience of the shah, also concentrated power in his own hands, and treated his royal master with a certain measure of contempt. An able man, he perhaps attempted too much at once. His severe rule and vigorous attempts to reform abuses met with opposition, and in 1851 he was overthrown and murdered. The queen mother, among others, played a prominent part in his overthrow (see FIRĀDĀYDN ʿĀDAMIYYAT, AMĪR KĀBĪR WA IRĀN, 3 vols., Tehran 1956-7). He was succeeded by Mīrzā ʿĀḵā Nārī, whose misfortunes were largely taken up in defending the machinations of numerous rivals and in a contest with the shah for the sole exercise of power. Corruption, which placed every office within reach of the highest bidder, was his weakness and rendered him accessible to the attacks of his enemies. He was deprived of the office of sadr-i ʿaẓam in 1853 when the government was reorganized [see HUKŪMA].

By the middle of the century, the resurgence of the bureaucracy, after its relative eclipse under the early Kāḏjār, was becoming evident. In the second half of the century its influence continued to grow. The position of officials, however, was still fundamentally insecure. This was why they so often sought support for their schemes from outside sources, in particular the British and Russian missions. It also explains in part the apparently equivocal behaviour of ministers such as ʿĀlī Aqẖār Ḵān Ṭāmān al-Sultān, who, until the fiasco of the Tobacco Regie, worked for the modernization of Persia in close co-operation with the British minister, Sir Drummond Wolff, but later fell under Russian domination. During the Kāḏjār period there was a contraction in the area over which Persia claimed sovereignty, but within the frontiers as they were eventually established the control of the central government gradually became more effective. Aḵā Muḥammad Ḵān's attempt to regain Georgia proved abortive. Hostilities with Russia in the Caucasus, which had been intermittent from about 1805, were resumed in 1811, and the Persian army was decisively defeated at Aslāndūz on 31 October/1 November 1812. In the following year a preliminary treaty was signed at Guliston on 13 September 1813 by which Persia ceded Georgia, Darband, Baku, Shīrvān, Shākli, Gandja, Karābāḡ, Mughān and part of Tālīṣ to Russia. Neither side regarded the peace as permanent and the war was eventually resumed in 1827. The Russian advance was rapid. Tabrīz fell and a treaty of peace was signed at Turkmānchāy on 27 February 1828. Erivan and Nakhchivan were ceded by Persia and the cessions made under the Treaty of Guliston confirmed (for texts, see C. U. Aitchison, A collection of treaties, engagements and sanads, Calcutta 1933, xv ff. and xxiii ff.).

The Perso-Turkish frontier, which was broadly as laid down in the Treaty of Zuhāb of 1049/1639 (which was in turn based upon the earlier settlement of 962/1555), also gave rise to many disputes. The Kurdish section, some 700 miles, in particular, was difficult country to settle and control. Like Karābāḡ, Mughān and Tālīṣ, it was inhabited by semi-nomadic tribes. These moved to and fro between the Paḵhalik of Baghdād and Persia, while the frontier authorities of both countries were in the habit of giving asylum to marauders and refugees from the other. Relations with Turkey were also strained by Shīfāʾ creation and strife and, in ʿArabistān, by Per-o-Arāb antipathies.

In 1804 and 1805, the Ottoman Sultan Selim III had allowed Russian forces to use the south-eastern coasts of the Black Sea in their operations against Persia. Muḥammad ʿĀlī Mīrzā, governor of Kirmān, subsequently engaged in intermittent hostilities with Turkey. War was declared in 1821 and continued until 1823 when hostilities were concluded by the Treaty of Erzerum (for text see Aitchison, xix ff.). A series of major incidents between 1833 and 1842, including the burning of Muḥammad by the paḵā of Baghdād in 1837 and the temporary occupation of Sulaymānī by Persia in 1840, again brought the two countries to the brink of war. In 1843 an Anglo-Russian offer of mediation was accepted. The proceedings were nearly wrecked at the outset by a massacre of Shīfāʾs at Karbalā. A second Treaty of Erzerum was finally signed on 31 May 1847, by which the lowlands of Zuhāb were ceded to the Ottoman Empire and the highlands to Persia. The latter gave an appeal to Sulaymānī while the Ottoman Empire recognized Persian sovereignty over Muḥammad. The two parties further agreed to appoint commissioners to delimit the frontier. The commission consisting of four commissioners, one each appointed by Persia, Turkey, England and Russia, met in 1849. Its proceedings were interrupted first by the Crimean war (1854-6) and then the Anglo-Persian war (1856-7). In 1869 a protocol was signed, laying down a band of territory twenty-five to forty miles wide within which the commissioners considered the frontier ought to be found. Repeated disputes between Persia and Turkey and acts of armed aggression bedevilled the work of the commission, and the frontier was not finally delimited until 1914 shortly before Turkey's entry into World War I (see further C. J. Edmonds, Kurds, Turks and Arabs, London 1957, 125 ff.).

When Aḵā Muḥammad Ḵān left Khurāsān in 1796 Persian control had not been fully restored. The re-conquest of Harāt, which had been formed part of the Saḵawī empire in its heyday, together with the reassertion of Persian power up to the Oxus remained
the aim of Fath 'Ali Shah, Muhammad Shah, and, in the first part of his reign, Nasir al-Din Shah. In the event, the reincorporation of Harāt into the Persian Empire was largely frustrated by British actions, and Persia and Britain were brought to the brink of war in 1838-9 (see Correspondence relating to the affairs of Persia and Afghanistan, London 1839; J. W. Kaye, History of the war in Afghanistan, 3 vols.; London, 1857; J. A. Norris, The first Afghan war 1838-1842, Cambridge 1967, 82 ff.), and to actual war in 1856 (G. H. Hunt, Outram and Havelock's Persian campaign, London 1858; J. B. Kelly, Britain and the Persian Gulf 1795-1880, Oxford 1968, 452 ff.). By the Treaty of Paris (4 March 1857) which brought the war to a close, Persia recognized the independence of Afghanistan (for text see Aitchison, 81 ff.). In 1870, the shah proposed that the boundaries between Persia and Kalât should be settled. Commissioners nominated by Persia, Kalât and Britain met and their proposals were accepted in the following year. The rival claims of Persia and Afghanistan to Sístân, which more than once threatened to rupture their friendly relations, were also settled by British arbitration in 1872.

The subjugation of the Guklân, Yamût, and Tekke Turkomans, who were in the habit of raiding deep into Persia and kept the Russian government on its toes for some years, was brought to an end by the Treaty of Finkenstein (4 May 1807). The treaty was an accommodation, only, in a state of permanent disorder, also proved beyond the power of the Persian government, and opened the way to a Russian advance to Marv and the Aţgal. Persia was forced to abandon her claim to sovereignty over the area and in 1869 Nâşir al-Din Shah signed an agreement with Russia for a new frontier along the Atrek River, which was later superseded by the Aţgal-Khurasan boundary convention of 1881 (for texts see Aitchison, liv ff. and lxxi ff.). Persia's geographical situation on the frontiers of Russia on the one hand and of India and the Persian Gulf on the other, if nothing else, would have involved her in the political rivalries of Napoleonic France and England (with both of whom treaties were signed; for texts see J. C. Hurewitz, Diplomacy in the Near and Middle East, New York 1956, i, 77 ff., and Aitchison 45 ff.) and later (in the 1870s), if nothing else, and on his second European journey, he asked the emperor of Austria for the loan of a number of instructors. A mission arrived shortly before his death and were employed in various parts of the country raising and drilling troops. They withdrew in 1836 on the rupture of Anglo-Persian relations over Harāt. A number of French officers were subsequently engaged but achieved nothing. By the end of the reign of Muḥammad Shâh the army, including the artillery, which Hâdîdji Mirzâ Ākâsî, in spite of his complete ignorance of military arts, had taken under his personal supervision, was in a state of decay.

Mirzâ Tâkî Khân, after he became sâdîr-i ʿâlam to Nâşir al-Dîn, began to reorganize the army as part of his policy to extend the power of the central government. Recruitment was reorganized and based on a system of quotas to be furnished by each village, district and tribe. In practice, however, the system was somewhat irregularly applied. Officers for the new army were to be trained in a new school, the Dâr al-Funûn, which was opened in 1851, and had on its staff a number of Austrian and other foreign military and civil instructors. These various steps, however, had little immediate success, and the emptiness of the treasury after the Harât campaign of 1856-7 precluded more radical reform. Subsequent efforts at military reform made during the ministry of Mirzâ Husayn Khân Muḥsîr al-Dawla were also unsuccessful.

Nâşir al-Dîn was not unmindful of the advantages of an efficient military force to maintain his own position, if nothing else, and on his second European journey, he asked the emperor of Austria for the loan of a number of instructors. A mission arrived in January 1879, to be followed shortly afterwards by a Russian mission to reorganize the cavalry, for which the shah had similarly applied to the tsar. The Austrian mission failed to achieve any results and left in 1881. The Russian officers remained and organized the Cossack Brigade, which became the most efficient regiment in the Persian army. It was a ready instrument for the Russians in the furtherance of their aims in Persia, and was used by Muḥammad ʿAll Shâh in his struggles against the constitutionalists (see further G. N. Curzon, Persia and the Persian question, London 1892, i, 571 ff.; F. Kazem-
The disparity in power between Persia on the one hand and Russia and Britain on the other had been demonstrated by the Russian wars and the disputes over Harat. Efforts at military reform, even if successful, would have done little to redress the balance between them, but would have contributed to the stability of the government and the maintenance of order, and so limited the intervention of Russia and Britain in internal affairs. As it was, both increasingly intervened in internal affairs because of the prevailing insecurity and maladministration, though their motives in doing so were different. Neither could regard with equanimity the prospect of civil war. Britain was not prepared to see the wa'il 'ahd, or another Persian prince, riding down to Tehran supported by Russian troops and the establishment of a puppet government, since this would have meant the establishment of Russia on the frontiers of India, while Russia could not afford civil war for fear that it might lead to a British occupation of southern Persia which would have blocked a Russian advance to the Indian Ocean. Persia, for her part, had no wish for subservience to either, but her dependence upon them grew, and in these circumstances it was natural that society should become divided into those who looked to Russia and those who looked to Britain.

Nāṣir al-Dīn probably had a clearer appreciation of Persia's weakness than his predecessors. Realizing that foreign intervention could not be prevented, he adopted a policy of encouraging foreign powers to invest in Persia in the hope that they would contribute to its development and prosperity, but he too did not recognize the need for radical financial and administrative reform if this policy was to be successful. It failed largely because of the disunity of Persian society, the rivalry of the powers, and the greed of the various parties concerned in the scramble for commercial monopolies and concessions. Thus, while the intrusion of France, Russia and England acted first as a stimulus to modernization, from the middle of the 19th century onwards, if not earlier, it added to the prevailing insecurity and intrigue, and so discouraged, rather than stimulated, progress and, in effect, contributed to the maintenance of the status quo.

The key to Persian independence was financial reform, which in turn presupposed administrative reform. Successive šadr-i a'zams, particularly in the second half of the 19th century and in the early 20th century, were harassed by demands for more money. In the reign of ʿĀqā Muhammad Khan the revenue was small, but broadly speaking expenses were met. Even in the time of Fath 'Ali Shah, in spite of the depletion of reserves by the Russian wars, the revenue from ordinary taxes (land revenue, cattle taxes, taxes on real estate in towns, and duties on merchandise), and extraordinary taxes (revenue from fines, new year presents, ad hoc presents, and public requisitions) balanced expenditure, though the pay of officials and of the army was frequently in arrears. During his reign there was, however, a constant drain of specie. This trend continued under Muḥammad Shah and resulted in a heavy depreciation in the value of the tumán, a rise in prices, and a general shortage of money, though conditions varied greatly from place to place and year to year. In the last three or four years of the reign of Nāṣir al-Dīn Shah an excess of copper coinage caused much distress among the poorer sections of the population and almost paralyzed small trade. This was withdrawn after the accession of Muḥammad Shah at great loss to the government.

By the middle of the 19th century government offices were being sold in an attempt to secure ready money, and there were signs of a financial breakdown comparable to that which had prevailed in Būyid times, prior to the emergence of the land assignment (šāhāni) as the dominant political and economic institution of the state. Scarcely any provincial revenue was reaching Tehran and payments by the government were almost entirely in the form of bills, whose value was nominal. At the beginning of the reign of Nāṣir al-Dīn Shah, Mīrzā Ṭāki Khān made an abortive attempt to effect financial reform. Venality and corruption in the tax administration thereafter continued unrestrained.

Various expedients, notably the grant of monopolies and concessions to foreign concerns, were adopted by Nāṣir al-Dīn and Muḥammad al-Dīn to provide themselves with funds. Muḥammad al-Dīn also sought foreign loans for the growing extravagances of the court, the allowances and pensions of the Kāḏjār princes and others, and general expenses (see further R. L. Greaves, British policy in Persia, 1892-1903, in BSOS, xxviii (1965), I, 34-60, II, 284-307, on the question of Anglo-Russian loans). Both policies gave rise to great discontent on the grounds that Persian resources were being sold and placed under the control of foreigners.

The first major concession was the concession granted in 1872 to a British subject, Baron Reuter, providing inter alia for railway and road construction, irrigation works and the establishment of a national bank. There was much criticism of this concession both inside Persia and abroad, and it was cancelled as a result of heavy pressure from Russia in 1873. It was finally remodelled and signed in January 1889, Baron Reuter being accorded for a term of sixty years the grant of the Imperial Bank of Persia, which was established under a British Royal Charter in September of that year. This was the beginning of a modern banking system in Persia. In 1890 a Russian subject obtained a concession for a loan bank, which some years later became an agency of the Russian State Bank.

In March 1890 a monopoly for the sale and export of tobacco was acquired by a British subject. This was the occasion for the open expression of popular discontent. The protest against the monopoly led by the religious classes resulted in the cancellation of the monopoly (see further A. K. S. Lambton, The Tobacco Regie: prelude to revolution, in St. Isl., xxii, 119-157, xxiii, 71-90; N. Keddie, Religion and rebellion in Iran. The tobacco protest of 1891-2, London 1966). The compensation paid to the Imperial Tobacco Corporation was provided by a loan contracted with the Imperial Bank of Persia in 1892.

A third concession of outstanding importance was granted in 1901, namely the concession to Mr. William Knox d'Arcy for the exploitation of natural gas, petroleum, asphalt and ozokerite throughout the Persian empire, with the exception of the five northern provinces, for sixty years. In 1909 the Anglo-Persian Oil Company was formed to operate the concession. In due course the exploitation of Persian oil resources transformed the economy of the country and profoundly affected her relations with Britain, but these developments did not reach their climax until after the fall of the Kāḏjārs (see further Ait-chison, 23 ff.).

In the course of the 19th century there were
changes in the direction and sources of Persian trade (see further M. L. Entner, Russo-Persian commercial relations, 1857-187). Customs duties, which were farmed, by the end of the 19th century, formed an increasingly important proportion of the revenue. Because of the provisions of the commercial agreement concluded under Art. 10 of the Treaty of Turkomân Cóy, Persia's hands in the matter of fixing the rate of duty were tied. The connexion between the customs and Persia's foreign relations was reinforced when the various foreign loans which Persia contracted were secured on the customs revenue. In 1890 Belgian officials were appointed to reorganize the customs administration. Greater efficiency in the collection of customs dues under the Belgian administration, coupled with new tariff charges secured by the Russian and British governments by agreements concluded in 1901 and 1903 respectively, aroused discontent among the merchant classes. This was an important factor in the support of these classes for the constitutional movement.

An arrangement of a rather different character from the normal concessionary agreements, but one which also emphasized Persia's weakness, was the secret agreement made with Russia in 1887 by which the shah pledged himself not to give permission for the construction of railways or waterways to foreign governments before consulting the tsar, and in 1890 a railway agreement was signed with Russia placing a ten-year embargo on railway construction (for text see Aitchison, lxxxii). There were still no railways by the end of the Kâdjar period except for a few miles between Tehran and Shâh ʿAbd al-ʿAṣîm and a line from Djuflâ to Tabâriz made in 1910. Lack of communications were an obstacle to trade and to the assertion of the control of the government in the provinces. In 1889 Persia had only two carriagable roads of any extent, namely from Kâznîn to Tehran and Tehran to Kûmm (Curzon, i, 486 ff., 613 ff.). Various concessions for road construction were given in the last decade or so of the 19th century, but little progress was made in road-building. In 1888 the Kârnûn River was opened to international navigation (see further R. L. Greaves, Persia and the defence of India, 1884-1892, London 1935, 161 ff.).

Insecurity, misgovernment, poverty, and the usurpation of power were not new to Persia, and there is plenty of evidence of unrest in the Kâdjar period—of rebellions by tribal leaders and others, such as the revolt of Aka Khán Mâhallâtî in 1840 (which also disturbed Anglo-Persian relations), mob violence in the towns, and movements of protest led by the religious classes, one of the most serious of which was the Bâbî movement led by Sayyid ʿAll Muḥammad, who declared himself to be the long awaited māḥdî in 1260/1844 (see Sâb). This movement was primarily a messianic movement, the intellectual bases of which went back to mediaeval Islamic movements of revolt and heresy, and like these earlier movements was provoked largely by a sense of injustice and frustration at the shortcomings of the government.

In spite of outbreaks of unrest the control of the central government by the middle of the reign of Naṣîr al-Dîn Shâh was more firmly settled. It was weakest in the tribal and frontier areas. An important factor contributing to the extension of government control was the establishment of the telegraph under a series of conventions, the first of which was concluded in 1863 (see Aitchison, 25 ff., Casp. i, 609 ff.). Both Naṣîr al-Dîn and Muḥaffar al-Dîn felt sufficiently secure to undertake extensive European journeys, the former in 1873, 1878 and 1889 and the latter in 1900, 1902 and 1905.

Although the government had succeeded in making its influence more widely felt by the last quarter of the 19th century, the increasing dominance of non-Muslim nations over Persia, which was a marked feature of the century had, by the turn of the century, given a new dimension to internal unrest [see also ʿIYYA]. Opposition to the government began to be expressed in terms of a nationalist movement, which was at once pro-Islamic and anti-foreign. The fact that Russia could at almost any moment send troops into Persia made the Persian government increasingly reluctant to resist Russian pressure, while at the same time Persia's subservience to Russia gave rise to growing resentment. Similarly, Britain's failure to give Persia the support to which she had felt she was entitled under the various treaties which had been concluded in the reign of Fath ʿAll Shâh and her refusal during the reign of Naṣîr al-Dîn to give a clear commitment to come to Persia's aid in the event of a Russian attack had created annoyance, which was added to by the Harât question, measures to suppress slavery and piracy in the Persian Gulf, and the British presence there, which, from time to time, was felt to threaten Persian independence.

New intellectual currents coming through diplomacy, travel, trade, Islamic modernist movements outside Persia, and education (though apart from the Dâr al-funûn there were few modern schools until the end of the 19th century) also contributed to this development, and to the progressive dissolution of the old institutions of government and society. Little by little a new system of government was worked out and the people who were to work it came to the fore. In the last ten years or so of the 19th century these trends were accelerated and reached their climax with the grant of the constitution in 1906 and the Supplementary Fundamental Laws in 1907 [see DUSTÔR and DÎMÎYVA]. In the first instance it was members of the Ministry of Foreign Affairs who first began to seek the reasons for Persia's backwardness vis-à-vis Europe and remedies for her ills. Among those who played a leading part in this respect were Husâyn Khân Mushâr al-Dâwla, who had served in consular posts in India and the Ottoman Empire, Mâlkâm Khân, a Persian Armenian from Isfâhân, who had been educated in Paris and was Persian minister in London from 1872 to 1889, Mirzâ Yusûf Khân Mumtâzî al-Dâwla, Mirzâ Muḥammad Khân Maqâid al-Mulik Sinâkl (d. 1881), Amin al-Dâwla, and others. Persians living abroad, or who had travelled abroad, such as Mirzâ Aka Khân Kirmânî, who lived in Constantinople, and Aka Mirzâ Fûrsât Shîrâzî, who travelled in India, and merchants engaged in foreign trade also contributed to the spread of new ideas. An important part was also played in this by the Persian press published abroad (there were no newspapers apart from the official gazette in Persia until after the death of Naṣîr al-Dîn Shâh), such as A dik founded by Mirzâ Aka Kirmânî in Constantinople in 1875, Kânûn founded by Mâlkân Khân in London in 1890, and Hâlî al-Mutâân first published in Calcutta in 1893 (see also ʿAWMIYVA, Persia).

The ʿulâmâ? also played a prominent part in the events leading up to the constitutional revolution and largely provided its leadership. This was not due only, or even chiefly, to the influence of the pan-Islamic movement led by Dîmâm al-Dîn Afgânî [q.v.], though this had considerable effect, but rather to the position of the ʿulâmîs? in society. Under
the Kadjars, the religious institution once more stood over against the state and was not wholly incorporated into it. The ‘ulama’ fulfilled certain functions for the government and many of them received allowances and pensions from the government, which to some extent compromised them, but on the whole they were able to exercise restraint upon the government and to act as peacemakers, though they were also sometimes associated with movements leading to outbreaks of violence in the cities. In the last resort, they provided a refuge for the people against injustice, and the people looked to them for protection and the fulfilment of their aspirations.

Fath ‘Ali Shah took pains to win the favour of the ‘ulama’. Later rulers were more concerned to limit their power. Muhammad Shah, although he gave pensions and allowances to the religious classes, was more inclined to the Shii than to orthodox Islam and he attempted to bring the ‘ulama’ under closer control. At the outset of the reign of Nasir al-Din Shah, Mirza Taqi Khan continued this policy and alienated the religious classes by reducing their salaries and pensions. He also attacked the practice of asylum (see BAST), which Bahman Mirza, when governor of Agharbodjan on behalf of Muhammad Shah, had also sought to limit. Tentative efforts to control waqf revenue, the spread of secular education with the setting up of the Dar al-Funun, and attempts at judicial reform by Husayn Khan Mushtir al-Dawla when he was sadr-i a’lam also created disquiet among the ‘ulama’, who began to feel their position menaced by the actions of the government. They also felt Persia’s traditional way of life and national independence were threatened by the intrusion of foreigners. Partly for these reasons, when dissatisfaction at increasing internal misgovernment and hostility to foreign intervention came to a head in the early 20th century, it was expressed in a nationalist movement, articulated paradoxically largely in terms of Islam and led mainly by the ‘ulama’ (see further A. K. S. Lambton, The Persian ‘ulama and constitutional revolution, in Revolution in the Middle East, ed. P. J. Vatikiotis, London 1972). It was not, as such, a revolutionary movement, and the understanding and aims of the various groups supporting it varied. In essence it was a protest against tyranny. So far as there was a demand for the adoption of modern techniques of government, its purpose was to restrain the arbitrary exercise of power by the shah in order to limit tyranny and to secure the country from foreign influence and intervention. So far as there was a demand for freedom, the freedom envisaged was seen strictly within the limits set by Islam and did not involve a revolutionary concept. The underlying intention of the majority of people who supported the movement was to carry out the Islamic duty of enjoining the good and forbidding the evil in such a way that the ruler would be duly warned and restore just government. Their aim was the restoration of “good” government. Since it followed from the traditional dichotomy between Islamic, i.e., just, government and usurpation, i.e., zulm, that the reassertion of just government meant “good” government by a just ruler, they did not demand a reformulation of the theory of government such as would provide for checks and balances in the exercise of power.

The victory of the constitutionalists in 1906 was shortlived. There was little to hold the various groups together once they had overthrown the despotism. Their confidence, moreover, was shaken by the conclusion of the 1907 Anglo-Russian agreement, which roused great resentment (see further R. L. Greaves, Some aspects of the Anglo-Russian Convention and its working in Persia, 1904-14, in BSOAS, xxxi (1968), 1, 69-93, II, 290-308). Muhammad ‘Ali’s counter attack against the constitution was, nevertheless, defeated and he was forced to abdicate. His son, Ahmad Shah, succeeded him as a regency. By 1913, however, when the constitution was suspended under Russian pressure, the leadership of the constitutional movement had passed into the hands of the bureaucracy and the landowning classes.

During the First World War of 1914-18 Persia proclaimed her neutrality but this was violated variously by herself, the central Powers and the Entente. At the end of the war a chronic state of disorder prevailed and the country once more seemed on the point of dissolution. In an attempt to forestall this, the abortive Anglo-Persian agreement, which recognized the independence and integrity of Persia, provided for military advisers, a loan, and co-operation in the improvement of communications, was signed in 1919. In the following year the Bolsheviks invaded Enzeli and occupied Ra’i, and a revolutionary government was set up in Gilan under ‘Ali Kuli Khan.

The last phase of Kadjar rule began with the coup d’état organized by Sayyid Diya’ al-Din and Rida Khan in 1921. The first action of the new government was to conclude the Perso-Soviet treaty of 1921, by the terms of which the Soviet government declared all treaties and conventions concluded with Persia to be null and void, but made it a condition that these concessions should be supported by Persia to aut its power. The measures taken by Sayyid Diya’ to create an orderly administration quickly aroused opposition. He quarrelled with Rida Khan and was overthrown. The latter, as minister of war, then began to reassert the authority of the central government. The movement led by Kocii Khan collapsed owing to internal dissension and the withdrawal of Russian support. In 1923 Rida Khan, as prime minister, sought by pressing the people to agree to a new constitution, which was to be null and void, but made it a condition that these concessions should be supported by Persia to aut its power. The measures taken by Sayyid Diya’ to create an orderly administration quickly aroused opposition. He quarrelled with Rida Khan and was overthrown. bilizing force, while the merchants had played an important part in the transmission and provision of funds for the state. By the end of the period Persia had become a modern territorial secular state, drawn into and affected by international politics. She had acquired a constitution and modern forms of government (though the spirit in which the new institutions were worked had not been transformed to the same extent as had been the outward forms). The functions of government had been greatly extended, and political power had become more widely based.

The account of his early years is given by TakI al-Asghar Shamim, in Dargndma-yi Kishm (and is not to be confused with his namesake Kadri Shafak, Tehran 1337/1958, 63; Rieu, Le Monde Oriental, 190, 1. 19-20; this is placing the mahkrdad of the kaf too far back.

Remark: H. Blanc (The "sonorous" vs. "muffled" distinction in old Arabic phonology, in To honor Roman Jakobson, The Hague-Paris 1967, 306) sees in the pronunciation of Arabic in the time of Sibawayhi, in 'Irak in the eighth century, two occlusives, aspirated, surd and probably strong: k and t; he adduces (ibid., 298) the researches and reconstructions of I. Garbell in Remarks on the historical phonology of an East Mediterranean Arabic (Word, xiv (1958), 303-37) and also his own documentation, with reference to his communication: The fronting of Semitic g and the Qal'g dialectal split in Aramaic, in the Proceedings of the International Conference on Semitic Studies (Jerusalem 1969). A correct interpretation of Sibawayhi's doctrine, in phonetics, does not, in our view, allow us to see in k and t aspirated occlusives; moreover, the reconstructions of I. Garbell depend on the basic principles that she has provided for herself (Word, 306-9, Stage 1) (see the presentation of H. Blanc, loc. cit., 298).

The articulation described is a phoneme; for the phonological oppositions that define the phoneme k see J. Cantineau, Esquisse d'une phonologie de l'Arabe classique (in Mémoire de J. C., Paris 1960, 173); for the incompatibilities see ibid., 201.

Kaf in classical Arabic is a continuation of k of common Semitic, preserved in ancient Semitic, but subject to spirantisation (k > kh) in Aramaic and Massoretic Hebrew, when it is immediately preceded by a vowel, however short.

Alterations: Sibawayhi (ii, 452, l. 13-4) mentions a faulty pronunciation of k: kaf between g1m (in fact g1m [see (1)]) and kaf; this, in our view, very probably a g pronunciation (cf. M. Bravmann, Materialien, 49). According to Ibn Durayd (Ibn Ya'qub, Sharh al-Mufassal, 1463, l. 11-2, ed. G. Jahn), it was a dialectal pronunciation of the Yemen, widespread among the people of Baghda, e.g.: *gamal (see ibid., § 120).

For the conditional and unconditional alterations of k in the modern Arabic dialects see J. Cantineau, Cours (in Mémoires de J. C., 66-7) and the references of D. Cohen (Le dialecte arabe hассaïïa de Mauritania, Paris 1963, 31, n. 1).

KAF, 22nd letter of the Arabic alphabet, transcribed k, numerical value 20, according to the eastern order (see BARD)
zu den phonetischen Lehren der Araber, Göttingen 1934, 47, for aspirated ʰ (H. Fleisch)

KAF, 21st letter of the Arabic alphabet, transcribed ʰ, numerical value 100, according to the eastern order [see ABDJAD].

Definition: occlusive, uvulovular, surd. According to the Arab grammatical tradition: ṣhadīda, madẖūra, in makhraj: the rear-most part of the tongue and the highest part of the upper palate (Sibawayhi, ii, 453, 1. 5-6, ed. Paris; al-Zamakhšarī, Mufassal, 185, 2nd ed. Bruch), i.e., that is to say: the root of the tongue is in contact with the very lowest part of the soft palate and the uvula and the latter disappears during the retention in the articulation: al-Khallī correctly says ḫahawīya “uvular” (al-Azhari, Le Monde Oriental, xiv (1920), 45, 1. 7-8; Mufassal, 190, 1. 19-20).

The Arab grammarians place ʰaf not among the muḥāba “velarized” (emphatic), but among the musāliya, which prevent āmāl [q.v.] (Sibawayhi, ii, 285, 1. 17-20; Mufassal, 190, l. 8). Ḫaf, in fact, is not an emphatic in Arabic: thus, in the form ṣafāla, a ʰ, as the 1st radical consonant, has no effect upon the ʰ with which it is in contact, unlike the emphatics. So we find, for example: ṣ̱afatāla; it is its velar articulation that may involve the velarization of ʰ (s > ʰ), a consonant of the same root (Sibawayhi, ii, 279, l. 18). H. Fleisch, Traité, § 46 h and the Traiti de Philologie arabe, in MUSJ, xxviii (1949-50), 242, n. 2).

Arab grammarians since Sibawayhi (ii, 453, l. 17) have placed ʰaf among the madẖūra (voiced); “but the traditional pronunciation of classical Arabic must assign it a surd” (J. Cantineau, Cours de Phonétique arabe, in Mémoi̇ral J. C., 67). A voiced pronunciation of ʰaf must certainly have existed, at least in an important part of the ancient Arabic language, otherwise it would be difficult to explain precisely how the manner of pronouncing this ancient ʰaf should have become at present a principle in discriminating between the vernaculars of nomads, in which it is voiced, and those of sedentary populations, in which it is a surd (see H. Fleisch, Traité, § 46 h and the references; J. Cantineau, Cours, ibid., 68 and the references). See (ibid., 66-9) the vernaculars that have a surd ʰaf or one reduced to hamza and (69-70) those that have a voiced ʰaf, a ʰaaf.

The ʰaf is a phoneme; for the phonological oppositions that define it, see J. Cantineau, Esquisse d’une phonologie de l’arabe classique, in Mémoi̇ral J. C., 174); for the incompatibilities (ibid., 201).

The ʰaf, which is not an emphatic in classical Arabic, is the continuation of a common-Semitic ʰaf that is emphatic (J. Cantineau, Le consonantisme du sémitique, in Mémoi̇ral J. C., 287; M. Cohen, Essais comparatifs sur le Vocabulaire et la Phonétique du Chamiisme-sémitique, Paris 1947, 123); but it is difficult to indicate precisely the nature of this emphasis (see J. Cantineau, ibid., 291), and, according to M. Cohen (ibid.) it cannot be determined whether the Hamito-Semitic phoneme had a surd or a voiced articulation, but it can be confidently stated that its quality of surd or voiced was of secondary importance in comparison to its emphasis.

Alterations: final ʰ of a word can be assimilated to initial kaf, the following word, thus: ʰ k > -kk- (see H. Fleisch, Traité, § 12 o). An Arabic compound of an unconditional change: ʰ k among some tribes; this fact is difficult to interpret (see ibid., § 9 h).

In modern dialects, we have seen above the transfer of ʰaf to hamza and the question of voiced ʰaf. J. Cantineau (Cours, ibid., 70) suggests a possible assimilation of ʰ into ʰ before a ʰ, in oriental as well as in North-African vernaculars. The explanation involving a dissimilation seems an inadequate solution to D. Cohen (Le dialecte arabe Ḥassāniya de Maurétanie, Paris 1953, 35). There are examples of the change of ʰaf into ɣayn: in Syria (G. Bergsträsser, Sprachatlas von Syrien und Palästina, in ZDPV, xxviii (1915), 216 (§ 95) and Karte 37; J. Cantineau, Cours, ibid., 70-1); in certain “North-Arabian nomad” vernaculars, in the majority of the vernaculars of the Algerian, and, apparently, Moroccan, Sahara (J. Cantineau, ibid., 72); in Ḥassāniya (D. Cohen, ibid., 35-7 and the references).

KAF, in Muslim cosmology, the name of the mountain range surrounding the terrestrial world. There is little doubt that this conception is borrowed from Iranian traditions. These make the Alborz (the Alburz, or the Alborz), the mythical mountain at the edge of the world, and the home of the gods. All the other mountains in the world have come from the Alburz by underground ramifications. This mountain (the high mountain: Hara-berezyati) surrounds all the world, but also a lake with the name of Wurukasha; however, according to the Bundahsh, this lake itself, although confined to the edge of the world, does not form a moat around it. The same work, talking of the geography of these mythical regions, gives the name of a mountain: Kaf (cf. Windischmann, Zoroastrische Studien, Berlin 1863, 7, 73, 75, n. 1).

This geography interlocks with another, again an Iranian one, but with horizons limited to those of the Iranian world itself, and not the universe taken as a whole. Here the Alburz is the mountain rampart which bounds the Iranian world to the north. This is doubtless what makes Yākūt say (iv, 18) that the Kaf was formerly called Alburz; cf. also Mustawfi, Ḵuzat al-kūlūb, GMS, xxiii, i, 191-2. Geiger (Ostiranische Kultur im Kulturall, Erlangen 1882, 42-3) thinks that Lake Wurukasha originally referred to a definite place (Aral or Caspian Sea), but that since then, from the time of the Avesta, it has been relegated to the realm of myth. On the Alburz - Hara-berezyati system and Lake Wurukasha (Vāruḳāsh), cf. Ritter, Die Erkdunde oder allgemeine vergleichende Geographie, Berlin 1822-9, viii, 42-3; F. Spiegel, in ZDMG, vi, 85, and Eranische Altertumskunde, i, Leipzig 1871, 191 ff.; W. Gieger, op. cit., 42-3; F. v. Adrian, Der Hohenkultur asiatischer und europäischer Völker, Vienna 1891, 287-8.

Iranian cosmology has fairly close links with that of the Hindus. In their writings, particularly in the Purāṇas, they deal with the question of the fabled
mountain chain of Lokaloka, which separates the visible from the invisible world, and which rises above the horizon as a boundary of the world, situated in the north, as it appears in the Indo-Iranian tradition, was very widespread among the peoples of the ancient Orient. Perhaps, in the last analysis, the origin of this could be sought in Babylonian cosmology; cf. F. Deltzsch, Wo lag das Paradies?, Leipzig 1881, 21, 117-8; F. Hommel, Aufsätze und Abhandlungen, ii, Munich 1900, 345-6; Zimmermann, Die Keilschrifttexte und das Alte Testament, Berlin 1903, 353, 355, 620. Traces of the same conceptions are also to be found among the ancient Hebrews: cf. W. Gesenius, Kommentar über den Jeremias, ii, Leipzig 1821, 316-7 (where analogous opinions found outside the Bible are also examined in detail); Dillmann-Kittel, Der Prophet Jesaja, Leipzig 1898, 134. Lastly, to return to the Hindus, the Meru which in ordinary Buddhist thought is considered to be the centre and navel of the earth (cf. W. Foy, in Festschrift E. Windisch-Leipzig, 1923-4); E. W. Hopkins, Epic Mythology, Strasbourg 1915, 253, index; Roscher, Neues Olympiak-Studien, Leipzig 1915, 72), is at times thought to be the mountains of the Himalaya bounding the Hindu world to the north. In this connexion it may be remembered that in the cosmological traditions of Islam itself as they are presented in the Kur’ân and Hadîth, an account of these themes can be found (T. Fahd, La naissance du monde selon l’Islam, in Sources orientales. La naissance du monde, Paris 1959, 237 f.). The general tendency of the classical Muslim world, apart from learned theories, is to consider the world as a flat disc. This manner of looking at it, which seems to result from certain kur’ânic passages (cf. e.g., Kur’ân, XV, 19, LXXIX, 30: God spread out the earth), is found in the traditions and consciousness of the people. The mountain of Kâf is separated from the terrestrial disc by a region which men cannot cross, a dark area which would stretch for four months walking, according to a saying of the Prophet (cf. the Persian version of Tabârî-Bai’damî, tr. Zotenberg, i, Paris 1867, 33). But the mountain of Kâf does not only surround the earth: it also encloses the Ocean which forms a girdle around the earth.

According to the descriptions, in particular those of Mutahhar b. Tâhir al-Mâkidî, Yâkût, Kazwînî and Ibn al-Wardî, the mountain of Kâf is made of green emerald, of which the sky reflects the colour. But others say that only the rock on which Kâf rests is of emerald. This rock (al-sakhra) is also called a stake (maṣâd); God made it to support the earth, which without it would not be able to stand up by itself. That is why the Persians say that Kâf did not exist, the earth would shake constantly, and no creature would be able to live on it: this latter idea can be compared with the role assigned to mountains in the architecture of the world by the Kûrân, cf. (XIII, 3 and passim).

The existence of Kâf combines with other conceptions relating to the supports of the earth. A tradition contained in Kazwînî, i, 146, tells how in the first ages, since the earth was oscillating in all directions, God created an angel who took it on his shoulders and grasped it with his hands (compare with the myth of Atlas); the angel had as his support a rectangular rock of green hyacinth, itself borne upon a giant bull which rests upon a fish swimming in the water. Ibn al-Wardî, who repeats these details (p. 12, 15-6), specifies that the mountain Kâf has as its base the rock of hyacinth. Elsewhere the same author (13, 17-8) increases the number of the supports of the earth, with the exception of the angel, and varies the hierarchy of elements already quoted. Other variants are pointed out by A. J. Wensinck, The Ocean in the literature of the western Semites, in Verh. Ak. Amst., Phil. Sect., new series, xix/2 (1918), 16 and n. 2, and J. Meyer, Die Hilfe im Islam, Basel 1901, 46. The Muslim Iranians describe the animal supporting the earth now as a bull (cf. Dâmî, op. cit., 13; Rosenzweig, op. cit., 190b; Vullers, Lex. Pers.-Lat., ii, 946a), now as a hybrid of bull and fish (cf. Firdawsi, Shâh-nâmeh, ed. Vullers-Landauer, Leiden 1877-85, 37, 144; Vullers, Pers.-Lat., ii, 947a). Similarly, popular belief in Baghdad long talked of a bull and a fish as supports for the earth (cf. H. Petermann, Reisen im Orient, ii, Leipzig 1861, 301). Amongst the inhabitants of the countries round the Red Sea, there reigned the belief that the earth rests on the back of gigantic bulls (cf. E. Rüppel, Reisen in Abyssien, i, Frankfurt-am-Main 1838, 256). Kazwînî gives for the bull and the fish the names of the biblical monsters Leviathan and Behemoth, proving in that way that these conceptions, taken over by the tradition of the Muslim world, are connected with ancient biblical ideas, which themselves go back to the Babylonian tradition of the chaos. But, on the other hand, the theme of the bull carrying the earth is also found in India, and the rock from which the mountain Kâf springs can double be identified with the stone Sêtitya mentioned by Firdawsi, which carries the umbilical stone of the earth, which God cast down into the depths of chaos or of the Ocean as the support of the earth (cf. for this legend Feuchtwang in MGWJ, liv (1910), 724-5; W. H. Roscher, op. cit., 73-4). It must be noted, however, to end the theme of the supports, that one tradition (Kazwînî, i, 144) maintains that God placed the earth in the universe without anything surrounding it or supporting it. Kâf is thought to be the mother-mountain of all the mountains of the world. They are linked to it by subterranean ramifications; when God wants to punish a people, or to destroy a country, He sets one of these ramifications in motion, thereby causing an earthquake. Others believe that the earthquakes are due to the fact that the bull, wearied by his burden, kicks, thus shaking the earth. However it might be, Kâf plays an essential role in the cosmos: it is the primary mountain, the one which sees the sun pass on its course, and it is given a certain human appearance with a head and a face.

Inaccessible to men, it marks the edge of the world; therefore its name is used metonymically with this latter meaning (cf. e.g., Dâmî, op. cit., 1). No-one knows what lies beyond; but some, while maintaining that this beyond belongs to the realm of eternal life, undertake to describe it: the country would be white like silver, stretching over forty days'
walk, and inhabited by the angels; stretching beyond Kāf there would be a land of gold, seventy of silver, and seven of musk, each one stretching in each direction over ten thousand days travelling, and each one populated by angels. Kāf with all the countries beyond can also be given as the home of the djinns. But above all, Kāf is thought to be the haunt of the fabulous bird Simurgh, a sort of griffon with characteristics similar to those of the ‘Anāq, [q.v.] of the Arabs. Existing since the beginning of the world, this marvellous bird then withdrew to Kāf in complete solitude, and lives there contented as a wise counsellor consulted by the kings and heroes of old. Kāf, its home, on account of this has been given the name, especially in poetry, of “mountain of wisdom”, or “mountain of contentment”. In the Ḍanīḥ al-Ṭayr, the Persian poet Farīd al-Dīn Aṭtār [q.v.] describes the pilgrimage of the Ṣūfī by way of the seven stations through which the soul must pass before it loses itself completely in God, by means of the allegory of a very difficult journey filled with adventures, accomplished by a bird, traversing the seven valleys, until it reaches the mountain Kāf, where their very wise king Simurgh is enthroned. Kāf also plays a certain role in the literature of tales; this mountain is found in the Thousand and One Nights (466th, 624th, and 787th Nights). On their return home an excerpt of the Korān, the letter Kāf, which stands at the head of Sūra L, as referring to the mountain Kāf (references in R. Blanchère, Introduction au Coran, Paris 1959, 147).

In purely terrestrial geography, no longer cosmological, Kāf at times denotes the part of the high Asiatic chain of mountains which borders the Muslim world to the north, especially the Caucasus and the mountains of northern Persia; that is why the Damar-Wand [q.v.], a mountain situated in the region of Haut-Tell about 30 km. from the Algerian border; the altitude varies from 700 to 850 m. Since 1962, an effort has been made to replace the traditional cereal cultivation with a greater agricultural diversification, although the attempt at co-operative collectivization of the land was abandoned in September 1969. The town has also benefited from a degree of urbanization and cultural promotion. To this end, since September 1967 an annual festival has been held in honour of Jugurtha, promoted to the rank of a local hero.

The site of al-Kāf has been inhabited since the Paleolithic era, but when the town itself was founded is unknown; it was probably a Libyan or Punic foundation. The name first appears in texts dated 241 B. C. relating to mercenaries sent there by Carthage after the First Punic War to fend off the threat to the capital. The Romans called it Sicca Veneria after a Punic goddess who was identified with Venus. There seems to be no doubt that ritual prostitution was practised at her sanctuary. Under the Empire the town was called Colonia Julia Cirta Nova; it later came under Muslim control under the name of Shīkka Banārya (a corruption of Sicca Veneria) and continued to be referred to as such in Arab texts until the end of the Middle Ages. Ibn Khaldūn (d. 808/1406) knew it under no other name. The name al-Kāf appears for the first time in the works of Ibn Abī Dīnār, who wrote around 1100/1698-9, and al-Wázir al-Sarrājī (d. 1149/1736-7). The latter, citing Ibn Shabbātī on Shīkka Banārya, found it necessary to add, “which is the town now called al-Kāf” (Hulal, i/2, 325), indicating that the old name had been completely forgotten. The change of name must have begun at the beginning of the period of Ottoman control (1574), which brought about a new stage in the history of the town. Around a score of sites in Tunisia bear names containing the vocable al-Kāf (R. Vaufrey, Préhistoire de l’Afrique, index to vol. i and ii; L. Balout, Préhistoire de l’Afrique du Nord; index; J. Ganiage, Les origines du protectorat... 35, 62; Guide Bleu de la Tunisie, index). An al-Kifān (pl. of al-Kāf) is noted in the vicinity of Fez (Leo Africanus, Description de l’Afrique, i, 229 n. 370), and Yāḥt (Buddan, iv, 431) mentions a fortress in Syria bearing the name al-Kāf, undoubtedly the same one which Ibn Khaldūn called al-Kahf (“Ibar, v, 842) and which Zāhir Baybars (658/1260-676/1277) captured from the Ismā’īlīs. It is apparent that the toponym al-Kāf is very widespread. No doubt a corruption of the Arabic word al-kahf (“cave”) through the dropping of the unvoiced spirant h, it was used to denote any agglomeration occupying a cavernous site, one that was raised up. In this respect, al-Kāf merits its name. “Standing on one of the main shoulders of a massif which can be considered as a natural citadel, the town dominates the great plains of Sers, Zanfour, Lorbus and Oued Mellégue, and at the same time commands the main routes from Tunis to Algeria” (Tissot, Géographie comparée... ii, 378).

This “natural citadel” was frequently mentioned during the Jugurthine war, and he made it one of his bastions. When it came under Roman control, it was
raised to the status of a colony and enjoyed real prosperity under the Empire, reaching some eminence when... 

The bey liammuda Pasha (1782-1813) restored the

Frères Barbu, which became the most important fortress in the region. In the middle of the 10th/16th century Leo Africanus could still sing the praises of Laribus, now no more than a few ruins 30 km. east of al-Kaf and totally eclipsed by the latter. No Arab geographer mentioned al-Kaf again until al-Bakri (d. c. 461/1068) and he only incidentally in the course of relating several Muslim encampments and battles fought on the site of the ancient city. Despite its eclipse, al-Kaf figures from time to time in medieval historiography. In 1717/78 the Ibadî Kharîdîs suffered a crushing defeat there during the rule of the Muhallabid Dâwûd b. Yazzîd. Its fall, without a single blow having been struck, into the hands of the Fâtimid dâ'î al-Bârî was a preliminary to the definitive defeat of the Aghlabid troops at Laribus. Under the Zirids, the town played an active part in the conflict between Bâdis (368/969-406/1016) and his uncle, Hammad, and during the Hûlîi invasion (443/1052) a certain ‘Ayyûd (or ‘Abbâd or ‘Imâd) b. Naşr al-Killâtî led a band of adventurers and founded a little kingdom there, successfully resisting all invaders. In 554/1159 the Almohads drove out his descendants and united the Maghrib. Al-Kaf is not mentioned under the Hafsids, except for a battle which raged in the vicinity in the summer of 724/1324. From then on, its decline began. V. Guérin, who

visited the town between the 8th and 10th of June 1860 observed: “Two quarters are almost in ruins and barely inhabited, which means that the town contains less than half the number of people one at first imagines. The total population consists of 4,500 Muslims, around 600 Jews, a few Maltese, and the employees of the French post-office” (Voyages, ii, 53-4). In 1864 it was taken in the inscription of ‘All Ibn Ghâdâmâm, and was hit by the famine and cholera of 1867. The railway linking Tunis and Suk el-Arba (now Djendâbî), built in 1878, accelerated its decline by depriving it of its traditional role as a commercial station between Algeria and Tunisia. The population of the town continued to decrease. In 1881 “its 45 hectares, which could have accommodated 8,000 people, contain no more than 3,500” (Monchicourt, La région du Haut-Tell, . . ., 408). When the French protectorate was established in Tunisia, General Lagorot took the town without a struggle on 26 April 1881. Three years later, in June 1884, the first French school in the interior was opened there; on July 8 in the same year it was raised to the status of a commune and from 1886 it was made the seat of a civil controller who governed alongside the caid. The municipal census of 1912 indicates its new composition, revealing also the resurgence it had begun to enjoy. Its 6,312 inhabitants in 1912 were made up of 4,462 Muslims, 650 Jews, and 1,200 Europeans, 800 of them Italians and 340 French. During the Second World War it became a vice-residency, administering that part of Tunisia which was not occupied by the Axis forces.

Al-Kaf, formerly one of the centres of Maraboutism, still possesses many saâiyas, but the political influence of the brotherhoods, in the past of some importance, is now practically nil.

**Bibliography: Sources (in chronological order):**

- Mukaddasî, 4hsan al-tabâsîm, ed. and partial tr. Ch. Pellat under the title Description de l'Occident, . . ., Algiers 1950, 18-19; Mâlikî, Riyâd, ed. H. Monès, Cairo 1951, i, 30; Bakrî, Masâlîk, ed. tr. De Slane, Paris 1965, 33-74; Yâkût, s.v.; Ibn al-Shabbat, Siât al-Simî, Ms. 3208, Nat. Lib. of Tunis, fol. 82 v.—83 r.; From then on and throughout the Middle Ages al-Kaf gave way to Laribus, which became the most important fortress in the region. In the middle of the 10th/16th century Leo Africanus could still sing the praises of Laribus, now no more than a few ruins 30 km. east of al-Kaf and totally eclipsed by the latter. No Arab geographer mentioned al-Kaf again until al-Bakri (d. c. 461/1068) and he only incidentally in the course of relating several Muslim encampments and battles fought on the site of the ancient city. Despite its eclipse, al-Kaf figures from time to time in medieval historiography. In 1717/78 the Ibadî Kharîdîs suffered a crushing defeat there during the rule of the Muhallabid Dâwûd b. Yazzîd. Its fall, without a single blow having been struck, into the hands of the Fâtimid dâ’î al-Bârî was a preliminary to the definitive defeat of the Aghlabid troops at Laribus. Under the Zirids, the town played an active part in the conflict between Bâdis (368/969-406/1016) and his uncle, Hammad, and during the Hûlîi invasion (443/1052) a certain ‘Ayyûd (or ‘Abbâd or ‘Imâd) b. Naşr al-Killâtî led a band of adventurers and founded a little kingdom there, successfully resisting all invaders. In 554/1159 the Almohads drove out his descendants and united the Maghrib. Al-Kaf is not mentioned under the Hafsids, except for a battle which raged in the vicinity in the summer of 724/1324.

The town did not regain its former importance until the Ottoman era. Facing Constantine, its task was to defend the Regency of Tunis against invasion from Algeria. It was involved in the successive conflicts between Algiers and Tunis (1628, 1685, 1694, 1705, 1746, 1756, 1807) and in the squabbles among the various pretenders to the throne of Tunis. A kasba was built in 1675, and remained fortified. In 1739-40 Ilî Pasha built a rampart around the town. The bey Hammûda Pasha (1782-1813) restored the kasba in 1806 and consolidated the enceinte. During his reign al-Kaf, alongside Tunis, Kayrawân and Bêjda, was one of the four main fortresses of the kingdom, permanently endowed with a strong garrison of at least 500 men under the command of an aqâ. Yet the town lost its strategic value: the installation of the French in Constantine in 1837 made its fortifications henceforth useless.

From then on, its decline began. V. Guérin, who

visited the town between the 8th and 10th of June 1860 observed: “Two quarters are almost in ruins and barely inhabited, which means that the town contains less than half the number of people one at first imagines. The total population consists of 4,500 Muslims, around 600 Jews, a few Maltese, and the employees of the French post-office” (Voyages, ii, 53-4). In 1864 it was taken in the inscription of ‘All Ibn Ghâdâmâm, and was hit by the famine and cholera of 1867. The railway linking Tunis and Suk el-Arba (now Djendâbî), built in 1878, accelerated its decline by depriving it of its traditional role as a commercial station between Algeria and Tunisia. The population of the town continued to decrease. In 1881 “its 45 hectares, which could have accommodated 8,000 people, contain no more than 3,500” (Monchicourt, La région du Haut-Tell, . . ., 408). When the French protectorate was established in Tunisia, General Lagorot took the town without a struggle on 26 April 1881. Three years later, in June 1884, the first French school in the interior was opened there; on July 8 in the same year it was raised to the status of a commune and from 1886 it was made the seat of a civil controller who governed alongside the caid. The municipal census of 1912 indicates its new composition, revealing also the resurgence it had begun to enjoy. Its 6,312 inhabitants in 1912 were made up of 4,462 Muslims, 650 Jews, and 1,200 Europeans, 800 of them Italians and 340 French. During the Second World War it became a vice-residency, administering that part of Tunisia which was not occupied by the Axis forces.

Al-Kaf, formerly one of the centres of Maraboutism, still possesses many saâiyas, but the political influence of the brotherhoods, in the past of some importance, is now practically nil.
**KAFA'**

A term which in common usage signifies at one and the same time equality, parity and aptitude, but in the terminology of *fikh* designates equivalence of social status, fortune and profession (those followed by the husband and by the father-in-law), as well as parity of birth, which should exist between husband and wife, in default of which the marriage is considered ill-matched and, in consequence, liable to break-up. In fact, in *fikh*, *kaфа*a works in a single direction and protects only the wife who must not marry beneath her station; it matters little, on the other hand, if the man marries a woman of socially inferior status except in two cases. The scope of the theory of *kaфа*a, which varies from school to school, and the sanctions provided for by them in regard to an ill-matched marriage are discussed in the article NIKAH. Here, as there, questions of social, family and economic parity have retained all their importance, even though as in the Maghrib, inequality of status is not the object of judicial sanction.

One must therefore resign oneself to explaining the importance attributed to *kaфа*a by the Hanafi system, not by sociological reasons, but by the fact that in this school the woman who had reached the age of puberty was permitted to conclude her marriage without the assistance of a *walid* (q.v.), even though such a proceeding was considered blame-worthy. In these countries therefore the risks of misalliance were much greater for the wife's family than in countries under Mālikī law where the indispensable assistance of the *walid* gave an important guarantee to the wife's family. This explains the tendency in certain Mālikī countries (Morocco for example) counterbalancing the relative freedom at present enjoyed by the woman to arrange her own marriage, to introduce in their recent code of personal status attenuated forms of *kaфа*a, unknown to classical Mālikī law.

surety-bond as a unilateral commitment on the part of the surety. This conception was adopted by the other schools in which the surety-bond is an action that is valid solely through the will of the surety. The surety-bond being seen as an act of generosity on the part of the surety, it was deduced that the latter must be able to dispose of it freely; that is he must be in full enjoyment of his capacities, and must not be a minor, madman, nor “prohibited”. On the other hand, the creditor being in the position of a donee profits, in Hanafi law (where his acceptance is insisted upon), from the same facilities as any other donee. Only debts and obligations which are capable of being fulfilled by the security in place of the principal debtor may be the object of a surety-bond.

Therefore penal obligations and talion (ğişâs) are excluded, except in the case of kafala bi'l-nafs, in which circumstances the surety-bond only guarantees the debtor's appearance in court.

a) Kafala bi'l-nafs. This original form of surety-bond underwent a lengthy evolution in all works of fiqh no matter to which school they belonged. The first Shâfi’is and the Imam al-Shâfi’i in his second teaching were opposed to it: later the Shâfi’i school, “influenced by public opinion and the pressure of necessity”, finally permitted it. This surety-bond assumed that judicial proceedings may be instituted against the debtor; it is therefore invalid when the debtor has disappeared after the conclusion of the agreement and it is not known where he may be reached (except in Shâfi’i law, in which trial by default is permissible). For the same reason the bond no longer holds good when the debtor dies, and of course the death of the surety has the same effect.

The schools deal differently with the defaulting surety; that is someone who fails in his obligation to make the debtor appear in court. In the view of the Hanafi school if, after a certain period of grace has been accorded him (for his failure may be due to the temporary absence of the debtor), he is still unable to fulfill his obligations then he is to be imprisoned, at the decision of the kâdi. In these circumstances the Mâlikis and Hanbalis give to the surety the benefit of the same waiting period as the Hanafis; if the debtor has still not appeared in court after this period the surety is sentenced to pay the debt of the debtor. Shâfi’i law is less precise on this point, but it does not, under any circumstances, provide for the imprisonment of the defaulting surety.

b) Kafala bi'l-mâl. All debts may be bonded, even though their exact total is not known, by the surety at the time when he enters into the contract or it is a question of an advance credit in the patrimony of the creditor (except in Shâfi’i law). It is sufficient if the obligation can be fulfilled by a third for the account of the debtor, excluding (as we have seen above) obligations pertaining to the person of the debtor (badd, gişâs, fee for contractual release, etc.).

The surety bond is subject to the same restrictive clauses schools in attending the principal obligation. From this it is deduced that if the creditor concedes a limit to the surety, the debtor, who has firmly pledged himself, benefits from it also. Nevertheless, in Hanafi law (in which the surety-bond assumes an agreement between creditor and debtor), the creditor is allowed to consent to a limit to the surety and to make the express stipulation that the debtor may not benefit from this. The creditor’s release of the surety from his bond does not free the debtor but, in the reverse case, the release of the debtor frees the surety. If, instead of guaranteeing the payment of the debt, the surety takes over the debt this is not kafala but hasefâ (q.v.), that is conveyance or assignment of the debt.

The moment that the debtor’s obligation falls due, the creditor has the right to proceed against the principal debtor or the surety as he pleases, or both at once. Therefore in Muslim law there is no benefit of discussion on behalf of the surety as there is in Western law, where the surety can constrain the creditor to begin his proceedings with the debtor, unless there is legal and conventional liability. Only the Mâlikî law allows the surety the opportunity of obliging the creditor to begin his proceedings with the debtor when the latter is solvent; the same is true when the debtor is absent, as long as the existence and stability of his goods can be established without difficulty. These conditions hold good in the absence of any contrary stipulations made by the parties concerned. The surety who has paid the reckoning of the debtor has no remedy at law unless the latter asked him to guarantee him and, being so be, he is able to dispose of his goods. In default of one of these conditions, the surety is bereft of any remedy, except in Mâlikî law where he always retains his right of legal remedy provided that the discharge of the debt is established.

Y. LINANT DE BELFONDS - AL-KAFF ('ilm), a divinatory process which belongs to the realm of physiognomy [see PIRASA], and designates more specifically chiromancy, or the art of deducing the character of a person according to the shape and appearance of the hands, whereas chiromancy proper is designated by 'ilm al-asâdir (lines of the hand) or Shâfi’i law. One can also say nasr fi 'l-yad, from al-kaff (cf. T. Fahd, Divination arabe, 393 ff.). But the use of the term 'ilm al-kaff has become general, and this has supplanted the others. It covers both chiromancy and chiromancy; it also includes dactylocracy (prognostications drawn from the observation of the finger joints) and onychomancy (divination from the finger nails).

Although this form of divination, considered by the Chinese to be the first step in the science of the occult, has been and continues to be very widespread, literature on the subject remained rare until the Middle Ages (cf., for example, the recent collective work entitled La divination, studies collected by A. Caquot and M. Leibovici, Paris 1968, where chiromancy, mentioned only twice, appears to play a very minor rôle in the divinatory tradition).

In the West, a pseudo-Ciromantia Aristotelis (cf. L. Thorndike and P. Kibre, A catalogue of incipits of Mediaeval scientific writings in Latin, revised and augmented edition, London 1963, the Mediaeval Academy of America, no. 29, pp. 225, 303, 830) seems to have been at the origin of several short treatises or pamphlets on chiromancy attributed to Albertus Magnus (op. cit., 282, 350), Michael Scott (ibid., 531) and other scholastic theologians. This Ciromantia, said to have been translated (from the Greek?) by John of Seville and Adelard (of Bath?), appears to
have been unknown to the Arab translators of the writings of Aristotle. This pseudo-Aristotelian tradition, rather late in the Christian East, through the medium of mediaeval Latin works, as can be seen from three Christian manuscripts known to us: a) Beirut, Fac. Or. 271 (no. 579), entitled *Firāsat al-kaff*, dealing, in a first section of twenty-four chapters, with the nature of the hand and its aspects (with rough drawings), and a second section, also of twenty-four chapters, concerned with the mysteries of life according to the hand; b) Aleppo, P. Sbath, 529, with the same title, done in the 19th century by a monk in Jerusalem (414p); c) Berlin, Cat. Ahlwardt, 4255, an anonymous work of 55 fol., citing Aristotle, Thomas Aquinas and Albertus Magnus, among others.

In the East, where for once Aristotle was not invoked as the initiator of this art, two traditions come together in Arab divination: the Indian tradition represented by an anonymous work now lost, which was quoted by Ibn al-Nadim (*Fihrist*, 314), K. Khudil al-kaff wa l-makddlr al-asdbi* (titles reminiscent of the two Bursa texts: the author lived in this town), attributed to the historian Mustafā b. Hasan al-Djannāī (d. 999/1590) by Hāḍidī Khālīfā, iii, 576. Meanwhile, in order to gain a clear idea of the object of this art according to the Arab authors, we have at our disposal two definitions: the first is found in the *K. al-firāsa* by Fakhr al-Dīn al-Rāzī (ed. and tr. Y. Mourad, Paris 1939, 11) and the second in Hāḍidī Khālīfā, i, 236. From this it appears that chiromancy allows the prediction of the length or brevity of a man's life, his destiny, happy or unhappy, his wealth or poverty, etc., based on the lines of the hand or the sole of the feet by observing whether they are close or far apart, long or short, whether the spaces which separate them are wide or narrow, and by looking at the patterns which they form.

Finally, as in the case of the *Firāsa*, *Lim al-asār* was applied in medical prognostication. Hippocrates and Galen practised it, as they did armed physiognomy (cf. *Divination arabe*, 381 ff.; cf. R. Labat, *Traité akhadien de diagnostics et pronostics médicaux*, Leiden 1951, where an appendix is devoted to the "pronostics akkadiens et pronostics grecs", pp. xxxv-xlv). In this respect it would be useful to verify the contents of the *K. Asrār* (= according to al-Rāzī, loc. cit.: lines of the hand and of the sole of the foot) *al-māṣ* and the *K. Asrār al-riddāl*, attributed to Galen and translated by Ḥunayn b. Isḥāk (cf. AS 4838, resp. fol. 57v-74v, and 76v-105y; Baghdātī Vehbi, 1409, fol. 191v-26v and 26v-32v).

**Kaff**, term used in prosody (see *Arab*); term with politico-religious meaning (see *Kof*).

**Kaffāra**, an expiatory and propitiatory act which grants remission for faults of some gravity. This technical term, which is only employed four times in the Kurān, is said to have been borrowed from Hebrew kāppārā (A. Jeffery, *Foreign vocabulary of the Qur'an*, 250; D. S. Margoliouth, art. *Expiation and atonement (Muslim)*, in *Hastings Enc.*). For the reasons set out below, this thesis should be considered as unproven. On the other hand the root *kfr* is undoubtedly Arabic.

Speaking strictly etymologically, *haffāra"covers"* sins rather than wipes them out. The root, which is frequently used in the Kurān, in fact means "to cover," "to cover a thing or person so that it is hidden from view." The renegade is called *kāfir* [q.v.] because his heart is wrapped in blasphemy; the same word refers to the night, for then things are shrouded in shadow (LA, root *kfr*). Thus the *haffāra* is intended to cover wicked deeds with a veil so that they are concealed. From this point of view, fault and expiation are regarded in a material sense, the moral content developing rather later.

Comparison with other Semitic languages leads to a closer understanding of the original meaning of the root *kfr*. In Syriac, *hefar* means to wipe, and the fault would seem to be seen as a stain which must be removed. Similar conceptions lie behind *kāppārā* in Assyrian, for it has the meaning of to wipe, to remove, to clean. The form *happura* expresses the idea of a magico-medical operation by means of which an illness is driven away or a demon expelled. In Hebrew, kippēr appears to be close to the Arabic meaning. According to Ed. König, "cover" is the only appropriate translation. True, this scholar's opinion has been criticized and kippēr can also have the meanings of to rub, to blot out and to wipe. The dominant idea is of expiation. Thus the kōfr is simply a ransom, the expiatory sum of blood; the *kappōrēth* is the region of the Ark which acts as a lid and serves as the instrument of expiation; finally,
Kaffara—Kafir

Kappdrd is specifically the expiation of a fault and wiping away of a blemish by means of a victim whose blood is used to rub or sprinkle the person or thing that is to be purified.

It is tempting, therefore, to consider that the ancient Arabs held a material conception of the remission of sins. It should be noted here that other Arabic words currently used to signify pardon also have the sense of to cover, to efface, to smooth away; in the same way mahb, to erase, by rubbing or covering, has the meaning of to pardon. Furthermore, according to al-Umar the Arabs sought pardon for their misdeeds by confessing them before an assembly and requesting those whom they had wronged to bury their misdeemaurers. This act, known as dafn al-qamaw [see ḍunūb, dafn al-] was enacted physically.

Although etymologically kaffara may be understood as “that which covers” sin, it should be noted that this meaning figures least in the Kurān, where essentially the root has the sense of to repudiate, to redeem, to pardon. In addition, the verb kafara, to be a renegade or infidel, often appears alongside aman, apparently its antonym (III, 156, IV, 37, XXIX, 12); the form kafara is employed with the sense of to erase (III, 195, IV, 31, V, 12, 65); kifr expresses forgetfulness (XXI, 94) and annihilation (while demolishing the sanctuary of al-Uzzā, Khalīd b. Walīl says: “Your annihilation and no longer your glory”, kifrana khāli subhānākh). It is therefore hardly surprising that kaffara is employed essentially in the sense of atonement: the kaffara for perjury and violating the ban on hunting when in a state of šahr is the manumission of a slave, fasting or the distribution of food or clothing to the poor (V, 89 and 95). Yet this is also a propitiatory act from which the idea of expiation seems lacking: “If a man grants pardon [for talion, this] will be a kaffara for him” (V, 5).

Therefore it is evident that kaffara, in its Kurānic conception, is obtained without the help of a blood sacrifice, unlike the levitical system, where the means of expiation is usually blood. We have thus eliminated the notion that this is a borrowing from Hebrew in spite of the similarity of pure form.

Other instances where the sinner must do penitence are dealt with in the Kurān: an attack on the physical integrity of the person (IV, 92), pronouncing the shāh oath (LVIII, 4), breaking the rules of fasting during Ramadān (II, 183 f.), violating the prohibitions of the pilgrimage (II, 195; V, 94, 95). In fact there are no grounds for claiming that these were cases of kaffārā stricto sensu, and it is by analogy that šāh applies this term to acts (fasting, liberation of a slave, feeding the poor, sacrifice) on whose exact nature the Kurān is silent (is it a case of redemption, expiation or propitiation?). It is also advisable to stress that šāh tends to regard kaffārā as a punishment (“shāh, ġzar”; cf. Ibn Rushd, Bidāyat al-muḍātahd, Cairo 1335, i, 212; al-Bukhārī, Sahih, kitāb al-ḥudud), which is not exactly the position of the Kurān, where there is a distinction between ġzar and kaffara (V, 95) and the latter is even considered a propitiatory act (V, 45). Following the standpoint of the legal schools, as is obligatory, the acts by which kaffara can be obtained include blood sacrifice, to be exact the ḥadiyy for complete infringement of the rules of the pilgrimage, particularly those of šahrām.

The expiatory nature of Islamic sacrifice is brought out especially by the rôle of the blood redeemer (J. Chelhod, La sacrifice chez les Arabes, 59, 174 f.). The Bedouins too believe that the blood of a victim gives protection against epidemics, averts ill fate, banishes the wrongdoer and casts out chthonian spirits. Such beliefs were widespread among ancient Semitic peoples. In Babylonian ritual, purification and atonement are obtained through blood sacrifice. As we have seen, the same means were used to obtain expiation in the levitical system. The Mineo-Sabians confessed their sins publicly and atoned for them by offering a bleeding victim (G. Ryckmans, La confession publique des péchés en Arabie méridionale préislamique, in Le Muséon, lviii, 1–14).

Kāfīla [see Tipārā].

Kapil [see Kāfās].

Kāfir (a.), originally “obliterating, covering”, then, “concealing benefits received” = “ungrateful”; this meaning is found even in the old Arab poetry and in the Kurān, Sūra XXVI, 18. In the Kurān the word is used with reference to God: “concealing God’s blessings” = “ungrateful to God”, see Sūra XVI, 57 and XXX, 33. “That they are ungrateful for our gifts”[cf. also Sūra XVI, 85. The next development—probably under the influence of the Syriac and Aramaic where the corresponding development took place earlier—is the more general meaning of “infidel” which is first found in Sūra LXXIV, 10 and is henceforth very common; plural kāfīrin or kaffarin, once (Sūra LXXX 42) kaffara. The term is first applied to the unbelieving Meccans, who endeavour to refute and revile the Prophet: Sūra I, 12 and elsewhere. The subject of incredulity is sometimes more nearly defined with added bi-., e.g., Sūra XXXIV, 33: “We do not believe in your mission”; Sūra VI, 89. In the early Meccan period a waiting attitude towards the unbelievers is still recommended (Sūra LXXXXVI, 17; LXXXIII 10 f.; see also Sūra CIX entitled al-Kāfrūn), but later the Muslims are ordered to keep apart from them (Sūra III, 114, also 27), to defend themselves from their attacks and even to take the offensive against them (Sūra II, 186 and elsewhere). In most passages the reference is to unbelievers in general, who are threatened with God’s punishment and Hell [cf. the article Dāranan].

In the literature of Tradition also the hadīth—when multiplication is in details—deal partly with the fate of the kāfir on the day of judgement and his punishment in Hell, and partly with the believer’s attitude towards him. For the rest they reflect the great controversy in early Islam on the question whether a Muslim should be considered a kāfir for committing a “major sin” (cf. al-Bukhārī, Kit. al-Imān, Bāb 22). Thus we find hadīths such as: “If a Muslim charges a fellow Muslim with kufh, he is himself a kuffar, if the accusation should prove untrue”; or “The reproach of kufh is equivalent to murder” etc. Nevertheless, kāfir in theological polemics is a fairly frequent term for the Muslim protagonist of the opposite view (see further Ṭāfṣir).

Eternal damnation for the kāfir has remained an
established dogma in Islam. In the dogmatic controversies of the early centuries the reasons were discussed for which a Muslim should be identical with a kāfīr and have to suffer eternal punishment. The most tolerant is the view of the Muḥātīja that all the Aḥl al-Kīlā, even if they commit a mortal sin (ḥabīra) are to be considered believers and their ultimate fate is to be left to God. The most striking contrast to this is the strict view of Ḧārīdīs (and Ḧābdī) that every Muslim who dies with a mortal sin, that is, every sin which has not been repented of—on his conscience is to be considered just a kāfīr. For this special case the Muḥatīja assumed an intermediate position between believer and unbeliever, the so-called “rejected” fāšik [cf. the article IMĀN]. According to Nallino, in the Riv. degli Studi orientali, vii, 436 ff., the names Muḥatīja, Ḧābdīja, etc. [q.v.] are probably closely connected with their attitude on this point.

According to the Liṣān al-ʿArab, vi, 459 f., the following kinds of unbelief are distinguished: 1) kūfr al-ʿināḥ = neither recognizing nor acknowledging God; 2) kūfr al-ḏiḥād = recognizing God, but not acknowledging Him with words, that is remaining an unbeliever in spite of one's better knowledge; 3) kūfr al-muʿādama = recognizing God and acknowledging Him with words but remaining an unbeliever (obdurately) out of envy or hatred; 4) kūfr al-izāfah = outwardly acknowledging, but at heart not recognizing God and thus remaining an unbeliever, that is being an hypocrite [cf. MUNAFIK]. Cf. the modernist war-psychology, on the other hand, at the time of the wars between Persia and Turkey could even bring it about that the Persians were called kūfīr in Turkish fethes etc. [see Pečewi, i, 311, 319], a name which the Turks themselves had applied to them in the proclamations of the Muhāl of the Sūdān.

Since in the modern period the trend of affairs has apparently been quite in the opposite direction, and Muslims have been more and more impeded in carrying out measures against the kūfīr by the political decline of Islam and the rise of the unbelieving nations (pressure of the Powers, capitulations, etc.), the very feeling of impotence in face of these facts may have contributed not a little to the strengthening of hatred and to periodical manifestations of it (in massacres etc.). This also explains the grotesque caricature of the kūfīr, which has sometimes been found in the popular imagination at the present day (see Snouck Hurgronje, Mecka, ii, 48 f.) and which is connected with the ideas of the Arch-Kāfīr, Dādīdī [q.v.] who bears kūfīr on his forehead (cf. I. Goldziher, in Der Islam, xi, 178).

It may also be due to the hatred of the Franks (and to dogmatic squabbles) that kūfīr had developed into a term of abuse, so frequent in the Turkish form gławar (the Persian geber [see gābir] is said to be the same), although in theory it is (ZDMG, liii, 562) affirmed that the Muslim commits a punishable offence if he says to the Christian or Jew: "Thou unbeliever". From the Turkish the word kūfīr has entered into most Slavonic languages. The Spanish cafre and the French cafard also go back to kūfīr or kūfīrī. (Cf. Erwin Rosen [i.e. Erwin Carle], Cafard, Ein Drama aus der Fremdenlegion in 4 Akten, Munich 1914). In two cases kūfīr has actually become a proper name, the name of a country, Kāfīristān [q.v.].

Kāfīr and kūfīr underwent a special development of meaning in the terminology of mysticism. Compare, for example, the well-known verse of Abū Saʿīd [q.v.]: “So long as belief and unbelief are not perfectly equal, no man can be a true Muslim”, with the various explanations given in Muhammad Aʾīlā, Dict. of Technical Terms (ed. Sprenger, etc.), s.v., according to one of which kūfīr is just the equivalent of imān-ī habīb.

(W. Björkman)

KAFIRISTĀN ("land of the unbelievers"), the name of a mountainous region of the Hindu Kush massif in north-eastern Afghanistan, until 1856 very isolated and politically independent, but since the Afghan conquest of that date and the introduction of Islam known as Nuristan ("land of light").

Some older European writers mentioned what might be termed a "greater Kafiristan", comprising such regions as Kafiristan in the restricted sense (see below), Laghman, Citral, Swāt, Bajawr, Gilgit, etc. This corresponds roughly with the mediaeval Islamic region of Bolor (the Po-lo of the Chinese Buddhist pilgrims, Bolor of Marco Polo), which seems to have extended as far as Baktistan on the borders of Kāshmīr and Tibet; the *Hudūd al-Islam* (end of the 4th/10th century), tr. Minorsky, 121, 369-70, describes Bolor as a vast country ruled by the Bullūrīn-Shāh who was a Child of the Sun. Modern usage restricts Kafiristan to the region lying roughly between latitude 33°-36° N. and longitude 70°-71°30' E., bounded on the west by the Panjshir River valley; on the east by the mountain range separating the Kunar-Bashgil valley from Citrāl (sc. the modern Afghan-Pakistani border); on the north by the mountains forming the watershed between the rivers of Kafiristan draining southwards and those of Mīndān and Bādakhšān draining northwards to the Oxus; and on the south by the Kābul River valley. This last southern fringe of Kafiristan, the regions of Laghman and Kūnār (called by the Afghāns *Kafiristān-i sulāfā*), is ethnically Afghan and Pashto-speaking and forms the hinterland of Dja-lālābād. It is the more northerly region (Kafiristān-i ʿulyā) which is Kafiristan proper, comprising from west to east the basins of the Alīshang and Alīngar, of the Pāč or Pārisun and the Waigal, and of the Bashgal; above these steep-sided river valleys the Hindu Kush mountains rise almost to 20,000 feet. The inaccessibility of the region had made it a refuge area for a very old group of Indo-European peoples, probably mixed with an older substratum, and for a distinctive group of Indo-Iranian languages, the Kafiri ones, which form part of the wider Dardic group (see Afghanistan, ii, Ethnography, and Dardic and Kafir Languages).

The enduring paganism of the local peoples and their imperviousness to the Islam which came largely to surround them, account for the name Kafiristan, although an influence from the district names within Kafiristān of Katwar or Kator and the ethnic designation Kati has been suggested. The distinction of "wearers of black" (Pers. *Siyāh-pūgī, Pto. Torkāfīr), comprising five sub-tribes speaking Kati, and "wearers of white" (Pers. *Safīd-pūgī, Pto. Spīkāfīr), comprising the Prasungeli, Wangi, Wamais and Ashkuns, is an old one, but does not seem to have any scientific or ethnological basis. Anthropologically, the Kafirs are dolichocephalic, with abundant, usually dark, hair, but with a noticeable strain of blue-eyed blonds. Whence popular tales that the Kafirs are descendants of Alexander the Great's troops; a depiction came to Sir William Macnaghten in 1839 at Djalalabad during the First Afghan-British War, claiming kinship with the British troops.

Parts of Kafiristān were in pre-Christian times probably part of the Greek satrapy of Paropamisia and inhabited by a people called the Kambodjas, mentioned in the Asokan inscriptions. Alexander the Great campaigned in the Kunar valley on route for India (see Sir Thomas Holdich, *The gates of India*, London 1910, 102-4). Then, in early Christian times, it came within the Kushan kingdom and the Buddhist province of Kapiśa, so that southern Kafiristān, the region known as Lamakān, later Lamghān, was strongly Buddhist, as the survival there of stupas attests (see L. Edelberg, *Fragment d'un stūpa dans la vallée du Kunar en Afghanistan*, in *Ars Asiatica*, iv/3 (1957), 199-206). It is probable that at this time the ethnic Kafirs occupied a wider geographical area than in more recent times, but were pushed northwards into the mountain fastnesses.

The Muslims only reached the borders of Kafiristan through the extension of Šafārīd rule to the Kābul and Panjshir River valleys (later 3rd/9th century), and then through the establishment of the Ghaznavīs, and the Ghaznavid sultanate in eastern Afghanistan. It is in the Ghaznavid historian Bayhaḏāl that the occurrence of the name Kator/Katwar seems first to arise, when Sūltān Mas'ūd b. Mahmūd is mentioned in connection with the *Kātur* (424/1033 or 425/1034) (Ta'ārikh-i Mas'ūdī, ed. Ghani and Fayyād, Tehran 1324/1945, 407, tr. Arends, *Istoria Mas'ūda*, Moscow 1969, 504).
Mas'ud's father, the great Mahmud of Ghazna, had previously led an expedition in 417/1020-1 against the lion-worshipping infidels of what Gardizi calls the Nur and Kirat valleys, the first name possibly to be connected with the modern place-name Nurgal in the lower Kunar valley, i.e., southeastern Kafiristan (*K. Zayn al-akhbar, ed. Nāṣīm, Berlin 1928, 78-9, tr. Bosworth, in *East and West, N.S. xvi* (1966), 341-2; cf. Nāṣīm, *The Life and Times of Sultan Mahmūd of Ghazna*, (Cambridge 1931, 74-5, and Beveridge's Appendix X to her tr. of the *Bābur-nāma*, xxiii-xxiv).

Marco Polo mentions the land of the Pasciai idolators, ten days' journey south of badakhshān, which may refer to the Kafirs as much as to the Pashaats proper of the south-western fringes of Kafiristan; a 10th/16th century source, the account of the Muslim expedition of 990/1582 (see below), shows that some of the so-called Kafirs of that time were in fact PashaaTs. It is clear, however, that Marco Polo never visited this area himself, but must have relied on reports of the Mongol general Neküder's march from badakhshān to Cîtral and Kāshfīr across the Kafiristan mountains in c. 658/1260 (see Yule, *The book of Ser Marco Polo the Venetian*, London 1872, i, 155; Cordier, *Notes and Addenda to Sir Henry Yule's edition, London 1866-77*, iii, 400-8). The Timurid Mīrūd Mīrzā b. Abī Sa'īd (d. 900/1495) is said to have campaigned twice in Kafiristan, gaining thereby the title of Ghārī, and Muhammad Haydar Dughštā, the future conqueror of Kāshfīr, led a raid in 934/1527-8 into what he calls “Būrkhān” (*Bābur-nāma*, tr. A. C. Beveridge, London 1912-21, i, 46; Muhammad Haydar, *Ta'rīkh-i Rashīdī, a history of the Moghuls of Central Asia*, tr. E. Denison Ross and N. Elias, London 1895, 384-6). Bābur gives a valuable geographical description of southern Kafiristan, with emphasis on its rich fruits and on the wine produced by the Kafirs, who exported it to Badjawr. He also speaks of Muslim nimbas or half-breeds, who were probably converted Kafirs and who still mixed with the Kafirs, living at Caghānsaray at the confluence of the Kunar and Pēc Rivers (*Bābur-nāma*, tr. i, 210-14, 371-2). Bābur himself made various incursions via the Lamghān district into the southern fringes of Kafiristan. In the winter of 913/1507-8 he crossed the Bād-i Pish or Bād-i Pakht Pass linking the lower Ashang and Kābul River valleys, causing an inscription to be carved above the pass commemorating his transit (the existence in modern times of this inscription has been noted by several observers, but it has not so far been scientifically described); in 926/1519 he passed again, he received the submission of certain Kafīr chiefs, who brought gifts of wine (*Bābur-nāma*, tr. i, 209, 343-4, 421-3).

In the Mughal period, the *Tabābdāt-i A'kbari* laconically mentions that in 900/1515 the Emperor A'kbar, whilst at Džalilbābād, sent an expedition against the infidels of Kātwor (Elliott and Dowson, *op. cit.*, v, 425). This detail can now be amply supplemented by the account in 16 dāstāns or epic narratives of the Kādī Muhammad Šālim, who accompanied this expedition as a preacher and encourager of the Muslim troops; Kādī Muhammad's work has been edited by G. Scarcia as the *Sīfāt-nāma-yi Darūl Muḥammad Ḥān-i Gāstī, cronaca di una crociata musulmana contro i Kafiri di Lašmān nell'anno 1582* (Rome 1965). The leader of the expedition, Muḥammad Hākim (d. 993/1584 or 994/1586), was A'kbar's younger brother and governor of Kābul, and was also a strong adherent of the missionary-minded Naqghbandiya Şofi order. The area attacked was the south-western part of Kafiristan, including the lower basin of the Alishang and Alingar Rivers, where the Muslim forces established various strongpoints against the Kafirs.

After this period, there is substantially silence until the 19th century, when British travellers and officials began to take an interest in Kafiristan as a still-independent buffer-zone between British India and the amirate of Afghanistan. Thus Mountstuart Elphinstone described the topography of the land of the “Seaoposh Caufirs, a strange and interesting people”, and gave the pioneering account of the Kafirs' customs and social organization, based on the reports of a Muslim envoy to Kamdesh in the Bashgal valley (*An account of the kingdom of Caubul, and its tribes of the Hindoo Koosh* (Calcutta 1880), he devoted a chapter to the “Siah Posh”, in which he included the Kalash of southern Ćitrāl, still today pagan in part, with considerable ethnological comment, and gave specimens of the Bashgali (i.e., Kati) language (*op. cit.*, 126-33, cxlv-cxliv). The first European to penetrate deep into Kafiristan personally was Col. Lordout, who was sending a mission in 1855-6 to examine the Hindu Kush passes and who spent some days amongst the Katis of the upper Bashgal valley. Soon afterwards, Capt. (later Sir) George Robertson, later British Agent in Gilgit, spent almost a year (1850-1) amongst the Katis at Kamdesh in the upper Bashgal valley adjacent to Ćitrāl; his account of the Kafirs still in their pre-Muslim phase of existence, *The Kafirs of the Hindu-Kush* (London 1896), remains a classic of ethnology.

The paganism of the Kafirs was a mixture of polytheism and animism. The *Sīfāt-nāma* of Kādī Muhammad Šālim mentions three of the gods whom the Kafirs invoked against the Muslims, sc. Pāndāl, Sh. w. y. and Lāmānd, and Scarcia has suggested a possible connexion with the cult of Śiva, in view of the long exposure of the Kābul River valley to Indian cultural and religious influences (*op. cit.*, clix-clx). Robertson says that the Kafir pantheon was headed by Imra the creator god, from whom sprang other gods such as Gisg the war god, the goddess Džranė and many lesser ones; there was also much emphasis on demons and evil spirits who needed constant propitiation. The politico-social system was locally-based, tribal and oligarchical. Internal affairs were directed by a council of senior clan headmen (jasts), and 13 magistrates (ur, urir) were elected annually for the actual conduct of government. Status was measured by wealth, symbolized
KAFIRISTAN — KAFIYA
by the giving of feasts and potlatches, and by
prowess in warfare, especially when the killing of
Muslims was involved. As well as the full tribesmen,
there was a class of poor freemen, mainly herdsmen;
a class of artisans, the baris; and a small slave class,
who were captives from warfare and who were
considered to be ritually impure. The status of
Kafiri women was low, with polygamy as the norm;
marrage was exogamous outside the clan. Note-
worthy as part of the material culture of the Kafirs
was the carving of wood into images of the
characteristic stools and chairs. Specimens of these
may be seen in the Kabil Museum and in western
ones like the Linden-Museum of Stuttgart; and see
on the craft, R. Henkl, The wooden sculptures of
Kafiristan, in J.R.A.S Bengal, Letters, xvi/ 1 (1950),
65-72, and J. Auboyer, The art of Afghanistan,
London 1968, P1s. 134-40.

In the 1893 Kâbul agreement between Sir Mo-
timer Durand and the Afghan amir 'Abd al-Râbmân
Kânân [q.v.], Kafiristan was left outside the British
Indian territory, and the amir in 1895-6 led an
expedition into Kafiristan, bringing the territory
under Afghan sovereignty and implanting Islam
amongst the pagan Kâfs (see Mir Munshi Sultan
Mahomed Khan, The life of Abdur Rahman, London
1949, xiii/1, 199-202). Today, most of Kafiristan,
own Nuristan, falls administratively within the provinces
of Badakhshân and the territory
between 40,000 and 60,000.

Most of the detailed studies
have been cited within the article. Scarascia’s edition
of the Sfârâ, nâmâm of Kâf Mubâhâmad Salîm [vi,
CLVI], contains an extensive account of the early
history of Kafiristan. For geography and topo-
graphy, see W. Barthold, Istoriko-geografitcheski
obzor Irana, St. Petersburg 1903, 56-7; M. Voigt,
Kafiristan, Breslau 1933; and J. Humlum et alii,
La géographie de l’Afghanistan, étude d’un pays
aride, Copenhagen 1959, 91-107. For a
synthesis of the information of Robertson and the
writers arising in 66/685 during the revolt of al-Mukh-
dar, Abu tfânifa al-Dlnawari, etc. (see Bibl. below), but
also A. R. Palwal, Die Kafiren, Formen der Wirtschaft und geistigen
Kultur, diss. Copenhagen 1965, 101-48, repr. in Sonderdrucke der Mit-
glieder der Südasien-Institut der Universität Hei-
delberg, no. 8, deals with the material culture and artificats of these two regions and their econ-
omic relations. Amongst historical and general
works on Afghanistan and Kafiristan or refer to the region, see V. M. Masson
and V. A. Romodin, Istoriya Afganistana, Moscow

1962, 50-2; M. Klimburg, Afghanistan, das Land
im historischen Spannungsfeld Mitteleuropas, Vienna
1966, 133-4; and W. K. Fraser-Tytler, Afghanistan,
a study of political developments in Central and
Southern Asia, London 1967, 5, 57-60.

(C. E. Bosworth)

KAFIRKÜB, which is recorded only in the plural
form kafirkâbâl, is formed from the Arabic word kâfr
[q.v.] (impious, unfaithful) and the present participle
of the Persian verb kûbidan (to strike, to crush). It
denotes a club, literally a “heathen-basher”. The term
is testified, in 'Irâq, from the end of the 2nd/8th cen-
tury, by Arab writers and chroniclers: al-Dîbâz, Abû Hanîfâ al-Dinawarî, etc. (see Bibl. below), but
al-Tabarî already cites it when describing the inci-
dents arising in 66/685 during the revolt of al-Muh-
târ [q.v.], and his Shi'ite followers, al-Khâshabiyya
[q.v.], who were given the name because they fought
with kâfrîbûl clubs; see De Goeje, Glossary to al-taba-
rit, CXCVI, CDLV; however, other interpretations
of the name of this sect have been proposed (see T.A.4). According to Abû Hanîfâ al-Dinawarî, al-Akhâr al-
aiwâdî, 343, the appellation kafirkâbâl originated on the
contrary in the uprising of Abû Muslim’s [q.v.] fol-
lowers in Khurasân: indgâf al-nâs ‘alâ Abî Muslim min Harât... fa-lawzaw djamân musawâdî
‘îthiyad wa-kad suraâd anṣâfâ al-kâfrûl allât
ma’âham wa-samamkhâ kafirkâbâl: “the men
who converged on Abû Muslim from Harât... they arrived
dressed entirely in black and had also blackened the
short clubs they called kafirkâbâl”.

It should be noted that this term does not appear in
such Arab dictionaries as the LA, Kâmûs, TA,
etc., nor in Desmaison’s French-Persian dictionary.
Nor does it seem to have been used outside the ‘Irâkî
sphere. It is not to be found in the works of Egyptian
writers such as al-MakrlzI or al-Kalfcashandi, who
use the term dâbbâs for a club; Ibn Kâldûn does
not employ it nor does Dozy mention it. It would thus
seem to be a term born of a particular period and in
a relatively circumscribed area which swiftly became
obsolete.

KÂFIYA (a.), plur. kâfâfâm, term in prosody,
meaning “rhyme”. Goldziher (Abb. zur Arabischen
Philoigie, Leiden 1896, i, 83-105; cf. R. Blachère,
Deuxième contribution, in Arabicà vi (1959), 141)
has shown that the word meant originally “lampoon”,
then “line of poetry”, “poem” and, that these earlier
senses survived in Islamic times after the word had
also come to be used in the technical sense of
“rhyme”. He derives kâfiya from kafân, “nape of the
neck” (and the corresponding verb kafâ, “to hit
the nape of the neck”) and draws attention to pas-
sages in which lampoons and curses are compared to
dangerous missiles wounding the head or other parts
of the body. The native lexicographers connect the
term in various ways with the verb kâfû in the sense
of “to follow” (e.g., “it follows upon everyone’s
sense of poetry”). They believe that “rhyme” is the
original meaning and that “line of poetry”, “poem” are
secondary (see Freytag, Darstellung, 296-7).

The theory of the kâfiya is usually considered a
special science distinct from the 4îm al-‘arûd or
"science of metre" [see 412]. It teaches how verses should end as regards consonants and vowels and which letters can be used as rhyme consonants and which not.

Many authorities attribute to Khall b. Abmad[q.v.] a definition according to which the kbdya comprises the group of consonants beginning with the vowelled consonant (one version says: the vowel of the vowelled consonant) immediately preceding the last two quiescent consonants of the verse, but various other definitions are attributed to him as well as to later authorities (Ibn Kaysn, K. tahlk al-kawdfi, 48, 54, that Khall b. Abmad used the term kbdya in the sense of "rhyme consonant"). According to the Arab view a verse always ends in a quiescent consonant, since they also consider as such the alif mdw, and yd of prolongation. A distinction is made, however, between a kbdya in which the rhyme consonant is not followed by a letter of prolongation, called kbdya mukayyada, "tettered kbdya (as in yktil), and a kbdya to which such a letter of prolongation is attached (as in yktilu, yktilu, yktilu). In the case of s and t the mdw and yd of prolongation are usually not written and their presence (in a vowelled text) is marked only by a 2amma or kasra added to the rhyme consonant. This type of kbdya as well as the various types where a vowelless rhyme consonant is followed by a short vowel and a vowelled or quiescent khd is called kbdya mulaka, "loose kbdya" (some speak of the rawi mukayyad and the rawi mulak, the "tettered rhyme consonant" and the "loose rhyme consonant").

The consonants of the kbdya are six in number: (1) the rawi or rhyme letter which, since it occurs in every type of kbdya, is considered its principal consonant after which famous poems are often named, e.g., the Lamyia of al-Shanfar, the 2thyiya of 'Umbar al-Farid; (2) as an annex to the rawi, the wasl or sisla, i.e., a letter of prolongation following the rawi (as noted above the alif is the only one that is always written in this capacity). The wasl can also consist of a vowelless khd preceded by a short vowel (as in yktiluh, yktiluh, yktiluh) or a khd followed by a letter of prolongation and preceded by a short vowel; (3) the khd, the letter of prolongation following the khd as wasl (as in yktiluhu, yktiluhu, tkai, etc.). Being a letter of prolongation it is considered quiescent, but indicated only in the case of alif; (4) the ridf, i.e., the mdw and yd immediately preceding the rawi as letters of prolongation or to mark the diphthongs aw and ay, and the alif as letter of prolongation in the same position; (5) the ta'sis, an alif of prolongation placed before the rawi and separated from it by a consonant, the dakhil, which may be changed at will. In case the ta'sis and the rawi belong to different words, the second word should be a separate pronoun or a preposition with a pronominal suffix (as in "annabh hiya, badh hiya, but cf. Lusm, 14-7; Tanukhi, K. al-Kawdfi, 84-5); (6) the dakhil just mentioned.

The vowels of the kbdya are likewise six in number: (1) the madr or mudr, the vowel of the rawi; (2) the na'dh, the vowel of the khd serving as wasl; (3) the tawdlik, the vowel before the quiescent rawi (according to others also before the vowelled rawi); (4) the bawd, the vowel immediately before the ridf; (5) the hadh, the vowel of the dakhil (there is some confusion over this term since sometimes it is limited to the vowel of the dakhil in a kbdya mulaka, and is also reported to have been applied to the short vowel preceding the rawi in a kbdya mulaka with out ta'sis); (6) the rass, the vowel immediately before the alif of the ta'sis (always a of course). The two quiescent consonants of the rawi may be separated by as many as four vowels. Thus five different types can be distinguished: (1) the mutadkaw in which the two quiescent consonants are separated by four vowelled consonants (as in fud(ka damim)); (2) the mutarlikib in which three vowelled consonants stand between the two quiescents (as in fud(fudali)); (3) the mutaddrsk in which two vowelled consonants separate the two quiescents (as in badd(asul)); (4) the mutaadlik in which there is one vowelled consonant between the two quiescents (as in bafi); (5) the mutardlik in which the two quiescent consonants come in immediate succession. This happens in principle only in kbdyas with a ridf (khl, lasl, etc.) and forms like al-nakr are rare and not considered permissible by some scholars.

Two different types of kbdya may not be used in one and the same poem, except in certain forms of the metres sarand (rarely) kaml where fa'sum may alternate with fslum. Nor are any changes allowed in five of the six consonants mentioned above (the dakhil being the exception), and generally speaking, in the vowels (see the exceptions noted below). Violations of these rules were designated at an early date by special terms on the meaning of which considerable uncertainty prevails (for the first see The Kitab nakh al-shr, Leiden 1956, Intro., 20-2, 25-6, 34-5; Blachere, op. cit., 137-40, 149-50): (1) the iwh, the change of the vowel madr. The older poets occasionally allow themselves to alternate u with i (see J. Fск, 4Arabiya, Paris 1955, 41; al-Akhfsh al-Awsf[q.v.]; K. al-Kawdfi, 42, suggests that this change was very common), and less frequently u or i with ay, though the interchange of i and u seems to be rare (Lusm, 32-3; but cf. 4Ik, v, 508); (2) the ikf, the substitution of a cognate letter for the rawi, e.g., nun for mim, the substitution of a letter that is unrelated being sometimes designated by the special term ikfz or ikfn (for other interpretations of these terms see 'Umda, 1, 132-3, 143-4; Tanukhi, K. al-Kawdfi, 134); (3) if, however, the rawi is followed by the letter ha as wasl, the iwh seems to be rare (Lusm, 32-3; but cf. 4Ik, v, 508); (4) the tawdlik, the changing of the vowel of the dakhil, the alternation of the u with the i being a less serious defect than that of the a with the other two (especially in the case of a kbdya mukayyada, see Lusm, 25-7, 31 and 'Umda, i, 138); (c) the sinad al-badhe, the changing of the vowel immediately preceding the quiescent rawi, though the interchange of u and i is generally allowed and even the alternation of the a with the two others occurs frequently; (b) the sinad al-tasl, the changing of the vowel of the dakhil, the alternation of the u with the i being a less serious defect than that of the a with the other two (as in the case of a kbdya mukayyada, see Lusm, 25-7, 31 and 'Umda, i, 138); (c) the sinad al-badhe, the changing of the vowel immediately preceding the ridf. The bawd and the ridf together form the long vowels 3i and 3i and the diphthongs aw and ay. One can alternate 3i with 3i and aw with ay (undesirable in the case of a kbdya mukayyada according to Lusm, 28-9; cf. also Akfsh, K. al-Kawdfi, 15; Tanukhi, K. al-Kawdfi, 90, 110-11), but other combinations, e.g., i with ay constitute a sinad; (d) the sinad al-badhe, the rhyming of a line that has a ridf with one that has not (though occasionally this happens with aw and ay, the mdw and the yd being considered consonants in such cases; see Lusm, 21-2 and Freytag, op. cit., 313-4); (e) the sinad al-tasl, the rhyming of a line that has ta'sis with one that has not (though again it may happen that such a line is introduced in a poem without ta'sis, especially in cases where the vowel of the dakhil is fah; see Lusm, 20-1; Tanukhi, K. al-Kawdfi, 130-1; and cf. Akfsh, K. al-Kawdfi, 15-6).
It should be noted, however, that no uniformity of opinion exists on the extent to which alternations of vowels are permissible (somewhat different rules apply to strophic poetry, see W. Hoenerbach, *Die vulgäranarabische Poetik... des Sa'diyyadin Hilili*, Wiesbaden 1956, Intro., 22-3), and that the short vowel immediately preceding the rawi in a loose kāfiya (for which some adopt the term ḥāḍī2) may alternate freely.

Two further defects of the rhyme should be mentioned here, the ṭāḍīm and the ṭadāmim or ṭatāmim. The ṭāḍīm occurs when the same word in the same meaning is repeated in the kāfiyās of lines belonging to the same poem, though this repetition is permissible in cases where more than seven lines intervene, there is a change of theme, or cases where one of the two words has the article and the other not (for further details, including a stricter interpretation of what constitutes an ṭāḍīm attributed to Khallī, see Akhaṣhāf, *K. al-Gawāfi*, 55-64; ‟Id, v, 508; Wāfī, 242-3). The ṭadāmim, "enjambement", occurs when one line runs into another in such a way that the end of the line only gives a complete sense when we add the beginning of the next (for further details see ṭadāmim). The above by no means covers all the defects of the rhyme, and the treatment of these defects listed by the critics. It also makes no mention of the various defects connected with the common practice of rhyming the first two hemistichs of a poem (see below). For further details see especially Akhaṣhāf, *K. al-Gawāfi*, 64-8; Tanūghī, *K. al-Gawāfi*, 65-8; 123-4; 135-6; ‟Umda, i, 149-54; Wāfī, 250-3.

In general the letters alif, ḥāʾ, waw, and yāʾ cannot be used as rawi, unless they belong to the root of a verb or noun, important exceptions being the pronominal suffixes -hu (‟aṣ) and -ḥā following a long vowel or a sukūn, the waw and the yāʾ in the diphthongs aw and ay, and the yāʾ that is preceded by a long vowel or is itself vowelised, and the yāʾ marking long i in a shortened niha ending (‟aḍi for ‟aḍiy). Thus, for instance, the kādā in ṭaḥādhā, the waw in raḥma, and the yāʾ in ṭefāy and in sa`dāy can be rawi even though these letters are not part of the root, but the alif in dakhāla (inflexion of the dual of a verb), the yāʾ in ʾuḥūlā and ʾiṭāb (inflexion of the feminine of a verb and pronominal suffix of a noun respectively), the waw in hatalā (inflexion of the plural of a verb), and the kādā in ṭaḥābuhā (preonominal suffix of a noun and in raḥma (where the kādā replaces the feminine ending of a noun) are wasī. The waw of the tanūm and the second energetic form of the verb cannot be used either as rawi or as wasī. But there is no agreement on these rules. Exceptions occur and letters belonging to the root, e.g., the kādā in ašḥāb from b-i-ha and the waw in yahūd from b-i-wu, can also be wasī. Some prefer adopting the pronominal suffixes -ha and -hi of the second person singular and the kādā of the third person fem. sing. of the perfect tense as wasī rather than as rawi, so that for instance ḥarābat rhymes with ḥalabat, but not with ṭawazan. Where the poet doubles the rhyme consonant, adopts a second rhyme consonant, or imposes upon himself some other rule that is not prescribed by the theorists we have the figure iṣṭām mī lā yahāsam [q.v.], also called isṭāsam, ṭādīm, or ṭasāḥādī.

In the kāfiya the final syllables of word are often subject to changes, the most important of which are the following: (1) final short vowels are dropped or lengthened, the tanūm disappearing at the same time (ṣawīd or ṣawīdā for ṣawīdun, al-nār or al-nārū for al-nāru) (2) the ḥāḍī2 of the feminine ending may be changed into ḥād and in that case the ending is dropped (raḥmah for raḥmatun); (3) in the kāfiya muḥāyyada the vowel of the final letter may be transferred to the penultimate letter if it is unwovelled (al-nāku for al-nakru), to avoid the unacceptable form al-nakru; (4) a quiescent ḥād may be added to verbal forms from which the last letter of the root has disappeared (khiḍādī for ḥiḍādī) and to the pronominal suffix of the first person singular; (5) the ṭamām at the end of a word may be replaced by a waw or yāʾ of prolongation which may serve as wasī (hasī for ḥasī). Ibn Kayṣān, Talkīb, 53-4, 60-1, draws attention to the musical qualities of the ṭasīs, the ṭifī, the ṭīs, and the ḥurūdī as vowels that can be lengthened in recitation and singing, thus marking clearly the end of a metrical unit. Others discuss in detail the practice of ṭarānum, i.e., the lengthening of the final vowel in the kāfiya mufāḥa in singing, and three alternate modes of solemn recitation: (a) the method followed by the Ḥiḍāzīs who pronounced these vowels as long even when there was no ṭarānum, (b) the practice of the tribe of Tāmīm (according to Akhaṣhāf, *K. al-Gawāfi*, 105, also of Kayṣ) who pronounced the final vowel with ṭanūm, and (c) the rejection of final vowels, apparently even in cases where one of these three modes would violate the metrical pattern of the verse (see also Akhaṣhāf, *K. al-Gawāfi*, 12-3, 34-7; Fīyātq, op. cit., 323-4, where specific terms for the long vowels are mentioned).

In all classical forms of poetry the same rhyme is maintained throughout the poem. Moreover, the rhyme also appears at the end of the first hemistich of the first line (except in the metre ṭaḫqāqīn) where there are no hemistichics, resulting often in a shortening or lengthening of its last foot to make it conform to the pattern of the last foot of the second hemistich. This practice is called ṭasīrī and the critics note that some of the older poets omit the ṭasīrī in the first line, but use it in some other line of the poem. They also quote early examples of the use of internal rhyme (see Ruḍāma, Ṣābād, 14-9; for the possible connections between these examples and the post-classical forms of poetry see García Gómez, Una "pre-Muḥaṣṣāla" in Al-Andalus, 22, 1956, 406-14; E. Wagner, Abū Nuwas, Wiesbaden 1965, 227 ff.). The common term for internal rhyme is ṭasīrī, but a number of other terms were introduced by later theorists to distinguish different and sometimes complicated patterns (see A. F. M. von Mehren, *Die Rhetorik der Araber*, Vienna 1853 [repr. Hildesheim 1970], 168-9, for definitions and examples of some of the most important terms). Other devices include the repetition at the beginning of the line of the rhyme word of the preceding line and the use of a double kāfiya throughout the poem, each kāfiya marking the end of a metrical pattern (see Mehren, op. cit., 165, 173).

In keeping with the critics' view that each line of poetry should, as far as possible, contain a complete statement, all treatises on rhetoric give attention to questions of style and figures of speech that affect the choice of the rhyme word. Besides formulating some obvious conclusions on how to avoid stopgaps, the critics recommend structuring the line in such a way that the listener can almost predict the kāfiya. This may be achieved, for instance, by leading the hearer to anticipate the repetition of a word that has occurred earlier in the line or one of its paronyms, or by making some rhetorical device depend on the last word of the line, e.g., ḥarām, "forbidden", in the kāfiya to create an antithesis with muḥā sala, "declared lawful", earlier in the line (laḥīm, laṭāhīh,
**Bibliography:** Discussions of the Kafiya appear in almost every work on literary theory and criticism and it is impossible to offer a comprehensive bibliography. The following list, moreover, does not mention treatises and special monographs that have already been summarized in Western handbooks or in the article *Kafṣa*. Some authorities recommend basing the line, if possible, on a Kafṣa one has selected in advance and if the synonym on which it depends comes only at the end (see Bonebakker, *Some early definitions of the tawriya*, The Hague 1966, 97). The Kafiya should not contain any expression from which an evil omen could be drawn. His nisba, Kafiyyaḏi or Kafiyyaḏi, was earned by Ibn al-Hādjib [q.v.]. A grammatical work, a commentary on the Kauwaḏ al-iḏlib of Ibn Hāshim (Brockelmann, II, 29, S II, 18), was praised by al-Kafiyyaḏi’s biographer as his most important publication. But his interests were unusually wide, comprising, in addition to points of law and religion, the full range of the linguistic disciplines, history, the mathematical sciences and astronomy, and, above all, logic. His basic work on logic is a commentary on the Tahdhib of al-Taftazani (Brockelmann, II, 278, also mss. Laleli 2592 and Bursa Haragci 1378). His numerous treatises (often carrying the date of their composition at the front of the manuscript) are preserved in large part but, with one exception, have been neither edited nor studied. Most of them are brief essays that focus on specific problems and try to organize the subject matter along general lines based on formal logic. As was noted by al-Saḥḥāwī, al-Kafiyyaḏi thereby founded, or gave the impression of founding, new disciplines as in the case of his treatise on historiography (cf. bibliography) or, preserved in a little essay entitled al-Raʿuḥ fi ʿilm al-ruḥ (ms. Atif Ef. 2828, i67a–i69b, also Berlin or. fol. 4249, cf. M. Weisweiler, *Der islamische Bucheinband*, Wiesbaden 1962, 83), which defines a mystically tinged knowledge of the spirit as a special discipline. His sense of brevity ran in a way contrary to the dominant Tunisian school of the time, so that his treatment of Qurʿān science, al-Tayṣīr fi kauwaḏ ʿilm al-taṣrif (written for Ābu Saʿīd Timurbughā in 856/1452) provoked words of dissatisfaction by the otherwise well-disposed Suyūṭī in the introduction of the İtkān. But in sum, it would seem that al-Kafiyyaḏi’s writings deserve recognition and study for their author’s effort to be interesting and original. — See also *Kafiyyaḏ*.

**Production in Journal of Arabic Literature, i (1970), 3<sup>13</sup> art. SAADF, *S. Bonebakker*.

**KAFSA (GAFSA),** a town in Tunisia’s 350 km. south-west of Tunis, 200 km from Kayrawān, and 100 km from Gabès [see KAFS], population 30,000; the chief town of an administrative region with a population of 300,000 whose principal mineral resour-
ces consist of the phosphate deposits of M'Dilla, Metlaoui, Redeyef, and Moulares, which were discovered in 1885. The oasis of Kafsa contains about 100,000 palm trees producing dates of second-rate quality, to which must be added orchards of orange trees, lemon trees, apricots and figs, vineyards and, very recently, olive groves and attempts to grow pistachio trees. Irrigation is supplied by copious springs which are in the heart of the town itself, and also by the sinking of artesian wells. As it is the first oasis on the road from Kayrawân towards the region of the Chotts, and is moreover likely to detain the visitor on account of its prehistoric and classical remains, the town has begun to take an interest in tourism and has therefore been able to take advantage of some recent improvements such as that of the road system and equipment of hotels; development of parks; the restoring of the "Roman baths", the Kasaba and the Great Mosque; the partial reconstruction of the Byzantine city wall etc. Handicrafts, consisting mainly of the fabrication of brightly coloured blankets and carpets decorated with simple motifs, are also making some progress.

History: Kafsa is the Arabic form of the classical name of the city called Capsa, the toponym from which J. Morgan, in 1909, created the term "Capssian" to designate the Upper Paleolithic or Mesolithic type of civilization of which this region was one of the most important centres, as can be seen from the numerous "snaileries" and other traces of prehistoric industries.

When we come to historical times, the past of Kafsa is less clear. In particular, it is not known precisely when, or by whom, the city was founded. It is reputed to have been founded by a god, the Lybian or Phoenecian Hercules, which together with other indications suggests a Punic origin. However no archaeological discoveries have been found to confirm this hypothesis. According to the Arabs, the founder of the city was Shantiyan, the slave (gulâm) of Nemrod (al-Bakrl, Masâlih, 47/100), the legendary king of Chaldea. In fact the foundation of the city, whose origin is unknown, can be explained by the topography of the site. As S. Gsell says (Histoire, v, 279): "there was there a junction of natural routes leading to the oases of the Chotts, to Gabbès, to the Byzacena, to Maktar and to Tébessa". It is by no means impossible that a Punic town should have been established at these crossroads, of benefit to every trade.

In later years the town was part of the Numidian kingdom of Jugurtha who treated it well, even going so far as to exempt it from taxes, in order to keep it in his power. It paid a high price for these privileges, and their corollary, fidelity to the Numidian king. In the course of a daring campaign, Caius Marcellus, whom Rome had given the task of subduing Jugurtha, took it by surprise and set fire to it (107 B.C.). But it was reborn from the ashes and at the beginning of the 3rd/4th century, the region was largely inhabited by Khârijis—Luwatta, Zuwagha and Miknasa. In 224/839 they took part in the revolt of the district of Kastilîya and were severely punished by the Aghlabid amir Abû l-Iklâ. According to al-Shâmâhî (Siyar, 203), the imâm 'Abd al-Wahhâb (168/784-208/823) had an 'âmil there; by this is to be understood a tax collector who raised the kur'anic taxes from the inhabitants and sent them more or less secretly to Tâhât, for the town had never been politically a part of the Rustamid kingdom.

After being under the authority of the Fâtimids and then the Zirids, for more than a century Kafsa became the capital of a real independent little state including the whole of the land of Kastilîya, present day Djèrîd, (445/1053-554/1159). The Hîllâi invasion had profoundly modified the political context and the ethno-ethnic equilibrium of the area. The authority of the central government collapsed, and anarchy reigned everywhere. The Zîrîd governor of the town, 'Abî al-Allâh b. Muhammad b. al-Rand, in common with others proclaimed himself independent (445/1053-465/1073) and, by paying tribute to the Arab nomads—above all the Riyâb—with whom he formed an alliance, he strengthened his authority and the security of his realm, attracting to his court poets and jurists.

The rule of the Almohads, who united the whole of the Maghrib, put an end to the independence of Kafsa. The town was taken in 554/1159 by 'Abî al-Mu'imin b. 'Ali after a quite difficult siege. From that time, like all the south of Ifriqiya, it had a troubled existence. There were attempts to take it from the Almohads by an adventurer of Armenian origin, Karâkûs, and above all by the Banû Châmiya [p. 96].

The Banû 'l-Rand on their part would not admit they were defeated. This dynasty was restored by Ibn al-Mu'izz at the request of the inhabitants, dissatisfied with their Almohad governor, whom they had put to death. The caliph Abû Ya'qûb Yûsuf came from Marrakesh to lay siege to the town in person.
KAFSA

Thanks to these advantages, Kafsa was able to maintain its importance and prosperity right up to the end of the Classical era, despite the decadence of Byzacena. After the Arab conquest its importance grew even greater. We have noted that it kept the appearance and style of a Classical city for many years. About the end of the 3rd/9th century, al-Ya’qubi, who is the first Arab geographer to leave some detailed personal observations about this town, described it thus: ‘A fortified town, surrounded by stone walls. There are springs in the interior of the town; the streets are paved. The suburbs are very prosperous, and the fruit there is famous’ (Les Pays, 212). In the middle of the 4th/10th century, Ibn Hawkal—who was at Kayrawân in 336/947 (Sârat al-Ârd, 94, tr. Kramers-Wiet, 92)—informs us that Kafsa was an ‘autonomous (mustabiyya) town’, and that ‘its prosperity was perfect (fi khayyat al-kamâl)’ before 336/947, at which date it was devastated by Abû Yâzîd [q.v.] (Sârat al-Ârd, 92, tr., 93). It must have recovered quickly from these devastations. In fact, towards the end of the 4th/10th century, al-Mukaddasî (d. 378/988) counts it among the great centres of Ifrikîya. In the middle of the 5th/11th century, al-Bakfî (d. about 461/1068), who had not visited the country and in general reproduces the Itineraries of al-Warrâk (d. 363/973-4), gives us a very favourable description of it. This description is one of the most detailed we possess of the medieaval stronghold, lays emphasis on the Classical monuments, still in an excellent state of repair, its gushing springs, providing an abundant supply of water for its orchards, which produced, among other things, large quantities of pistachios exported to all parts of Ifrikîya, and even to Egypt, to Sidîlmâsî and to Spain. There were also to be found, he adds, dates as big as pigeons’ eggs. In the surrounding area there were no less than two hundred villages, called Kusur Kafsa, all flourishing. Lastly, and the final uncontroversial indication of wealth, he informs us that the taxes raised there furnished no less than 50,000 dinârs to the Treasury. It is certain that this description related to the highest degree of prosperity attained by the town, were also to be timed, al-Wârâk, that is the end of the 4th/10th century. This prosperity was doubtless maintained during the following century, that of al-Bakfî, despite the invasion of the Hûlîîs with whom the Banu ‘l-Rand succeeded in finding a modus vivendi which, though costly, was at least acceptable. The town continued to flourish until the middle of the 6th/12th century, when al-Idrîsî was writing, and he described it as ‘a fine town (madîna basâna)’, with its walls still intact, its abundant water supply, its well stocked markets, its numerous traders, its industries in full expansion (zindâ’ kâtîma), its vast palm grove producing dates of magnificent quality (‘aadjî), its populous villages, its gardens, its orchards, and its varied plantations providing, amongst other things, henna, cotton and cumin, all of which were highly prized in the Middle Ages.

From the time of the Almohads, the scene changed. The town, jealous of its independence, rebelled frequently, and paid a high price for its excessive love of freedom. Several times over, as we have seen, its ramparts were razed and its palm grove laid waste. Its economic decline can be traced back to that time. In the 7th/13th century, Yakînî (574/1178-626/1229), though he recounts its former splendours, mentions it at the time only as ‘a small town (ba[lîdâ’ saghîra) on the borders of Ifrikîya… in the middle of a sterile saline region’ (Buildîn, iv, 382). Its sur-
rounding villages, which were the most exposed to devastation, disappeared. In the time of Ibn al-Shabab (618/1222-680/1282), reproduced by al-Wazir al-Sarradji (Hulal, i, 437), "only a few of them survived". In the middle of the 10th/16th century, Leo Africanus, after reporting the destructions ordered by al-Mansûr, wrote: "Today Caphsa is completely repopulated, but its buildings are only small, with the exception of a few mosques. Its streets are very wide and paved all over with black stone like those of Naples and Florence. The population is under control, but poor on account of the taxes by which they are burdened by the king of Tunis" (Description de l'Afrique, ii, 444). He continues, pointing out that its climate is unhealthy, and praising its cloths, its pottery, its dates, its orange trees and its olive trees, which gave "an oil as perfect in taste as in colour".

The diverging descriptions in the sources imply no contradiction, but only different procedures existing in chronological order: Ibn Khurradadhbih, Masudî, and Ibn al-Fâthî, Bu'ainân, partially ed. and tr. Hadj-Sadok under the title Description du Maghreb... Algiers 1949, 6-7 and n. 70; a. Al-Wâzir, Bu'ainân, tr. Cairo 1937, 212; Ibn Hawkal, Sûrat al-Ârîd, Beirut n.d., vi, 87, 92 (tr. Kramers-Wiet, 92, 93); Mukaddasi, Ahsân al-tabâsim, partially ed. and tr. Ch. Pellat under the title Description de l'Occident... Algiers 1950, 4-5, 64-5; Bakrî, Masûdî, ed. and tr. de Slane, Paris 1965, 14 and 35, 47 and 100-2, 75 125-6, 148 and 284; Idrîsî, Nuzha, partially ed. and tr. H. Pérez, Algiers 1957, 75, 80, 89; Yâqút, Bu'ainân, Beirut 1957, iv, 382-23; Tidjânî, Rîhâ, Tunis 1958, 114, 136-9, 147, 353, 356-7; Safl al-Dîn al-Âbaghîdâlî, Marâdân al-Îsfîlî, ed. 'All Muhammad al-Bijâwî, Cairo 1954, iii, 1113; Jean-Léon l'Africain (Leo Africanus), Description de l'Afrique, tr. A. Épaulard, Paris 1956, ii, 443-5; al-Wazir al-Sarradji, Hulal, ed. M. H. al-HIla, Tunis 1970, i, 368, 379-81, 382-5; and medicines, but the latter, according to the Muslim sources native to Fanûr (Kansûr, Faisur, and variants) in Sumatra, production of which must have been greater in the Middle Ages than today, was much more expensive and efficacious than the East Asian variety; according to Marco Polo it was worth its weight in gold.

Camphor seems to have been unknown to Greek and Roman antiquity, but the Near East by Sâsînî at the latest, it was used as spice and perfume; when the Arabs conquered Ctesiphon in 16/637, they found there rich stores of camphor, which they thought was salt (Balâghurt, Futûb, 264; Ibn al-Âthîr, Kamûl, ii, 401). It was also known in ancient Arabia, for according to Kurîân LXXVI, 5, devout Muslims are refreshed in paradise with a drink flavoured with camphor. Camphor was known to ancient Arabic poets, al-Adârî, an, "a name; it is often put metonymically with musk (misk [q.v.]) as a symbol of the opposition of white and black, e.g., ʿUmar b. Abî Rabî'a, ed. Schwartz, 10, 16; 16, 14; 31, 2; 115, 12; 171, 6; 183, 3; Imruʿl-Kays in Hamdânî, Diastara, ed. Müller, 198; anon. in Yâkût, Muqâjam, ed. Wüstenfeld, iv, 747. Cf. further Aṭghâ, ed. The same word kāfor (variants kufarrā, kifīrā, giyfarārā, et al., Lane 626a2; Lisān (Beirut), v, 149 f.) also designates the integument of the palm leaf or the grapevine. The word came through the Aramaic gōparā probably from the Akkadian. Cf. Asma', al-Nakht wa 'l-ḥarm, ed. Haffner, Beirut 1908, 6; Ibn Sīdā, Muhkhasas, xi, 119; Maimonides, Sharh asma' al-ḥabhar, ed. Meyerhof, no. 206; Frenkel, Aram. Fremden, 147; Brockelmann, Lex. Syr. 1, 120a.

KĀFŪR, Abū'l-Misk, a black eunuch (the name al-Lābi, given to him by al-Mutanabbī, suggests his origin from Lāb in Nubia) became the dominant personality of the Ikhshīdīd [q.v.] dynasty in Egypt. Sold to its founder, Mūhammad ibn Tughjī al-Ikhshīdīdī [q.v.], Kāfūr so impressed his new master that the latter sponsored his rise to positions of political and military influence. As a field commander Kāfūr participated in the Egyptian expedition of 333/945 to Syria; he was also involved in the diplomatic exchanges between al-Ikhshīd and the Caliph of Baghdad. Of great significance was his appointment as the supervisor of the princely education of the two sons of al-Ikhshīdīdī. Upon the death of Ibn Tughjī Kāfūr safeguarded the interests of his master's dynastic legacy by securing a formal succession of the Ikhshīdīdī princes, Abū'l-Kāsim Anūdūr (Unūdūr) in 334/946, and 'All ibn al-Ikhshīdīdī in 349/963. Although during that period Kāfūr enjoyed complete executive authority, he found it expedient to operate behind the façade of the Ikhshīdīdī establishment. Only in 355/966, following the death of 'All, did Kāfūr publicly declare himself as the sole master of Egypt. This declaration was justified because of the minority of another prospective Ikhshīdīdī successor, Abūd b. 'All, and was sanctioned by an official diploma of investiture allegedly received from the Caliph of Baghdad. Until his death on 21 Dījumādī I 357/23 April 968, the name of Kāfūr replaced the Ikhshīdīdī names in the Egyptian Ašhūb [q.v.]. His official title was al-usṭadādī [q.v.]. The few sporadic references that exist in evidence, however, that his exalted political status included the prerogatives of sihka [q.v.] or firās [q.v.].

The main significance of Kāfūr in Islamic history lies in the fact that during the twenty-two years of his government he successfully protected the Ikhshīdīdī establishment against dangerous outside pressures (the Fātimids, the Karmatians, the Nubians and the Hamādānīs). All this he accomplished in spite of internal political complications (rebellion of Qāhūn in 335/947-336/948; an abortive coup d'état by Anūdūr in 343/954; persistent spread of subversive Iṣāmīlītī propaganda) and serious economic setbacks (a devastating fire in the business section of Fustāṭ in 343/954; major earthquake in Egypt in 344/955; recurrence of famine, food-price inflation, and consequent civil disturbances in 338/949, 341/954, 343/955, 352/963-357/968). His effective military and diplomatic measures helped secure a advantageous agreement with the Hamādānīs in 335/947 concerning the Ikhshīdīdī hold over Damascus. Above all, Kāfūr was able to delay the Fātimids expansion to Egypt. "The black stone (i.e., Kāfūr) stands between us and thee (i.e., the Fātimids Caliph)" complained frustrated Iṣāmīlī agents in Egypt. (Cf. al-Makritī, Ittiḥād al-ḥunāfī, Cairo 1945, 147.)

In spite of economic adversities and heavy government expenditure, Kāfūr's administration refrained from extortionate fiscal practices. Its gold coinage, though fluctuating in weight, displayed a remarkable stability as to the standard of fineness. Kāfūr's domestic accomplishments must be partially attributed to his ability to enroll the services of competent administrators, one of them the famous Yaḥyā ibn Killīs [q.v.].

Kāfūr also gained popularity in Islamic history because of his patronage of scholars and writers. The most celebrated of them was the great poet al-Mutanabbī [q.v.], who immortalized the black ruler in a number of panegyric and satirical verses. Kāfūr has been credited with the construction of a number of sumptuous palaces, of two mosques (in Gīza and on al-Muqattām), of a hospital, and of the Kāfūrīyya gardens in the capital. No archaeological traces of his architectural contributions have been discovered.

KAFUR — KAGHAD

(1942), 23-46; Ismail Kashif and M. Afzal Mud, Misr fi 'asr al-Juluniyyln wa'l... on the plan of those in Samarkand; al-Fa'far, brother of Djafar al-Barmak, who had been governor of Khurasan in 898/1299 he was taken by the commander Nusrat Khan, probably the recognition as sultan of 'Ala al-Din Muhammad Shāh Khādīl, the six-year-old son of Dīn al-Dīn Barani, ed. A. S. Usha, Madras 1948; Nasir, Tārikh al-amār, Bombay 1360, 1363; Ibn Baṭṭūtā, Rihā, iii, Paris 1855; Farishta, Ta'rikhi i, Bombay/Poona 1832. Secondary works: K. S. Lal, History of the Khaljis, London 1967; R. P. Tripathi, Some aspects of Muslim administration, Allahabad 1959; S. K. Aiyangar, South India and her Muhammadan invaders, Oxford 1921; J. D. M. Derrett, The Hoysalas, Oxford 1957; S. Lane Poole, Mediaeval India under Muhammadan rule, London 1922.

KAGHAD, Kaghad (from the Persian kaghad perhaps of Chinese origin), paper. In the early period of development of Muslim culture the east was acquainted only with papyrus (biṭā) as writing-material. It was Chinese prisoners of war brought to Samarkand after the battle of Atlakh near Talas who first introduced in 1347/55 the industry of paper-making from linen, flax or hemp roots after the method used in China. The various kinds of paper then made were the following: fir'aumī ("Pharaonic"), a kind which was to compete with papyrus even in the land of its origin (the oldest paper with Arabic writing on it found in Egypt dates from 180/996-997/8); sulaymani, from Sulaymān b. Bāghid, the treasurer of Khurāsān under Hārūn al-Rashīd; dīfa'fīr, called after papyrus; dīfa'ī, vizer of Hārūn al-Rashīd (d. 187/803); jahlī, from Ṭalba b. Tāhir, the second ruler of the Tāhirid dynasty; kāhi, from Tahir II of the same dynasty; nābī, after the Sāmānid Nābī I, 331/942-954.

To judge from these names it must be supposed that paper achieved some importance as early as the second half of the 2nd/8th century. About that time or at the beginning of the 3rd/9th century paper had, according to al-Dībājī, the same importance for the east as papyrus had for the west, especially since Hārūn al-Rashīd had ordered the use of paper as a writing material in the government offices because it was not possible to erase a text written on paper, or to scratch it out without this being noticed. In the second half of the 3rd/9th century paper made in Samarkand had already replaced papyrus as well as parchment in Baghdad, although we do not know precisely when the manufacture of paper began in Baghdad or in Cairo. According to al-Tha'labī (350/961-962/1038) the paper made in Cairo was especially fine and smooth, but on the other hand it is stated that the Thālabīd vizier, Dīfa'īr b. Hīnzābī (d. 391 or 392/1001), had brought the paper which he used directly from Samarkand.

Paper-mills were erected elsewhere on the plan of those in Samarkand; al-Fadl, brother of Dīfa'īr al-Barmakī, who had been governor of Khurāsān in contemporary rumour accused Kafur of hastening his end. Kafur secured the recognition as sultan of 'Ala al-Din 'Umar, his bodyguards: in 'Ala al-Din by Chit' al', daughter of Rāmādeva of Devgrī; some sources state that Kafur also married this lady. In the struggle for power he succeeded in having Khidr Khān blinded and two other elder sons of 'Ala al-Din imprisoned, but failed in the case of a fourth, the future Sultan Kūtb al-Dīn Mubārak. About 35 days after the death of 'Ala al-Din, Kafur was murdered by four wealthy Khudās of "Khojda"—see. Nizār Ismā'īl of Kanbāhāyat (Cambay). In the Muslim conquest of Gudjarāt on 698/1299 he was taken by the commander Nūr al-Šāh and presented to Sultan 'Ala al-Dīn in Dihlī. Ibn Baṭṭūtā, (ii, 187) may be in error in stating that the epithet al-Ḍīn, her grandfather, was known as al-Fa'far, brother of Djafar al-Barmakī, who had been governor of Khurasan in 392/1001), had brought the paper which he used for this purpose. In the northern Deccan. He performed this task undoubtedly and he next appears as an outstandingly successful military commander. Ca. 705-6/1305-6 he commanded an army which in the Pandāh defeated the Mongol commander Kōpek/Kebek, but the hostile forces were routed by Kafur, but the hostile forces were taken by Kafur, and presented to Sultan 'Ala al-Dīn in Dihlī. Ibn Baṭṭūtā, Rihā, Paris 1855; Farishta, Ta'rikhi i, Bombay/Poona 1832. Secondary works: K. S. Lal, History of the Khaljis, London 1967; R. P. Tripathi, Some aspects of Muslim administration, Allahabad 1959; S. K. Aiyangar, South India and her Muhammadan invaders, Oxford 1921; J. D. M. Derrett, The Hoysalas, Oxford 1957; S. Lane Poole, Mediaeval India under Muhammadan rule, London 1922. (S. Digby)

KAFUR, Malkī, known as 'IZZ AL-DAWLI, TĀM AL-DIN AND HAZAR-DINAR, EUNUIT AND MINISTER OF SULTAN 'ALĀ AL-DIN MUHAMMAD SHĀH KHĀDĪL ('Azīz al-Ḍīn) is stated to have been of Harthāt (Marthā) (see Ismā'īl, p. 319). In youth he was the slave of a wealthy Khudā of Kanbhaṭ, perhaps of Chinese origin, paper. In the early period of development of Muslim culture the east was acquainted only with papyrus (biṭā) as writing-material. It was Chinese prisoners of war brought to Samarkand after the battle of Atlakh near Talas who first introduced in 1347/55 the industry of paper-making from linen, flax or hemp roots after the method used in China. The various kinds of paper then made were the following: fir'aumī ("Pharaonic"), a kind which was to compete with papyrus even in the land of its origin (the oldest paper with Arabic writing on it found in Egypt dates from 180/996-997/8); sulaymani, from Sulaymān b. Bāghid, the treasurer of Khurāsān under Hārūn al-Rashīd; dīfa'fīr, called after papyrus; dīfa'ī, vizer of Hārūn al-Rashīd (d. 187/803); jahlī, from Ṭalba b. Tāhir, the second ruler of the Tāhirid dynasty; kāhi, from Tahir II of the same dynasty; nābī, after the Sāmānid Nābī I, 331/942-954.

To judge from these names it must be supposed that paper achieved some importance as early as the second half of the 2nd/8th century. About that time or at the beginning of the 3rd/9th century paper had, according to al-Dībājī, the same importance for the east as papyrus had for the west, especially since Hārūn al-Rashīd had ordered the use of paper as a writing material in the government offices because it was not possible to erase a text written on paper, or to scratch it out without this being noticed. KAGHAD — KAHIN

178/794, probably founded the paper-mill in the Dār al-Kazz quarter in Baghdād. Soon afterwards others arose around Mīsam Thāl, Yemen and Egypt, where paper ultimately drove out papyrus, also in Damascus, Tripoli, Hamāt, Manbūjī, Tiberias, the Maghrib, Spain (at Jativa), Persia and India. Kāghad-khanā, the "paper-makers", was the name taken by the people of the village of Kūnānī or Kūnā in Ḍāhārbāyān, two days' journey from Zāndān, on account of the excellent paper made there. The place was destroyed by the Mongols, who, however, founded a colony, Mughulīyā, there (Barbier de Meynard, Dict. de la Perse, 219: Ṣāḥībī Khālīf, Dīkānānūmā, Istanbul 1145/1733-4, 298, tr. Norberg, i, 365).

On the preparation of paper and the different methods of colouring it, interesting details are given by J. von Karabacek, Neue Quellen z. Papiergeschichte, in Mitt. aus der Samml. der Papyri Prot. Rainer, iv, 75 ff. The raw material for paper-making consisted of rotten linen or hemp ropes, cut into small pieces, cleaned and bleached. It was then pounded in mortars, stampers or paper-mills, and water was added to make a pulp which was dressed with glue made of wheat starch (nābd). The pulp was then led off into a pulp-vat (bāriyya), water was added, and the pulp drawn through a deckle (kālib) and shaken. It was smoothed by hand, left on the deckle as long as seemed necessary, then laid on a table, attached to a clean, even wall and left to dry. Then each side of the sheet was rubbed with a concoction of flour and starch, left to dry and polished. The fineness of the paper depended on the nature of the deckle, the finest, like our vellum, coming from a very fine wire sieve.

In the rubbish heaps of the old towns in Egypt (e.g., al-Uṣhumayn, Madīnat al-Fayyūm, al-Fustāt), great masses of ancient paper of different kinds and colours have been discovered. Besides very white and off-white papers, artificially coloured ones — yellow, pale blue, violet, pink, green and red, have been found. Paper was much cheaper than papyrus; according to a 4th/10th century document in the collection of Archduke Rainer in the National Austrian Library, 15/3 dinars were paid for 100 sheets. The price naturally depended on the quality and kind. That made in Baghdād (al-warak al-Baghddi) was considered the best.

The paper used in the east is now almost entirely of European manufacture. In Persia we still find a Chinese paper called Kūhān Balkī (Turkish name of Peking), a scarce paper, sought after for its durability. The Cairo printers prefer a strong yellow-coloured paper called nābdī (Pers. nābdī, sugar-candy). A paper-mill long ago destroyed (Kāghad-khāna, popularly Kʿst-Hāna) gave its name to the Imperial Kiosk and the public promenade of the "Sweet Waters of Europe" in Istanbul.

KAGHAN [see KHAKAN].

KAHF [see ASHAB AL-KAHF].

KAHL AL-KAHIN [see AL-KAHIN].

KAHIN, a term of controversial origin (cf. T. Fahd, Divination arabe, 91 ff.), belonging to Canaanite, Aramaic and Arab traditions. At the earliest stage known to us it appears to have been used by the "Western Semites" to designate the possessor of a single function with related prerogatives, that is to say, the offering of sacrifices in the name of the group, the representing of this group before the deity, the interpretation of the will of the deity, and in addition the anticipation and communication of his wishes. The evolution of this function and these prerogatives follows the social evolution of these three groups themselves, but linked with their transition from a pastoral to an agricultural civilization, their conception of the deity and of the service due to him changed to suit the conditions of daily life. As the pre-Islamic Arabs were the last followers of the pastoral way of life, their conceptions of the priesthood probably reflect more or less faithfully the earliest stage of the priestly function, so far, of course, as the post-Islamic data at our disposal have remained faithful to their oral or written sources.

In this respect, although the accounts in which the kāhin appears may be fanciful and tendentious, it remains true that, in order to recreate a proper context for these stories and to avoid anarchisms, the people who told them and the people who used them must have tried to reconstitute and preserve the original orientation. With those who knew the Semitic theodicy in particular, the importance of the names and epithets given to the deities in polytheism and to God in monotheism in the elaboration of theology is obvious, bearing in mind above all that the true Muslim theodicy is to be found in the treatises of the āsmāʾ al-ḥusna (q.v.) rather than in those of the mutakallimūn.

We are of the opinion that the same reasoning applies to the terminology designating the personnel and the accoutrements of the cult. Therefore we have chosen as our point of departure the various names and attributes designating the function and prerogatives of the kāhin, in the hope of gaining a clearer picture of his characteristics as they must have appeared in the religious outlook of the greater part of the Arabs, since we lack documents of sufficiently established authenticity that deal with the conception of the kāhin held by the élite of the people and the ruling class.

Like the Greek Ἱεραρχία and the Latin sacerdos, the Arab kāhin combined the functions of sacrificer and guardian of the sanctuary, and those of the μαστίγος and the averter; hence it is possible to render the word kāhin by "priest", in the sense of agent of the official cult. But the predominance of nomadism, where it was usually the head of the family or tribe who offered sacrifices, after the manner of the patriarchs in the Old Testament, and in which frequent migra-
The oracular, manic and augural role of the kāhin is for all practical purposes the only one recognized in the evidence we possess, which derives essentially from folklore. The numerous special divinatory functions which he exercised are known to us only through the various names which designated the exercise of these functions, illustrated by a few examples. These names, frequently used as synonyms for kāhin (as are for example for "diviner and the female equivalent: "augur", "haruspes", "magus", "pythones", "sybil", "seer", etc.), are: afhal, ḥāst, ṣāḥ, ṣādīn, ṣādīq, ṣādīr, ḥāfīn, ḥādīn, ḥādīs, which properly speaking designated the function of guardian in the holy places and the regions where the saera of a tribe or a group of tribes were deposited. This function of the kāhin amounts in practice to no more than the significance of those names and the deductions to be drawn from the stories which illustrate them.

To begin with the term kāhin itself: its etymological origin is obscure (possibilities are the Semitic root k w n, "to be, to stand up", and the Akkadian root kānūn, giving the idea of prostration; but the unaltered permutation of the consonant k is still unexplained). However, it seems to have been part of the earliest religious vocabulary of the Western Semites, after the manner of the bārū at Mari and in Akkad. Like the bārū, he combined the functions of guarding the holy place, transmitting the oracle, offering sacrifices, and interpreting signs by divination. These were the functions of the Hebrew kōhēn before the institution of the Monarchy, as described in the Bible (cf. H. Ringgren, *Israelite Religion*, 1966).

The Arab kāhin had not developed beyond this stage when the advent of Islam brought about his disappearance because of the absence, in the nomadic environment in which he lived, of a permanent stable kingdom which, as in neighbouring kingdoms and elsewhere, would have organized the priesthood if only to keep it under control. This lack of organization resulted in making the kāhin the sole repository of supernatural knowledge, dispensed in Israel by the kōhēn and the nābī, and this led them to the practice of both divinatory and ecstatic techniques. Thus, like the bārūm in *Le place du dieu dans la société de Mari*, in *La Divination en Mesopotamie ancienne et dans les régions voisines*, Paris (C. F. A. Finet, 1966, 93), the kāhin of ancient Arabia was held in his hands the fate of the entire tribe, in both peace and war.

The oracular and ecstatic aspects of his functions appear more overtly in the kāhin, who likes the ecstatic prophetess of Mari (*muḫḫitu transliterated as Mari, *Duš., Dūš., Dōš., Dūš.*), had visions and was in charge of an oracle (rabāt bayt: cf. examples and references in *Divination arabe*, 98 ff.). The most famous of these women was Ḥajīnab, daughter of the king of the Arbaštā and bāst (Zubayr b. Ḥajīnab, the sayyid of the Kābl). In fact afhal, from the Semero-Akkadian aphālu and preserved in several Semitic languages with the meaning of high priest (cf. *Divination arabe*, 103 f.), seems to have acquired an ecstatic character among the Arabs (loc. cit.); in the same way the ḥāst, a term of Aramaic origin comparable to the Hebrew roṣḥ, the forerunner of the nābī, must have been originally a "seer", as is indicated by his name; but he became increasingly an observer of omens, and the term became a generic one covering different divinatory and magical practices (op. cit., 112 f.). (On the oracular utterances of the kāhin and the kāhinina see *Sā'ūr*).

The aspect of guardian and sacrificer in holy places and places of worship appears in the following names given to the kāhin: ṭābb, who like the r b of Ugarit and the Kaṭābān ṭ r b y had to manage the affairs of the holy place (territories and entrances); ḥādīn, caretaker of the bethel, the "sacred stone" itself entrusted to his keeping during the movements of the tribe, expressing at the same time the close link arising from the proximity between the deity and his servant (compare with ṣādīn, r taym, i mu'ru, and their Semitic equivalents); sādīn and hādīs, which properly speaking designated the function of guardian in the holy places and the regions where the saera of a tribe or a group of tribes were deposited, therefore, a measure of settlement and all that this implied with respect to institutions, organizations and established customs. The observation of what was happening in other temples of the world around (compare for example the reforms introduced by 'Amr b. Lūḥayy [q.Ş.] after a stay in a Hellenistic spa, and the institutions founded in the 5th century by Kusayy [q.Ş.], who came from a Byzantine area where ecclesiastical and monastic organization were highly developed) aided the development of the office of the sādīn, and stability made possible the creation and preservation of traditions, myths and legends. But the function of the sādīn was not restricted to the guardianship of the holy place; he took the place of the kāhin, and like him performed sacrificial and divinatory rites, as did the Ugaritic ṣā'ād (compare Hebrew nōḥed from the Meššā' stela) who also bore the titles r b and k h n (see *Divination arabe*, 111).

The divinatory aspect of the function of the kāhin is covered generically by the term *ārāf, and specifically by names derived from the divinatory specialities which he practised, such as *ḥāyā' and sā'ādir (see *Ṭā'ara*), ḥā'ī (see *Ṭā'ara*), ḥādīs and several other secondary designations for particular occasions, such as ḥāmā (arbitrator on the occasion of a musāfara), ḥā'īb, (spokesman and messenger), ḥā'īr (incantator and inciter to battle), ṭābbī (medicine man), ḥā'ābīr (valuer).

The *ārāf is the kāhin, even though the former occupies a lower rank than the latter in the hierarchy of seers because he does not more than exercise the divinatory prerogatives of the kāhin; however, since in a nomadic society these predominated, *ārāf and kāhin were eventually applied to the same person. *Ṭarāfa is the knowledge of things unseen or of things to come, on the basis of things visible or present. It implies a gnostic knowledge (compare maʿrū'a in relation to *ihrām*), and consequently a knowledge restricted to the initiated, an implication contained in the Akkadian and Hebrew equivalents of *ārāf: màdād and tādān* unt. Therefore *ṭarāfa, while belonging essentially to the realm of divination, comes close to that of enchantment and magic. *ʿArāf and *ʿārāf are inspired by a lábīc or lábīc
KÄHN — AL-KÄHINA

(familiar spirit) or a ra’iyy or ri*iyy (inspirer for particular occasions); therefore the kähin’s role is called maiba* (flanked by a demon), and *‘arrdf is at times assimilated to sorcery and to sha’badha (lègendarèm, conjuring). The lowest stage of the function of the ‘arrdf and the kähin is rendered by the term nā&hid.

This epithet refers both to his role as exerciser (mundshada) and to his role as finder of lost animals and other objects. It is often in this guise that the kähin ‘arrdf appears in the apologetic folktales of primitive Islam.

Before Islam, the kähin in central Arabia was the spiritual and intellectual guide of the tribe, a role filled by all agents of a cult in underdeveloped societies at every period and everywhere. By reason of the geographic, historic and social circumstances in which he practised, he was an independent holy man, like his Greek counterpart, even though at times connected with an oracle, rather than as an official in the service of a centralizing state, like his Assyro-Babylonian and Roman counterparts.

Her true personality—which must have been highly complex—is very difficult to discern, for only the distorted reflections of her real features can be detected behind the legend. There is no agreement even on her real name, for al-Kähina is only a nickname given to her by the Arabs. It is said that she was named Dīḥā—Ibn Khaldūn (tr. de Slane, *Berbères*, i, 172) mentions a Berber tribe known by this name—of which Dāḥyā, Dāḥīya, Dāmya, Dāmiya, or Dābāy could be merely variant spellings. There is the same doubt about her descent; she is said to be the daughter of Tāṭt, or again of Māṭīya (= Matthias, Matthew) son of Tīfān (= Theophanus). If this means that al-Kähina was descended from those Berbers of mixed blood, the issue of mixed marriages, it would help to explain her authority, not only over her compatriots but also over the Byzantines. Several other indications confirm this hypothesis.

Al-Kähina herself is said to have married a Greek. We are told that she had two sons: the one of Berber descent, the other of a Greek father (Yānānī). She was also, contrary to general belief, Christian by religion rather than Jewish. Her tribe, the nomadic and pastoral Djarawa, a subdivision of the Zanāta, themselves related to the Butr, had indeed first adopted Judaism, but like many other tribes, such as the Nafṣūn, had afterwards been converted to Christianity. When al-Kähina appeared on the scene, she was a widow, and was certainly very old. Legend relates that she lived for 127 years, 35 of them as “queen” (maliqta) of the Aurès, where in 477, following a successful rebellion against the Vandals, a first independent Berber kingdom had already been set up, governed by Ibadas. Like those “Arab queens” cited by T. Fahd (*Divination arabe*, p. 98), she was clearly an “ecstatic”. At the moment of inspiration she became wildly excited, let her hair stream out, and beat her breast. She also practised more orthodox techniques of divination, such as reading the future in gravel, and there is no doubt that she owed a large part of her power to her prophetic gifts.

Al-Kähina took up the challenge thrown down by Kusaya, who had mobilized in particular the settled Berbers of Carthage and destroying the organized Byzantine forces, Hassan turned towards the Aurès, the stronghold of Berber resistance. He regrouped his forces on the banks of the Meskīān and attacked. Al-Kähina did likewise, after demolishing Bāghāya, which was probably her capital and which she wished to avoid falling into the aggressors’ hands. The decisive confrontation took place on the banks of the Oued Nīnī, probably not far from the railway station of the same name which today is situated 16 km. to the south of Aln-Beldā on the railway line to Khenchela. The battle was so disastrous for Hassan that for many years afterwards the Arabs called the oued (river of trials), or, for less apparent reasons, Wādī ‘Audades (valley of the virgins). This campaign, Hassan’s first setback, had an epilogue in the territory of Gabes in the course of a final battle which drove the invaders out of Ifriḳiyya.

Hassan was ordered to halt his retreat four stages to the east of Tripoli, where he established his camp (Ḳuṣṭur Ḥassān) and bided his time. Al-Kähina enlarged the area of her authority, but her power certainly did not spread over the whole Maghribi, nor even the whole of Ifriḳiyya, as is stated in some sources (Ibn ʿIdhārī, Bayān, i, 36; al-Nuwārī, *Nūkhāya*, de Slane, *Berbères*, i, 340). She treated the Arab prisoners well; she had adopted one of them according to the Berber rite of simulated sucking, an influential chief,
Khalid b. Yazid (sometimes called Yazid b. Khālid), who was regarded as a spy from Hassan’s camp. Perhaps he was ensnatched in this role, but the relation with the Arabs and bring them to renounce their designs, of which she was doubtless informed, by means more reliable than divination. It was probably the failure of this policy which forced her in despair to devastate the country, adopting in the face of a stubborn enemy a “scorched earth” policy, which Solomon had completely, but nor should they be seen as a cataclysm. They could not have extended beyond certain regions of Ifrikiya, but they must nevertheless have been sufficiently serious to disfavour large sections of the settled population, who, when they did not seek refuge in the Mediterranean islands or even in Spain, were ready to beg Hassan to intervene.

Hassan, who had kept himself informed of the situation and had received reinforcements, once more invaded Ifrikiya, probably to establish good relations with the enemy a “scorched earth” policy, which Solomon had completely, but nor should they be seen as a cataclysm. They could not have extended beyond certain regions of Ifrikiya, but they must nevertheless have been sufficiently serious to disfavour large sections of the settled population, who, when they did not seek refuge in the Mediterranean islands or even in Spain, were ready to beg Hassan to intervene.

The new vizier, Muhammad b. al-Kāsim b. 'Ubayd Allāh, supported the anti-Shī‘ite policy of the caliph, who had Ibn Yabaḥ and Mu'nis put to death, declaring himself al-muntakabī min a‘dā‘dīn Allāh and having this slogan engraved on the coinage. Al-Kāhir wasted no time in ridding himself of his vizier and replacing him with Ahmad al-Khaṣṣībī; but he too soon found himself in insurmountable financial difficulties, while the former vizier, Ibn Muṣlīh, plotted against the caliph and managed to stir up the Sādīṣ guard, who rising on 6 Dū‘ādād I 322/24 April 934, seized the caliph and imprisoned him.

The son of al-Muḳṭadīr, taking the name of al-Rādī, was proclaimed the new caliph. Since al-Kāhir had refused to abdicate, in spite of the pressure put upon him, the chief of the Sādīṣ guard, supported by al-Rādī, had him blinded. Al-Kāhir was released only eleven years later, on the orders of the following caliph, al-Mustakflī, and he died in Dū‘ādād I 339/ October 950.

**Bibliography:** D. Sourdelle, *Vistral*, 471-8; Ibn al-Aḥdr, index. (D. SOURDELLE)

**AL-ḴĀHIRA**, capital of Egypt and one of the most important centres of religious, cultural and political life in the Muslim world. The city is situated on both banks of the Nile, at 30°6’ Lat. N. and 31°6’ Long. E. respectively, at ca. 20 km. south of the delta where the Mukaṭṭam Mountains almost come down to the river. This strategical point dominating the access to Lower Egypt had been inhabited since early times, but became of primary importance during the Arab invasion in 226/643, when ‘Amr b. al-‘Ās established the foundations of a permanent encampment at al-Fustāṭ. The actual name of the city is derived from Miṣr al-Ḵāhirā, a town established in 359/970 by the Fatimid caliph al-Mu'iz, which gradually embraced the surrounding places. The remains of al-Fustāṭ are found in the quarter of modern Cairo called Maṣr al-῾Atika, Old Cairo. See also BABALYUN, AL-FUSTAT, MIHRA, AL-RAWDA. (ED.)

**Monuments**

Numbers in square brackets after monuments are those given in the *Index to the Mohammedan monuments in Cairo* (Survey of Egypt 1951). An asterisk after a monument indicates that it is dated by reference to a foundation inscription (often more than one).

**Nomenclature.** A considerable difficulty in the identification of monuments is orthographic, since current pronunciation of a name (Ṣargẖitmīsh [218]), the literary sources (Ṣargẖitmīsh [Budagov], Suyrughẖitmīsh [Moritz, *Arabic palaeography*]) and the inscriptions (Ṣargẖitmīsh, carefully pointed) often diverge markedly. For the sake of convenience, in reference to the standard art-historical authorities a modified form of the colloquial arabized Turkish has been adopted (Kūḏīn [224] and not Kāwāwawn, as it appears pointed on the perch of his mosque), except when popular etymology has so distorted the name (Ṭaghẖīrīdī/Taḥtīrīdī [200] which has become Ṣaghẖīrīdī) that the original is difficult to reconstruct.

**Topography.** The vast extent of the modern city of Cairo creates problems for the history of its monuments. Exceptionally among Middle Eastern cities, its development has been horizontal, rather than in terms of vertically superimposed layers, extensive rather than intensive. The original enceinte of al-Kāhirā, located well to the north of the agglomerations of al-Fustāṭ, al-‘Askar and al-Ḵāṭāţ, was intended essentially as a centre of government, well outside the main habitation areas, containing a palace complex, the barracks of the Fatimid armies and the new congregational mosque of al-Azhār [97]. For a time the walled city of old Cairo, Kaṣr al-Shāmī, Bābālyūn and al-Fustāṭ maintained their importance as industrial centres with the chief port installations on the Nile and the major blocks of tenements. However, the progressive westward deflection of the course of the Nile, and the attraction of al-Kāhirā as the centre of government led to a steady population movement northwards, so that the original mud (labīn) walls of Diwāhwar (358/969 onwards) had twice to be expanded, by Badr al-Dīmām (6, 7, 190) 480/1087-84/1091 and by Bāḥa’ al-Dīn Karākūş under al-Salāh al-Dīn in 572/1176-83/1173. The 5th/11th-century expansion, allegedly motivated by fear of an attack by the Sādīṣ, Ātīṣ, was less extensive than the latter, which included large areas between the walls of Diwāhwar and the Nile (see Fig. 1), now commemorated only in the names of certain quarters of modern Cairo, the Bāb al-Lūk, the Bāb al-Hādīd, the Bāb al-Khalk (Ḫark), etc. The steady northward population movement led to the desertion of large areas of al-Fustāṭ, which by the mid-6th/12th century had become abandoned (ḫāridā) and which in 572/1176 were partially connected to the inhabited areas by a wall, which remained incomplete at al-Salāh al-Dīn’s death.

From the Fatimid period onwards the areas of al-Kaṭāţ south of the mosque of Ibn Ṭūlūn became increasingly associated with the southern cemetery (the Karāţa al-Kubrā, see below). The first major expansion outside the Fatimid enceinte was the Citadel built for Salāh al-Dīn, 572-1176 onwards, not to fortify the city but as a place of refuge.

The Citadel was supplied with water from the Nile by means of an aqueduct (78) (bandār) which in its present state dates only from the reign of al-Nāṣir Muḥammad (Creswell, *MAE*, ii, 255-9), who in 712/1312 (sic) built four sabāḥīya on the Nile to raise water to the aqueduct of the Citadel and in 741/1341 incorporated into it the remains of Salāh al-Dīn’s wall, which had been intended to enclose the khāridā of al-Fustāṭ. It was restored and lengthened at various times during the 9th/15th century and particularly in the reigns of Kaṣrī Bāy and Kānṣaww al-Ghwārī [99-100], to whom the large water-tower, now known as the Sabā’a Sawāḥīt and still more or less on the Nile, must probably be attributed [78].

A second Ayyūbid fortress, no longer extant and destroyed and rebuilt several times during the Mamūk period, was the Kaṣr al-Rawdā/Kaṣr al-Mīyās, erected on the Island of Rawdā (Rod) by al-Malik al-Sālīḥ, though the island was almost exclusively a residential area, like Dilza (Giza), and very few monuments of any architectural importance now survive there.

Under the Bahri [see AL-BARHIYYA] Mamūlaks the expansion continued mainly outside the Fatimid walls, those foundations within being almost exclusively funerary and royal. The south-western slopes of the Citadel, which had remained unfortified in the Ayyūbid period, were walled by al-Nāṣir Muḥammad but were principally occupied by the sultan’s palace and the houses of his high amirs. In this period we see the creation of the great Mamūlak thoroughfares, the Darb al-ʿAṣmar leading from the Citadel to the Bāb al-Zuwaysa [590], the Shāriʿ al-Ṣalbā leading from the Citadel towards the Mosque of Ibn Ṭūlūn, and the Khalījī, originally a canal (now the Shāriʿ Port Saʿīd). The expansion to the north of the walled city of al-Kāhirā was not so marked:
the only two remaining foundations of any importance are the Mosque of Baybars in the Maydan Dahir (261/557), 666-7/1266-7, built on one of the royal polo grounds (see Pls. 3, 3a, 3b) and Kubba-al-Fadawiyya [5], dated by Creswell to 884-6/1479-81*.

Under the Ottomans the expansion of Cairo appears to have taken a different direction, to the west of the walled city of al-Kahira, particularly in the Bulaq area, which then became the principal port of Cairo. These are only by pre-Ottoman buildings surviving in this quarter, the mosque of the Kadic Yabya [344], 852-3/1448-9, and the mosque of Abu l-Tila [340], c. 890/1485. By contrast, the quarter contains the mosque (kulliya) of Sinan Pasha [349], 979/1571*, a large number of 17th- and 18th-century foundations and many less important but interesting khana ( urbadas) as well as wooden houses of a distinctively Istanbul type. The area has been only cursorily surveyed and stands in need of a detailed study. The change of direction initiated by the Ottomans was continued with the development of residential quarters, at Dijza and 'Ilbama on the west bank of the Nile, at Shubra, where a palace of Muhammad 'Ali built by 1850 (E. Pauty, 'L'architecture au Caire depuis la conquête ottomane', 52-8) attracted a residential suburb, at Abbasiiyya, and ultimately in the development of Garden City and Helioptolis (see Pl. 8).

The history of settlement of al-Kahira shows a secular northward movement continuing from that of al-Fustat to al-Katatt. Al-Kahira itself, at least within the walled area enclosed by Salab al-Din, remained of central importance as the seat of government and in the 19th century, with the Europeanized town plan imposed upon the Ezbekiyya quarter, the centre of commerce as well. The same development, however, was not followed in the quarter which now virtually surrounds the city and which are perhaps the most remarkable architectural feature of Cairo to strike the visitor.

Cemeteries. The great southern cemetery (al-Karafa al-Kubra), the principal burial place of Cairo since the invasion of 'Amr, remained in full use in the Fatimid period, when it was the centre of a veritable cult, which in the context as a Sunnith orthodoxy by the foundation of a madrasa at the tomb of the Imam al-Shafi soon after the Ayyubid conquest of Egypt (the present mausoleum [281], 608/1211, was built by al-Malik al-Kamil; see Pls. 2, 2a). At the south of the cemetery are a group of Fatimid maqbaras, the most important of which is that of Yabya al-Shibli [285], c. 545-6/1151, the mausoleum of the Imam al-Shafi [263] rebuilt by al-Ghawri in 921/1505* and restored in 1200/1883*; the khanqah and mausoleum of Shahn al-Khalawati [212], 945-1358, and the mausoleum of Sidi 'Ukba rebuilt by Muhammad Pasha Silidard in 1066/1655-6* and restored in 1909/1688 [608], better known as the Sadiet al-Wafadiyya. Remains of the Mamlik period in this area are now sparse, though a detailed survey would doubtless permit the location of many funerary foundations mentioned by Maqrizi and others. Behind the mausoleum of the Imam al-Shafi are the tombs of the late royal family, the Hawsh al-Pasha.

The northern part of this cemetery contains a less and more important group of Fatimid maqbaras, including that of Sayyida Naflsa (of which only restoration inscriptions dated to the reign of al-Hafiz now exist; the reconstruction proposed by D. Rennell)

A note on the cemetery of the 'Abbassid caliphs and the shrine of Sayyida Naflsa, in Ars Islamica, vi (1939), 168-74, is highly speculative, Sayyida Rukayya [273], 527/1133*, and Sayyida 'Atika [333], c. 1115. The sequence continues almost without interruption with the mausolea of late Ayyubid and Safer Mamluk sultans or princesses, including Shadjar al-Durr [169], c. 648/1250, the hawsh and mausoleum of the 'Abbasid caliphs [276], possibly as early as 640/1242-3, and the mausoleum of al-Ashraf Khall [275], 687/1288*, the last Mamluk sultan to be buried in this area. Doubtless to be included within the same cemetery, in the area to the south-west of the Citadel, is a group of funerary foundations. The earliest of these is conventionally known as the mausoleum of Mustafa Pasha [279], (? 666/1267-67/1273, and they include the mausoleum of khanqah of Kusun [201], 736-7/1335-7*, and a remarkable mausoleum with minaret, the Sultaniyya [288-9]; by reason of its domes, which resemble superficially Timurid domes at Samarqand and Herat, Creswell dates the latter to the mid-13th/13th century but it may well be a century earlier.

The fringes of the southern cemetery merit attention. The Christian cemeteries appear to have been located, as they are now, in the vicinity of Ksar el-Sham, though nothing of any antiquity remains there (those of the Djibal at-Abmar to the north-east of Cairo appear to date from the present century). The Jewish cemeteries were located, as they are now, in the vicinity of a considerable cult, which was made acceptable to the living in the area of Basatin al-Wazir. The most puzzling of these fringe monuments, however, is the Masjid al-Diyuygh [304], 478/1085*, the mausoleum of Badr al-Djamali, which now stands completely isolated on the Muka'tam hills, though the literary sources refer to pavilions and other buildings (e.g., the Masjid al-Tannur built on the supposed site of the Tannur Firmaun) which no longer remain. It is, in any case, the only buried cemeteries in this area.

The cemetery of the Báb al-Wazir to the north and north-east of the Citadel lies immediately outside the northern walls of Salab al-Din. The most important, as well as the earliest, foundation there is that of Mandjak al-Yusuf [138], 750/1350*, described as a mosque in the Index, but, exceptionally, having a separate entrance gateway, and a tomb attached to the mosque in the fortress. The other monuments are also 8th/14th century, the tabi of Shaykh al [144], 755/1354*, the earliest free-standing tabi in the architecture of Cairo, the masjid and hankah of Shaykh Nisam al-Din [140], 757/1356*, and the mausoleum and hankah of Tankizbugha, situated in an isolated position some distance away on a low spur of the Muka'tam hills (85), 764/1364*. The latest of this group is the mausoleum of Yavus al-Dawadkar [130], 757/1357, pre-783/1382. None of the foundations is royal, and since the foundation of Mandjak is not significantly smaller than those of the Babr Mamluk sultans, the creation of this small cemetery is an index of the pressure upon space created by the grand funerary constructions of the Mamluk sultans imara muros and in the main streets leading from the Citadel towards the centre.

The great northern, or north-eastern, cemetery, known misleadingly as the Tombs of the Caliphs, though almost contiguous with that of the Báb al-Wazir and now apparently separated from it only by a recent road, the Shari Saltim Bank, would appear (al-Maqrizi, ii, 36) to be a separate development; the first tomb to be built in this area (known in his time as the 'Awamid al-Sibak) was that of Yavus al-Dawadker [157], 783-4/1382, actually the burial place of Anas*, father of Barak. There is a topographical problem here, however, since in the southern sector of this cemetery, contiguous to that of Báb al-Wazir,
Both the numbers of the monuments, and the numbers and letters of the sections of the map correspond with those of the Map of Cairo showing Mohammedan monuments, Survey of Egypt, 1950 (enclosed in K. A. C. Creswell, The Muslim architecture of Egypt, i, Oxford 1952), and the Index of Mohammedan monuments in Cairo, Survey of Egypt, 1951.
are three important Bahri foundations, of Tahtúnur (92), 715/1314*, Tāybuhū ḥ al-Tawḥī, pre-758/1356 (37)* and Khwānd Ṭughāy (64), known locally as Umūm Anūk, pre-749/1348 (al-Makrīzī, ii, 66-7), a nausoleum and khānqāh with remains of rich stucco decoration and some interesting faience mosaic at the base of the surviving dome. North of this group all the surviving monuments are Burgīl (in spite of all the maps which indicate, without numbering, Bahri remainders); all are on a larger scale and many are royal. These include the khānqāh complex of Faraḍî b. Barkūk (149), 803/1400-813/1412*, the funerary complex of Kāṭ bī Yāq (94, 99, 101, 104), 877-9/1472-4* (see Pl. 6) and the combined foundations of Sultan Ṭāylū al-jawll, 960/1360 (al-Makrīzī, ii, 162), 911/1506-7*. Once again, it is easy to ascribe the growth of this cemetery to the pressure upon building space within the city, all the more so since expropriation was discouraged and sub-stitution (tabdīl) of waṣf property generally required a special fīṣūd, the practice only becoming general, according to Ibn Ḥaṣūn, in the 9th/10th century. However, the larger royal foundations of this cemetery included elements like the ṭabīr (plural ṭābūr) of a decidedly commercial nature, and there is evidence (Van Berchem, C.IA, iii, 316-31) that Faraḍî b. Barkūk hoped at some time to transfer the Sūk Orthodoxy of his khānqāh. The area has only recently been colonized and was for much of its extent isolated from Cairo itself by the line of rubbish heaps known as the Barqiyya. Access to the cemetery would appear, therefore, to have been not from the Bāb al-Ważr but from the Bāb al-Barfiyya, remains of which, dated 480/1087 by an inscription, were discovered late in the 19th century (Creswell, M.AE, i, 261-3), which exceptionally has vaulted ṣūqān instead of the usual flat roof. The ṣūqān could sometimes be closed off from the durakān by palatial doors, as in the case of a ṣūqān (Dayr al-Bandāt) in the Greek Orthodox monastery of St. George at Old Cairo (Kaṣr al-Sham), a construction of indeterminate date but with such doors of the Fāṭimid period, and as in the case of a similar pair of doors in the Museum of Islamic Art in Cairo found in excavations at the nausoleum of Kāṭūn (Inventory No. 554 [Pauty, Bois sculptés, Plate ix]).

Fortifications. The mud-brick tabūr fortifications of Dāwjāhīr have disappeared by al-Makrīzī's time, the result not of the instability of the material but of the population pressure on the compound of al-Kāhira, in spite of all attempts to exclude the public from its precincts. (There is an unrecorded mud-brick muṣallā or masjidī in the al-Kārāfī ḥ al-Kubārī near the Sādāt al-Wāfīyya which is almost certainly Fāṭimid in date). The present Fāṭimid fortifications of al-Kāhira, therefore, date from the time of the Caliph al-Mustaṣūr and even before their extensive repair by Sālūbī-Dīn in various sectors were much more characteristic of North Syrian than of Cairene architecture, being of squared stone and strengthened with transversely placed columns. The chief remaining elements of the north wall, in which the wall and the north porch of the mosque of al-Ḥākim are embedded, are the Bāb al-Futūfī and the Bāb al-Nasr (6, 7), 480/1087* (see Bāb); on the east is the Bāb al-Barfiyya of the same date* (not marked on the monuments map) and on the south the Bāb Zuwayla, 484/1091 (al-Makrīzī, i, 381). For a precise reconstruction of the walls of al-Kāhira, showing the fortifications of Dāwjāhīr, Sādāt al-Barfiyya and Sālūbī, see Fig. 1.

Mosques. The earliest of the mosques of al-Kāhira was that of al-Ashār (97), situated to the south of the palace, dated 355-6/1970-2 (al-Makrīzī, Khīṭāt, ii, 273) and built very much on the lines of the mosque of Ibn Ṭūlūn with a ṣūqān and rūmās surrounding it which are multiplied in the hābra side [see Masqūd]. Very little of the building is original (for a reconstruction see plan in Creswell, M.AE, i, 58-60, Fig. 20). It was not originally founded as a teaching institution though little more than a year after its foundation it had become the centre of the propagation of the Fāṭimid da'wah. It was this change of function, as much as the population increase within the enceinte of al-Kāhira, which doubtless explains...
the foundation soon afterwards of the mosque of al-Hākim [35], founded by al-‘Azīz in 380/1090-1 and completed by al-Hākim no later than 403/1012, outside the walls of Djiawhar, to the north. Creswell has deduced that those parts of the stucco facing of the biḥla riwāt of al-Azhar which are not 19th-century inventions may go back to the original date of foundation; but the courtyard façades and the domed pavilion at the entrance to the raised crossing on the axis of the miḥrāb cannot be earlier than the reign of al-Hāfīz li-Dīn Allāh, 526/1131-534/1140. For the Ayyūbid period there is only the testimony of ʿAli Pāḥā Shubārak (iv, 16) that any upkeep of the mosque at al-Ḥaṣrā was attempted, al-Malik al-Kāmil being said to have erected a biḥla šaṭīra min ḥaṣāb biḥla riwāt al-Sharīfīyya in 627/1230. With the exception of this dubious period, however, al-Azhar was reorganized, restored and added to by almost every important ruler of al-Ḥaṣrā from al-Hāfīz to Kāʿīt Bāy, who added a miḥrāb and a minaret (both undated) as well as a monumental porch (bāwāsūba), and al-Ghawrī, who added its second minaret, also undated. The adjacent madrasas of Tāʾybars and Aḥkūbhā (709/1309-10 and 734/1334-4 to 740/1339*), were enclosed within the complex when the bawāsūba (the bāwāsūba al-Mašāyīn) was added by Kāʿīt Bāy (829/1426*), though the present entrance is Ottoman, 1167/1753-4*, probably the work of ʿAbd al-Raḥmān Katkhudā, who considerably enlarged the mosque at this time.

The mosque of al-Hākim was even more traditional in that it boasted a šiyāda or temenos on at least one side (identified by Creswell, MAE, i, 115-7 and dated by him 411/1021-427/1036), though it added two minarets based on north-west and south-west corners and adopted the plan of three monumental entrances, the northern one being subsequently embedded in the wall of Badr al-Dījamāl. The mosque suffered badly in the earthquake of 702/1303 but was restored immediately by Baybars al-Dījamālī (Ǧāshnegīr), who added pyramid-like casings to the two stone minarets and a miḥrāb (or perhaps larger) like those of each minaret to the north and south. In spite of a further restoration attributed by al-Mafṣūlī (Khitat, ii, 277) to Sultan Hasan the mosque is now in a ruinous condition and the decoration judged so important by S. Flury (Die Ornamente der Hakim- und Ashar Moschee, Heidelberg 1912, 9-26, 43-50) can scarcely now be made out.

The other two extant Fāṭimid mosques of Cairo, both modifications of the same plan, merit attention. Al-Akmār [33], 510/1120* (see Pls. 1, 1a), the work of the vizier Maʿmūn al-Batāʿīh, has the earliest decorated façade in Cairo, with a rich complement of foliate and epigraphic ornament, but is equally significant because although the mosque is biḥla-oriented (at least approximately) the façade follows the street, which is not parallel to the biḥla wall, this is the first case of what was to become a standard Cairene practice. The mosque of the vizier al-Ṣāliḥ Talāḥī [116], 555/1159*, the last dated Fāṭimid building of Cairo (misleadingly restored in the present century), also combines architectural interest—a colonnaded narthex or loggia as façade and a basement of shops (dakkhim)—with rich interior stucco decoration, partly restored by the amir Bektāmiş al-Chāndārī in 695/1296 or 703/1304*. This mosque, situated in the judiciously opened gap in the Dījamāl immediately opposite the Bāb Zuwayla, had been intended as a shrine for the head of al-Husayn. This was placed in a mosque-shrine inside al-Kāhirah on a site now occupied by the mosque of Sāyridnā al-Husayn, the work of an unidentified 19th-century architect under the influence of the railway station architecture of the Gothic revival in Europe.

Tombs, Maṣḥāds. The tombs of the Fāṭimid caliphs were inside the palace in the actual region of the Khān al-Khalīfī [53,4,56] and were thus destroyed on the fall of the dynasty. (A fragment of the only remaining inscription has been published in RCEA 2104; see G. Wiet, Inscriptions historiques sur pierre 34-5, no. 52.) Many other funerary inscriptions have been published (see Bibliography), most from the typical Cairene bawwāb, an unroofed burial enclosure, which may be provided with one or more miḥrābs in the biḥla wall, which contains graves covered by cenotaphs, or sometimes one or more domed mausolea, usually biḥla-oriented but following no clear chronological sequence. Some domed mausolea of private persons survive, among which may be the Sābīa Bānt, four mausolea, not all with miḥrābs, to the south of the ruins of al-Fustāt and identified by Creswell on the basis of Bawwāb, ii, 449 with the mausolea of those members of the family of the vizier Abu ʿl-Kāsim al-Husayn b. ʿAlī Maḥrūbī put to death by al-Hākim in 400/1010. More characteristic are the maṣḥāds of the late 12th-13th centuries built over or next to the southern cemetery in various groups. Among the best preserved are the Khaṭān (Ikhwaṭ) Yūsuf [301], c. 500/1100, Sayyida ʿĀṭika [333], c. 510/1120, Sayyida Rūkhāna [273], 527/1133*, the only precisely dated member of the group, Yabāyan Ṣabic al-Sabīnī [185], c. 545/1150 and Umm Kulthum nearby (not marked on the monuments maps, pre-550/1155. Small constructions, sometimes with a central courtyard, the maṣḥāds consisted of sanctuaries of one to three rooms, often in threes, and containing one or more cenotaphs, which were perhaps surmounted by a makhṣara. These were conceived essentially as centres of pilgrimage (ṣiyādāt). Not all Fāṭimid funerary monuments take these forms, however: the ʿKabr Luʾluʾ bint al-Muqarrīkī, among the mysterious remains of al-Kārīfī al-Muqarrīkī, consists of three-storeyed domes on squinches, with richly decorated carved stucco friezes and miḥrābs, often in threes, and containing one or more cenotaphs, which were perhaps surrounded by a makhṣara. This was conceived essentially as a sort.

Ayyūbīds

Fortifications. The Citadel and the walls of Sirābī al-Dīn have been authoritatively described and analysed in detail by Creswell (MAE, ii, 1-460 ff.). The former, the largest Ayyūbīd fortification ever undertaken, occupies a spur of the Muqāṭṭam Hills on its north-west side: the south side is an artificially built up terrace. The Ayyūbīd remains are confined to the more or less rectangular northern enceinte, which had four gates, the Bāb al-Mudarrātī built by the amir Karānbī in conspicuous Ayyūbī times in the Burjī al-Matar and the Burjī al-Imām and the Bāb al-Kullā. To this first period may also be assigned a long stretch of curtain wall with fairly uniformly spaced half-round towers which starts at the east of
the Burdż al-Muk'attam and runs round the south, east and north sides of the enceinte. The ramparts were connected by a chemin de ronde and had round crenellations. These fortifications which, Creswell judges, must have been virtually complete at the time of Śalāb al-Dīn's death, were strengthened by al-Malik al-ʿAdīl in 604/1207-8, when he added three great square towers, the Burdż al-Šufa, the Burdż Kerkyulan and the Burdż al-Ṭurfa, all built aithwart the southern sector of the walls, cutting the chemins de ronde so as to form individually defensible redoubts in case of need. The Bāb al-Karafa at the Burdż al-Ḥaddād (Ḥadīd?) and the Burdż al-Raml were converted into circular bastions. On the completion of these works al-Malik al-ʿAdīl took residence in the palace there. Makrīzī states that the Citadel was built with stone from the pyramids at al-Jīza; most of it is, however, of soft Mutaḵṭam limestone which was quarried on the spot. In Creswell's view the rusticated masonry is easily attributable to al-ʿAdīl since he employed it for fortifications at Buṣrā, Damascus and elsewhere.

The purpose of the Citadel was internal defence, against the possibility of a Fātimid counter-attack or an invasion of the population of the city of al-Ḥārām. A second Ayyubid fortress with the same purpose, a secure palace complex, the Khalvat al-Rawda, was built on Rawda by al-Šāfiʿī Naṣīr al-Dīn Ayyūb, 638/1240-1. It contained a khūba (Creswell, MAE ii, 84-7) with an enlarged ṣarīfā to take a free-standing dome, probably wooden. It also had a Gothic doorway, doubtless carved on the spot by some of the Frankish prisoners taken in the Egyptian campaign. Although nothing now survives of this fortress of sixty towers, it remains of interest, for it was here that al-Ṣāfiʿī installed the garrison of Mamlūks known, from their station on the Nile (al-Bāb al-Nil), as Bahri, which eventually supplanted the Ayyūbīd dynasty (al-Makrīzī, Sulūk, Ziyāda I, 341).

Mosques. There are no surviving Ayyūbīd mosques in Cairo, and no Ayyūbīd restoration inscriptions from either the mosque of Ibn Tūlūn or the mosque of ʿAmr, which under their occupation was the only mosque in which the ṣarīfā was permitted, in an attempt to eradicate the importance of al-Ḥāzir as the centre of Fātimid propaganda. More curiously, the restoration of the mosque of Ibn Tūlūn by the Fātimid vizier al-ʿAfsallāh, who added a mīhrāb c. 687/1094, appears to have been respected, since the ʿAlīyīd khakhāda which appears on it has never been defaced.

Madrasas. It would appear probable that the Ayyūbīds relied more upon the institution of the madrasa to combat the Fātimid da'wa. Time has dealt harshly with these foundations however. One of the first foundations of Śalāb al-Dīn's occupation of Egypt was a Shāfiʿī madrasa near the grave of the Imām al-Ḥadīth in the southern cemetery (begun 571/1176-7). Of this nothing remains but the magnificent teak cenotaph of al-Ṣāfiʿī Naṣīr al-Dīn Ayyūb, 638/1240-1, and the work of the naghdiyī ʿUbayd b. Maʿallī. The combination of venerated tomb with madrasa was an interesting exploitation of the principle of the Fātimid masgad for orthodox Sunni ends. Elements of the madrasa probably survived until the late 12th/18th century, but the tomb of the Imām under went one great transformation, under al-Malik al-ʿAdīl in 604/1207-8, which not only destroyed the magnificent teak cenotaph but also converted the mausoleum into an enormous wooden-domed mausoleum, which has been frequently restored since but is still arguably the most impressive mausoleum-shrine of Cairo (see Pls. 2, 22).

(For the chronology see G. Wiet, Les inscriptions du mausolée de Shāfī, in BIE, xv (1933), 167-95.) Remains of a madrasa in the Suk al-Nahl?asin attest a second foundation of al-Ḵāmil, the Kamāliyya (428), 622/1225 (Ḵhiyāl, ii, 375), but the best conserved of all is a double two-iwan madrasa on the Kaṣaba, the main street of Fātimid Cairo, by al-Ṣāfiʿī Naṣīr al-Dīn Ayyūb [38], 641/1243-4, with a single minaret crowned by a mussābīrā above the porch in the centre of the façade and a street between which separates the madrasa and the mausoleum. Apart from the decorated street façade which depends for its ornament on the tradition of the courtyard façades of al-Azhar, the madrasas are almost in ruins, though the crown of the vault of the west iwan of the left-hand madrasa has inserted of stone vaulting in the brick substructure, which are executed without centring as in Upper Egypt, an architectural practice which has attracted little attention from archaeologists working in Cairo but which is fairly frequent in the 7th/13th-8th/14th centuries. The most significant feature of the foundation, however, is the mausoleum of al-Ṣāfiʿī, 667/1269* but completed (Ḵhiyāl, ii, 374) 68/1243, of which the second post-mortem funerary constructions of Cairo, it is also the first conspicuous funerary foundation, the hibla-oriented mausoleum essentially forming part of the street façade and thus one of the most conspicuous features of the building. This approach was to become so much a standard feature of the architecture of Mamlūk Cairo that where a choice between a hibla orientation and a street façade arose it was often the latter which prevailed.

Tombs. A funerary construction of a more traditional type is the "Tomb of the ʿAbbasid Caliph" [276] near Sayyida Naṣīra, possibly as early as 660/1262-3, with very rich decoration of carved and painted plaster, which contains the cenotaphs of many of the caliphs who lived in Egypt as Mamlūk puppets after the fall of the caliphate of Baġdad. The domed mausoleum is enclosed in a vast baḵsh with seven mīhrābs in the hibla wall and the remains of a monumental entrance. In the post-Ayyūbīd period such isolated mausolea without appurtenances are very much the exception.

Few public works of the Ayyūbīd period survive. The Ayyūbīd elements of the aqueduct which supplied the Citadel with water were incorporated into the works of al-ʾNāṣir Muḥammad. Two bridges on the al-Dīza road remain, however, with inscriptions from the time of Śalāb al-Dīn in the name of Karākūsh (Van Berchem, CIA, 455 ff.) and restoration inscriptions of al-ʾNāṣir Muḥammad, 716/1316, Kāḥtī Bāy, 884/1479 and Husayn Pāḥša, 1087/1676.

Mamlūk Fortifications. There are no considerable Mamlūk fortifications extant in Cairo. The Kaṣr al-Rawda was restored under Baybars and the restoration inscriptions of al-ʾNāṣir Muḥammad on the Citadel relate principally to the building of an irregular southern enceinte and to the construction of a new aqueduct connecting the Citadel with the Nile and incorporating into it part of the wall of Śalāb al-Dīn which had been intended to connect the ḫarībā of al-Fuṣṭašt with al-Ḵāmil but was never completed. The aqueduct was begun as early as 721/1321 (Ḵhiyāl, ii, 450: Casanova's translation erroneously has 711/1311, cf. Creswell, MAE, ii, 255-9 also for the later history of the aqueduct). The buildings of al-ʾNāṣir Muḥammad on the Citadel included a large mosque on the ṣariqā plan [143] with a
foundation inscription of 718/1318, which was considerably modified in 735/1335 (Khdt, ii, 212, 315) when the large wooden dome over the mihrab supported on ten columns of Aswan granite was doubtless less added. The mosque also has two minarets said to have been decorated by craftsmen from Tabriz: if this report is really to be believed the craftsmen appear to have forgotten their skill on the way to Cairo. The palace of al-Nasir Muhammad, the Kasr al-Ablacr (so called from its use of bi-coloured voussoirs for the arches of the main qa'a), also known as the Bayt Yusuf Sallabh al-Dfn, was destroyed in 1824. It has been possible to reconstruct it, however, from descriptions given by Shihab al-Dfn al-‘Umarl, Masalik al-abjar (Bibliotheque Nationale MS arabes 583, folio 190a) and al-Makrzl (Khdt, ii, 209-10, which gives the date of construction as 713-4/1313-5). The palace consisted of a great qa'a (cf. Creswell, MAE, ii, 250-1) and a central qa'a', which appears to have had flat-roofed iwans and a central dome on wooden pendentives. The palaces of the alms which in Makzrl’s time covered the southern slopes of the Citadel have now entirely disappeared, those which still remained doubtless being destroyed when the palace of al-Djawhara [505] was built by Muhammad 'Ali in 1829-30.

Mosques. The earliest of the Batr Mamluk mosques is that of Baybars in the Maydan Dahir [1], 666/1266 (see PIs. 3, 3a, 3b), completed two years later, on a pole-or-well to the north-west of the Fatiimid walled city. Built very much on the plan of the mosque of al-Hakim, though without the siyda and without the two minarets, it has three monumental entrances, the decoration of which is a curious blend of North Syrian motifs and the ornament of the Fatiimid mosque of al-Akmar (see above). The building has been largely gutted; the wood and marble brought for it by Baybars from Djaffa has disappeared and only fragments of the rich stucco decoration of the window frames remain. Its most conspicuous feature is the large square mbsyra in front of the mihrab, doubtless originally covered with a wooden dome and unparalleled in scale in the mosque architecture of Cairo. With the exception of Ldjrn’s restoration of the mosque of Ibn Tulun (see Restorations below), the principal period of mosque construction in Cairo would appear to be from 713/1313 onwards, partly following on the foundation of the mosque of al-Nasir Muhammad on the Citadel and partly taking rather belated advantage of the relaxation of the restriction of the khdsba to a very limited number of mosques inside Cairo. The foundations, often on a large scale, are all of amirs, not of sultans, and are chiefly on the main arteries to the south and south east of the Fatiimid walls leading towards the Citadel. They include 'Alamilik (7) al-Cdcdndar [24], 719/1319, Ahmad al-Mihmdr [113], 725/1324-5, 'Almlds (Yldms, less probably Olmst), 730, 733/1332-90 (Khdt, ii, 307), Kdsrn [202], 730/1332-30, which has a monumental porch on the east at some distance from the mosque itself, Bsghtk [205], 735/1335, and Altinbugha al-Mrdndn [120], 739-40/133940, the grandest and most inventive of the lot, with many columns of Aswan granite complete with Ptolemaic capitals, glazed ceramic window-grilles, carved wooden mashrabiyya screens separating the kula from the main dome, and a very curiously indented facade on the Darb al-Abmar. There are three further mosques of this period, Aslan al-Bahar [112], 745-6/1344-5, 'Alsmunk [123], 747-8/1346-7—better known from its restoration by Ibrahim Aga Mustafabn in 1602/1652, who covered part of the interior with (bad) blue and white tiles and made it known as the Blue Mosque, and Shaykh al-Umar [147], 750/1349-50 (Khdt, ii, 312-3 has 756/1355-6). These foundations vary considerably in their dimensions, but their façades always follow the line of the street in which they are built, any divergences from the kdra orientation which this might entail being reconciled by setting the interior plan askew. None are primarily funerary constructions and some are quite definitely not, for example the mosques of Kdsrn, who built a mausoleum and khanlbk [290-1] in the southern cemetery 756/1355 (Khdt, ii, 425), and of Shaykh, whose khanlbk and mausoleum are directly opposite [152], 756/1355*—.

The Cairene mosques from the time of Sultan Hasan onwards, if even grander in scale, are fewer in number and, even in the case of royal foundations, usually form part of more complex institutions. This is reflected in the terminology of the literary sources, which becomes steadily more diverse. The mosque of Sultan Hasan [133], 757/1356-758/1358* (see Pl. 4), described in its wafsiya as hdsba’-masdja al-dgami wa'l-madrass, is variously described by al-Makrzl as madrasa and dgami. Its central feature is indeed a vast cruciform madrasa for the four madhabts with an open courtyard containing a domed library (wdsra). The principal iwans, allotted to the Hanafs for teaching purposes, contains a marble minbar and a monumental mihrab, leaving no doubt that the functions of madrasa and masdja dgami were not exclusive. Remarkably, the kdra iwans gives on to a palatial tomb-chamber, originally covered with a wooden dome. The madrasas occupy each corner of the main courtyard and consist of many storeys of cells disposed round a small interior courtyard. Annexed to the construction are still to be found a midali or ablation courtyard (in Cairene architecture it is unusual for fountains in the courtyards of mosques or madrasas to be used for ablutions before the late Ottoman period), a high water-tower, a haysariyya with the remains of shops, and a rb, which may also have served as a hospital. Complete specification of the appending spaces, many of which have disappeared in the last hundred years, must await publication of the wafsiya of the institution. In the architecture of 8th/14th-century Islam as a whole, not only of al-Kahira, the mosque of Sultan Hasan is outstanding for the vastness of its conception and scale and is particularly remarkable for its height. The interpretation of its architectural history has not significantly advanced since the publication of Max Herz Bey’s monograph (see Bibliography), except that unconfirmed speculations that the porch might be of Anatolian inspiration have now been confirmed by comparison with the two-minaret porch of the Sallacb Gok Medrese at Sivas (see SALDJS: ARCHITECTURE) 670/1271-2 (J. M. Rogers, Seljuk influence on the monuments of Cairo, in Kustcr des Orients, vii/1 (1972), 60-68). The building, which remained unfinished at the time of Sultan Hasan’s death, had an eventful history under the early Burdji Mamluk sultans and its vast scale made it rather unsuitable for general imitation. The façade was, however, imitated by al-Mu’ayyad Shaykh in his mosque, with its other dependencies, including two minarets placed on top of the Bab Zuwayla (1900, 828/1425-833/1420 (Khdt, ii, 348-50), and he paid the mosque of Sultan Hasan the further compliment of having the great bronze doors from its entrance and a bronze chandelier from the interior for his own construction.

The mosque of al-Mu’ayyad, the last considerable mosque of Mamluk Cairo, is built on the qa’a plan,
and the remains of its courtyard façade show it to have been also the last imitation of the blind arcading and rosettes which were taken over by al-Hâfir 11-Dîn Allâh from the mosque of Ibn Tûlûn for his reception of the courtyard of al-Azhâr. Polychrome marbles on a vast scale were expropriated for the decoration of the kibla wall, and the mausoleum even contains fragments of an kishâbîd cenotaph; decoration of such richness, or rapacity, was not subsequently possible in the architecture of the Mamlûk period. The later 9th/15th-century mosques of Cairo, even royal foundation like that of Dâjânâm in the Darb Sa'dâ, 883/1449*, are comparatively on a very small scale indeed. Their plans become progressively more similar to those of madrasas, chiefly of the two-iwan type with a reduced sahrân, which eventually becomes roofed with a wooden lantern, and the approximation of plan is doubtless due to the fact that the mosque became simply a minor element of complex foundations. Kâfît Bây, the most considered builder of the Bûrjî Mamlûks, built no mosques which were not primarily some other institution, and the chief interest of those few buildings of his reign which might be classified as primarily mosques, like that of Kîdjûm (Sa'âdî) al-Isbâkî [114], 885-6/1480-1*, is not the scale or comprehensiveness but the architectural problems they solve. In principle the mausoleum of the founder was attached, partly explains the labyrinthine convolutions of the street façade in funerary foundations generally took first place.

The exceptional character of the independent, non-funerary madrasa is shown by the fact that in the Burjî period only two madrasas, both founded by Kâfît Bây (on the Kala'un al-Kabîh [233], 880/1475*, and on the Island of Dâjânâm, described also as a mosque by Ibn Ýâs (text ii, 205, 211, 271, 301) and completed by 896/1481, the only standing monument of any antiquity on the island), can be considered as non-funerary foundations. One funerary madrasa did not exclude the possibility of other funerary foundations either. The amîr Karânjûr, who built a madrasa [32] in 700/1301 in Cairo, built a tomb at Aleppo when dâbî of that town and is buried in a tomb, the Gunbad-i Ghâftârîyya, at Mârâgâ [q.v.] in N.W. Iran, whither he had fled in 712/1312. The amîr Tankizbûdî actually built two foundations inside Cairo, one in the southern cemetery [298], c. 760/1359 (Creswell’s dating), and one on a spur of the Muqâta˒m to the east of the Citadel [30], 764/1356*, which contains a canopy mausoleum (sâfârî pûd) completed four years after his death. Even Barbûkî, who had founded a funerary madrasa in cells under [157], 786/1384-6*, is reported to have asked on his deathbed to be buried in a rubba near the graves of various venerated shaykhs, which is one of the motives given by al-Mâfrî (Khitâb, ii, 464) for the location of the hânkâh of Fârâdî in the desert [149], 803/1400-1401/1410*, where Barbûkî is indeed buried. This suggests that whereas institutionally speaking madrasa and hânkâh are not exclusive terms, the latter were preferred as places of burial; in any case Barbûkî’s reported wish is curiously similar to the Timûrids’ motives for the development of Shahr-i Sabz (Kish, Kishkâh) and the Shâh-i Zinde at Samarqand [q.v.] as their family cemeteries.

Regarding the evolution of the plans of Cairene madrasas, in particular of the cruciform madrasa, an authoritative account has been given by Creswell (MAE, ii, 104-34). The institution was imported from Syria by the Ayyûbîds, but no surviving Ayyûbîd monument in Egypt or Syria is cruciform in plan and the lists of the known madrasas of Damascus up to 695/1295 and of Cairo up to 639/1242, mostly Shâfi˒i or Hanîfî, show few for two rites and none at all for four. The Madrasa al-Mustanṣiryya at ‘Askâfî (831/1333) was intended for four rites, but Creswell has shown (MAE, ii, 126-7), that it was not cruciform, whereas the first Cairene cruciform madrasa built by Baybars, the ‘Azhîrîyya [37], 660/1262*, does not appear to have been intended for all four rites. This is also unusual in that it does not appear to have been a funerary construction, Baybars having built his tomb in the Madrasa al-Zâhîrîyya at Dâjânâm (see Dimashq). The cruciform plan was not immediately adopted for the madrasa, that of Kâlûn [43], 683-4/1284-5*, having one dawûn only and a sanctuary three bays deep. The first cruciform madrasa in Cairo for all four rites was that of al-Nâṣîr Muhammad [44], 695/1295-703/1304*, and only two others appear to be recorded by Mâfrî, those of Sultan Hasan (see above) and Dîmârî al-Dîn al-Ustâdâr (Khitâb, ii, 401) [35], 812/1409. The cruciform plan was, of course, more widely employed, for mosques as well as formadrasas, though always with a tendency for the axial dawûn to enlarge at the expense of the side ones. It was, however, most conspicuously employed in the two surviving hospitals (mdrîstîn) in Cairo,
that of Kalâ‘ün [43], 683/1284, and that of al-Mu‘ayyad [257] (see Pls. 5, 5a), 621-3/1428-30 (Khitai, ii, 408), the façade of which suggests some direct acquaintance with the Mengûqûkîd kingdom at Divriği in Central Anatolia (626/1228 onwards). The hospital of al-Mu‘ayyad was, however, turned into a mosque in 825/1421-2.

The great majority of the Mamlûk madrasas of Cairo are modifications of the two-isnâf type. Even if we cannot accept Creswell’s suggestion that the plan of such madrasas was entirely determined by that of the domestic architecture of Cairo, in particular the kâ‘a, we may readily admit that domestic architecture and the madrasas of the Mamlûk period developed pari passu. There are even two madrasas which bear inscriptions proving that they were originally houses, al-Ghannâmiyya [96], 774/1372-3*, and that of Khûqkâdam al-Abîmadî, formerly the palace of Tashghimûr al-Dbaddûr [155], 768/1366-7 or 778/1376-7. The dates of their conversion to madrasas are curiously late: the former must have been a madrasa by 827/1423 when the Khüîat was completed, but according to Ibn Iyâs the first kâ‘iba was pronounced in the latter only in 891/1486. The conversion was, of course, simple: it required only the hollowing out of a mihrâb on the kâ‘ibâ side and the construction of a minaret, both essential features of the Cairene madrasa.

Khânkhâhs. Mamlûk Cairo is rich in religious foundations of a quasi-monastic type, suwarîyas, bîkhânkhâhs (pl. usually bîkawwâních or bîkhânkhâhidh) and rûbîs. The first of these were generally small constructions housing a shaykh, with room for students to group informally round him. They are rarely of architectural importance and are often not endowed. Nor was a kâ‘iba built at the express request of the khânkhâh. Of the only two mentioned in Creswell’s Brief Chronology, the Zawiyat al-‘Abbâr [146] (c. 684/1285-6, Khüîat, ii, 420) consists of two domed mausolea and is equally well known as the Khânkhâh al-Bundukhdîrî, and the Zawiyat Âydmur (Âydmurîn) al-Dhahlabîn [22], the date of which is disputed (see Van Berchem, CJA, 125), was almost certainly a madrasa. Where the sources speak of other suwarîyas they may say no more than that they consisted of a kûnr or a rûbû: they are, therefore, extremely difficult to identify architecturally.

The earliest khânkhâh founded in Egypt was Âyûbîd (569/1173-4), in the palace of Sa‘îd al-Su‘âdâ, a freed slave of al-Mustânîr (Khitai, ii, 415-7, 472). The site may still be identified, but the building has been so often changed that no idea of its original disposition can be formed. Curiously enough, throughout the Ottoman conquest, only seven buildings are named, or implied, in their foundation inscriptions as khânkhâhs: those of Baybars al-Dhâshenkrî [32], 706-9/1306-9, Shaykhû al-‘Umârî [152], 736/1336, Nîthâm al-Dîn Ibrâhîm [140], 757/1355*, Mûkîb al-Zîmâm al-Dâbîdî [177], 797-8/1396*, and the three in the same cemetery, Faridî b. Barûk [149], 803/1400-1, 1310*, al-Asgîrî Bârsbûy [121], 835/1432*, and al-Asgîrî Innâl [258], 854-60/1450-6*. The conception of a khânkhâh as an independent construction, with kitchens, a bath and living quarters either disposed round a central courtyard or in separate blocks, as in that of Faridî b. Barûk, is well established by Makrîzî, Ibn Tughrîbîrdî, Ibn Iyâs and al-Sâkhiwbî; but the extreme divergence in the numbers of khânkhâhs they give, from twenty-nine in the first case to a mere four in the last, and the fact that each gives a slightly different list shows that the term, like madrasa, is far from having an exclusive sense in the architectural history of Cairo. The general tendency in the Burdî period is for bânkhâhs to be subsumed in epigraphy under madrasa or dîwânâ, though reference may be made to a mawshîkîsh or mawshîkîsh sûfiyya, and, as in the case of the foundation of al-Asgîrî Bârsbûy [121] above, the “khânkhâh” of the inscription may become “madrasa” in the wâfîyya (A. Darrag, L’Egypte sous le règne de Bârsbûy, Damasc 1961, 50). Up to the end of the reign of al-Nâşir Mu’âammad, which coincides with the foundation of most of the khânkhâhs mentioned in the sources, it seems to have been the rule for Süffis to live in khânkhâhs, in cells either grouped around a courtyard, as in the foundation of Rukn al-Dîn Baybars al-Dhâshenkrî [32] above, and of Sâlih and Sâdiq al-Dîjwîlî [221], 703/1303-4*, on the Dîjbal Yâshkûr, or in an annexe, usually of cruciform plan, or, finally, as in the foundations of Innâl, Kâ‘în Bây and Kurkûmûs, in a rûbî or block of living-units set within the main enclosure but structurally independent of it. In the latter two types there is no necessary resemblance between the annexe and the main construction.

By the first quarter of the 9th/15th century living quarters were being suppressed from new foundations within the city, though whether this was for lack of space or of Süffis is unclear. A condition of residence within the khânkhâhs of the Burdî period often stipulated in their wâfîyyas (cf. ‘Abd al-Lâtîf Ibrâhîm ‘AIl, Dirassât târijkîyîn wa aljûmîyîn fi wâfîyyîn mîhrâb ‘asr al-‘dîrî, unpublished doctoral thesis, University of Cairo, 168-9, for the wâfîyya of Baybars al-Dhâshenkrî that was Süfîs, as well as taking vows of poverty and piety, were obliged to relinquish salaried appointment within the administration or in any other religious institution. Non-residential tassawwuf was permitted in the Bahri period under some circumstances, e.g., to married Süffis, but khânkhâhs founded at this time were seen as essentially places for private dîwân to which non-residents were in principle not admitted. From the time of al-Mu‘ayyad Shaykhî on (wâfîyya quoted by ‘AIl Pâshâ Mûbârak, v, 128) the emphasis changed to the communal dîwân, the previous restrictions on alternative employment for Süffis were less rigorously enforced, and the important element of tassawwuf became daily attendance at the dîwân. The later Burdî khânkhâhs were dependent parts of complex funerary foundations, and were sometimes no more than mabâds, like that of al-‘dîrî [66-7], 908-10/1503-4*, a large oriented hall where the daily dîwân dajâmî or dîwân wâfî al-tassawwuf was celebrated at certain specified hours.

Much more work is required on the development of the khânkhâh in Mamlûk Egypt (for a survey see S. Mehrez, The Ghawriyya in the urban context, an analysis of its form and function, IFAO Cairo, forthcoming). It has been suggested that the change from residential to non-residential Süfî centres was at least partly the result of the decadence of the ârâbîs in 9th/15th century Egypt; this may be true, but the sources are extraordinarily silent on the precise târika for which a given khânkhâh was intended or which eventually took control of it. Divergences in the practices of the ârâbîs led in 8th/14th-9th/15th century Iran and in Ottoman Turkey to profound modifications in the architecture of the khânkhâh, and it would not be reasonable to suppose that Cairo was any different in this respect. Only however in stipifying this question appears to lie either in the publication of the Mamlûk wâfîyyas of Egypt (e.g. the wâfîyya of Bârsbûy [Ahmad Darrâg, L’Egypte sous le règne de Bârsbûy, Damasc 1961, 50].)
to the west of his **khānkal** in the desert, a **zdwiya** for the benefit of the **ṣufis** (Rifd'is)) or in a **prosopos** during the 8th/14th-9th/15th centuries. **Ribāţ.** Ribāţs (used always in the religious sense and not in the sense of **khānkal** are rare foundations in Cairo and the only foundations named as such in inscriptions are the **Burdi**, that of Yābūy Zayn al-Dīn [141], 856/1452* (CIA, 746, No. 270), and two of al-**Aqharīf Ināl, one attached to his mausoleum in the desert [158], 854/1450-856/1452, and one inside al-**Kahira in the Khurunšah [61], 857/1453-865/1461*. There is little evidence that the foundations were intentionally associated with the early Islamic ribāţs for the **muqaddam** [see ribāţ], and the occurrence in the ribāţ of Ināl [138] of a second foundation describing it as a **khānkal** (Van Berchem, CIA, 399 No. 274) suggests that the two terms were by this period virtually synonymous. **Tombs.** The most splendid of the mausolea of the Mamluk period are, of course, those “attached” to the great funerary foundations—of Kala‘un, al-Nasir Muhammad, Barkūk *intra muros* and of Faradī b. Barkūk on to Kā‘bit Bāy in the eastern cemetery, though, as C. Kessler has observed, it was really the foundation which was attached to the mausoleum providing its justification, so that, as the present judgement against monumental mausolea gradually waned, the tombs took over a progressively greater part of the foundation or became even more central to its plan. On the other hand there are a number of smaller mausolea from this period, if not exactly isolated then certainly worthy of remark. That of Kūkīṭ* for, example, incorporated into the mosque of Aṣṣūnūr [213], 747-8/1346-7*, is exceptional in being neither oriented nor having a **kibla.** That of Aṣzāb (Ozbek) al-Yūsufī is simply one of the side niches of his two-tūn madrasa [211], 900/1494-5*, with a wooden maghribiya grille to separate it from the **durğâ.** The Kubbā Āsūrī [al-Āṣūrī?] in the eastern cemetery [132], post 913/1507, is attached merely to a **sabil.** So concerned was al-**Qāhīrī that his mausoleum [67], completed 909/1504*, should be on the **Kasba** that the depañas are almost eliminated and the mausoleum reaches right from the street to the **bibla** wall. The mausoleum of Khayr Beq is attached to his palace, [249], pre-910/505, and the space between filled by a mosque or **musalla** with a **muhrāb** which deviates 28° with reference to the **bibla.** There are a few Mamluk canopy tombs (laḥār lābās), notably those of Tankizbūgh [85], 764/1362*, and a mausoleum within the **khānkal** of al-**Aqharīf Barsībāy in the desert [121], 835/1432*, though most Mamluk tombs are domed chambers (hence the general use of the term **kubba** for mausoleum). Most interesting of these isolated constructions is al-Kubba al-Fadāwiyā at ‘Abbaṣiyā [5], a vast domed edifice datable to 884/1479-81* on a high basement, part of which serves as a **musalla,** but which has no ground floor porch and which is reached by a grand staircase on the exterior. **General considerations.** It is often asserted that the architecture of Cairo shows a progressive decline from the Bahri to the Burdi periods. There was certainly a change of taste in the later period with an elaboration of surface ornament on both exterior and interior surfaces, in marble veneer, glass paste or simply carved stone, the exterior surface of the domes of the larger central foundation, from that of Faradī b. Barkūk onwards, being carved with elaborate tracery in high relief. Wood was scarce and an expensive import, no marble appears to have been quarried after the Byzantine period, and despite all expedients the supply of antique material had almost dried up by the mid-9th/15th centuries. The devices resorted to supply this deficiency, for example the use of bitumen or red paste to fill in grooved designs on white marble and thus create the illusion of polychrome marble veneer (**madrasa** of the kā‘ī Abū Bakr Muṣḥīr [49], 884/1479-80*; Qīdīmās [Kā‘īn], al-**Ishbāl** [144], 885-9140-1*; funerary **madrasa** of Kā‘īt Bāy [99] completed 875/1474* (see Fl. 8); **madrasa** of al-‘Qāhīrī 960 completed 997/1491* show technical inventiveness rather than decadence. Pressure on space within the confines of al-**Kahira** doubtless explains the smaller size of funerary foundations, in order to accommodate the standard appurtenances, and there is a tendency for the proportion of height to ground area to increase. There also does seem to have been a misguided preconception among Mamluk builders that a plan or elevation could be reduced by a factor of two or four without losing in effectiveness, and this smaller scale naturally makes all-over surface decoration even more conspicuous. However, where space was freely available, as in the eastern cemetery, the Burdi monuments of the whole of the 9th/15th century remain architecturally imposing. This period also saw a tremendous development in the technology of vault work. The few stone domes of the Bahri period are small and mainly experimental constructions: where a large area was to be covered the dome had necessarily to be wood (as in the mausoleum of the Imām al-**Shāhīfī** or of Sultan Hasan, both incidentally restored in their original material by Kā‘īt Bāy) or of brick, as in the mausoleum within the **madrasa** of Sarghāmish [218], 757/1356*. In the Burdi period the enormous span of the domes of the **khānkal** of Faradī b. Barkūk represents perhaps the apotheosis of Mamluk stone-work in Egypt, but the technique was maintained right up to the fall of the Mamluks, in the tomb and palace of Khayr Beq [248-9], 906-8/1501-2*. These are scarcely grounds for speaking of decadence. **Domestic Architecture.** In the discussion of the Cairene **madrasa** the central role of the **kha‘a** in the grand domestic architecture of al-**Kahira** has already been stressed. In many cases a **salsabilī** in the wall of an **iwan** emitted a trickle of water which flowed down into a pool in the centre of the **durğâ** (kā‘ī of Muḥammad Muṣḥīb al-Dīn [50], otherwise known as the **mabāb** of ‘Ummān Kātkhūdā, dated 751/1351* not 851/1253 as in Creswell, Brief Chronology). Ventilation was assured by wind-funnels or towers (**malakf, plur. malakīf**), facing north to catch the evening breeze, and these also occur in some religious buildings (the mosque of al-**Sāhib** Tālīyat [116], 555/1160*, where the shaft inconveniently issues at the top of the **minbar**, and in the **khānkal** of Baybars al-Dāshenār [32], 706-9/1306-9*). The main kā‘ī may not be on the ground floor, and as in the case of the palace of Beṣḥāk [34], 738 or 740/1337 or 1339, the **piano nobile** is reached by an exterior staircase up the side of a basement which contained the stables as well as a street façade of shops incorporating a **masджid** of Fātimid foundation, the Masджid al-**Fiqhī.** In the storeys above the kā‘ī were the private apartments, often looking on to it through wooden maghribiya screens: the result was to make some of the great houses of Cairo extremely high. Of most of these palaces the chief remains are the monumental porch giving on to the street (Mangjak al-Sāḥīdīr [247], 747-8/1346-7*; the Amir Tās [267], 753/1352, on the Sharī‘i al-Sūfiyya), but one palace, of the amir Yūshāb, who to judge from an inscri-
tion of 880/1475-6 was the last owner of the building, has been preserved almost in its entirety [266]. Its other current name, the "Hawsh Bardaš, suggests that it should be identified with the ḥāǧa (both stables and residence) built by Košun as an enlargement of a palace of Sandjar and pillaged in 742/1341-2. After Yushak's death in 887/1482 the palace was given by Kāṭīr Bāy to yet another amir, Āḳbārdī, who recorded occupant, who died in 904/1498-9. The sequence of owners suggests that this palace, and possibly others as well, may have been an official residence, but this is so far undemonstrable and its continued use may simply be due to the lack of suitable housing for amirs holding high positions. It became customary, indeed, to incorporate earlier palace buildings within later structures, or to amalgamate adjoining buildings, so that they came to form rambling complexes of ḥā[a]s and maḳṣ[a]s, north facing loggias generally at mezzanine level on a basement of storerooms or servants' quarters (e.g., that of Mamāky [51], 901/1496*), now known as the Bayt al-Kādī) disposed round irregular courtyards. The Rabī Ṭrdaḇn Bey [406] near the Bāb Zuwayla and the Bayt al-Kirtīliyya, adjoining the mosque of Ibn Ṭūlūn [321], both 11th/12th-century constructions, incorporate earlier elements, and the same would appear to be true of the 13th-century, for example, the "palace" of Kāṭīr Bāy [228], 860/1458*, in the Darb al-ʿAhmar. This tradition of appropriation of earlier houses and the resultant constructions rambling round a ḥā[a] probably changed little from the Fatimid period onwards. It was certainly little affected by the Ottoman occupation, and Turkish influence on the architecture of al-Kāhira was probably at its least in this sphere. The Mūsāfirīḡhāna palace [20], 1193/1779-1203/1788, is arguably more of an Istanbul-type construction, and Muḥammad ʿAlī's palace of al-Djawharā [505], 1229/1814, shows much French influence. But the less elaborate houses of Ottoman Cairo continued the local tradition.

Commercial Architecture. The tenement houses or ṭarāb of Cairo have never been studied architecturally as a group (most appear on the Index as "house-maḳṣ[a]s"). The Mamluk baths of the city, numerous as they once were, scarcely survive. The entrance to the bath of Beṣhtāk [244], pre-742/1341*, and the central hall of a bath which formed part of the endowments of the mosque of Muḥammad ʿAlī [410] (cf. `All Pāḡā Mūbrārk, v, 36-6, vi, 71) are the only important remains of the Mamluk period. The ḥāns of the Mamluk period are slightly better preserved, though, given the lavish documentary evidence from the Fatimid period onwards for ḥāns in foreign merchant lodges and the fact that many of the high Mamluk amirs engaged in trade, it is surprising that there should be only one surviving ḥān of the Ǧārīm Mamluk period, the earliest in Cairo, that of Košūn [11] in the Djamaliyya quarter, pre-742/1341, the date of his death. Two ḥāns founded by Kāṭīr Bāy are preserved (the inscriptions use the word ḥān, though the literary sources almost invariably use the word wakāla[wakāla], one at al-ʿAẓhar with a sabīl-kutṭāb attached [75-6], 882/1477*, and one [g] at Bāb al-Nāʿār, 883/1481. The best preserved, however, is the Wakālat al-Naḥkha [64]*, which bears the cartouches of al-Ghūrī, 906/1501-922/1516. It consists of a court approached through a monumental entrance surrounded by a ground floor of booths (dakāḥīn) or depōts (maḥāṣīn) with two upper storeys of rooms for lodging and, possibly, originally another storey as well. The plan differs little from that of contemporary ḥāns in Aleppo and Damascus, though the building is much higher in proportion to its ground area, and the street façade has windows for each storey above the ground floor. These late Mamluk wakālas, organized, as in Syria, according to trade as well as to the nationality of the merchants who inhabited them, changed very little after the Ottoman occupation, most of the surviving ḥāns being 10th/16th-12th/18th century in date.

Al-Ǧhūrī also built a ḥāṣa[y]īyya [53, 56] (undated), now known as the Ḥān al-Khālīṣī, which was in fact a ḥān of 8th/14th century date (`All Pāḡā Mūbrārk, v, 90, 301). It has been assumed that al-Ǧhūrī merely restored the ḥān, but the incomplete foundation inscription in his name (Van Berchem, CIA, 906, No. 406) leaves no doubt that it was a new foundation.

Ottomans

Most assertions of the disruptive effect of the Ottoman conquest upon the architecture of Cairo are based on prejudice or on superficial acquaintance with the monuments. The Mamluk tradition as it had evolved under the Ǧurdi Mamluks was extraordinary persistent, and, in contrast to Damascus, the Ottoman metropolitan tradition of architecture made itself felt only sporadically. Changes of various sorts did take place. The Ḥāṣa[y]īyya Khāzīnī, a tax first fixed under Khādim Sulaymān Pāḡā [931/1524-941/1534] (see Ḥāṣa[y]īyye), left the Ottoman wālis with little money for building, and most of them left Egypt with heavy debts. In the later 11th/12th and 12th/13th centuries, when the Mamluk beys prevented its remission to Istanbul, larger foundations were undertaken, like the mosques of Iskandar and the central hall of a bath which formed part of Muḥammad ʿAlī's palace of al-Djawharā [505], 1229/1814, shows much French influence. But the less elaborate houses of Ottoman Cairo continued the local tradition.
by considering the history of the sabil, the earliest surviving example of which is that in the name of al-Nasir Muhammad [561] at the porch of the foundation of Kalāūn. The cistern cannot be located, and the later elements of Cairene sabils, a carved stone salsabīl or khāshāruwān down which the water flowed into an interior pool and bronze grilles through which the water could be taken with a dipper, do not survive. The date is disputed: Kalāūn, ii, 97 (followed by Creswell, MAE, ii, 274-5) gives 726/1326, but there are clear signs of a subsequent restoration, when a kūtāb (Kūrât school) may have been added above. One free-standing Bahri sabil, that of Shaykhū [144], 755/1354*, appears to be without a kūtāb, but by the early Burdji period the joint construction, generally at the corner of a façade so that it might be accessible from two or three sides, becomes a feature of larger foundations, for example that on the façade of the khānkāh of Shaykhū [152], later than the foundation of 756/1355*, and the pair at either end of the façade of the khānkāh of Faradż b. Barkūk in the desert [149], 803/1400-813/1414*. However, where a site at an important street junction could be employed, the sabil-kūtāb might become free-standing in the later Burdji period, for example, that of Kāfît Bāy [324], 884/1480, with a magnificent revetment of marble veneer and a complex of small rooms behind.

In the Ottoman period one of the most frequent of all commemorative foundations, doubtless for reasons of economy. It was almost invariably an independent foundation, even when built up against some earlier building. That of Khusraw [96*] (Husrev) Pāshā [52], 942/1535*, is both typical of the genre and symptomatic of general Ottoman practice. Governor of Egypt from 940/1534 to 942/1535, he had built mosques at Diyarbakr (925-35/1519-29), Sarajevo (actually a kulliyiya (kuliyiye); cf. Mayer, Architectes... , 50 (938/1532) and Van (975/1567), and a mosque and double madrasa, the Khusrawiyya, at Aleppo (953/1546-7), and a türbe in Istanbul, all these three built by Sīnān, a canopy tomb at Van (989/1581) and a khān on the Van-Bitlis road. His architectural activities are far by the most frequent examples of his architecture. The Ottomans neglected Cairo, although his case is paralleled by that of Sīnān Pāshâ, twice governor of Egypt, whose numerous constructions in Syria and in Istanbul are represented in Cairo now only by his mosque at Būlāk [349], 979/1571*, which was subsequently imitated by that of Muhammad Bey Abū Dhabāb [98], 1187/1774*. The use of a dome similar to that of the Kubba al-Fadāwiyya [5], 884-6/1489-90*, rather than one of the dome types evolved in Istanbul, as a model for both mosques appears at first sight remarkable, however, Hasan 'Abd al-Wāhhab (Ta'rikh al-masādiid, i, 671) has added evidence that by the late 17th/18th century at least this Mamluk mausoleum had been used only of the sights for visitors to Cairo. Both mosques, like others of the 19th/16th to 17th/20th centuries, introduce certain features which are more characteristic of the Ottoman architecture of Istanbul: a narthex with mīrābās, allegedly for late-comers to prayers, and, inside, a balcony above the entrance (it is not always clear whether a royal box or a gynaecium was intended), and a sunken transverse passage across the sanctuary, a reconciliation, perhaps, of the Istanbul practice of entry into the sanctuary directly from the street rather than via a sāhr or a midāt, as in Cairo. The balcony above the entrance first occurs in the architecture of Cairo in the mosque of al-Nāṣir Muhammad on the Citadel, when it may actually have been a royal box; there appears to have been a gynaecium right from the start in the mosque of Aṣlām al-Bahā' [112], 745-6/1344-5*, and the sunken passage across the sanctuary occurs in various Burdji monuments, including the mosque within the khānkāh of al-Aṣgār Barsbāy in the desert [121], 835/1432*. Such Ottoman modifications, therefore, were mainly ritual rather than architectural.

This general point also applies to other Ottoman mosques of Cairo, for example the Mārūndiyā [135], 973/1568, very much a Burdji Mamluk building in construction but based on the mosque of Sultan Hasan opposite, even to the tomb-chamber behind the kūba wall, though the choice of a steep hill as a site makes the whole idea rather ineffective. The mosque of Dā'ūd Pāshâ [472], 955/1548, combines an
irregularly shaped musallā of late 9th/15th-century type with an entrance more like a ʿabā with a stair-case instead; and the Ribāḥ al-Āṣār [120], 1073/1662-1224/1809, a much restored building which is now in part a basilical mosque, has a ḥubbah attached which is no mausoleum but a repository for two limestone feet of Pharaonic workmanship, now revered as the ʿāṣār al-nabaʿuwyyya [see Ḫadām al-Safārī]. [For earlier restoration, in the name of Faraj b. Qāsim b. Ḫadhīr, see Wiel, Inscriptions historiques sur pierre, nos. 79-80, 107, 129]. There is a general tendency for basilical mosques, sometimes with a central lantern, like that of Muṣṭafā ʿṢurbağī [Corbajād] Mīrzā, [343] 1104/1698*, to replace those with an open ʿabān, the last of which is the mosque of al-Fakahānī [109], 1148/1736*, but this again is the conclusion of a Burdīj development. In general, the continuity of Mamlūk plans and materials is striking, and while, to judge from the extant remains, tile revetments of low quality were employed in some Ottoman buildings, when a flashy marble mosaic was required it could easily be executed by local craftsmen (mosque of al-Burdayn [201], 1025/1616-1038/1629*).

Madrāsas and tekkes. The Cairene madrasas of the Ottoman period are conspicuous only by their absence. The Takhkiya Sulaymānīyya [225], 950/1543-4*, and the takhkiyya and saḥbī of “Ṣultan Mahmūd” [308], 1164/1751*, which closely follows it in plan, are both described in their foundation inscriptions as madrasas, but there are scarcely any others known and a complete survey of the Ottoman epigraphy of Cairo is required to determine the question. Both these buildings follow the plan of an Istanbul madrasa with a raised courtyard surrounded by arcades with cells and a large dār al-khāna: unlike their Istanbul counterparts they are oriented, so that the dār al-khāna also serves as a masjīd. If they were also tekkes we have no information regarding the farīka which occupied them. The situation is little better regarding the foundation of ḥanākahs in the Ottoman period. There is a tekke of the Mawlawiyya (Mevlevi) order attached to the tomb of Masʿūd as-Saḥāra[263], 715/1315*17/1322*, with a late 12th/18th-century wooden semāʾ khāne on an upper floor, and there is also a tekke of the Rivāfiyya [442], 1185/1774. Yet a third extant tekke of the Ottoman period is a Bektāshī convent at the foot of the Muṣṭatīm, an early 17th/16th-century foundation of considerable potential interest but which has long been totally inaccessible and has never been surveyed.

Commercial architecture, etc. It has already been remarked that the commercial and domestic architecture of Cairo appears to have changed little from the Mamlūk to the Ottoman period: almost all the major architectural changes in these spheres have been from the time of Muḥammad ʿAlī onwards. This impression remains to be confirmed, however, and on this, as on the architecture of the 19th-century city, the basic work remains to be done.

Restorations. Any account of the architecture of al-ʿĀṣār would be incomplete without some reference to the major restorations which the monuments have undergone. Almost all those still standing have undergone generally accurate major restoration at the hands of the Commis de conservation des monuments de l’art arabe over the past ninety years. By no means all earlier restorations are commended by inscriptions (for example those of Kāʾit Bāy in Sultan Hasan and the Imām al-Ṣāḥīfī or thought worthy of record by the literary sources: much of the Islamic architecture of the city owes its relatively well preserved state to the fact that for most of the time waḥd revenues must have been adequate for the upkeep of the building. Where this was not the case, in the Mamlūk period at least, money available for building was usually spent on a new foundation to commemorate the individual donor rather than on the repair of another’s monument. Only this can explain the rarity of inscriptions commemorating major restorations in the architecture of al-ʿĀṣār: it was, ultimately, more costly to demolish a dilapidated building than to restore it.

The major restorations, therefore, are generally explained by special considerations. The Fāṭimid restorations of the mosques of ʿAmr, Ibn ʿUmar and al-Azhār had a political motive, the propagation of the daʿwā, as well as the necessity of coping with a population increase, and the Mamlūk and Ottoman restorations of the Citadel, the aqueduct and the main bridges extant in the Cairo area are readily comprehensible in terms of the necessity of maintaining public, or royal, utilities. The continuous series of inscriptions attesting additions to or restorations of al-Azhār by the ʿAbbāsids and Burdīj sultans is an index of its importance in the 8th/14th-9th/15th centuries as a teaching institution; while the restoration of the mosque of Ibn ʿUmar [109] by Lādīl, 968/1265-67*, the most considerable of the whole period involving two mihrābs, a domed fountain (jawwār) in the centre of the courtyard, a sundial and the virtual rebuilding of the minaret as well as, doubtless, unspecified structural repairs, was in prompt fulfilment of a vow, as is shown by the dating of the minbar he also erected there a fortnight after his accession, 696/1296. The earthquake of 702/1303 was evidently destructive enough to demand widespread repairs, of the mosque of al-Ḥakim by Baybars al-Djashenkalī, of the mosque of al-Sāḥīr Ṭalḥī[216] by Bekṭūmūr al-Ćūkandrī, and the mosque of ʿAmr by the amir Ṣalār, who probably built the mihrāb on the outer wall by the main entrance.

The other recorded Mamlūk restorations appear capricious in the extreme: a further restoration of the mosque of al-Ḥakim by Sultan Hasan, 1082/1671-2*, the latter of which may in any case refer only to the rebuilding of the fountain in the courtyard. Other Ottoman restoration inscriptions indicate a curious revival of interest in Fāṭimid maqṣāds: the Maṣḥād al-Diyūyīṣīlī to which are attached the remains of an undated Ottoman tekke, Sayyida Naṣīfa, which was apparently burned down at the Ottoman conquest, by Sayyida Ḥakimīya b. Ḥakimīya al-Misīrīya al-Ṣāʿīfīya, 1207/1792; the mausoleum of Ṣaltu ʿUkbā, by Muḥammad al-Pāshā al-Silāḥī (first rebuilt 1066/1655-6* and
now known as al-Sādiq al-Wafā'īyya [463]); and the shrine of Zayn al-Abidin [599], which bears a somewhat defective Ottoman copy of a foundation inscription dated 549/1154, restored by ‘Ughmāni Aḥma Mustafāzān (1225/1810, cf. ‘All Pāshā Mubārāk, v, 4). Two earlier Fatimid buildings were completely rebuilt: a mosque founded by the amīr Āḥā Manṣūr Kūstāh, 533/1141 (Ṣīdī Sāriyya), in the Citadel, which re-appears as the mosque of Khādidīm Sulaymān Pāshā [142], 933/1528, and the mosque al-Zāhir ibn Naṣr Allāh, 543/1148, rebuilt by Abūmā Khātūdā Mustafāzān Khāṟpublī, 1148/1735, as the mosque of Faĥāhānī [209], into which the wooden doors of the Fāṭimid mosque were incorporated.

The Ottoman inscriptions of al-Azhār (given in Mehren, ii 59, see Bibliography) chiefly coincide with the substantial enlargements of the mosque undertaken by ‘Abd al-Raḥmān Kāthūdā. The only other inscriptions which demonstrate a concern for public utilities are those of the Great Aqueduct, restored by ‘Abd Pāshā, 1139/1727, with a chronogram also giving the date 1140/1728 (Van Berchem, CIA, 591).

This brief account of restoration work in al-‘Uṣur′a over a period of seven hundred years or so is based mainly on the published inscriptions: if suggestive in certain respects, it is clearly lacunary. It is more than possible that not a few inscriptions which claim to refer to the founding of a building are really recording pretentious restorations. However, if the record of restoration under Ottoman dominion is poor, it is scarcely worse than in the earlier history of al-‘Uṣur′a. Concern for the monuments of others, one may conclude, was not a pronounced Cairo characteristic.

Bibliography: (apart from references cited in the text): The bibliography of the monuments of al-‘Uṣur′a is so scattered that no complete survey of the source material can be attempted. Much work remains to be done even before a corpus of the Islamic architecture of Cairo can be assembled, and the present brief account demonstrates the extent to which generally received opinions are based upon a priori generalizations rather than detailed publication. The most recent and complete bibliographical work is K. A. C. Creswell’s A bibliography of the architecture, arts and crafts of Islam to ist January, 1960 (American University in Cairo Press 1961); Supplement, to ist January 1970, in the press. The monuments of al-‘Uṣur′a up to 1260/1326 have full chronological bibliographies in idem, The Muslim architecture of Egypt, abbr. as (MAE), i, Oxford 1954, ii, Oxford 1959, those for monuments founded before 358/969 being found in Early Muslim architecture, (EMA), ii, Oxford 1940, which gives details of repairs and additions to them subsequent to the foundation of al-‘Uṣur′a. The latest general bibliography of Cairo by ‘Abd al-Raḥmān Zāklī, A bibliography of the literature of Cairo, Cairo 1964, is to be consulted for recent articles in Arabic, though in general it supersedes none of Creswell’s works cited above.

The material available falls into six classes: (1) maps; (2) primary sources and accounts based directly upon them, rather than upon the monuments; (3) detailed publication of the monuments themselves; (4) epigraphy; (5) general studies, including less pretentious works which aim to be partly guide books; (6) guide books proper. Work in hand will be indicated at the end of the account.

For (1): The maps of Cairo which have become built up during the present century, for example the island of Rūdā (Rawdā), appear as misleadingly unimportant, and for a more accurate impression of their constitution in the post-mediaeval period the maps in M. Jomard, Description de l’Égypte. État moderne, 1809-22, ii, 579-788, should be consulted. There are many differences of detail between the 1951 maps and those attached to MAE, i-ii: in cases of divergence the latter are generally more reliable. The Indexes do not correspond exactly in their Arabic and English versions, showing discrepancies of orthography or even classification; and, particularly for the Ottoman period, some monuments numbered on the maps do not appear in the Indexes. The basic work of their collation and revision is at present being undertaken by a seminar of the American University in Cairo under the direction of C. Kessler.

For (2) primary sources: For the reign of al-Nāṣir Muhammad ibn Khālid, D. P. Little, An introduction to Mamlūk historiography, Wiesbaden 1970, is a useful guide to the material available. It is regrettable that no similar survey has yet been attempted for any other period of the history of al-‘Uṣur′a. Of all the primary sources, al-Maḥritī, Mauritī (Khātil), for the period up to the reign of al-Muḥammad al-Shāykhī is by far the most useful and is generally the first-hand source (ed. Būlāk 1570/1853; ed. G. Wiet, in MIFAO, xxx, xxxiii, xlv, xli, (Cairo 1927- ), covering i, 1-322 of the Būlāk edition; tr. U. Boutrant, in MMAF, xvii, fascicules 1-2 (Paris 1895-1900), covering Būlāk ed. i, 1-250; tr. P. Casanova, in MIFAO, iii (Cairo 1906), covering Būlāk ed., i, 251-347). This should be supplemented by the recent works of S. Zāyiyya, i-i, Cairo 1934-70; tr. E. Quatremère as Histoire des Sultans mamlouks, i-i, Paris 1837-44; continued by Muḥammad ibn ‘Abd al-Raḥmān al-Sakhāwī, al-Tābr al-masīḥī fi ḥayāl al-Sulīk, ed. A. Zeki Bey, Revue d’Égypte, ii-i, Būlāk 1866-7; E. Gaillardot (Cairo 1897), also al-Sakhāwī, Thābfal al-`albāk, i, Cairo 1937. Among other sources of primary importance are Ibn Dukmaḳ, Kāthī al-inīṣād li-waṣṣīat ʿād al-amār, Būlāk 1310/1891-2; Ibn Taḥtabbdīl, Cairo (see Abu l-Makhrī); Ibn al-Zayyāt’s guide to the Karāfā, al-Kawākbīl al-sayyāra fi tāltāb al-siyāra fi l-Karatāfayn al-hurbā wa-l-fujrā, Cairo 1325/1907; and Ibn Iyās, Badāʾī al-zuḥūr, Būlāk 1311/i-1393-7 (for other editions see ibn Iyās), translated G. Wiet as Histoire des Mamlouks circassiens, IFAO, Cairo 1945, covering the period 1487-1500, and as Journal d’un bourgeoise du Caire, i, Paris 1955-6, covering the period 1500-16; ii, Paris 1960, covering the period 1516-22.

For the Ottoman period the chief source remains ‘All Pāshā Mubārāk, al-Khātil al-tawṣīḥīyya al-gaḍida, Cairo 1306/1889-9 (new edition, Cairo 1969- ). With the exception of Ahmad Darrādī, L’Acte de wafàd de Barsîb (Huddādi waṣf al-azkha r Barsîb), Cairo 1963 and of L. A. Mayer’s valuable study, The buildings of Qaybāy as described in his endowment deed, Fasculōe i (all pub-
lished), London 1938, the substantial collections of wakfiyyas in the Ministry of Wakfs in Cairo remain wakfiyyas (cited (i) above) is sometimes useful. For the 19th century onwards, with the exception of A. Bahgat and A. Gabriel, Les fouilles d'al-Foustat et les origines de la maison arabe en Égypte, Paris 1921. Owing to the unfortunate fact that the rebuilding operations within Medieval Cairo have rarely been accompanied even by salvage excavations, the curious apparent incongruity between the Ṭulfânid-Fâtîmîd-Ayyûbid domestic architecture of al-Fustat and the Mamlûk architecture of al-Kahîra inra muros has remained so far unexplained, though it is to be hoped that the forthcoming publication by R. Mantran and the late A. Lézine, under the general title, Étude scientifique des palais et maisons à dôme et de Rosette (XVIe-XVIIIe siècles), will throw light on this problem. E. Pauty's, "Les palais et les maisons d'époque musulmane au Caire, MIFAO, lvii (1932), and Les hammâms du Caire, MIFAO, lviv...
(Cairo 1933), are poorly documented general studies with few plans and give little idea of the history of the domestic architecture of Cairo.

For the Coptic architecture of Cairo in the Islamic period, A. J. Butler, *Ancient Coptic churches of Egypt*, i-ii, Oxford 1884; reprinted with Butler's corrections, Oxford 1970, is to be supplemented with discretion by M. Simaika Pasha, *A brief guide to the Coptic Museum and to the principal ancient Coptic churches of Cairo*, Cairo 1938. On the architecture of the other non-Islamic periods of which is apparently 18th century or later, there appears to be nothing published at all.

(4) Epigraphy. The epigraphy of the monuments of Cairo, the most valuable source for their history, should be approached with the caution that, especially in the Burdi [g.v.] Mamluk period, a foundation inscription may specify only one of the buildings of the complex to which it applies. This custom partly accounts for the misdescriptions or inconsistencies in the Arabic and English Indexes to the *Special 1:5,000 scale maps of Cairo* (see (1) above). The still incomplete *RCEA*, a secondary compilation, has not superseded M. Van Berchem's *Matériaux pour un Corpus Inscriptionum Arabicarum* (CIA). *Première partie, Egypte* and *Palestine*, Paris 1933; *Watte, MMAF*, iii, Cairo 1929-30. The two volumes contain only a selection of the inscriptions from the Ottoman period. *CIA*, i-ii, superseded Van Berchem's *Notes d'archéologie arabe*, in *JA*, 8e série, xvii (1891), 411-95; xviii (1891), 46-86; xix (1892), 377-407. The *CIA* should now be completed with G. Wiet, *Inscriptions historiques sur pierre* (*Catalogue général du Musée d'Art Islamique du Caire*), Cairo 1971. Some volumes of the *Catalogue général du Musée Arabe du Caire* are also relevant, particularly because of the striking rôle which wood plays in the architectural decoration of all periods in Cairo: J. David-Weill, *Bois à épigraphes*, i, *Jusqu'à l'époque mamlouke*, Cairo 1931; ii, *Depuis l'époque mamlouke*, Cairo 1936; E. Pauty, *Bois sculptés d'églises coptes* (*époque faïmolide*), Cairo 1930, and *Les bois sculptés d'églises byzantines et de Madiria*, Cairo 1931. The volumes of the *Catalogue général* dealing with the tombstones in the Islamic Museum in Cairo, *Stèles funeraires*, i-ix, Cairo 1932 onwards, to which Hasan al-Hawwád, Husayn Ráshíd and G. Wiet have all contributed, are of less value, partly because in most cases the tombstones have only the vaguest provenance and partly because of the common Cairene practice of building earlier stele into a mausoleum of later date. C. Frost, *Les revêtements céramiques dans les monuments musulmans de l'Egypte*, i (all published), in *MIFAO*, xi (Cairo 1916), is a preliminary study of the curious problems, epigraphic and technological, raised by the scanty use of ceramic revetment in Mamluk and Ottoman architecture. Hasan 'Abd al-Wahháb *Ta'khif al-jumud* 'alá dâkhil Misr, in *BIE*, xxxvi (1955), 533-58, gives craftsmen's signatures, generally of workers in the minor arts and not of architects proper, on the monuments of Cairo, with comment upon their exceptional rarity for Islamic architecture. It is on this work that Mayer, *Architects*, largely depends. Mayer, *Saracenic heraldry*, Oxford 1933, includes occurrences of Mamluk blasons on the architecture of Cairo, but it is still a basic adjunct to the epigraphic material relating to al-Káhirá.

On the difficult problems raised by Mamluk names there is a preliminary study by J. Sauvaget, *Noms et surnoms des Mamelous*, in *JA*, cxxviii (1955), 31-45. On the Turkish rôle this may be supplemented by P. Pelliot, *Notes sur l'histoire de la Horde d'Or*, Paris 1949, and by L. Rásonyi, *Sur quelques catégories de noms de personnes en turc*, in *Acta linguistica Academiae Scientiarum Hungaricae*, iii (Budapest 1953), 323-51, though many Mamluk names of Turkish origin remain problematic. Further enlightenment may be obtained from G. Doerfer, *Türkische und mongolische Elemente im Neuzeitlichen*, i-iii, Wiesbaden 1963, 1965, 1967, which is all the more important since the studies of the Mongol and Circassian Mamluk names, by L. Hambis and G. Dumézil respectively, announced by Sauvaget (art. cit.), do not appear to have been published.

(5) General works. Apart from C. H. Becker's still useful short account *Cairo in EJ*, there is no adequate, comprehensive work on the architecture of Cairo. Of those so far attempted that of Hasan 'Abd al-Wahháb, *Ta'rikh al-másajjid al-ḏāḥāriyya allatī sallâ fis-hā fardad al-djum'ah hadrat sâhib al-ḏjâlālā al-Malik al-Ṣalih Faruk al-awwal*, i-ii, Cairo 1946, which, as its title indicates, is selective, is the most useful compilation of historical, epigraphic and architectural information. L. Hautecoeur and G. Wiet, *Les mosquées du Caire*, Paris 1932, volume of text with album of plates, is a premature attempt to order the monuments, hastily compiled and with some prejudices which have evoked little sympathy (cf. review by K. A. C. Creswell in *JRAS* (1934), 199-203). Nevertheless, while many of their generalisations have turned out to be unjustified, some chapters on technology, particularly the Mamluk taste for marble revetment, contain much valuable, if not precisely documented, information. The lavishly illustrated production of the Ministry of Waft, *The mosques of Egypt from 641 to 1946*, i-ii, Giza 1949, has a text which is too brief to be informative. Ahmad Fikrî, *Masjīd al-Kâhirâ wa-madārisuhâ*, i-ii, Cairo 1965-9, in fact covers only the Fátimid and Ayyúbíd periods. D. Brandenburg, *Islamische Baukunst in Ägypten*, Berlin 1966, 726/1326, and upon a not always critical reading of Hautecoeur and Wiet. The most recent general work on Cairo, 'Abd al-Rahmân Zákî, *Mawâdât madinat al-Kâhirâ fi alf ʿâm*, Cairo 1969, gives much information, particularly relating to the architecture of Cairo in the 18th-19th centuries, which is not otherwise available, but the work is too short for completeness and the treatment of the earlier monuments is highly selective. It is, indeed, a significant comment on the paucity of recent published work on the monuments of Cairo that for the period after 726/1326 two of the best general works should still be A. F. Mehrën, *Câhirâr* and *Kerdâf*: i, *Gravmonumenter paa Kerdâf eller de Dodes Stad udenfor Câhirâr*; ii, *Religieuse Monumenter i Câhirâr*, Copenhagen 1869-70, which record many otherwise unpublished monuments, and M. S. Briggs, *Muhammedan architecture in Egypt and Palestine*, Oxford 1924.

Recent collections of essays relating in general with the history or archaeology of Islamic Egypt contain some material directly related to the architecture of Cairo, in particular, *Mêlanges Massép,* iii, = *MMAF*, lxvii (Cairo 1940), and *Studies*
in Islamic art and architecture in honour of Professor K. A. C. Creswell, Cairo 1965. However, it is noteworthy that in the most recent collections of essays on Cairo to appear, Annales Islamologiques, viii, Volume commémoratif du Millénaire du Caire 969-1969, IFAO Cairo 1969, and Colloque international sur l'histoire du Caire, Ministry of Culture of the ARE, Berlin 1973, the emphasis of recent research—following the lead established by M. Clerget, Le Caire, Étude de géographie urbaine et d'histoire archéologique, i-ii, Cairo 1934, a work which can still be consulted with profit—has been upon the problems of urbanism in Cairo and the extent to which the architecture of the mediaeval city was successful in resolving them. The most recent work of this kind, best for the late 18th-20th centuries, is J. Abu Lugbod, Cairo. One thousand and one years of the City Victorious, Princeton 1972.

In the light of the unbalanced publication of the monuments such a shift of emphasis may appear premature, but it is to be hoped that it will lead to a revival of interest in the basic archaeological problems.

Among what may be best described as informative guide books to the monuments of al-Káhira, D. Russell, Medieval Cairo, London 1962, is the most detailed and to a considerable extent succeeds in overcoming its defects of organization (into tourist itineraries rather than historical periods or coherent quarters), occasional inaccuracies, lack of plans and a perhaps excessive prejudice in favour of the monuments of the Fátimid period. Other useful works of the same type, though they aim to cover more limited areas of Cairo, are Mabnúd Aḥmad, Tašrít al-damá al-Tuláni, Cairo 1346/1927; R. L. Devonshire, Rambles in Cairo, Cairo 1931; E. Pauthy, La mosquée d' Ibn Touloun et ses alentours, Cairo 1936; Mabnúd Aḥmad, Concise guide to the principal Arabic monuments in Cairo, Böllák 1939; and Hasan 'Abd al-Walhāb, Šāmih al-Sultān Ḥasan wa-mā Baalahu, Cairo 1962.

For much of the Ottoman architecture of Cairo these general works remain the only source, though they may with discretion be supplemented by E. Pauthy, L'architecture au Caire depuis la conquête ottomane, V'ue d'ensemble, in BIFAO, xxxvi (1936), 1-69, a general work in spite of its apparently promising title. The author's lack of acquaintance with Metropolitan Ottoman architecture and the small number of Cairene monuments he considers in detail have contributed to the generally held, though highly misleading, impression of the Ottoman period in Cairene architecture as one of decadence and inactivity. It remains for subsequent research to correct this. See A. Raymond, Artisans et commerçants au Caire au XVIIe siècle, 2 vols., Damascus 1973, and G. Wiet, Cairo, city of art and commerce, Norman, Okl. 1964.

(6) Guide books. The text of the Guide Bleu, which has not substantially changed for the mediaeval monuments of Cairo since its first edition (compiled by M. Baud Paris 1950), is of little use for all but the most obvious of the Islamic monuments. Murray's Handbook for travellers in Egypt (many editions: I cite the 10th edition edited M. Brodick, London 1900) depends largely upon the work of S. H. Poole and other late 19th-century authors and, despite its literary bias, is both more complete and less misleading, containing much information on no longer extant buildings of the 18th-19th centuries. K. Baedeker, Handbuch für Reisende, Ägypten und der Sudan, 8th edition 1928, with preface on the monuments by K. A. C. Creswell, is particularly useful for its description of monuments on the outskirts of Cairo, which do not always appear on the Special 1:5,000 scale maps of Cairo and for its directions for reaching them.

Work in progress. Apart from works mentioned above, in particular G. T. Scanlon's Final Report on his excavations at Fustat and the publication of Cairene houses and palaces by R. Mantran and the late A. Lézine, work in hand includes a major publication of the funerary architecture of Cairo, Fátimid to Mamluk periods, by C. Kessler, to appear as a volume of the Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe, with contributions by Layla 'All Ibráhím on the Mamluk foundations of the 14th century. The work of these authors, to which should be added that of M. Meinecke, Šahbír Muhirz, J. Raghb and M. Keane, may be expected in the course of the next few years to advance substantially the present state of knowledge on the monuments of al-Káhira and their history.

(J. M. Rogers)

**THE MODERN CITY**

General outline. Modern Cairo took shape under Muhammad 'Ali (1805-49), from whose reign date the first beginnings, modest as yet, of new institutions. Once begun, the movement could no longer be stopped. So far as town-planning, the press, and the birth of Egyptian nationalism are concerned, the reign of Khidive Ismá'il (1863-79) was a watershed. During this period, Cairo began to take on the appearance of a modern city. Owing to a fortunate run of production in the United States following the American Civil War (1861-5), Egypt easily found markets for her crop and money poured in. Besides this, the opening of the Suez Canal in November 1869 drew the eyes of the world to Egypt; control of this area appeared even more of a decisive element in the struggle for worldwide power. For this reason the debts of the Khedive were made the pretext for the first stages of foreign intervention and in due course this was also the reason for the British occupation (1882).

Throughout all these events the city developed and public services such as gas, water and tramlines were laid on. Foreigners as well as migrants from other Ottoman territories settled there. The First World War marked the definitive separation of Egypt from the Ottoman Empire. With the Cairo demonstrations which followed immediately after the armistice in 1918, Egyptian nationalism became a genuinely popular movement, given concrete expression in the Wafd Party. Political pressure was still held to be the best means of achieving liberation, and the importance of economic factors on the road to freedom was given but scant recognition through the establishment of the Bank of Egypt in 1920, and that within the framework of a national capitalism. A measure of independence was proclaimed under the aegis of King Fu'ád (1922). The opening of the first state university in Cairo in 1925 was a significant moment, and indeed, in his novels Nadfíb Mahfíz presents this event as the dawning of a new era in the history of the Egyptian middle classes.

One after another the institutions characteristic of a large modern city were set up. The Free Officers' revolution (23 July 1952) brought in its train the abolition of the monarchy and the eviction of the old ruling classes. The new political orientation was
demonstrated in the city even at the level of urban development through the opening up of thoroughfares, the establishment of workers' housing, institutions and factories and by the development of radio, the building of new mosques, etc. The Anglo-French military intervention of October to December 1956 led to wholesale nationalization of French and British enterprises. With the ending of the three-year long union with Syria in 1961, the country clearly took the path of Arab socialism, with the stress on the essential economic struggle facing the Third World. Finally, the Palestine war of 1967, on both the political and the military fronts, continued to impose a burden on Cairo which remained very heavy.

Today Cairo is undoubtedly one of the liveliest capitals in the world. The city has a dual aspect, truly Egyptian and yet at the same time cosmopolitan, the latter arising from her geographical situation.

The genuinely Egyptian aspect is revealed in the drama of a people rudely forced into changing their way of life by demographic pressures. Thanks to modern medicine, both pressure and change have led to the disappearance of many ancient customs and the proletarianization of a section of the population.

The efforts of the present-day authorities to create a new Egypt are a response to this demographic challenge. As for the cosmopolitan aspect of the city, this is partly related, as in former days, to the presence of students and teachers who come from all over the world. It also arose because of the succession of foreign rulers (Mamluk, Turkish and British). Now that Cairo is governed by Egyptians, the foreign element is confined to tourism, technical aid and so-called operation.

Town planning. The map drawn up by Bonaparte's expedition depicts the city as bounded in the west by the Ezbekiyya, with fields lying between it and Būlāk. “The great builder and earth-mover”, Muhammad 'Ali, embellished and cleared façades and drained the Ezbekiyya but built very little apart from a palace and mosque in the citadel (between 1830 and 1848) and a large palace at Shubra (1868, rebuilt in 1823); he had a road built across the fields so that there was a direct route to the latter (now Shari'a al-Husaynī) or Faggala (Fadjdjaia), which began around 1880, or residential areas like Garden City (which dates from 1905) could be populated without the need for trains and tramlines. But Zaytūnah and Matarīyya in the suburbs could only come into being after the construction of the railway from Pont Lemoun (Kūbrī Limūn) to Matarīyya and al-Mardī (1889-90). The same was true of the tramlines which were laid in 1896 and linked the 'Ataba al-khādra' with ‘Abbāsīyya (1896), via Faggala, or with Shubra in 1903 (the first large-scale development in Shubra took place in 1898). The Khālīdī seems to have been filled in on the 1897 plan of Cairo; the process was completed in 1899 and the tramline from Da'her (al-Zāhir) to Sayyidah Zaynab made use of it in 1900.

The malek of the Zāhirī district, south of the road which later became the Umar Khayyam Hotel. The sikka djadlda, mddīh wa mustakhbaluhd, dates from 1863. In 1867 Khedive Ismail saw Hauss-Hammād (al-Zahir) to Sayyida Zaynab made use of it in 1900. In the desert to the north-east of the city, Heliopolis (Miṣr al-gjadlda) arose in 1906 following the granting of a concession to a Belgian company in 1905. An express tramline, called the “metro”, connected Heliopolis to Cairo (cf. the commemorative album published by the company, nationalized since 1960, Dāhiyat Miṣr al-gjadlda, mādīkh wa mustakhbaluhd, 1960). On the southern suburban line to Helwan (al-Ḫulwān), which is 27 km. long, the area of present-day Maadi (al-Ma'ādī) 11 km. from the city began to be developed by a company in 1907. Only Helwan was undeveloped, and so it remained until the 1952 revolution when it became an industrial centre with iron and steel works, armaments factories, etc.

Apart from those already mentioned, notable bridges are the Embabeh (Imbābā) railway bridge (1890-91, rebuilt in 1925); the Giza bridge (formerly Abbās: 1907, rebuilt in 1966-7); and the bridge from Zamalek to west bank (1912). The University Bridge, constructed in 1958, should be added to this group.

All these developments in Cairo were brought formerly the seat of the Turkish pağhas. A canal, al-Tira' al-İsmā'īliyya, was dug between the Nile and the Khālīdī, passing between Būlāk and the Ezbekiyya, then to Bāb al-Hadid and finally to Gharmā (it was filled up shortly after 1867). The Kubba palace dates from 1863. In 1863 Khedive İsmail saw Haussman's Paris. He too had new quarters laid out: the streets of the İsmā'īliyya district, south of the road from the Ezbekiyya to Būlāk, have the same layout today (cf. the 1873 plan of Cairo). For the celebrations which marked the opening of the Suez Canal (1869), the Opera House (destroyed by fire in 1972) was built near the Ezbekiyya; a building was added to the Khedive's palace on the island of Gezārah (al-Diāzrā) which later became the 'Umar Khayyam Hotel. The road from Giza (al-Dița) to the Pyramids was transformed into a splendid boulevard. In 1871-2 a modern bridge spanned the Nile (the Kāsr al-Nīl, now the Kūbrī 'l-tahrīr, which was rebuilt in 1931), with another over the other arm of the river (rebuilt in 1914). In 1872 two large arcaded thoroughfares were laid out: Clot Bey street from the station to the Ezbekiyya and Muhammad ʿAll street from al-'Ataba al-khādra' to the Citadel.

The establishment of modern means of transport played an essential part in the development of both suburban and peripheral areas. Relatively central districts like Tawfiqiyah (named after Khedive Tawfiq, 1879-92) or Faggala (Fadjdjaia), which began around 1880, or residential areas like Garden City (which dates from 1905) could be populated without the need for trains and tramlines. But Zaytūnah and Matarīyya in the suburbs could only come into being after the construction of the railway from Pont Lemoun (Kūbrī Limūn) to Matarīyya and al-Mardī (1889-90). The same was true of the tramlines which were laid in 1896 and linked the 'Ataba al-khādra' with ‘Abbāsīyya (1896), via Faggala, or with Shubra in 1903 (the first large-scale development in Shubra took place in 1898). The Khālīdī seems to have been filled in on the 1897 plan of Cairo; the process was completed in 1899 and the tramline from Da'her (al-Zāhir) to Sayyidah Zaynab made use of it in 1900.

The malek of the Zāhirī district, south of the road which later became the Umar Khayyam Hotel. The sikka djadlda, mddīh wa mustakhbaluhd, dates from 1863. In 1867 Khedive Ismail saw Hauss-Hammād (al-Zahir) to Sayyida Zaynab made use of it in 1900. In the desert to the north-east of the city, Heliopolis (Miṣr al-gjadlda) arose in 1906 following the granting of a concession to a Belgian company in 1905. An express tramline, called the “metro”, connected Heliopolis to Cairo (cf. the commemorative album published by the company, nationalized since 1960, Dāhiyat Miṣr al-gjadlda, mādīkh wa mustakhbaluhd, 1960). On the southern suburban line to Helwan (al-Ḫulwān), which is 27 km. long, the area of present-day Maadi (al-Ma'ādī) 11 km. from the city began to be developed by a company in 1907. Only Helwan was undeveloped, and so it remained until the 1952 revolution when it became an industrial centre with iron and steel works, armaments factories, etc.

Apart from those already mentioned, notable bridges are the Embabeh (Imbābā) railway bridge (1890-91, rebuilt in 1925); the Giza bridge (formerly Abbās: 1907, rebuilt in 1966-7); and the bridge from Zamalek to west bank (1912). The University Bridge, constructed in 1958, should be added to this group.

All these developments in Cairo were brought
about by companies, especially foreign ones, who were given contracts for the work. Public services were also carried out by non-Egyptians: the post office in 1843, water in 1865, gas and then electricity, run by the Le Bon company from 1873 to 1948, telephones in 1881, trams in 1896, etc. Much later the Egyptian government recovered these concessions, some when they expired and others through buying them back or through nationalisation. The part played by foreign architects can be seen in a number of façades in the Italian style. Telegraphic communications began with the railways, and Cairo was connected by submarine cables with Bombay, Aden, Malta, Gibraltar and Great Britain as early as 1870.

Health services, types of housing and a study of the population have been covered by Clerget. The various groups of citizens moved to different districts: thus the Greek minority could be found in the south and south-west of al-Azhar, the Jews south of Khoronfish and later at Sakakini, the Europeans around the Rossetti Garden and Muski, where the different Catholic churches also sprang up, and later in Garden City or Zamalek, and the Copts around the patriarchate at Clot Bey and later in Shubrá. The Syro-Lebanese Christians were particularly attracted to the new district of Abbasiyya where churches and schools were to be found (the Jesuit school opened there in 1885); later many moved to Heliopolis and Zamalek and the Copts settled there. In the heart of the city the Muslim bourgeoisie still lived in the palaces and traditional dwelling houses, the exodus to Hilmiyya or to cooler districts not yet having become general. The Gamaliyya quarter is the subject of a special study by J. Berque.

After the 1914-18 war the expansion of the town continued. Gardens and villas made way for large modern blocks. Around 1926-8 two large thoroughfares were built connecting al-Ataba with al-Azhar (al-Sharīf al-Azhar) and al-Ataba with al-Abbāsīyya. The widening of Khalldj street, decided upon in 1937, was not effected until after the revolution, in 1956. On the west bank of the Nile, Giza was developed between the world wars although the bank opposite Abbasiyya was superseded by an international airport situated in the desert further to the north-east. It was equipped with a new air terminal in 1963.

To relieve the pressure on the over-crowded city, the revolution established new housing estates, such as Naṣr, which lies between Heliopolis and al-Abbāsīyya on military land turned over to civilian use and to which it is hoped to move the greater proportion of governmental departments. A stadium holding 100,000 people has been built here. A large trunk road joins the airport and the citadel via Naṣr then links up with the Nile corniche at Fustat. An attempt to set up a semi-touristic estate was made in 1954-6 at Muktaṭam on the flat area to the south of the tomb of al-Djuyūqī, but the date was inopportune and the enterprise stagnated.

In which directions will the present-day city develop? Committees are discussing this problem at this very moment. But in the meantime the lack of suitable legislation has caused historic sites to be swamped by ugly housing and the splendid buildings of the past are vanishing, gutted or abandoned. Some determined Egyptians are fighting to ensure that the necessary expansion respects some of the legacies of the past. The public services face problems which grow daily more complex in the realms of transport, sewage and the road network posed by the ever-increasing number of inhabitants.

The American University in Cairo Social Research Center, 1963). Taking into consideration the whole metropolitan area of Cairo, including Helwan and Maṭariyya. In 1947 Cairo had two million inhabitants, discounting the population of the outlying suburbs but including the people of Dūkki and Ṭugāzila in the kisim of Ṭābidn (cf. Janet Abu-Lughed and Ezz el-Din Attiya, Cairo Fact Book, Cairo, The American University in Cairo Social Research Center, 1962). From his work we learn that there were 1,070,857 inhabitants in 1927 and 3,348,799 in 1960, the latter figure covering the whole metropolitan area of Cairo, including Helwan and Maṭariyya. The hotel infrastructure had been in private hands for many years; now numerous hotels have been nationalised. According to the 1965 statistics (as noted by P. Marthelot), 66.8 % of the active population of Cairo was employed in some undefinable activity; 23.5 % held regular jobs in the administration; and only 7.5 % was employed in industry. From such figures we can only guess at the number of underemployed, a considerable proportion, though only a minority are totally unemployed.
The question of accommodation has always been difficult. With the initiation of Arab socialism in 1961 and the creation of the Ministry of Housing and Utilities in 1965, the state became a builder on a large scale. But private activity also continued in this sphere, facing, with considerable difficulty, the influx into the capital.

"The same is true of Cairo as of many cities in the so-called Third World," writes F. Marthelot (p. 197), "which stand out against a rural back- ground subject to demographic tension or marked by structural flaws: the city is the receptacle in which are concentrated all those whose lives tend to be disturbed because of this, whether or not it is able to answer to the demands made on it. But this is at the price of the stagnation at a very low standard of living of a very important section of the population!"

In both Clerget and Marthelot there are numerous data about town planning—the density of the inhabitants varying a great deal according to district (cf. al-Tal'a, February 1970, 70, pointing out that in Bulaq over 60% of families live in one room)—the expansion of the city, transport, etc. They are based on statistics compiled by the governmental department concerned. As far as health is concerned, Cairo has one doctor per 910 inhabitants, as opposed to one per 3,420 in Lower Egypt and one per 2,990 in Upper Egypt. Similarly, the city has one hospital bed for every 233 people, as against one in 384 and one in 636 in Lower and Upper Egypt. There is one telephone for every 27 inhabitants, while in Lower and Upper Egypt the figures are one in 362 and one in 301 respectively (cf. al-Tal'a, ibid., 74-5).

The government is making a determined effort to remedy this state of affairs and to this end has enacted new socialist laws.

Culturally speaking, Cairo has two aspects, on the one hand the development of national institutions—schools, universities, specialised institutes—and on the other the holding of international meetings and congresses. A large number of schools have been opened. Around 1950 only 40% of children in Egypt received a primary education; by 1970 the number had risen to over 75% for the country as a whole and was said to exceed 90% in Cairo (cf. Cairo Fact Book; education in 1947 listed by šīyādī, a subdivision of the kism). Examples from higher education are the Dār al-Ui'm (s.v.), the Free University of Cairo (1908; converted in 1925 into Fu'ād al-Awwal University and now the University of Cairo), and ʿAyn Šams (1950), the former a religious educational establishment attached to al-Azhār (s.v.). Since the publication of the article al-Azhār in EI, considerable changes have been wrought by a law of 1961, with a remodelling of curricula and the creation of new faculties of secular studies—medicine, polytechnic, etc.—in addition to the three formerly in existence. There are a number of advanced institutes in Cairo (see ʿAbd al-Rahmān Zaki, Muṣāʾarat mimānat al-Khādir 1 al-ʿāḏām, Cairo 1969; J. Berque, L'Égypte, impérialisme et révolution, Paris 1967 (Eng. tr., Egypt, imperialism and revolution, London 1972); M. Berger, Islam in Egypt today; social and political aspects of popular religion, Cambridge 1970; G. Baer, Egyptian guilds in modern times, Jerusalem 1964; P. J. Vatikiotis, The modern history of Egypt, London 1969; Anouar Abd el-Malek, Egypte, sociétés militaires, Paris 1962. For particular aspects of the cultural life of Cairo see the publications in the series MIDEO, Cairo.

KAHRAMĀN-NĀMĀ, or Dāštān-i Kahramān, a popular romance in prose, several versions of which are known in both Persian and Turkish. It belongs to a series of prose works which develop themes from the Iranian epic tradition, embellishing them with fabulous touches borrowed from folk literature. Like the Hindūkūsh-nāma, the Tahmūratī-nāma and the Kīsī-ī Djamshīd, the story takes place in the earliest period of the legendary history of Iran, the times of the pīghādīyān. The central hero is Kahramān, nicknamed Kāṭīl, "the slayer". His name is in fact a common noun, the arabicized form of an Iranian word, probably of Median origin, the Middle Persian counterpart of which is kāhrūmān, meaning "manager, superintendent" (cf. W. B. Henning, Handbuch d. Orientalistik. Iranistik. Linguistik, Leiden 1958, 49, n. 2). This meaning was also attached to the word in classical Arabic (cf. Dozy, Suppl., s.v.) and in mediaeval Persian (cf., e.g., Nāšīr-i Khusrāw, Divān-i ʿabāʾī, Tehran 1355 šh., 5; Sanāʾ, Divān, Tehran 1341 šh., 20; Abu ʿl-Maʿālī Naṣr Allāh Munjih, Targāmān, Kāšī va Dimna; ed. M. Minowī, Tehran 1337 šh., 11). In modern Persian and Turkish, however, the word kahramān has acquired the meaning of "hero, champion", a semantic change which might very

well have resulted from the existence of the romance. It is also not unlikely that the name of the hero was derived from the rôle of superintendent which he seems to play with regard to the shah of Iran, Hōshang. On behalf of this king, Kahramān subdued divs and sorcerers and acted as the leading champion of the Iranian army when Hōshang invaded India in order to complete an empire comprising the seven climes of the world. The story varies greatly in its particulars in the existing manuscript and printed versions of the romance, a confusion undoubtedly resulting from the long history of its development in popular literature. A few versions, all in Turkish, have been summarized in a more or less detailed form (cf. H. O. Fleischer, Catalogus libr. manusc. qui in Bibl. Senatoria Civilis Lipsensis asservatur, Grimae 1838, 524 f.; Th. Menzel, in EJ, s.v. Kahramān-nāma; E. Blochet, Catalogue des manuscrits turcs de la Bibliothèque Nationale, Paris 1932-3, i, 137-8, 144-5, 356, ii, 23).

According to some of these, Kahramān (or a another person called Kahrām, who sometimes takes over part of his functions) was the king of the man-eaters living in Sistān who at first opposed the king of Iran. But he is also represented as a prince of royal Iranian blood who as a youngster had been carried off by divs in the manner of the 3rd/9th century Kāf. Thāthīgh his enormous strength he is able to master the demons. When he returns to the world of human beings he rides a monstrous creature which he has caught and tamed himself. Woven into the main plot of the romance is a tale about the king and queen of the fairies and their son Bahram-i Diaballāh, as well as a series of picaresque stories of the ʻayvārūn (q.v.). The origin of the early history of the Kahramān-nāma is still obscure. A reference to Kahramān as the guardian of the treasures of Hōshang in the Divān of ʻUnṣurf (ed. Y. Karīb, Tehran 1323, 129; ed. M. Dābrī Siyākī, Tehran 1342, bayt 2416) proves that at least the kernel of this romance already existed in the time of Firdawsi. It would seem that elements of the legends about Hōshang (q.v.) and Rustam have been used to build up a new epic cycle. The composition of a voluminous version in Persian is attributed to Abū Tāhir Tarsus! (see Abū tāhir ṭarsūs). Of this only some manuscripts of a Turkish translation are known, and for a relevant discussion Schmucker, loc. cit., 186 f., cannot be sure whether this mention of the word is the oldest known. Anyhow, two Arabic authors of the 3rd/9th century use the word: Abī B. Sahī Rābān Ṭabarī, Firdaws al-šikmā, written 236/850 (see for a full list of references Wörterbuch, loc. cit., and for a relevant discussion Schmucker, loc. cit. ("Qurt") means Maimonides, ʻarṣa asmāʾ al-ʻukhrāh, ed. Meyerhof, 1940) and al-Kindī, Ahrāb bddih (see M. Levey, The medical Formulary, 1966, no. 224 and p. 320). Today the word is also used for "electricity" (Khwā znaj). The very name of the substance, the only one used in Islamic sources, points to the lands from which the knowledge of amber reached Islam. Al-Muqaddasi includes it in a list of goods imported from Khwāẕram via the Bulghars (q.v.; this corresponds to Scythia mentioned by Theophrastus and Pliny. The origin of the amber imported from there is the shore of the Baltic Sea.

KAHTABA

a nickname derived from the verb k-f-d-b, which means, inter alia, "to strike with a sword" (LA, s.v.). In one place his kunya is given as Abū Hanzra (Muḥabbār, 469); it is quite possible that he had two kunyās, like some other leaders of the da'wa who took the precaution of adopting a new one on becoming active in the movement.

Practically nothing is known about Kahtaba before his appearance as one of the Abbasid emissaries in Kūfrah. Some information, however, exists about his grandfather, Khālid b. Maʿdān, which may explain the origins of Kahtaba’s connections with a Shiʿīte movement. Khālid b. Maʿdān supported ʿAll in the Battle of the Camel and was on that occasion the standard-bearer of his tribe, the Banū ʿAmr b. al-Šāmit (Dīmāḥara, loc. cit.). Later, in the year 38/558, he was commander of ʿAll’s army at the battle against the Khwārīdī at Nahrawān (Tabarī, ii, 3431; Ibn al-ʿAṯīr, iii, 309). He took the field against the Khwārīdī once more in 43/653-4 (Tabarī, ii, 54), but this time he refused to pursue them after they had been expelled from Kūfrah, asserting that his sole responsibility was the defence of his miṣr. It can thus be deduced that Kahtaba’s family settled in Kūfrah at least as early as in ʿAll’s time. An isolated apocalypse tradition in Taḥrik al-ʾumām mentions that as a young man Kahtaba was also resident in Kūfrah (Yaʿqūbī, ii, 421). As such he must have been familiar with the ʿAlīd ideas and Shiʿīte activity in the town. His name, however, does not feature in the detailed list of Abū Hāshim’s supporters in Kūfrah which appears in Abhār al-ʿAbbās (183-4, 191-2). The list is mentioned on the occasion of Abū Hāshim’s death, in 63/687-8, and it is highly likely that by that time Kahtaba was already in Kūfrah, although there is no mention of this in the sources.

That Kahtaba was familiar with the Hāshimiyah and its ideology, and that in Kūfrah he actually joined the clandestine movement, is demonstrated by his election as one of the nukabāʾ, the twelve most prominent leaders, when the movement organized its leadership in Marw. According to the tradition transmitted by al-Ṭabarī (ii, 1358), the ʿAbbāsid daʿwa in Kūfrah was inaugurated by the visit there of the emissary Abū ʿIrīkma and his nomination of the nukabāʾ in the year 100/718-9. In later Islamic tradition this acquired apocalyptic significance through the messianic expectations associated with the beginning of a new century—an association somewhat similar to the millenarian hopes in Christianity. It was thus politic of the ʿAbbāsids, after they had come to power, to link the inception of their daʿwa to the year 100, stressing that the new order brought to Islam by their daʿwa was the embodiment and fulfillment of the messianic hopes attached to the turn of the century.

The discovery and publication of the Abhār al-ʿAbbās has permitted a detailed reconstruction of the history of the daʿwa. From the unique traditions contained in this source it is quite clear that the Hāshimiyah movement in Kūfrah pledged itself to the ʿAbbāsid cause only around the year 126/743-4. Until then it had been organized in secret, mainly in Marw and in Nīṣāḥārū, in the form of small, clandestine groups. Towards the year 117/730, Marw took the lead with the arrival there of Khiḍāsh [q.v.], the competent Hāshimite leader from Nīṣāḥārū, who was undoubtedly responsible for the creation and development of the organization that had existed there from the time of Khiḍāsh. This included a supreme council of twelve nukabāʾ in Marw and a great number of daʿwāʾ (formally 70), 40 of whom were in Marw and its vicinity and the rest scattered throughout the main urban centres in Khurasan. At the end of 125 or 126, soon after the death of Muḥammad b. ʿAll and the succession of his son Ibrāhīm [q.v.], a delegation of three nukabāʾ, Kahtaba amongst them, met the new imām during the Ḥādīdī in Mecca and swore allegiance to him in the name of their Kūfrahī sīḥa. Henceforward Kahtaba was the chief link between Kūfrah and the imām. The stringent secret measures, undertaken by the daʿwa in order to keep the identity of the imām hidden from the movement’s followers as much as from most of its leaders, demonstrated the importance of his role. A later tradition, attempting to legitimate the status of Abū ʾl-ʿAbbās al-Saffār [q.v.] as the first ʿAbbāsid caliph, made Kahtaba the man who met Ibrāhīm before his death in the prison of Marwān II and received from him his testimony in favour of the imāma of Abu ʾl-ʿAbbās (Frag., 190:1; cf. Ibn Khuldun, 251).

Kahtaba’s real genius was revealed when he served as general in the army of the daʿwa. When Abū Ṭūlūm [q.v.] was sent to Kūfrah in 128/745-6 to organize the movement according to the imāma’s specifications, he must have ratified the organization that had existed there from the time of Khiḍāsh. This included a supreme council of twelve nukabāʾ in Marw and a great number of daʿwāʾ (formally 70), 40 of whom were in Marw and its vicinity and the rest scattered throughout the main urban centres in Khurasan. At the end of 125 or 126, soon after the death of Muḥammad b. ʿAll and the succession of his son Ibrāhīm [q.v.], a delegation of three nukabāʾ, Kahtaba amongst them, met the new imām during the Ḥādīdī in Mecca and swore allegiance to him in the name of their Kūfrahī sīḥa. Henceforward Kahtaba was the chief link between Kūfrah and the imām. The stringent secret measures, undertaken by the daʿwa in order to keep the identity of the imām hidden from the movement’s followers as much as from most of its leaders, demonstrated the importance of his role. A later tradition, attempting to legitimize the status of Abū ʾl-ʿAbbās al-Saffār [q.v.] as the first ʿAbbāsid caliph, made Kahtaba the man who met Ibrāhīm before his death in the prison of Marwān II and received from him his testimony in favour of the imāma of Abu ʾl-ʿAbbās (Frag., 190:1; cf. Ibn Khuldun, 251).

Kahtaba’s real genius was revealed when he served as general in the army of the daʿwa. When Abū Ṭūlūm [q.v.] was sent to Kūfrah in 128/745-6 to organize the movement for the decisive campaign against the Umayyads, Kahtaba was appointed to lead his army. His son Hasan was his lieutenant. In the middle of Ḍuʿālīmīh 129/March 747, Kahtaba accompanied Abū Ṭūlūm in a tour of the daʿwa centres in western Kūfrah in preparation for the revolt, which was to begin in Mubarram 130/August-September 747. When they reached Kūmis, Abū Ṭūlūm returned to the vicinity of Marw and Kahtaba continued westwards at the head of a small delegation in order to meet the imāma during the Ḥādīdī of that year. After meeting the imāma in Mecca and informing him of the detailed plans for the revolt, he returned to Kūfrah, having been formally nominated by Ibrāhīm as head of his armies.

Meanwhile the plans for open revolt in Kūfrah received a setback through some unforeseen development in the province. The black banners of the daʿwa were hoisted on 25 Ramaḍān 129/17 September 747, but military activity was delayed until after the coming of winter, affording ample time for Kahtaba to return to Mecca and for Abū Ṭūlūm to recruit large numbers of warriors (mainly the muḥāṭīla of the Yaman tribes) and thoroughly organize the army. In Rabīʿ II 130/January 748, Abū Ṭūlūm entered Marw and drove out Naṣr b. Sayyār [q.v.],
the last Umayyad governor of Khurāsān, who fled to the west (Akhbār, 315 f.). Soon afterwards Kahtaba returned to Khurāsān and took over from his son Ḥasan as the head of the army. He was accompanied by a group of military commanders, most of whom were Arabs, and by two competent administrators, Khalīd b. Barmak (q.v.) and Dājīm b. Ḍāṭiyā, whose task was the organization of the campaign, including the regular payment of the troops, and the administration of the occupied territories.

The winter over, the campaign opened in Shabān 130/April 748 (Akhbār, 321). Kahtaba marched on Sarakhs, there encountering his first adversary, the Khāridjīt Shaybānī, whom he defeated and slew. After the fall of Sarakhs, Kahtaba advanced swiftly westwards, revealing his military genius in the short way to ‘Irāk. The main campaign started out from Abīward. Advancing on Ṭūs, Kahtaba met an Umayyad army led by Tamīm b. Naṣr b. Sayyār. Defeating and killing his adversary, he captured Ṭūs then swiftly pressed on to Nihāwān, which he took at the end of Shabān 130/July 748. Meanwhile a strong Umayyad army, commanded by Nubātā b. Ḥanẓala al-Kilablī, captured Gurgān and endangered Kahtaba’s right flank. At once Kahtaba diverted the whole of his army northwards. He met Nubātā on 1 Dhu ‘l-Hijdād 130/August 748, defeated and killed him, and dispersed the remnants of his army. Having secured his right flank, Kahtaba resumed his original route and captured Kūmīs in the beginning of Aḏrād 130/September 748. A grave danger now emerged from the south. Ṭāmr b. Ḍūbārā al-Murri assembled a huge army in ‘Iṣfāhān (‘askar al-‘asādīr, Ṭabarī, iii, 4). Leaving Ravy, which had fallen without a struggle, Kahtaba entered with the main body of his army against this new threat. At the same time his son Ḥasan was sent to advance on the main route of northern Khurāsān, commanded by Malik b. Adham al-Bahill. The battle of Ḥayrat, leaving the highroad and outflanking Ibn Hubayra’s camps in Daskara and Dijālūla. Crossing the Katīl canal near Bāḏjarā, he assembled his army near Awânā and crossed the Tigrīs there on a bridge of boats. Once safely on the right bank of the Tigrīs, he hastened to Anbār, captured it and crossed over the Euphrates at Dimimma. Ibn Hubayra, too late to intercept these swift moves, had to retreat with speed towards Kūfah. Meanwhile Kahtaba advanced southwards along the western bank of the Euphrates. On reaching the eastern bank, Ibn Hubayra moved simultaneously opposite him. A few miles to the south of Fām al-Furat, Kahtaba caught sight of a shallow stretch of the river which he decided to ford. During the night of 8-9 Muḥarram 132/27-8 August 749, he mounted a surprise attack on Ibn Hubayra and defeated him, forcing him to relinquish Kūfah and retreat with the remnants of his army along the Nile toward Wāṣīt. In the confusion of the battle, Kahtaba was either slain or drowned. His place was immediately taken by his son Ḥasan, who led the victorious army into Kūfah on 10 Muḥarram 132/29 August 749. (M. Sharīn) Kāhtān, according to the consensus of opinion among Muslim genealogists, historians, and geograph-
ers, and in popular tradition, the ancestor of all
the South-Arabian peoples [see YAMAN],
whence he is sometimes known as "father of all
Yaman", the Yamanis themselves being called
banū Kahtān, habūl Kahtān, or simply Kahtān.
He thus corresponds to Ḥadānī [q.v.], the common
ancestor of the northern Arabs, though some authori-
ties prefer to contrast him with one or other of
"Adnān's descendants, e.g., his son, Maʿadd (al-
Dinawarl, 287; al-Tabarī, ii, 1056, 1084; al-Masʿūdī,
al-Tanbūḥi, 88), or his grandson, Nūr (al-Masʿūdī,
Murūḏī, v, 223, vii, 42 f., 46, 143, 150; Ibn al-Athīr,
iv, 273). The normal genealogy given for Kahtān is
Nūr—Ṣām—Arfakhshadh—Shaḥāb—ʿĀbar—Kahtān,
and he is also credited with a brother, Fālah." In this
we may see an adaptation of the Yahwist tradition in
the Table of the Nations (Genesis, X, 21-5; 1 Chronicles,
1, 4, 17-9); Noah—Shem—Arphaxad—Shelah—Eber—Peleg + Joktan, and this is
confirmed by the Arab insistence on the identity of
Kahtān with Joktan (Yaḵtān), who was the
ancestor of several peoples of pagan South Arabian
reference. Some genealogists do admittedly make
Yaḵtān a brother or son of Kahtān (e.g., Ibn Kutay-
ba, 14; al-Masʿūdī, Murūḏī, i, 79 f.; al-Tabarī, i, 217),
but this is certainly a confusion on their part. The
elaboration, however, that the term Kahtān is an Arabiza-
tion of Yaḵtān (e.g., Tāḏi al-ʿArās, s.v.) is phono-
logically hazardous and need not be pressed. Hebrew
Yaḵtān is rather to be related to the verb ʾāḏān "to
be small, weak", thus "the younger (brother)", and
one might compare the occurrence in Old South Ar-
bian of the term qin to denote collateral descent from
a clan-head. Kahtān, on the other hand, is now
attached as a tribal name before Islam. An in-
scription of the time of the second century Ḥamdānī
dater, 528 R. m 532 AR (Jamme 635/26-7) alludes to
campaigns in the country to the north of Ṣajdān
against a king of Kinda and Kahtān (mīkhiḍiʾIQbn),
and this may provide additional support for the
identification of Polen's Kaṭvaṭa (Geogr., book vi,
chapter 7, §§ 20, 23) with Kahtān. Though
virtually nothing is known of this people in pre-Islamic
times, it seems reasonable to suppose that
the apparent similarity of the name with Yaḵtān led the Arab genealogists to make the
identification in order to provide the South Arabian
peoples with a respectable biblical ancestry, just
as the Northern Arabs, under the influence of the
Bible and the Kurʿān, had been linked with Ishmael,
son of Abraham, through the fictitious "Adnān.

The tribal confederation of the Kahtān is sub-
divided into two groups, the smaller of the Himyar
and the larger of the Kahtān. The two were officially
regarded as brothers and their descent from Kahtān
was established by the interpolation between biblical
Joktan and his son Sheba of two further generations
represented by Yaʿrub and Yashhdub. The Himyar,
as progenitors of the great pre-Islamic kingdoms of
South Arabia, were probably settled, while the Kahtān
were essentially nomads (cf. Landberg, Arabica,
v, 116 ff.). Most, indeed, of the Southern tribes which
had settled in North Arabia, Syria, and "Irāk by the
advent of Islam claimed descent from Kahtān.

The hostility between the Kahtān and the Maʿadd seems to go back to pre-Islamic times and may find
its origin in the opposition between the desert and the
sown. This enmity was intensified by the repeated
raids of the Yamanis into the lands of the Ismaelites
as well as by the later antagonism between the Ansār
(Medinans) and the Kurayḥ, which came to a head
after the death of the Prophet and influenced the

KAHWÀ, an Arabic word of uncertain etymology, which is the basis of the usual words for coffee in various languages. Originally a name for wine, found already in the old poetry (see Landberg, Etudes ii, 1057 and al-Akhrán, 1st ed., vi, 110, viii, 794, xx, 180), this word was transferred towards the end of the 8th/12th century in the Yemen to the beverage made from the berry of the coffee tree. The assumption of such a transference of meaning is not, it is true, accepted by some who consider kāhwā —at least in the sense of coffee—as a word of African origin and seek to connect it with the alleged home of the coffee tree, Kaffa, although they also assume contamination with kāhwā “wine” (see Ritter, Erdkunde, xiii, 566; Vollers, in ZDMG, i, 657; Hobson-Jobson; Landberg, op. cit., ii, 1057-66). On the other hand, it should be noted that the holders of this view do not prove that coffee was exported from Kaffa as early as 1400, and do not quote a similar word in the languages of Ethiopia and adjoining lands, while the usual word for coffee there (bān for tree, berry and beverage; see Armbruster, Imita Amharica, ii, Cambridge 1910, 58; Coulebeau and Schreiber, Dixc. de la langue tigréa, Vienna 1915, 408; I. Reinisch, Die Kafa-Sprache etc., ii, in Sit- zungsber. der Kais. Akad. der Wiss. zu Wien, phil.-hist. Cl., cxvi, 1888, 273; see also Landberg, op. cit., ii, 1055) has passed in the form būn in (rhyme also būn) as a name of the tree and berry into Arabic. But as it is probable that the drinking of coffee spread in the Yemen out of Sūfi circles and a special significance was given to wine in the poetical language of the mystics, a transference of the poetic name for wine to the new beverage would not be at all impossible.

The coffee tree was not indigenous to South Arabia and was probably introduced from the highlands of Ethiopia, where it is found in profusion growing wild, notably in Kaffa. But there is no trace of authority for the assertion (Deflers and Handbook of Arabia) that the coffee tree was already introduced into Yemen in the period of the Ethiopian conquest and of the fall of the Himyar kingdom, about a century before the Hidjra. In this case the older literature would hardly have left it unnoticed.

The earliest mention of coffee so far found is in writings of the 10th/16th century. According to (Ab- mad) Ibn ʿAbd al-Ghaffār, quoted by ʿAbd al-Kādir al-Dzhārī in his essay (see below, Bibliography), the popularity of kāhwā as a beverage in the Yemen was first known in Cairo in the beginning of the 10th/16th century. It was there taken especially in Sūfi circles, as it produced the necessary wakefulness for the nightly devotional exercises. According to this authority, it had been brought to Aden by the jurist Muḥammad b. Saʿīd al-Dhahabīn (died 875/1470-1), who had become acquainted with it during an involuntary stay on the African coast and on his return devoted himself to mysticism; it soon became popular.

Another reference in al-Dżārī, however, ascribes the introduction of the beverage to ʿAll b. ʿUmar al-Shāhī, Abu l-Ḥasan ʿAll b. ʿUmar of the family of Daʿṣayn died in 821/1418 according to al-Shārījī. He also might have become acquainted with coffee in Ethiopia, for after entering the Shāhālīiya order, he lived for a period in the entourage of the king Muḥammad b. Saʿīd al-Dīn (i.e., between 788/1386 and 805/1401-2 or 807/1404-5), cf. al-Maqrīzī, al-Imām bi-Akkhār man bi-ʾArḍ al-Hābādīn min ʿUluḥ al-ʿālam, ed. Rinck, Leiden 1790, p. 24; Faultschke, Harar, Leipzig 1888, 504 (infra), who gave him his sister to wife. Even after he had founded his ʿawāra in al-Makhā (to follow al-Shārījī) gifts continued to reach him from admirers in Ethiopia.

In the treatise by ʿAbd al-Kādir (Ibn) al-ʿAyyārūs (see below, Bibliography), ʿAll b. ʿUmar, the saint of al-Makhā, alone is mentioned as the introducer of the beverage kāhwā (muhīḍāt al-kāhwā, fol. 347b; wādīʿukhā, fol. 347b, in a verse by Shaykb b. ʿAbd Allāh al-ʿAyyārūs, died 990/1582). His claim to fame is, it is true, qualified by the note “that, before he prepared the beverage, only the kernel of the husk, i.e., the būn, was used and the husks were thrown on the dung-heaps (fol. 348a). In a verse attributed to him, however, he praises the kāhwāt al-būn as a dispeller of sleep and aid to devotional exercises (fol. 342b). While al-Shārījī says not a word of his connection with coffee, ʿAbd al-Kādir al-ʿAyyārūs numbers the introduction of the beverage among his miracles (harāmāt, fol. 344a).

The legend as given by Hājīdjī Khalīfa seems to have made two individuals out of ʿAll b. ʿUmar, of whom All represents the founder of the Shāhālīiya order, Abu l-Ḥasan ʿAll b. ʿAbd Allāh (d. 656/1258); see al-Ṣar’ānī, Lawdīkh al-Amūr, Cairo 1292, i, 5) and his disciple ʿUmar the saint of al-Makhā (Mūkhā). The latter was ordered to settle, by command of his teacher who had appeared to him at his own funeral, at the place where a wooden bull which he gave him shone the rest. This is how he came to Mūkhā. On the charge of having misconducted himself with the daughter of the king who was staying with him for a cure, he was banished into the mountains of Uṣāb (Wuṣāb, N.E. of Zabīd).
He and his disciples, who followed him into exile, are said to have sustained themselves with kahwa (here the berry) and finally to have made a decoction from it. His visitors were cured of an itch, epidemic in Mughāẓ, by taking coffee and this procured the saint an honourable return.

The third person who is given credit for the introduction of coffee is Abū Bakr b. 'Abd Allāh al-'Ayarūs. An essay by 'Alawi al-Sakkāf (see below, Bibliography) contains a statement from the 'Ardīkh of al-Nadīm al-Ghażlī (i.e., apparently al-Khdūkī al-sā'rā bi-mānāsī il-mi'a al-shāhīra by Nadīm al-Dīn al-Ghażlī, Brockelmann, II, 376), according to which the Sūffī, who is called a Shadhīlī, once came upon a coffee tree in his wanderings and ate the berries. As he noticed their stimulating effect he took them as a food and recommended them to his disciples, so that they became known in different countries. The reference here is probably to the Sūffī of this name who died in 914/1508-9 (Abū Makhrāma, Leiden Ms. 1956, fol. 188; al-Nabhānī, Dīmūt kardma t al-awliyā', Cairo 1329, i, 263), whose grave is still honoured there. 'Abd al-Kādir (Ibn) al-Ayarūs only mentions his fondness for coffee and quotes his表扬 in praise of it. On the other hand, Abū 'ṣ-Ḥasan Muhammad al-Bakrī in his treatise 'Īdālī ma'nawīya al-kahwa, fol. 2b mentions Abū Bakr al-'Ayarūs as the introducer (mursī) of kahwa.

According to Glaser (Mitt. der Geogr. Gesellschaft in Wien, xxx, 25), it is stated in a Turkish source (which he does not name) that in the 10th/16th century the wālī Özdemir (cf. Ahmed Rā’hīd, Tārīḫī Yemn ve Sanā’, i, 83 ff.) transplanted coffee from Africa to Yemen.

The fact that the merit of introducing coffee as a beverage is given to different individuals, suggests that we have to deal with various local traditions. The tradition of Mughāẓ is the most firmly established and most widely known; therefore 'All b. 'Umar al-Shadhīlī—who is frequently confused with the founder of the Shadhīlīya order (d’Ohsson, von Hammer, Rinn)—should precede it. Shaykh b. Ismā‘īl Bā Alawi of al-Šīhīr, however, prescribed the fourfold repetition (futūfrdt)” (op. cit., supra, i, 330), who in his last years is said to have lived on nothing but coffee:—”He who dies with some kahwa in his body enters not into hell-fire” (Safwat al-Sahwā, fol. 344b).

Coffee was probably not known as a beverage in South Arabia much earlier than the turn of the 8th/14th century. Whether the tree was introduced long before this is doubtful. Ibn Ḥādal al-Haytami (q.v.) speaks in his ʿĪsāb (commentary on al-ʿUdhīb, probably by ‘All b. ‘Umar al-Sayfī; cf. Brockelmann, II, 531) of a beverage which appeared (viz. in Mecca) shortly before the 10th/16th century and was prepared from the husk of the būn, a tree introduced from the region of Zaylā’, and called kahwe (quotation in ‘Alawi al-Sakkāf, p. 9). Among the jurists who gave an opinion in favour of coffee, the oldest is Dīmāl al-Dīn Muhammad b. Sa‘īd b. ‘All b. Muḥammad Kabbīn al-ʿAdānī (died in Aden 842/1438, cf. Abū Makhrāma, fol. 149 b f.; according to al-Nabhānī, op. cit., i, 155 f.: 829/1425-6).

An ʿurdīza of Sharaf al-Dīn al-ʿAmrīfī gives the year 817/1414-5 as the date at which coffee became domesticated in Mecca (Persch, Die Arab. Handschr., zu Gotta, iv, no. 2107). According to the ʿUmdat al-safwā, however, the drinking of a decoction of coffee husks first appeared towards the end of the 9th/15th century, while previously only the eating of the fruit as a delicacy (nabī) was known. The drinking of coffee dropped out of use again for a time, but it finally established itself and soon people drank coffee even in the sacred mosque and regarded it as a welcome tonic at ʿakhir and mawlid. Coffee-houses (buyūl al-kahwe) were soon opened, where men and women met to listen to music or where they played chess or a similar game for a stake. This and the custom of handing round the coffee in the manner of wine naturally aroused the indignation of the ultra-

The legends are probably correct in saying that the taking of coffee in Arabia first began among Yemeni Sūffīs. They were particularly fond of the beverage because its effect facilitated the performance of their religious ceremonies. They therefore considered this as its original “destination” (mawṣūla‘iṣ). They did not, however, consider it as its original “destination” (mawṣūla‘iṣ). It received a ceremonial character, being accompanied by the recitation of a so-called ṭūbīs. This ṭūbīs consisted in the repetition 166 times of the invocation ʿād hāni. This usage is based—apart from the similarity in sound between ʿād hāni and ṭūbīs—on the fact that the numerical value of ḥāμk, i.e., 116, is the same as that of ʿād hāni, i.e., ʿād hāni, “strong”, one of the most beautiful names of Allāh (see al-ʿASMA‘ AL-HUSNĀ). According to Shaykh b. ‘Abd Allāh al-ʿAyarūs, the recitation of the ṭūbīs should precede it. Shaykh b. Ismā‘īl Bā Alawi of al-Šīhīr, however, prescribed the fourfold repetition of the Sūra Yā-Sīs (Sūra XXXVI) with a hundredfold tasliya on the Prophet as ṭūbīs (Safwat al-Sahwā, fols. 341b, 345b, 347a). Thus when taken with a righteous intention and devotion and genuine religious conviction, coffee-drinking leads to the enjoyment of the kahwa ma'nawīya, the “ideal kahwa”, also called kahwe al-Sāfīyya, which is explained as the enjoyment which the people of God (Allāh) feel in beholding the hidden mysteries, the wonderful discourses (mukhāṣṣāfat) and the great revelations (futūfrdt)“ (op. cit., fols. 341b, 345a, supra, 345b infra f.),—All b. ‘Umar al-Shadhīlī is reported to have said that coffee, like the water of Zamzam, serves the purpose for which it is drunk (op. cit., fol. 348a, cf. above ii, 588a, infra), and the saying has been handed down of Aḥmad b. ‘Alawi Bā Djabbāh (d. 973/1566; cf. al-Nabhānī, op. cit., i, 330), who in his last years is said to have lived on nothing but coffee:—”He who dies with some kahwa in his body enters not into hell-fire” (Safwat al-Sahwā, fol. 344b).
pious, many of whom had from the first set their faces against the beverage as an objectionable innovation. They found a champion in Khā'ir Bey, who was appointed chief of the police in Mecca in 917/1511 by Kānṣūb al-Ghaqri [q.v.]. He carried through the proclamation of coffee as forbidden (ḥārām) in the same year, in an assembly of jurists of the different schools in which the unfavourable judgment of two well-known physicians and the evidence of a number of coffee-drinkers regarding its intoxicating and dangerous effects ultimately decided the issue. The kādīs signed the protocol of the assembly. Only the then muftī of Mecca dared to declare his co-operation and became therefore the object of damaging suspicions. By putting the questions in a clever way they were at the same time able to get an opinion condemning coffee from the fakih of Cairo. The rescript which Kānṣūb issued in reply to the protocol sent to Cairo did not completely fulfill the hopes of the opponents of coffee as it contained no absolute interdiction but only allowed measures to be taken against any concomitant features contrary to religion. Ibn Ḥaḍjar al-Haytami, as late as about 950/1543, had a vigorous discussion, at a wedding feast (nīlmati 'urūd) where coffee was offered to the guests, on the new beverage with a prominent muftī, who declared it intoxicating and forbidden. Ibn Ḥaḍjar refers to the assembly above-mentioned and cannot find words strong enough to condemn its decision and the manner in which it was reached (ṣafwat al-safwa, fols. 352b-356a, quotation from the Muwādīan Mādhkārī). In accordance with this verdict, Khā'ir Bey forbade the taking and sale of coffee and had a number of vendors punished and their stocks burned, so that coffee husks (īshīr) disappeared from the market.

But Kānṣūb's rescript again gave the coffee-drinkers courage and when in the next year one of the leading opponents of coffee was subjected to disciplinary punishment by a high official from Egypt and Khā'ir Bey replaced by a successor who was not averse to coffee, they were again able to enjoy with impunity the beverage, to which these measures had only attracted the attention of wider circles. Only occasionally do we read of action being taken there-again against disgraceful proceedings in coffee-houses. An edict forbidding coffee issued by the Ottoman sultan during the Ḥāḍidī in 950/1544 was hardly respected at all.

In Cairo coffee was first made known in the first decade of the 10th/16th century in the Azhar quarter by Sūfīs from Yemen, who held their ḥārās in the mosque with their associates from Mecca and Madina while partaking of coffee. After it had been publicly sold and drunk there for a time, the ḥārāb Ahmad b. 'Abd al-Ḥaḳḳ al-Sunbā̀tī, famous as a preacher, declared it forbidden in 950/1543-2. Two years later in a meeting for exhortation in the Azhar mosque he so incited his hearers against the beverage that they fell upon the coffee-houses, made short work of their contents and maltreated the occupiers. The difference of opinion thus emphasized caused the kādī Muḥammad b. ἱlyās al-Ḥanāfī to take the opinions of prominent scholars; as a result of personal observation of the effects of coffee he confirmed the opinion of those who considered the beverage a permitted one. Although in the following years coffee was from time to time for brief periods forbidden in Cairo, the number of its devotees, even among the religious authorities, steadily increased.

Several notable theologians had given ṣafwatūs in favour of coffee, for example, Zakariyā al-ʿAnṣārī (died 926/1520), Ṭabīb al-Ḥasan al-Suyūṭī (d. 929/1523-4), Abu 'l-Ḥasan Muḥammad al-Bakrī al-Siddīkī (died between 950 and 960/1543-553), who in verses in praise of coffee also gives the advice that the opinion of Ibn 'Abd al-Ḥaḳḳ should be set aside and the fatwā of Abu 'l-Ḥasan followed (ṣafwat al-safwa), fols. 349a, b; cf. also al-Siddīkī's verses in Bahāzl al-Dīn al-Ṣāmilī's al-Kāgbāl, Bulāk 1286, i, 19; 'Abd al-Rahmān b. غ buds al-Zāhirī (d. 883), and others (ṣafwat al-safwa, fol. 348b).—Gradually the view came to prevail that coffee was in general permitted (nīlmati), but that under certain circumstances the other legal categories could be applied to it also.

Intercourse with the holy cities and with Egypt brought coffee to Syria, Persia and Turkey. Rauwolf in 1573 found the beverage widely known in Syria (Aleppo). In Istanbul and Rūmūlī coffee first appeared in the reign of Sulaymān I (926/1520-927/1566). In 962/1554 a man from Aleppo and another from Damascus opened the first coffee-houses (kahwet-i 'irfk) in Istanbul. These soon attracted gentlemen of leisure, wits and literary men seeking distraction and amusement, who spent the time over their coffee reading or playing chess or backgammon, while poets submitted their latest poems for the verdict of their acquaintances. This new institution was jokingly called also maktub-i ʿirfān (school of knowledge). The coffee-house met with such approval that it soon attracted civil servants, kādīs and professors also (Ṭārīkh-i Peşest, i, 361 ff.; English translation in B. Lewis, Istanbul and the civilization of the Ottoman Empire, Norman, Oklahoma 1968, 132 f.). Kātūb Celebi, The balance of truth, tr. G. L. Lewis, London 1957, 60-2). Poets like Mānūjīya al-Rūmī (cf. Bahāzl al-Dīn al-Ṣāmilī, op. cit., p. 147) and later Beliğār sang the praises of coffee, and the opinion expressed in 928/1522 by Sulaymān's court physician, Badr al-Dīn al-Kūṣûnī (Leiden Ms. 945, fol. 58) was not unfavourable. The coffee-houses increased rapidly in number. Among the servants of the upper classes were ḥalawati, whose special task was the preparation of coffee, and at the court they were subordinate to a kahwet-i 'irfān (Gibb-Bowen, i, n. index). In religious circles, however, it was found that the coffee-house was prejudicial to the mosque, and the 'ālamāt thought the coffee-house even worse than the wine-room. The preachers were specially eager for the prohibition of coffee and the way was paved for them by the muftīs (according to d'Ohsson: Abu 'l-Ṣawād) with an opinion that (roasted) coffee was to be considered as carbonized and therefore forbidden (the same argument is found in the treatise by Muḥammad ('Ali?) Dede, Leiden Ms., 682, i, fol. 4b). The fact that current politics were discussed in the coffee-houses, the government's acts criticized and intrigues concocted, was the principal cause for the intervention of the authorities. Both were issued in the reigns of Murād III (982/1574-1003/1595) and Ahmad I (1012/1603-1016/1617) were not strictly enforced and still less obeyed. The religious authorities met public opinion by declaring coffee legal, if it had not reached the degree of carbonization.

Murād IV 1032/1623-1049/1640 issued a strict prohibition of coffee (and tobacco). He had all the coffee-houses torn down and many forfeited their lives for the sake of coffee. Under Mehmed IV 1058/1648-1068/1678, while the sale of coffee in the streets was allowed, the prohibition of coffee-houses was at first renewed by the Grand Vizier Köprülı for political reasons. This prohibition could not possibly be kept in force permanently, and later we even read of measures taken by the government to lower the high
price of coffee. From Sulayman’s time a tax was levied on coffee which was at a rate of 8 aspers per okka. In the Mufaiteh mountains and in the east for Christians; in 1190/1697 there was added an extra tax of 5 paras the okka, which was called bid’at-i kahwe, for both.

According to Hammer-Purgstall, GOR, v, 713, the question of the correct spelling of kahwa with h or k has been disputed in Turkey. Kahwa is actually found in several manuscripts e.g., in the opinion of al-Kūfīn above mentioned.

The coffee tree flowers in south-western Arabia and does best on the western side of the Sarât at a height of 1100 to 2200 m., where it finds in the depths of the valleys and on the slopes a fertile, moist soil and the uniform warm temperature necessary for it. The plantations on the slopes arranged in terraces (see the picture in Handbook of Arabia, Pl. xiv), however, needed regular watering; in addition, the mist (mu’dd, sukhayd-ni) that rises in thick (nmd*, sukhaydn) cloud, or fog, at a height of 1000 to 2200 m., where it finds in the Djawf. But it is the Haraz mountains, the east we find coffee grown in the land of the Yafi and southern areas of coffee cultivation are Bilad al-Sh-dh-y (Shadha?) in the land of the Zuhran (north of Cairo 1330, 16; cf. J. L. Burckhardt, Handbook of Arabia, 136, 137). The most southern areas of coffee cultivation are Bilad al-Aslr see infra; x, 306 infra; K. al-Dhakhd*ir wa ‘l-tufraf, Cairo 1302, 8-10; Hadidji Khalifa, Dhikannam ud, Istanbul 1145, 535-6; (French tr. in De Sacy, Cerise, i, 830-3, cf. also Hammer-Purgstall, Literaturgesch. der Araber, vii, Vienna 1856, 435); Pecew, Tārtīk, Istanbul 1283, i, 363-5; Na’mā, Tārtīh, Istanbul 1140, i, 551-4; Rāshid, Tārtīh, Istanbul 1282, ii, 425 f., 144 f.; Mehmend Hafid b. For Arabic and Persian works on coffee in addition to those quoted above and in the Bibliography, see Ahlwardt, Verzeich. der arab. Hand. . . zu Berlin, nos. 5476-5480; Fertisch, Die arab. Hand. . .
The arrival of European merchants in Mukha and the Red Sea in general was significant for the coffee trade in more than one way. Hitherto, the southern Yemeni rulers, governed by the more conservative Imam, had supplied the entire Islamic world with coffee beans. Indeed, the Yemeni rulers passed stringent rules against any attempts made by foreigners to export coffee seeds and seedlings (see Ellis, 29). But with the rapid spread of the habit of coffee drinking in Europe and other parts of the world during the 17th and 18th centuries and the consequent rise in demand, the monopoly enjoyed by the Yemeni rulers of the Red Sea was broken for ever, and its cultivation extended to Ceylon, Java, the Caribbean and South America (India Office Records, London, letter of 22 August 1732; Factory Records Egypt, vol. 2, no. 301, 160). Another unforeseen consequence was the greater availability of documentation on the volume and structure of trade, which the purely Islamic sources seemed to lack. The descriptions left by European travellers and traders and the records of the English and Dutch East India Companies not only provide general accounts of the trading conditions at Mukhā and Bayt al-Fakhr, the chief centres of the coffee trade, but also detailed information on exports of various nations, prices, methods of purchase, commercial regulations, the areas of coffee growth, and the economics of marketing. There can be little doubt that coffee was one of the most valuable commodities entering the international trade of the Middle East and played a vital part in the flow of silver specie it insulinward journey from Europe to India, bringing in the process considerable prosperity to regions that had few alternative sources of wealth.

The existence of coffee as a plant and a beverage became known in Europe towards the end of the 16th century. Jean de Lécluse, a herbarium collector, was the first scholarly historical treatise on the origins of coffee both in the Near East and Europe, attributed its first botanical reference to Prosper Alpinus, whose book was published in Venice in 1592. The work of Alpinus went through several editions in the 17th century and was followed by the treatises of Philip-Sylvestre Dufour, Nicholas de Bégny and John Ray. The interest aroused by coffee among the scientific world of Europe was matched by its economic and commercial prospects as seen by merchants. As early as 1660-19 the ships of the English East India Company were sent to Mukhā to inquire about trading possibilities, and the commander of the Sixth Voyage, Sir Henry Middleton, succeeded in making a journey to San‘ā’ (The First Letter Book, 240). In 1661, the Dutch merchant, Pieter van den Broecke, learned about coffee at Mukhā and managed to obtain very favourable commercial terms from the imām, much to the surprise and annoyance of Arabian, Persian and Indian merchants at San‘ā’ (F. de Haan, Friangan, iii, 804; K. Glammann, 183; E. Macro, 37). But it was not until the middle of the century that coffee began to be regularly imported into Europe by the Cape route. In the 1650s coffee was sold under the name of “coba de Mocha” in the public sales of the English East India Company in London, while the first reference to “cauwa de Mocha” in the Amsterdam auctions of the Dutch Company occurs in 1661-62 (A Calendar, 27; Glammann, 183).

Although the servants of the Dutch East India Company were perfectly aware of the economic importance of coffee in Middle East trade and often exported it from Mukhā to other Arabian and Indian ports, they made little effort to import it to Europe on a regular basis before 1690 (Daghi-Register 1664, 311). In contrast, the English imports were much greater during this period and there were few years between...
1664 and 1700 when coffee was not imported and sold in London. In 1664 the total quantity listed in the account books amounted to 44,932 lb. valued at £1,138, while in 1690 there was a peak import of 298,816 lb. worth £9,821 (India Office Records, London, vols. 26 etc.). In the first half of the next century the average annual imports were well over a million lb., the peak being reached in 1724 when the total imports were 2.67 million lb. The English sources also provide interesting information on the total exports of coffee from Yemen and the share of the different trading groups in the total. In 1726, for example, out of a total estimated export of 19,267 bales (each bale containing approximately 280 lb.), the Arab and Turkish merchants handled 10,330 bales or 54 per cent. The next largest exports were those of the English, both the Company and private, with 5020 bales (26 per cent), followed by the Dutch with 2000 bales (10 per cent), the French (1300 bales or 7 per cent), and the Persian and Indian merchants with 617 bales (3 per cent). However, it is probable that these figures were either underestimated or the season for this year was exceptionally bad. For in 1731 the chief merchant of the English factory stated that in good years the quantity of coffee exported varied between 60,000 and 70,000 bales, although in none of the actual reports sent home by the servants of the East India Company did the exports exceed 40,000 bales (Factory Records Egypt, vol. 1, no. 201, p. 518; vol. 2, no. 261, pp. 79-80). A possible explanation for the discrepancy lies in the difference between the weight of coffee in an English bale and in an indigenous bale, the latter being much smaller. (For the weights and measures of Mughā, see Factory Records Egypt, vol. 2, no. 209, p. 11, no. 311, p. 106). It is evident from these figures that the share of the Middle East as a consumer of coffee was overwhelmingly large. But with European demand at 40 per cent, its effect was both a rapid increase in cultivation and a progressive rise in the price of coffee. In 1672, a year of high demand, the price of coffee in Mughā was 45 Spanish dollars per bahar (approximately 450 lb.). The coffee was frequently sold at 100 dollars and in years of short harvest the price could rise to well over 170 dollars per bahar (Factory Records Surat, 16 Sept. 1672, vol. 3, fol. 16; Ovington, 271; Factory Records Egypt, vol. 1, no. 29, p. 56; vol. 2, nos. 334, 347, 344, 348 pp. 302, 324, 330, 342; Abstract, vol. 449, p. 406). The Turkish and Arab merchants seem to have purchased their coffee exclusively in the great inland mart of Bayt al-Fakhī [q.v.] and seldom used Mughā. Coffee was brought down to the coast by camels and shipped off through the ports of Luhayya and al-Hudayya. According to Ovington, Luhayya came into prominence when the trade of Mughā was disrupted by English warships during the short war with the Mughal emperor in 1687-88 (Ovington, 273). But it is also possible that the proximity of al-Hudayya and Luhayya to Djudda, which was the main intermediate market for coffee in the Middle East, was the reason why these ports were used by the Muslim merchants in preference to Mughā. Coffee was distributed in the Ottoman Empire through two separate routes. The most important one was through the Djudda, Suez, and Cairo, but substantial quantities also went through Basra and up the Euphrates. The demand in India and Persia was small and seldom exceeded 500 bales unless the Sūrat merchants were especially commissioned by the European trading companies in western India to purchase coffee on their behalf. However, with the increase in the consumption of coffee in Europe towards the end of the 17th century, the chartered companies fell into the practice of buying coffee directly in Mughā. The Dutch Company re-opened its factory in Mughā in 1696 after previously closing it in 1684 (Glamann, 186, 188). The English East India Company had sent their servants from Sūrat to Mughā during the trading season and had also despatched ships direct from London with superfugiaes who had the responsibility of purchasing coffee in Yemen. But in 1716 the Bombay Council decided to establish a permanent factory in Mughā with the aim of buying coffee all the year round and thus avoiding the high prices of the main trading season (Bombay Public Proceedings, 6 February 1716, vol. 4; Abstract, vol. 449, para. 49, p. 229). From Mughā it was only a short step to Bayt al-Fakhī, and during the early 18th century English, Dutch and French merchants regularly made their appearance alongside the Arab, Turkish and Indian traders in the coffee market of the inland town.

One of the reasons why the directors of the English East India Company had hesitated before opening a regular trading post at Mughā was the fear of religious intolerance and on one occasion it was definitely stated that the Muslim pilgrims on the Hajjī considered it a meritorious deed to insult and abuse any Christians they met with in the Red Sea region. The treatment of Europeans by the imam of Mughā and Bayt al-Fakhī were consistently more favourable than those given to the indigenous or Indian merchants. The export duty paid by the former was only 3 per cent ad valorem while the latter paid 5 per cent (Hamilton, i, 36). In addition, after the civil war of the late 1720s in Yemen, the new İmâm allowed the European companies to import coffee duty-free each year (Factory Records Egypt, vol. 2, no. 271, p. 10). It is true that the formal commercial capitulations given out at San'ā were often violated by the local governors who demanded additional payments for themselves, and the sellers of coffee to some extent had to make up the fiscal loss in the shape of a special levy on coffee sold to the Europeans. In 1721, for instance, it was reported from Mughā that very little coffee had come onto the market that season because the normal excise duty of one dollar per bahar had been suddenly raised to five dollars (Abstract, vol. 449, para. 8, p. 406). In Bayt al-Fakhī, according to La Roque, the tax was paid only by the seller (La Roque, 105). That the coffee trade yielded to the local rulers a lucrative source of income is shown by the high transit duty imposed on it by the governors of Mecca and Djudda and the pasha of Egypt, who raised the duty to 12 1/2 per cent in 1699 (Alg. Rijksarchief, The Hague, Koloniale Arch. Oost-Indië en de Kaap, no. 1810, 7 and 10 July 1719; Glamann, 192). There was also evidence that the Porte was alarmed by the effect of European competition on the trade of the Turkish merchants and sent several diplomatic missions to Yemen to try to persuade the İmâm to prohibit the export of coffee by the Europeans. The missions ended in failure when the İmâm demanded a compensatory income equal to the duty and the total purchase
value paid by the Europeans (ibid.). It is no exaggeration to state that the place formerly occupied by pepper and spices in the Levant trade was in some measure taken by coffee.

The international demand and the commercial expertise of the visiting merchants were responsible for creating a fairly sophisticated organization in the coffee trade. Very little information is available on the economic structure of its cultivation, but it seems that coffee was grown mostly by smallholders who brought the ripep and dried berries to the market themselves, although there were also large growers who employed the big merchants of Bayt al-Fakih to market their products (Factory Records Egypt, vol. i, no. 166, p. 481). The markets of Mukhā and Bayt al-Fakih were served by distinct and separate growing areas, the supplies coming to Mukhā being from villages to the south. The areas supplying Bayt al-Fakih were much more extensive and varied from one and a half day's journey from the latter to six days. The best coffee came from Wosab and Saffal, but the output of this type was generally small. The next grade purchased by the Europeans was grown in Harrass, Rimah, Himmah and Doran, while coffee from Selba, Sinan and Aden was brought to the market in a very dirty condition and seldom bought for market in the hope of higher prices. On several occasions the Dutch servants made competitive bids, but the output of this type was generally small. The beans were nearly always cleaned and given an initial degree of processing before being sold, although in years of high demand they could be offered "ungarbled" and protests made by the English and the Dutch against such practices met with the rejoinder from the governors that they could not compel their subjects to sell coffee only in a particular state if the Turkish and other merchant were prepared to buy what was offered (Factory Records Egypt, vol. 2, no. 319, p. 227).

The main trading season in Mukhā and other ports extended from March to August, when ships from Suez, Djudda, Baṣra and Sūrat arrived to buy coffee and exchange their cargoes of foodstuffs and Indian piece goods as well as European woolen goods. The coffee market was particularly sensitive to the timing of the ships' arrival and departure, and the mere rumour of the sighting of a European or Turkish merchantman at sea could send up the price at Bayt al-Fakih or lead to the withholding of supplies from the market in the hope of higher prices. On several occasions the Dutch servants made competitive bids, but each time gave way before the higher bids of other Europeans and ended up without purchasing any coffee. It was only later that the servants of the English Company discovered that this was a deliberate plan in order to keep up the price of Yemen coffee, so that the product of their own plantations in Java could be sold more advantageously in the home market (Factory Records Egypt, vol. 2, no. 216, p. 9). But in general the most important influence governing the price at Mukhā or Bayt al-Fakih was the wholesale price obtaining at Djudda and Cairo, the Yemeni merchants keeping themselves fully informed by a system of local correspondence. One of the by-products of the coffee trade was a very large influx of precious metals, largely silver, into the Red Sea area, which enabled the traders to import luxury goods from India and elsewhere, and the Indian ships returning to Sūrat mostly carried specie. There was also an active banking system in the Eastern Ocean and the Red Sea being the first made by the French in the years 1708, 1709 and 1710 (first published in French in Amsterdam 1710); Prospérité Alpint de Plantis Aegypti liber...accessit etiam liber de balsamo alias editus, Venice 1592; Philip-Sylvester Dufour, Traites du Café, du Thé et du Chocolat, Lyon 1585; Nicholas de Blegny, Le Bon Usage du thé, du café et du chocolat pour la préservation et pour la guérison des maladies, Paris 1687; John Ray, Universal History of Plants, London 1687; The First Letter Book of the East India Company 1660-1619, ed. KAHYĀ (KETKHUDA) or DJENAZE HASAN PASHA. Ottoman grand vizier under Sultan Selim III. A slave of Circassian origin, he served different Ottoman dignitaries until he became KAHYĀ (KETKHUDA [q.v.]) of Melek Mehmed Pasha [q.v.], thus being known later as Ketkhudā Hasan Pasha. His military skill first became evident during the Greek rebellion in Morea, when as mütesellim of Tripolitza he defeated the rebels besieging the town on 23 Dhu l-Hijja 1183/19 April 1770. He was appointed commander of the fortress Vidin with the title of vizier in Muharram 1202/November 1787 while Melek Mehmed Paša became serlacher of Vidin. On the latter's dismissal in Rabī' II 1202/January 1788, Hasan Paša succeeded him. During the Russian and Austrian war his victories in the summer of 1788 at Orsova, Mehadiya and Sebes against the Austrians won him such a reputation that the new sultan, Selim III [q.v.], appointed him grand vizier on 3 Ramaḍān 1203/28 May 1789. As he was ill, he arrived at the army headquarters in Rusuk on a stretcher, thus acquiring his second nickname of Djenaze (corpse). His grand vizirate proved to be unhappy. Indeed an Ottoman army under the command of Kemānḵesh Mustafā Pasha was beaten by the Austro-Russian allies at Fokshani on 9 Dhu 'l-Ka'da 1202/August. Furthermore, the main army under his own command was defeated at Martineshti, near the Rimnik River, on 2 Muharram 1204/22 September 1789. With the ensuing capture of Vidin and Bucharest by the Austrians and that of Akkerman and Bender by the Russians, Hasan was dismissed from the grand vizirate on 5 Rabī’ II/23 November and replaced by Djezārīlī Ghaṭī Hasan Paša [q.v.], who had success-
fully defended Isma'il against the Russians. Nominated commander of Rusçuk, he was exiled to Bursa. HisAda (Temple) in Dumlupınar in January 1790. Two years later, in Dhu'l-Qa'da 1206 (June 1792), he was appointed governor of Silistre, but was later transferred to Crete. He was governor of the Morea when the French landed in Alexandria on 1 July 1798. After a period of retirement in Yefi-Shehr (Larissa), he later became commander of Bender, but a sudden attack by the Russians obliged him to surrender it on 27 Ramadan 1221/8 December 1806 and he was taken to Russia as a prisoner of war. After being released, he lived in Yefi-Shehr until his death around 1225/1810. Although a brave soldier, he possessed the qualities neither of a military leader nor of a statesman.

— KÂ'İD (A.), an imprecise term, but one always used to designate a military leader whose qualities might vary from captain to general. Semantically, it is the equivalent of the Latin dux. The plural most frequently employed by historians is ḍawwâd. For the army in Muslim Spain, this title corresponded to general or even commander-in-chief. In the navy, kâ'id al-usūl (= kâ'id al-uṣūl or kâ'id al-baḥr (= kâ'id al-baḥr, kâ'id fi l-baḥr) was equivalent to "admiral". But Ibn Ṣaḥādīn intimates that the term current among sailors of his day was al-milân (pronounced with a back lâm), a Catalan loan-word (lughat al-Ifrandia) which is evidently related to the Castilian and Portuguese almiránte. The kâ'id al-ṣaṣīl was the admiral-in-chief. On a warship the kâ'id commanded the fighting men on board (mufyidtīlun), while the raṣīl directed the fighting chief. On a warship the kâ'id was the admiral-in-chief and the government deemed it dangerous for him to dwell within his native tribe, he was compelled to live at court, with the honour due to his rank. This power was known as a kâ'id raṣīl (admiral kâ'id), "governor of himself".

— KÂ'ÌF (see kiyâfa).

**KÂ'İM ÂL MUHAMMAD,** "the Ka'im of the family of Muhammad", in Shi'i terminology commonly denotes the Mahdi (q.v.). The term kâ'im, "riser", was used in Shi'i circles at least from the early 2nd/8th century on in referring to the member of the family of the Prophet who was expected to rise against the illegitimate regime and restore justice on earth, evidently in contrast to the kâ'id, or "sitting", members of the family, who refused to be drawn into ventures of armed revolt. The term thus was often qualified as al-Kâ'im bi 'l-sayf, "the one who shall rise with the sword". It also appears frequently qualified as al-Kâ'im bi-amr Allāh meaning both "the one who shall rise by the order of God" and "the one who carries out the order of God". With the latter connotation the term could be applied to any imām. Thus some Imāmīs kādākhs stress that every imām is the Ka'im of his age (Kâ'im ahl samānīh). In its specific sense the term meant, however, the eschatological Mahdi, who as such was sometimes called Kâ'im (more commonly: Šāḥb) al-samān, "the Lord of the (final) age". Various early Shi'i sects expected the return of the last imām recognized by them, whose death they usually denied, in the role of the Kâ'im. In Imāmī and Isma'īlī usage the term Kâ'im has widely replaced that of Mahdi.

Among the Imāmīyya, whose imāms, especially
from Dja'far al-Sādīk [q.v.] on, made it a principle to refuse involvement in revolutionary activities, numerous traditions were related concerning the rising (khīyām) of the expected Kāʿim imām, the signs (ʿalāmātāt) indicating his appearance, his acts and his conduct. After the death of the eleventh imām, the twelfth, Hidden Imām was identified with the Kāʿim who on his appearance will fulfill the predictions about his actions and miracles. Imāmī doctrine distinguishes between inevitable (maḥdīāmāt) signs for the coming of the Kāʿim and conditional (mustaʿṣarāt) ones which may be cancelled by God. The traditions do not fully agree as to which signs are inevitable. Most often mentioned are: 1. The coming of the Yāmānī who shall appear in the Yamanī calling for the support of the Kāʿim; 2. the appearance of the Sufyānī [q.v.] who will rise in the Dry Wādi (al-Wādī al-Yābīs) in the month of Rāqiq in the same year as the Kāʿim and will seize Damascus and the five provinces of Syria before being killed by the Kāʿim; 3. a voice (nīdāt or ṣayba) from heaven calling the name of the Kāʿim; 4. the swallowing up (ṣuṣaf) of an army sent by the Sufyānī against the Kāʿim in the desert (al-baydāʾ); and 5. the killing of the Pure Soul (kāl al-nafs al-ṣahīya), whom the Kāʿim will send to Mecca as a messenger, by the Meccans between the Rukn and the Makām, concerned with the coming of the Kāʿim in Imāmī doctrine is the raḍīa [q.v.], the return to life of some of the wicked and the righteous of earlier generations, giving the latter the chance of taking revenge for the injuries they had previously suffered. The Kāʿim is expected to proceed from Mecca where he will reside and rule the world. His reign, according to a well-attested tradition, will last forty days of turmoil after the passing of the Kāʿim until the Resurrection and the Judgment.

Imāmī doctrine added a further dimension to the concept of the Kāʿim describing him as Kāʿim al-ḥiṣāmā, "the Kāʿim of the Resurrection", who shall act as the Judge of mankind, and attributing a cosmic rank to him above that of prophets and imāms. For details see ISMĀʿĪLIYYA, Doctrine. Druze doctrine recognizes Ḥamzā b. ʿAll as the Kāʿim al-samān. See DURŪʾ.

AL-KĀʿIM BI-AMR ALLĀH, 26th ʿAḥādīs calīph, whose rule lasted from 422/1031 to 465/1075, corresponding with the end of the Buwayhīd period and the beginning of the Saljuq period in Irāq. Born in 391/1001, the son of an Ethiopian concubine, he was named heir shortly before the death of his father, al-Kādir [q.v.] and succeeded to the throne unopposed. The usual oath of allegiance was taken on 13 Dhu l-Hijjah 422/12 December 1031.

At this period, although the caliph had only very limited personal resources at his command, he had recovered a measure of freedom, to the extent that he was able to arbitrate in the rivalry between the Buwayhīd amīrs. The amīr al-umārāʾ Djaʿlāl al-Dawla [q.v.] was in fact threatened by his nephew, Abū Kālīqdār [q.v.], ruler of Fars, and was trying to impose his authority. As early as 423/1032, al-Kāʿim entrusted the jurist al-Mawardi with a confidential mission to Abū Kālīkūr, refusing to grant the latter any title but that of Malik al-Dawla; soon after, Djaʿlāl al-Dawla, who had invited the Turks against the caliph, was reconciled with al-Kāʿim and even agreed, after an incident which cast doubt on the morality of the amīr, to apologize to him. A few years later, in 428/1039, Djaʿlāl al-Dawla had Abū Kālīkūr recognized as his delegate, then requested new titles, those of gāhānādāk al-ʿamār and malik al-mulk; in spite of hostile public opinion, the caliph awarded these exceptional titles to the amīr after he had obtained the consent of the principal fīqāhīs. The situation remained tense, from a political as much as from a religious point of view, in 435/1043 Abū Kālīkūr thought it opportune to give a new reading of his father’s profession of faith, al-risāla al-khādirīyya. Then in 434/1043 he had to make a vigorous protest against Djaʿlāl al-Dawla’s wish to take from him the collection of taxes paid by tributaries or diwānīs; after having threatened to leave the capital and have the mosques closed, he managed to make the amīr al-umārāʾ capitate on this point.

The following year, the authority of the caliph of Baghhdād was once again recognized in Irāk by the Zirid sovereigns, who had been formerly Fāṭimid vassals, and when the town of Aleppo similarly escaped from the control of the rulers of Egypt, a new problem arose through the approach of the Saljuq amīrs. In 435/1044 Tughrīl Beg seized the city of Rasyī, and the caliph sent al-Mawardi to him as ambassador. The object of this embassy is explained in different fashions by the chroniclers, but it seems that the caliph, while bestowing the title of maṣūla Amīr al-Muʾminīn on Tughrīl Beg, wished at the same time to protest against the pillage of the recently captured town. However, the policy of keeping a balance between the Buwayhīd amīrs and the Saljuq amīrs which the caliph initiated was speedily compromised by various events.

The death of Djaʿlāl al-Dawla in 435/1044 brought the fulfilment of Abū Kālīqdār’s ambitions; proclaimed amīr al-umārāʾ, he received the title of Muḥsyīʿ l-dīn and applied himself to limiting the caliph’s freedom of action. After first opening hostilities with Tughrīl Beg, he made peace with him in 439/1048; he died soon after and was replaced by his son, who received the title of Malik al-Rahīm [q.v.]. Until 444/1052-3, Tughrīl Beg, after having seized Isfahān and approached Irāk, remained at the borders of the country, where troubles multiplied: incidents between Sunnis and Shiʿīs, agitation by the ʿayyarīqūn [q.v.], and Fāṭimid propaganda. When the Turkish amīr al-Basāṣīr [q.v.] accused the caliph’s vizier, Ibn al-Muslima, of summoning the Saljuqs to defend the caliphate, the vizier denounced him as a Fāṭimid agent; whereupon the caliph was informed that al-Basāṣīr was preparing to overthrow him. Then, according to some chroniclers, the caliph himself or his vizier Ibn al-Muslima decided to appeal to Tughrīl Beg for help. In fact, the outcome of these events suggests that the caliph, who never willingly accepted the advent of the Saljuq amīr in Baghhdād, was not responsible for this action, which in any case was inevitable, whatever the vizier’s true attitude might have been.

At the end of Ramādān 437/December 1055, Tughrīl Beg entered Baghhdād, though declaring that he was simply passing through, and the ḥudba was
proclaimed in his name. A few days later, on 2 Shawwal/25 December, he took up residence in the "royal palace" and received from the caliph the titles of ruhn al-dīn, šāhānšāh, and sultan. The caliph also consented, despite himself, to give Tughhrī Beg the hand of his own daughter. Only two years later, in 449/1057, he was received in solemn audience by the caliph, who conferred on him the new title of Malik al-muṣṭafīr wa l-maḏāhib and gave him authority over the lands controlled by the Fāṭimid caliphs.

The rebellion of al-Basāsīrī broke out in 450/1058; for a few months the rebel succeeded in having the ḥuṣnīya pronounced in the name of the Fāṭimid caliph while Tughhrī Beg was occupied in Iran in suppressing a revolt by his brother. Though first choosing to stay in Bāghdād, al-Kāɨm was exiled on the order of al-Kūndurī, the former imprisoned caliph, and the death of al-Basāsīrī soon enabled him fully to exercise his powers as sultan once again. The caliph could therefore no longer continue to play off rival amirs one against the other and found himself confronting Suldūq sultans as he had earlier confronted Buwayhī amirs. The only difference, though that an important one, was that the new controller of the reins of military power supported a policy of Sunnī restoration that was closer to the caliphal position than Buwayhī policy had been.

In spite of appearances, relations between the caliph and Tughhrī remained no less strained. The sultan’s reign was dominated in this respect by his marriage with the caliph’s daughter; not only did he succeed in marrying her, he also managed to take her far from Bāghdād in spite of her father’s opposition.

The death of Tughhrī Beg on 8 Ramadān 453/3 September 1063 inaugurated a somewhat confused period during which Alp Arslān [q.v.] was mainly concerned with eliminating rivals and lighting the Byzantines. Al-Kāɨm smoothed matters for him by opposing the ambitions of the ʿUqaylid amirs and refusing the offer of the Kurdish amir, Hazarasb, governor of al-Ahwāz. For his part, Alp Arslān showed himself desirous of gaining the favour of the caliph by returning his daughter to him and having imprisoned, then put to death, al-Kundurī, the former vizier of Tughhrī Beg who had been held responsible for the intrigues leading up to the marriage. Alp Arslān was thus recognized as amīr al-umārāʾ and sultan in Rabīʿ II 456/March-April 1064. He never lived in Bāghdād and died in Rabīʿ I/January 1073. After receiving the privilege of the ḥuṣnīya from the month of Raḏāb, his son Malik Ṣaḥḥ [q.v.] obtained the official investiture from the caliph a few months later. The latter died on 18 Ḡaḏār 457/March 1065, having in the usual way named as his heir his grandson ʿUbayd Allāh, who was to take the name of al-Muḍṭaddī [q.v.]. Religious strife was a particular feature of this latter period. The foundation of the Niẓāmīya madrasa in 459/1067, which was put under the direct protection of the sultan and aimed at the diffusion of Ṣaḥīḥ law, triggered off the hostility of the Ḥanbalīs. Various incidents took place in the capital and the caliph, who hesitated to make a stand without consulting the sultan, was unable to control them.

Thus al-Kāɨm, who had followed in his father’s footsteps, was unable either to restore the power of the caliph or to impose the doctrine defined in the Risāla ḥadīṣyya; all the same, the caliphal concept had been successfully defended in his day by the first authors of treatises on public law, al-Ḥaḏrī [q.v.] and Ibn al-Farrāʾ [q.v.]. It was up to his successors to try to pursue his policy.

(D. Sourdel)
the tutor, the spiritual father of al-Ka'im, the musta-
ika'im Imam, to whom he handed over the imamate of which he was the "trustee". The first genuine Fatimid caliph was thus al-Ka'im, and the Fatimids' nasab can be traced back from al-Ka'im to Fatima, through her son al-Ḥusayn.

Criticised by Ivanow in his Rise, discussed in detail by S. M. Stern in Heterodox Ismā'īlism and again in the present author's (unpublished) thesis Le Califat fatimid au Maghreb, the idea put forward by B. Lewis remains attractive. The notion of istiṣāda would correspond to an established fact: the persecutions endured by the Fatimid pretenders, under the 'Abbāsids, compelled them to act in a clandestine manner and to entrust the imamate during the period of occultation (ṣaīr) to their "trustees" (muṣtaʿda) or "proofs" (muḥāda).

On his death, al-Mahdī had left a critical situation in the remoter part of the Maghrib, caused by the volte-face of the lord of the Miknās, Mūsā b. ʿAbī ʿl-ʿAyyās, who had transferred his allegiance to the Umayyads of Spain. Immediately after his accession to the throne, al-Ka'im launched an expedition aimed at re-establishing his power in Morocco and expelling the influence of his rival, the Umayyad al-Nāṣir. The Fatimid army, under the slave Mayṣūr, crossed the Maghrib in a single thrust and reached Fez. Another of al-Ka'im's officers, the slave Ṣandal, had meanwhile descended upon Naktūr, which he captured, killing the local Shālīb ruler in Shawwal 324/September 936. He then rejoined Mayṣūr outside the gates of Fez, which at that time was under siege. Finally the city surrendered, and the Fatimid general re-established the authority of the Idrīsid Bani ʿAbd al-Muḥammad, who had remained loyal to the Fatimids, before returning victorious to Ifrīkiya.

In order to restrain the hostile Berber tribes who had settled on the frontiers of his kingdom, al-Ka'im took steps to strengthen the authority of ʿAll b. Hamdūn, an Arab of ʿDhul-Qarnayn origin and ruler of Masiṣa (q.v.), over the territory of the Kamlān who, during the Idrīsiyan campaign, had been moved to the southeast of Kagrawān. To counter the Maghrawa, a powerful branch of the indomitable Zanātka, he pursued an alliance with the ʿṢanḥāda of Zīrī b. Manād, whom he helped to find the city of ʿAshīr (q.v.), in 324/936, in the heart of the Algerian Atlas. The Huwārā of the province of Tripoli, who had risen in revolt under the leadership of a Kurāqhi named Ibn Tālīb, a pseudo-imām, were swiftly brought to heel.

His authority being thus re-established in the south of his realm, al-Ka'im at once considered a resumption of hostilities against the ʿAbbāsids in their Egyptian province. As it is recorded under the year 323/935, this campaign against Egypt appears to have been organized by al-Mahdī himself shortly before his death. In fact, as soon as he succeeded to the throne, al-Ka'im must have resolved to employ the troops stationed at the base at Barka, reinforced with elements from Ifrīkiya, to attack Egypt, where he had already suffered two successive defeats. It was therefore in his reign, as al-Kindī states categorically, that the third raid on Egypt took place, again without success. This time, however, the Fāṭimid attack was made at an unpropitious moment. Having rebelled against the Idrīsid governor Muḥammad b. ʿUsbādī (q.v.), the officers commanding the fleet, ʿAll b. Badr and Badjīm, and also the commander of the garrison of Alexandria, Ḥabāshī, fled to Barka where they placed themselves under the authority and in the service of al-Ka'im. To re-

inforce them, al-Ka'im sent troops under the command of his freedman Zaydān and his officer ʿAmīr, known as al-Majdūnīn. The Kutāma occupied Alexandria on 6 Dhuʾal-Ḥiḍādhi I 324/1 April 936, but Ibn Tughdī, reacting swiftly, succeeded in freeing the town and forcing the Fāṭimid troops to withdraw towards Barka.

In the year of his accession, al-Ka'im resolved to resume naval operations against the Christians. A strong squadron of twenty sailing vessels, under the command of an Arab officer from the jund of Tripoli, Yaʿqūb b. Ishāq b. al-Lard, left Mahdiyya on 7 Radjab 323/23 June 934 and sailed towards Italy. Yaʿqūb intercepted a number of Christian merchant ships on their way from Spain and proceeded as far as Genoa, which his men captured after a fierce siege. Having sacked the town and carried off much booty, the Fāṭimid admiral set sail for Mahdiyya, arriving on 25 Ramadan 323/28 August 935. In addition to this attack, al-Ka'im endeavoured to intensify the dijihād in the Byzantine territories in eastern Sicily and Calabria. To Palermo he sent a new governor, Khallī b. Ishāq, the brother of the admiral Yaʿqūb and a talented poet and his favourite general, who subjected the island to a reign of terror. For four years, from 325/937 to 329/941, Khalīl made himself notorious by his tyranny over Muslim and Christian alike. Some Arab elements who had settled there under Aḡhlabīds were forced to flee to Christian territory, and a number of them were constrained to adopt Christianity. Native Sicilians were dispossessed of their lands and compelled to settle in forts situated along the frontiers of the Christian territories. The cadastral register (see Xānūn) was burnt, thus rendering the verification of land taxes impossible in certain regions such as Agrigento.

After his accession al-Ka'im proved particularly anxious to increase his military strength and to consolidate his authority in the interior of the kingdom. For this reason, from the time of his reign the internal policy of the new rulers of Ifrīkiya became more severe. Under al-Ka'im, the country seems to have suffered to a greater extent from excessive taxation and religious persecution, and the Khāridjī agitation which sprang up in the Aures and Kasīliyya thus found suitable soil.

However, al-Ka'im's attitude towards this agitation seems strangely passive. He allowed the rebellion to take root among the hostile tribes of the Aures whom the garrison of Baghaya were unable to hold in check and, when the Berbers poured through the valley of the Oued Mellegue under the banner of their Nukkār leader, Abū ʿYāzīd (q.v.), capturing in succession Tebessa, Marmādžījān, Larībūs, Sībība and Dougga (Tugga Terebinthina), in 323/936, he limited himself to a static defensive strategy. His reaction was lacking in both energy and foresight. Yet he had at his disposal large numbers of troops (70,000 men, according to al-Ḥuṣayn), well equipped and well organized. Instead of launching a vigorous counter-offensive and sending his powerful forces directly against the enemy, he adopted the unfortunate idea of dividing his troops among different strategic points, thus compelling them to remain stationary and to await the invaders, and also dividing his own effort, while leaving the enemy free to take the initiative in operations. In this way, a body of troops under the command of the slave Bushra took up their position at Bēja, another at Kagrawān under the command of Khallī b. Ishāq, and a third was on the road between Kagrawān and Mahdiyya, led by the slave Mayṣūr. Abū ʿYāzīd had no difficulty in defeating each of these
three adversaries in turn, and in Dījamād I 333/January 945 he began a siege of the capital, Mahdiyya. Al-Kā'im, however, succeeded in arousing vigorous resistance to Abū Yazid in this maritime stronghold. Repeated attacks by the rebels were checked at the gates of Mahdiyya, which remained impregnable despite the rigours of the siege. The ardour of the rebels ultimately evaporated, and many tribal contingents returned to their mountains since there was nothing more in Ifrīqiyya to pillage. Harrassing operations were successfully conducted by Fātimid troops outside Tunis and Sousse, at Cape Bon in particular, and on Abū Yazid’s rearguard, and his threat to the capital was reduced considerably. Thus, when al-Kā'im died there in Shawwāl 334/May 946, the moment had already come for his son and successor Ismā‘īl, the future al-Manṣūr, to pass over to the offensive and to spend many months on the task of crushing the revolt.

Kā‘īm (., originally a; cf. ʿkām), the name formerly used for paper money in Turkey, an abbreviation for kā‘īm-i muṭṣeber. The word kā‘īm was originally used of official documents written on large, long sheet of paper; the first paper money was also manuscript on large sheets, and was also known as sekim kā‘īmesi, kā‘īm-i naḥāisi, ewrāk-i naḥāisi, and ʿenām-i muṭṣeber. Although in the 20th century bank notes have been called kā‘īm, this term was not used for notes of the Imperial Ottoman Bank, a private bank under government charter, but only for paper issued by the government itself. The early kā‘īm were interest-bearing treasury notes; they are, however, to be distinguished from the many other kinds of short and long-term interest-bearing paper issued by the Ottoman government or its individual departments and known variously as hāsāmī tama‘ā, serqi, ekṣām-i ʿedāid, ekṣām-i mīmātā, etc. (see asḥām), and also from the Ottoman bonds sold principally to European investors from 1854 on. The kā‘īm became paper money, while the other sorts of paper did not, since from the start kā‘īm were intended to circulate on a par with coin and to be accepted as such by state offices and tax collectors. When, in the middle of the 19th century, the forced circulation, later issues of kā‘īm were in low denominations and without interest, it became even more obvious that this was paper money.

The first issue of kā‘īm probably occurred in July or August of 1840, in the crisis period, as ‘Abd al-Ma‘ṣūl [q.v.] began his second year as sultan. (Taḥrim-i Pākā‘ūl, 15 Rājdāb 1256; London Times, 18 September 1840). These handwritten treasury notes had a face value of 500 piastres, matured in eight years, and bore interest payable semi-annually to the bearer. Modern Turkish scholars uniformly put the interest rate at 8%, but it appears that the first issues bore 12%/ year. The total value of the first issue amounted to 150,000 Turkish pounds. Other larger issues followed in September and October in denominations of 50, 100, 250, 500, and 1,000 piastres; the format was somewhat that reduced for convenient circulation. These series were unnumbered and easy to counterfeit, although in the second issue indelible ink was used and the tughra [q.v.] and seals of the finance minister and ministry were affixedas a further measure against the growing counterfeiting, new printed kā‘īm were decreed in 1841 (though perhaps not issued until 1842) and the holders of manuscript issues were given three months to exchange theirs for the new. The circulation of the kā‘īm was now restricted effectively to Istanbul, since provincial officials were unable to distinguish the counterfeit from the genuine. These issues were regularly called ʿAṣār Pāshā kā‘īmesi after the then finance minister. When the printed kā‘īm were counterfeited, a new printing (1842?) was done in ṣarḥ letters. Interest was reduced in 1844 to 6%.

Interest was regularly paid in the 1840s, and some holders simply kept the kā‘īm as an investment. But new issues included smaller denominations, down to 10 and 20 piastres at the time of the Crimean War (known as ordu kā‘īm), that bore no interest. An estimated 1,750,000 pounds of kā‘īm circulated at the start of the war. During the war this amount was more than tripled, and the value of kā‘īm declined seriously. Three efforts to retire the kā‘īm after the war, through two foreign loans and a capital levy on the Istanbul populace, narrowly failed. A very large issue of 12,500,000 pounds to meet current needs in March/April 1861 produced chaos. On December 12 of that year, when the kā‘īm had depreciated to one-third or less of face value, merchants refused it, shops were sacked, and panic gripped Istanbul. Fu‘ād Pāshā, newly appointed grand vizier, drew up a plan involving a new foreign loan to retire the kā‘īm, government economies, the institution of a central government budget, and the creation of the Imperial Ottoman Bank. With English backing, the loan of 1862 sufficed to retire all kā‘īm, which were redeemed 40% in coin and 60% in so-called Konsolide (Consols) or ekṣām-i ʿedāid; government bonds at 6% interest.

No further kā‘īm were issued until the crisis period initiated by the revolt in Bosnia-Herzegovina: two million pounds on 13 August 1876, one million
on 11 November, seven million on 5 January 1877, and six million on 3 September. Denominations ranged from one piastre to one hundred piastres, none bore interest. Only about two million were retired as intended, and the value plummeted rapidly to a bottom of 1200 piastres in 1879–80.

Again, the critical years of World War I brought further issues of paper money. When the Ottoman government pressed Germany for gold shipments to meet war expenses, the German government urged the Turks to issue paper money instead. This they refused to do without gold cover. The solution conceived was that the Ottoman Public Debt Administration acted as a bank of issue for seven issues of kâ'ime, 1915 to 1918, totalling 160 million Turkish gold pounds. Each issue but the last was covered either by gold or by treasury certificates deposited by the Ottoman government in Berlin under the seal of the Ottoman Public Debt.

The Turkish Republic inherited this same paper currency, which was not increased in amount after 1918, but decreased somewhat through wear. After 1923 the value remained relatively stable. Worn bills were replaced in 1927. From the 1930s to the present (1973) the Türkiye Cumhuriyeti Merkez Bankası has issued paper money, earlier referred to as evrak-i nakdiye and now usually just as kâşi para or banknot; the term kâ'ime has become obsolete.

KĀ'IME — KĀ'IM-MAKAM  Taşkin, Germany and the Ottoman Empire, 1914-1918, Princeton 1968, 271-82; Mine Erol, Osmanlı İmparatorluğu'nda Kâşî para (kâ'ime), Ankara 1970 (now the best study, partly based on archives, many illustrations); Tahtım-i Wehdâ'ı 1256/1840, nos. 206, 210, 213, 216. See also ASHĀM, DUVÜN-i ÜMÜMİYE. (R. H. DAVISON)

KĀ'IM-MAKAM In the Ottoman Empire the title of kā'ım-makâm was borne by a number of different officials, the most important of whom was the sa'dâret kā'im-makâm or kā'im-makâm pağâ'î who stayed in the capital as deputy when the grand vizier had to leave for a military campaign. The appointment of a kā'im-makâm seems to have begun in the 10th/16th or even in the 9th/15th century and it lasted until the end of the Empire. The kā'im-makâm enjoyed almost all the authority of the grand vizier, issuing firmans and nominating functionaries, but he was not allowed to intervene in the area where the army was operating. He was especially influential in the administration of the capital. Selected earlier from among the viziers, he often intrigued against the grand vizier with the aim of succeeding him. A kā'im-makâm was also appointed at the removal of a grand vizier when the successor had to travel from some provincial governorate. In this case the tenure of the kā'im-makâm lasted only for a short period without having much distinction. During the last decades of the Ottoman Empire a cabinet minister or the şeyhâh-i İslam [q.v.] was usually nominated kâ'im-makâm upon the grand vizier’s illness or his absence from the capital.

The reform movement in the Empire added new meanings to the term. The position of a kā'im-makâm was now instituted as a military rank corresponding to lieutenant-colonel in the ‘Âsâkir-i Mânsûr-i Mümâmedîye Army, established by Mahmut II in 1245/1826. The term remained in common use until the 1930s, to be replaced then by that of yarbay. The governor of a sandîq [q.v.] was equally called kâ'im-makâm when the Ottoman civil administration was reorganized in the first years of the Tanzimât [q.v.]. By the law of 8 November 1864 revising Ottoman provincial government, the kâ'im-makâm became the governor of a bâdâ’i [q.v.], appointed by the sultan. The republican regime, maintained in essence the 1864 law, and thus the kā'im-makâm (“kâymakâm”) still continues to be the administrator of a bâdâ’ı.

In Ottoman Egypt, while possessing in general the sense of “lieutenant” of a higher official, kâ'im-makâm had a number of specific usages.

(a) Before Muḥammad ‘All Pâgha, the term was applied (i) to the acting viceroy, who held office between the death or removal from office of one viceroy and the installation of the next. After 1913-16, the office seems invariably to have been held by a boy, hence, in practice, by a Mamlûk household. The deposition of a viceroy and the appointment of a kâ'im-makâm became, particularly in the 12th/18th century, a device by which a
Mamluk faction would legitimize its ascendancy. The term was also used in this period, (ii) for the general agnates of mulasim in the administration of his iltsam; he would usually be a member of the mulasim's Mamluk household; (iii) for the head of a naval commander (kapudan), administering his master's financial assignments in emanat.

(b) Under Mu'ammad 'Ali Pagh'a, the old usages of the term became obsolete, and it was applied to specific grades in the military and administrative hierarchies: (i) In the reorganized and westernized army, the rank of ka'im-makam was equivalent to lieutenant-colonel; (ii) in the administration the ka'im-makam was in charge of a nahiya (subdistrict) and had special responsibility for the maintenance of the irrigation-system. His immediate superior was the hakim al-khuft (district officer).

KA'IT BAY, AL-MALIK AL-ASHRAF ABU 'L-NASR SAYF AL-DIN AL-MAMHUD AL-ZAHIRI, sultan of Egypt and Syria (872/1468-901/1496), was purchased by Barsbây [q.v.], manumitted by Sultan Diakmak, became a life-guard, then Dawuddar Saghir, i.e., assistant dawuddar in the office of the Grand Dawuddar [see DAWuddAR], then amir of 10 Mamluks under Inal [q.v.], Tablakhdna (i.e., amir with the right to have a band accompanying him), under Sultan Khughdadam [q.v.], inspector of houses of refreshment and shortly afterwards commandar of a thousand (muhammad Alif). In 872/1467-8 he became Ra's nawbat al-Nawwâb (i.e., Commander of the Mamluks of the guard).

When Temirbogha ascended the throne in Djamada 1392/Nov. 1467, he appointed his friend Ka'it Bay alâbèk but the sultan had no real power, as he had very few supporters among the Mamluks under his command. He had not the means to win over new followers; the treasury was empty. After an unsuccessful rising by the Ustadar Khârî Bey the crown was offered in the month of Rajab of the same year (Feb. 1468) to Ka'it Bay, who accepted it after some hesitation. Temirbogha retired into private life to Damietta, to which he was not taken as a prisoner but travelled in perfect liberty accompanied by some friends. Unlike other Ottoman Mamluks, Ka'it Bay never allowed deposed sultans or descendants of former sultans throughout his reign with magnanimity and honour, frequently invited them to polo tournaments in Cairo, allowed them to make the pilgrimage to Mecca and even allowed them to visit the capital in his absence without any suspicion or fear of conspiracies.

Ka'it Bay's chief political problem was his relations with the Ottomans. The rivalry between them and the Egyptians found expression in the fighting among their vassals in Asia Minor. The ruler of Albistân [q.v.], Shâh-suvâr [see Shâh 'L-Kadr] was at war with Egypt [see KURSHADAM] and was secretly supported by the Ottomans, while Ka'it Bey assisted prince Ahâm of Karamân in his war with Mehemmed II. The first two expeditions sent against Shâh-suvâr (872 and 873) ended disastrously through the carelessness of the Egyptian commanders and more especially the lack of discipline among their troops and the rivalry between the Egyptian and the Syrian corps. Ka'it Bay later succeeded in depriving Shâh-suvâr of the help of the Ottoman sultan by agreeing to cease assisting Ahâm of Karamân. Thus weakened, Shâh-suvâr was decisively defeated in 876/1471 by the Atâbek Ezbek. Shâh-suvâr fell back to Zâmulû. Desisting there, he castigated his people, against that he was allowed to remain in possession of his kingdom as vassal of the sultan; but he was taken prisoner, brought to Cairo and executed contrary to the laws
of war. The prince of the Ak-Koyunlu, Uzun Ilasan, the ruler of Diyar Bakr and a part of Persia, was a dangerous rival to Ka’it Bay, and advanced from triumph to triumph; in 892/1488 he defeated the sultan of the Kara-Koyunlu and in 873 the sultan of Samarqand, but when in 876/1471 he declared war on Mehmed II he was defeated and thus became less dangerous for Ka’it Bay. He died in 880/1475 and was succeeded by Ya’kub Bey. A quarrel arose between Bayindir, the latter’s governor in al-Ruhâ (Edessa), and the sultan’s general Yeshbek, because Bayindir had given shelter to Sayîf, the rebel chief of the Beduins of Hamâ. Yeshbek advanced on al-Ruhâ and, although satisfaction was offered in every respect, he insisted on besieging the town, but was defeated during a sortie and killed with several of his staff; other Egyptian notables were taken prisoner. Ka’it Bay could not wipe out this defeat and had to make peace, as he was threatened with a struggle with the new Ottoman sultan Bâyazîd [q.v.]. Apart from continual friction regarding the ownership of Albîstân, Bâyazîd felt himself threatened, because Ka’it Bay had given a friendly welcome to his brother Djem [q.v.], the pretender to the throne, and had even encouraged him to fight against Bâyazîd. An embassy sent to Bâyazîd to endeavour to maintain peace was unsuccessful. The Ottomans invaded Cilicia in 891/1485 and occupied Tarûs and Adana; other Ottoman troops besieged Malatya. The Egyptian forces operated with success against both armies especially as Ka’it Bay had won over ‘Alâ’ al-Dawla, prince of Albîstân. In 893/1488 the Ottomans were no more successful. An endeavour to land a considerable body of troops in the bay of Iskandarûn [q.v.] failed. In 895/1490 the Amûr of Kûbî of the Darîm, who made common cause with the Ottomans, inflicted a decisive defeat on the Ottomans at Kaysarî in Asia Minor, where several generals were captured. Ka’it Bay showed a wise moderation in maintaining his inclination for peace, recognizing the enormous resources of the Ottomans, and peace was concluded in 896/1491. The rest of the reign of Ka’it Bay was peaceful but the domestic situation did not improve. It is true that he succeeded by his authority alone in preventing a fight between the hostile Mamlûk factions, but he could not permanently restrain their outbursts and he did not succeed in introducing a sound financial system.

Ka’it Bay’s reign stood out above those of the other Circassian Mamlûks because of its duration but also because of his initiative and effectiveness. Ka’it Bay was well disposed towards the trading nations. While many of his predecessors, Barsbay in particular, had put obstacles in the way of the activities of Italian merchants, Ka’it Bay granted them new privileges and made no attempt to monopolize the spice trade. It is quite probable that trade between the sultan’s lands and Christian Europe did in fact make great strides during his reign; but Ka’it Bay also introduced measures to protect the interests of native merchants, taking appropriate action in relation to the governments of other states. His understanding of the economic interests of his country is also attested by the many inscriptions, which have recently been published, dealing with his abolition of certain taxes that weighed heavily on various branches of industry. Moreover, he spent considerable sums of money in construction work, such as the new buildings in the citadel of Cairo, his mausoleum, a Sûfî monastery (at Khânkhâh, near Cairo), the repair of the mosque of Medina and the aqueduct supplying water to the mosque at Jerusalem.

It was his military activities above all, however, which swallowed up his financial resources. According to Ibn Lyây, for the conduct of all his wars Ka’it Bay spent more than 7 million dinârûs (ashrafîs), discontinuing the gratuities he had to pay to his troops when they returned to Cairo, which was also an enormous sum. This information is borne out in the accounts of other writers. To this must be added his expenses connected with fortifications, such as the repair of the fortresses of Alexandria, Aleppo and other towns. Since the Mamlûk sultans had never succeeded in establishing a regular system of taxation, Ka’it Bay was obliged to exact arbitrary contributions, known as musâdara, from his subjects. When he was in need of money and the treasury was empty he levied contributions from leading citizens, from merchants, from the non-Muslim communities and even imposed new taxes on various branches of commerce and property in mortmain. Such measures reinforced the economic recession which had long marked industrial and commercial development in Egypt and Syria. In spite of the increase in international trade and the great efforts of the sultan, who embarked on tours of inspection in all the provinces (though not before his old age), the seemingly rich and powerful Mamlûk state under Ka’it Bay was heading for disaster. When he abdicated, one day before his death, the Mamlûk kingdom was so impoverished and enfeebled that it was no match for the Ottoman Turks.

SOBERNEHM—[E. ASHTOR]

Al-Ka’Kâ’î, Arabic term for a man whose foot-joints can be heard cracking when he walks, but often found as a proper name in the first days of Islam and particularly among the Tamînis; the last to bear this name seems to have been al-Ka’Kâ’î b. Dirâr al-Tamînlî, chief of police for ‘Isa b. Mûsâ [q.v.], governor of Kûfâ from 132/750 to 147/764 (Ibn al-Kalbi-Caskell, ii, 455; al-Tabarî, i, 131, 347). Among those who bore this name, apart from al-Ka’Kâ’î b. ‘Amr [see the following article] and the poets cited by al-Marzubânî (Ma’dîqam, 329-30), especially noteworthy was the Companion of the prophet al-Ka’Kâ’î b. ‘Abd Allîh b. Abî Hadrâd, who took part along with his father in the events at Wâdi Idfâm in 862/898 [see HAMO], after which was revealed the Kûr’ânic verse IV, 96/94, a warning and even a reprimand (Sîra, ii, 626-7; see also Ibn ‘Abd al-Barr, Istî’âb, iii, 263; Ibn Hâdi’îr, Ijab, nos. 7126, 7342). Another Companion was al-Ka’Kâ’î b. Ma’bad b. Zûrûra al-Tamînlî, the nephew of Hâdîb b. Zûrûra [q.v.] and sayyîd of the Dîrîm, who made common cause with Sa’dâb [q.v.]; he is described here for his generosity and nicknamed Tayyâr al-Furât (see Ibn al-Kalbi-Caskell, ii, 455; al-Tabarî, i, 1913; al-Dîbâlî, Bayânû, iii, 88; idem, Hayawan, index; Nâbâî’d, 258, 771; Ibn Hîshâm, Sîra, ii, 621; Ibn Hâdi’îr, Muhabbar,
Also worthy of note are the names of al-Ka'ka' b. 'Atiyiya al-Bahlil, who lived in Khurram and was taken prisoner by the Khardidjites (Mubarrad, 996); and al-Ka'ka' b. Khulayd al-'Abdi, who was secretary to al-Walid b. 'Abd al-Malik between 86/705 and 96/715 (al-Dihajihayr, 47; al-Tabarî, ii, 357, 1300, 1312; Ibn al-Kalbi-Casqué, ii, 465; Ya'qubî, ii, 373). A'ibî b. Khulayd, whose generosity became proverbial, thanks to two verses in his praise, al-Ka'ka' b. Shwarz b. 'Iqbal al-Dhuhil, is cited among the associates of 'Ubayy Allâh b. Ziyâd (q.v.); he is numbered among the witnesses against Hujrî (q.v.) in 51/671 and among the officers who took part in the action against Muslim b. 'Abdi (q.v.) at Kufa in 60/680 and that against al-Muhtâr b. 'Abd 'Ubayd (q.v.) (al-Dajhis, Bayân, index; idem, Haâyân, vi, 327; idem, Tarbî, 85; Mubarrad, Kâmil, 152; al-Tabarî, ii, 133, 256-7, 272, 523; Ibn al-Kalbi-Casqué, ii 465; Ibn 'Abd Rabbih, 'Ihd, iii, 311; al-Marzuqy, 330; Ibn Durayd 'Istibâk, 211; Ibn Kutayba, Ma'ârif, 99; Ibn Hağjar, Liṣân al-Mizân, iv, 474-5). Lastly, there is another belated ābât, al-Ka'ka' b. Hakîm al-Azdî, who settled in Baṣra and was a contemporary of al-Mahdi, (Ibn Khâbîr, Muhabbat, 407; Ibn Kutayba, Ma'ârif, 663; idem, Mawsûdî, Murûdî, vi, 257; al-Nawârî, Taḥâkî, 513-4). (Ed.)

AL-AMR B. MALIK AL-TAMîM! a warrior of the early Islamic period who, after the death of the Prophet, joined Sâdâbî (q.v.) for a time and became the lieutenant of Khâlid b. al-Walid (q.v.), taking part in the battle of Buzâkha (q.v.) as early as 11/632. After the capture of al-Ḥira, he commanded a detachment which won a victory over the Persians in the region of the Anbâr, probably in 12/633. In Râdbâb 13/August-September 635, he took part in the conquest of Damascus and the following year led a troop of cavalry at the battle of Yarmûk (q.v.). He fought with distinction at al-Kâdisîyya (q.v.), where his intervention was timely. He is cited among the brave warriors who captured al-Maddîn (q.v.) and he must have commanded the vanguard at the battle of Dijlîlî (16/653) (q.v.) and established a garrison at Hulwân (q.v.). He also took part in the capture of Nîâwân (21/641-2). Before the battle of the Camel [see al-Djamal] 'All sent him to Baṣra to negotiate with Ṭâlîb and al-Zubayr. Later he settled at Kufa. Al-Ka'ka', a much-loved heroic figure, was also known as a poet; a few of his verses celebrating his military exploits are extant.

KAKHTA — KAKUYIDS, or KAKWAYHS, a dynasty of Daylam origin which ruled over part of Dibbāl or west-central Persia during the first half of the 5th/11th century as virtually independent sovereigns, and thereafter for more than a century as local lords of Yazd, tributary to the Saljuqs. The rise of the Kakuyids is one aspect of the “Daylamite interlude” of Iranian history, during which hitherto submerged Daylam and Kurdish elements rose to prominence. Under the dynamic leadership of the greatest member of the dynasty, ‘Allā al-Dawla Muhammad, the Kakuyids played an important rôle in the politics of western Persia at a time when three great powers, the Buyids, the Ghaznavids and then the Saljuqs, were striving for power there.

1. Political and dynastic history.

The founder of the line, ‘Allā al-Dawla Abū Di‘āfar Muhammad b. Dughmanzīvar (thr in most of the literary sources: Kakuyid coins invariably have Dughmanzīvar, lit. “afflicting the enemy [through his military prowess]”, cf. Justi, *Iranisches Namenbuch*, 88), was the son of a Daylam officer, Rustam Dughmanzīvar, who was in the service of the Buyids of Rayy and Dibbāl. Muhammad often appears as “Ibn Kākūya” or “Pisar-i Kākū” in the historical texts. These sources generally explain kākūya as a hypercorist from Daylamī kākū “maternal uncle”, Dughmanzīvar being the uncle of the famous Sayyida, mother of the Buyid amir of Rayy, Majdī al-Dawla Rustam b. Fakhr al-Dawla (387–420/997–1029), cf. the modern Luri use of kākū “uncle” in a jocular, friendly sense. Sayyida was thus Muhammad’s first cousin, and Majdī al-Dawla dominated by his forceful mother, enabled Muhammad to constitute himself as the military defender of the Buyids. In 411/1020–1 we find him suppressing a revolt of Turkish soldiers in Hamadān for Madīd al-Dawla; in 414/1023–4 he seized Hamadān from the Daylamī garrison there and went on to attack the Kurdish Annazids [i.e.; in 417/1024 he put down unrest among the Kurds of Dibbāl or Gūrān; and in 418/1027 he repelled the concerted invasion of Dibbāl by the Bawandid Ispahbadh of Tabaristan and the Ziyārid Manzūr b. Kābūs, who had come to the aid of local Daylamī rebels. Whilst still acknowledging Buyid overlordship on his coins, Muhammad was now largely undisputed in his control of western Dibbāl and the adjacent parts of Kurdistan. There are extant coins of his from Isfahān, Hamadān, Asadadbād, Kirmān, al-Kaṣr, Burūjird, Djarbādkhān, Shābūr Khwāst, Dinawar, Karadī in the Rūdhrāvar district, Rayy and Yazd; their legends show how he gradually acquired an impressive string of altāb or honorific titles, comprising those of ‘Allā al-Dawla, ‘Aqṣū al-Din, Fakhr al-Millā and Tādd al-Umma.

When Māmūd of Ghazna occupied Rayy in 420/1029 and overthrew the Buyids there, ‘Allā al-Dawla Muhammad’s position was threatened by the efforts of Māmūd’s son Mas‘ūd to extend Ghaznavid control over north-western Persia, and shortly afterwards, the appearance of Oghuz raiding bands further complicated the situation. On more than one occasion, he lost Isfahān and Hamadān to the Ghaznavids, fleeing for refuge to the Buyids of Khūzsān or to the Annazids of Tarum. But the Ghaznavids always regarded Pisar-i Kākū as their implacable opponent, as Bayhaqi’s history shows. His statesmanship and pertinacity were such that he was always able to recover his position after reverses. On two occasions he even held Rayy, and it was probably in 421/1030 that he captured Yazd and minted coins there, the farthest outpost in the east of Kakuyid power. Possession of the rich towns of Dibbāl enabled him to hire mercenaries, Daylamī and Kurdish, for his army, and also to recruit Oghuz Türkmen fleeing westwards from the Ghaznavids in Khūrūsān. The historian of Isfahān, Ḩāfīr al-Rūmī, praises ‘Allā al-Dawla Muhammad for his care to maintain all fortresses in his territories, his ingenuity in planting spies in neighbouring regions, and his sense of realism, knowledge of when resistance was possible and when conciliation and yielding were wisest.

‘Allā al-Dawla Atā-Khan

With the collapse of Ghaznavid authority first in the west and then in Khūrūsān, ‘Allā al-Dawla Muhammad was for a brief period completely independent and acknowledged no suzerain on his coins. The increasing strength of the Saljuqs and the relentless extension of his power westwards by Tughrīl Beg were, however, bound to press on the Kakuyids. In 429/1037–8 ‘Allā al-Dawla Muhammad built a protective wall around Isfahān, but he died in 432/1041–2. His eldest son, Zahr al-Din Shams al-Mulūk Abū Mansūr Farāmūr had already discerned the trend of events; he was present with Tughrīl on the battlefield of Dandānkān in 431/1040, when the victorious Saljuq leader granted to him Rayy and Isfahān. When ‘Allā al-Dawla Muhammad died, there ensued a struggle amongst his sons over the Kakuyid inheritance. Farāmūr’s succession in Isfahān was contested by his brother Abū Ḥarḥ, who secured help from the Buyid amir of Fārs and Khūzsān, ‘Imād al-Din Abū Kālidār, but nevertheless failed to capture Isfahān. From 438/1047–8, when Tughrīl besieged him in Isfahān, till 433/1051, Farāmūr acknowledged on his coins Tughrīl as suzerain. In Muharram 433/May–June 1051 Tughrīl finally captured Isfahān after a year’s siege, razed its walls and moved his capital thither from Rayy. Farāmūr received in compensation the towns of Yazd and Abarḵū in northern Fārs, and ended his days as a faithful vassal of the Saljuqs; thus he was a member of the delegation led by
Kundur in 453/1061 to seek the hand of the caliph al-Kāfīm’s daughter for Togrīl, and of the sultan’s retinue when he went to Baghdad two years later to meet his wife.

A further brother of Farāmūrz, ʿAlāʾ al-Dawla Abū Kālidār Gardāsh, had been governor of Hamadān and Nihāwānd, i.e., the western part of the Kākūyid dominions, during his father’s lifetime, and had defended Hamadān against the so-called “ʾIrāqī” Turks when they besieged it in 420/1030. In 430/1038-9 the town was again attacked by the Qūghur, suffering a frightful sacking, but the Turks were soon afterwards repulsed by ʿAlāʾ al-Dawla Mūhammad himself. When the latter died, Gardāsh soon clashed with Togrīl Beg, and tried to get help from the Būyid Abū Kālidār; in exasperation, Togrīl in 437/1038-9 had defended Hamadān; the great scholar wrote his Persian encyclopedia of the sciences, the Dānṣik-nāma-yi ʿĀlī, for the Kākūyid amīr, and he died in 428/1037 whilst accompanying his patron from Ḳhurāsān to Hamadān. The Kākūyid governors of Yazd did much to beautify the town and make it a centre of intellectual life, and under them and their epigoni, the Atabegs, Yazd enjoyed one of its most prosperous periods. The local historian of Kirmān, ʿAdil al-Dīn Kirmānī, says in his ʿIḥār al-ʿulā that “ʿAlī al-Dawla ʿAllī b. Faraḥmūrz, who was the ruler of Yazd, continually sought to attract the eminent men of both Ḳhurāsān and ʿIrāq, encouraged them with all sorts of promises and expressions of favour, and brought them to Yazd” (ed. ʿAmīrī, Tehran 1321/1932, 102). ʿAllī was particularly noted as an early patron of the outstanding poet of the Saldjuks, Muʿizz al-Dīn, and several of the latter’s odes are dedicated to the Kākūyids. The Tarīkh-i Yazd and the other local histories deal at length with the many palaces, mosques, madrasas, caravanserais, libraries and mausoleums constructed in the town by the Kākūyid amīrs; of prime value in Yazd, situated on the local population, but in such troubled times the walls were regarded as a great benefit. One of ʿAlī al-Dawla Mūhammad’s special claims to fame is that he gave refuge to Ibn Ṣīnā (Aviceenna), after the latter had been in the service of the Būyid Ṣams al-Dawla of Hamadān; the great scholar wrote his Persian encyclopedia of the sciences, the Dānṣik-nāma-yi ʿĀlī, for the Kākūyid amīr, and he died in 428/1037 whilst accompanying his patron from Ḳhurāsān to Hamadān.

II. Cultural.

By the time of the Kākūyids’ rise to power, the Daylānī rulers of Persia had emerged from their pristine barbarism and grossness, and we find ʿAlī al-Dawla Mūhammad assuming the responsibilities of the paternalistic Islamic ruler in his principality. The cost of the walls which he built around Ḳɪsˤḥān, their circuit running to 15,000 paces not counting the defences of the outlying suburbs, was a burden on the local population, but in such troubled times the walls were regarded as a great benefit. One of ʿAlī al-Dawla Mūhammad’s special claims to fame is that he gave refuge to Ibn Ṣīnā (Aviceenna), after the latter had been in the service of the Būyid Ṣams al-Dawla of Hamadān; the great scholar wrote his Persian encyclopedia of the sciences, the Dānṣik-nāma-yi ʿĀlī, for the Kākūyid amīr, and he died in 428/1037 whilst accompanying his patron from Ḳhurāsān to Hamadān. KAL'A [see gagDIR, BURJU, HIŠĀR, HIŠN, KĀṢABA].
AL-KAL'Ā (ם), castle, fortress, a word which has passed into Spanish in the simple form Alcalá,
and as Cala—or Calat—in compounds, occurs as a place-name throughout the entire peninsula—e.g., Alcalá de Henares, Alcalá la Real (also named after Ibn Zayd), Alcalá de Guadaira, or Calahorra (castle of Hurra). Calatrua (Kal'Ta Rabah [g.v.] = 'All b. Rabah ?), Calatayud (Kal'At Ayyūb [g.v.]), Calatorao (from turāb = land, as in Madinat al-turāb = Valencia), Calatanao (Kal'at al-nusur, the site of the alleged defeat of al-Mansūr). The diminutive Alcolea (from the Arabic al-kulay'a) is also the name of vari-
ous places of less importance, such as Alcolea in the neighbourhood of Cordoba, Alcolea del Cinca, etc. The northern zone of Old Castile and the Alava 'land, as al-Kil'ā, 'the castles', a term comparable with the names Castilla and Cata-
luha = regions of castles.

grográfico, i, 356-96. (A. Huici-Miranda)

AL-KALĀBĀDI, ABĪ BAKR MUḤAMMAD b.
ISHĀKH, author of one of the most celebrated manuals
on Sufism. In spite of the fame of his work, he himself
is practically unknown. He is believed to have died in
380/990 or 384/994; his nisba indicates that he lived in
Kalābād, a district of Bukhārā, according to
Yākūt [s.v.], and manuscript sources (see Arberry,
India Office Catalogue, no. 1218) confirm that he
died in Bukhara, where "his tomb is visited and
revered". Of the five or six works by al-Kalābādi,
two have come down to us, one of them unpublished
and without any great merit: Mašā'īn i-l-ābbār (for other titles of this work see Seghin, GAS, i, 669), a kind of brief ethical commentary on some of
the Prophet's hadiths. The other is Ta'arruf li-madīnah
ahli al-taṣawwuf, a basic work for the understanding
of Sufism in the first three centuries of Islam (tr.
1935). The work is divided into three parts. The first,
his book, section defines the meaning of the word
ṣūfī and gives a swift survey of the most important
figures of Sufism; the second part is apologetics,
going back to the articles of the creed al-Fikr al-
Akbar II to demonstrate the accord between the
doctrine of the Sufis and Ash'arī (see Arberry,
Sufism, 60); through using quotations from the
Sūfis and commenting on them, the third part sets
out the major stages on the mystic path. The author
frequently quotes al-Hallāj, indicating that he lived
in an environment favourable to mysticism but one
in which Sufism had begun to deteriorate. According
to the introduction, the book was written in response
to this decay and with the intention of delineating
true Sufism.

Bibliography: In the article. (P. NWYIA)

KALABAND (Ottoman) [see NAVY].

KALAH (KALAH, KĀLĀ, KĪLĀ, KILLAH), the
mediaeval Arab geographers' name for an island or
peninsula (djaizra) which played an important in-
termediary role in commercial and maritime relations
between Arabia, India and China. It was particularly
well-known for its tin mines, and the Arabic word
kalāihat [g.v.] for this metal derives from Kalah;
the place was also portrayed as the centre of trade in
camphor, bamboo, aloes, ivory etc. Its capital also
was named Kalah (cf. e.g., al-Dimashqī, Cosmo-
graphie, 152, 170; so too the sea which washed its
shores and was very difficult to navigate was called
the Bab Kalah (e.g., al-Dimashqī, op. cit., 152, 169).

The identification of Kalah, of no small importance
for the history of trade in the Indian Ocean, has
engendered a vast bibliography. Various clues, the
production of tin in particular, have suggested the
Malaccan peninsula; Walckenaer (Nouvelles Annales
des Voyages, Paris 1852, 19) was the first to identify
Kalah with a town whose name is written as Quedah
in the Portuguese sources, but is pronounced Kēdāh;
this town lies on the west bank of the Malacca
peninsula (6° Lat. N.). The province of Kēdāh,
watered by the Kalang River (see Ritter, Erdkunde,
v, 20-1), is still of importance in this region of Malacca
because of its brisk trade in tin; the town itself,
though a flourishing port in the past, has declined
considerably.

Walckenaer's identification was accepted by L. A.
van der Lith (ed. of K. 'Adid'ib al-Hind, index), De
goeje (in De Gids, Amsterdam 1889, iii, 165-93), and
tomaschek (Die topogr. des indischen Sesselspiegels
Mobīl, Vienna 1897, 86) and G. Le Strange (tr. of Hamd
Nuzhat al-frulub, Vienna 1897, 86) and G. Le Strange
(tr. of Hamd
Nuzhat al-frulub, Vienna 1897, 86) and G. Le Strange
(par. of Hand
Aliāl Mustawīfīs 'Nushāl al-kalābād, 194. Quatremerre
in Journal des Savants, 1846, 734) and Yule and
Burnell (Hobson-Jobson, 145) think it likely; the
latter believe that Kalan should also be identified
with Ptolemy's Kēlān, but this town seems to have
been situated elsewhere (cf. Pauly-Wissowa, art. Koli,
xi, 1973). J. Sauvaget (Relation de la Chine et de l'Inde,
Paris 1948, 43) favours this identification but points
out that Kēdāh, Kērah (Kra isthmus) or even Kēlāng,
north of the town of Malacca, are all possibilities.
Although the Malay d is pronounced in such a way
that an Arabic speaker might hear t, the Chinese
transcribed the name as Ko-lo and the vocalization
of the first syllable of Kēlah is in fact unknown (P.
Pelliot, Deux sinines de Chine en Inde à la fin
du VIIIe siècle, in Bull. de l'Ecole fr. d'Extreme-
Orient, iv (1904), 351 n. 6).

Moreover, it must be noted that G. Ferrand (in
JA, 2nd series, xiv (1919), 214-33) came to reject the
possibility of identifying Kēdāh with Kalah and to
conclude: "geographically, between Qara = Kra,
about 10° latitude North, and Kara, near Kēdāh, I
prefer the first of these ports as the site of Kalah
and its variants in the Arabic texts"; Ferrand's study
giving the reasons for his preferences has not been
published, and the claims of Kēdāh and Kēlah (Kra)
cannot be considered as settled. Other reasonable suggestions for the site of Kalah are: in Ceylon (the port of Gâlahi, Galle, Galle Point; e.g., Reinaud, Relations des voyages . . . Paris 1845, i, pp. lxxi-lxxi and Abu 'l-Fidâ', Geographie, i, cdxiv, cdxvii-cdxi; Dulaurier, in JA, 4th series, viii, 209), Malabar (Reinaudot, cf. Ouseley, Travels . . ., i, London 1819, 53 n.) and Coromandel (Gildeheimer, Script. Arab. de rebus Indicis loci, Bonn 1838, 57-8).

Alongside Kalah, Arab geographers use the compound word Kalâh-bâr (e.g., Rel. de l'Inde et de la Chine, § 15; al-Masûdî, Murâdî, i, 330, 340 = tr. Pellat, §§ 361, 374), where bâr is explained as deriving from the Sanskrit udâ, from which come ûdā and ûdâr, "district". However in Sanskrit and in Tamil pâram (= bâram in compounds) designates "the opposite coast" and is used by sailors from another country for the coast to which they usually travel; Relation (§ 15) gives two explanations ("kingdom" and "coast"), the second being the correct one, so al-Masûdî (i, 340-374) was wrong when he took bâr to mean "sea".

(M. Streck)

AL-KALÂ', Abu 'l-Râbî' Sulaymân b. Mûsâ b. Sâlim al-Himyari al-Balânsî, often known as Ibn al-Kahlâl, was the author of more than a score of works, but the only one which has been preserved is the Kitâb al-Ikhtîfâ', sometimes called the "Defensive Apologetics", or "the science of discourse" (on God); and 2) kalima [q.v.] which, in the expression kalimât Allâh, means "a" (single) divine utterance.

KALÂM, in the sense of kalâm Allâh the Word of God, must here be distinguished from 1) kalâm meaning "ilm al-kalâm" ("the science of the masâkid of the Prophet and of the first three caliphs only", is based on sources many of which are now lost. The volume published by H. Massî, the cover of the Prophet's mission, the conversion of Hamza b. 'Abd al-Mu'tassîl and the emigration to Abyssinia. Some quotations from it are to be found in al-Dîyârâbktîr's Ta'rîkh al-Abarmîs (Cairo 1283, 1302): Khurghîh Ahmad Fârîk has published in Delhi (Indian Institute of Islamic Studies, 1970) from a Ms. preserved in Dar al-kutub (Cairo), as Ta'rîkh al-riddâ, the passages in al-Ikhtîfâ' relating to the Ridda [q.v.].

Most biographers of al-Kalâlî agree on the list of his works; these reveal that this musâdîdî, celebrated for his erudition and fine handwriting, was particularly concerned with the Companions of the Prophet (notably Khâbîr Maydân al-sâhîkan, etc.; al-Musâdî 'l-dhârî man wâlîkat kunyat kunyat saudîq min Shahbât al-Musâfârî) and the transmission of hadîth (in particular, Ru'adî al-Bugdârî wa-akbârûnh, in 4 vols.; Arba'ân, etc.). Independently of his masters' Musâdî, he collected his poetical works in a diwân, as well as his correspondence and a few proverbs. Although it is difficult to form a judgment on the sole basis of titles which are not always explicit, it would appear that posterity did no injustice to al-Kalâlî in preserving from his voluminous output only the Ikhtîfâ', a work which deserves some attention.

(C. Pellat)
In the list of "the most beautiful (divine) names" (cf. AL-ASMA’ AL-HUSNA), neither kalām nor mutakallim is found. God speaks, but the Kur'ān does not "name" Him as "speaker". Kalām Allāh, "God’s spokesman", is the name of Moses. Yet in the treatises on "God, His existence and His attributes", God is described as mutakallim ("speaking"), since He possesses kalām.

Two groups of questions arise: 1) on the basis of the Kur'ānic texts, kalām, Word, is attributed to God and the "theologians" were quick to examine the question of kalām as a divine attribute (sifā); and 2) God having addressed His word to the prophets (II, 253), by antonomasia kalām Allāh designates the Kur'ān, which gave rise to the problem of the relationship between the Kur'ān and the Word as attribute. Throughout the centuries, this was to remain one of the most controversial questions.

I.—Kalām, a divine attribute. This problem is directly linked to reflections and debates on the nature of the Kur'ān (created or uncreated). Did such discussions come into being, as has been frequently stated (by C. H. Becker, for example), through the wish to reply to the Christian theologians of Damascus, who proclaimed that the Logos, the Word of God, was both uncreated and eternal?—e) Finally, the Ash'arite groups understood it to mean a divine, eternal Idea, a necessary emanation of the flux (fayd) which is bound to flow from the Prime Being, is received by the separate Intelligents, transmitted to men by the illumination of the single Active Intellect and is broken down into words on account of the structure of mankind's passive intellect (bi'l-fruwwa).—c) According to the Karrāmiyya, the Word of God is not strictly speaking eternal: God becomes the agent and speaker by producing within Himself (ihdāth fi 'l-ḥādī) the Act and the Word. It is therefore proper to speak of "an attribute of the Essence", but one which has "begun".—d) The "pious Forefathers" and the Hanbalite tradition affirm the absolute eternity of the Word, subsisting in God and revealing Him, the various schools interpreted this according to different principles, which are outlined above. Logically, therefore, the positions concerning the created or uncreated Kur'ān are an application of the teaching on attributes, but in fact the positions adopted on the subject of the Kur'ān took precedence and influenced developments relating to the attribute of the Word.

a) The Mu'tazilite theory of the created Kur'ān is based on the concept of word as speech, presuming articulation and movement, which would be incompatible with pure divine immutability. All prophetic utterances, above all the Kur'ān, may be called the "Word of God" in that they express what God wishes to communicate to mankind; but this Word is created on the lips of prophets or reciters, or on the pages where they are recorded. In the same way, when God spoke to Moses in the "burning bush", strictly speaking it was the bush which spoke, though sounds and words directly created in it by God.

b) It is not easy to define to its ultimate consequences the thinking of the "pious Forefathers", especially that of Ibn Hanbal. The affirmation that the Kur'ān is the uncreated Word of God is absolute. The definitive thinking of Ibn Hanbal is that the Kur'ān pertains not to the world of creation (khalī) but to the world of commandment (amr). Now, nothing appertaining to amr can perish. "The Kur'ān went out from God and will return to Him" (’Arba'a, v. 313; quoted by H. Lauoust, La profession de foi d'Ibn Batta, Damascus 1958, 84, n. 3); according to Ibn Batta, this applies to each word, each letter of the Book (ibid., 51/86). And anyone who asserts that the Kur'ān is created, or reserves any doubt on this subject, or simply refuses to make a pronouncement (wukhl), is impious (kāfir); so too is anyone who refuses to condemn such a man as an unbeliever (takfir). When God makes His Word appear in a body, said Ibn Taymiyya (Fatāwa v, Tis'īmiyya, Cairo 1329, 265), He does not create anything in that body; it is He Himself who speaks, as He did in the bush which revealed to Moses: "I am God and there are no other gods but Me." H. Lauoust has made an excellent summary of Ibn Taymiyya's thinking on this point, which is in itself an echo Hanball tradition (Essai sur les doctrines sociales et politiques de Tahdī-Dīn Ahmad B. Taimīya, Cairo 1939, 171 and ref.). The attribute of
the Word is subordinate to the attribute of the Will
(irdda). God speaks or (in opposition to the Salamiy-
ya) ceases to speak when and how He wishes. His Word is at the same time “an idea, sounds and letters organized
with an end in view (makhṣṣid)” (H. Laoust, ibid.). It may convey information (takhbīr) or ordain a command (ingāh). In this last case, it will either bring about a creation (takwīs: e.g., the five kūrānic kun) or formulate a law (taṣqīrī). The Word is therefore multiple in its formulation. It is also hierarchically graded: the best of the sūras is the Fāṭākh, followed by the sūrat al-Ikhlās; Kurān, Tawrāt and Indjil are indeed the Word of God, but the Kurān is superior to the Tawrāt, which itself is superior to the Indjil.

Are the pronunciation (laṣf) and reading (tildwā) of the Kurān by the faithful also uncreated? The professions of faith of Ibn Ħanbal declare that to assert that its pronunciation and reading are created, where the book is kalām Allāh, is the mark of the condemned sect of the Dāhiyimiya (ʿAbdīIa 1, 15, 12). Al-Barbahārī makes the same assertion, adding that it is also ḥāmi to opt for ṣubḥāf, a deferment of judgment, on this precise point.

But there is a Ḥanbalī tradition which tends to qualify—or at least make more exact—the position of Ibn Ḥanbal. It is said that he protested vigorously against those who averred that pronunciation and reading were created; but he never adds that they were definitely uncreated. Ibn Taimiyya came to the following conclusion: those who hold that the pronunciation and reading of the Kurān are uncreated are in fact similar to the Dāhiyimiya and thus to be condemned; but, also according to Ibn Ḥanbal, those who support the opposite view are guilty of “blame-worthy innovation” (bidā). It was Abū ʿAlī al-Makki, remarks H. Laoust (Essai... 152, n. 2), “who attributed to Ibn Ḥanbal the dogma that recitation of the Kurān is uncreated”. Was this in fact a position of reserve (tawaṣṣul) which Ibn Ḥanbal adopted for fear that such an uncreated recitation would lead to the acceptance of Ḥulāl, an “infusion” of divine substance in the reciter? Ibn Taimiyya avoided saying that the laṣf was uncreated and confined himself to formulating: “The Word (kalām) is the Word of God, and the voice (jawāt) is the voice of the reciter” (ibid., 172), and again: “When men recite the Kurān, or when they write it down on paper, the Kurān remains in reality (hābiṭaʾ) the Word of God. A word, in fact, can be attributed only to him who first formulated it and in no respect to him who transmits it or spreads it abroad” (tr. H. Laoust, Ibn Bajīa, 83, note referring to Wāṣīyiyya, 22).

c) The ʿAshʿarites and Ḥanafītes-Māturīdītes preferred a compromise to this prudent tawāṣṣul. Their solution was presented, especially by the earliest scholars, as the middle way between the Muʿtazilites and those whom they called Ḥaḍārīyya: according to the latter, the Kurān was uncreated, not only on the lips and in the hearts of the faithful but also in so far as it was reproduced in writing on paper; following a ḥakīm attributed to Ḥaḍīṣa, whatever lies between the two covers of the book is the Word of God (and thus uncreated).

The thesis of the Kurān as the Word of God, eternal and uncreated, was forcefully proclaimed in the professions of faith of al-ʿAshʿarī (Ibaina, ed. Cairo 1348, 10; Mahālīd al-Isāmiyyīn, ed. Cairo 1396/1950, 3, 321); and also in the Wāṣīyiyyat Abī Ḥanīfa (article 9) of the Fī Ḥikm Abī Ḥanīfa II (article 1); and II (article 16). Al-ʿAshʿarī cites the authority of Ibn Ḥanbal. Throughout the centuries, the schools remained faithful to this total affirmation.

But what part of the kalām Allāh is communicated by the prophets and recited or read by the faithful? Al-ʿAshʿarī’s profession of faith are silent on this point; yet on the other hand the problem is posed in basic Ḥanafī-Māturīdī texts. The Kurān, says the Wāṣīyiyyat Abī Ḥanīfa (article 9), the uncreated Word of God, inspired and revealed by Him, “is not He, nor other than He, but His real Attribute, written in the copies, recited by the tongues, preserved in the breasts, yet not residing there. The ink, the paper, the writing are created, for they are the work of men. The word of God on the other hand is uncreated, for the writing and the letters and the words and the verses are manifestations (dalāla) of the Kurān for the sake of human needs. The word of God on the other hand is self-existing in His Essence, and its meaning is understood by means of these things. Whoso sayeth that the word of God is created, he is an infidel (kafīr) regarding God... His speech being recited or written and retained in the heart, yet never dissociated from Him” (tr. Wensinck, The Muslim Creed, 127). Fīḥk Abī Ḥanīfa II (article 3) goes further as far as this distinction is concerned: “Our pronouncing, writing and reciting the Kurān is created, whereas the Kurān itself is uncreated.”

What exact relationships can be established between the divine attribute of the Word and the Kurān, read, written or recited? A venerable tradition distinguishes between the heavenly Kurān, written for all eternity on the “protected table” (lawḥ mahfūz [q.v.]) and the earthly and created books. Burning one of these earthly Kurāns would not destroy the Word of God. Certain later writers, such as al-Fudālī, wondered if the words which “descended” on the Prophet were the very words of God (those of the lawḥ al-mahfūz) or the words spoken by the Angel. ʿAshʿarī answers were usually more elaborate. In an analysis reproduced by Ibn Hazm, al-Bākīllānī explains that the Kurān is the Word of God in the sense that it is an “expression” (tābīra) of it (see A. J. Wensinck, The Muslim Creed, Cambridge 1932, 151, and E1, D. B. Macdonald, tr. Kālām and refs.). He says further: “The kalām is an entity (maʿnī) subsisting within the soul (ḥāram bi ṣīnaf) which sometimes expresses itself in audible sounds” (Tamhid, ed. R. J. McCarthy, Baghdad-Beirut 1957, 251). This distinction led to the famous theory of the kalām al-naṣf or kalām nafsī, the internal word, which, as we have seen, was rejected by the Muʿtazilītes. Al-Djiwaynī stresses this point forcefully (Iṣrāḥ, 58-78/98-131; see also his Lūnāt). We have a brief and clear account of it in al-Ghazālī’s Iḥtiṣād (ed. Cairo, n.d., 80). It is not true that there can be no speech without letters and sounds. Internal speech, “the discourse of the soul”, kalām al-naṣf, is a reality. The attribute of the Word, subsisting in the divine Essence, is first and foremost this internal Word in God, which is eternal and uncreated, without future or past, without multiplication or division. It is in no way impossible that God makes it manifest ad extra by created sounds and letters. It is essentially in this that prophetic revelation resides. Contrary to the belief of the Muʿtazilītes, it is not a matter of words created in certain bodies. It is indeed God who speaks, but through sounds and letters belonging to the world of creation which manifest and express His single and immutable Word. Later ʿAshʿarī and Māturīdī manuals take up these points again with greater or lesser felicity (e.g., al-Badīūr,

Finally, it should be noted that if "the Word of God is one attribute without multiplicity" (al-Badjari, *thud*), its manifestation through verbal words allows us to make a distinction in the Kur'an between information and commandment as the Ancients insisted (cf. above, the Hanbali doctrine). In turn, commandment may be divided into prohibition, promise and threat; but these are "distinctions made by reason" (Abdom *Sibrkyya; *thud).

d) In the modern period, Mu'hammad 'Abduh emphasized the Ahl'arid distinctions to the extent of presenting an answer which seems an attempt at a synthesis between Agh'arism and Mu'tazilism (see Rida'at al-tawhid, Cairo 1353, 44 ff.): the Word is an eternal attribute of the essence; the Kur'an is the Word of God without any intermediary, but in as much as it is expressed in words that are uttered or written down, recited or read, it belongs to the world of creation. In this sense it can be said that God created the Kur'an, but without the intervention of any creature.

Bibliography: As well as references within the article, all manuals on usul al-din and *ilm al-kalam and all works in European languages devoted to these disciplines contain a chapter or some paragraphs on *kalam as an attribute of God.

(L. GarDET)

KALAM, theology [see *ilm al-kalam*].

KALAM (*kalka nour, reed*), the reed-pen used for writing in Arabic script. It is a tube of reed cut between two knots, sliced obliquely (or concave) at the thicker end and with the point slit, in similar fashion to the European quill and later the steel pen. The reed has to be very firm so that it does not wear away too quickly; the best kind comes from Wasi's and grows in the marshes (ba'diakh) of Irak, but those from the swamps of Egypt (al-Mukaddasi, *BA*, iii, 203, 1. 23) or from Fars were also recommended. Those from a rocky ground were called *sukhr/, those from the seashore *bahri* (Ibn 'Abd Rabbiihi, *Ikh i farid*, Bulak 1876, ii, 221, 1. 18 ff., al-Kalkashandi, *Subh al-a'sha*, ii, 441, 1. 7 ff.). It is allowed to steep like hemp and is kept in the water until its skin has taken on a beautiful dark brown colour. Its fibres should be quite straight so that the slit may also be even. After the nib of the kalam has been cut, it is laid on a long, flat piece of ivory or bone *mikafa/, which is specially used for this purpose; the point is then slit with a sharp transverse cut with a special very sharp knife with a long handle (penknife, Turkish kalametirik). The length of the reed-pen should be, according to Ibn Mula, 12-16 finger-breaths or a span, but could not exceed this by more than the length of the *djiya* (nib). The width should be that of the index and the little finger (al-Kalkashandi, *op. cit.*, ii, 444, 1. 14-16), but a medium thickness—not too long or short, not bent or curved—would be the best one (al-Kalkashandi, *op. cit.*, ii, 440, 1. 16-19). The intermediate should not be too long. The pen should also not be dry, although well-ripened; it should be browned by the sun, golden, shining like a pearl and silvery on the sides.

Each kind of script needed a special pen, and the cutting of the nib (*djiya*) was an art in itself. It was the prime necessity for good handwriting, and excellent cutting was considered as "half the script": it is worth noting that in the Fatimid period a kind of "fountain-pen" was invented in Egypt.

The part of the point to the left of the incision is called *insi*, "human", because it is turned towards the writer, and the right *waqfi", "savage". If the former is slightly softer than the latter so much the better. It became a rule that in the kinds of writing called *mashkh, thuluf* and *rikah* the *waqfi* side ought to be twice as broad as the *insi* side; in the kinds called *divini* and *birma*, it is the other way about. The *nasta'lik* is written with a pen slit exactly down the centre.

To protect the kalam from damage it is kept in a holder (*miklama*). These are of two kinds: 1) a metal box in the form of a long flat tube closed at one end by a lid with hinges and often adorned with arabesques. Attached to it is an inkwells (dawlat, popularly *dawla*). This kind of holder is peculiar to the Arabs. In Ottoman Turkish it is called *divel* (from Ar. *dawlat*); at an earlier period it was also called *subur* (strictly, plur. of *bahr* "grave") by the Ottoman Turks, a word which is found as early as Abü Yusuf, *Kitab al-Kalami* (Cairo 1302, p. 17), with the meaning of "holder"); *case*; 2) a paper,mache box adorned with lacquerwork. In it is a drawer which also holds an inkwell. This kind is used particularly in Persia and is called *kalamdar*, "pen-box".

Sura LXVIII of the Kur'an (Suraat Numin) is sometimes called *Suraat al-Kalam* from its opening: "N—By the pen and what they write...". According to the traditions quoted by al-Tabarî (Tabari, *Bulak* 1323-30, xxix, 107) the kalam was the first thing created by God so that He could write down events to come. Two explanations have been given of this kalam: 1) the implement used for writing, a divine gift like the latter; 2) a kalam of light, as long as the distance from heaven to earth, which wrote down all things that are to happen until the last judgment (cf. Fakhr al-Din al-Razi, *Majdiq al-Ghayb*, Cairo 1279, vi, 330; Mu'tahhar b. 'Abd al-'Aziz, *Kitab al-bad* wa *'l-ta'rikh*, ed. Huart, i, text 161 ff., tr. 149).

The kalam is the emblem or symbol of the administrative services as opposed to the *sayf*, which marks the military officer. Ibn al-Wardi (d. 749/1349) wrote a *Mufakharat al-sayf wa 'l-kalam* and Ibn Nubata (d. 768/1366) a work with a similar title; al-Maliki (d. 1112) and Fakhr al-Din al-Mubarak (d. 997/1587), *Ali b. 'Abd al-'Aziz Umm al-Walad-zade (d. 920/1514) and Khallal-zade (d. 979/1572) each wrote a *Risala Kalamiyyaya* on the same subject (Brockelmann, ii, 140, 211, 430, 433).

(K. Huart—A. Grohmann)

KALAM. In Ottoman usage the word *kalam*, pronounced *kalam*, was used figuratively to designate the secretariat of an official department or service, and then came to be the normal term for an administrative office. This usage has survived in modern Turkish, and is also current in Arabic.

(Ed.)

KALAMDAN [see *kalam*, *kitab*].

KALAMKARI [from Persian *kalam*, "pen", and *kari*, "work"], the hand-painted and resistdyed cottons of India, also known as chintz (from the Western Indian vernacular word *chita*, "spotted
In true kalamkārī, printing-blocks are not employed. The design is sometimes drawn free-hand, but more commonly "pounced" (i.e., applied by rubbing powdered charcoal through a perforated paper stencil), after which the mordants (fixing-agents), some of the colours themselves, and the wax-resist which protects parts of the fabric during red and blue dyeing operations, are applied by hand, with kālamās made of reed or bamboo. The kālams incorporate a cotton wad or hair ball impregnated with the colour or with wax. Although India had understood the principles of mordant-dyeing for at least 2,000 years (there is some evidence that this was even practised in the Harappa civilization, c. 2000 B.C.) there are no surviving specimens of the work earlier than about 1000 A.D. The finest kalamkārī of that period were made in the hinterland of Masulipatam (Golconda), the craftsmen being Hindus who worked mainly under the patronage of Muslims and Europeans, although some were also produced as temple- hangings. Throughout the 17th and 18th centuries, large quantities were shipped to Europe by the Dutch, English and French East companies and had an important influence on the decorative arts of the West. Laws were introduced in France and England to forbid importation in the interests of home industry, but they were often defied. When the laws were relaxed in the second half of the 18th century, the fate of the trade was already sealed by advances in European technology, and in particular by the application of the copperplate process to fabric-printing. Henceforth the standard of the craft in India declined.

KALAMMAS, appellation bestowed on the man who, according to tradition, was the first nasi [q.v.] of the Arabs, Hudhayfa b. 'Abd b. Fukaym b. 'Adi, of the Banū Malik b. Kināna; al-Marzubān (Muhđjam, 250), however, echoes a tradition according to which al-Kalamass al-Akbar was 'Adi, great-grandfather of Hudhayfa, and al-Tabārī (Tafsīr, Būdī, x, 3) states that three men were the first to be designated nasi, but he does not mention Hudhayfa by name. However he does mention him in this respect in Annalen, i, 1134. According to al-Mas'ūdī (Mūrūđ, iii, 116 = § 965), the latter bore the kunya of Abu l-Kalammas, while biographers of al-Dībāšī [q.v.], a masūd of this family (see Mūsīn, s.v. and biblio.), attribute this kunya to a nasi by the name of 'Amr b. 'Abd, who does not appear in the current lists (much later it was borne by 'Uthmān b. 'Ubayd Allāh b. 'Abd Allāh b. 'Umar; see al-Ṭabarī, index; Abu l-Farādž, Mābdī, al-Tālibīyyin, 296).

It is probable that al-Mas'ūdī's Abu l-Kalammas derives from a confusion with the kunya of the last of the nasa'a, Abū Thumāmā, a contemporary of the Prophet. The function of nasi [q.v.] was handed down from father to son for several generations (Caussin, Essais, i, 244, who dates the institution from 412 A.D.) until the aforesaid Abū Thumāmā. The latter's genealogy differs according to the various writers: Ibn al-Kalbī-Caskel (Tab. 47) called him Dīnādā b. Umayya b. 'Awf b. 'Abd b. Hudhayfa, and in the Sira (i, 44) he appears as Dīnādā b. 'Awf b. Umayya b. 'Abd b. Kāla b. 'Abd b. Hudhayfa; Ibn Ḥabīb (Mubāhab, 157) and al-Būrūnī (Chronology, 13) add another Kāla, but they were often confused between Kāla and Kāla. On the other hand, however, Ibn Nūbahā (Sarh, 406) makes al-Kalammas a contemporary of Hind bint al-Quss [q.v.], who was thought to be responsible for introducing taboos relating to certain domestic animals which Allāh denies having introduced (Kūrān, v, 102/103).

The direct descendants of Hudhayfa were known collectively as al-Kālimīs, the plural of kālammas, the meaning of which is not clear; Arabic dictionaries give the meaning of the word as "sea, copious well" (cf. kālammas in LA, s.v.) and, by extension, "a generous, able man" etc. It may be related to kāmūs (kamwān) and perhaps also to kalendas, as A. Moberg has suggested (An-Nasi' in der islam. Tradition, Lund-Leipzig 1931, 44, 53-4).

Bibliography: in the article. [Ch. Pellat]

KALANDAR, name given to the members of a class of dervishes which existed formerly, especially in the 7th/13th century, in the Islamic world, within the area extending from Almalk in Turkestan in the east to Morocco in the west; they resembled, with some minor differences, the "hippies" of today, distinguishing themselves from other Muslims by adopting Malāmātiyya [q.v.] doctrines and by their unconventional dress, behaviour and way of life. The origin of the term has not yet been established: it is first encountered in a rubā'ī of Baba Tāhir (Uryān, 8th series, vi, 516) and in a short treatise entitled Kalandar-nāma (ed. Sultan Husayn-i Tabanda-i Gunbādī, 1939) by the well-known Sāfī 'Abd Allāh-i Anṣārī (d. 1482/1868-9).

It passed into Arabic in the form karamal (see Ṣafādī, al-Wāfi bi l-wa'fayāt, Berlin, Westdeutscher Bibliothek, Ms. orient, fol. 3145, f. 3a f.; Dozy, Suppl., ii, 340) and kalandar (al-Nu'aymī, Tanbih al-jālib wa irshad al-dāris, al-Ṭajni's Ms., f. 368b f.). The suggestions put forward that the word derives from Persian kalandar ("ugly and ungainly man"; "a whitened piece of wood put behind a door to stop it opening"); Burkhān-i kāstī, ed. M. Muftīn, Tehran 1342, ii, 1680a, Persian kalantar (from kalān, "large, great") (ibid.), or from Greek kalotēr, from the root kalo (Ivanov, Truth-workers, p. 60, note i) are still no more than hypotheses (cf. Burkhān-i kāstī, iii, 1540, editor's note 3). In Turkish, it came to mean "a dervish who has withdrawn from the world and who wanders about like a beggar; a man who has renounced all worldly things and who has seen the truth, a philosoper" (see Sāmī, Kāmis-i Türkī, Istanbul 1328, ii, 1081; cf. J. W. Redhouse, Turkish-English dictionary, Istanbul 1921, 1471).

There exists, especially in Turkish works, vivid and detailed information concerning the kalandar's outward appearance: they are depicted in the chapter on them in the Karšidān-i Dībān wa nafišā-i dīdān, by the 10th/16th-century Turkish writer Wāhīdī (Istanbul University Library, Ms. TY 9504, f. 31b), as clean-shaven, with shaven eyebrows and heads, wearing a conical hat of woven hair and a yellow or black shawl, and carrying a drum and a standard (sālam); to this should be added the information concerning the appearance of the dervishes connected with the Abdālān-i Rūm and the Şamshī groups (cf. Wāhīdī, ibid., ff. 20a-21b).

In an illustration to Nicolas de Nicolay's Les navigations... (Lyons 1567) and reproduced in Blaise de Vigenère's translation (Paris 1622) of Chalcondyles, the kalandar is wearing a coarse garment of horse-hair which reaches only to just below the hips; his hair and face are completely clean-shaven; on his head is a felt hat with a horse-hair brim of one hand's length and detailed information concerning the kalandars and the Haydarlı, Dījāmī and Bektāșī sects,
which differed to some extent in their appearance and dress but had adopted the same way of life. (Wit, ff. 43a, 57b ff., 60a ff.; cf. Türk halk edebiyatı ansiklopedisi, no. 1, p. 52b; Faşır, Ta'rifāf, Ist. Un. Lib., Ms. TY 3051, f. 13b.) In Old Ottoman texts, the words fgang and torlak are used as equivalents of kalander (Türk halk edebiyatı ansiklopedisi, p. 334).

In the Punjab, the word kalender usually means "a trainer of performing monkeys" (see Rose, Glossary of the tribes in Punjab and N. W. Frontier, iii, 257).

Bibliography: In the text. (TAHSIN YAZICI)

KALANDARIYYA, name of a Muslim tarīka and, earlier, name given to a (not strictly organized) movement, which probably began after the appearance of the Malâmatiyya (q.v.) (3rd/9th century) and whose adherents, holding in general to Malāmī doctrines, gave them a different interpretation; as manifested in the 7th/13th century, the movement was strongly under Buddhist influence (see M. Habib, Chishki mystīcs . . . , in Med. Ind. Qtly., i/2 (1950), n. 1). The existence of the movement in Kūrāsān in the 5th/11th century is clearly attested; its adherents then may have been Buddhist ascetics maintaining their Buddhist beliefs and way of life under a Muslim guise; alternatively, the (earlier) Malāmīs had been inspired by such Buddhist ascetics. Since the kalander looked with envy at the way of life of the Indian ascetics (see Khatīb-i Fārisī, Manāhī-i Camāl al-Dīn-i Sāvī, ed. T. Yazici, Ankara 1972, 12), the second alternative is more likely. The movement was at first confined to individuals and to the eastern Islamic world (Kūrāsān, Turkestan, etc.); it spread westward, in the early 7th/13th century, is due to the activities of Djamāl al-Dīn al-Sāwī (d. ca. 630/1232-3). Until his day the movement, like the Malmātīyya, possessed general basic principles, but remained no more than a corpus of ideas; al-Sāwī, systematizing and adding to this corpus, produced in effect a new movement—so new, that in some sources (e.g., Muhammad b. Muḥammad al-Khatīb, Fustāf al-ṣadādā, ed. O. Turan, in Fuad Köprüöz, Armāğāns, Istanbul 1953, 555 ff.) he is represented as the founder not of the Kalandariyya but of the Djawlaškīyya branch of the Kalandariyya. The history of the movement must therefore be treated in two phases, before and after al-Sāwī.

In the first phase, the basic principles of the movement consisted of a kind of existentialism. Whereas the Malāmatīs, without boasting or ostentation, carried out scrupulously God's commands, the Kalandarīs sought to destroy all custom and tradition and to conceal their actions from public view (Dīāmī, Naftāhī, Turkish tr. by Lami, Istanbul 1289, 20; cf. al-Suhrawardi, Ṭawārfīf, Cairo 1358/1399, 56-7, partial Eng. tr. in J. S. Trimingham, The Sufi Orders in Islam, Oxford 1971, 267). Al-Suhrawardi's description is supported by the statements of kalandars in 'Abd Allāh-i Anārī's Kalandar-nāma (ed. Sulṭān Ḥusayn-i Tābānda-i Gunbāḥēdī, Tehran 1319 s., 87 ff.), which presents a system of thought advocating inner contentment, the unimportance of learning, the avoidance of all display, and contempt for the transient world and everything in it (op. cit., pp. 88 ff.).

In practically any society some individuals, naturally enough, will adopt such ideas; but their systematic adoption was probably due to the influence of Indian ascetics. In the 3rd/9th century there were to be found in Mesopotamia and adjacent regions wandering non-Muslim ascetics, practising poverty, seeking uprightness (ṣīdāf), purification and sanctity, traveling in pairs and never spending two nights in the same place (Dīābīs, Hayyūsūn, iv, 147; cf. J. Goldscheider, Le dogme et la loi de l'Islam, Paris 1920, p. 133). It is very possible that Muslim ascetics, impressed by these holy men, looked for, and found, in the Kurā (e.g., X, 112) and in ḥadīth the authority to imitate them.

Apart from Anārī's Kalandar-nāma, no work is known which treats of the movement before the beginning of the 7th/13th century, the time when it attracted the attention of the whole Muslim world, no doubt because of the appearance of Djamāl al-Dīn al-Sāwī, with his unusual style of dress, and his attraction of adherents. He and his followers shaved the beard, the moustache, the eye-brows and the head; they wore a hair-cloth garment; and they regarded any action as licit. Such distinctive behaviour provoked reaction in some, attracted others, and caused them to be mentioned in several literary works. Al-Sāwī probably died in about 630/1232 (the birthdate 382/992-3 given in his Manāhib (ed. T. Yazici, Ankara 1972, intr. p. iv, text p. 5; cf. M. F. Köprüöz, Andolu'da İslāmîyet, offprint from EFM, p. 52) is to be rejected). The name djawlaškīyya presumably arose from the founder's distinctive garb (Pers. djalawāla, "sack-cloth"). The Djawlaškīyya (under that name) had persisted in Anatolia in the first half of the 7th/13th century (see O. Turan, loc. cit. above; cf. Djalal al-Dīn al-Rūmī, Mathawārī, ed. Nicholson, i, 18). Convents of the movement were found principally in Anatolia and Egypt, but the movement itself spread as far as the Magrib and India (see Fakīr al-Dīn 'īrāfī, 'Uṣūl al-nāma, ed. and tr. A. J. Arberry, Oxford 1939, 2-26; cf. Djalalshāhī, pp. 213 f.; Dīmānī, Naftāhī, Turk. tr., p. 673). Kalandars were numerous in Syria and Egypt in the 7th/13th and 8th/14th centuries, and their unconventional behaviour occasionally produced a reaction from the authorities: thus in 761/1360 the Mamūlīl sultan al-Malik al-Nāṣīr obliged them to adopt normal dress. They were found in Anatolia in the first half of the 7th/13th century (cf. Afkārī, Manāhib al-ṣarīfīn, ed. T. Yazici, ii, 596; Fr. tr. Huart, ii, 100; cf. O. Turan, op. cit., p. 561), and in the Ottoman period (they were active until the 12th/18th century) are referred to also under other names: Abdālānī, Rūm, Shamsīyānī, etc. "Abdālā" are recorded from the early 8th/14th century (see, e.g., the Vīdyetnāme of Ḥājjīlīl Bektāšt, ed. A. Gölpınarlı, Istanbul 1958, 46). In the 10th/16th century, attacks on such dervish-groups began: a certain Wūbdīlī wrote his Maǧdīa-ī Dījkān wa Naḍībī-ī Dīnī (in the press, ed. T. Yazici) as a condemnation of the adherents of ten tarīkas of this type; and in the next century, when they were still active, Karakah-zāde 'Umar Ef. produced a modernized redaction of Wūbdīlī's work (Nūr al-hudā li-man ihtadā, Istanbul 1286). When later authors (e.g., Harīf-zāde Kemāl al-Dīn, Wānī al-haška fi bayān sa'dāsī al-tarābī, Ms Fathī 432 ff. 74 v. ff.) allege that the Kalandarīyya derives from the Mawlawīyya, they are misled by the fact that the dress of the Shamsīyānī, a branch of the Mawlawīyya, resembles that of the Kalandars. In Anatolia Kalandars are also called ışık and torlak.

In Iran the usual name was Kalandar (Türk halk edebiyatı ansiklopedisi, p. 34). In the Şafawīd period they were numerous, especially around Ardabīl (A. Okearīus, Vermerhete . . . Reisenbeschreibungen, n. p. 1656, 685).

The movement was firmly established in India as early as the reign of the Ilutmush (607/1210-633/1296) see M. Habib, in Med. Ind. Qtly., i/2 (1950), 3). In the 7th/13th century Kalandar-type dervishes came
to Delhi, and aroused curiosity by their odd behaviour (Diyâ 3 al-Din Barani, Ta'rikh-i Firuz-shâdi, Calcutta 1866-2, 202); especially in the Punjab and in Sind they influenced such personalities as Fâghr al-Dîn 'Irâqî (d. 686/1287-8), Amir 'Abâsînî (d. 718/1318-9) and Shâhâbâz Kalandar ('Uglîmân-i Marandî, d. 724/1324). They had convents in the neighbourhood of Delhi. They flourished particularly in the 7th/13th and 8th/14th centuries (Barani, op. cit., p. 350), but were later absorbed into other orders (C. A. Storey, Persian literature, i, 1036).

Doctrines. Influenced by Hindu and Buddhist (especially Mahayana and Sangha) traditions, the Kalandariyya were distinguished from other Muslim orders by the following features: (1) The shaving of the head, eye-brows and face (especially after the time of al-Sâwi) in order fully to reveal the beauty of the face. (2) The wearing of a Khirfra- (cf. I^afiz Abru, Mandkib-i Carnal al-`ardb va afrshdm va farik-i Balu6, s. xvi/4, 421-2). His functions were primarily concerned with the assessment and collection of taxes. In the first three months of the year, he would appoint a tax collector (muqâsîl), assemble the heads of the craft guilds and the heads of the districts or wards of the city and send them, together with the minor officials, to the shah. Iskandar Beg, referring to the appointment of a certain Adham Beg as kalantar of Tabrîz in 1015/1606-7, states that this office was "among the most important affairs" (as muqâsîl-i ta*rikhi-i Iran, Dastur al-muluk, ed. Iradj Afshar, Tehran, 1971, 264-9).

As the head of a town or district the kalantar held a position of respect similar to that of the ra'îs in the Saldjûk period, though it must not be assumed that the kalantar necessarily carried out the same functions everywhere or that his status was always the same. He was, like the earlier ra'îs, the link between the government and the taxpayers and his main duty was to reconcile the interests of the two parties. In some cases he received his appointment from the ruler (cf. the appointment of a village kalantar by Timûr mentioned by J. Aubin, Un santon de l'époque Timuride, in REI (1967), 211). The analogy between the kalantar and the ra'îs, however, must not be pressed too far. Under the Şafawids, the kalantar was more fully integrated into the official hierarchy than had been the ra'îs in Saldjûk times. In the case of Isfahan and of the major towns, the kalantar received his appointment from the shah. Iskandar Beg, referring to the appointment of a certain Adham Beg as kalantar of Tabrîz in 1015/1606-7, states that this office was "among the most important affairs" (as muqâsîl-i ta*rikhi-i Iran, Dastur al-muluk, ed. Iradj Afshar, Tehran, 1971, 264-9).

KALANDARIYYA — KALANTAR

KALANDARIYYA — KALANTAR

KALANTAR (Pers. kalân, "big, great") is used in the 8th/14th and 9th/15th centuries to mean "leader" (cf. Hâfiz Abrû, Cinq opuscules de Hâfiz-i Abrû concernant l'histoire de l'Iran au temps de Tamerlan, ed. F. Tauer, Prague 1959, 7; Mu'ûn al-Dîn Natanji, Muntakkab al-tawârîkh-i mu'tini, ed. J. Aubin, Tehran 1957, 257, 258, 261), and occurs especially with reference to the tribal or the city and the inhabitants of the different districts had, with the government of Khurasan and Transoxania (Asud va muhtâbâh-i ta'rikhi-i Iran, ed. 'Abd al-`Ussayn Navâ', Tehran 1962, 322), in which the phrase it il va wilâ va kalânârân va sar khâyân va a`šâb va a`khdâm va farik-i Balâd is found in a document dated 874/1470 issued by Uzun Hasan for the

KALANTAR

KALANTAR (Pers. kalân, "big, great") is used in the 8th/14th and 9th/15th centuries to mean "leader" (cf. Hâfiz Abrû, Cinq opuscules de Hâfiz-i Abrû concernant l'histoire de l'Iran au temps de Tamerlan, ed. F. Tauer, Prague 1959, 7; Mu'ûn al-Dîn Natanji, Muntakkab al-tawârîkh-i mu'tini, ed. J. Aubin, Tehran 1957, 257, 258, 261), and occurs especially with reference to the tribal or the city and the inhabitants of the different districts had, with the government of Khurasan and Transoxania (Asud va muhtâbâh-i ta'rikhi-i Iran, ed. 'Abd al-`Ussayn Navâ', Tehran 1962, 322), in which the phrase it il va wilâ va kalânârân va sar khâyân va a`šâb va a`khdâm va farik-i Balâd is found in a document dated 874/1470 issued by Uzun Hasan for the
approval of the kadkhudās, allocated this among their members and the inhabitants of the districts respectively and the documents recording this had been signed by the nakhš, these would be brought to the kalāntar for his signature and would be registered by the muhasṣīs-i mamlakā, who kept a register of the break-down of the taxes among the individual taxpayers belonging to the guilds and districts. The muhasṣīs-i mamlakā was, in effect, the kalāntar’s clerk and appointed with his approval. The seal of the kalāntar was required on orders for the payment of drafts made on the taxes of the guild or districts.

It was also the duty of the kalāntar to investigate and decide any disputes which might occur between the guilds or the inhabitants of a district concerning their trade, business, or activities and to prevent them exercising tyranny or oppression against one another. A number of attendants belonging to the diaryān (mulāzsīn-dī diaryān) were allocated to him to act as his subordinates to perform the various tasks which were referred to him by the diaryān (Dastīr al-mulāh, xvi/4, 421-2, 427, xvii/5-6, 549; see also Taghāhir al-mulāh, tr. and explained by V. Minor- sky, GMS, 1943, Persian text, fol. 76a ff.). He received wages, allocated on the taxes, and dues which he collected annually from the guilds according to custom (Dastīr al-mulāh, xvi/4, 422). Dues levied for the kalāntar (Kalāntārī, rūstām-i kalāntārī, marṣām-i kalāntār) are also attested in Āl Koyunlū documents (see text of a sayyārghāl granted by Rustam Beg dated 902/1496 and a grant of immunities from Ahmad Beg dated 901/1497, given by J. Aubin in Arch. persanes commences 12, Note préliminaire sur les archives du Tabārī, Tehrān 1993, 51, and A. K. S. Lambton, Landlord and Peasant, Oxford 1953, 103, for a document dated 904/1498-9 for a sayyārghāl from Amir Alwand Āl Koyunlū).

The kalāntar of Isfahan had certain functions in connection with the reception of foreign envoys, and was consulted by the mhāmānd-bārgāh and the wazīr over the designation of their lodgings (Dostūr al-mulāh, xvii/4, 427; cf. also a document dated 1370/1717 from Shāh Sulṭān Husayn, instructing the diyāndābegī, vizier, kalāntar, and officials of Isfahan to hand over to a certain Frenchman the house in which he was to live, H. Busse, Untersuchungen zum islamischen Kanzleiwesen, Cairo 1959, 229). When Ḥumāyūn, the Great Moghul, came to Kazwīn during the reign of Ṭāhmasp he lodged with the kalāntar Khādīja ʿAbd al-Qānnī Diālādātī (Iskandar Beg, ʿĀlāmārā-yi ʿAbbāsī, i, 98). Tavernier, when he arrived in Isfahan in 1664, was met by the kalāntar of the Armenians, who was ordered to provide him with men to transport the presents he had brought for inspection at the court (Voyages en Perse, Geneva 1970, 116).

The duties which the kalāntar performed on behalf of the government were only one aspect of his functions. He was also, in the words of the Dostūr al-mulāh, the representative of the people (wakīl-i raʿāyatī). As such, it was his responsibility to present their affairs to the shah and others in authority, to remove tyranny and oppression which might afflict them, and to see that the orders and regulations issued by the guilds concerning their business and work were carried out. Similarly, he was required to be present on occasions when measures were taken affecting the interests of the people, as, for example, when claims for a reduction of taxation after some natural calamity were examined by the rayyāc (surveyor), or when disputes over the use of the water of the Zāyandarūd were investigated (Dostūr al-mulāh, xvii/5-6, 557).

The population probably had greater influence on the appointment of the kalāntar in the provinces than in the capital. A document dated Rabīʿ I 1107/1695 for the dismissal of a certain Khādīja Muhammad Taḵī, the kalāntar of Gīlān-i Bīyā Pas (Rasht and its dependencies), and the appointment of Khādīja Muhammad Saʿīd as his successor, states that the wazīr, deputy wazīr and mustaʿfiṭī of Gīlān-i Bīyā Pas, the local šaykh al-islām and the wazīr of the buyūlt-i ḥāṣa had investigated the dissatisfaction of the kadkhudās, taxpayers (arbāb-i bunātā), and people of the province with Khādīja Muhammad Taḵī and their wish that Khādīja Muḥammad Saʿīd, the former kalāntar, should be reappointed. The document records that they had reported that only 469 persons had expressed their satisfaction with Khādīja Muhammad Taḵī, while 2,177 persons had signified their desire for the reappointment of Khādīja Muḥammad Saʿīd; of these 983 had complained against Khādīja Muhammad Taḵī, while the rest had merely stated their support for the appointment of Khādīja Muḥammad Saʿīd. In the light of this, the latter was reappointed kalāntar and the population of the province was instructed not to oppose him in anything which he would contrive to bring ease of the people or increase the revenue of the diaryān. The document states that the wazīr and mustaʿfiṭī were not to make allocations on the revenue or interfere without his knowledge or permission (or that of the officials he might appoint). It was his responsibility to make charges on the revenue in accordance with the details received from the diaryān and to send to the diwān (Tehrān) at the end of the year a statement of these charges and of the taxes and dues and their allocation among the individual taxpayers together with the relevant documents and receipts duly sealed. He was also given general oversight of the purchase of silk from Gīlān by the royal administration, and had a watching brief over matters connected with law and order: disputes between the people were to be decided by the dārḵīs in his presence or that of the officials he appointed (Barrashā-yi tārīḵī, Tehrān, ii/2, 80-2; also in Yak sad o pāndāh sanād-i tārīḵī, op. cit., 54). An undated farāmān issued by Shāh Sulṭān Ḥusayn in favour of Amīr Muḥammad Šāmān b. Amīr Muḥammad Ḥusayn, after establishing the hereditary claim of Amīr Muḥammad Šāmān to the office of kalāntar of some of the provinces (wālāyāt) of Sīstān and mentioning that the claim of his grandfather Mīr Muḥammad Muʿīn had been recognized in Rāmāḏān 1068/ June-July 1658, subject to two-thirds of those whose names were on the tax-roll (bunātā) being agreeable to holding the office of kalāntar, appoints him to that office, provided his appointment is also supported by two-thirds of the people. His duties were similar to those of the kalāntar of Gīlān-i Bīyā Pas, except that he did not have special duties in connection with the silk trade (Asnād-i khāndān-i Kalāntārī-i Sīstān in Barrashā-yi tārīḵī, Tehrān, iv/5-6, 12-14). Cf. also two diplomas for the office of kalāntar of Tabrīz issued by Kārim Khān Šand, dated 1764 and 1773 respectively, which show that the wishes of the inhabitants were considered in the appointment of the kalāntar, at least in theory. Nādīr Mīrzā, Tārīḵ-e pānkārā-yi dār al-salām-i Tabrīz, Tehrān lith., 1905, 297 ff.)

In the smaller towns also the kalāntar was the spokesman of the people and could sometimes make his voice heard. For example when the kalāntar of
Sava and the people of that region complained to Shah Abbas in 999/1590-1 of the tyranny and exactations of Shah Kuli Sulṭān, the Turkoman governor, he was replaced by Gandj Ali Khān (Kādī Ahmad Kummi, Kūlāsādī al-tawārīkh, ed. H. Muller, Wiesbaden 1964, Persian text, 90). Several European observers in the 17th century state that the kalāntar’s function was to defend the people against the injustice and extortion of the government (cf. Du Mans, État de la Perse en 1660, Paris 1890, 36; Tavernier, Voyages en Perse, 260; Cornelle le Brun, Voyages de Corneille le Brun par la Moscovie, en Perse, et aux Indes orientales, Amsterdam 1718, i, 209).

The kalāntar of the Armenians of New Djlufa outside Isfahān, where Shāh ‘Abbās established an Armenian colony, was an important and influential official in Safavid times. He was normally an Armenian. His functions were similar to those of the kalāntar in other towns or districts of towns (see further H. Busse, Untersuchungen zum islamischen Kanzelwesen, 138 ff.; J. Carswell, New Djlufa, Oxford 1968, 78). An official known as the kalāntar was also well-known in Georgia in the 17th and 18th centuries and his functions seem broadly to have corresponded to those of the kalāntar in Persian towns (cf. Joseph Karst, Le Code de Vakhtang VI, Commentaire historique analytique, in Corpus Juris Ibero-Caucasici, Strasbourg 1937, iii, 564).

Usually, the kalāntar was a local man, and as with many other local officials there was a strong hereditary tendency in his office. Occasionally the kalāntar of one city might be transferred to another, but this was rare. Sometimes the kalāntar held some other office as well (cf. the case of Muḥammad Šālīb Beg, a Tiflisī, who died in 1031/1621-2, after having been at one time usūr of Shīrwān and later usūr and kalāntar of Kumm; Iskandar Beg, ‘Ālamārā-yi ‘Abbāsī, i, 991).

The fact that the kalāntar, while acting as the spokesman of the people, was also integrated into the official hierarchy made it easy for him, as soon as the hand of the central government was removed, to use the power and influence which he held as a government official to assert his independence. In the 18th century the kalāntars and kadkhudās of the cities and towns often emerged as local leaders in times of crisis. One such was Ḥādījī Ḥāshim, whose father Ḥādījī Ḥāshim had been kadkhudābādī of the Haydarī quarters of Shīrāz under Nādir Shāh. He became kalāntar of Shīrāz after the death of ‘Alī Murād Khān Zand and continued to hold this office under Lutfi Ḥālī, and in 1205/1791, when the latter abdicated himself from Shīrāz in an abortive attempt to seize Isfahān, took possession of the city, to surrender it in due course to ʿĀdū Mūḥammad Khān Kādī-jār, whose sadrī aʿrām he later became. Amin al-Dawla, one of Fath ʿAlī Shāh’s first ministers, was also, at the beginning of his career, kadkhudā of one of the districts of Isfahān and later kalāntar of the city.

Sir John Malcolm, writing in the early 19th century, states that “the Kalantar, or chief magistrate of the city, and the Kut-khodas, or magistrates of the different wards, though nominated by the king, must be selected from the most respectable inhabitants. They hold the power and influence which they derive from personal consideration to aid the authority of the government.” (History of Persia, London 1829, ii, 324-5). James Morier, about the same time, states that a kalāntar besides “the real governor resides in every city, town and village and superintends the collection of the tribute”. His account shows that there was a marked continuity of practice in the office of kalāntar. He states, “The Kelountar is a man of consequence wherever he presides; he is an officer of the crown, and once a year appears before the Royal presence, an honour which is not permitted to the Ket Khoda. He also receives wages from the King’s treasury, which the Ket Khoda does not. The Kelountar is the medium through which the wishes and wants of the people are made known to the King: he is their chief and representative on all occasions, and brings forward the complaints of the Rayats, wherever they feel oppressed. He also knows the riches of every Rayat, and his means of rendering the annual tribute: he therefore regulates the quota that every man must pay; and if his seal is not affixed to the document which the Rayat brings forward in the time of the levy, the assessment is not valid, and the sun cannot be received” (A journey through Persia, Armenia and Asia Minor to Constantinople in the years 1808 and 1809, London 1812, 235-6).

From about the middle of the 19th century, as the central government extended its operations, the office of kalāntar lost its importance. Its functions were largely taken over by officials of the ministry of finance. The kalāntar continued, however, under the government, to have some responsibility for local affairs, the guilds, and, to some extent, public order, but his duties and influence varied from place to place (cf. E. Aubin, La Perse, Paris 1908, 37, 38, 51). With the grant of the constitution in 1906 and the adoption of modern forms of government, the office of kalāntar lapsed, its various surviving functions being taken over by municipal and police officials. During the reign of Riḍū Shāh, the term kalāntārī became the official designation of a policeman.
information: thus at Tlemcen he met al-Kasim b. Sacld al-cUkbani (d. 854/1450) and Muhammad b. Ahmad Ibn Zaghb (d. 849/1443), both of whom had a great influence on him and acquainted him with the methods of arithmetic and their application to the problems of the fara'id. In Egypt he attended the lectures of Ibn Radjjar al-Asflalani (in 852/1448). Having returned from his pilgrimage, al-Kalasadi settled in Granada, consecrating his life to teaching and editing his numerous works. Of his pupils, Abú 'Abd Allâh al-Mallâhî, Abû 'Abd Allâh al-Sanûsî, and Ahmad b. 'Ali al-Balawi may be mentioned. The political and military situation was, however, deteriorating: the united houses of Aragon and Castile decided to launch the final attack against the last Muslim stronghold in Spain. Courageously, al-Kalasadi exerted himself in trying to organize resistance, but he was soon forced to join the Andalusian hordes of refugees that were spreading over the Maghrib. He died in Ifrîkiya at Bedjaa, on 15 Dhû 'l-Hijjâd 892/10 December 1486.

Al-Kalasadi was a prolific author on widely varying topics, some of whose works enjoyed considerable renown both in East and West. He was certainly a compiler, but distinguished himself by the originality of his composition and the multiplicity of personal examples. In his mathematical works, one notices the first use of a symbolization which he uses quite extensively in the presentation and writing down of equations, sc. the use of the letter $x$ (abbreviation of $shayt$ to represent the unknown ($a$), of the letter $m$ (for $maâl$) $= x^2$, of $k$ (for $ka'b$) $= x^2$, of $l$ (for $la'd$) to represent the symbol $= $, of $d$ (for $da'd$) $= y$. Al-Kalasadi's commentary on Ibn al-Banna's *Mukhtasar* al-`Attdbiyya, a fairly advanced formula for finding the approximate square root. Finally, attention may be drawn to a rational classification of the fractions by him and an exhaustive study of arithmetical procedures [see Al-Kasî]. Here follows a list of his works:

(M. Souissi)

**KALÂT** [see BALOCÍSTÁN].

**KALÂT AYYûB** now Calatayud, a fortress town in the Upper March (al-`Thâqîr al-`atâ`d) to the south-west of Saragossa, built near the site of the ancient Bilbis (Labla in Yâfût); it took its name from the *tâbi`* Ayyûb b. Hâbbâ al-Lakhrâmi, a *wâlée* who succeeded `Abd al-`A`azîr b. Mûsâ b. Nušayr. Situated 25 miles from Tudela and 30 miles from Medinaicai and Saragossa, the town possessed fertile, well-watered lands with orchards of figs and many fruit trees, yielding a fairly wide variety of produce which was sold at moderate prices. According to al-Bakrî, the local mountains produced a gum-resin (murra) of good quality. A type of ceramic with a golden glaze was manufactured in the town and exported. Al-`Idrîsî included the *balad* of Kalât Ayyûb in the *ikîm* of Arnedo (Arnu), along with Daroca, Huesca, Saragossa and Tudela, but in al-Bakrî's opinion it must have come under the last-named place for administrative purposes; according to al-Maqqari, Mo- lina was its *madina*. The territory of Kalât Ayyûb suffered from incidents arising from the behaviour of two powerful families who were not always subject to Cordoba, the Banû Kast (mawâllitâd) and the
Banu 'l-Muhadjir or Tuglbis (Arab). According to al-Qadi, the amir Muhammad rebuilt Kal'at Ayyub in 248/862. Under the domination of the Tuglbis, it was compelled on several occasions to submit to Cordoba during the caliphate. In the 5th/11th century it was ruled by Sulaymân b. Hūd who, on his death, left the town to his son Muhammad, but the latter swiftly handed it over to his brother Ahmad, lord of Saragossa. It is reasonable to suppose that Kal'at Ayyub was under the control of the Almoravids at least from 503/1109, and it remained in their possession until 25 Rabi' I 114/12 June 1120, when it was captured by Alfonso I of Aragon. The Muslims who stayed on in Calatayud after the Christian conquest formed a community living alongside Christians and Jews; they must have been far superior in numbers. The Jalón valley, where Calatayud is situated, was one of the regions of Aragon where there was a strong concentration of Moriscos.

KAL'AT BANI 'ABBĀS, a town in Algeria in the Bôbân mountains, about 35 km. northwest of Bordj Bâ 'Arridj. Situated at an altitude of about 1050 m., the town stands on a strategic position on a plateau surrounded on three sides by sheer ravines. From about 800-900 m. in depth, its only link with the surrounding country being a narrow strip of land, Kal'a enjoyed the benefits of a real neutrality. The tomb of Sidi Ahmad, the son of 'Abd al-Rahmân and ancestor of the Ulûd Mu'âkrân, was an object of veneration in the 18th century. It was also in Kal'a that Mu'âkrân, the leader of the 1871 revolt, was buried.

KAL'AT BANI HAMMÂD, a medieval town in the Central Magrib, situated in the Ma'dîd mountains, capital of the Banû Hâmâd dynasty [see Hâmâdîs]. It is also known as Kal'at Abi Tawîl (al-Bakrî, Istibdâr, etc.). The site of the town, now a mass of ruins, is in the form of a vast amphitheatre opening out onto the plain of the Hodna which it dominates from a height of about 550 m. The average altitude of the old city is 900 m. above sea level. To the north of it rises the massive truncated cone of Ta' ārîb (1418 m.), an arid mountain whose contours are marked by projecting spurs where the folds of rock are inverted; to the west is the Gerein range, which can be transversed in the direction of Msila only by a pass at the foot of the peak, which rises to 1110 m. To the south, the Djebel Rahma largely bars the view, except over its eastern flank, which is cut by the narrow valley of the Oued Frâjî, running from north to south, a gap revealing in the distance the plain with the glittering Chott
Hodna. The same torrent, flowing down from the
mountain through narrow gorges with steep sides, runs past the eastern part of the town. Beyond its
deeply embanked course rise various mountains ranging from 1000-1400 m. in height.

Well protected against any possible attacks from the plain, which can easily be watched, and situated only a short distance from the most usual east-west routes, the site has doubtless been occupied from the earliest times. Ruins dating from antiquity—not yet investigated scientifically and including the remains of some baths—indicate Roman occupation, though it is impossible to estimate either its extent or its character. In 335/947-8, the place may have seen mains of some baths—indicate Roman occupation, routes, the site has doubtless been occupied from only a short distance from the most usual east-west the plain, which can easily be watched, and situated

the tragic end of Abu Yazid [q.v.], the "Man on the donkey", since Mount Kiyānā, still called the moun-
tain of the "Adīśa, seems to tally closely with the modern Takarbūst on whose summit some ruins are to be seen. There can be no doubt that the strategic value of the place was well known to the Sanhādja; the reasons motivating Hammād, son of Buluggin, son of Zīrī, in his partial abandonment of the ancient capital Ašhīr are thus apparent. By choosing the Ka'lā site, he secured for himself a second base that was strong and particularly well protected against the ambitions of the Zanjāt in the plain; but also and above all, by building a stronghold there, he made clear his desire for independence from Bādīs, the Zīrid of Kayrawān. Ka'lā was to appear as a spear-
head directed towards the East. Some years later (405/1015), Hammād raised "the standard of revolt" and "proclaimed the sovereignty of the 'Abbāsīd caliphs". A new dynasty was born, and Ka'lā became the capital of an independent state.

If Ibn Khaldūn is correct, the town was built and populated by the forced transfer of the inhabitants of Msila and Sūk Hamza (Boura); other elements of the population, particularly the Djarawa, settled there themselves. Hammād’s first care was the building of strong ramparts, a palace, "several mosques, caravanserais and other public buildings". It is hard to believe, however, that as early as 401/1010, Ka'lā "attained a high degree of prosperity" and that "artisans as well as students flocked there from the remotest regions and the furthest points of the empire". In fact, at this period Hammād still seems to have been closely attached to Ašhīr, regarding Ka'lā as merely a secondary town. Bādīs, who had re-
acted vigorously against his uncle’s initiatives, attacked Ka'lā in 406/1015; it seemed that the town could not resist his assault, when the Zīrid suddenly died.

The very short-lived apoge of the town came during the reign of al-Nāṣir, son of ‘Alānmās (454/ 1062-481/1089) and his son and successor al-Mansūr (481/1089-496/1050). The sudden prosperity of Ka'lā is due to the misfortunes of Iṣrīkiya when it was in-
vaded by the Arab nomads; but also and above all, by building a stronghold there, he made clear his desire for independence from Bādīs, the Zīrid of Kayrawān, in particular, were depopulated, while Ka'lā, according to al-Bakri, became the metropolis after the ruin of Kayrawān: “the inhabitants of Iṣrīkiya flocked there to settle... the town is a trading centre which attracts caravans from ‘Irāk, the Hīdjas, Egypt, Syria and all parts of the Ma-
thrib”. However, from the beginning of his reign al-
Nāṣir bought an emergency outlet to the sea; he had the little port of Bougie put into order, and there his son built al-Mansūriya, where he later took refuge. The Hilāllīs [see HILLAI] held the whole Hodna plain as well as that of Sétif, as far as the Iron Gates; despite a treaty, the Aḥbādī made the city’s existence more and more difficult, subjecting it to a terrible blockade. In the 6th/12th century, the power of Ka'lā declined continuously, to the advantage of Bougie, and in 543/1148-9 Yabāy the son of al-'Azzī removed all articles of value and transported them to Bougie. Shortly after 547/1152, Ka'lā was taken by storm by the Almohads, who "destroyed it utterly". However, the armies of 'Abd al-Mu'min installed themselves there and formed a garrison, restoring various ruined buildings and reconstructing a small oratory in the remains of the Great Mosque. The Banū Qanīyya occupied the town for a time, but they were dislodged by the Almohads after a three month’s siege (1185). After this date, noth-
ing more was heard of the former capital of the Hammādīs.

The population consisted firstly of the Sanhādja, kinsmen of Hammād who probably constituted a privileged class, secondly of the citizens of Msila and Sūk Hamza, whose origin was complex, and finally of the Djarawa, whose quarter, to the east of the town, seems to have been walled off from the other quarters of the town. There stood the Kasr al-Manār and its keep, the top of which commanded a view over the whole city and its environs. This situation corresponds so very closely to the text of Peter the Deacon that it is tempting to see in the Djarawa the famous Christians cited in the Chronique du Mont Cassin who were said to have had a church dedicated to the Virgin. Towards the end of the 5th/11th century, the population was augmented by new arrivals from Kayrawān, heterogeneous ethnic elements who included some Jews (there is in fact a record of the presence in Ka’la of the Jewish scholar Isaac Alfāsī, who apparently left for Spain at the end of the 11th century).

The topography of the town reveals an almost rectangular enceinte facing the south (approximately 950 by 500 m.), enclosing on three sides the town which is built on the last ridges of Takarbūst; despite the natural defence afforded by the precipi-
tous flanks of this massif, to the north of the town, the wall climbs high up the mountain, runs across its peak and comes down on the east to rejoin the quarter of the Djarawa. Similarly, on the west it follows the summit ridge of Gorein and climbs up to the peak, descending sharply to the bed of the oued, beyond which is the gate known as Bāb al-Dīrāwā, leading to Msila. An almost rectilinear axis connects this gate with Bāb al-Awkās, leading to Burdij Redir, to the north-east of the city, at the edge of the Djarā-
wa quarter; a third gate, to the south-east, Bāb al-
Djarawa, opens towards the Hodna valley. To the south of the east-west axis stand the ruins of the Great Mosque whose minaret still rises to a height of more than twenty metres. To the north of the same axis, on ridges fairly well isolated from one another, towards the west, can be seen the ruins of the Kasr al-Salām and then, further to the east, the Kasr al-
Kawkab and the Kasr al-Mulk, better known as Kasr al-Bahr because of the large sheet of water lying to its south, upon which nautical jousting (istibdar) probably took place. Finally, towards the east, in the Djarawa quarter can be seen the ruins of the Manār keep and those of the palace of the same name.

Identified by Méquesse in 1886, the old Hammādī city was investigated by P. Blanchet and A. Robert in subsequent years. Excavations on a quite considerable scale were undertaken by General de Béyfis; they concentrated upon the Manār keep, the Kasr al-Bahr and the mosque. From 1951 to 1962, new excavations were conducted by L. Golvin, particularly on the
Kalat Bani Hammad

[After V. Huot]
Kasr al-Manar and the Kasr al-Salam; numerous silos were discovered in the latter group of buildings, appearing to confirm al-Idrīsī’s statement: “There were... stores of such excellence that it (corn) could be kept for one and even two years, without fear of the least deterioration”. Still more recent excavations, which are being undertaken at the present time under the direction of R. Bourouiba, have succeeded in isolating the Kasr al-Manar completely; it is in enabling the excavators to draw up a more convincing plan of the mosque than that given by Beylîé to be drawn up.

The art of Kal'a reveals some originality, particularly in the deeply cut vertical niches in the façades of the Manār, and above all in its system of square, superimposed rooms, forming a central hall around which ramps are placed, roofed over with cradle vaulting, a foreshadowing of the great Almohad minarets at the end of the 6th/12th century (Kutubiyya, the Hassan Tower, the Girālda). The minaret of the mosque, square in shape, is much closer to those in Muslim Spain than to those in Ifriqiyya; on its south face it is ornamented with a rich decoration of deeply cut recesses set with polychrome tiles, the antecedents and continuation of which are little understood, while lobed interlaced arches, sometimes bordering shell-shaped or saucer-shaped semi-domes, call to mind Fāṭimīd Egypt. To Egypt should be attributed the hanging honeycomb vaulting (Mukarnās), probably the earliest in the Muslim West. Elsewhere, decorations of carved plaster may be compared with those in Sāmarrā, but here also is a reminder of Egyptian craftsmanship; and very beautiful enameled or painted decoration, polychrome tiles, hangings, honeycomb vaulting, a foreshadowing of the great Almohad minarets, are displayed.

Several painted frescoes, numerous ceramic fragments of carved plaster may be compared with those of the Manār, and above all in its system of square, superimposed rooms, forming a central hall around which ramps are placed, roofed over with cradle vaulting, to which ramps are placed, roofed over with cradle vaulting, a foreshadowing of the great Almohad minarets, are displayed.

KA'LAT HUWWARA — KA'LAT AL-SHAKIF

KA'LAT NADJM, a fortress in northern Syria, situated on the right bank of the Euphrates, which in the medieval period commanded the route from Halab to Harrän, in Upper Mesopotamia, via Manbijdi. This fortress stood at a point where the Euphrates was relatively easy to cross, owing to the existence of two small islands which facilitated the construction of pontoon bridges. It is thought that the fortress stands on a Classical site, but the identification of this presents some problems: the most tenable hypothesis appears to be the identification of the site with the Caeciliana of Roman itineraries.

In the oldest Arab texts, the locality is called Djdhr Manbijdi, and these add that the bridge over the Euphrates, which had formerly existed, was constructed at the order of the Caliph 'Uthmân. The name of Ka'lat Nadjm was rarely mentioned before the 6th/12th century; it seems to derive from a certain ghulâm called Nadjm who, in 300/912, re-founded the town. Certain maps and even texts are therefore mistaken when they give the name as Kal'at al-Nadjm. However, it seems that this name was deliberately adopted by these authors as more poetic, dubbing the fortress "the castle of stars".

The bridge of Ka'lat Nadjm played an important role from the earliest years of Islam. The region was conquered in 18/639 and the bridge is mentioned in accounts of the struggle between `All and Mu'âwiya. By this route the Umayyad armies won Mesopotamia. Subsequently, Ka'lat Nadjm was part of the Hamdânid [q.v.] domain, then that of the Mirdâsids [q.v.], and the Banû Numayr [q.v.], before falling into the hands of Zankî, of Nur al-Din [q.v.], and then of the Ayyûbîds [q.v.]. Nûr al-Dîn restored the fortress (which twenty years later Ibn Džubayr called a "new castle"), placing an important garrison there.

Later, probably in 68/1280, Hülâgû had to give battle to secure the fortresses which commanded the Euphrates crossings; at that time Barhebraeus, bishop of Aleppo, made his way to the conqueror to seek mercy for the Christians and was imprisoned at Ka'lat Nadjm.

The fortress of Ka'lat Nadjm, which was described by many travellers of the 10th and the beginning of the 20th centuries, stands isolated on a rocky eminence at a height of about 50 metres. The castle itself comprised two storeys and certain parts were damaged when the castle, where a rebel Arab had taken refuge, was captured by the Ottomans in 1820. Three Arabic inscriptions mention works undertaken at the orders of the Ayyûbid al-Malik al-Zâhir, son of Salâb al-Dîn, between 605/1208 and 612/1215. Of the little town which, according to the Arab geographers, lay along the bank of the river and at the foot of the fortress, no identifiable vestiges remain. The ancient bridge has also disappeared.

(D. SOURDEL)

KA'LAT RABĀH, Sp. Calatrava, town of Muslim Spain, of which the ruins are to be seen at Calatrava la Vieja on the left bank of the R. Guadiana about 15 km. north-north-east of Ciudad Real. According to the Râwâd al-mîjâr the town was founded in Umayyad times and peopled by the inhabitants of decaying Urtl (Oreto), about 40 km. to the south. The eponymous Rabâb is unidentified; the common belief that the place was named after the tâbi' 'All (or 'Ubayy) b. Rabâb seems to be an unfounded conjecture. It was the capital of an extensive region divided into dâ'is, which word in Andalusian usage (says Yâkût) was the equivalent of dinâm. The adîs of Bakr, Lakhm and Djudham are recorded. The marshy region to the north-east of Ka'lat Rabâh was well known to topographical writers as the place where the upper Guadiana (under which name they confused several rivers, e.g., Gigueta, Rânasares) disappeared underground and reappeared several times before emerging finally at Ka'lat Rabâb [see Wâdî vâla]. Dimâşkhî (q.v.) says that red arsenic or realgar (rabâdî l-zâhâ) is found there.

Standing in Toledan territory on the main highway between Córdoba and Toledo not far from Christian lands, Ka'lat Rabâb had an eventful history and is frequently mentioned in the literature, though without details. It fell into Christian hands for the first time in 478/1085 when Alfonso VI annexed Toledo, but this occupation came to an end with the arrival of the Almoravids (Battle of Zallâkâ [q.v.], 479/1086) though Toledo itself was not taken and never again came under Muslim rule. With the erosion of Almoravid power Ka'lat Rabâb was once more under Christian rule by 541/Jan. 1147 and remained so until the Muslims, in the shape of the Almohads, again reasserted their authority for a few years in 592/1196. (Alarcos, the scene of the celebrated Almohad victory in the previous year, is a short distance downstream from Ka'lat Rabâb [see AL-ARAK]). It finally surrendered to Alfonso VIII in 609/1212 immediately before the battle of Las Navas de Tolosa [see AL-TIKAR]. It did not recover any measure of prosperity and in 1252 the capital of the region became Villa Real, newly founded by Alfonso the Wise. It was renamed Ciudat Real in 1429.

The religious order of the Knights of Calatrava was founded in 1158 during the second Christian occupation with the purpose of fighting the Moors. The name Calatrava still exists as an element in numerous toponyms of the region.

KA'LAT AL-ROM [see RÔM KA'LEST]

KA'LAT AL-SHAKIF (the "Citadel of the Rock") is the Crusaders' castle of Beaufort. It is also known by the name of Shaki' Arûn. On the testimony of the Arab authors, Yâkût among others, it was long believed that 'Arûn was the Arabic transcription of the name Arûn, a Frank said to have been lord of the region. In fact, it is a toponym which occurs even in the Bible (Joshua, XII, 11); its position to the west of the Jordan indicates that it corresponds to the present village of 'Arun which, in former times, marked the frontier of the land of Moab. From the earliest remains it may be supposed that a
military settlement existed on the site during the Roman period, beside the Leuctrum.

The castle, which was considered impregnable, is situated at an altitude of 670 m., high on a rocky crest, at the extreme southern end of the mountain range of Lebanon. To the east, standing above a sheer drop of 300 m., it dominates the deep and narrow valley of the Nahr al-Kasimiyya, forming the dividing line between the mountains of Lebanon and the plateau of Galilee.

Kal'at al-Shakif stands in an important strategic position, for it effectively controls a two-arched bridge over the Litâni, the Dijâzn and Saydâ, as well as several roads which meet at the bottom of the valley, including the roads from Bânyas to Saydâ via Nabâtîyâ and from Bânyas to Beirut via Dijâzn and Dâyr al-Kamar, and the road from Şûr (Tyre) to Damascus. The castle commands the entrance to Palestine; it guards the southern passage from the Bûk'ân, access to Syria from the south, and access from the coastal region of Şûr and from Saydâ. It is linked with several other fortresses, including Subayba to the south-east, Hûnûn to the south, Tîbnîn to the south-south-west, Kal'at Mârûn to the south-west and Saydâ to the north-west.

The whole complex of buildings, constructed on two levels, follows the configuration of the ground and takes the form of an elongated triangle about 140 m. long, with its base (about 38 m. wide) at the southern end. A ditch 15 to 36 m. wide, cut out of the rock on the north, west and south sides, forms a barrier between the plateau and the site of the fortress, which is inaccessible from the east. Opposite the entrance, two piers about 4.30 m. apart made it possible to cross the ditch by means of a bridge which could be destroyed in the event of an attack, and to reach a small artificially levelled area on the south side of the crest. Today Kal'at al-Shakif is in a very ruined condition. It is divided into various sections surrounded by two enceintes constructed of courses of large blocks of stone, the surface of the stone-work being left rough: to the east, above the ravine, is a group of buildings in the lower courtyard defended by four round towers linked together by curtain walls, and to the west is the upper part, which forms a redoubt accessible by means of an interior ramp. Such is the fortress itself, which includes several sections built at different periods. For the mediaeval period we can distinguish five separate programmes of alterations and construction: 1119 to 1119 (Crusaders), 1190 to 1220 (Franks of Saydâ), 1220 to 1268 (Temporals), 1268 onwards (Mamlûk). When the Crusaders arrived, Kal'at al-Shakif formed part of the province of Damascus. In 1133/113, the atabeg Shihâb ad-Dîn ceded the fortress to Fulk, king of Jerusalem, who entrusted it to Reynald, lord of Saydâ, since it controlled access to his territory. The irregularly shaped keep standing in the middle of the west front and typical of the Crusaders' earliest constructions dates from this period; it consists of two storeys and a terrace, the old curtain wall of the enceinte leaving it projecting; the rough surface of the stone-work is a characteristic feature of the period. After the battle of Hattin (q.v.), the Frankish castles still retained their garrisons, but through lack of man-power they no longer received any reinforcements or relief troops, and one after another they fell into the hands of the Muslims. Salah ad-Dîn (q.v.) prepared to lay siege to Kal'at al-Shakif on 17 Rabî' I 585/12 May 1189. Reynald of Sagette obtained a three months' truce, and took advantage of it to improve the castle's defences: the curtain walls were strengthened, and living-quarters were constructed in the courtyard. Stone-work with a more finished surface and stirrup-shaped arrow loops characterize this second period. In Rabî' II/August, the siege was resumed; in the end the fortress was starved out and surrendered on 15 Rabî' I 586/12 April 1190. Then began half a century of Muslim occupation (586-637/1190-1240). The Ayyûbîd al-Malik ad-Adil (q.v.) undertook various building operations, including some alterations to the first enceinte on the south side; he also constructed a new section of wall flanked by massive cylindrical towers with an entrance, to the east, giving access to an oblong armoury leading to the terreplein of the castle.

In 637/1240 al-Salih Ismâ'îl, prince of Damascus, was in conflict with his nephew al-Salih Ayyûb, the ruler of Egypt; to win the support of the Franks and Templars, he offered to restore to them the region of Saydâ, Kal'at al-Shakif, Tiberias and Şafad. The garrison of al-Shakif refused to surrender the fortress, and Ismâ'îl was compelled to besiege it in order to gain possession and to hand it over to the people of Sagette, the son of Reynald and a member of the Ibelin family. The castle was almost immediately, and his son Julian inherited the fortress, which he held until 1260. Crippled by debts and unable to strengthen the fortress to meet the threat from the troops of Baybars (q.v.), he sold it to the Templars and joined their ranks. The Templars improved its defences: on the east side, opposite the keep, they built a large hall with two vaulted bays over ogival windows and, about 245 m. to the south, the new castle, a small outwork destined to be destroyed eight years later. On 19 Rabî' II/April 1266, the sultan Baybars appeared before al-Shakif and bombarded the fortress with 26 sieve-engines for ten days. The garrison of Templars surrendered, the women and children were sent to Şûr, and the garrison itself, consisting of 480 men and 22 knights, was sent into captivity. The sultan appointed the amir Şârid ad-Dîn Kaymaz Kâfûr as governor and the amir Sayf ad-Dîn Balâbân Zaynî as superintendent of works; the latter restored the fortress and placed on the walls the heraldic device of Baybars, a feline passant. In the Mamlûk period, Kal'at al-Shakif was the centre of one of the eleven districts of the miyâba of Şafad.

At the beginning of the 11th/12th century, when the amir Fâkhr ad-Dîn Ma'n (q.v.) revolted against the Ottomans, he drove out the Ottoman garrison and tried to repair the citadel's defences, to withstand the troops sent by Eftâh' Ahmad Pâshâ from Damascus in 1022/1613. The fortress had stocks of water, oil and provisions for 500 men. Al-Shakif possessed three cannons for defence, while the attacking forces had only one which exploded at the second shot; the only damage suffered by the fortress was the destruction of an outer tower caused by the accidental explosion of a powder store. Eventually the troops from Damascus withdrew, after a siege lasting for 84 days. Fâkhr ad-Dîn entrusted the fortress to a Sukmân chief, Husayn Ţawîl, with stocks of food for three years. Shortly after the arrival of the Sukmâns, the latter betrayed the Ma'n and joined the Harîflâh. Sappers sent from Damascus then dismantled the fortresses of Bânyas and al-Shakif in 40 days.

At the beginning of the 18th century, al-Shakif
became the centre of one of the three districts of DJabal 'Amila, a region inhabited by the Mutawali, whose chiefs at that time belonged to the Yemeni section of the Shīṭite tribe of the Banū Sa'b. At the end of the 18th century, the fortress was included in the territories of the Druze and came under the pashalik of Sa'yada, while all around it, according to Volney, the best tobacco in Syria was grown. At the beginning of the 20th century al-Shakif formed part of the district of Sa'yada, on the borders of the districts of Şür and Mu'assasat Şeyh. In 1970 the castle was under the kadā' of Nabatiyya.

**Bibliography:** Yâkût, Muğṣūm al-Salih al-Nadim al-Adil (1000–1070), The Life of Sultan Salamish reigned for only three months, during which time his atabak Kalawun was the real ruler. Kalawun's name was mentioned in the Friday Khalt al-Shakif - Kalawan

The Mamluks then asked Kalawun to accept the post of commander of a thousand Mamluks, becoming one of their leading figures. In 627/1229 he fled with other Mamluk leaders such as Baybars, Sunqur, and Baysara to Syria in order to escape the likely revenge of Aybak, whom they had tried to depose. He spent about three years in Syria in the service of the Mamluk al-Nasir II al-Salih al-Din Yusuf (648/1250-650). In 653/1257 Kalawan and his fellow Bahtū Mamlūkīs fell foul of al-Nasir and were forced to leave him. They thereupon entered the service of the Mamluk al-Mughīth Fakhr al-Din 'Umar in Karak. The amīr Kutuz, the deputy of the Mamluk Sultan Nur al-Din 'Ali b. Aybak, sent an army to meet the fugitive Bahtū Mamlūkīs on their way to Karak. The Mamlūkīs were defeated and Kalawan was taken prisoner to Egypt. He did not stay long in Cairo but disappeared and fled to Karak in the same year (655/1257).

Kalawan remained in Karak for about two years, until 679/1280, when he returned to Egypt accompanied by other exiled Mamlūkīs. They were welcomed by the new Sultan Kūṭūṭ, at that time preparing to meet the invading Mongols, who were defeated near Nābulus in 658/1260. Kalawan was among the Mamlūkīs who helped Baybars I in his attempt to kill Sultan Kūṭūṭ and seize the throne in the same year. Baybars trusted Kalawan and promoted him to the position of commander of a thousand amīrs (amīr al-af). In 671/1272 Kalawan accompanied Sultan Baybars in a campaign against the Mongols. He distinguished himself as the first amīr to cross the Euphrates, thus gaining an advantage over the enemy. During the reign of Baybars, he became very close to the sultan, and in 675/1276 gave his daughter in marriage to Baybars' son, al-Malik al-Sa'di Baraka Khan. Baybars celebrated the event with great festivity.

In 676/1277 Baybars died, and was succeeded by his son. Kalawan, as father-in-law of the sultan, became the most eminent and important of the amīrs. In 676/1277 Sultan Baraka Khan sent Kalawan on a campaign against the Armenians. During this campaign, Kalawan rose to a higher position among the Mamlūkīs, becoming one of their leading figures. In 627/1229 he fled with other Mamluk leaders such as Baybars, Sunqur, and Baysara to Syria in order to escape the likely revenge of Aybak, whom they had tried to depose. He spent about three years in Syria in the service of the Mamluk al-Nasir II al-Salih al-Din Yusuf (648/1250-650). In 653/1257 Kalawan and his fellow Bahtū Mamlūkīs fell foul of al-Nasir and were forced to leave him. They thereupon entered the service of the Mamluk al-Mughīth Fakhr al-Din 'Umar in Karak. The amīr Kutuz, the deputy of the Mamluk Sultan Nur al-Din 'Ali b. Aybak, sent an army to meet the fugitive Bahtū Mamlūkīs on their way to Karak. The Mamlūkīs were defeated and Kalawan was taken prisoner to Egypt. He did not stay long in Cairo but disappeared and fled to Karak in the same year (655/1257).

Kalawan remained in Karak for about two years, until 679/1280, when he returned to Egypt accompanied by other exiled Mamlūkīs. They were welcomed by the new Sultan Kūṭūṭ, at that time preparing to meet the invading Mongols, who were defeated near Nābulus in 658/1260. Kalawan was among the Mamlūkīs who helped Baybars I in his attempt to kill Sultan Kūṭūṭ and seize the throne in the same year. Baybars trusted Kalawan and promoted him to the position of commander of a thousand amīrs (amīr al-af). In 671/1272 Kalawan accompanied Sultan Baybars in a campaign against the Mongols. He distinguished himself as the first amīr to cross the Euphrates, thus gaining an advantage over the enemy. During the reign of Baybars, he became very close to the sultan, and in 675/1276 gave his daughter in marriage to Baybars' son, al-Malik al-Sa'di Baraka Khan. Baybars celebrated the event with great festivity.
prayer and struck on the coins along with that of Salamish. At last in 678/1279 Salamish was deposed, and Kalawün was saluted as sultan, taking the title al-Malik al-Manṣūr.

As soon as he was acknowledged as sultan, Kalawün arrested a group of Zāhirī amirs, that is to say, amirs belonging to the late Sultan al-Zāhir Baybars. Prompted by purely political motives, Kalawün abolished certain taxes such as a war-tax which was collected whenever the sultan made preparations for a campaign. During the first year of his sultanate, Kalawün faced opposition from several of Baybars’ amirs who had their own claims to the sultanate. One of them, the amir Sunqur al-Aṣghar (“the ruddy”) proclaimed himself sultan in Syria with the name al-Malik al-Kāmil. Sunqur gained the support of Baybars’ Mamũks, the Bedouin tribes of Syria and the Ayyūbid amir of Hamah. Kalawün sent against him a strong army headed by the amir Badr al-Dīn Bakītāsh al-Fakhīr. The two armies met at al-Diṣṣūra near Damascus in 679/1280. Sunqur was defeated and fled to the Bedouin Arabs, asking the Mongols for assistance. In the following year, when both sides learned about the advent of the Mongols, Sunqur made peace with Kalawün.

Like Baybars I, Kalawün was successful in defending Syria against the Mongols, who had now taken advantage of the confusion in Syria resulting from Sunqur’s revolt. Led by Mangūṭīmūrī, a brother of the Ilkhan Abākā, the Mongols, together with their Georgian, Frankish and Armenian allies, had managed to cross the Euphrates and invade Syria. Kalawün came to Syria with his army, which was augmented by additional troops from various parts of Syria. The two armies met in 680/1281. The Mongols were severely defeated and forced to withdraw from Syria. Both Mangūṭīmūrī and Abākā died in the same year. Abākā’s successor, Abmad Tegūder (Takūdār), was a convert to Islam. He tried to establish good relations with Kalawün, exchanging letters and embassies with him. In 683/1284, Abmad Tegūder was murdered and his brother Arghūn succeeded him. Arghūn, who remained a pagan and was very hostile toward the Muslims, attempted, unsuccessfully, to persuade the pope and the king of France to help him in a Crusade against the Mamũkhs.

As for the Crusaders, Kalawün followed the example of Baybars I in pursuing the holy war against them in Syria. During the struggles with Sunqur and the Mongols, Kalawün had made a truce with the Crusaders, which led to a temporary cessation of hostilities. Having brought these struggles to a successful conclusion, he broke the truce and conducted a series of raids into Crusader territory. In 684/1285 he attacked the fortress of the Knights Hospitalers at Marḵāb and, after a siege of 38 days, succeeded in capturing it. The historian Abu ʿl-Fīdā (d. 733/1333), who was at that time 16 years old—participated with his father and cousin in this battle. He reports that after the capture of Tripoli he crossed over to an island outside the port where he was oppressed by the foul smell of decaying corpses lying there. In the following year (689/1290) the people of ‘Akkā (Acre) broke the truce by robbing and killing some Muslim merchants. Kalawün proclaimed a holy war, but as he was about to attack Acre, he died in his tent on the outskirts of Cairo.

This task was therefore left to his son and successor al-Malik al-ʿAṣḥaf al-Khālīl, who captured the city in 690/1291.

Kalawün also took the offensive against the Christian Armenians. The Kingdom of Little Armenia was raided in 682/1283. After two years the Armenians were forced to conclude a truce for ten years. They agreed to pay an annual tribute consisting of a large quantity of Armenian silver coins, and to release all Muslim prisoners.

In order to extend Mamũk rule in the south, Kalawün waged war against Nubia in 686/1288 and 688/1289. He sent two expeditions, headed by some of the ablest amirs, to punish Shāmāmūn of Nubia. Shāmāmūn had been playing a kind of “hide and seek” with the Mamũk army. At last he sent a delegation, bearing a gift and the normal tribute, bahīf (g.n.), to Egypt and begged forgiveness. These offerings were accepted and the delegation was kindly received. Nubia remained subordinate to the Mamũk sultanate.

Kalawün preserved and strengthened the good diplomatic and trade relations established by Baybars I with foreign powers. He also maintained good relations with the Mongols of the Golden Horde, Andronikos II Palaeologus of the Byzantine Empire, King Alfonso of Castile, James of Sicily and Rudolf I of Habsburg. He concluded, further, a commercial treaty with the republic of Genoa. Hoping to attract merchants to Egypt as a means of encouraging Egyptian trade, Kalawün issued a charter of safe conduct (amān [q.v.]) to foreign merchants coming from China, India, Yemen and others countries which is preserved in Kalkashandī’s Subh al-ʿAṣṣāhī. As an encouragement to internal trade Kalawün abolished a sub-category of the sakāt tax, called sakāt al-dawlabā, which was payable by Muslim shopkeepers on their merchandise, realizing that it tended to impoverish the merchants.

Kalawün bequeathed the most important monuments of the Mamũk period. He restored the citadels of Aleppo, Baalbek and Damascus. In Cairo, he erected a hospital (al-bimāristān al-Manṣūrī), which is perhaps the most remarkable building of the Mamũk era. It consists of many wards for various diseases, a lecture room, laboratories, a dispensary, baths, kitchens and store-rooms. This hospital was open to men and women, rich and poor, residents and transients from all countries and provinces, without distinction of origin or rank. Every patient leaving the hospital received a gift of money and clothing. The hospital was connected with a school mosque and a mausoleum which is decorated with remarkable arabesque tracery and fine marble mosaic. The school mosque, which was designed for the education of approximately 60 orphans, was equipped with a library containing a fine collection of medical, theological and legal books. Nuwayri, who was the nāṣir of Kalawün’s hospital and its wakīf, provides in his book Nikāyat al-arab valuable data about the properties, shops, public baths, and farms which constituted the wakīf assigned by Kalawün for the maintenance of his tomb, school and hospital.
Kalawun died on Saturday 7 Dhu 'l-Kacda 689/11 November 1290. He had proved to be brave, patient, generous, just and mild. It is said that he could express himself in Arabic only with great difficulty. He was the only Mamluk sultan who succeeded in founding a dynasty capable of holding the sultanate for several generations. All the Mamluk sultans from 689/1290 until 784/1382 were his descendants, except those who were his Mamluks; i.e., Kitbugha, Lajjin, and Baybars II al-Djafrakil. Kalawun established the Burdj or Cassian Mamluks, the second line of the Mamluk sultans, ruled Egypt and Syria from 784/1382 until the end of the Mamluk sultanate in 922/1517.

Hassanein Rabi

KALB pl. ṣulub (A.), "heart".

I. MYSTICISM

In Sūfī terminology the "heart" plays a large part, for it is viewed both as the source of man's good and evil aspirations and as the seat of learning or religious apprehension and of divine visitations. The 'ilm al-ḥulub wa-l- ḥulaf, "science of hearts and movements of the soul", owes its origin to al-Hasan al-Baṣrī, one of the earliest writers on tāṣawwuf (cf. L. Massignon, La passion d'al-Hallâdî, Paris 1922, 468).

The role allotted to "heart" in the personality and understanding of man is in strict conformity with Semitic tradition, and the Sūfī "science of hearts" is firmly based on the Kur'ān. While 'aql, "intellect", has no place in the vocabulary of the Kur'ān, kalb is repeatedly employed. It is with his heart that man "understands", just as he sees with his eyes and hears with his ears (e.g., Kur'ān, VII, 179, XXII, 46). Of those who neither understand nor hear the Word of God it is said, "it is not their eyes that are blind, but the hearts in their breasts" (XXII, 46). Such blindness of the heart is a denial, the origin of ignorance. Thus God "seals the hearts" of "those who do not know" and does not guide them in the true way (VII, 101, X, 74, XXX, 59, etc.). God "sets a seal on the heart of every haughty tyrant" (XL, 35). In tafsīr and 'ilm al-kalām, the "seal affixed to the heart" was to become one of the most controversial questions in the consideration of man's freedom of action (e.g., Fakhr al-Dīn al-Rāzī, Ma-fāth al-qāyub, on Kur'ān, XVII, 23).

So it is from his heart that man's awareness or ignorance of God originates. But far from being merely an intellectual apprehension, this is a knowledge which demands the whole of one's life. So that the heart may be truly the seat of divine knowledge, it must be "assuaged by a remembrance of God" (XIII, 28), be pure (XXVI, 69; XXXVI, 84) and contrite (L, 33); it must be filled with takrūr, referential awe of the Lord (XXII, 32). It is one of the main sciences; it is also the home of that mercy, that "faith above faith" which is the divine dwelling-place: God Himself "causes His Presence to be marked out for severe punishment on the Day of Judgement, and the hearts of those who do not believe (sakina) to descend to the hearts of Believers so that they may add faith to their faith" (XLVIII, 4). The hearts of those who are guilty, however (XV, 12; XXVI, 200), which are "marked out for severe punishment", and the hearts of "those who do not believe in the Hereafter" (XXXIX, 45), "shudder" (ibid.); terror will strike the hearts of the impious (kuffār, III, 151, VIII, 12).

Closely related to these texts is L. Massignon's comment (op. cit., 489): "In sum, the Kur'ān made the heart the source of the knowledge and conscience; since he can in no way "hold back" the irreparable dispersion of his resources (in movements and feelings), man can regain possession of himself only within his own self, in his takrīb, in his heart". This he does "against the grain of the countermanding fleshly lusts, which all Muslim writers locate in the liver and bile" (ibid., n. 7).

Consequently, the deepening experience of faith and the search for understanding God, which was the first and constant aims of tāṣawwuf, become linked with the study of the "science of hearts", the 'ilm al-ḥulub to use al-Hasan al-Baṣrī's expression. The following distinctions were formulated: the seat of thought and awareness of self lay not in the brain but in the heart, a bodily organ (qism), a morsel of flesh (madīqa, madīq), situated in the hollow of the breast whose beats both gave life and indicated the presence of life. There in the heart lies the "secret and hidden (sirr) home of the conscience, whose secrets (nafs) will be revealed on Judgement Day" (L. Massignon, op. cit., 478). The role of the spiritual master (ghayb) regarding the novice (murād) is to teach him this "science of desires, thoughts and inner impulses, to teach him to recognize and overcome those aspirations which come from the physical soul" (nafs), and to gather up and protect the inspirations from the "heavenly spiritual breath" (ruh) through which God reveals Himself to man. Everything that enables man to battle against cupidity and the passions, all that can strengthen his faith (imān) and foster his surrender to God (islām), becomes part of "the science of hearts". Thus the celebrated Sūfī treatise by Abū Tašīl al-Makki (4th/10th century), which covers the final steps in the path to divine union, is called Kūt al-ḥulūb ("Food for Hearts", numerous eds., especially Cairo 1351/1932). In a closely related sense, Babya
ibn Pakūda, an Andalusian Jew who wrote in Arabic in the 5th/6th century and was strongly influenced by Sufi ideas, entitled his spiritual treatise ‘Introduction to the Duties of the Heart’, *Hidāya ila ḥaraqāt al-kalb*.

This stress placed on the ‘heart’, the organ of conscience and seat of religious knowledge and of life in the presence of God, is in no respect an emotionalization of religious values. It stems from an experimentally based anthropology in which understanding and will are united in an existential mode of behaviour which binds man and his destiny. It remains in complete harmony with one of the most dominant notes in the Sufi teaching. Here, *kalb* comes close to the Sūfī idea of *maʿrifa*, the direct awareness of the ‘initiate’ (*drīf*).

A great many works of *taṣawwuf* deal with the ‘science of hearts’, but here we will restrict our enquiry to one of the most characteristic examples. One of the best, and most famous, expositions is that of Abū Hāmid al-Ghazālī, notably in his *Ihya* *uluḥm al-dīn*, which follows in the same tradition as Abū Tālib al-Makki and in fact reproduces whole passages from the *Kūt al-kulub*. However, the influence of Hellenic philosophy led al-Ghazālī to set out clearly the problem of the heart as one of the foundations of the human personality. While it may be legitimate to stress the ethical end of the ‘science of hearts’, as does al-Ghazālī, for example, in *Bidāyat al-Hidāya* (cf. W. Montgomery Watt, *The Faith and Practice of al-Ghazālī*, London 1953), the close intertwining of knowledge and the moral life which is also affirmed there should not be forgotten. These are its presuppositions:

The first book of the third part of the *Ihya* *uluḥm is called *Shahr ʿadīd* al-*kalb*, “A commentary on the wonder of the heart”. The preliminary definitions where al-Ghazālī analyses the four concepts *kalb*, rūḥ, nafs and *ʿakl* are well known. For each concept al-Ghazālī distinguishes a ‘physical’ and a spiritual meaning. In the first sense *kalb* is a bodily organ: rūḥ the “vital spirits” in the blood (cf. contemporaneous ideas of physiology); nafs is the sum of man’s passions, the root of his “blameworthy qualities”; and *ʿakl* the faculty of knowing, which “has its seat in the *kalb*”. In the second sense *kalb* is a “subtle, divine and spiritual” principle which is “the reality of man” (*hākīkat al-insān*); rūḥ is that spiritual substance in man that acts and understands; and *ʿakl* the faculty of knowing, which “has its seat in the *kalb*”. The *kalb* in the second sense is “subtle, divine and spiritual” principle which is “the reality of man” (*hākīkat al-insān*); rūḥ is that spiritual substance in man that acts and understands; and *ʿakl* the faculty of knowing, which “has its seat in the *kalb*”. In the second sense *kalb* is a “subtle, divine and spiritual” principle which is “the reality of man” (*hākīkat al-insān*); rūḥ is that spiritual substance in man that acts and understands; and *ʿakl* the faculty of knowing, which “has its seat in the *kalb*”. The second sense is “the faculty of knowing, which “has its seat in the *kalb*”.

In Sufism the analysis of the cardinal virtue of *dhikr* is one of the most characteristic and profound examples of the problem of the heart as one of the foundations of the human personality. It is a problem which is raised in the Sufi tradition as a whole, the bodily organ of the heart and its spiritual function being of central importance. The Ghazalian text *Risāla lādāmiyya* (in *Dhawāshir al-shawāhidi*, Cairo 1353/1934, 23-7) lays greater stress on the synonymy of the terms: “By the ‘rational soul’ I mean that matter to which all schools give a special name. Philosophers call it the ‘rational soul’; the Khurān calls it the ‘soul at peace’ and the spirit which descends from the Word of God” (cf. *XVII, 87*); the Sūfis call it ‘the heart’. These are simply differences in terminology, but they cover a single concept (*maʿrāt wūḥūd*): there are no conceptual differences. The heart, the spirit and the soul at peace are all names for the rational soul, which is a substance endowed with life, action and perception. Wherever we speak of the ‘spirit’ in absolute terms, or of the ‘heart’, it is this substance we are discussing”.

Thus it would be a mistake to take al-Ghazālī’s stress on the heart as indicating his “subjectivity” in the western sense of the term (cf. J. Oberman, *Der philosophische und religiöse Subjektivismus Gha- zalīs*, Vienna 1921). If, as A. J. Wensinck observes (*La Pensée de Ghażalī*, Paris 1940, 64), “the heart comprises reason and will”, then rather than perceiving an emotionalization of rational values (see above), we should be aware of a total apprehension of what is distinctive of man according to an existential psychology common to biblical and Sufi traditions: “the heart in a Pascalian sense” indeed, but only to the extent that Pascal’s statements are themselves inspired by the Bible. “The heart has two gates”, said al-Ghazālī in the *Ihya* (cf. Wensinck, op. cit., 66-7), one opening on to the external world, the impressions of the senses, passions and desires and thus open to devilish whispers, and the other opening on to the “internal Kingdom”. This second gate is “that of inspiration, of the breath of awe of God, and of revelation”. Though the terminology is different, this is very close to the “two faces of the soul” found in St. Augustine and mediaeval Latin writers.

In the experience of *dhikr* (*q.v.*), increasingly intensified repetition of the Holy Name passes from the tongue to the heart (cf. *Ihya* ii, 17): the formula uttered, and thus the Object it evokes, are impressed first on the very organ of the heart (and thus the circulatory system) and then, by this means, on the spiritual heart, that is in the very depths of being. (N.B.: the “heart” plays a very similar role in Sūfī *dhikr* and in the hesychasm of Mount Athos or in the *Ac- count* by a *Russian Pilgrim*). Al-Ghazālī appears to distinguish only two stages, “*dhikr* of the tongue” and “*dhikr* of the heart”; others add a third, “*dhikr* of the inmost heart of hearts (*sirr*)”, which takes possession of the whole being of the man or prayer (cf. Ibn ʿAtaʾ Allāh of Alexandria, *Miftāḥ al-salāf wa l-mashāb*, Cairo, n.d., 4-6).

To sum up: we have seen that for al-Ghazālī and Sūfī tradition as a whole, the bodily organ of the heart (and not the brain) is the seat of *ʿakl, the faculty of knowledge. *ʿakl*, in the meaning of “the understanding of knowledge”, is “in short the heart itself”, and the heart is the home and source of *maʿrāt*. Now the “spiritual heart” is the province of the moralist (in man as in animals the “bodily heart” belongs to medicine). Thus while *ʿakl* may be identified with *kalb*, the reverse does not hold. *Kalb* is not only the faculty of knowing, it is also the seat of all moral impulses, both evil desires and instincts and the struggle to be free of them and attentive to divine teaching (cf. the analysis of texts of the *Ihya* by H. Laoust in *La Politique de Ghażalī*, Paris 1970, 218-21). Salvation comes only from the heart’s purified knowledge in its dual and inseparable aspects, speculative and actual. Thus it is a complete education of the “heart” that spiritual teachers must constantly develop and enrich in themselves and their disciples.

In Sūfism the analysis of the cardinal virtue of *ṣūdah* (*q.v.*), “sincerity” or “truthfulness”, is wholly dependent on the “science of hearts” (here *kalb* is *ṣūdah* of al-Kharrāz (ed. and tr. A. J. Arberry, Oxford 1937). On Judgement Day the answer to the *swād al-ṣūdah*, “the question of sincerity”, will be revealed in two fashions by those prophets who are
also saints (wajh): it will be stamped on the tongue, visible to the hearers, and on the heart, the seat of divine inspiration.

Al-Hallâjî, al-Tirmîdî and Ibn 'Arabî comment in this manner on Jesus' answer to the su'ûd al-sîdîk (cf. L. Massignon, op. cit., 686 and ref.).

**Bibliography:** in the article. (L. Gardet)

### II. — POETRY

Although accorded from the outset an important place in the nasîb of the kaṣîda (g.v.), the word “heart” is emphasized only rarely in the ancient literature of Arabia. This situation conditioned the evolution of the word in all subsequent poetic literature. It was rediscovered and re-assessed as the progressive development of feeling caused the word to be employed more and more freely in the traditional context of Arab poetry. It would appear that this represented the righting of a deliberate omission, the precise reasons for which have yet to be determined.

In fact, the old Arab nasîb contains hardly any mention of the heart as the seat of the passions, at least in the collections generally held to be the most Bedouin (one example in Zuhab, two in the Muṣafād al-sîdîk, 13 in Dîarih, who was influenced by the poetry of the cities). It is permissible to suppose that the rarity of the word “heart” in the works of the founders of the Arab lyric is related to the nature of love which was celebrated in their nasîb, though it is true that the few examples found in their verse show that they did not neglect the affective meaning of the term. But for them “matters of the heart” had a social, even sociological, importance. In fact the nasîb reveals many of the features of the “Rites de passage” (V. Gennep, Paris 1909). The poet is searching for a protector, a stronger or older “neighbour” whose intervention entails a new tribal affiliation, nasîb (cf. al-Buṭûrî, al-mawlâ 'l-sârîb-nasibû); the hâmâ, or “abandoned encampment”, appears to be the place where the “binding” rites took place, in the ceremony perhaps called ašâba (Robertson Smith, Kinship and marriage in early Arabia, 152); the poet becomes the bondsman of a new clan, the clan of the Lady who is presumed to have sprung up in capâs (sâhî}); he becomes a “hostage” (râkîm) of the Lady’s clan (used in the sense of captive in Futûh al-bulûd, 402; cf. al-Sârâjî, al-Maṣâri, 177, verse by Hilâl b. al-‘Alâ?). He is a captive (aṣîr) of the Lady’s clan like the devotee of a god dwelling in the midst a sanctuary in classical antiquity. Furthermore, for the Lîsân, each child is called râhîna, pledge or captive in respect of the ašâbka he has undergone; the same root implies the idea of kâdîb, the sacred sport of arrows, which is compared with the “arrows of the Lady”. The same is true of the poet’s she-camel; we know that in Arabic folklore (e.g., in al-Sârâjî, Maṣâri, 101) the lover is in search of (nîshâd) a stray she-camel, perhaps also jabl al-hâjja, the visit of the Lady being a sign that the poet’s quest is crowned with success.

Like the ašâba, the nîshâd is an old pagan rite (cf. ḍadîb on the prohibition on gleaning in the haram of Mecca, the former hâmâ). The munṣâhîd, the pilgrim of the hâmâ and acolyte of the “visit”, is searching for “signs”, as the meaning of the root indicates. These signs are those provided by the sâdîr: these become commonplace in the classical nasîb. Sometimes the munṣâhîd’s quest is ended by the ‘aṣâr, a term with clear sociological and religious overtones (the descent affiliation being connote by the 5th and 7th forms of the root). The visit to the Lady or pilgrimage of the hâmâ (‘l-sârîb) seems to be linked to the season, the spring equinox, raḍījâb, for the first encounters (the ideal month of the ‘umra or the ‘Irâj), after a visit had been made to the sanctuary of the Lady; it is possible, on the evidence of the Kurân, that wâ’d and iḥlîbî were related to the vicissitudes of this quest of the Arab lover, which in later literature became that of the “heart” as such.

From these fleeting but converging indications, we can speculate with some probability that “Arab love” corresponded to a “passage ritual”, related, at least in the composition of its vocabulary, to the presence of a lady from another tribe who mysteriously bound the lover by a tie, the duration and exact nature of which remained imprecise because of the same “tabu” which affected “matters of the heart”.

This “tabu” no longer operated where the Bedouin significance of the love poem had been completely obliterated, and when it had succumbed to the joint influence of the poetry of the cities, music and religious terminology. After the breakdown of tribal ties, those poets who preferred to turn to the past rather than to the future, with the exception of ‘Umar b. Abl Ribâ’sa, transferred the main import of Bedouin love to the heart, but weakened it into mere metaphor. The following ideas were retained: 1) Now it is the heart of the poet which, always in straitened circumstances or abroad, “searches” for the Lady. 2) Having become the seat of passion, that is of the Memory and the Secret, the heart is for that very reason an indispensable part of courtly dialectic, at the same time confidant and actor. Naturally the latter is the element which we shall see emphasized when we turn from the poetry of Hîlâjî to that of ‘Irâj (1909).

The heart is on a never-ending quest, journeying after the caravan in which his beloved rides (Hâmassa of al-Marzûkhî, i, 51; al-Sârâjî, Maṣâri, al-bûb man tasyâmû, 141; Dîarih’s Dîawûn, ed. Nâssâr, 118; al-‘Abbâs, 232). This heart is called mûrtakîn (‘Umar, 179 and 295), for it is no longer clear where it dwells and the uncertainty condemns the poet to perpetual wandering. Dissociated from the person of the poet and his group, it is free. (See ‘aṣîra, or even: it flies through space, in the grip of such an intense emotion that it cannot recognize its true country (mâri), 185), a metaphor later employed by the mystic Dînâyî (al-Dâlayâmî, ‘Aţîf, 32).

Such an instability, arising from uncertainty about its home and where it really belongs, turns the heart into a nomad with no clearly defined pastureland, doomed to follow the whims of the seasons (mîshâ’ al-wâsân, ‘Umar, 279). Strictly speaking, this situation is tasyâmû, slavery in exile (‘Umar, 192; cf. al-Dâlayâmî for an analysis of the equivalent notion of Huyâm, 23). It is also the ‘ibû, the call of passion (coming after the signs given to the munṣâhîd), flashes of lightning, the language of birds which set the heart on the right road. Vagabond and wanderer, the heart is at the same time imprisoned in the net of love which condemns it to strive unceasingly for the wâsîl or wîsîl (the Lady’s favour, originally integration within the Lady’s group; ‘Umar, 295, a synonym: mawadda, Abû Nuwâs, 704; cf. ‘Umar, 222 and 326). During this tabâ, this quest, the heart is truly the quarry (a gazelle of the sacred enclosure) hunted by the Lady and eventually tracked down by her and pierced by her arrows, perhaps like the animals that are no longer kept by the prohibition of the hâmâ (‘Umar 316: mawadda coupled with tasyâmû, ibid., 360; the Lady hunts the heart though she herself has the appearance of a gazelle).
The heart which has been subjected to such harsh blows (musdūb) is lovesmitten and dependent upon the Lady’s pleasure (mu’alāk, musu’ūkāl, 362). These metaphors are interchangeable between the lover, represented by his heart, and the Lady; the victim is endowed with the traits and attributes of his tormentor, and vice versa. Thus the poet is led to declare that the Lady occupies his heart (ibid., 355), the heart itself having become the sacred enclosure where the Lady’s whims are given free rein. The Lady occupies the best seat in the poet’s heart, the “highest place” (‘Umur, 190: muhasilān, rafi‘ān). There she can do exactly as she pleases, knowing herself to be in a vanished land (abbaṣat Umm Ḥazra min ḫalād, Djarīr, 65; cf. al-‘Abbas, 39, 191, and ʿAbū Nuwas, 497). At the end of love’s “quest”, the heart can be possessed by the Lady through a variety of means (magic, the hunt, capture, captivity, chains, bonds, cords, nets, pledge, loan, deposit with every kind of alienation, the result of the departure for strange lands which is the “quest” inherent in the Arab concept of love).

Yet in still deeper fashion, by means of a psychology which endows the heart with many ‘membranes’ (al-Hamādhānī, al-‘Alīs al-haddīsyya, hāb yāmīn al-‘abbās; cf. Daylāmi, ‘Afīf, 16 and al-Šarīf al-Murtada, 1, 861), it can be considered that the heart contains the Lady or her image (a trace of the encampment) in whole or in part. Thus it is with a love which is more internal, more courtly or more normative that the poet from the cities of ʿIrāq (e.g., al-ʿAbbas b. al-ʿAbnāf; fifty examples in the Khazraḍī edition; the pseudo-dīwān of the romantic heroes) must come to terms when he endeavors to look into his heart.

The heart is the seat of the Memory of Love (al-ʿAbbās, 182). This Memory is identical with Love (281: “I am astonished that a heart can love you”). To compare the lover to the Lady is to compare the respective state of their hearts (ibid., 53: “if my heart were like yours”). The heart experiences the fires (nirān) of passion (ḥād abrabāt nirānahu ḫalī). The Lady rules the heart of the lover as absolute monarch (ibid., 16). Little distinction is made between Memory and the image of the Lady which resides in a heart that can contain no other object (ibid., 19).

On the other hand, there is less insistence on the breaking or cracking of the heart (ṣuṣdāt, fufur), that symbol of the restless life of the lover and his separation from his tribe.

Arab poetry henceforth invested the heart with an importance which remained characteristic of the courtly spirit. But the heart also had conflicts and problems which occupied theorists as well as poets. In the first place, since the heart seemed to be the principle of love, the question arose whether it shared this role with the eyes, whose act of looking had wounded the poet. This question brought to the fore the related question of the “licentiousness of the glance” (natal al-kulub) cast at the beloved object, which is the main object of courtly ethics. To recognize the priority of the glance is to uphold the imperative of a strict morality which condemns the lover and perhaps the Lady or her image (a trace of the encampment) in a heart that can contain no other object.

Thus the heart begins by referring to a Bedouin love about which little is known except that it involved a change of status where the sacred element had already infiltrated tribal customs. In the cities, the heart eventually seems to be the focus of poetic modes of expression; later, under other and still more complex influences, the heart becomes the authorized seat of the Memory of Love and the Vision of the Lady. To determine to what extent this “vision of the heart”, the offspring of a highly elaborated civilization, remained faithful to the ideas of primitive Arab culture, is not one of the least of the problems posed by the appearance in the Arab language of a literature composed in a clearly courtly spirit.

Bibliography: Examples of the use of the word kāb: Mufaddaliyyāt, ed. Ahmad Shākir, 93, 301; Zuhayr, ed. Ahlwardt, 91; Djarīr, ed. al-Sawi, 65, 91, 100, 147, 158, 159, 181, 210, 227, 240, 257, 300, 301; ‘Umur b. ʿAbī Rabi‘a, ed. ʿAbī al-Ḥamīd, 67, 84, 105, 106, 160, 176, 179, 185, 190, 192, 195, 201, 203, 217, 219, 222, 225, 227, 229, 279, 295, 319, 323, 326, 355, 360, 362. For the relationship which may have existed between the condition of the poet and the heart’s “captivity”, see J. C. Vadet, L’esprit courtisant en Orient dans les cinq premiers siècles de l’Hégire, Paris 1968, 61. For the role of the heart in “courtliness”, see Vadet, op. cit. and Ibn al-Ḍawwūr; Ḥīlāl al-Ṣawād, Ms. Bursa 1535 and especially Ibn Kayyim al-Daghawīyya, Rawdat al-muḥšihin, ed. Ubayd, 104 (mundšara between the heart and the eyes). For the original meaning of munḥīd and insād, see the romance of ‘Umur b. ʿAbī Rabi‘a in Azkāni, i, 199, Daylāmi, ‘Afīf, 88, the legal treatises on the relationship between yāmīn and mundšadā. (J. C. Vadet)
in numerous proverbial sayings. In addition, throughout Asia and the Near East, and particularly in Arabic sayings in all countries at all periods. It is also obvious why the Prophet, faced with the problem of a plague of stray dogs in Medina in his day, at first took the implacable decision to exterminate “all dogs” (according to the hadiths) and then, mitigating his decree because the canine race were a race of Allah’s creatures (inna-hā umma min al-umam) and because man needed certain categories of dog, decided to exterminate the black-coated strays and particularly those with light patches (sabatādnī) on each eyebrow, the undisputable mark of the devil in the eyes of all Arabs. It should be noted that this physical trait occurs frequently among black-herd and sheep-dogs of many occidental breeds and could be regarded by cynologists as an identifying mark of oriental pariahs. Freed from the Prophet’s condemnation were all useful dogs who obeyed a master, i.e., trained hunting dogs (kalb al-sayd, dārī, pl. dāzdari) and watchdogs, whether they guarded houses (kalb al-dār), alleys (kalb al-darb), flocks (kalb al-darʿ), kalb al-khanām, or crops and vineyards (kalb al-tarʿ). In the general opinion of the doctors of law and jurisconsults it was permitted to possess, maintain (khudnā), buy, sell and bequeath such dogs, even black ones so long as their use could be justified. In addition, one who killed one of these dogs had to compensate the owner (kālib) at the rate of forty dirhams for a hunting dog, one ewe for a sheep-dog, one farāk (= 16 raḥis) of wheat for a crop-guarding dog and one farāk of good earth for a house watchdog. Though socially useful dogs are tolerated, the animal remains unclean with respect to religious practices. Everything a dog touches or licks is rendered impure and the place where it has lain must be purified with water, following the practice of the Prophet on one occasion. A dog prowling close to a house is, according to the individual writers); they are likewise noticed for him to be given a proper name which had no connection with his external appearance, like Saʿd, Masʿūd, Anś, Murdgān or Samba, and the chroniclers recount a number of anecdotes illustrating the compassion shown to dogs. The Prophet himself promised a divine reward to an old woman for her act of charity to a thirsty dog. S. H. Leeder (in Tieded Mysteriels of Egypt, 1912) twice mentions wills or wakfs made in favour of dogs (cf. G. H. Bouquet, Des Animaux et de leur traitement selon le Judaïsme, le Christianisme et l’Islam, in L. Ist. ix (1938), 37-48). Nor does the Muslim forget the edifying and touching story of Kitīmīr, the dog belonging to the Seven Sleepers (Kur’an, XVIII, 17), the symbol of fidelity [see AṣHAB AL-KAHF]; he will be the only dog allowed to enter Paradise. In the opinion of al-Bayḍawlī (Anwār al-tansī, Leipzig 1848, i, 557), Allah gave this dog the gift of speech, while al-Ṭabarī (Tafsīr, xv, 141) believed him to be the incarnation of a human being, a view that tallies with the Ismāʿīlī belief that Kitīmīr’s doglike exterior hid the huntsman (mukhallīb) Salmān (see al-Dībājī, Hayagunakan, ii, 189, iii, 44; al-Damrī, s.v. kalb, ii, 278-312; Massignon, Les Sept Dormants d’Éphèse en Islam et en Chrétienté, in REI, xxii-xxxi (1954-62). It was al-Dībājī who restored the dog to its just place in Muslim society in his remarkable treatise On Animals” (Hayagunakan, i and ii). Pleading the case for the defence of the dog in a disputation between the supporter of the dog (ṣāhib al-kalb) and the supporter of the cock (ṣāhib al-dīkh), he gathers together the Greek scientific data alongside Aristotle, whom he can, when necessary, refute, Arabic sayings in
prose and verse, travellers' tales and contemporary information, with the addition of his own observations on canine ecology and ethology. All this he examines critically in the light of a logic which in his case may owe more to an innate feeling for method than to his penchant towards the rationalist tendency of the Mutʿazilites. In any case, we may be grateful to al-Djahiz for not having contented himself with an apology for one type of hound, the "Sahri" (kalb al-sahri) (see Agāh, 1969), which was all that poets and writers on the hunt before and after al-Djahiz could do. Thanks to him, although we cannot speak of breeds, we are nevertheless able to distinguish the most common dogs of his day. Apart from the Saluki, there were the Kurdish sheep-dog (kurdāl), a large animal introduced into Turkey in the 6th–7th century by the Kurds, probably the fore-runner of the Hungarian herd-dog, the Kuwatz. Since it had a keen sense of smell, the Kurdish sheep-dog was also used to track game and, when mated with a Saluki, produced a "cross" (bhi-
lāsī) with the qualities of both its parents. This, the first hound to hunt by smell and not by sight, was described succinctly by the poet 'All b. al-Diāhm al-Sāmī (d. 249/863), the favourite of the caliph al-
Muqawwāl b. al-Muqtawwāl (see Agāh, 1969). A century later, this verse portrait was summarized by Ibn al-Muṭazz in two of his tādīyyas [q.v.] (see Dīwān, Istanbul 1945, 26, no. 30; Damascus 1952, 297; Beirut 1961, 282-3), where this great hunting dog is described as nāyraḍīn masaradī, "a tireless tracker". The many subsequent crosses of this strain, which falcons used as "bird dogs" to flush small furred and feathered game for their birds of prey, led to a great many varieties of "master hunters" or mongrels (kādīrān) and in the Maqārr bālūsī, barbāshī). The pointer known as sāgārī/suṣurī (pl. --iyān) is, from its old High German name, seigari, "pointer", appeared in the 6th/7th century with the Crusades. It was imported into Islamic countries at great cost for use as a bird dog; quieter than the bhi-
lāsī, it was described as kalb al-ḥadī, "the bush dog". Because of its origins and its clear and light-coloured coat, the sāgārī pointer greatly resembles the present-day Italian pointer and Hungarian Vizsla, who are assumed to be the ancestors of all other breeds of pointer. From its pale beige coat, the sāgārī pointer was given the nickname sabībī (dry grape colour); thus named, it is listed among the presents set by the Bulgarian emperor Michael VI Stratitokos to the Fātimid caliph al-Mustanṣir bīlāhī in 444/1052 (see M. Hamidullah, L'Europe et l'Orient musulman, in Arabica, vii (1960), 289).

Among the smaller breeds, al-Djahiz mentions a baskett sheep-dog, the tīmisī, which is reminiscent of the Hungarian Puli and Pumi. He also mentions the kalālī, the "stocky dog", which seems to belong to the same type as the Poon, and the simī, the "Chinese", which corresponds to the pud or Pekinese. This dog was easily trained to perform tricks for ladies such as holding a lamp on its muzzle without moving or running errands in the market place with a basket round its neck (Hashardt). Mountebanks and travelling showmen made wide use of its skills as a performing dog (mulatālākīn), putting it to work with monkeys in public performances.

Following the Greeks, the Muslims were not aware of any breeds of wild dog, believing the painted hyena or cynhyena (simī) and the aardwolf (tīshār) to be hybrids resulting from a cross between domestic dogs and wolves or hyenas. Al-Djahīs was the first to refute these errors (Hashardt, i, 183-5).

Rabies (dād al-halq) was widespread in Arab countries from the earliest days because of the hordes of pariah packs transmitting the virus. For a long time, a man smitten with the disease (kalāb, makāb) was considered as one possessed by diyān and treated accordingly by methods designed more for exorcism than therapy; drinking the blood of a king was held to be the supreme remedy and empirical treatments, which were kept secret, were passed on from father to son in some families. Driven by the urgent need to act against the growing scourge, Ziyād b. Abī Sufyān, governor of Baṣra (45/665-6), made public a form of treatment by having it posted up on the wall of the Great Mosque which he had restored (Hayaṣāwān, ii, 10-2); unfortunately we do not know the nature of this treatment, which appears to have produced good results. The clinical symptoms of rabies, especially hydrophobia, were known precisely; al-Djahīs describes them and, after him, so Kūshā-
dīm (Maṣāyīd, Bagdad 1934, 138-9), al-Kawzānī and al-Damrī (s.vv. kalb).

On the analogy of shape, the Arabs gave the name kalb to other animals; thus kalb al-māwī (fresh-water dog) is the name for the otter, and in the western Islamic world for the beaver. Greed was the analogy which led to the name kalb al-bahr (dog of the sea) being given to the little shark which we too call the dog-fish and which Arab naturalists also call the kaw-
saḍī or ḥālīm. It is from this "little shark" (barayyā) that Muḥammad's tribe probably took its name, apparently through totemism. Finally, in the world of the invertebrates (bāštārdā), we find the kalb al-maṣṣā, the mole-cricket (gyllolatpa vulgaris), also called bāštārdā and kaw-saḍī by horticulturists, while arbori-
culturalists call all wood-eating worms kalb. By a similar process of analogy, the word kalb and its derivatives were given to a large number of objects, instruments and tools, whose contours or functions were to a greater or lesser degree reminiscent of the animal (see Dozy, Supplément, s.v.).

The dog in astronomy. The ancient astron-
omers gave the name "dog" (kwuṣūn, canis) to a number of constellations and stars because of the allegorical figures which they believed they would perceive in
their dispositions in the sky. After the rise of Islam, the Muslims adopted the same principle and, translating the Greek and Latin terms, gave the name kalb to the following two stars: a) al Kalb al-akbar, the Great Dog—also known as Kalb al-джаббар, “the dog of the giant” (i.e., of Orion)—is a sub-zodiacal constellation lying to the east of the Hare, beneath and to the left of Orion, on the edge of the Milky Way. In the European Middle Ages it was called the quell alagbar and quell elbar. There are seven stars in the constellation and one of these, Sirius the Dog (α Canis majoris, magnitude 1.58) or al-Shir'ā al-yamaniyya (Elschere alieni), rises soon after the summer solstice. b) al-Kalb al-asghar, “the Little Dog”—also called mulhadam al-kalb, “the forerunner dog”—is a sub-zodiacal constellation lying under Gemini between Hydra and Orion. Quell al-ṣaqar embraces two stars: Procyon (α Canis minoris, mag. 0.48) or al-Ghumayṣāl algomāla (rheumy-eyed, a corruption of al-dumayṣā, the sycamore)—which is also known as al-Shir‘āl-dhimiyā, “Sirius of Syria”—and al-Shir‘ā al-‘abār/al-khabur, “Sirius which has crossed” (the Milky Way). They rise in mid-July. c) al-Kalb, “the Two Dogs” (of Abdebaran), in the zodiacal constellation of Taurus are two stars situated between the Hyades and the Pleiades, corresponding to η Tauri, mag. 4.5, and x Tauri, mag. 4.6. d) Kalb al-rā‘il/قلب، “the Shepherd's Dog”, is a corruption of Kitf al-rā‘i, “the Shepherd’s Shoulder” (Aruteus) and corresponds to β Ophiuchi, mag. 2.9, in the Serpentarius constellation. e) Kalb al-dhihrā‘, “the Dogs of Winter”, designates the four mansions of al-dhihrā‘ (Castor and Pollux, α, β Gemini), al-Nathra (γ, δ, ε Cancer), al-Tarif (ζ, η, θ Leo), and al-Leonis) whose heliacal rising occurs successively from the end of June to mid-August and acronychal setting from the beginning of January to mid-February. Sirius (α Canis majoris) rises at the same time as al-dhihrā‘. This long period covers the time of the Dog (al-kalb) or "Dog Days" (cf. Fr. jours caniculaires, Ger. Hundstage), which are characterized by heatwaves (sahhedīr) and sandstorms (samāt) and also the time of the dry-frost (kuiba, kalab al-dhihrā‘), with its "black nights" (al-layāl al-sūd). In antiquity this whole period was regarded as ill-omened and thus held in dread. At the time of the rise of Sirius the Romans sought to placate him by sacrificing a red dog. The maxims of the nomadic Arabs concern the kalb, the animal, see, e.g., Aghānī, vii, 109, l. 4) were in the steppe between Syria and Irāk (see map in vol. i, §91) called samawal Kalb (Yākūt, iii, 152 et al.; here their centres were the oases in the low-lying valley (al-kibha) formed by the Djawf and the Wādlī Sīrān (g.v.) which opened to them the way to Syria long before the Muslims conquered it (see the verses in Hamāda, Freytag, p. 659 and Wellhausen, Das arabis. Reich, ii, 2 ff.). Thus, they had settled in Salamiyya, Palmyra, Damascus (especially in the Ghūṭa and al-Mizāb), in Djawlān, al-Suwāyda‘, and in the region of Harrān; there were small numbers of them in Hims, Aleppo, Hamāt and Manbūq. They had also settled in Fadak, Dōmat al-Djadjal, Taymā‘, and al-Hira, and, according to al-Kalkashandi (Kal‘id al-qūmān, 47) and Ibn Khaldūn (Ibar, ii, 521), there were many of them in “the Gulf of Constantiople” (al-malādī al-kustānīfīn), as well as in Şhrāz in Persia, and in Manfalūt in Egypt. In Syria the Byzantines had placed them under the command of the Ghassānids (g.v.), their phylarchs, to defend the Syrian Limes against the Sasanids and al-Hira. In this way the Kalb became accustomed to military discipline and to law and order. Like the Ghassānids they became converted to Christianity in its Monophysite form.

The Kalb clashed with the Muslims for the first time when Muhammad sent, c. 6/627, an expedition against Dōmat al-Djadjal (g.v.) which led to the conversion of al-Asbagh b. ‘Amr and a treaty (Ibn Sa’d, i, 36; see J. Sperber in MSOS As., xi (1910)). There were already some converted Kalb in Mecca, e.g. Muhammad’s step-son Ẓayd b. Ḥārīja (g.v.) and Dihyā (g.v.). In 8/639 the Kalb sent a deputation to Muhammad to announce their conversion; it seems however that the majority stood aside, taking no part in the conquest of Syria.

The relations between Kalb and the Umayyads go back to the time of the caliph 'Ugmn b. 'Affân (see above). Owing to their importance and strength in Syria, Muṣ̄wiya, who had married Maysun [q.v.], whose father, Unayf [q.v.], belonged to the Kalb aristocracy, chose to rely on the Kalb in order both to secure his position at home, and to prepare himself to face Ṛbl b. Abī Ṭalib in war. Thus the Yamounites in general and the Kalb in particular became the most influential of the tribes in Syria during the reigns of Muṣ̄wiya and his son, Yazīd, who also had married a wife from the Kalb, and during that of Muṣ̄wiya II [q.v.].

Conflicting interests led Kalb and Kays [q.v.] to support opposing political groups. In the period of political trouble that followed the death of Ṛbl, the support given by Kalb to the Umayyads was due to the favourable economic and political position which they had enjoyed under them. On the other hand, Kays gave their full support to Ibn al-Zubayr [q.v.], less because of their attachment to his cause, than because of their hatred for the Kalb and the Umayyads who supported them. Masuṭḍ reports (Mụṣ̄alāt, v, 200) that al-Yaman, headed by the Kalb, Ḥassān b. Mālik b. Bahdal, stipulated before giving their full support to Marwān [q.v.] that they should be given the same concessions as they had enjoyed under Muṣ̄wiya I, Yazīd I and Muṣ̄wiya II. These were that two thousand of them should receive two thousand dirhams for their support each year, and, if a recipient died, his son or cousin should receive the payment. Kalb should take precedence at court, for their support each year, and, thus had a response among some of the Kalb and Kays in the Ḍažlra had stirred up the Band Fazara [q.v.] in Ḳīrak, who complained to the caliph ʿAbd al-Malik. This led to another series of raids, the most celebrated of which was that of Banāt Kayn, in which the Kays was victorious. As a result of the wise measures taken by ʿAbd al-Malik, the raiding ceased, and the day of Banāt Kayn was the last of the famous “days” between Kalb and Kays.

During the military struggle between the Umayyads and the ʿAbbāsids (152/770), 2,000 Kalb originally sent to help Salm b. Ḳutayba—the Umayyad governor of Baṣra—defected and took the side of the ʿAbbāsids. This may have been due to the fact that Marwān II relied almost exclusively on Kays; or the Kalb may have realized that this time the Umayyad cause was lost and therefore have tried to win favour with the new regime. However, in the same year the Kalb, with others of Yemen, took part in the revolt of Abu ʿ1-Ward against the ʿAbbāsids army led by ʿAbd Allāh b. ʿAbbās of ʿIrāq. This may have been a result of their disappointment with the new regime.

Under Ḥārūn al-Raṣḥīd [q.v.], Damascus was the scene of a tribal feud between the two factions of Yemen and Muḍar. It lasted with short intervals from 174/790 to 180/796. The chief reason for this feud was the Syrian Arab tribes' sympathy for the Umayyads, and it was fostered by the policies of the ʿAbbāsids governors, who supported one faction against the other. This feud emerged once more under al-Maʾmūn [q.v.] (213/828) in connection with the Yaman in Egypt.

In the later ʿAbbāsids period, the history of the Kalb was of less importance and took the form of Bedouin (aʾrāb) attacks on the central authorities. The following are the main events. The Kalb under ʿUṯayf b. Niʿma took part in the revolt of Ḥiṃṣ against the governor al-Faḍl b. Kārīn and killed him in 250/864. But al-Muṣṭaʿīn's general, Mūsā b. Bughā b. al-Kabīr, was able to defeat the rebels and capture Ḥiṃṣ. In the year 294/906, the aʾrāb of Kalb, together with al-Nimr b. Kāṣīt [q.v.] and Asad, defeated al-Ḥusayn b. Ḥamḍān, the governor of Muṣṭaʿīn, and pursued him to the gates of Aleppo. In the same year al-Ḥusayn b. Ḥamḍān succeeded in defeating the aʾrāb of Kalb and Ṭayy [q.v.], but he was eventually captured. Under al-Muṣṭarṣīd, the Kalb took part in the dispute between the ruler of Damascus and the slave bodyguards, the ruler of Aleppo [see Mawṣīda], by betraying the latter, who took refuge with them, to the former.

It is interesting to note that Carmathian propagandists found a response among some of the Kalb and especially the Banu ʿ1-Ulaṣ b. ʿUṣāna and their maidūl, who were living in the Samawa desert. In 289/901 they paid homage to Yahyā b. Zakrawayh, the Carmathian propagandist, calling him ʿsk̄ayy. Banu ʿ1-Asbaḥ—another branch of Kalb—also joined Ibn Zakrawayh, and seem to have believed so sincerely in his mission that they called themselves “Fātimids”. Taking by surprise al-Muṭaqiḍ's army, which was pursuing them, they managed to kill its leader, Sabūk b. ʿUṣāna. Then they pushed on to Damascus, burning the mosque of al-Rūṣafā and surprising all the villages they passed through. Ibn Zakrawayh and his followers harassed Ṭubghā b. Ḥijj b. Ṭū[f. q.v.], the ruler of Damascus, and imprisoned
him within his city. It was not until the Egyptians sent an army under Badr al-Kalb, Ibn Tabb's slave, that the Carmathians were defeated and their leader Ibn Zakrawayh was killed. It is significant that one reason suggested for his death was the egalitarian policy he adopted towards his masuli followers.

The death of Yabäb led Banu 'l-'Ulayas and Banu 'l-'Asbagh to follow his brother al-Hasan b. Zakrawayh. The latter was able to defeat the Egyptian force and the troops of Himas and of other Syrian provinces sent against him. He also made his authority felt to such an extent that he was recognized as Amr al-Mu'min in the Friday khutba all over Syria in 289/901-2. However, the caliph al-Muktafi was able to have him seized and put to death in 291/903.

Following the death of al-Hasan b. Zakrawayh, the Banu 'l-'Ulayas, Banu 'l-'Asbagh and Banu Ziyad (all from Kalb) joined another Carmathian dâbi, Abu Ghânim Naṣr. They made several attacks on Buṣra, Ṭabariyya, Damascus and Tabariyya. j

III.—In Muslim Spain

The army of Māsûb b. Nuṣayr [q.v.] included Kalb and Kaysi elements, among whom the memory of Mardî Râḥîṣ aroused an antagonism which showed itself in North Africa and particularly in Spain throughout most of the 2nd/8th century. The troops sent by Highâm b. 'Abd al-Malik to suppress the Berber revolt launched by Maysara [q.v.] were composed of Syrians; Baldj [q.v.], commander of their van, who was a member of the Kaysi aristocracy, took refuge at Ceuta, appealing for assistance to the governor of Spain, 'Abd al-Malik b. ʿAbd al-Rahmân b. ʿAbd al-Ragman I [q.v.], who adopted a policy which favoured his fellow-tribesman. His partiality earned him the hostility of a Kaysi chieftain, al-Sumayl b. ʿAbbâs [q.v.].

The revolt launched in 127/745 was successful; Abu ʿl-Khaṭṭār, defeated and taken prisoner, was replaced by Ṭahâbâ b. Salama al-Djûdhamî, who died in 129/746. Yusuf b. 'Abd al-Ragman al-Fihri [q.v.] was then chosen as governor of Spain. The Kalb supported Abu ʿl-Khaṭṭār, who had fled, were defeated at Secunda (Shakunda) in 130/747 by the Caliphate, its Fall, Calcutta 1927, 70-1, 132-3, 178, 182, 201-6; W. Caskel, Gomharat an-nasab: das Genealogische Werk des Ḥisām al-Djâibî, Leiden 1966, 279, 288, 359; A. A. Dixon, The Umayyads Caliphate, London 1970, 83-120. [A. A. Dixon]

ranks of the Kufans, was slain beside him at Dayr al-Diathalik in 71/690 by Warka' al-Nakha'i b. al-Sa'ib (and not b. Malik as in the Fihrist, ed. G. Flügel, 95) played an active part in the revolt of 'Abd al-Rahman b. Muhammad b. al-Ash'ath [see Ibn al-Ash'ath] and fought in his ranks at Dayr al-Diamjādir [q.v.] (82/701); he left a partial account of this battle in which he recounts, inter alia, his honourable, even triumphant, return to his family in Kufa in one single day without having had to abandon one of his weapons (al-Tabari, vi, 349-50, 364).

To swordsmanship, the family added another claim to fame: learning; in fact it is rare to consult an early Arab book without finding some reference to an al-Kalbi. These references, brief or more detailed, concern three different persons, who were already difficult to distinguish in early days.

I.—Muḥammad b. al-Sā'ib al-Kalbi (Abu 'l-Nadr) died in Kufa at the age of at least 80 in 146/763. He was interested in all contemporary branches of learning: universal history; the history of religions, pre-Islamic (al-Šahrastānī, Misā'il, Cairo 1947, 1220-64), Jewish (Ibn 'Abd Rabbih, Ḥabid, Cairo 1948, i, 157) and Christian; poetry (Ibn Khalikān, Cairo 1948, iii, 436), literature and philology; genealogy, tradition and ancient legends. He employed his wide knowledge in a commentary on the Kur'ān (Tafṣīr), the longest ever composed (al-Ǧabab, Ḫabar, Kufa 1930, i, 106). Stagira, the sphere that Sulaymān b. 'Alli, perhaps during his governorship of Ṣaḥra (133-9), brought him to that city to teach ūrānic exegesis. With the support of Sulaymān b. 'Alli, Muḥammad al-Kalbi put forward, despite the opposition of his hearers, an interpretation of the Kur'ān which went contrary to received opinion; it is probable that he expressed pre-ʾAlid views. His courses were written down (Ibn al-Kalbi, Tafṣīr, Cairo 1374, i, 76, 91, 216-7, etc.). He was sometimes accused of heresy, of rijaḍ of sabaʿīsm, of irijaḍ and so on, and sometimes of forgery and falsehood. Even in the 10th century he has impassioned opponents among the scholars of al-ʾAzhar (Abmad Ṣakhir in his edition of the Tahdhib 'al-ʾAdhāb, Cairo 1935, 134-5, n. 5). Yet he has remained an authority, and even his detractors draw on him as a source.

II.—Muḥammad b. Muḥammad b. al-Sā'ib al-Kalbi, Abu 'l-Mundhir, generally called Ibn al-Kalbi, was probably born in Kufa around 120/737 and educated in that town; he died there in 204/819 or 206/821, in the caliphate of al-Maʾmūn. His death was greatly regretted by the caliph (al-ʾAbbāṣīd al-Mahdī d. 169/785) made use of Ibn al-Kalbi's knowledge when counteracting the Umayyad attack in Spain (al-Tabari, viii, 172-3). It was probably during this caliph's rule that Ibn al-Kalbi stayed in Baghdād. Like his father, he was interested in all branches of knowledge of his time and he wrote a good number of works, more than 150 according to the Fihrist. This immense oeuvre was incorporated, to a great extent, in the works of his direct and indirect disciples: Muḥammad b. Ḥabbīb, Ibn Durayd, al-ʾTabari, Abu 'l-Faradī al-ʾIrṣāḥān and many others who borrowed a great deal from him without much concern for acknowledgement and often with vague references to the master's work. A few titles, however, have been recovered from this anonymous mass by Ibn al-Kalbi's fame.---1. Dīmgharats al-Nasab: W. Caskel and G. Strenzick have published two imposing volumes, one a study on everything closely or remotely connected with Arab genealogy and with Ibn al-Kalbi in particular, and the other genealogical tables culled from the work of Ibn al-Kalbi (Dīmgharat an-Nasab des Ibn al-Kalbi, Leiden 1966). Ibn al-Kalbi was the uncontested master of Arab genealogy, and in his Dīmghara Ibn Ḥazm did no more than give currency to the work of his eminent predecessor, without acknowledging it to a great extent. In his lifetime Ibn al-Kalbi was the source, arbiter and sometimes amused dispenser of titles of nobility.---2. Al-ʾApnām, published for the first time in Arabic by Usamah b. Zaki, has been translated into German (by Rosa K. Rosenberger, Leipzig 1941), into English (by N. A. Faris, Princeton 1952), and into French (by M. S. Marmardji, in Revue Biblique, xxxv (1926), 397-420; a fragmentary translation; more recently, W. Atallah has published a new ed. of the text together with an annotated French translation (Paris 1969)). As on genealogy, Ibn al-Kalbi remains an authority on the history of Arab paganism; Ibn Durayd, al-ʾTabari, and al-Baghdādī and others consulted his work, summarized it, and always cited him as a reference.---3. Anṣāb al-ʾKhayl, in which the author set forth genealogical accounts illustrated by short poetic pieces celebrating the most famous chargers of history (ed. Levi Della Vida, Leiden 1928; a copiously annotated edition by Ahmad Šakīr appeared posthumously in Cairo in 1946-7). A few fragments of various length have been preserved, vestiges of lost works such as K. al-Kalb, K. al-Lubāb, Šaʿr Ḥāʾīm al-Ṭāʾī, etc.

To some extent Ibn al-Kalbi's work has been mingled with that of his father, but only partially; in the narrative of the battle of Dayr al-Dīmgharats, for example, he naturally cites his father, who had taken part in the combat, but he also had recourse to other witnesses (al-Tabari, vi, 342-50). He is so scrupulous in his pursuit of exactitude that he even quotes his own father through the medium of other narrators (ibid., ii, 272, vi, 360). Apart from oral sources, Ibn al-Kalbi cited specialists who had access to biblical and Palmyran sources (ibid., ii, 273); he was kept informed of the genealogical accounts illustrated by short poetic pieces in the Yemen (Ibn Durayd, Ṣahkan, ed. Harūn, Cairo 1958, 524); he seems to have had a secretary called Djabala who provided him with translations from Pahlavi (Fihrist, 244) and he himself consulted the archives and tablets of the Christian communities of al-Hira (al-Tabari, i, 628). Equipped with modern methodological criteria, it is easy to point to lacunae in Ibn al-Kalbi's knowledge and to criticize some of his opinions on the basis of modern languages or some of his narratives, which are more legendary than historical. In his universal history he often had to fall back on oral sources alone, and he should be given credit for having written these down. All in all, his work is not inferior to that of other historians of
oriental or classical antiquity. Some Arab writers were fiercely critical of him, but such criticisms, sometimes based on scholarly rivalry, were often sectarian or motivated by religious fervour, for, like his father, Ibn al-Kalbi fell foul of Sunnī orthodoxy. On the other hand, he did have ardent supporters (Yākūt, Beirut 1956, ii, 187-8, 219, 504), and detractors and admirers alike were frequently largely dependent on his work. Among modern scholars, I. Goldziher has criticized Ibn al-Kalbi (Muḥ. Stud., i, 185-7) by taking literally the early criticisms directed against him; he bases his arguments on the false, self-glorying genealogies which Ibn al-Kalbi recounts with humour, and on his pro-Abbāsid views (al-Tabari, viii, 172-3), using these to throw doubt on his scientific worth. Th. Nöldeke (Gesch. der Araber und Perser, Leiden 1879, xxvii and index) restored the balance, and since then criticisms of Ibn al-Kalbi have been reduced to their proper dimensions: even so, neither ancients nor moderns have evaluated him at his true worth. Present-day research is confirming Ibn al-Kalbi's eminent role in the history of Arab literature.

III.—Abūbās b. Ḥishām, Ḥishām's son and not his brother as al-Kūtī states (Fihrist, 95). Al-Ḵāṭīb al-Baḡdādī (xvi, 46) speaks of an Ibn al-Kalbi who must be the grandson of Muhammad al-Kalbi. Al-ʿAbbās transmitted his recollections of his father, Ḥishām, passing on some of his learning to philologists like Ibn Durayd (Iṣḥāḥī, passim) and to historians like al-Balāḍīrī and al-Ṭabarī. Nothing further is known about him.

Bibliography: Main accounts: Ibn Saʿd, Ṭabarī, Beirut 1937, vi, 358-9; Ibn Kuṭayba, Maḏarī, ed. Ṭūkhāra, Cairo 1960, index; Ibn al-Nadīm, index; al-Ḵāṭīb al-Baḡdādī, Cairo 1931, xiv, no. 7386; Ibn Ḥallikān, Waṣfaydī, Cairo 1948, iii, 436-8, v, 131-3; Yākūt, Uqba, Cairo 1936, xix, no. 112; Dhahabī, Misʿam, Cairo 1963, iv, 304-5, 556-9. Among modern writers, the editors of Ibn al-Kalbi usually provide ample bibliographies. Note the introductions to the Diwanāʾ (Cassel-Strenzke) and to the Ḳarāmā of Ibn Ṭabīb and of Ibn ʿAbd al-Brockelmann, Biāber, Litt., and also Khabīla.

(W. ATALLAH)

KALBIDS, a family stemming from the tribe of the Kalb b. Wabara [q.v.], which Arab sources relating to the Maghrib call Banū Abī Ḥusayn (or al-Ḥasan).

In the Maghribi chronicles, governors and senior officials of the Umayyad administration in Ifrikiyya who were of Kalbite origin appear frequently, as do others belonging to the rival Kayū tribe. While the more astute of the caliphs in Damascus sometimes managed to steer an even course between these two adversaries, their representatives in the Maghrib, in Spain and in Sicily often leaned to one side or the other, guided either by their personal sympathies or by the circumstances obtaining at any particular time. Thus the disputes and often bloody battles provoked by the traditional antagonism of the two tribes intensified the chaos in a situation where a Kalbite waṣṭī frequently followed aKayyite one and vice versa.

Under the Aḥlabids, who relied largely on Muḥarrīte elements, the Kalbites began to decline, but they were the main prop and stay of Fāṭimid political and religious policy; they therefore swiftly found in the new milieu a fresh role to their rise, so that by the middle of the 4th/10th century they were the governing element of Muslim Sicily. At this period Kalbite elements were probably already allied with the Kutāma Berbers.

For services rendered particularly to the first imams of Ifrikiyya, the Kalbites were speedily rewarded by the Mahdī and his descendants; in al-Kāʾīm's day, All b. Abī Ḥusayn al-Kalbi (one of the first dynasts of this family and son-in-law of Sālim b. Abī Rāḍīḥ, the Fāṭimid governor of Sicily from 305/917 to 325/936) died at the siege of Agrigento (326/938) in the midst of the struggle pursued by Sicilian Fāṭimid supporters against those who had remained faithful to the caliphate in Baḡdād. His son al-Ḥasan b. All, who had distinguished himself in Ifrikiyya in the campaigns waged by al-Kāʾīm and al-Ḥansūr against the Khaḍījīt Abū Yazīd [q.v.], was the first of a succession of Kalbite governors in Sicily, a kind of hereditary emirate (cf. Kūḥā b. Amāl al-aʿlām [see Bibl.]), which lasted until the mid-5th/11th century.

Confronted by that chaotic situation caused by the rebellions in Palermo and Agrigento against the Fāṭimid representatives, the Caliph al-Ḥansūr deemed it logical and sensible to entrust Sicily's management to those whose fidelity was proven beyond doubt and who, moreover, could maintain a neutral stand between the rebels and the imams of Ifrikiyya. Only a few years after his arrival in Sicily, al-Ḥasan had two victorious encounters with the Byzantine forces in Calabria and Alabardara, and took the opportunity to build a mosque at Reggio, but it was destroyed a few years later. On al-Ḥansūr's death (Dhu 'l-Qadā' 341/March 953), al-Ḥasan returned to Ifrikiyya, leaving the government of the island in the hands of his son Ahmad, but without definitively abandoning his role as military commander in Sicily and Calabria. He was later recalled to the area by his brother ʿAmmar, who was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed, and was later recalled to the area by his brother ʿAmmar, who was hard-pressed, while Ahmad was hard-pressed.

In the succeeding years the different Kalbid governors pursued sporadically their conflict with the Byzantines, but military offensives were rarely large-scale: Byzantium had now admitted the need to enter into peace negotiations with the Fāṭimids, especially since the ambitions of the Emperor Otto I regarding southern Italy had become known. These ambitions also fired his son, Otto II, who, when he ventured into Calabria, found himself faced with a coalition of Muslims and Byzantines, the latter driven by necessity to stand shoulder to shoulder with the Kalbid troops, the former providentially assisted by the rivalry of the two Christian empires. The clash between Otto II's troops and those of the Kalbid waṣāṭ, All b. al-Ḥasan, son of the first Kalbid governor of Sicily, took place in Mubarram 372/July 982 at Cape Crotone in Calabria. At first the Muslims seemed overwhelmed but the battle quickly turned in their favour. This was perhaps the last great Muslim victory against the Christians in Sicily, aside from a few offensives of little importance such as the forays of 376/986 into Calabria, the battle of the straits, which is celebrated in a long letter to Ibn Ḥānāʾī (Daʿud, ed. Zāḥid All, 1358/1934, no. 40, 540-59).

In Egypt too the Fāṭimids employed the services of leading members of the Kalbid family, some of
whom were sent to Sicily by the imams of Cairo to act as governors. This was true of, for example, 'Abd Allah b. Muhammad, in Egypt counsellor to al-'Aziz bi-llâh (al-Mu'izz's successor in 354/975), who governed the island for two years (372/983-374/985). This period saw the apogee of Kalbid prestige: in Egypt, when al-Hakim bi-amr Allâh [q.v.] was proclaimed caliph, the Kutama Berbers, Fâtimid supporters, demanded that control of affairs be entrusted to al-Hakim b. al-Hammar, the victor of Rametta and nephew of al-Hasan b. 'Ali b. Abî 'l-Husayn; in Sicily, the Kalbid Abu 'l-Futûb Yûsuf b. 'Abd Allâh (379/989-388/998) governed the island with great wisdom for eight years. The former was granted the title of Amîn al-Dawla and the latter that of Thikat al-Dawla.

The fortunes of the Banû Abî 'l-Husayn family soon declined from this peak: in Egypt there was a conspiracy against al-Hasan, while Sicily sank into chaos under Dja'far (388/998-410/1010), son of Yûsuf. Although the steadily increasing autonomy enjoyed by Sicily from the outset of Fâtimid rule in Egypt coincided with the greatest splendour of the amirs' court in Palermo, it proved detrimental to the political realities of the moment, in the face of which the Kalbid rulers should have shown greater administrative prudence and zeal. Instead, they preferred to relaxing in the mansions of Palermo, numerous at this period, to the efforts of military undertakings or the cares of political responsibility. Indeed Dja'far, amîr of the island for twenty years, seems to have been the founder of Castello di Maredolci in Palermo. The effects of this decline were apparent in all fields, but they were especially marked in military matters: the Muslims suffered their first setback in Bari in 394/1004 at the hands of the Byzantines and the latter then withdrew to Calabria, leaving the Kalbid era was one of the most prosperous. As their autonomy, promoted the marked development of western Sicily. Palermo and some other urban centres prospered once more, thanks to the new impetus given to municipal enterprises, to public works and to cultural matters. In the capital especially, the study of the traditional sciences had already been inaugurated in the preceding period, and some of the most enlightened Kalbid amirs, themselves often enthusiastic versifiers, encouraged an exceptional development of poetry, as may be seen from the few extant extracts of the vanished anthology compiled by Ibn al-Katå'â al-Sikîlî [q.v.].

Bibliography: The historical, geographical and literary texts dealing with the Kalbids of Sicily have been collected by M. Amari in Biblioteca arabo-sicula, Leipzig 1857, appendix, Leipzig 1875 (Italian tr., i, Turin-Rome 1886; ii, 1887; appendix 1889); the historical data on this family have been studied by this same historian in Storia dei Musul-mani di Sicilia, ed. C. A. Nallino, Catania 1933-39.

In the Kitâb amâr-al-âdâm of Lîsân al-Dîn b. al-Khâṭîb, one chapter is devoted to the Banû Abî 'l-Husayn family; cf. the edition by Ahmad Mukhtâr al-`Abbâdî and Mûb. Îbrâhîm al-Kîttîânî, Casablanca 1964, 122-36 (Sp. tr. by R. Castrillo Marquez, Madrid 1958).

KAL'Â [see KAL'Â]

KAL'È-I SEFÎD [see KAL'ÈI]

KAL'È-I SEFÎD, a fortress in Fârs, in 30° 10' N. Lat. and 51° 30' E. Long. (Greenwich). It is built on a mountain with a flat top, in the eastern part of the valley of Kohra, which falls steeply down on all sides. On its summit, which can only be reached by cliff-paths, lies an extensive well-wooded plateau watered by numerous springs. A strong garrison is necessary for its defence, as is noted in Fârsnâmâ. Descriptions of the fortress and the country round it are given, among Oriental writers for the pertinent passage is copied by Mustawfi, Nuhtal al-Külûb, 'Ali Yazdi and Mirghi`ând (see Bibli.). Of descriptions by European travellers in the 19th century, that of Stolze deserves special mention; along with Andreas Khatib, one chapter is devoted to the Banû Abî 'l-Husayn family; cf. the edition by Ahmad Mukhtâr al-`Abbâdî and Mûb. Îbrâhîm al-Kîttîânî, Casablanca 1964, 122-36 (Sp. tr. by R. Castrillo Marquez, Madrid 1958).

KAL'BIDS — KALCE-I SEFÎD 497

briga di Cefalù. A fortezza situata sul promontorio di Cefalù, la cui storia è strettamente legata alla storia della Sicilia. La sua importanza geopolitica nei secoli successivi ha permesso di conservare al posto di frontiera i resti di una struttura militare di notevole rilievo arabo-siciliano.
very probably originate in the dazzling white colour of the building-stone used. The name Kal’c-i Gul (citadel of the rose and rose-water), borne by Kal’c-i Sefid in al-Bundār (Houtsma, Recueil, ii, 183, 13) is remarkable.

Kal’c-i Sefid is the most noteworthy point on the mountain road which leads from Behbahān to Shīrāz and furnishes communication between Khūzistan and Fārs. It may be regarded as certain that a commanding place like this was very early fortified. The “Persian passes,” through which Alexander the Great tried to enter the ancestral home of the Achaemenids and which were defended by the Satrap of Persis, Ariobarzanes, with his strong forces, have often been sought in the valley of Kal’c-i Sefid; e.g., by Vincent, Mützel, Droyseyn, Forbiger. Ritter (Erdkunde, ix, 138), in differing from these, considers Kal’c-i Sefid to be the stronghold of the Uxians and places the “Persian Gates” farther east. Ritter’s view has been attacked particularly by Mützel in his edition of Curtius (Berlin 1841, p. 414 f. and by Stolze (op. cit., 262 f.; see bibl.). That the region of Kal’c-i Sefid does not correspond to the situation of the “Persian Gates” of the historians of Alexander and that the latter should be located elsewhere has been fairly convincingly proved by Stolze, op. cit.

Kal’c-i Sefid is not mentioned by the Arab geographers of the Middle Ages. Like the adjoining town of Nawbandān (Nawbandadjan) it must have been allotted to the Persian province of Sābūr in the Caliphate period. From the 4th/10th century on we find cropping up in the Oriental sources a nomenclature of which the Shūl, after whom the whole area, inhabited by them from the west of Shīrāz to the frontiers of Fārs and Khūzistan was called Shūllistān. There is definite evidence to show that Kal’c-i Sefid belonged to Shūllistān. On the Shūl and the land of Shūllistān cf. the references in Quatremère, Hist. des Mongols, 380 f. (see bibl.) and also Mustawfi, Tāʿrīḵ-i Gusāda (ed. Browne, GMS xiv), 538, 638, 660, 696, 726.

Kal’c-i Sefid is frequently mentioned by Persian poets and chroniclers. It is first found in Firdawsw’s Shāhkama (ed. Mohi, ii, 92, 245 f.); here the conquest of the stronghold is related as one of the noteworthy deeds of the hero Rustam. As the Fārsnāma (written about 500/1106) reports, the fortress of Kal’c-i Sefid had lain in ruins for many years until it was rebuilt by a certain Abū Naṣr from Tir Mūrdān (a district of the province of Sābūr) during the tumults of the last decades of Bāyūl rule, that is in the first half of the 5th/11th century. The mountain, difficult of access, served not infrequently in wartime as a secure hiding-place. For example in 534/1139 Buṣāba, governor of Fārs, retired here before Karā ʿṢonḵor, atabeg of the Ṣaḥīḫ Ṣutan Masʿūd, cf. the article būz-ābān. The Salghūrīd Abū Bakr (g.v.), atabeg of Fārs from 623 to 658 (1226-1260) (on him see Salghūrīd) transported his treasures to Kal’c-i Sefid and placed a garrison in the citadel in order to have a place of refuge here in case of a catastrophe. The last atabeg of Fārs of the Salghūrīd dynasty, Salghūrakh, met his death at the foot of Mount Kal’c-i Sefid in battle with one of Hūlāqū’s generals in 663/1264; see J. v. Hammer, Gesch. der Ilkhān, Darmstadt 1842, i, 243 and cf. also Mustawfi, Tāʿrīḵ-i Gusāda, 509. Mustawfi (ed. Houtsma) issued an order to destroy all the fortresses in the lands conquered by him, an exception was made of Kal’c-i Sefid, as is expressly mentioned; cf. the passage in the Tāʿrīḵ-i Wāṣṣāf in Quatemère, op. cit., 382. The citadel could therefore continue to serve as a place of refuge, and was also on several occasions a station for political opponents. Thus for example Masʿūd Shāh of the Indjū dynasty, who ruled as governor of Fārs from 736/1335, imprisoned his brother Muḥammad in Kal’c-i Sefid [see INQŪ]; when later Abū Isḥāḵ, a younger brother of the Masʿūd Shāh just mentioned, came into conflict with the Muzaffarīd Muḥārīz al-Dīn and had to flee before the capture of his capital Shīrāz in 735, he went to Kal’c-i Sefid (see Mirḵābd’s account in Quatremère, op. cit., 382; Mustawfi, Tāʿrīḵ-i Gusāda, 658, 15 f.). A few years later the sons of Muḥārīz al-Dīn, Shāh Ṣultān and Shāh Shuḏjā, rebelled against their father, blinded him and imprisoned him in Kal’c-i Sefid in 759/1358; see Mustawfi, Tāʿrīḵ-i Gusāda, 681; Defrémery in JA, 1864, ii, 112. In 785/1383 Shāh Shuḏjā had his son Sūltān Shuḥbīl sent to Kal’c-i Sefid as an alleged rebel (see Mustawfi, op. cit., 743; Quatremère, op. cit., 382; Defrémery, op. cit. (1845), i, 437).

Kal’c-i Sefid has attained special fame through its capture by Timūr. The latter on his second campaign in Fārs in 795/1393 passed by the road from Behbahān to Shīrāz, besieged this barrier fortress, considered impregnable, and stormed it on the third day. All the members of the Muzaffarīd dynasty who were captured and put to death (cf. Šaraf al-Dīn ʿAlī Yāzdī, Šarfānrāma, Calcutta 1887, i, 600 f.; Mustawfi, op. cit., 751).

We read of the capture of Kal’c-i Sefid by Hamza-Bey several centuries later, in the reign of Shāh ʿAbbās I; see Quatemère, op. cit., 384. The Mamasānī have now settled in a large part of what was once called Shūllistān; they are a robber tribe, who centre round Kal’c-i Sefid. On them see Layard in the JR Geogr. Soc., xv, 28; Ritter, Erdkunde, viii, 390, ix, 137; C. de Bode, Travels in Luristan and Arabistan, London 1845, i, 210, 219 f., 262 f. When the Mamasānī in the latter part of the reign of Fath ʿAlī Shāh (1797-1834) were in constant rebellion under a robber chief named Wāl Khan Bakākh, an army of ʿĀdhar-baydjam troops was sent against them, who besieged Kal’c-i Sefid and forced the stubborn defenders of the citadel to yield (cf. Curzon, op. cit.).

It should further be mentioned that below the fortress on the mountain there was at one time a second smaller castle, the name of which is variously given as Astāk (Fārsnāma, 158, 17) or Nūzhān (Mustawfi, Nūzhā, 127); further variants of the name are given here in note 1).

The little village of Tell Espid should not be confused with this; it lies northwest of Kal’c-i Sefid in the adjacent plain on a hill some 2400 feet high; cf. Wells in the Proc. of the Roy. Geogr. Soc., 1883, v, 161 and Herzfeld, op. cit., 85.

KAL'EE-I SULTANİYE [see CANAR-KAL'E BOGHAY].

KALENDER [see KALANDAR].

KALENDERGHOLİ MEHMED (d. 1018/1600), leader of the Djeilaî [q.v. in Supp.] rebels of Anatolia, was born in the village of Yassilvårın, in the sandjak of Ankara. He managed to obtain a timar in this sandjak and was promoted to cavuş when Lala Mehmeth Paşa [q.v.] was beglerbegi of Anatolia. As one of the “deserters” (fördir) who fled at the critical moment in the battle of Mezö-Keresztes (q.v., 1005/1596), he was deprived of his timar; when he appealed, his dismissal was confirmed and he was threatened with further punishment, whereupon he, like so many others who had been proscribed as “deserters”, joined the Djeilaî movement under Karayazgil, then the virtual ruler of Anatolia. Karayazgil died in 1010/1601, and was succeeded as leader by his brother Deli Hasan. In 1015/1603, Deli Hasan came to terms with the government in Istanbul and crossed into Rûmeli to serve as beglerbegi of Bosna, but Kalendergholî, together with such other leaders as Karakush Ahmed and Kara Sa'îld, stayed in Anatolia and maintained their resistance in the area of Ankara—Akshehir—Kütahya. He came to the fore as one of the officers of Tawll Khalî, who surprised the army of the vizier Nasûb Paşa near Bolvadin (1014/1605), so that when the sultan (Abmed I) attempted to come to terms with the Djeilaî leaders Kalendergholî was appointed beglerbegi of Karaman (and thus obtained the title of pasha). However, he did not assume the duties of this post but was granted Ankara as arşapîl [q.v.]. His position became precarious with the death of Lala Mehmeth Paşa, who had been his protector, and the appointment of Müredd Paşa (“The eggplant”) [q.v., 1015/1606] as grand vizier. Moreover, the people of Ankara had refused to permit him to enter the city; he was obliged to leave one of his officers to deputize for him and to withdraw eastwards.

Meanwhile, Murâd Paşa had marched against the rebels and summoned Kalendergholî to join him in the campaign against Djanpulatoghî Ali Pasha at Aleppo. Suspecting a trap, Kalendergholî disobeyed this order, thus revealing himself as a rebel. When Murâd Paşa moved towards Aleippo, Kalendergholî, at the head of a numerous host of segbâns [q.v.], moved westwards, occupying the Aegean coastlands and the Bursa district, so as to threaten Istanbul itself. He defeated the government forces sent against him and even laid siege to Bursa; he failed to take the city but fired the suburbs. Greatly disturbed by Murâd Paşa's decisive defeat of Djanpulatoghî in 1016/1607, Kalendergholî summoned all the Djeilaî leaders to join him; nearly all obeyed, with the exception of Muslu Cavuş, who was operating around Silifke, and Djanpulatoghî himself, who was attempting to take refuge in Istanbul. Kalendergholî's proposal to offer battle in the region of Marâş - Aleppo was accepted, with few assessents. The army of over 70,000 segbâns was defeated in the yayla of Gökşün [q.v.] by Murâd Paşa's troops, composed entirely of kapidu kullari and reliable tribal levies from south-east Anatolia and the Arab lands (22 Rabî' II 1017/5 August 1608). Kalendergholî and his companions fled, hoping to reach safety in Persia. Holly pursuing, he ended on the 10. took refuge with Şâh 'Abbâs, but since he would not abandon his turbulent ways he was put to death.

(Streck)

KALGHAY, KALGHAY, KAGILKAY, a title best known as indicating the “deputy” or “heir apparent” of the khans of the Crimean Khânate [see KİRM]. The term has been subjected to a variety of linguistic, sociological and political analyses, the most important of which are summarized here.

Linguistically, the title has been connected with the Tatar word kalghay, “he will remain” or “let him remain”, on the basis of an anecdote given by Halîm Giray (Gülbûn-i Khânân, Istanbul 1287, 11 f.). This popular etymology, followed by Hammer (Geschichte der Chane der Krîm . . ., Vienna 1856, 10), Howorth (ii/1, 60) and Ahmed Djeewed (Ta'rikh, i, 73), is untenable. A Mongol origin (Pelliot, Inalcik) is unlikely, since the term is not encountered before 1475. For a full discussion of the problem, see Doerfer, iii, p. 499, and J. Matus, Qalqa, in Turcica, ii (1970), 101-29.

In a sociological or institutional sense, there were ample precedents for the office of kalghay. The Khânate of the Golden Horde and its successor state, the Crimean Khânate, like other stable governments, required a trusted official who could make decisions in the absence of the khân. The kalghay, as deputy and heir apparent, was invariably a brother or a son of the khân (M. de Peyssonnel, Traité sur le commerce de la Mer noire, ii, Paris 1877, 252). As direct descendants of Cingiz-Khân [q.v.], the khâns of the Golden Horde and of the Crimea followed closely many Mongol or inner Asian traditions. In fact, the office of kalghay corresponds rather closely to the Mongol prince known as the olcîgîn-âjan or “master of the hearth and the home yurt or patrimony” (cf. B. Vladimirtsov, Le Régime social des Mongols, Paris 1948, 67 and 126). According to Mongol tradition, the home yurt was entrusted to the care of the khân's youngest son. He would appear significant that most kalghâys were chosen from among the younger brothers of the khân until the end of the 13th century, a time when Islamic-Ottoman practices became more influential in the Crimea (see OTAY and the accompanying genealogical table). Inalcik reports (loc. cit.) that slightly more than half of the khâns had previously served as kalghay, which emphasizes the role of deputy over that of their apparent. Clearly the Ottoman sultan (after 883/1478) and the tribal aristocracy could always impose their will, and often did, to disrupt an orderly succession and to weaken an able or over ambitious Giray dynastic line. A convolution of the tribal dignitaries, termed a kuriltay [q.v.], also represented a weakened version of an inner Asian institution; the original kuriltay
apparently consisted only of family members of a ruling dynasty. In the Crimean Khanate, the privilege was extended to the tribal mirsads [q.v.], thus weakening the authority of the ruling family (cf. B. Grekov and A. Iakoubovski, *La Horde d'Or*, Paris 1939, 121-3).

In accordance with the inner Asian practice of conferring an injeqd or fief upon princes and holders of high office, the kalghay maintained his seat of power in Akmesdjid, exercising from there complete administrative and judicial authority over the inner Crimean territory from Akmesdjid to the Ottoman enclave of Kaffa (Kaffa). He held his own daily divdin [q.v.] and was attended by officials with ranks corresponding to those of the khans divdin in Baghche-saray. It was in the composition of the court and in the powers given to kadids that one may observe Islamic political influences among the Krim Tatar elite. The divdin of the kalghay could recommend the death penalty for criminals within the kalghay's territory, but this penalty was subject to the review of the khans and his mujid and badi-saker [q.v.]. The appointment of a nur al-din [q.v.], a second deputy and heir apparent to the khans, after 992/1584, may indicate an Ottoman influence. Henceforth the tendency was to appoint a brother of the khans, younger or older, to the right wing of kalghay, while the position of nur al-din was reserved for his favourite son. Thus, a certain preference was given to seniority of line, as in the case of the later Ottoman sultans, rather than seniority in a given Giray family.

In the 12th/18th century the revenues of the kalghay included 10,000 piastres from the customs dues of Karasubazar [q.v.], 5,000 p. from the salt works of Kaffa, 3,000 p. from the khan's own dairies, and a tribute of 2,500 p. from the honey tax of Moldavia and 1,000 p. of the same from Wallachia. He also received the capititation tax (jizya, [q.v.]) from certain Christian villages, a revenue which he often turned over to officers of the court, and he inherited the property of mirsads in his district who died without suitable heirs (Peyssonel, ii, 254).

The kalghay could be called upon by the khans to lead Tatar contingents to war (usually in support of the Ottoman army, at which time special subsidies were forthcoming) or on Tatar raids into the territories of Poland-Lithuania, Muscovy or Circassia; on these occasions the kalghay had full powers and received one tenth of all booty in keeping with Mongol custom. When the khans led the army, the kalghay often remained behind to guard the Crimea from Cossack or other attack. If he accompanied the khans, he was placed in command of the right wing of the army (Ewliya Celebi, *Seyahatname*, x, 47-8). The kalghay generally could be expected to support the prerogatives of the dynasty against encroachment by the sultan or the mirsads.

In the sphere of foreign affairs, the kalghay could send his own envoys together with those of the khans and could negotiate independently of the khans under certain circumstances. A proportional amount of all tribute (fisah) payments from Muscovy, for example, had to be specifically allotted to the kalghay. (Note the lists of articles sent to the Crimea in H. Feyizhan and V. Velyaminov-Zernov, *Materiiali po istorii Krimskago Khansata*, St. Petersburg 1864, passim.)

The palace of the kalghay, situated on high ground on the left bank of the Salt river in Akmesdjid, was demolished after the Russian conquest of 1783. Close to the old town, the Russians built the new enclave of Simferopol, which became the seat of power for the Russian governor of the Crimea. The office of kalghay typified the combination of inner Asian and Islamic institutions, a feature common to the institutions of the Turco-Tatar peoples of western Asia.

KĀLĪ, KALĀT, the name used by the Arabs for tin (or for an especially good quality of tin), which is sometimes also called raṣāṣ al-kašī and raṣāṣ al-abyād, that is, "kašī lead" or "white lead" (see LA, s.v.; Dozy, Supplément, s.v.; Vullers, Lex. pers.-lat., s.v.; E. Ribdf Dhi 'l-Kifl, Paris 1913-4, 814, 45). The word probably comes from the Far East, whence the Arabs could have borrowed it directly, without the intermediary of modern Persian (although this is also possible) as al-Jāwālišī believed (ed. Socin) no. 3, speaks of the "pearls of Kalāšt" (kalāšt). It is clear that the Arab word kalāšt is derived from the district of Kalāšt, which was celebrated for its tin mines, gave rise to kalāšt and kalāšt. Sometimes the Syro-Arab desert (the Badiya), or the Yemen (al-Flruzabadi, ed. Le Strange, 203), is often mentioned, especially in early Arabic poetry (cf., for example, Ṣīdīqī, al-Kāfī, ed. Le Strange, 203). The word is also—already certainly erroneously—connected with an (alleged) source of tin called al-Kalabī (kalabī) in Ceylon (Yākūṭ, iv, 21, iv, 162), in Spain (Yākūṭ, iv, 162; Ṣīdīqī, al-Kāfī, ed. Le Strange, 203) and in the Yemen (al-Fīruzabādī, op. cit.).

The usual word for tin in present-day Malay appears to be tinak. Also found with this meaning are kalang, kalang—not kalag as Langles, Quatremère, Dozy-Engelmann, Yule-Burnell and others write it—which, according to the dictionaries, means primarily tin-plate or tinned iron-plate (though the meaning tin may be an older one). It is clear that the Arab word kalāšt is derived from Kalāšt (= Kalabī), but from this Malayan word. Quatremère firmly supports this etymology but Dozy-Engelmann and Yule-Burnell do not commit themselves. It is difficult to credit that the Malayan kalang is a corruption of kalāšt. The possibility has also been considered that the name of the district of Kalah, from the Malayan kalang, means simply "land of tin"; this view was expressed as long age as Langlès in his edition of the Voyages of Sinbad the Sailor in Grammaire de la langue arabe by Savary (Paris 1813, 499 = offprint, Paris 1814, 63). Yule and Burnell quote as an analogy the fact that the little state of Salangor (north of the city of Malacca) was formerly known as Nagri Kalāšt, "the land of tin". Furthermore, according to Wilkinson, Malay-Eng. Dict., 526, Kēlāng, Klang properly only name the district of Salangor and a small urban town within that district, is also often extended to include the whole state of Salangor. Perhaps the origin of kalāšt is to be found in this Kelāng.

Kāli, kalašt is also used for a type of sword which is often mentioned, especially in early Arabic poetry (cf., for example, Aww b. Ḥāḍjar, ed. Geyer, 33; Ruβa b. al-ʿAḍijadāšt, ed. Ahlwardt, 49, l. 43; scholia to ʾAṭara, Muʿallaka (apud Arnold, Septem Moalakat, Leipzig 1850, 61). On al-Ṭāʿalīb, Kalāšt, 102, 130 (cited by Dozy, Supplément, ii, 358), see Fleischer in Sitz.-Ber. d. Sächs. Gesell. d. Wiss., (1886), 45. Cf. also Ibn Saʿd, Tabābādī, l. 30). This kind of sword is generally considered to be of Indian origin (cf., e.g., al-Fīruzabādī, al-Kāfī, and, indeed, modern Indian swords were famous from early times among the Arabs and were celebrated by the poets (cf. Schwarzlose, Die Waffen der alten Araber, Leipzig 1886, 127-8 and A. Siddiqi, Studien über die persischen Fremdwörter im klassischen Arabisch, Göttingen 1919, 88-9). As a more definite place of origin Arab geographers and lexicographers usually give al-Kalāšt, where the tin of the same name comes from (e.g., Yākūṭ, s.v.). Sometimes the Syro-Arab desert (the Bādiya), or the district of Hūlwān in ʾUrāk (cf. LA and Kāmūs, s.v.) is given as the place of origin. The Yemen, which produced the finest swords after India, is sometimes given as the place where the sayf kalāšt came from; as in the glossary of ʾAṭara's Muʿallaka cited above. Jacob, All-arab. Beduinen-lexen (Berlin 1889, 149) would like to opt for the Yemen, more, according to Wilkinson, specifically the "fortress" (kalāšt) of Aden; in support of this hypothesis is the fact that a poem by ʿAlīkama (ed. Socin) no. 3, speaks of the "earls of Kalāšt" (kalāšt). Yet the derivations of the Arab word from an East Indian place called al-Kalāšt (= the Kalah of Malacca (q.v.)) seems more likely. The distinction between the two kinds of sword, kalāšt and kalāšt (cf. Freytag, Lex. Arab.-Lat., s.v. kalāšt and kalūst), is in any case invalid (contra Schwarzlose, op. cit., 130).

KALĪF, also KAYLIF, a town on the Amū-Daryā (al-Masʿūdī, viii, 64 calls the latter "Kālīf River"), west-north-west of Tirmašt. The main part of the town with the fortress Ribāšt Dhi-i-Kārmaš lay to the south of the river; there was a castle nearby. On the outskirts on the northern bank lay the fortress called Ribāšt Dhi-i-Kālīf (cf. Būkht). In 1220 the Khwārizmshāh Muḥammad II marched on the town to prevent the Mongols from crossing the Amū-Daryā. According to Mustawfī, Nuzhat al-Kalāšt, 135 (translation 153), Kālīf was famous in the 9th/10th century for its fruit and had some importance as trading-post on the road from Bāltik to Nakhchīvan (Nasaf) (q.v.) in Sogd. The town still exists (Russian Ribči) but is now situated not on the northern bank of the river only. The ford in the Amū-Daryā is still of importance on the route to Afghanistan.

KALIFA [see ERZURUM].

KALIFAT [see CACUTTA].

KALILA WA-DIMNA, title of an Indian mirror for princes, formed by the corruption of the Sanskrit names of the two principal characters, two jackals, Karāṭaṇka and Damānaka (in the old Syriac translation the forms are still Kaallag and Damnag). It was translated from Sanskrit into Pahlavi and thence into Arabic, and became widely known in Muslim as well as Christian literatures.

1. The original work. The Indian original was composed by an unknown Vignhunite Brahman, according to Hertel probably about the year 300 A.D. in Kashmir; the main argument for this, the translation of denarius by dinəra is, however, not conclusive, as the pronunciation of the ɣ as i is older than Hertel supposes (see also A. Berriedale Keith in JRAS, 1915, 505). It consisted of an introduction and five books, each of which bore the name tantra, i.e., "occasion of good sense". The book was intended to instruct princes in the art of polity by means of animal-fables composed in perfect Sanskrit. The oldest descendant of the original work is the Tantrākhyāyika, rediscovered by J. Hertel (see Tantrākhyāyika, die älteste Fassung des Pañcatantra, tr. from the Sanskrit with intro. and notes by J. Hertel, 2 parts, Leipzig-Berlin 1909). A second recension of the original work is called the Añcatantra. J. G. Kosegarten published an uncritical mixed text (Bonn 1848) on this. Benfey based his translation, Pañcatantra, fünf Bücher indischer Fabeln, Märchen und Erzählungen, tr. from the Sanskrit with intro. and notes, 2 vols., Leipzig 1859. In the introduction to this work the history of the spread of Indian literary themes to Europe was first exhaustively investigated.

2. The Pahlavi translation. A rather early recension of the Pañcatantra was translated from Sanskrit into Pahlavi by order of the Sasanian king Khusrav Anāšāhvān (532-579) by his physician Burzōe, whom he had sent to India for this purpose, and expanded by the addition of an appendix of fables from other Indian sources; of these the three first (chap. 1-13 in de Sacy) are taken from the twelfth book of the Mahābhārata (ibid., chap. 138, 139, 111); the other five (de Sacy's chap. 14, 15, 16, 18, 19 and the story of the king of the mice, see below, not given in de Sacy) have so far not been found in Indian literature, although there is no reason to doubt their Indian origin. Burzōe prefaced his translation with an autobiographical introduction which the vizier Buzurdjmír, it appears, signed with his own name (see Burzōe's Einleitung zu dem Buch Kalila wa-Dimna, tr. and annot. by Th. Nöldece, Schriften der wissensch. Gesellsch. in Strassburg, fasc. 12, Strasbourg 1912).

3. The old Syriac translation. Burzōe's Pahlavi translation itself is lost; but by about 570 A.D. it had already been translated by the Periodiut Būd into Syriac. This translation only survives in one manuscript, which was formerly preserved in the monastery at Mārdin, then in the library of the Patriarch of Mōsul and afterwards came into the possession of Mgr. Graffin in Paris. From a defective copy of this, which Socin had brought with him, Bickell prepared the first edition (Kalila et Dimna, ou Fables de Bidpai, Paris 1816) is based on an inferior manuscript and is arbitrarily emended from other manuscripts (see Nöldeke, in the Göttinger Gelehrte Ans., 1854, 676). In de Sacy's text, Ibn al-Mukaffa's preface is preceded by a new preface by an otherwise unknown Bahnhīd b. Sābwa' or 'All b. al-Shāh al-خارش, in which he gives an account of the history of the book in India, as well as a report said to have been written by Buzurdjmīr regarding Burzōe's mission to India with the commission to bring back the book; in several manuscripts this is followed by another story of Burzōe's being sent for a miraculous plant. Some manuscripts (see J. Derenbourg, Directories vitae humanae, 323) add at the end two more fables, of the heron and the duck and of the dove, the fox and the heron from other, as yet unknown sources. This latter story is also inserted in the oldest Oriental reprint of de Sacy's edition, Bōlāk 1249 (according to Chauvin, op. cit., p. 13); from this it has passed into the more recent editions printed at Cairo, Mōsul and Beirut, the list of which in Chauvin, p. 13 ff., according to Cheikho, p. 6, is not yet complete. Valuable contributions to the criticism of de Sacy's text from Italian manuscripts are given by I. Guidi, Studi sul testo arabo del Libro di Calila e Dimna, Rome 1873. The story of the king of the mice and his ministers, not given in de Sacy, which is shown by the Syriac text to belong to the Pahlavi work, was published by Nöldeke in text and translation in the Abhandl. der Königl. Gesell. der Wissenschaft. zu Göttingen, xxv/4 (1879). The complete material from 16 Paris manuscripts for the story of the ascetic and the broken jug was given by Zotenberg in the JA Ser. 8, vii (1886), 116-23.

While the numerous printed editions of the East (Bōlāk 1249/1817; Cairo 1297/1835; Bayt al-dīn 1869; Mōsul 1874, 1876; Beirut 1880, 1884) in the main reproduce the texts of the Sacy and Guide, A. N. Tabbara (Kalila et Dimna, trad. arabe copiée d'après un ancien manuscrit trouvè à Damas, avec notes, Beirut 1904) claimed to have discovered a new source for textual criticism; but his work (1904-1925) is too modern to afford new material and his edition is, besides, bowdlerized. On the other hand I. Cheikho found in the Lebanon monastery of Dayr...
al-Shir a valuable manuscript of the year 719/1320, and made it accessible in an excellent edition: The version arabe de Kalilah et Dimnah d'après le plus ancien manuscrit arabe daté, Beirut 1905 (many later eds.). A new edition by Khalil al-Ya'qubi (ibid., 1908) was followed by that of Salim Ibrāhīm Shādir and Shāhīn Ṭāṭīa (ibid., 1910), intended for school use. The latest of note is that of T. Husayn and Ḥabīb al-Wahāb Azzām (Cairo 1947), based on a Ms. from Aṣyā Sodīya dated 619/1224 and therefore earlier than that of Cheikho. The modern European translations from de Sacy’s text are given by Hertel (op. cit., 393); to these may be added M. Moreno, La versione araba di Kalila e Dimna, tr. into Italian, San Remo 1910 (see RSO, vi, 201, in his Kalila et Dimna, fables de Bidpāi (Paris 1957); A. Miguel follows the ‘Azzām’s edition with the addition of chapters from fragments of Marāfī (4th ed., Cairo 1935) and Derencour’s Directorium.

5. Arabic versifications. The translation by Ibn al-Mukaffa’s has been three times put into Arabic verse. The first version was made by his younger contemporary Abūn al-Lābīkī [q.v.]; see also A. E. Krymski, Abūn al-Lahiqī, le Zindiq (environ 750-825), versificateur arabe des recueils des apories indo-persans. Essai sur sa vie et ses écrits, tiré de l'unique manuscrit de Souli,..., Bbl. Khd., N°., 594, and d'autres sources primitives. A. geproces. Brr,hm et bases...; b. Texte arabe intact d'al-Avrāq par Souli, éd. en collaboration avec Misra Abdoullah Ghaffarow (also in Russian with Turkish title) Moscow 1913; on the manuscript cf. Horovitz in the Mitt. des Seminars für Orient. Sprachen, Westas. Stud., x, 35. This version is lost; with the help of it, but on the basis of the text of Ibn al-Mukaffa’s, a version was prepared in 1190, Ibn al-Habbariya announces his intention of reproducing the work completely, including the aphorisms which seemed to him particularly valuable, with all the rhetorical adornment of artificial prose; he gives only Buzröe’s introduction in ordinary prose, as an artificial style does not suit its matter. The work was lithographed in Tehran in 1282/1865 (this dispenses with Chauvin’s doubts, p. 46/7), 1304 and 1305; cf. de Sacy in Not. et Extr. X, i, 96 ff.; E. G. Browne, A literary history of Persia, li, London 1906, 349.

A metrical version of the book was composed by Sultan ‘Īzz al-Dīn Kaykābūs (641-62/1244-63) by Ahmad b. Mahmaid al-Tūsī Kānī, a contemporary of Djalāl al-Dīn Rūmī at Kumya, who had fled before the Mongols from his native city of Tūs; it was probably based on Naṣr Allāh’s translation, which, however, he now mentions (see Rieu, Cat. of the Pers. MSS. in the Brit. Mus., 582 ff.; E. G. Browne, A history of Pers. literature under Tar tail dominion, Cambridge 1920, 121).

This work was, however, put in the shade completely by the revision of Naṣr Allāh’s translation done by Husayn Wā’īs Kāshīfī (d. 910/1504) [see Xāqīgīr], the court-preacher of Ḥusayn Baykārā of Herāt [see Husayna [q.v.]] in honour of Husayn’s minister Ahmad Suhaylī he called his work Ame’ir-i Suhaylī. He professed to be making the rhetorical artificial prose of Naṣr Allāh easier to understand by giving it a new version but in reality he created an even more florid and verbose concoction, “full of absurd exaggerations, recondite words, vain epithets, far-fetched comparisons and tasteless bombast and represents to perfection the worst style of those florid writers who flourished under the patronage of the Timurids” (E. G. Browne, A literary history of Persia, n. 352). But as this style remained predominant in Persia and particularly in India down to the threshold of the modern period, the work had an unparalleled success and was printed in England (first complete edition London 1836), where it was used as a text book for the examination of English officials in India in Persian and repeatedly printed and lithographed in India and Persia, translated into several Indian dialects, into Pushtu, Georgian and all the principal languages of Europe (see Chauvin, 26-43). Husayn replaced the four prefaces of Ibn al-Mukaffa’s by a new introduction from a so far unidentified source; de Sacy supposes (Not. et Extr. XII, i, 59) that in it we have the older Dīkwān al-Kord, which al-Turtūshī was still able to use for his Sirādī al-Mulūk, Bulāk 1260, 97, 185. The Emperor of China, Humâyūnflā, is persuaded to give up the idea of abdicating his throne by his vizier, who tells him how the Indian king Dābhīlīn was directed by a dream to a cave in which an old man would give him a treasure. Of the latter Dābhīlīn keeps only the testament of Hoghang, king of Persia, which contains 14 pieces of advice for rulers, and with these he goes to Ceylon, where the Brahman Bidpāι and Pillāpī explain each of these precepts by stories which form the separate chapters of the book.

Dislike of the extravagant and luxurious style of the poet Rūdhīkī (d. 304/916) put the book into Persian verse of which, however, only 16 verses have survived in quotations in Asadī’s Lughāt-i Fors, ed. Horn, p. 18 sqq. Ibn al-Mukaffa’s work was translated into Persian prose probably after the year 530/1144 (see Rieu, Cat. of the Pers. MSS. in the Brit. Mus., 745-6) by Nizām al-Dīn Abu ‘l-Ma’ālī Naṣr Allāh b. Muhammad b. ‘Abd al-Ḥamīd, who dedicated his work to Bahrām Shāh of Ghazna (q.v.). Naṣr Allāh in a new preface announces his intention of reproducing the work completely, including the aphorisms which seemed to him particularly valuable, with all the rhetorical adornment of artificial prose; he gives only Buzröe’s introduction in ordinary prose, as an artificial style does not suit its matter. The work was lithographed in Tehran in 1282/1865 (this dispenses with Chauvin’s doubts, p. 46/7), 1304 and 1305; cf. de Sacy in Not. et Extr. X, i, 96 ff.; E. G. Browne, A literary history of Persia, li, London 1906, 349.

A metrical version of the book was composed for Sultan ‘Īzz al-Dīn Kaykābūs (641-62/1244-63) by Ahmad b. Mahmaid al-Tūsī Kānī, a contemporary of Djalāl al-Dīn Rūmī at Kumya, who had fled before the Mongols from his native city of Tūs; it was probably based on Naṣr Allāh’s translation, which, however, he now mentions (see Rieu, Cat. of the Pers. MSS. in the Brit. Mus., 582 ff.; E. G. Browne, A history of Pers. literature under Tar tail dominion, Cambridge 1920, 121).

This work was, however, put in the shade completely by the revision of Naṣr Allāh’s translation done by Husayn Wā’īs Kāshīfī (d. 910/1504) [see Xāqīgīr], the court-preacher of Ḥusayn Baykārā of Herāt [see Husayna [q.v.]] in honour of Husayn’s minister Ahmad Suhaylī he called his work Ame’ir-i Suhaylī. He professed to be making the rhetorical artificial prose of Naṣr Allāh easier to understand by giving it a new version but in reality he created an even more florid and verbose concoction, “full of absurd exaggerations, recondite words, vain epithets, far-fetched comparisons and tasteless bombast and represents to perfection the worst style of those florid writers who flourished under the patronage of the Timurids” (E. G. Browne, A literary history of Persia, n. 352). But as this style remained predominant in Persia and particularly in India down to the threshold of the modern period, the work had an unparalleled success and was printed in England (first complete edition London 1836), where it was used as a text book for the examination of English officials in India in Persian and repeatedly printed and lithographed in India and Persia, translated into several Indian dialects, into Pushtu, Georgian and all the principal languages of Europe (see Chauvin, 26-43). Husayn replaced the four prefaces of Ibn al-Mukaffa’s by a new introduction from a so far unidentified source; de Sacy supposes (Not. et Extr. XII, i, 59) that in it we have the older Dīkwān al-Kord, which al-Turtūshī was still able to use for his Sirādī al-Mulūk, Bulāk 1260, 97, 185. The Emperor of China, Humâyūnflā, is persuaded to give up the idea of abdicating his throne by his vizier, who tells him how the Indian king Dābhīlīn was directed by a dream to a cave in which an old man would give him a treasure. Of the latter Dābhīlīn keeps only the testament of Hoghang, king of Persia, which contains 14 pieces of advice for rulers, and with these he goes to Ceylon, where the Brahman Bidpāι and Pillāpī explain each of these precepts by stories which form the separate chapters of the book.

Dislike of the extravagant and luxurious style of
the Amãr-i Suhâyli induced the Emperor Akbar (1556-1605) to commission his vizier Abu 'I-Fadl to prepare a new edition of the work. This bears the title 'Iydr-i Dâmiq and was completed in 966/1558. It retains the arrangement of its model but restores Ibn al-Mukaffa’s preface and Burzoe’s introduction. The work itself is still unpublished but a Hindustân translation by Hafi zuddîn, entitled Khâm ã Afrás, was published by Th. Roebuck (Calcutta 1815) and by Eastwick (Hertford 1857), London 1867 on account of its elegant diction.

Naṣr Allâh’s edition was translated into old Ottoman Turkish (not into Eastern Turkî, as Hertel, p. 407, says, relying on a somewhat misleading expression of Éthé’s, op. cit.) by Masûd for Umar Beg, prince of Aydîn (d. 748/1347) (a Ms. in the Bodleian, Marsh. 180). This prose text was put into verse by an unknown author who dedicated his work to Sultan Murâd I (761/1359-792/1399); only about half has survived in a copy manuscript (see Persîch, Ver. der âûr. Handschr. d. Her. Bibl., 168, 189). A modern Ottoman prose version, which must have been made before 955/1548, exists in the Bodleian Ms. Marsh. 61; cf. H. Éthé, On some hitherto unknown Turkish versions of Kalilah and Dimnah in the Actes du 6th Congr. internat. des Orientalistes, 2nd sect., i, 241 ff.

9. Ali b. Šâlîb, called ‘Ali Wâsi or ‘Ali Célébi, translated the Amãr-i Suhâyli into Ottoman rhymed prose and dedicated his work to Sultan Sülaymân I (1512-20) with the title Humâyûn-nâmâ; it has been several times printed in Bîlâk and Istanbul (see Chauvin, p. 50). Among the different European translations of the Humâyûn-nâmâ, the best known is the French of Galland, published after his death by Gueulette (Paris 1724); it was reprinted many times and "continued" in 1778 by D. Cardonne (see Abdel-Halim, Antoine Galland, Paris 1964, 180-8, 254-9). It was translated into German, Dutch, Hungarian and Swedish, and into Malay by Gonggrijp (Batavia 1866) and the latter version inspired a Javanese translation by Kramaprawira, which was put into Javanese verse by an anonymous poet. The luxuriousness of its language, in which the Humâyûn-nâmâ surpassed even its Persian original, induced the muftî ‘Abd Allâh Efendî and ʿUmrânâzîdê, who died in 1159/1746 as hâdzi in Cairo, to prepare extracts from it (see Éthé, op. cit., 242).

The Amãr-i Suhâyli was translated, apparently with the assistance of the Humâyûn-nâmâ by Faqîr Allâh b. ʿIsâ Taqīkandî, at the instigation of Muḥâm-mad Mûsâ Bay Bâkî into modern Eastern Turkî prose (to be more accurate, into the language of Tashkant and Farghânâ as the colophon says, or the language of Turkestan and Farghânâ as the title states). Muḥâm-mad then had the book lithographed by the calligrapher Mîrzâ Ḩâşim Khodîndî, according to the colophon in 1308/1888; according to the title, the book was published in 1893.

Ibn al-Mukaffa’s book was translated from the Arabic into Eastern Turkî by ‘Abd al-Allâh Fâysân Khân Oghlu and printed at Kazan in 1896 (University Press, Orient. Bibliographie, iii, 1421), in the same year at Wjatschak (ibid., iv, p. 3935) and in 1892 at Cîrkova (ibid., vi, 167, no. 3166). The introduction, however, was borrowed from the Amãr-i-Suhâyli. The Mongol translation which Malik Iltifâık al-Dîn Muḥâm-mad b. Abî Naṣr, a descendant of Muḥâm-mad Bakrî, prepared in Kazan has not survived (see Hand Allah Mustawfî, Taʾrikh-i Gûstâda, ed. Browne, Gibb Mem. xiv, 844-5, tr. 233; Browne, A history of Persian literature under Tartar dominion, 93, and correctly stated as early as Hammer-Purgstall in the JA, 3rd Ser., i, 580). This statement is confused in Hâddîl Fâtih, v, 239, who ascribes a translation into Turkish (jugal-tûrk) to the ancestor Muḥâm-mad Bakrî (see de Sacy, Not. et Extr. X, 175; Éthé, op. cit., 243, does not take notice of von Hammer’s cor-

correct statement). As Flügel wrongly translates in "language Taterorum", Hertel (p. 414) wrongly identifies this reported Tatar translation with the above mentioned Kazan Turkî (so-called Tatar) translation quoted in Chauvin, 78, n.

10. The Ethiopic version, which was certainly based on an Egyptian text of the Arabic of Ibn al-Mukaffa, is also lost: it is mentioned in a work composed in 1582 (see Wright, Cat. of the Ethiopic MSS. in the Brit. Mus., 816; see also Nöldeke, Gött. Gelehrte Anz. 1884, 676, n. 5).

11. The Hebrew and older European trans-

lations. At the beginning of the twelfth century a certain Rabbi Jôël translated Ibn al-Mukaffa’s work into Hebrew (see S. de Sacy, Notes et Extraits, ix (1823), 397-466) from a valuable manuscript which, however, already contained the false story of Burzoe’s mission and the two not genuine fables at the end of the heron and the duck and the fox, dove and heron. From the unique manuscript, exceedingly corrupt in the beginning, J. Derenbourg published his translation along with that of Jacob b. Eleazar of the 13th century (Deux versions hébraïques du Livre de Kalîlh et Dimnah in the Bibli. de l’École des Hautes Études, fasc. 49, Paris 1881). Jacob’s version while based on a similar text to that of Jôël is, however, very free, composed in elegant rhymed prose and full of biblical locutions. The version of Rabbi Jôël was then translated into Latin by the baptised Jew John of Capua for Cardinal Ursinus between 1263 and 1278 with the title Directorium vitae humanae (cf. Johannes de Capua, Directorium vitae humanae, publ. and annot. by J. Derenbourg in the Bibl. de l’École des Hautes Études, fasc. 72, Paris 1889). With the exception of an old Spanish version, which reproduces the same text as Rabbi Jôël much more faithfully than John of Capua does (see Clifford G. Allen, L’ancienne version espagnole de Kalîla et Digna, texte des mss. de l’Escorial, précédé d’un avant-propos et suivi d’un glossaire, thesis, Paris-Macon 1906), all later translations into Western European languages, with the exception of quite modern ones, are based on the Latin text of John of Capua (see Chauvin, 59-71; Hertel, 366-400). Most noteworthy are the Italian versions by Firenzuola (Discorsi degli animali ragionanti tra loro, Florence 1548) and Deni (La filosofia morale del Doni, Venice 1552), and the French adaptations by G. Pottier (Plaisants et factieux discours sur les animaux, Lyons 1566) and P. de la Rivey (Deux livres de philosophie fabuleuse, Lyons 1579). In 1664 G. Gualmiier published a translation from the Arabic text entitled Livres des lumieres. , . . , . attributing its elaborations to “David Sahod d’Isfahan”. A version of a Greek translation (see below) appeared in 1666, prepared by P. Pousianne. The last two works inspired La Fontaine (for the influence of Kalîla wa-Dimnah on the Roman de Renart and

12. The Greek translation. Towards the end of the 11th century, Symeon son of Seth translated Ibn al-Mukaffa's work fairly freely into Greek from a manuscript which was still free from later additions but contained the chapter on the king of the mice and his ministers. He called the book Στεφανίται και Ύγιελάται, because he recognised in Kalila the Arabic shhih and in Dimna the Arabic word for "trace". See Στεφανίται και Ύγιελάται, Quattro recensioni della versione greca del Kitāb Kalila wa-Dimna, pubbli. da Vittorio Puntoni, *Publibcazioni della Società Asiat. Ital.,* ii, (1889). This version was in turn translated into Latin and German as well as into several Slavonic languages.

13. The Persian translation of the Hitopadēṣa. The later Sanskrit version of the Pañcatantra, the Hitopadēṣa, was translated very freely into Persian, probably in the reign of Akbar, by a certain Tādji al-Din, under the title Musarrāt al-Kalilā va-dimnā (see above). The Indian Ethics, transl. from the Version of the celebrated 2nd Indian Ethics, ed. by his vizier Muhammad b. Ghādār al-Malāyān; his work, entitled Rawdat al-Ukhlā, exists in two manuscripts in Leiden and Paris. The *Marzubānnāma* of Sa'd al-Dīn-Warāwīnī, composed between 607/1210 and 622/1225, enjoyed greater popularity. It has been edited by Mīrzā Muhammad (Gibb Mem. Ser., vol. viii, 1932).

Warāwīnī's version was translated by an unknown author into Ottoman Turkish (a copy of 848/1444 in Berlin; see Pertsch, *Vers. der Türk. Hds.,* no. 444); this Turkish version was again translated anonymously into Arabic (Ms. Berlin, see Ahlwardt, Verz., no. 847). A second Arabic translation, which according to the Gotha Ms. (see Pertsch, *Die Arab. Hāss. der Pers. Bibl.,* no. 269), is also based on the Turkish, was made by Ibn 'Arābah (q.v.); there is another Ms. in Paris (de Slane, Cal., no. 3524) and it was lithographed in Cairo in 1278. The same author then rewrote his work in artificial prose in his *Fikhab al-Khalafā wa-Muṣaffār al-Ẓārafā*, and added several new stories.

The same recension, which had been translated into Ottoman Turkish and which is distinguished from Warāwīnī's vulgate as well as from the Rawdat al-Ukhlā by the tenth (concluding) chapter, thus came to be called iṣyādāt-i ʿumr wa-dawlat wa-zindagānī hardān bā dōst udāman, was translated into Kazan Sulaymān Bek, son of Muhammad Bek, and printed at Kazan in 1864 under the title Kitāb Destārī Shahī fi ḥikāyāt Dādivānī.

15. Imitations of Kalīla wa-Dīmnā. A handbook of Mohammedan missions was prepared by the prince of Tabaristan, Isḥāq ibn al-Kurashī, intended to produce a mirror for princes, *al-kulub fi ḥikāyāt al-dāima,* in which historic anecdotes are mingled with beast-fables for the edification of the reader, was composed about the end of the 10th/16th century by the prince of Tabaristan, Isḥāq ibn al-Kurashī, in the Persian dialect of his early youth, he visited India in Dāgānīr's reign, but returned to Persia in 1019/1609-10. Two years later, however, he migrated permanently to India. On his arrival, he sought his fortune in various
provinces, including Deccan, where he attached himself to Mir Aqsa Khan. Following Shahjahan's accession, Kalim entered the imperial court, and became poet laureate to the emperor. He was commissioned to write a verse account of Shahjahan's reign on the model of Firdawsi's *Shāh-nāma*. He died in Kashmir in 1651, and was buried there.

Kalim's poetic output is said to comprise approximately 24,000 couplets. He tried his hand at almost every traditional form, but his claim to renown rests chiefly upon his *ghazals*, which are characterized by a subtlety of themes. His consistent use of the artifice known as *miḥāliyya* (giving a statement in one line of the couplet and equating it with an appropriate illustration in the other) seems to have contributed to its popularity as an accepted poetic convention.

**KĀLIM ALLĀH**

KĀLIM ALLĀH AL-DJAHANABĀDI

KĀLIM ALLĀH AL-DJAHANABĀDI, b. NūR ALLĀH B. ĀHMAD AL-.MMĀR (mason/architect), al-S̄īndī, one of the leading Cīṣṭī saints of his time, who was responsible for the revival of this order in the Indo-Pakistan sub-continent when Muslim society was in a state of utter disorder. He was born at Shāhjahanābād (Delhi), whence his nisba al-Djahanābādī, on 24 Djumādā II 1060/24 June 1650, eight years before Awrangzīb's accession to the throne. His ancestors, builders and masons by profession, originally hailed from Khojandā (q.v.). On his death, the mosque was made by his father, the ustād ʿUlī Nūr Allāh. He acquired his early education from local scholars, including Abū Ḵārid Mūḥammad, uncle of ʿUlī Wāfī Allāh al-Dihlawī (q.v.).

Later he left for the Hijāz to make the Ḥajj and Ziyāra and stayed there for a long time. He contrac-
ted his *bayā* in the Cīṣṭī order with Yābūyā b. Muh-
əmmād al-Gūrjānī (d. 1101/1690), who had migrated to Medina and settled there. During his stay in the Hijāz he was initiated into the Naḵkhbandi and Kādīrī orders by Miḥrābān and Shaḵykh Mūḥammad Ghiyāt (cf. *Nushāt al-Khawādīr*, vi, 240). On his return to Delhi he stayed in a mosque situated between the Red Fort and the Ḍāmī Masjīdī in the quarter known as the Khānim bā Ṭābārār. He established a madrasa there which attracted a large number of students from far and wide who enjoyed free board and lodging. No details of this madrasa are available. The Sūfī poet Mīrzā Maḥzār Ḍāmī-Ḍānānī once saw him teaching the Sābīḥ of al-Bu-
khārī to students in this madrasa, which probably formed part of the mosque in which he stayed.

According to Mīrzā Mūḥammad Aḥṣārī Gārgānī (*Tadž-
hīra-ī Auliya*; *Hind wa-Pākistān*, Lahore 1954 (7), ii, 272), the emperor Awrangzīb later ordered the construction of a khānkhānā for him, a complex of buildings comprising ʿibādat-khānā, Ṣafāi-khānā, Ṣanjār-khānā and private quarters. According to the same author the emperor Mūʿāzẓam Bahādūr Shāh I (q.v.) became his disciple in his fourth reignal year (1123/1711), while engaged in an expedi-
tion against the rebellious Šīkh under Banda Bāy-
rāgī. Kālīm Allāh led a life of austerity, which was mainly on the *fuṭūḥāt* (offering) received from dev-
tees and disciples. Learning of his poverty, Far-
rukhsīyār (q.v.), during his short but eventful reign, offered him financial assistance but he refused to ac-
cept it, perhaps fearing persecution at the hands of the *amīr al-ṣamāʿ* Ḥusayn ʿAlī Kāhān, one of the Sāyīdī king-makers known to Indian history.

As a rule he discouraged his disciples from coming close to the rulers and kings and even exhorted them not to approach or visit them. He also did not favour the samāʿ, as was in vogue in his days, although he himself enjoyed it. In one of his letters (no. 110) he vehemently condemns the imitation or sham Šīfīs whom he describes as *mulhīdā* who have given up the *gharfaʿa*. As against Abmad Sirhindī (q.v.), he was not keen of keeping good relations with the non-Mus-
lims so that they might be impressed with the teach-
ings of Islam. Similarly he did not shun the common people but rather liked their company. He discouraged the indiscriminate discussion of the knotty prob-
lem of ṣawdāt al-wudjud. All his life he struggled for the glory and spread of Islam but like Shāh Wāli Allah al-Dihlawī, his successor in the field, his efforts met with little success.

He died on 24 Rābīʿ I 1142/17 Oct. 1729 at an advanced age at Delhi and was buried in the com-
pound of his own khānkhānā, which also served as his residence. The year of his death has been variously given as 1140/1727, 1141/1728 (cf. *Nushāt al-Khawādīr*, vi, 241), 1142/1729 (appendix to Saudā al-Sādī, 139) and 1143/1730 as given by Ghūlām ʿAlī ʿĀzād Bilgārāmī (cf. *Maẓāḥkāda al-Khurās̄ānī*, 1, Haydarābād 1840, 42). The year 1142/1729 has been adopted as the most reliable one, as many authorities agree thereon. After the mutiny of 1857 the entire quarter wherein stood his khānkhānā was pulled down by the British but his grave was spared. It had remained in a state of neglect and disrepair for some decades when Ḥāfaẓ-Ṣāḥīb Ḥūšām Farīd, spiritual guide of the ruler of Bahāwālpūr (q.v.), contributed a large sum for its reconstruction. It was later repaired and renovated by one of his descendants, who set up a beautifully carved stone railing around his grave and paved the tomb floor with marble flags. The tomb still exists and is the lonely structure standing between the Red Fort and the Ḍāmī Masjīdī. An āʿpū is held every year at his tomb on the occasion of the anniversary of his death. It was regularly attended by the last Moghul emperor of Delhi, Bahādūr Shāh ʿZafar (q.v.), and other princes of the royal family.

His leading *khaliṣa* was Niẓām al-Dīn Awrangzībādī to whom he addressed a number of letters on the problems of ṭasaʿwūf. He left three sons and three daughters. His sons, however, were all minors at the time of his death.

He is credited with having written more than 20 books including: (1) Saudā al-Sādī (ed. Delhi 1343/ 1925), original in Arabic with Urdu tr., on various mystic problems; (2) *Irshaddī-ī Kalimi* (ed. Delhi 1346/1927), a selection of letters addressed to his principal *khaliṣa* Niẓām al-Dīn Awrangzībādī, with
KALIM ALLAH AL-DJAHANABADI — KALIMA

Urdu translation; (3) Kashkul (in Persian, Delhi n.d.), described as a pot-pourri of tasaawuf, composed in 1101/1690, when he was nearly 41 years of age; (4) Murakka (in Persian with Urdu tr., Delhi n.d.), comprising what the ḥikûts recite daily by way of dhikr, regarded as a supplement to No. 3; (5) Maktab (Delhi n.d.), 132 in number, addressed to his principal disciples, outstanding among whom was Nizâm al-Dîn Awrangbâdî, interspersed with personal and private affairs; (6) Tâhâri i gharas al-Kâmila, in Arabic (ed. Delhi with Urdu tr., n.d.), discusses ten problems of tasaawuf which he claims to have solved while in ištîkâq (q.v.) during Ramâdân; (7) Mâ lâ-budda fi l-tasaawuf, (ed. Delhi n.d., in Arabic with Urdu tr.), deals with the aims and objects of suâlî and tasaawuf; (8) Keeping up the tradition of his family he wrote a treatise on astrology styled Risâlât Tashkhi i Alâjî i 'Amîlî mubâhkhî bîl-fârsîyya (Ms. in the Naghñîrya Public Library, Delhi). He also wrote a commentary on the Kânûn of Avicenna of which a Ms. copy is preserved in the Raza (sic) Library, Rampur. A fine commentary on the Kur'ân, called Kur'ân al-Kur'ân, which was printed in the margin of a copy of the Kur'ân (ed. Meerut 1920), was also written by him. A certain Kibb al-radd (ṣalb) or Risâlât Radd i Rawdfid (ed. and Fr. tr. H. Laoust, Damascus 1957, 253) the Christians and the Mu'âtshîfîtes were confused once again. Thus in al-Bakillanî's Diet, of Technical Terms, "decree" is the self of the creative commands (kalimat Allah), which is related to the problem of the attribute of kalima which he claims to have solved during Ramadan; (7) i'tikâf [q.v.] and tasâwîf,...
formed beneath the Prime Intelligence” (ed. and tr. H. Corbin, Triologie ismaélienne, Tehran-Paris 1964, 30/32). “The Word of God”, says Corbin (ibid., 29, n. 44), “should be understood as the divine imperative (amr Allāh) by whose will the Prime Intelligence exists”. Further on (7092), al-Sidjistiţanī specifies: “Paradise is the kalimat Allāh by whose means He first founded those things which exist in Paradise”. Finally, the penultimate chapter of the book considers the “meaning (maw'ūd) of the Word (kalima) of the Prime Cause” (90/4/123-121). 

There kalima is analysed letter by letter (k-l-m-h) according to the principles of digfr [q.v.], with reference to the Isma'īlī hierarchies. To the extent that the Prime Intelligence is identified with kalām Allāh (91/119), kalimat Allāh becomes synonymous with the “First Cause, i.e., the Oneness” (90/118).

b) From an Ismā'īlī lexicon. In his Kitāb al-maghāfîr (ed. and tr. H. Corbin, Tehran-Paris 1342/1964) Mullā Sadrā Shirāzī (10th/16th-11th/17th c.) established the link between the Word of God and the Kurān. He deals with the kalām Allāh, but in specifying that the attribute of the Word (kalām) refers to the production of “perfect Words” (kalimatī tāmmī), whose chief example is the creation of Jesus in Mary’s womb (op. cit., 57/193). Mullā Sadrā is the chief exponent of kalimat Allāh. He was Ibn ‘Arabī, who took it as his main theme in Fuyūs al-bihām (ed. ‘Affīlī, Cairo 1365/1946). His meditations on the experience of each prophet are called “the divine Wisdom in the Word (kalima)” of Adam, Seth, Abraham, Isaac, etc. In the chapter on Jesus he stresses this (i, 139); while in the passages dealing with the experience of Moses (i, 197 ff.), he notes Kurān, X, 64 (“the words of God cannot be altered”) and adds (i, 211): “the words of God (kalimatī Allāh) are in fact the essence (a‘yān) of all things in existence; to them belongs eternity (kidām) by virtue of their immutability; to them belongs contingency (budībāh) because of their (concrete) existence and their burgeoning forth (within existence)”. Many other texts could be cited to show how kalima becomes the creative Logos of God, His Parole instauratrice, “instigating Word” (H. Corbin), the first and emanating Source of the production of all being which makes and is the essence of all things.

(K. D. Macdonald—L. Gardey)

KALIMA [see vahdāt]

AL-KALKASHANDĪ, the nisha or gentilic of several Egyptian scholars of the Mamluk and early Ottoman periods, the most important of whom are as follows:

1. Shihāb al-Dīn Abū ’l-‘Abbās Ahmad b. ‘Ali (‘Abd Allāh?) b. Ahmad b. ‘Abd Allāh al-Fazārī al-Shāfi‘ī, legal scholar and secretary in the Mamluk chancery, and author of several books. The main sources for his life are the fairly brief mentions of him in biographical and historical sources of the late Mamluk period by al-Aynī, al-Makrīzī, Ibn Taqrī- birdī, al-Shawkānī and Ibn al-‘Imād; some of his compositions are recorded by Ḥādīdī Khalfā; but it is above all from his own works that we gain most information. It is remarkable how little notice was taken of al-Kalkashandi by contemporaries or near-contemporaries. Al-Shawkānī (d. 902/1497) even states in his al-Daw‘ al-‘alimi that al-Kalkashandi’s Šubh comprises four volumes only, instead of the seven of reality, and he had obviously not seen an actual copy. Nor does he seem to have seen a copy of al-Kalkashandi’s Kitāb al-‘aflat, for he states in his defence of the study of history, al-‘āfāl bi’l-tawbik li-man dhimmu ahl al-tawrīk, tr. in F. Rosenthal, A history of Muslim historiography, 2, Leiden 1968, 434, that it was dedicated to the Ustadar Djamāl al-Dīn, when the dedicatee in the Nihāya itself is another person altogether (see below). Hence we do not know much about al-Kalkashandi’s legal and professional life beyond the salient points and dates of his official career, let alone about his early years, education and private life.

He was born in 756/1355 at Kalkashanda (the form Kalkashanda in Yakūt, Buldān, must be based on a mispronunciation or a dialectal variant pronunciation), a small town south of Tūkhī and north of Cairo in the modern muḍabitiyāt of Kalyūb [q.v.], into a family of scholars. In his nasab or genealogy, al-Kalkashandi attached himself to the Bānū Badr of the North Arab tribal group of Fazārā of Ghatafān [q.v.], see Šubh, i, 345, which had settled in this part of Lower Egypt after the Muslim conquest. In the course of his education at Alexandria, he concentrated on literature, tradition and law, with the aim of becoming a kāfīl of the Shāfi‘ī law school, and his earliest compositions were in this sphere (see below). In 778/1376-7 he received his idgāhī fakhrī or licence to lecture (al-fuyūs wa’l-tadrīs) on Shāfi‘ī law and on the classic collections of traditions from the well-known scholar Shaykh Sirājī al-Dīn Abū Ḥaṣṣ ‘Umar b. ‘Ali, called Ibn al-Mulakātin (d. 804/1401).

However, after a period of teaching, in 791/1389 al-Kalkashandi became a secretary in the chancery under Mīrām b. ‘Ummār al-Makrīzī of the Mamluk administration in Cairo, as a kāfīl al-dāst, one of the secretaries who accompanied the chief secretary (kādī al-sirr) when the latter sat with the sultan for the dispensation of justice [see nīwān, i Egypt]. The background to this appointment of his under the kādī al-sirr Badr al-Dīn Muhammad b. ‘Alā‘ al-Dīn ‘Ali b. Fāḍl Allāh al-‘Umarī, of the famous secretarial family of the Bānū Fāḍl Allāh [q.v.], is indicated in the makāmā in praise of the secretarial art and of his master which al-Kalkashandi inserts in Šubh, xiv, 122-28 (see on this Bosworth, in BSOAS, xxvii (1964), 291-8).

He died on 10 Dijmādāl II 821/16 July 1428 aged 65; it is not known whether he was still employed in the disān at that date. His son Nadīm al-Dīn Mūhammad, called Ibn Abī Ghudda (791/1395-876/1471), also achieved some fame as a legal scholar, a traditionist and a littérateur (Shahkawā, Dāw‘, ed. Cairo 1353-5, 1934-5, vi, 322-3; Makrīzī, Sulhā, ed. Cairo 1353-6, 1934-6, iii, 821; cf. Brockelmann, II, 167, S II, 165).

Al-Kalkashandi’s compositions fall into three groups: (a) law, (b) adab, (c) kīhāb, the secretarial art, together with its genealogical and historical ancillary disciplines.

In the legal sphere, he composed commentaries on the works of two earlier scholars. Firstly, on the Dīwān al-muḥāṣṣarat al-furū‘ī al-ṣafī‘iyā of the Shāfi‘ī scholar Kumāl al-Dīn Abū ‘Umar al-Nasā‘ī al-Madlīlī (691/1292-727/1325), see Brockelmann, II, 224, S II, 271; Guadet-Demobynés, La Syrie à l’époque des Mamelouks, VIII, gives this commentary the title al-Sawāik al-kawāsim, without, however, specifying his source; and secondly, on the treatise al-Hikāt al-ṣagīr fi ‘l-furū‘ī of the Šufi Shaykh Nadīm al-Dīn ‘Abd al-Ghaṭafār al-Kawāzin (d. 665/1266, see Brockelmann, II, 494-5, S I, 679). These two works are mentioned by Ḥādīdī Khalfā and
Sakhawl respectively, but do not now seem to be extant.

In the realm of adab, al-Kalkashandi wrote a short work, the Ḥiyāy al-fādil wa-nīzāt al-karam fi 'l-muṣafāḥa bayn al-sayf wa'l-balam, for the bearer of the royal inkstand or davāddār [q.v.], Zayn al-Dīn Abu ʿl-Ẓāhirī, when Sulṭān al-Ẓāhirī Barūḵī appointed him to this high post in 794/1392; the text of this exists in independent manuscripts and is also inserted into the Majālis of Maḥmūd b. Shams al-Dīn. The Subh was completed in 819/1416. This may well have been al-Kalkashandi’s last work; it has been edited by Abyārī (Cairo 1959).

The study of genealogies, important to the secretary for identifying and correctly addressing the recipients of official documents, is dealt with in Subh, i, 306-71, but al-Kalkashandi devoted two works specially to the science of genealogy. The chief one is the Nihdya al-arab fi 'l-tarīf, written after the Subh and before the Dawā, and dedicated to the Amir Abu ʿl-Māḥāsīn Yūsūf al-Umawī al-Kurāṣī. As well as giving a very detailed account of the science of genealogy in general, it deals with early Arabic history, the Asyam al-arab, etc.; but the core of the book is an alphabetically-arranged dictionary of Arab tribal names. The book was printed at Baghdad in 1331/1714 from an unspecified manuscript, and properly edited (with a very biographical introduction, summarized by G. C. Anawati in MIDEO, vi (1959-61), 274-6) by İbrahim al-Abyārī (Cairo 1959).

One question discussed by Abyārī relates to the ascription by Hādīdī Khālīfā, iv, no. 9556, cf. vi, no. 14070, of a work also entitled Nihdya al-arab to al-Kalkashandi’s son Muhammad (see above), this book being written for Zayn al-Dīn Abu ʿl-Dīn Rāghīd, “Amir of the Bedouins of the Eastern and Western Regions”, sc. of Lower Egypt; Brockelmann, ii, 167, 52, 16, attributed this work to the son Muhammad and repeats this dedication to Abu ʿl-Dīn. Abyārī, on the other hand, thinks it improbable that father and son should both write a work on the same subject and with the same title, and convincingly suggests that Muhammad transcribed the original manuscript of his father’s Nihdya in 874/1469-70 and presented this copy to Abu ʿl-Dīn (Nihdya, ed. Cairo, intro., hdn-thd). Al-Kalkashandi’s other genealogical work, described as a supplement (istīdār) to the Nihdya, is the Kālidī al-dījmān fi 'l-tarīf bi-kabāʾil al-arab al-sāmān, dedicated to Abu ʿl-Māḥāsīn Muhammad al-Dīnān al-Muʿayyadī, and completed in 839/1436. This may well have been al-Kalkashandi’s last work; it has been edited by Abyārī (Cairo 1964).

Finally, we have al-Kalkashandi’s remaining work, the Maʾḏāhir al-infāf fi maʾṣālim al-khillāf. This is a treatise on the constitutional position of the Caliphate, the qualities necessary for office, the duties of the caliphs, the documents issued by them (of which many texts are quoted), together with a history of the caliphs and some of the latter sultans. The whole work is dedicated to the ʿAbbāsid caliph in Cairo, al-Muʿtaṣidī b. al-Muṭawakkil (816/1414-845/1447), which places the composition of the work after that of the Subh and in the last years of al-Kalkashandi’s life; the non-historical part of the Maʾḏāhir is clearly dependent on the Subh. The work has only recently become known with the identification of two manuscripts in Turkey by the late Mūkrimī Hallī Yūnān and İbrahim Kafesoglu; a detailed analysis of the work, with the parallels in it to the Subh, indicated, is given by Kafesoglu in his article Kalkasandîn’in beli neyven bir esseri, Mecâsir 1-Indfa, in Tarih Deriğisi, viii, no. 11-12 (Istanbul 1956), 99-104. A printed edition of the Maʾḏāhir, based on an unspecified manuscript and with no acknowledgement of the contribution of Turkish scholars, has been given by ‘Abd al-Sattār Ahmad Farrāfī (Kuwayt 1963, 4 vols.).

(2.) A famous family of Shafiʿī scholars, originally from Kalkashanda but settled in Jerusalem, retained al-muṣīr al-muṣfir wa-dāndān al-dawā al-muṣāmīr, dedicated to Kamāl al-Dīn Muḥammad b. al-Bāṭnī, who later became kāḥīr al-sīr (the first volume only of this printed at Cairo, 1334/1916). The Dawā appears to contain a few items of information not found in the Subh.
the nisba of "al-Kalkashandi", including Takl al-Din Abu Bakr b. Muhammad b. Isma'îl al-Ma'dîsî (783/1382-862/1453) and his nephew Karîm al-Dîn 'Abd al-Karîm b. 'Abd al-Râbîm b. Muhammad b. Isma'îl al-Ma'dîsî (808/1405-855/1542), both of whom achieved fame in Cairo and in Palestine as teachers, authors and muftîs, see Sakhwî, Dawât, iv, 311-12, xi, 69-71, and idem, 'âlamîn, in Rosenthal. A history of Muslim historiography3, 439-40. Probably to be attached to this Jerusalem family also is Burcham al-Dîn Abu 'l-Fatb Ibrahim b. Ali al-Makdisi, d. 922/1516 in Cairo, author of collections of traditions and of a treatise Ta'jibîl al-mulîk bi-ta'fûrî bawilîf ta'allâ 'ali al-khummah mâlîk al-mulîk, none of them published, see Brockelmann, II, 94, S 11, 85.

Bibliography: As remarked above, the primary sources for al-Kalkashandi's life, outside his own works, are exiguous. See Sakhwî, al-Dawât, iii, 8; Ibn al-Sâ'dî, Shahrârî al-dhâhâb, vii 149. Makrizî, K. al-Sulâk, iii, 821. Ibn Taghribirdi, al-Manhal al-sâfi, Cairo 1375/1956, i, 330-1. Tâshkûrûzâde, Mîlâh al-sâ'dâda, i, 182. For secondary sources, see the biography prefixed to vol. xiv of the Subb; Sarkis, ii, 1231-3; Kahfcala, al-Dawât, i, 317. Zirikhî, al-A'lam, i, 173. Gaudefroy-Demblonye, La Syrie à l'époque des Mamelouks d'après les auteurs arabes, Paris 1923, V-XV; Brockelmann, II, 166-7, S 11, 164-5; I. Kafesoglu, IA art. s.v.

Studies based on the Subb (in addition to those older ones mentioned in Brockelmann's EI art.) include: M. Amari, De titoli qui usavala la cancel-\l

(C. E. Bosworth)

KALLALA, GUELLALA, a Berber-speaking village situated to the south of the Isle of Djebra [q.n.], famous for its pottery workshops. A great variety of models (at least 120 types) are made there and sold throughout Tunisia. Formerly, they were exported to Algeria, Sicily and Tripolitania, but in recent years the manufacture of pottery has suffered a slight setback as a result of the importation of cheap European ware, some of it made from plastic. Kallala pottery is of two types. The large teffayya, which demands great skill, is designed to support considerable pressure. Pieces can be as large as 1.50 m., with a low centre of gravity to allow the potter to operate the lathe and fashion the upper part at the same time. It is even necessary to make these pieces in several parts. The sfri (Berber amiris), a large container for oil or water (holding 200 to 250 litres), is made of four pieces mounted one on the other. The smaller harrdscha type is more finely finished and is used for a great variety of receptacles (for water, flour, oil, delicacies, spices), for casserole, lids, pipes, lamps, perfume-holders, etc. Enamelled and decorated pottery is also made here. On the occasion of a marriage, neighbouring potters give the young couple a large glazed earthenware jare for storing part of the trousseau (blankets and winter clothing).

The Berber spoken in Kallala (Arabic Gellâla, Berber Ikallâm = "the potters") has preserved a number of archaic features. The dynamic accent has a phonological value: they say afrûhî âmaâkhun, "the little boy", and tafrûkhî tâmîkhun, "the little girl", but afrûhî 'amâkhûn, "a little boy" and tafrûkhî tâmîkhûn, "a little girl"; the feminine is definite or indefinite solely according to the placing of the stress. Vowel length is also a phonological factor: akmûrûn is "bread", but akåmûrûn (with a long û) is "his bread" and akmûrûn-nûn (with a short û) is "their bread". There is a difference between rakabûk al-bûsî, "I have gone to his father's house" (movement, bâb-is) and yâllâ al bân-is, "he is at his father's house" (rest, bân-is). On some occasions the noun following the genitive is shortened: 1mî, "mouth" or "gate" (with a long i), but 1mî-lûsh, "an area in front of the house" (with a short i). Numerals and prepositions can also influence the pronunciation of the nouns they accompany: bôrkûsh, "couscous", but edh berkûshes, "with couscous" (with a short u). Sîlûsh means "house" but they say wîshâ d-s-sîlûsh (with a long û) for "I have come from the house". A number of nouns have a pronoun value: alqâmûn, "his camel", alqâmûn-is, "his camel"; albâgbûl, "mule", albâbgûl-is, "his mule"; albakânhâth, "coffee", and albakânhûn-is, "his coffee". Two things should be noted in this last example: the voiceless dental is pronounced th (aspirant) after a vowel and l (occlusive) after a consonant and the closed syllable remains so by means of gemination in a new syllabic structure. The treatment of f and th resembles the Âgâšehfet consonant. Some of the opposing ones at Kallala are th = b; dâd b, gûs, kûs (= postpalatal voiceless aspirant which tends to a "hushing" quality) and dâd (often pronounced d). In some cases analogy and a massive intrusion of Arabic words have shattered the harmony of the system, but the whole has the same correlations to be found among the Ghumara of Morocco and the Zenaga of Senegal. Kallala, along with Sedikesh, Almay and Adjin, is one of the last strongholds of the Berber tongue on the Isle. An oral literature (songs, tales and riddles) still remains, but the language is sorely threatened by schooling, radio and television as well as by contact with the Arabic-speaking population.
KALLALA — KALPAK

(W. Vycichl)

KALPAK, the Turkish name for a Mongol people, the Oyrat, who in the time of Çingis-Khan [q.v.] inhabited the forests to the west of Lake Baykal. The name is derived (probably only by popular etymology) from the verb kalmak, “to remain” and distinguishes the Oyrat, who “remained” pagans, from the Onggans (the Chinese-speaking Muslims), who had “returned” (the verb dönmek), according to the well-known Muslim idea, to Islam. A group of the Oyrat had accompanied Hülegü to the west and played a certain rôle in Il-Khânid Persia. The people as a whole, however, came into their own only after the collapse of the Mongol dynasty in China, when they wrested the greater part of Mongolia from the Çingizids and laid the foundations of the Kalmuk empire.

From the time of Wāy Khān (1418-28) the Mongols of the Ṭīn [q.v.] had to fight against the “infidel Kalmak”; accounts of these wars are given in the Ta’rikh-i Rashidi. Wāy Khān was twice taken prisoner by the Kalmuks and had to give his sister in marriage to their chief, Esen Tawakkul. Toghon, the latter’s father, was then ruling in Mongolia on the Chinese frontier, where he was succeeded in 1439 by Esen Tawakkul. After the death of Esen Tawakkul (1455) the great nomad empire of the Oyrat broke up; individual princes are mentioned from time to time later as ruling in the neighbourhood of Muslim lands; at the beginning of 864/1459 a Kalmuk embassy appeared in Harat. The Muslim sources also report the restoration of the Oyrat empire under Khara Khula (d. 1634). In Turkestan during this period also the Kalmuks were regarded as powerful foes of Islam. The Kazakh Khan Tawakkul (Tefkel in Russian) had to flee before them to Tashkent, where he was received by the Uzbek ruler Nawruz Aḥmad (d. 963/1556); in reply to his appeal for help, Nawruz declared that even ten princes such as themselves would be no match for the Kalmuks. At a later date, however, on the occasion of his embassy to Tsar Feodor (1594), Tawakkul was described in Russian documents as “king of the Kazakhs and Kalmuks”, perhaps because a few bands of Kalmuks had attached themselves to him. In the winter of 1603-4 there occurred the first invasion of the Kalmuks into Khārīzim. Soon after, under Tsar Vasili Shuisky (1606-1610), the Kalmuks entered into relations with the Russian government for the first time, though it was not until 1612 that they settled on the Volga on a large scale. This branch of the Kalmuks had separated from their kinsmen, under the leadership of Kho-Oorrhok, as early as 1618. The territory of the Volga Kalmuks did not therefore form part of the empire founded by Kharà Khula, although relations between the two branches of the people had not yet been severed. Representatives of the Volga Kalmuks still appeared at the kurilay [q.v.] of 1640; Batur, the son and successor of Kharà Khula, gave his daughter in marriage to the grandson of Kho-Oorrhok. By the same kurilay the dominance of Buddhism was firmly established among all branches of the Kalmuks. The progress made by Islam described in the Ta’rikh-i Rashidi (p. 91) in connection with the above-mentioned marriage was apparently not maintained. Most of the Muslim territories in Turkestan were under the suzerainty of the Buddhist Kalmuk ruler on the Ilī, the founder of the last great nomad empire in Central Asia, which lasted until it was destroyed by the Chinese in 1758; as late as 1749 the regent (ālātik) of Bukhara and his opponent had to submit a dispute to the verdict of an embassy from the Kalmuk ruler. A great part of the Kazakhs’ pasture land was now seized by the Kalmuks, and Islam was almost completely banished from the southern part of Semireçeye. Several Buddhist monuments, including Tibetan inscriptions, date from this period. It was only after the decline of the Kalmuk empire that these areas were re-occupied by the Muslim Kazakhs. The wars of the Volga Kalmuks with the Crimean Tartars and their raids into Khārīzim had less effect on Islam; from 1724 the Kalmuk chiefs on the lower course of the Volga were regarded simply as viceroyos (nemestnik) of the Russian tsar. They had no longer any connexion with the ruler on the Ilī. The decision of the “viceroy” Ubashi and a large number (about 300,000) of his people to migrate from Russia and settle in Chinese territory proved disastrous to the Volga Kalmuks. During the migration heavy losses were inflicted on them in Central Asia, especially by the Kazakhs (1771). Henceforth the Kalmuks were of no political significance in either Russia or in China. During the Muslim rising in the Ilī valley the great Kalmuk temple of Buddha near Kuldi was destroyed.

(J. A. Boyle)

The Modern Period.

After 1771, some 50,000 Kalmuks continued to live west of the Volga. Their descendants joined the anti-Bolshevik Southeastern League but after its disintegration in 1920 they were formed into an “Autonomous Oblast” (province), which was raised to the status of Autonomous Republic in 1933. In 1939 the population of the republic was 200,000 including 134,000 Kalmuks. It was partly occupied by the Germans in 1942 and abolished by the Soviet Government in 1943, when all the Kalmuks were deported to Central Asia on the grounds of alleged collaboration with the enemy. A Soviet decree of 1957 provided for the return of the Kalmuks to their territory, which was reconstructed an Autonomous Republic in 1958 with its capital at Elista (formerly Stepnoy), 150 miles south of Volgograd. According to the 1970 census, the population of the republic was 268,000, of whom 110,000 were Kalmuks. This constitutes 80 % of the Kalmuks living in the USSR. A few thousand still live in the Sinkiang-Uygur Autonomous Region of China, where they are known as Oyrats. Only a small number of Kalmuks, less than 2,000 living in Semireçeye, ever embraced Islam, the rest remaining actual or nominal adherents of Buddhism.

KALPAK [see LIBAS].
KALPÍ, once a powerful town in Uttar Pradesh, northern India, 26° 8' N., 79° 45' E. The old town and fort stand on clay cliffs overlooking the river Dījamnā [q.v.]; there is a modern town to the south-east of the old one, which has some commercial importance and where a fine quality paper is still made by hand. The town was traditionally founded by a rādīd of Kānwadjī in the 4th century A.D., and fell into Muslim hands in the first conquest in 591/1196. The high fort, walled on three sides and defended on the fourth by the cliffs and river, was an important stronghold on the Dījhī sultans' line of communication along the Dījamnā. In the early 9th/15th century, after Tlmur's devastation of Dījhī, Kalpī became independent for a short time under a former governor, Muhammad Kāhn b. Malikzāda Frūz, until in 837/1433 Ibrahim Shāh of Dījawpurna sought to annex it to the Sharkī sultanate; a counter-attack by Mubārah Shāh Sayyid of Dījhī regained it, but in the following year during the Dījhī-Dījawpurna wars it was seized by Hūjang Shāh Ghōrī of Mālwa and remained in the possession of Mālwa for the next ten years. About 847/1443 it was sacked by Māhmūd of Dījawpurna, but after the eventual fall of the Sharkī sultanate to Bahēlī Lodī, Kalpī reverted to Dījhī, and Bahēlī appointed Kuthū Lodī Kāhīn as its governor.

There were in addition several minor incidents during the 9th/15th and 10th/16th centuries in which possession of Kalpī fluctuated between Dījhī, Dījawpurna and Mālwa. It fell into Mughal hands in 933/1527, and under Akbar became the headquarters of a sarkār and a copper mint. After the Marāfha wars in the early 16th century Kalpī became the residence of a Marāfha governor.

Among a number of old Muslim tombs to the west of the old town, one is outstanding, the Cawrāsī Gunbād (lit. "84 domes"); this name is obscure. This is a square, nine-domed structure in a walled courtyard, with two graves under the central dome; popular belief assigns it to a Lōdī sultan; it is possible that it may have been of a Lōdī governor, as the style of its arches and the supporting systems is consistent with a late 9th/15th or early 10th/16th century date; certain Dījawpurna motifs in its decoration do not necessarily vitiate this conclusion, as stonemasons would have had no difficulty in travelling from one area to another to the Dījamnā. It is possible that the "84" of its name represents a date; if so 1358 V.S., about 934/1527-8, would be the most likely.

See also Bibliographies to Dījhī, Dījawpurna, Mālwa, Sharīds. For the Lōdī style of building see HIND, Architecture.

IKALDIYA [see KALWADHA].

KALWAHDHĀ, a locality situated on the left bank of the Tigris, not far south of East Baghdād, capital of a district (jāmīlat) of the same name. Here the Nahr Bin flowed into the Tigris; a branch of the Nahrawān, it provided East Baghdād with a network of canals. Kalwāhdhā was a large town endowed with a Great Mosque frequented by the people of Baghdād since it was only a short distance to travel (Ibn Rusta- Wiet, 214, estimates it at three parasangs, but Yāhīdī, s.v., reduces it to one parasang, specifying that in his day the place was in ruins). The town is often mentioned in verses of the 12th/18th century which extol its pleasures.

Tradition attributes its foundation to Kalwāhdhā, son of Tmūr, but philologists connect the name with kalwādāh, the Ark of the Covenant, which was supposed to be buried there.

Bibliography: Ibn Hawkal-Wiet, 234; Salmon, Introduction, 151 n. 1; Le Strange, index; idem, Baghdād, 193-6.

AL-KALWADHĀNI, Abu ʿl-Khaṭṭāb Maḥfūz b. Ahmad b. 'Alam b. Ahmad al-Baghdrādī, a celebrated jurist (fākhī) of the Hanbali school and one of the architects of what Makdisi called "the resurgence of traditionalist Islam in the 15th century". Born on 2 Shawwal 432/6 June 1041, he was the disciple of Abū Yaʿlā during the same period as Ibn ʿAqlī. He studied ʿadāb and fikr under his master "until he was pre-eminent in his knowledge of the Hanbali rite" (baraʿi fī midqāshā). His other teachers were less well known, apart from ʿAbd Allāh al-Wannī (d. 450/1058), under whom he studied the law of inheritance. It is said that he and Ibn ʿAqlī attended al-Ghazālī's classes at the Niẓāmīyya, but nothing is known of his opinion about the young man from Khūrāsān who had just arrived in Baghdād (484/1091, see Ibn Radjal, Dālay l, 177). Like the majority of Hanbalites, Abuʿl-Khaṭṭāb did not share al-Ghazālī's taste for theology and philosophy. His speciality was fikr, and in this field he acquired the status of a mujiṣāhīd who was accorded the right to put forward, in particular cases, new solutions according to his own judgement. Ibn Radjal (op. cit., 147-54) gives a number of examples of these solutions; in one striking case Abuʿl-Khaṭṭāb went against the consensus of scholars (idjmā) in deciding that a marriage contract is not automatically broken when one of the partners is held prisoner of war by non-Muslims. In defence of his opinion he even declared that a ṣādīq of Abū Saʿīd, recorded in Muslim's Ṣāḥīḥ, was not authentic; according to this ṣādīq a marriage is broken when the wife is held captive in the dār al-harb, in the country of the impious.

Despite such independence of spirit, in most of his works al-Kalwāhdhānī is much more classical and less original than his rival, Ibn ʿAqlī. Among his works, Ibn Radjal thought the most important were: al-Hīdāya fi ʿl-fikr, al-Khīlāf al-hābir, also called al-Insiār, and al-Khīlāf al-saghir, which is also known as Ruṣūs al-masāʾil. Manuscripts of the first two are extant in Damascus, along with al-Tamīḥ fi wuqūf al-fikr (see Brockelmann, S I, 687), an important work on the basic of the law.

Al-Kalwāhdhānī died in Baghdād, where he seems to have spent all his days, on Wednesday, 23 Dijmādār II 510/3 November 1116, and was buried at the feet of Ibn Hanbal beside another celebrated Hanbali contemporary, Abū Muḥammad al-Tamīnī. By far the most important of his disciples was ʿAbd al-Rādī al-Dījāla, who studied under him and Ibn ʿAqlī at the same time.

KALYĀNĪ, a fortified town of the Deccan [see DAKHAN], 17° 53' N., 76° 57' E., about 37 miles west of Bidar [q.v.]. In the 14th/15th and 5th/16th centuries, it was the capital of the Late Western Calkūyā rādīsān, passing later to the Yādavas of Devagiri (= Dvatalabād, [q.v.]); after the foundation of the Bahmanī [q.v.] dynasty at Devagiri, Kalyānī was annexed as one of the strongholds on their northern borders; but there had presumably been a previous
Muslim conquest of the town since an inscription is preserved of a dārābī masjd founded by Ulugh Khan (later succeeded as Muhammed b. Tughluq) in 723/1323; and another Tughluq inscription of 734/1333 is known. The fort was rebuilt by the Bahmans at the end of the 9th/15th century after the introduction of gunpowder. The fort was maintained in good repair, as is evident from a series of inscriptions on its bastions, in the 10th/16th century; these show that it was held by the Barīd Shāhīs [q.v.] as the successors to the Bahmans in Bidar until 981/1573, after which it passed to the ‘Adīl Shāhs of Bidgāpur [q.v.]. It fell to the Mughal empire, after a protracted siege by Awrangzīb, in 1067/1657, and was included in the Mughal īṣbā of Bidar. When the Deccan became independent of the Mughals under the Bahmans in Bidar until 981/1573, after which it passed to the Mughals under the first Nīfām of Haydarābād [q.v.], Kalyānī was one of the possessions included. From 1278/1664 it was governed by a line of Nawwābs of Kalyānī, of whom the first was Mir Muḥammad Ibrāhīm Khān, a son-in-law of Aṣāf Ḍāḥ of Haydarābād.

KALYOMB, a moderate-sized town in Lower Egypt, with a railway station 10 miles north of the central station at Cairo on the Cairo-Alexandria railway. The town proper lies about a mile west of the station and about 3 miles from the right bank of the Nile, on the Turʿat al-Sardūsīyya. Down to the middle of last century, Kalyūb was the capital of the Mudiyya al-Kalyubīyya, but then in 1871 under the Khidges Ismāʿīlī, the Dīwān of the Mudiyya was moved to Benhā. Since that date Kalyūb has been a markaz (district capital). Branch lines run to Zakāţik and the Barrage du Nil. The majority of the inhabitants are Muslims. According to ‘All Paşa Mubārak, Kalyūb possessed a Shariʿa court (maḍāma sharīyya) and a hospital. Cf. ‘All Paşa Mubārak, al-Khalīj al-ḥādīda, xiv, 114 ff.; Baedeker, Egypt (1914), 34; Samībey, Kāmūs al-Aʿlām, Istanbul 1352/1935, vol. 4, 363 ff. The population of the mudiyya of Kalyūb was 930,000 in 1871.

A Greek Kαλύπτων—not yet, however, found—is at the base of the name. In the Scales it is found under the form Καλύπτων (Muspero-Wiet, Matériaux pour servir à la géogr. de l’Egypte, Series 1, 152).

Historical: John of Nikius mentions Kalyūb in his Chronicle, ch. 113 (ed. Zotenberg, 321, 509). ‘Amr b. al-ʿAṣ [q.v.] had a bridge thrown over the canal at this town to be able to conquer the other towns of the province of Misr (ca. 20,642). In 549/1154-5 the caliph al-Zahir granted Kalyūb as a fief to his great favourite Naṣr b. ʿAbbās. Usāma b. Munkīdī so depreciated this present in the eyes of Naṣr and his father that it became one cause of the murder of the caliph by Naṣr and ‘Abbās (Ibn al-ʿAṯr, xi, 126; Usāma b. Munkīdī, ed. Dörnberg, i, 145; Ibn Muyassar, ed. Massé, 93). In the fighting between Selmī I and Qatān-Bey, Kalyūb did not escape the raids of the Arabs (Ibn Iyās, Taʾrīḵ Shīr, under ʾĪṣār 923/March 10 1527). For embassies etc., Kalyūb was the stage before Cairo. Thus, for example, in Rabīʿ I 923/March 1519 ʿĪsār Bey had the Sulṭān’s envoy received there with the greatest ceremony by the Kādī Barakīt b. ʿAbd-al-ʿAṯr (Ibn Iyās, op. cit., iii, 109). The town had again to submit ignominiously to the burning of soldiers and Mamluks in the years 1292-93/1804-5; cf. al-Djabarti, ʿAḏḏāb al-ʿAṯrāb, sub annos. Kalyūb, as a result of its situation close to the gates of Cairo, probably did not escape on other occasions the effects of the political happenings in the capital. Ibn Dukmāk (803/1400) and al-Zahirī (839/1434-5) report that in their day Kalyūb was for the most part lying in ruins.

Economic: Almost all sources praise the wealth of Kalyūb in gardens and trees, among which the acacias (ṣaʿat) are mentioned as particularly valuable. In spite of the restrictive edicts of al-Malik al-ʿĀṣīlī, the ground was very badly farmed, so that Kalyūb’s prosperity suffered considerably (cf. ‘Uqmān b. Ibrāhīm al-Nabulūsī—wrote 637/1240-9. Brockelmann, GA, I, 409—who devotes a longish section to Kalyūb in his Lumaʿ al-Kawānīn al-Muṣṭaʿīn al-Dawāsīr al-Dīyār al-Miṣrīyya; quoted in ‘All Paşa Mubārak, op. cit., 114 f.). In 1240/1854-5 Muhammad ‘All built a cotton mill in Kalyūb and later a barracks and a remount depot were established there. The al-Shawārībī family deserves special mention for its share in the economic development of Kalyūb, where they also built a seray with a mosque. There are six mosques in Kalyūb, in one of which the Friday service is held. Among these the “great Mosque”, formerly called Dījmāʿ al-Zaynabi, with its great Manāra, made a great impression on Ibn Djabari, 578/1182-3 in Egypt; cf. Brockelmann, I, 629; ‘All Paşa Mubārak, op. cit., 114 f.) According to the inscriptions on its minbar and above the door, it was renovated in 1148/1735-6 by the Shaykh al-ʿArab of Kalyūb, Abmad al-Shawārībī. Among the tombs of saints the most important is that of Sīdī ‘Awwād.

‘All Paşa Mubārak gives a very full account of the above-mentioned al-Shawārībī family, as one of the most prominent in the town. Al-Malik al-ʿĀṣīlī Baybars gave them charge of the new bridge over the Bahr Abūl Manadījja (cf. also al-Kalkashandi, tr. Wüstenfeld, 28) and granted them large estates as fiefs and an annual pension (which lasted till 1275/1858-9). Mustafā Paşa granted them the supervision of the whole province of al-Kalyūbiyya. Various members of the family also filled important posts in the administration, besides the office of Shaykh al-ʿArab of Kalyūb, which seems to have been hereditary amongst them. Sulaymān al-Shawārībī’s patriotism cost him his life; in Radjab 1213/Dec. 1798 he was beheaded by the French for his part in an attempted rising (cf. al-Djabarti, iv, 37 f.).

According to Ibn Dīthān (cf. ʿAbd al-Latif, al-I ḥāda ma-ʾrūbār etc., French tr. de Sacy entitled Relation de l’Egypte etc., 595) the province of al-Kalyūbiyya comprised in his time (777/1375-6) 59 townships and yielded a revenue of 419,054 dinārs (but on p. 599 a list of 61 townships is given). Ibn Dukmāk gives 60 with a total revenue of 383,140 dinārs. In the time of the French expedition, the revenues of the province from the estates (Descr. de l’Égypte, i, 306 ff.) amounted to: (1) for the payment of the mirʾ, 3,390,742 dinārs; (2) for the kushātīyya, 1,710,462 dinārs; (3) for the fiʿāl, 15,119,199 dinārs. The Bahr al-Dardūr—according to legend built by Pharaoh and enlarged by his “vizier Hāmān” (Ibn Dukmāk, al-Kalkashandi)—was, according to the enthusiastic description in Ibn Dukmāk (whom al-Kalkashandi follows), a large canal, apparently with water always in it. This is indicated also by two documents of 922/1516 and 1550-1 (quoted by ‘All Paşa Mubārak) in the possession of the al-Shawārībī family. Al-Kalkashandi notes that the canal in his time had disappeared and
that its place had been taken by the Abu 'l-Manadżdia canal (cf. Wiistenfeld, op. cit., 25 f.); Kespero-Wies., op. cit., 105). According to 'All Pasha Mubarak, there was only a small channel in his time: the Turṣat al-Sardūsīyīya. Ibn Khallīkān, Butrus al-Bustānī and 'All Pasha Mubarak give several scholars who bore the nisba al-Kalýūbi. The best known of them is Shīhāb al-Dīn al-Kalýūbi [q.v.].

**Bibliography:** Besides the works quoted above: Ibn Muyassar, Aḥkār Mīr, ed. H. Mass, Cairo 1910, 23, 60, 93; Abū Shāma, Kiāb al-Rawḍafayn, in the Hist. des Crois., iv, 147; al-Dīmāṣhī, Nabhāt al-Dīr fī Ḡābīb wa-l-Barr wa-l-Bahr, ed. Mehen, Copenhagen 1874, 231; al-Makrīzī, al-Ḫuṣayf, ed. Wiet, i, 313, ch. 25, ii, 85, n. 1; Ibn Dūmād, Kiāb al-Inṣāfār, ed. Vollers, with title Deser de l'Égypte, Būlāk 1309, v, 43, 47; al-Kalāṣāhāndī, Suḥb al-ʿĀrīq, in Wüstenfeld, Calculschandī's Geography u. Verwaltung von Ägypten (Abb. d. Kgl. Gesellschaft. d. Wiss. zu Göttingen, xxv 1879), 25 f., 28, 109; al-Ẓāhirī, in De Sacy, Chrestomathie arabe, Paris 1826, ii, 5; Ibn Iyās, Taʾrīḵ Mīr, Būlāk 1311, ii, 54, 109, 157, 204, ii, 110, 190, 206, 286, 303, 318; d'Anville, Mémoires sur l'Égypte., Paris 1765, 381; al-Dībārātī, Fawdādī al-imenti fī Īlādī in the Zahiriya or in the Carnab, his investigations of celestial and meteorological phenomena, the camera obscura, and other topics in optics. His theory of the rainbow is particularly important as he demonstrates the combinations of refractions and reflections of sunlight within a drop of water that result in both the primary and the secondary rainbows; his investigations of celestial and meteorological phenomena with the camera obscura were brilliantly conceived and executed. Unfortunately, this work has been little studied.

Besides the Tābkī, works by Kamāl al-Dīn existing in manuscript are: Tādhrīk at-ṭabībī (e.g., Köprülü 941, fol. 128v-136, copied at Bābdād in 733/1337; cf. Ḥādīḍī Khaltīs, ii, 257), on "friendly numbers"; Babā al-fawdādī fī ʿush al-fawdādī (Köprülü 941, fol. 1-128v, and in other Istanbul manuscripts; see M. Krause, passim.) to which he added appendices on the refractions and reflections of a sphere, the rainbow, the halo, the camera obscura, and other topics in optics. His theory of the rainbow is particularly important as he demonstrates the combinations of refractions and reflections of sunlight within a drop of water that result in both the primary and the secondary rainbows; his investigations of celestial and meteorological phenomena with the camera obscura were brilliantly conceived and executed. Unfortunately, this work has been little studied.

**KALYOB—KAMAL AL-DIN ISMĀ'IL**

The place had been taken by the Abu 'l-Manadżdia canal (cf. Wiistenfeld, op. cit., 25 f.); Kespero-Wies., op. cit., 105). According to 'All Pasha Mubarak, there was only a small channel in his time: the Turṣat al-Sardūsīyīya. Ibn Khallīkān, Butrus al-Bustānī and 'All Pasha Mubarak give several scholars who bore the nisba al-Kalýūbi. The best known of them is Shīhāb al-Dīn al-Kalýūbi [q.v.].
KAMÁL AL-DÍN ISMÁ'ÍL — KAMÁNCA

KAMÁL AL-DÍN SHIR ‘ALÍ [see BANNA’YÍ]

KAMÁL KHUÐJANDÍ (KAMÁL AL-DÍN MAŠÚD), Persian lyric poet and mystic, was born in Khuðjand (Transoxania), later settled in Tabriz, where he lived the rest of his life and, according to Khán-dámír, died in 803/1400-1. Kamál Khuðjandí’s modest diván contains short, exquisite ghásals of five to seven verses with love, Lebenslust and frustration as central themes, and permeated with a deep pantheistic mysticism reminiscent of the school of Ibn al-‘Arabí and Djaláli al-Dín Rúmí. True to the tradition of the great Persian mystics, he never condescended to write panegyrics on potentates, and was often critical of the ‘ulama’ (even in his capacity as Shaykh al-Islám) and the temporal authorities. Háfíz held Khuðjand in high esteem and exchanged poems with him. Revered and much visited by the people, the shrine of Shaykh Kamál was long regarded as a sanctuary.

KAMÁL PÁSHA ZÁDE [see KEMÁL PÁSHA ZÁDE]

KAMÁNCA [see MÁLÁHÍ]

KAMÁNCA (KAMENIEC, KAMENET PODOLSKI), a fortress town of the Ukraine, situated in the region known as Podolia. Kamánca rose to prominence as a stronghold guarding the southern border of Lithuania and (after 1432) of Poland against the incursions of the Tartars. It was important, too, as a station on the commercial route extending from the Black Sea and Moldavia to Poland and the Baltic. The fortress occupied a position of great strength on a high spur of rock, a little above the confluence of the River Smotrych with the River Dnestr (cf. Dupont, 29, who describes it as “le boulevard de la crétenté dans cette partie de l’Europe”). Ottoman forces appeared before Kamánca in 1044/1633 (Fedélhe, ii, 160). Not until the Polish-Ottoman conflict of 1085-7/1672-6, however, did the town become subject to the Turks, falling to the Grand Vizier Ahmed Köprülü in the first year of the war (1083/1672). Kamánca was not destined to remain for long under Ottoman rule, being returned to Poland in 1107/1699 at the Peace of Karlowitz which brought to an end the War of the Sacra Liga (1684-99). The town passed into the hands of Russia at the time of the Second Partition of Poland in 1793. In 1918, at the end of World War I, it reverted to Poland once more, but since 1945 it has been included in the U.S.S.R.

Al-Kamar (a.), the Moon.

I.—Astronomy.—Al-Kamar is the one celestial body that in fact orbits the earth as mediæval Muslim astronomers, following their predecessors, assumed all seven “planets” to do. The actual motion of the moon in its orbit is extremely complicated, as it is effected by a combination of the gravitational pulls of the sun and of the earth. It was a major aim of Muslim astronomers to devise a cinematic model that would enable them to predict this motion accurately, as several lunar phenomena, and in particular the first visibility of the lunar crescent after conjunction (ru’yat al-hildl), which determines the beginning of a month, were of great significance to them. They did not fully succeed in their efforts, though they did conceive of a model essentially identical with that of Copernicus.

Among the pre-Islamic Arabs as among the Muslim, the basic calendaric unit was the lunar month, which began at the sunset following the first visibility of the lunar crescent after the moon’s conjunction (ru’yat al-hildl), which determines the beginning of a month, were of great significance to them. They did not fully succeed in their efforts, though they did conceive of a model essentially identical with that of Copernicus.

One method of intercalation of the pre-Islamic Arabs according to Al-Birûnî was essentially by observation of the mansûl (lunar mansion) occupied by the moon at first crescent. The risings of the 28 mansûl [48], which are individual stars or groups of stars that the moon conjoins with roughly at the rate of one each night of a sidereal month, were originally used for weather-predictions (e.g., in the Kitâb al-Asrâb of Ibn Kutayba), but the conjunctions of the moon with these mansûl later became an important element of catarchic astrology on analogy with the Indian usage of the conjunctions of the moon with their 27 or 28 nakshâras. In general, the moon plays an important role in astrology as the transmitter to the world of the four elements of the influences of all the higher celestial spheres as well as of its own.

Muslim astronomers date the epoch of their era, the Hijrâ, variously at sunset of 14 or 15 July 622 A.D. Each normal year thereafter contains 354 days. But, because of the slight inaccuracy of the estimate of 29½ days in a synodic month, an intercalation-cycle is employed according to which 12 years out of every 30 contain 355 days. The earliest known such intercalation-table, the Mudjarrad, is for 210 years (30 x 7), so that the weekdays on which years and months begin are also cyclical; it occurred in one of the works of al-Fazârî (fl. 1437-82 - ca. 1747/90) (D. Pingree, in JNES, xxix (1970), 110-1), but is often repeated thereafter.

The earliest Muslim theories of lunar motion were based on Indian and Indo-Sasanian developments of Greek theories as found primarily in the Zidî al-Sindhindî and in the Zidî al-Shâhî. In these theories there was only one inequality in lunar motion—that explained by the assumption of an epicycle on whose circumference the moon (or rather the moon’s apogee) rotates in the opposite sense to the rotation of the centre of the epicycle on the circumference of the deferent (see, e.g., D. Pingree on Mâghârîl ‘Ilâhî’s De elementis et orbibus coelestibus). Rather crude “Indian” methods of estimating the time of the occurrence of the first visibility of the lunar crescent are often found in the early Muslim astronomers (see, e.g., E. S. Kennedy on Ya’qûb ibn Târik in JNES, xxvii (1968), 126-33), as are also Indian procedures for computing lunar parallax in latitude (see, e.g., O. Neugebauer, The Astronomical Tables of Al-Khwarîzmi, Copenhagen 1962, 71-2 and 121-6, and E. S. Kennedy in Isis, xlvii (1956), 33-53). In general, Muslim lunar eclipse-theory is Ptolemaic.

During the third century after the Hijrâ Muslim astronomers gradually adopted Ptolemaic models of planetary motion, retaining from the earlier material mainly some new parameters and the use of sine and related functions in place of chords. For the moon Ptolemy hypothesized a deferent circle whose centre rotates on a small circle about the earth (the “crank-mechanism”) in the direction opposite to the order of the signs at the rate of double the moon’s elongation from the sun. On the circumference of the deferent in the direction of the order of the signs rotates the centre of the lunar epicycle at the rate of the moon’s mean velocity. On the circumference of the epicycle in the direction opposite to the order of the signs rotates the moon itself at the rate of its anomalistic motion. The plane of this mechanism is inclined to that of the plane of the ecliptic, and the diameter of the intersection of the two planes rotates in the direction opposite to the order of the signs at the rate of the moon’s nodal motion. Further, the apogee of the lunar epicycle, from which point the moon’s anomalistic motion is counted, is not the intersection of the line extending from the earth through the centre of the epicycle with the epicycle’s circumference, but the intersection of the line extending from the point on the little circle about the earth opposite to the centre of the deferent through the centre of the epicycle with the epicycle’s circumference, which is the point on the little circle about the earth opposite to the centre of the deferent through the centre of the epicycle with the epicycle’s circumference (prosnexus). The choice of different parameters (that is, ratios of the radii of the three circles to each other, rates of (mean) motion of the moon, the sun, the lunar anomaly, and the lunar node, and...
inclination of the lunar orbit) for use in this model will lead to different predicted longitudes and latitudes for a given time, and generally Muslim astronomers simply adjusted the parameters so that these predicted longitudes and latitudes would better conform to observed or otherwise determined “true” longitudes and latitudes.

There are two principal exceptions to this rule. Astronomers at Maragha in the late 7th/13th century began a process of revision of the Ptolemaic planetary models in order to obtain more “perfect” models in which all motion is circular and constant about the circle’s centre and in which, for the moon, its distance from the earth at quadrature is not as small an amount as will result from Ptolemy’s model. The culmination of these efforts lies in the brilliant work of Ibn al-Shāṭir (fl. 750/1350) of Damascus, whose lunar model is essentially identical with that of Copernicus; the latter must somehow be dependent on the former. Ibn al-Shāṭir achieves his desired result by replacing the circle about the earth on which the centre of the deferent revolves according to Ptolemy with a second epicycle bearing the moon, whose centre revolves on the circumference of the first epicycle (see V. Roberts in Isis, xlvii (1957), 428-32; F. Abbud in Isis, lii (1962), 492-9; and E. S. Kennedy in Isis, liv (1960), 365-70). The second revision was due to the Jewish astronomer Levi ben Gerson (1288-1344) of Orange in southern France. His complicated lunar models will be described in a major forthcoming publication by B. R. Goldstein (meanwhile see B. R. Goldstein in Proc. Israel Acad. Sci. Hum., lii (1960), 239-54). The “Aristotelian” model of al-Bīrūnī (B. R. Goldstein, Al-Bīrūnī, New Haven 1971, i, 36-9 and 142-54) is no improvement over Ptolemy’s.

One other problem relating to the moon that interested Muslim scientists was that of the nature of its light, or rather in what fashion the moon’s light was reflected especially in Persian and Turkish poetry. Some poets, however, apparently employing Bedouin maxims, lay stress on the deficiencies of the moon, in a manner which seems sacrilegious to literary theorists. The mystics sought to make it the symbol of ineffable realities, a symbolism reflected especially in Persian and Turkish poetry.

The crescent moon sometimes appears in Muslim painting, but mainly at a later date in India under European influence. Above all, however, it is a decorative theme, stemming from pagan religious symbolism. In astrological treatises representations of the moon derive from Babylonian models by way of orientalized Hellenistic imagery.

Popular traditions of many kinds, handed down from antiquity, associate the moon with particular agricultural practices, attribute particular illnesses to its influence, and so on; from it are derived meteorological predictions, omens and various signs. Popular literature, proverbs and riddles often refer to the moon. Likewise, it is often personified. In many cases this is no more than a rhetorical device, but often too a true personalization is involved. The vocabulary and tales usher in a whole sub-mythology which is rarely accompanied by associated popular ritual practices, and yet God is never absent. The Moon, although subject to God, has its own power. It is said to have rendered homage to Muhammad through a miracle which places the apocalyptic forecast of the Kur’ān (LIV, 1) “the Moon has been split”, in the Prophet’s day. Eclipse particularly induced mythological comment. Popular magical practices in the Maghrib make appeals to the Moon.

crescent, always employed as a decorative motif, eventually became the emblem of Islam to Europeans, and was accepted as such by the Ottoman empire in the 19th century [see nI]).

Pre-Islamic astral paganism endured for many years among the “Sabeans” of Harran, who invoked the Moon, among other deities. Traces of its influence can be found among the Yazidis and also the Nuṣayris of Syria, where ‘Ali and Salamán are identified with the moon and where a religious sub-group is called the Khamsa.

Bibliography: Apart from the articles cited above, see M. Rosdinson, La lune chez les Arabes et dans l’Islam, in La lune, mythes et rites, Paris 1962 (coll. Sources orientales, 6), 153-215, where the relevant references will be found. (M. Rosdinson)

KAMARAN,珊瑚岛 (island with numerous small islets) in Yemeni territorial waters, less than three miles from the Sall peninsula, 200 miles north of Perim; its length is 14 miles, its maximum breadth 6 miles, its area 22 sq. miles. The impoverished inhabitants, who number between 1000 and 3000, are Sunnís of mixed origin (Adeni, Ethiopian, Somali, Indian); they cultivate cotton and fish for pearls.

At the end of the 19th/20th century the king of Yemen kept prisoners on Kamaran; in the first half of the 20th/21st century the island was occupied and fortified by the Portuguese. In the second part of the 19th century Turkey, by virtue of the international health regulations, established there a quarantine station for pilgrims arriving through Bab al-Mandab; they used to contract a disease called in Mecca “Kamaran sickness”. In June 1915, as the Turks were attacking Aden, Kamaran was occupied by the British. In the early 1920s the British raided all Red Sea islands, ceased in 1923 under Article 16 of the Treaty of Lausanne. The quarantine station had passed under British administration; Holland became a participant in 1928, Italy in 1938; the Anglo-Italian Agreement provided that Great Britain should not “establish its sovereignty or erect fortifications or defences” on the island. When the quarantine station was closed in 1952, thanks to improvements in health conditions on the mainland, it was said to receive 100,000 pilgrims yearly.

The international status of Kamaran is peculiar: in 1948 the Kamaran Order in Council declared that the United Kingdom had “power and jurisdiction” over the island and appointed the Governor of Aden as Governor of Kamaran, stating however that the island was not part of Aden Colony or of the Aden Protectorate, and that the Foreign Jurisdiction Act applied to it “as if it were a British colony or possession”, a formula resembling that of trusteeship agreements (mandates). Since 1928 Yemen has constantly and unsuccessfully claimed sovereignty over Kamaran and protested against British concessions for oil research on it (the one given in 1955 to the D’Arcy Exploration Co. proved fruitless). On 1 December 1967 the “Peoples’ Republic of South Yemen”, following a British communication to the United Nations dated 30 November 1967 to the effect that the Kurya Murya islands would be restored to the sultan of Maskat, issued a decree naming its own governor for Kurya Murya, Perim and Kamaran.

KAMH, the name for wheat in Syria and in Egypt; in 'Irāḳ wheat is called bīna and in Arabia it was called biyūr. These different words are also used in the literary Arabic of the western and eastern provinces of the Muslim empire.

Wheat was the main grain crop in the Near East from the beginning of the Muslim period (and much earlier), while in Europe in the Middle Ages even the upper classes ate bread made from barley and rye. The predominance of wheat among cereals distinguished Muslim countries from the Far East also, as Chinese travellers observed.

Muslim physicians recommended abstention from other bread and literary evidence shows that in the caliphal period only the poor classes of southern 'Irāḳ ate rice bread. In Ḵhūzistān and in some Caspian provinces, such as Māzandarān, however, there were extensive rice plantations or rice was even predominant. But in the central provinces of the Muslim world people ate bread made of cereals other than wheat only in times of distress, e.g., famines, or when the general prosperity had decreased considerably, as in Egypt at the end of the 9th/13th century. Bread made of barley was the food of ascetics.

The accounts of the 'Irāḳ treasury of the 3rd/9th century, which have come down to us in extracts included in the works of the geographers Kudāma b. Dja'ar and Ibn Khurraḍāḏbih, contain information on the quantities of wheat and barley received as taxes in kind. These figures point to a slight predominance of barley, but this cereal was used for animal fodder. Furthermore, the accounts show that barley was grown mainly in districts where the soil was apparently less adapted to wheat growing. It is worth noting that the equilibrium between wheat and barley was a striking feature of agriculture in 'Irāḳ from Sumerian times and is still characteristic at the present day. In the days of the caliphs Upper Mesopotamia produced great quantities of wheat which were shipped to southern 'Irāḳ. In Syria the provinces of Ḥamā, Ḥims and Ba'bābak, and particularly the Hawrān, were veritable granaries, supplying the surrounding regions with wheat. In Palestine wheat of excellent quality was grown in the coastal plain, so that al-Muḫaddasī could praise the quality of the bread of Ramla. Egypt, which had earlier supplied Rome and Constantinople with wheat, exported it in the days of the caliphs and their successors to the Ḥidjāz and to other countries. The main wheat-growing region was the Sa'īdī, the southern part of the country. Arabic authors emphasise that some types of Egyptian wheat were unequaled. barley-growing had been decreasing in Egypt before the Muslim conquest and probably continued to decline thereafter. European travellers who visited Egypt in the 8th/14th century dwell on the excellent quality of its wheat breed. So over many centuries the predominance of wheat remained unchanged. Throughout the coastal regions of North Africa wheat was produced and was the staple food, at least of the town-dwellers. Speaking of the province of Būna, the geographer Ibn Hawkal says that wheat and barley were so plentiful that their quantities could not be measured. The Muslim merchants of North Africa exported wheat to the countries then called Ghāna and Takrūr, now part of Senegal and Mali.

The predominance of wheat was universal in
Muslim lands. Only in very dry regions, such as Kirmān and Nubia, was dhura (sorghum) grown. Of course the wheat grain was not of the same variety elsewhere. The grain enquirer al-Bakṛr says that in the province of Sījlīmās, in western Morocco, there was grown a small-grain "Chinese" wheat. All the texts quoted so far refer to the golden age of Muslim civilization. In the later Middle Ages the cultivation of wheat declined in many regions of the Muslim world, as regards both the extent of the areas cultivated and the quality of the grain, this being a result of bedouinization. The papyri, the Arabic chronicles and the writings of various Arabic authors contain extensive data on the prices of wheat and of barley. In the Near East in the 'Abbāsid period their price ratio was 2:1 and in the later Middle Ages 3:2. It is evident that grain prices rose under the Umayyads and the 'Abbāsid caliphs, both in 'Irāk and in Egypt, by 900 per cent or even more. Prices in Egypt were however much lower than in 'Irāk. From the end of the 4th/10th century the price of wheat began to fall in 'Irāk and from the end of the 5th/11th century in Egypt, a fact probably connected with the main trends of demographic development: the growth of population (i.e., of consumers) in the caliphal period and the decrease from the period of the Crusades.

The measures in which the grain prices are given are in the classic period the kurr (2025 kg.) in 'Irāk, the ghirāra (208.8 kg.) in central Syria, the makkāk of Aleppo (about 82 kg.), the ʿtilīs (75.5 kg.) and later the irdāb (69.6 kg.) in Egypt and various mudd in the provinces of North Africa. KĀMIL, MUSTAFA [see MUSTAFA KĀMIL].

AL-KĀMIL (AL-MALIK), title of two Ayyūbid princes.

1) al-Malik al-Kāmil Nasīr al-Dīn Abu 'l-Ma'āliMuḥammad, the eldest son of al-'Ādīl [q.v.]. Abu Bakr b. Ayyūb, born 573/1177 or 576/1180. In 593/1197 he left the Dījāzra, where he had begun his political career as his father's representative (from 587/1281), to come to the aid of al-'Ādīl at Damascus in his struggle against al-Afdāl b. Saḥāb b. al-Dīn. After the latter's defeat, father and son marched into Egypt, entering Cairo on 22 Rāmāzān 595/27 August 1200. Al-'Ādīl was proclaimed sultan of Egypt and Syria. After the formal investiture by the caliph in 604/1207, al-'Ādīl distributed his provinces between his sons [see al-'Ādīl], al-Kāmil was to remain viceroy of Egypt for the rest of his father's reign. In 604/1207 he moved his residence to the newly finished Kaṭāf at al-Dījāzra.

In 615/May 1218 the Franks made an un-

expected attack on Egypt (fifth Crusade [see CRUSADES]), landing at Dimyāt [q.v.]. Al-Kāmil was unable to prevent their capture of the Burd al-Salsala (Tower of the Chain), the main stronghold of the harbour. Shortly after receiving news of this, al-'Ādīl died in his camp near Damascus (Friday 7 Dījūmādād II 615/31 August 1218), and al-Kāmil became sultan of Egypt and supreme head of the Ayyūbid realm. On 25 Shawāl 616/5 November 1219 the Franks finally succeeded in conquering the town of Dimyāt. For nearly two years al-Kāmil was able to hold them at bay from his new camp, called al-Manṣūra, south of Dimyāt, until the combined forces of al-Ashraf [q.v.], al-Muʿṣāẓm [q.v.] and other Ayyūbid princes, following their brother al-Kāmil's demand, reached Egypt in August 1221. The Franks, who had lost irretrievable time, tried to march against Cairo, but were encircled from all sides and after heavy fighting were forced to surrender (7 Radjab 618/27 Aug 1221) and to leave Egypt: the fifth Crusade had reached its inglorious end.

The second period of al-Kāmil's reign was marked by the struggle for the leadership among the Ayyūbid brothers: al-Kāmil against al-Muʿṣāẓm of Damascus (1221-1227) and—after the latter's death—against al-Ashraf, who succeeded him (1227-1237).

As early as 619/1222 al-Ashraf visited his brother in Cairo and they concluded an alliance against al-Muʿṣāẓm, who subsequently had to give way to al-Ashraf in two separate disputes (succession at Hamāt, 619/1222; possession of Akhṭāt [q.v.]). An alliance between al-Muʿṣāẓm and the Khārazmshāh Djalāl al-Dīn [q.v.], concluded during 622/1225, tilted the balance of power, and al-Ashraf was compelled to seek an arrangement with his brother. In Shawawl 1227 he left Egypt and submitted to al-Muʿṣāẓm and to renounce his supremacy over Hamṣ and Hamāt; until Dījūmādād II 624/May-June 1227 he was forced to remain as de facto prisoner. The Ayyūbid realm was on the verge of dividing into two states when the situation was completely altered by the sudden death of al-Muʿṣāẓm (Friday, 1 Dhu 'l-Hijjah 624/12 November 1227). His son al-Malik al-Nāṣir Djalāl (q.v.), in power for 21 years, at once submitted to al-Kāmil, recognizing his supremacy.

In the same year 624/1227 rumours of a new Crusade reached Cairo. Presumably considering the situation desperate, al-Kāmil contacted Frederick II, offering him all Saladin's conquests. Frederick II accepted, and on 7 September 1228 landed at Acre. After hard bargaining the famous treaty which delivered Jerusalem to the Franks was signed on 7 February 1229.

Al-Kāmil's cordial relations with his nephew al-Nāṣir did not last. At a meeting with al-Ashraf at Tell al-Aqūdāl (near Ghazza), he therefore agreed that al-Nāṣir should cede Damascus to al-Ashraf; a treaty was signed at the end of 623/1228. The two brothers then marched against the Syrian capital. After a short siege, al-Nāṣir surrendered (22 Radjab 626/15 June 1229) and had to accept the frontiers of al-Karak and al-Shawbak in exchange. Damascus was handed over to al-Ashraf; al-Kāmil was recognized as overlord of the realm. Princes favouring al-Kāmil were installed in all the minor principalities and took over al-Ashraf's possessions in the Dījāzra, thus further enhancing al-Kāmil's influence and control.

After a prolonged visit to the Dījāzra, al-Kāmil returned to Egypt in Radjab 627/May 1230, but only two years later the situation demanded his return. He marched to Salamiyya to prepare with the assem-
bled Ayyūbid princes against an expected attack by the Mongols. As no attack materialized, he decided to expel the ill-famed Artukid ruler of Amid, al-Mas'ud b. Rukn al-Dīn Mawdūd (Dhū 'l-Hijjād 629/ October 1232). The Artukid soon surrendered and was sent into captivity at Cairo. Ḥīn Kayfā, the other important fortress of the prince of Amid, capitulated soon afterwards and was given to al-Kāmil's son Nadīm al-Dīn Ayyūb, who in 634/1236 also took over Amid. Even in the Dżazira al-Kāmil had become the most powerful sovereign, so that the other Ayyūbid princes were bound to feel threatened by him.

Al-Kāmil returned to Cairo in about Djiwād I 630/February-March 1233, but his stay was once more brief. The capture of Aklūbāt by the sultan of Rūm Kaykobād [g.v.] (at the end of 629/1232) led him to mount a general attack on the Sālidūqs of Asia Minor; probably he planned to transfer—after the expulsion of the Sālidūqs—the Ayyūbid princes from Syria to Asia Minor, Syria to be governed as a united state like Egypt. The invasion began from Sālamiyyā in Ramadan 634/June 1234, but failed. The distrust and opposition of the Ayyūbid princes then forced al-Kāmil to abandon his plans; he returned to Cairo in Dhū 'l-Qa'da 631/August 1234, but soon he had to hurry back to repel with the help of al-Asīraf the counter-attack of Kaykobād, in places covered with Ayyūbid princes and the town in 658/1260, in spite of the brave resistance of the latter.
expectant mother is placed in the hand and the louse dropped into it; if it runs out the child will be a girl, if not, a boy, since in the latter case the milk is thicker. Other beliefs are attached to this pest; for example, a man who throws away a living louse forgets his acquaintances.

Although translators of the Kur'an, basing themselves on Exodus VIII, 18, freely employ the word "lice" for summâl in VII, 130/133, where the places of Egypt are mentioned, commentators offer different explanations of this term, which is held to designate either crickets or a sort of moth (ṣirdān, ḥalam, etc.).

Other insects related to lice are bugs and fleas. Bugs, hemipters of the cimex family, are distinguished by their stench and by the odour of bitter almonds which is given off when they are crushed. They are called baḥğ and banād al-bāṣir because they hide in the bedmatting, but they are sometimes included (see LA, s.v.) in the species called baʿād, "mosquitoes", because the latter were regarded as a metamorphosis of the bug, as were fleas, of which, the Arabs thought, they constituted a variety. Bugs may be killed, under the same conditions as other vermin, but as they appear mainly at night and in dwelling places, they were less of a problem to the fūfraghd* than lice and fleas.

The latter, diptera of the pulx family, were called burqāṭh, and also Abū Ṭafīr, Abū ʿAdī, Abūl-Wathīhāb, Tāmir b. Tāmir, colloquial names inspired by the backward leaps they make. They are born in the earth, in dark places, at the end of winter and in early spring, and they also change into mosquitoes. They can be got rid of by the use of talismans (as burqāṣ) or of a reed smeared with asses' milk or billy-goat's fat, on which they will gather in return for a promise that they will be thrown outside without being killed and to the accomplishment of the appropriate formulas. It was popularly believed that if a fox whose coat was full of fleas took a tuft of wool in his mouth then the fleas would gather on it; if he slid gently into the water, they would be carried away.

According to tradition, injuring fleas is prohibited because they woke up a prophet in time for the morning prayer. However, killing them is permitted, except in the mosque or the state of šīrām, and, as with lice, it is advised that they should not be thrown in the fire. At an early date the question of whether the blood (or rather excrement) of fleas on the clothing or body necessitated washing was discussed, but the majority of fūfraghd consider that a few stains do not impair ritual cleanliness.

Bibliography: Diābīṣ, Ḥayawān, index, s.v. kaml; idem, Buḥuqālī, ed. Ḥājīrī, 199 (Arabic), 192/5, 327; Damtri, s.v.; Kayrawānī, Rūsāla, index, s.v. poux. (Ed.)

Al-Kammān, by-name of Abū ʿAbd Allāh Muḥammad b. Ṭāhir, a Ḥanāfī sharīf from Constantine who moved to Fez, where he taught ḥadīth, logic and dialectic. None of his works has survived, but some noteworthy responsa (adjwāba) on a number of cases of the category of (nazāṣil) reveal his competence in the subject. He died in 1116/1704-5.

Bibliography: E. Lévi-Provençal, Chorfa, 288 and n. 2; Ṭāhirī, Naṣrī, 184; idem, al-Naṣrī al-habīr, II, fol. 53 r.; idem, Iltībā, fol. 57 r.; M. Lakhdar, La vie littéraire au Maroc sous la dynastie Almoravide (Casablanca, 1955); M. Lakhdar, Kammān, cumin (Cuminum Cuminum), an unbelliferous plant which seems to be a native of eastern Iran. At an early date it was found in the Near East (Syria, Palestine, the upper valley of the Nile), then spread throughout the Mediterranean basin. The Hebrew is kāmān, Greek kāmīn, Latin cuminum.

Wild or cultivated, its aromatic seeds were much sought after. Physicians recognized its many virtues: carminative, emmenagogic, sudorific, etc. in potions and in electuaries (maṣāḏān). Dieticians knew it as an aid to digestion.

Many varieties were known and these were variously appraised. Cumin from Kirmān (q.v.) was considered the best; pharmacists described it as bāṣīlahān, "royal". After this came cumin from Fāris, Egypt, Syria, the land of the "Nabateans", and Abyssinia (ḥabbāṣī).

Allied to a determinant specifying the type of the plant, the word kammān was used as a generic term to designate other plants, not necessarily unbelliferous ones, which bore aromatic or medicinal seeds. Kammān armani, "Armenian" or kammān rūmī, "Byzantine" was in fact caraway (Carum Carvi). It was also called kammān barī, "wild cumin", as it is in some regions of France, where it is known as cumin des prés, "meadow cumin". Kammān hulā, "sweet cumin", was one of the names for aniseed. In Bougie, in eastern Algeria, kammān al-dījābal, "mountain cumin", was the name for Manicarum mansamicum Jacq.. Kammān aswād, "black cumin", was fennel-flower (Nigella sativa), a ranunculus properly called ḥānīts. It was also known as al-habba l-sawād, the "black grain", and is called ḥabbet el-baraka in modern Syria.

According to the Arabic-speaking world in using, alongside kammān, diffused throughout the Arab world, is found another much rarer term. The consonantal variant is kāmūn, but its exact pronunciation is not known: sannāṯ, sunnāṯ, or sinnaṯu? Lexicographers also give it the meaning of "honey", "fruit syrup" (rubb), "cheese" and several other conditions. This rare term appears in some hadīths; it seems to be a Yemenite word. A denominative verb, sannata, is attested, with the imprecise meaning of "to throw s-n-w-t in a pan".

The Muslim West. Seeds of cumin were cultivated and used widely, both in medicine and in cooking; they were also attributed with magical and beneficial properties. Muslim Spain differed from the rest of the Arabic-speaking world in using, alongside kammān, a dialectical phonetic variant, kāmūn, where it seems that the reduction of the gemination was compensated for by the lengthening of the preceding vowel. This form kāmūn also gave rise to a derivative: kāmīn, kaimīn. Here we find the mutation ā-ā = ay-ā, which is attested in Spanish Arabic dialect for other nouns of the same morphological type: kānān, lābūl, dāsūs (for dāṣūs); this may be a case of pronunciation with ūma [ū.]

The Spanish word alcamondas, signifying a range of aromatic seeds, cumín, caraway, aniseed, fennel-flower, etc., is an Arab loan-word given a Romance plural. It is the equivalent of the quatro semences chaudes majeures, "four main warm herbs", of the old French pharmacopoeia. In Old Spanish the original Latin name for cumin often appears in a plural form, cominos.

In the Maghrib, Morocco is characterized by the widespread use of the Spanish form, kāmūn. In the extreme north-west of the country (the regions of Tangiers and Tetuan), the variant kāmūn is preserved. Herbalists in Fez sell a variety of this grain called kāmūn ẓef or kāmūn bū-nilfa, "fluffy cumin", imported from the Tuat. A potion made from it is used to cure pains in the entrails or stomach. In the
rest of the Maghrib, it would seem, kammun/lutmamn is the one name used for cumin.

In Tunisia kammun symbolizes grace, charm (sirr), the absolute perfection of a beauty. Its seeds, thought to generate attraction, are one of the essential ingredients of love potions. The plural, kmmamn, designates "an assortment of aromatic seeds: cumin, coriander, aniseed, caraway, fennel-flower, etc."; a synonym for this is the plural srr, "seeds". This is an equivalent of al-camunds and also of the Moroccan rrs l-kamn, lit. "the essentials in the shop (of the druggist, 'attar)". In Malta cumin is called kemmun, alcamonias and also of the Moroccan kammuni, is used for aniseed (cf. above).

The Persian name for cumin is kammun. The composites shk-srra and sirra-rs designate caraway. A particular dish, containing cumin, is called shrbd, sirbd; in the archaic form shrbd (for shrbdg), the dish and its name passed into the Arabic culinary vocabulary of the east and Muslim Spain. Alongside the learned-word kammun the Turkish of Turkey uses a popular form, kemyon; the adjective kemyon means olive green. The Persian dish mentioned above is called srra and today describes "a dish of calves' feet with rice and garlic"—and apparently without cumin.

Finally, proverbs which feature cumin are found sporadically throughout the whole Islamic world. These belong to two series: in the first the cumin is promised that it will be well watered, tomorrow—this is the prototype of empty promises; in the second the cumin says, "rub me between your hands and I will release my good smell", which is the equivalent of "ring for service".

AL-KAMMUNI, MUHAMMAD B. IBRAHIM AL-TAMMI, a Kayrawânî paneyst of the Zîrîd al-Mu'izz b. Bâdis (first half of the 9th/10th century), was admired by the critics for the abundance and perfection of his laudatory, descriptive and elegiac poetry, remarkable alike for the choice of themes and the perfect rhythm of the verse. But the vogue his poetry enjoyed during his lifetime was equally due to the verse, humour and sprightly imagination with which he recounted the vicissitudes of his disordered and picturesque life, and denounced the failings of some of his fellow citizens. However, very few lines of this classical yet personal output have survived.

KAMRAN DURRANI, a son of Bâbur and of Gurkûl Bâghûn, and half-brother of Humâyûn; he was born in Kâbul ca. 915/1509. He was cleverer than Humâyûn and had a poetical turn, but he was cruel and vicious and a restless schemer. He repeatedly rebelled against Humâyûn, who was at last compelled by his officers to make him innocuous by blinding him in 960/1553. He went to Mecca in 954/1554 and died there in Dhu 'l-Hidjja 904/October 1557. The most interesting thing about him is the devotion of his wife, Mâh Cîchâk Bégâm Aghûn, daughter of Shâh Hasân of Sind. She insisted on accompanying him to Mecca, in spite of her father's remonstrances, saying that he had given her to Kamran in the days of his greatness (in 954/1546) and that she would not abandon him now in the time of his misery. She died at Mecca a few months after her husband.

Kâmrân was put in charge of Kandahâr by his father, and in the beginning of Humâyûn's reign he was governor of the Panjâb. During the interregnum, when Humâyûn was in Persia, Kâmrân and his younger brother, 'Askârî, ruled over Afghanistan. He left one son and three daughters. The son, Abu 'l-Kâsim, who inherited his father's poetical talents, was confined in Gwâilor by Akbar in 964/1557, and was put to death some years later as a dangerous competitor. All three daughters were given in marriage; one of them, named Gurkûl, was a woman of masculine spirit; she married Ibrahim Husayn Sultân, and she and her son were thorns in Akbar's side. (Firîshta, lith. ed., 221, and Muhammad Husayn, Darbâr-i-Akbâri).

KAMRÂN SHÂH DURRÂNĪ, ruler of Harât in succession to his father, Mâhêmûd Shâh (d. 1244/1288). By alienating the powerful Bârzkaz family Kamrân contributed to the fall of Safawid rule in Afghanistan in 1235/1818. Subsequently, Mâhêmûd and Kâmrân disputed possession of Harât, which comprised an area extending from the Harf Rûd in the west to the Hilmand river in the east and from Sîstân in the south to Maymûna in the north, although their authority in the outlying areas was always contested. In his early years Kâmrân revealed energy and ability, but during the last five years of his reign power passed to his able son, Yâr Muhammad Shâh. Kân Alkozay (d. 1267/1851), who secured his position by control of the only effective military force, of the revenue and of the British subsidy negotiated in 1255/1839 and who deposed and murdered Kâmrân in 1258/1842. Kâmrân and Yâr Muhammad continu-
ued the Haratl tradition of alternately acknowledging and rejecting Iranian sovereignty and in 1253-4/1837-8 withstood a prolonged Iranian siege which devastated the Harat valley.

**KAMRÚP, a region in western Assam (q.v.),** the most north-easterly limit of penetration by Muslim armies in India. Conquest was not followed by any great settlement of Muslims in the region, which was in fact held only for limited periods. The few Muslims in the district today are mostly traders in the towns; for the history of the district as it affects Islam, see Assam. In the Muslim geographers (Hadid al-Qiam, Marwazi) it is often referred to as Karmun.

**KÂMÛS (a.), dictionary.**

1. **Arabic Lexicography.**

The word kâmûs/kawmas, from the Greek ὑκενσός appeared in Arabic, at the latest at the time of the Prophet, with the meaning of “the bottom, the very deepest part of the sea” in the sense of the centre, and used as a metaphorical concept for the origin of a language - and its root. This is what the Arabic geographers borrowed the Greek word again, in the form Ubâyînûs, and applied it to “the mass of water surrounding the earth”, particularly the Atlantic Ocean, which was called Ubâyînûs al-muhîfî, then more simply al-Kâmûs al-muhîfi. As this latter term was employed in a metonymical sense, it had a special meaning in the language of the time, and was used to denote the origin of a language, in contrast to mu’djam (q.v.), “Lexicon”. This distinction, however, was not general nor absolute, so that nowadays mu’djam tends to be used in the same sense as kamûs. In classical Arabic, the concept of “dictionary” was not covered by any single term, each lexicographical work bearing its own title. A number of these titles included the word lugkah, “language”, and lexicography was called fiml al-lugkah “the science of language”. Sometimes this was confused with “philology”, today which is called fikh al-lugkah, an expression already employed in the Middle Ages by Ibn Fâris (q.v.) in the title of his celebrated Sâhibîl. The neologism mu’djamîyyàt is now tending to gain currency.

In Persian, the general term for a dictionary was farhang, but, as in Arabic and also in Turkish, various expressions were also used in titles.

Mediaeval Arabic dictionaries may be classified in three groups, according to the arrangement used:

I. Those arranging roots anagrammatically, treating all permutations of a group of root letters under one heading, and separating biliterals, triliterals and longer roots. Almost all such dictionaries adopted an alphabetical order based on phonetic principles, beginning with gutturals, a practice somewhat reminiscent of the order of the Sanskrit alphabet. This system was first used by al-Khall (q.v.).

II. Those employing the “rhyme order”; that is, arranging roots primarily under the final radical, then the first and any intermediate radicals. Within this framework, the normal alphabetical order was followed. The first major work to use this system was al-Djâhwarti’s Shahâbî. This system soon gained the ascendency in general dictionaries, and was not seriously questioned until the 19th century, under European influence.

III. Those arranged, more or less, on the modern European pattern insofar as roots are concerned. The earliest example, Abû ‘Amr al-Shaybânî’s Kitâb al-Djim, lists all words with the same initial in one chapter, but in no obvious order within the chapter. This has been called the “Kufan Method” (J. A. Haywood, Arabic lexicography). The modern arrangement proper goes back at least to Ibn Fâris. However, it found favour largely in specialized dictionaries such as those of the Kurân and hadîth. Al-Zamakhshâri’s Asâs al-balâgha adheres most closely to this arrangement.

The following are the principal mediaeval Arabic dictionaries, arranged in rough chronological order. (The Roman numerals I, II, and III in brackets after titles indicate the arrangement used in accordance with the above classification).

2nd/18th century: Al-Fâris (Ed.).

3rd/19th century: Ibn Durayd (q.v.), al-Djâmharâ fi ‘l-lugkh (I). This combines the anagrammatical arrangement with the normal alphabetical order. The Haydarabâdh (Decani) edition (1344 AH) has a useful index listing the content in the modern order.

4th/19th century: Al-Sâhib ibn ‘Abhabî (q.v.), al-Mûhîfî fi ‘l-lugkah (I), Ms. only (“Trûk Nat. Mus.”).

5th/20th century: Ibn Sîdahîd (q.v.), al-Mukam al-‘mûhîfî al-‘asâm fi ‘l-lugkh (I), Cairo 1958. This work was compiled in Spain.

6th/21st century: al-Zamakhshâri (q.v.), Asâs al-balâgha (III), Cairo 1953, largely concerned with the language of rhetoric.

7th/21st century: Ibn Mukarram or Ibn Manşûr (q.v.), Lîsîn al-‘Arâb (II), Bâlâk 1300-8 AH, Beirut 1955-6. This is still the best-known large-scale dictionary.

8th/24th century: al-Firûzâbâdî (q.v.), al-Kâmûs al-Muhîfî (II). This is the standard handy dictionary, containing a very large vocabulary compressed into small space by the omission of supporting examples. It has been frequently printed, mostly in Cairo and in four volumes.

12th/18th century: Though not strictly mediaeval, Murtâdâ al-Zahîd’s Talîh al-sârîs min qawm al-Kâmûs (II), Bâlâk 1306-7 AH, Kuwait 1965, is best mentioned here. It is an expansion and extension of the Kâmûs, on the scale of the Lîsîn al-‘Arâb.
The modern (European) dictionary arrangement is now normally used by Arabs. Butrus al-Bustani used it for his 2-volume *Maqālāt al-musīkā* (Beirut 1867-70), basically a re-arrangement of the *Kāmūs*. No large-scale Arabic dictionary has appeared in the Arab world since the Tādīl al-ʿarāṣī. The most popular one-volume work is Louis Maṭṭī al-Muḥammadī, *Beirut 1908*; Beirut 1965. Bi-lingual dictionaries were rare in the Arab world until the present century. Kāimpūrī’s *Dīwān lugāt al-Tūrī* (5th/11th century) explains Turkish words in Arabic, while al-Zamānkhāshī’s *Muḥammadī al-adāb* (Samācṣṭherī Lexicon Arabicum Persicum, ed. J. G. Wetstein, Leipzig 1843-50) gives the Persian equivalents of Arabic words. Neither is very conveniently arranged. To list all bi-lingual Arabic dictionaries published since the Renaissance would take several pages. Those mentioned below are of the literary language only, and do not include polyglot dictionaries.

Jacob Golius’ *Lexicon Arabico-Latinum*, Leiden 1653, with a Latin-Arabic index, was pre-eminent until G. W. Freytag’s larger work, with the same title, was published, Halle 1830-7 (also has a Latin-Arabic index). Both are based on the *Kāmūs*, recast in modern arrangement. A. de Biberstein Kazimirski’s *Dictionnaire arabo-français*, Paris 1860, pays some attention to dialectical Arabic and is still very useful, since it is more complete than Père J.-B. Belot’s *Vocabulaire arabe-français*, which has enjoyed general favour since 1883. Edward William Lane’s *Arabic-English Lexicon*, London 1863-7, repr. 1955-7, though incomplete, is still widely used. These 19th-century works may well be superseded by two new dictionaries in the course of publication: The first, *Wörterbuch der klassischen arabischen Sprache*, published in Wiesbaden in fascicles since 1957, is sponsored by the Deutsche Morgenländische Gesellschaft (the present editor (1974) is M. Ullmann). Definitions are in German and English. It begins at the letter ʿāf, where Lane’s *Lexicon* becomes mere sketches, because of the urgent need to supplement the deficiencies of Lane. The second is the *Dictionnaire Arabe-Français-Anglais*, edited by Blachère, Chouémi and Denizeau, published in Paris in fascicles from 1961. It covers both the classical and the modern languages.

The above account does not include dictionaries from European languages into Arabic. No comprehensive work has yet been published. Illüss Bochtor’s *Dictionnaire français-arabe*, which appeared in a third edition revised and supplemented by Caussin de Perceval in Paris in 1864, has been practically forgotten. Belot’s *Vocabulaire français-arabe* has gone through many revisions since 1889, but it is still inadequate. G. P. Badger’s *English-Arabic Dictionary*, London 1913, is worthy of note. But the late Elias A. D. Al-Tal’s *Modern Dictionary*, Cairo 1913, has been very widely used. Mumir Bašković’s *Al-Mawrid*, Beirut 1965, is fuller and more up-to-date, with considerable scientific and technical vocabulary, but Arabic definitions do not include some information—such as broken plurals—useful to European Arabists. There is a useful Russian-Arabic Dictionary by Baranov, Moscow 1961; Supplement, Gotz Schregel’s *Deutsch-Arabisches Wörterbuch*, 1st fasc., Wiesbaden 1963, at present under publication, will be of benefit. Two French-Arabic dictionaries have been published in Beirut: the first, *al-Manhal*, is the work of Dliabbār ʿAbd al-Nūr and Suhayl Idrīs (1970); the second (1972) is a French-Arabic *Mundīj*.

**Bibliography:** The following general works contain bibliographies:

(J. A. Haywood)

2. **PERSIAN LEXICOGRAPHY**

The normal Persian word for “dictionary” is *fārang-i furs*, which also retains its original meaning of “learning, education”. In its Middle Persian (Pahlavi) form it is applied to two glossaries which, though undated, preserve pre-Islamic material. The *Frahang-i ʿoim ek*, named after its first entry, lists Avestan words with their Pahlavi equivalents. The *Frahang-i Fakhravī* provides mainly the Persian equivalents of the basically Aramaic ideograms used in Pahlavi, with their traditional mnemonic readings. Owing to the great ambiguity of the Pahlavi script, many of these readings are fantastic, e.g., *binmin* (Aram. *br* read as *bmn* for *pus*, "son").

The earliest named dictionary of modern Persian is the *Risāla of Abū Ḥasy-i Soghdī*, variously attributed from the 1st/7th to the 5th/11th centuries. Although no longer extant, this work seems to have been still available to compilers of the 11th/17th century. The *Lughat-i furs* from the poet Abū Maṣūr ʿAllāb, Ahmad Asadi Tūst is the oldest surviving Persian dictionary. Compiled about 500/1105-1106, its purpose was to explain about 1,200 rare and archaic words in the older poets of eastern Iran. It is arranged alphabetically by rhymes, each entry supported by a quotation in verse. A slightly earlier work by the poet Kārina of Tabrīz, *Tadsīsīr fi lughat al-furs*, is lost. No other Persian dictionary is recorded until the beginning of the 8th/14th century. The lexicographers of the period devoted their energies instead to the analysis of Arabic, particularly of the Kūrān, in both Arabic and Persian. Of lexica with Persian glosses we have the *Kitāb al-maṣādir* and *Tarjumān al-Kūrān* of Husayn Zawzanī (d. 486/1093), Dastūr al-lugha al-ʿarabīyya and *Kūrān al-mīrāḥ* by Husayn Natanzī (d. 490/1193), al-Sāmī fi *l-ʿāsāmī* (497/1104) by Abu ʿl-Fadl Maydānī, the celebrated *Muḥaddāmat al-adāb* (before 521/1127) by Abu ʿl-Kāsim Maḥmūd al-Zamakhshārī, Tādīl al-maṣādir by Djiʿarāk Bayhaḵī (d. 544/1149); a work of this name is also ascribed, almost certainly wrongly, to the poet Rūdkā, d. 1390-1. *Dastūr al-lugha* (545/1150-1) by Abu ʿl-Fadl Hubayyash Tīfīḏ, a work based on al-Djwārī’s Arabic *Al-Sīḥā* called *al-Sūrah min al-sīḥā* (685/1282-3) by Djamāl al-Kurāghī, and several others.
Also based on the Arabic Siḥāl is the Persian Siḥāl afīrs (or, al-ṣājdām) by Muḥammad Hindī-šāh. Shakhdawānī Shams-i Mungī, written in 728/1327-8. The third oldest Persian dictionary, forming the fourth part of a treatise on poetics called Miṣyār-i Djamālī, by Shams al-Dīn Muḥammad Faḵrī Ṣafā-hānī (Shams-i Faḵrī), an older contemporary of Haftī, is written in 745/1344. It is modelled on Asadī’s work, but supports the verses for its 1,600-odd words are mostly by the author himself, and so less accurate.

After this time the centre of Persian lexicography moved to India. Two works of the 8th/14th century are preserved, the Farhang-nāma (700/1300) by Mubārak Shāh Ghānawī, Faḵrī-i Kawwās, and Baḥr al-fadāʾil (ca. 795/1393 ?) by Muḥammad b. Kiwām al-Bāqli. The Adāt al-fadāʾil (822/1419) by Kāḏī-ḵān Muḥammad Dihlawl Dharwal names other sources since lost. Many more Persian dictionaries were compiled in India in the next two centuries, of which it is possible to name only the Shāraf-nāma-i ʿAḥmad Munayrī (878/1473-4) by ʿĪbrāhīm Khān al-Dīn Fārūḵī, based on the poets, the Tuhfat al-saʿāda (928/1520-2) by Māḥmūd b. Shayah Diyaʾ-ʾāl-Dīn Muḥammad, without quotations, Muʿayyid al-fadāʾil (925/1519) by Muḥammad b. Lād Dihlawl, Farhang-i Waʿfī (933/1526-9) by Ḥusayn al-lughdt (ca. 1,054/1549) ? by ʿAbd al-Raḥīm b. Ahmad Sūr, and Maddar al-fadāʾil (1,001/1593) by Ḥālādād Fawīdī Sīrhīndī.

The same period saw the rise of another stream to feed the Persian sea, namely the efforts of Turks to interpret Persian writers. After the anonymous and undated Abnānī-i ʿṣādjām, the first important works of this type are the three compilations by Luṭf Allah b. Aḥd Yawūf Ḥallīn, Baḥr al-ṣaḥīḥūb, Niḥāyāt al-muṣākh (872/1467-8) and the shorter Kaftāna (917/1511-2). Ḥallīn stands out by reason of the critical attitude he adopted towards his sources. Among similar contemporary works were Ṣāḵmīl al-lughdt (900/1495) by Ḥasan b. Ḥusayn Karabāḏīrī, Wasīlat al-maḏābīd (903/1497-8) by Ḥafṣī b. Rustam Mawlāwī, and the Tuhfa-yi Ṣāḥīḥī (920/1514-5) in verse, by ʿĪbrāhīm b. Ḥūḍyādve. All but the last of these works were used by Niḥāyāt Allah b. Aḥd Mūḥārak al-Rūmī in the preparation of his celebrated Lughat-i Niʿmat Allāh (before 947/1540).

At the beginning of the 11th/17th century two major compilations appeared. In 1008/1599-1600 Muḥammad Kāšīm Kāšānī Surūfī produced his Maddār al-fadāʾil for Shāh ʿAbbās Ṣafawī. Thirty-eight earlier dictionaries are named among his sources and nearly 6,000 words defined. At the same time, at the Moghul court, Djamāl al-Ruṣūl, Burhdn, produced his famous Burḥān-i ḥāṯī in Haydarābād, Dakhān, and two years later ʿAbd al-Raḥīm al-Ḥusaynī al-Tattawī his Farhang-i Ṣafāhī. Rashīd sought to shorten his work by omitting much of the quoted verse. Burḥān’s changes were more sweeping. For the first time the vocabulary, of some 20,000 words, was arranged completely, alphabetically. Of Rashīd’s successors, almost every page of Shams-i Fakhri’s work contains invented words, supported by bad verse attributed to fictitious poets. Their origin will probably never be known.

More than any previous dictionary, the Burḥān-i ḥāṯī gave rise to a series of works criticizing or defending it. The most valuable of these is the Sirāḏī al-lughdt (1147/1734-5) by the poet Sirāḏī al-Dīn ʿAllāh Ḵān Arūz. This was shortly followed by a vast compilation called Bahār-i ʿṣājdām (1160/1750) by a pupil of Arūz, Rāy Ṭabāī and Bahār, from whose time onwards the vocabulary of contemporary writers began to find a place in the dictionaries beside that of the classics.

By this time European contacts with Iran and India had led to a lexicographical interest. In 1669 Edmund Castell contributed the first printed Persian dictionary in his Lexion heptagloton, quoting Niʿmat Allah’s Lughat and a manuscript work by Jacob Golius (1596-1668) as his sources, but evidently not also using Shu’urī’s Al-Ālia. In 1680 Franz von Menšgīn Meninski’s Turkish-Arabic-Persian Thesaurus appeared, incorporating the works of Ĥallīn, Niʿmat Allah and Shu’urī, and the Tuhfahīnī. Meninski’s was the mountain from which John Richardson’s Dictionary Persian Arabic and English (1777-80) was quarried, later to be enlarged by Francis Johnson (1809). J. A. Vuillers’ Lexicon Persicum (1855-64), I. J. P. Desmaisons’ Dictionnaire persan-français (1908) both drew on these European works, but also on the Burḥān, the baletl Shu’urī, the Bahār-i ʿṣājdām, and other oriental works. F. Steingass’s Comprehensive Persian-English Dictionary (1892) goes furthest on the downward path of omitting all references to sources.

In the 13th/19th century many more Persian dictionaries in the classical tradition appeared in India, including Shams al-lughdt (1220/1805-6) compiled under the direction of Joseph Barretto, Haft kulzum (1237/1822) by ʿAffūl Muḥammad, but ascribed to the sultan of Awadh (Oudh), Ḥiyātī al-lughdt (1242/1826-7) by Muḥammad ʿAffūl al-Dīn, and the Farhang-i Amadadā (1306/1889-90) by Muḥammad Pāḏāsh Sāḥēb Shād. In Iran Rādī Kull Ḥidāyat’s compilation, Farhang-i anjuman-ār-yi Nāṣirī (1286/1869-70), was the most significant, despite his swallowing the Dasādīr whole.

The foundations of modern lexicography in Persian, relying on direct recording of the spoken and written word, may be said to have been laid in 1874 by J. L. Schlimmer’s Terminologie médico-pharmaceutique et anthropologique française-persane. The number of present-day Persian lexica is legion. Mention can be made only of two outstanding but disparate ventures: in Europe Fritz Wolff’s Glossar zu Firdosi’s Schönname (1935), with full references, and in Iran...
the encyclopedic Lughat-nāma, begun by Ali Akbar Dihkhuda (1879/1956) and continued under the direction of Muhammad Mu'in and others.

(D. N. MacKenzie)

### 3. Turkish Lexicography.

**a) Oriental Dictionaries.** Turkish lexicographers maintained the arrangement of Arabic and Persian dictionaries.

The first Turkic dictionary is Mahmūd al-Kāshīgar's Diwan lughāt al-Turk, written in Baghādād in 466/1074 (ed. Kilissi Ri'fāt, Istanbul 1333/1915-77; dictionaries based on it by C. Brockelmann 1826, B. Atalay 1943). It deals with the standard language of the Karahāżdēs Empire, including a number of dialect words. The meanings are given in Arabic and illustrated by quotations from Turkic folk poetry.

Kāshīgar's work served as a model for the Kipchak Turkish dictionaries produced in Egypt and Syria in the 8th/14th-9th/15th centuries (O. Pritsak in *PAA*, i, 75-61; Abī Hayyān, K. al-Ṭirāq (712/1313, ed. A. Caferoğlu 1931); the anonymous Tārdīμān Turkī (743/1343, ed. B. Flemming in *IS*, 1866), 226-9, ed. M. Th. Houtsma 1894; Djamāl al-Dīn al-Turkī, K. Buğdun al-muḥāfs (8th/14th cent., ed. A. Zajaczkowski 1954-8); the anonymous K. al-Tūbāf al-Zāhiyya (8th/14th cent., ed. T. Halasi Kun 1942, B. Atalay 1943); the anonymous al-Kawānsīn al-kulliyā (9th/15th cent., ed. Fuad Kūprūlī 1928) and the recently discovered K. al-Durrā al-muṣīla (partial ed. by A. Zajaczkowski in RO, xxiv [1965]).

In Khârazmī al-Zamakhāshīgar's Muḫdaddat al-adāb was popular. No less than 15 manuscript copies of this work, provided—fully or partly—with Khârazmīan Turkic glosses, have survived (Z. V. Togan in *TM*, xiv [1964], 81-92).

The Caghatāy dictionaries were compiled primarily to facilitate the reading of the works of Nawāzī (844/1439-906/1502). Their arrangement is alphabetical and within each letter are entered according to the vowel which follows the initial letter. Poetical quotations help to illustrate the meanings of a word. Important are: Tālī' Imānī of Herāt, Badāṭī al-lughāt (Cagh.-Pers., before 912/1506, ed. A. K. Borovkov 1961); the anonymous Aḥwāska (Cagh.-Ottoman, first half of the 10th/16th century, ed. A. Vambéry 1862, V. Velyaminov-Zernov 1968); Mirzā Mahdī Khān, Sangālīkā (Cagh.-Pers., ca. 1172/1758, ed. Sir G. Clauson 1960).

Ottoman lexicography starts with versified vocabularies, averaging 2,000 Arabic or Persian words explained in Turkish. These vocabularies, destined to be memorized, are divided into bīfūs (sections) in which words of similar form or sound are grouped together. One of the earliest is the Tuhfet-i Ḥusainī (Pers.-Turk., 802/1790) by Ḥusain, mentioned in the Tuhfet-i Shāhīdī (see below). Famous were: Fīrīght-eokhulu ʿAbd al-Lāṭif (d. before 870/1474), Lughāt-i Fīrīght-eokhulu (Ar.-Turk.), printed in the margins of another Ar.-Turk. versified vocabulary, Subha-i Şīyān (n.d.); Şāhīdī Ibrahim Dede, Tuhfet-i Şāhīdī (Pers.-Turk., 920/1514, litb. 1275/1859); Sīmābdāde Mehmēd Vehbi (d. 1809), Tuhfet-i Vehbi (Pers.-Turk., 1st ed. 1213/1798) and Nakbhe-i Vehbi (Ar.-Turk., 1st ed. 1220/1805); Hasan ʿAynī, Naṣīr al-Dīn wālah (Ar.-Pers.-Turk., printed 1250/1834-5); Ahmed ʿAṣīm (d. 1235/1819), Tuhfet-i ʿAṣīm (printed, Būlāk 1254/1838-9).

Large dictionaries were also produced. In the Arabic-Turkish dictionaries the Arabic words are arranged in bābs either according to the initial or according to the last letter, and, under each bāb, divided into fasās according to the second and following letters. The best known are: Muṣṭafā b. Şams al-Dīn al-Karābāshī, Aḥkārī Kābir (Aḥkārī-i Kābir) or Lughāt-i Aḥkārī (952/1554), at least 15 editions between 1826 and 1906; Ahmed ʿAṣīm, al-ʿOqlāymās al-ʿAsāsi (1st ed. 1230/1813-1818), the translation of al-Fīruzābdālī's Kāmūs al-Muḥtāb; Mehmēd b. Muṣṭafā al-Wānī (Wānkūl), Tarḍīṣamī Sīhāb al-Dīnāhahrī (printed by İbrahim Mütferrika, 1141-1729), the translation of al-Dīnāhahrī's famous al-Sīhāb. In the Persian dictionaries the Persian words are arranged in bābs according to the initial letter, and within each bāb in three sections according to the dārs (vowel) after the first letter. Important are: Allāh b. Ahmed, Lughāt-i Niʿmat Allāh (947/1540, unpublished), in which verbs and nouns are dealt with separately; Hasan ʿShūrī, Fārsān-ī Shūrī (1808/1692-1692/1682, printed by İbrahim Mütferrika, 1157/1742); Ahmed ʿAṣīm, Tibāyn-i nāftī (1st ed. 1214/1900, 1800), the translation of al-Ṭarīqī's Durān bābī, with an arrangement as in modern dictionaries. The best known Turkish-Arabic-Persian dictionary is Eṣfād Mehmēd b. Ahmed ʿĀṣīm, Lābād al-lughāt (1145/1732-3, printed 126/1860-2).

The vast majority of (non-Ottoman) Turkic languages are spoken in the Soviet Union. Before the Soviet period dictionaries of several of these languages already existed. However, their systematic investigation began only after World War I. Today dictionaries...

**KANÀ [see KUNÀ].**

**KANAMI [see KANEMI].**

**KANAN**, the biblical Kana'an, is a personality regarding whom the few extant traditions agree on scarcely a single point. Al-Bayadawi (ed. Fleischer, i, 513) mentions him as the father of the famous Numru'd (Numru'd according to the LA and the TA); he is also regarded as the ancestor of the Kana'iniyyun (LA, x, 191) and of the Berbers (al-Mas'udî, Muraji, index; al-Dimashki, Nukhbat al-dahr, ed. Mehren, 266; Ibn Khaldun, Tarih, vi, 93, 97). Very little is known about him. Many believe that the story in Sura XI, 44 ff. about a son of Nuh who disregarded his father's fervent pleas and refused to take refuge in the Ark, thus perishing with the unbelievers, refers to him (al-Bayadawi, ad loc. and al-Tabarî, Kisas al-anbiyd', Cairo 1324, 36). Al-Tabarî (i, 199) also mentions a son of Nûb called Kan'ân who lost his life in the Flood, but treats the question as referring to Yam b. Nûb (see Tafsir, ad loc.), although in i, 199 he identifies the latter with Kan'ân.

While Kan'ân appears here as a son of Nûb and Ibn al-Kalbî mentions "Shallum, that is, Kan'ân" as Nûb's fourth son (in Yâkût, iv, 311), in the passage parallel to Genesis, ix, 25 (in al-Tabarî, op. cit., 212) he appears as a son of Hâm b. Nûb (cf. al-Yâ'qûbî, i, 13 ff., 16; cf. also al-Mas'udî, iii, 240, 244). According to a third tradition (in Yâkût, op. cit.) Kana'an was a son of Sâm b. Nûb, and according to a fourth—but unreliable—tradition a son of Kûsh b. Hâm (al-Dimashki, op. cit.).

(B. Joel*)

**KANAN PASHA [see KANAN PASHA].**

KANAT (A.), pl. kannawa, kanâ, kuni, aköiya, “canal, irrigation system, water-pipe”. Used also as a baton, a lance, etc., the term originally meant “reed” [see KASABA] and it is with this meaning and as “reed” that the word kanal in Akkadian (cf. Zimmer, Akkad. Fremdwörter, Leipzig 1913, 51), becoming kanah in Hebrew and kanâ in Aramaic, it passed into Arabic and was also borrowed in Greek and Latin in the forms kánwa, kánwa (kánwa), canna, by an evolution parallel to that of kana, the Latin word canalis “in the shape of a reed”, acquired the meaning of “pipe, canal”. In Persian kanât is used today especially for those underground water pipes which are the subject of this article (hydraulic methods in general are discussed in M; Dîrî, Filâkî; see also KANTARA, etc.).
The kândt, a mining installation or technique using galleries or cross-cuts to extract water from the depths of the earth, has been described as the greatest contribution made by Persians to hydraulics. Kândts are a special feature of the Persian plateau, where geological conditions are favourable to the enrichment of underground pools of water and so to the spread of kândts (see further H. Goblot, Le problème de l'eau en Iran, in Orient, xxiii (1962), 46-55, also published in an English translation in The economic history of Iran 1800-1914, ed. C. Issawi, Chicago 1971, 214-19). They are mainly associated with large alluvial fans in the piedmont zone between the high mountains and the kavir or salt desert, or in large alluvial valleys on the desert margin, but are also found in the larger intermontane valleys of the Zagros Mountains. By means of a gently sloping tunnel, which cuts through alluvial soil and passes under the water-table into the aquifer, water is brought by gravity flow from its upper end, where it seeps into the gallery, to a ground surface outlet at its lower end. In eastern and south-eastern Persia, Afghanistan, and Balîstân these installations are known as kârânis.

The origin of the techniques used in the construction of kândts is to be sought in the old kingdom of Urartu around Lake Urûmiyya (Rûdâyiyya in north-western Persia) (R. J. Forbes, Studies in ancient technology, Leiden 1955-5, i, 153 ff.). A kândt built by Sennacherib (705-681 B.C.), whose father, Sargon II, claims to have learnt the secret of tapping underground water in his campaign against Urartu, still carries water to the city of Erbil (J. Laessøe, Refections on modern and ancient oriental waterworks, in Journal of Cuneiform Studies, vii (1953), 5-26). With the establishment of the Achaemenian empire kândts appear to have spread westwards to the Mediterranean and Egypt and southwards to Oman and Southern Arabia. In Egypt kândts, probably built during the Persian occupation, have been found in the Kharga oasis and Matrûh (A. T. Olmstead, History of the Persian empire, Chicago 1948, 224; H. J. L. Beadnell, An Egyptian oasis: an account of the oasis of Kharga in the Libyan desert, with special reference to its history, physical geography, and water supply, London 1909, 171; idem, Remarks on the pre-historic geography and underground waters of Kharga oasis, in Geographical Journal, 1933, 128-39; G. W. Murray, Water from the desert: some ancient Egyptian achievements, in Geographical Journal, 1955, 171-81; G. F. Walpole, An ancient subterranean aqueduct west of Matrûh, in Survey of Egypt, Cairo 1932). The second major diffusion of kândts took place in the early centuries of Islam, when they were introduced into Spain by the Umayyads of Spain (see J. O. Asín, Historia del nombre "Madina", Madrid 1959) and thence to Marrakesh, where there are known as kâtaras or rûkharas, the Canary Islands, Mexico and Chile (C. Troll, Qanat Bewässerung in der alten und neuen Welt, in Mitteilungen der Österreichischen geographischen Gesellschaft, 1963, 313-30; idem, Techniques agricoles, milieu naturel et Histoire de l'Humainîte, in Bull. de la société géographique de Liége, December 1967). In the 4th/10th century they spread to southern Algeria, where they are called joggara (fâhîrâ). They are also found in the Damascus oasis, east of the River Jordan near Shunut Nimrûn, south-east of Riyâd at al-Khardî, north of Djîhânât at al-Kâffî, in Cyprus and in the Turfân oasis, where the technique was apparently introduced in the 18th century (M. Cable and F. French, The Gobi desert, New York 1944, 184-5. See further C. Troll and C. Braun, Madrid, Die Wasserversorgung der Stadt durch Qanale im Laufe der Geschichte, in Abhandlungen des mathematisch-naturwissenschaftlichen Klasse, Akademie der Wissenschaften und der Literatur, Mainz, 1972, No. 5, 105-90 for a discussion of the geographical disposal of kândts).

Kândts are constructed by specialists called mu-känns (tâkhîî in Kirmân and Yâzîd, cf. Muhammad Mufîd, Dîamîn Mufîd, ed. Irâdi Afsâh, Tehran 1961, i, 127; Iskandar Beg, 'Alâmârâ-i 'Abbâsî, Isfâhân 1956, i, 473; kumûgh, Hasan b. Mu'âmmad b. Hasan al-Kumî, Ta'rîkh-i Küm'm, tr. into Persian by Hasan b. 'Abbî b. Hasan b. 'Abîd al-Mallîk, ed. Sayyid Dîjâl'al-Dîn Tehrînî, Tehran 1934, 42; 'Alâmârâ-yi 'Abbâsî, i, 473; Kûrîskân in Afghanistan; and Kumûghkân in Kurdisân), whose knowledge and skill are largely passed from father to son. The inhabitants of certain districts, notably Yâzîd, are highly rated for their skill as mu-känns. The traditional techniques of the mu-känns are described in a 5th/11th century Arabic work, Anbâ' al-miyyâ al-ghâfiyya, by Abû Bakr Mu'âmmad b. al-Hasân al-Hâsîb al-Karâdîji, whose patron was Abû Ghânîm b. Mu'âmmad, the hasanîr of Manû'îr b. Wûshmîr. This work was printed in Haydarâbâd, Decan, in 1940. An abbreviated translation entitled The construction of subterranean water supplies during the Abbaside caliphate, was published by F. Krenkow in 1951 (Transactions of the Glasgow University Oriental Society, xii, 23-32). In 1966 a Persian translation, with the title Istikhrâjî-i dâhâ-yi panhânî, by Husayn Khâdiv Dîm in appeared in Tehran. This clarifies some of the difficulties in the published Arabic text. Al-Karâdîji states in his preface that he had referred to various books by earlier writers on the exploitation of subterranean water and found them lacking. No craft was more beneficial than that which was concerned with the exploitation of subterranean water, because by its help the earth was made to flourish, men's lives achieved order, and abundant benefit accrued (Istikhrâjî-i dâhâ-yi panhânî, 2). His account makes clear that the techniques employed by mu-känns were mining techniques.

The first step in making a kândt is to sink a trial shaft (gamânâ) to prove the presence and depth of the ground-water-table. The choice of location of the trial shaft is affected by the slope of the land, general topographical conditions, variations in vegetation, and the site of the land to be irrigated or the settlement to be provided with domestic water (cf. Istikhrâjî-i dâhâ-yi panhânî, on the indications by which the presence of underground water can be recognised, 15 ff.). When the trial shaft is sunk and water reached, the mu-kânî then has to determine whether the well has struck a constant flow of water in an impermeable stratum (âb-i kalîrî). If this is the case, the alignment and slope of the well has to be adjusted so that it hits the impermeable stratum at the greatest depth, which becomes the mother well (mâdâr tâkhî), to the point where the kândt is to come to the surface above the land which is to be irrigated, has then to be established. If the gradient is too steep, the water will flow too fast and erode the walls and the tunnel will fail in. Work on the kândt usually begins at the lower end, i.e., where the water of the kândt is to come to the surface. The mu-kânî, using a small pick and shovel, digs back towards the mother well, though occasionally work is begun simultaneously at both ends. One of the most difficult problems of the mu-kânî is to avoid the rush of water when the tunnel enters the water-bearing section and a break-through is made (cf. Istikhrâjî-i dâhâ-yi panhânî, 34).
on the digging of the trial shaft or gamdna, 35).

Vertical shafts are sunk from the surface to the tunnel every 20-150 yards or so, or are sunk first and then connected by a tunnel. The cross-section of a tunnel is usually elliptical with a height of ca. 4 ft. and a width of ca. 2V2-3 ft. It is usually unlined, but if it passes through soft soil, baked clay hoops (kanad, nay, tanbusha) are used to prevent collapse (cf. Istikhrādī, 54 ff., 60 ff.). The vertical shafts are approximately 2 ft. 6 in. in diameter and their upper portions are strengthened by mud or stone linings. Their purpose is to give ventilation and to enable the soil excavated to be hauled to the surface in a bucket by a windlass. If the shaft is unusually deep a second windlass may be set halfway down in a bucket by a windlass. If the shaft is unusually deep a second windlass may be set halfway down in a bucket by a windlass. If the shaft is unusually deep a second windlass may be set halfway down in a bucket by a windlass.

The discharge of the water of kanadīs varies according to ground-water characteristics, the nature of the soil and the season. Those which tap a permanent aquifer tend to have a constant flow throughout the year. If a kanadī does not tap a stable ground-water source or is in porous soil, its flow may be reduced to virtually nothing in summer, or in a dry year. The water of such kanadīs is known as ab-i riʿī. The flow of some kanadīs may reach 400 gallons a minute, but that of most is much smaller, dropping to 30 gallons a minute or less. It is a disadvantage of the kanadī system that the water, since it flows all the year round, may be wasted when irrigation is not needed.

Regular cleaning and repair of kanadīs is required, though the frequency with which this is necessary varies with the soil and the configuration of the land (cf. Istikhrādī, 120 ff. on the maintenance of kanadīs). They are subject to damage and destruction by flash floods. The shafts are sometimes covered by a slab of stone to prevent them being filled by blown sand (see also below.)

In 1962 a distinguished French water engineer, M. Henri Goblot, estimated that about half the land under cultivation in Persia was irrigated by kanadīs, while some of the crops under dry farming in the plateau would not have been cultivated if the construction of a kanadī had not made it possible to establish a village in the neighbourhood. The total number of kanadīs is variously thought to be between 30,000 and 50,000 (see further H. Goblot, Le problème de l’eau en Iran, op. cit.). Dr. Esmail Feylessoufi, writing in 1958, put the number at the lower figure, of which he believed some 22,000 to be in running condition, and their estimated discharge to be 560 cubic metres per second (Underground water kanadīs and deep wells in Iran, publication of the Independent Irrigation Administration, Tehran 1958, 9 ff.). M. Goblot accepts a rather higher figure, namely 40,000, with a total discharge of 600-700 cubic metres per second (see also idem, Le rôle de l’Iran dans les techniques de l’eau, in Technique: revue de l’enseignement technique, 135-6 (January/February 1962), 12).

Kanadīs have played an immensely important role in Persia, both in contributing to the spread of cultivation and also in influencing the site and nature of settlements. Hamadān, Kazvin, Tehran, Nishāpūr, Kirmān, Yazd (cf. the legend of the foundation of Yazd by Alexander, which was preceded by the
making of a kandāt, Muḥammad Muṣaff, Dhāmis-i Muḥfa, iii, 731–2), and many other towns owe their existence to kandāts. Until 1930, the water supply of Tehran, the modern capital, was provided by twelve kandāts. In some districts there is a heavy concentration of kandāts. Aerial photos, for example, showed that there was a total of 266 kandāts in the Varamīn plain, twenty-five miles south-east of Tehran, in the last quarter of the 19th century (P. Beaumont, Qanats in the Varamīn plain, Iran, in The institute of British geographers, transactions and papers, 1968, publication no. 45, 172).

From the point where a kandāt comes to the surface, fields and gardens spread out round it and its branch canals, and settlements grow up along or near the kandāt, their size and number depending upon the volume of its flow.

Sometimes the ownership of the kandāt is in the same hands as the land which it waters. Sometimes the different parcels of land have a prescriptive right to the water of a kandāt with or without the payment of dues. Frequently the ownership of the land and of the kandāt is in different hands and the water is bought and sold. Many kandāts are waḥīf property or ḥāliṣa (cf. a miṣkān granting tax immunities to Fayyābdād, Bālāh, which states that four dāngs of any kandāt brought into operation belonged to the dīwān, H. R. Roemer, Staatschreiben der Timuridenzeit, Wiesbaden 1952, 18 b).

The distribution of the water of a kandāt is based on time. The rotation period varies from kandāt to kandāt, and the order in which the different parcels of land receive the water is sometimes permanent and sometimes settled from year to year by the drawing of lots or some other method. Normally land higher up has the right to water before land lower down. The shares are often fragmented into very small units of time. If the flow of a kandāt is considerable and those having a right to the use of its water numerous, the distribution of the water is likely to be under an official known as the mirāb, who is chosen by the joint users, or, in the case of a ḥāliṣa kandāt, by the government, and is paid by a special due. The division of the water of some kandāts through branch canals goes back many years: that of one in Ardīstān is reputed to have originated in Mongol times.

The need for the careful regulation of the water of a kandāt among the various parcels of land it waters, or between the inhabitants of a town for which it provides domestic water, and the need to keep it in good repair impose a certain solidarity upon the users, though this does not prevent frequent, and sometimes bloody, disputes over the use of its water, or usurpation of this by those higher up to the detriment of those lower down. The maintenance of a kandāt in the case of joint ownership clearly poses certain problems, but there are numerous instances of kandāts owned by one or several persons being successfully operated. A substantial body of law concerning kandāts, based partly on custom and partly on the Shari'a, has grown up over the centuries. This includes especially the question of the harim, i.e., the land bordering a kandāt in which another well or kandāt cannot legally be sunk, and access to kandāts (see Iskād-i dāh-i pānkhān, 42 ff.). Some of this law goes back to pre-Islamic times. Gardeners mention that ʿAbd Allāh b. Ṭāhir (governor of Khusrawān 213/828–230/844) assembled the fukahā from Khusrawān and ʿIrāq to write a book on kandāts and rules for the distribution of their water, since disputes were continually taking place over them. He states that the book which resulted from their labours, the Kiāb al-kūnī, was extant in his day (Zayn al-akhbār, ed. Muḥammad Nāṣim, Berlin 1928, 8). In modern times customary law and the Sharī'a have been supplemented or superseded by the civil law and governmental regulations (see further A. K. S. Lambton, Landlord and Peasant, London 1953 and eadem, The Persian Land reform 1962–1966, Oxford 1969).

There is frequent mention in histories of the repair of old kandāts, and the making of new ones by rulers and others. The upkeep of irrigation works (which included kandāts) was, indeed, one of the traditional functions of the ruler. There are also records of the destruction of kandāts by acts of war. In recent years, as a result of the use of power-operated wells in regions formerly watered entirely or partly by kandāts, and the construction of dams controlling surface irrigation water, the ground-water table has fallen, and many kandāts (whose flow is governed by the height of the water table) have become dry or their flow has been seriously depleted, (cf. P. Beaumont, Qanats in the Varamīn plain, 177 ff. and idem, Qanats systems in Iran, in Bull. of the International association of scientific hydrology, xvi, 1:15971, 40).

kandāts, however, still play an important part, sometimes the only, source of irrigation and domestic water supply in many parts of Persia, but in the more densely populated districts they have lost their importance as the main suppliers of water.

Oman and Trucial Oman. A considerable number of kandāts, or afldād (sing. falādād) as they are known, some in operation, others abandoned, are to be found in Oman, Trucial Oman, and Bahrain. Many of them are sited near wāddāts and the alignment is often adjacent or parallel to the wāddā bed. They are liable to damage in time of flood. For this reason the vertical shafts are frequently covered by stone slabs to lessen the danger of destruction. Tradition attributes the building of afldād to Sulaymān b. Dāʿūd. It seems probable that, in fact, the kandāt system in Oman was developed first in Achaemenian and then in Sassanian times, while many kandāts appear to have been restored under Yaʿarıba rule (see further J. C. Wilkinson, Arab settlement in Oman; the origins and development of the tribal pattern and its relationship to the imamate, unpublished Ph. D. thesis, Oxford 1969).

One of the afldād of Iskī is by tradition supposed to have been destroyed by Ḥadīdādād b. Yūsuf (q.v.) during his expedition against Oman. At the present day the technique of making afldād is confined to certain groups of the ʿAwālmī tribe.

In general the kandāts of Oman are neither so deep nor so long as those in Persia. At Nizwā there is a falādād the mother well of which is ca. 60 ft. deep; in the Burayml oasis, which is irrigated by afldādī, the longest is ca. 9 km. In Central Oman an inverted syphon (gharrāf falādād) is used in kandāt building to cross wāddās. There is considerable variation in the ownership of the afldād, their administration, and the distribution of their water. In some cases the ownership of the falādād and the land it irrigates is in the same hands, but more often it is separate and the water is bought and sold. A special feature of the afldād in Oman is that a share of the water belongs to the falādād, the revenue from which is devoted to its upkeep. Many afldād have a special book recording the ownership, sale, and distribution of the water. The rotation period of the water varies from falādād to falādād. It is measured by the sun by day and the stars by night. The water is divided into shares called bāda and subdivided into rabi'a, kāmā, aẓhar, and bīyāds. The official in charge of the water
distribution is commonly known as the ārif, who, in some cases, has under him a subordinate official or officials, known as bādhīr. Another official, the wakil, is normally in charge of the upkeep of the falādi. The ārif and the wakil, who are elected by the owners of the water, are paid by dues or a share of the water.

II. In Arab Countries

The Persian word ḥaṭṭāhārēs (see Vullers, *Lex. pers.-lat.*, ii, 707, 927; Desmaisons, s.v.), which was originally applied to underground irrigation systems before being replaced by kanāt, passed into Arabic in the form ʿṣṭāḥrāfūḥārdī, which generally designates a cistern, kanāt having a wider current use. Yākūt (s.v. kanāt) believes that the ḥārā of al-Kanāt (in the Arabian provinces and the al-Djizīrā) took its name from underground water pipes, and these have been found near Karyatayn on the ancient road from Damascus to Palmyra (Moritz, *Die antike Topographie der Palmyrener*, in *Abb. Pr. Ak.*, iv (1889), 12); and in *Paysans de Syrie et du Proche-Orient* (Paris 1946, 283 and fig. 85), J. Wente notes that near Sābīr (in the Damascus region) there are draining systems of 8 to 10 km. long, sunk at a level of 10 to 12 m., sometimes terminating in underground reservoirs whose water is drawn by norias. Basing his observations on al-Nābulusi’s *Rīḥā*, J. Nasrallah (Voyages et pêlerins au Qalamīn, in *B.E.t.O*, x (1943-4), 26) reports that a village named al-Ṣālīḥīya, which lies between Yābrūd and al-Nabīk (north of Damascus), had a kanāt, which, legend has it, dried up when a Maghribī whom the village people had made unwelcome cast a spell on it; the ruin of the whole locality ensued. The same writer notes that the clearing of the kanāt begun shortly before the Second World War restored the prosperity of the region.

Methods of underground canalization spread from Iran to the Yemen and thence to Hūǧāz where the canals were called ḥāṣīma (pl. ḥāṣīmām). Among various meanings, this term, according to al-ʿAsmaʾī (*apud* LA and TA, rad. k-f-r; cf. Yākūt, s.v. kanāt), especially designates a series of wells sunk at a certain distance from one another and linked by a gallery (kanāt) laid out at a level that does not tap the underground water. The water tapped by this method flows gently towards the centre of habitation so that it supplies or irrigates. The water outlet is known as a ḥāfīr (pl. ḥafūr), but this term (cf. LA and TA, rad. f-k-r) is also used for a well or a group of wells linked by a gallery, that is, it is practically synonymous with ḥāṣīma.

Al-ʿAsmaʾī’s description corresponds to a method which consists of tapping underground water, from an altitude higher than that of the intake point, by means of a series of wells linked by a gallery high enough to permit a stooping man to move through it (1 m. to 1.50 m.). Such a technique has the virtue of dispensing with machinery to raise well water to the level of the ground, reducing loss due to evaporation, tapping the seepage water, and finally of giving a gentle, regular incline to the underground draining system, less steep than that at ground level.

That the Romans may have known of this technique is suggested by remains found in the Kayrawān region in Tunisia (see M. Solignac, *Recherches sur les installations hydrauliques de Kairouan et des steppe tunisiennes du VIIe au XIe siècle* (J.-C.), in *AIEO Alger*, 1952, 1-272, esp. 60 ff.), but the Arab origin of their works in North Africa is not in doubt. They have been found in Tunisia near Gasba (Burseaux, *L’Oasis d’El-Guettar*, ses ressources, sa découverte, in *RT*, (1910), 364-73), among the Nafzawa, where they are called ḥāridja, and even in the immediate vicinity of Tunis (see M. Solignac, *Travaux hydrauliques hafsides de Tunis*, in *R. Afr.* (1936), 517-80).

The method employed in the Algerian oases of Touat, Gourara, Sétif, Mâdâb, Tididelt and Figuig (Fi-дж) is called ḥaṭṭāhārēs (< ḥaṭṭāhārē), pl. ḥaṭṭāhārē, which seems to come from the same root as ḥaṭṭāhārē, although f-d-r and f-w-r are also possible. Described many years ago by J. Brunhes (*Les oasis du Sous et du M’sab*, in *La Geographie*, v (1902), 180), they consist of underground canals sunk at a depth of 8 to 55 m., connected to the exterior by shafts originally designed to collect rainwater; at the outlet the main canal branches out so that gardens can be irrigated. In the central Sahara and at Fazzān a pump well has been called a ḥhāṭṭāhārēr (pl. ḥhāṭṭāhārēr), implying the notion of movement to and fro, but in Morocco this term is applied to the underground draining systems.
existing in Tafillalt, here and there in other regions, and especially in Marrakush. Wells sunk to a depth of 40 m. at the outset and spaced out at 10 to 20 m. on average, with shafts set out at similar distances over a total course of 4 to 5 km., are linked as before with a gallery at a slope of about 1%. Water from the aquiferous stratum and stream-level was distributed by conduits lined with stonework and earthenware (khdas; Sp. arcuatus) for use in irrigating gardens and drinking-water. The works were built between 1519 and 1635, during the reign of Akbarl records it as the headquarters town of sarkdr. In the 12th/18th century, with the decline of the Mughal power, campaigns of 932/1526, to lose it, and his kingdom, brother Barbak [see SHARK!].

In the 12th/18th century, with the decline of the Mughal power, campaigns of 932/1526, to lose it, and his kingdom, brother Barbak [see SHARK!].

KANAWDJ or KANAWDJ (Sanskrit Kana- kubja; known to the Arabic geographers as Kana- kubja, Kanauj, Kinnawdi, the latter form used also in Arabic). It was a town that Muhammad b. Kasim, the conqueror of the Ghurids, captured in 796/1394; and, in his new governorship which was necessary for Iltutmish to attack it again later — presumably decisively for a few years later we find his young grandson ‘Ali al-Din Mas‘ud appointing a cousin, Djialal al-Din, to the governorship of Kanauj in 1240/1243. Thereafter it figures frequently in the histories of Khalji and Tughlukid times, doubtless on account of its strategic importance on the banks of the Ganges; Ibn Ba‘thita refers to it as well built and strongly fortified, and mentions its sugar trade. Kanauj figures as one of 23 provinces in the time of Muhammad b. Tughluq (Mas‘ulik al- Absár, Eng. tr. Spies, Aligarh 1943, 16).

Towards the end of the 8th/14th century Kanauj was one of the centres of activity of the Hindù “rebels” against whom Malik Sarwar was despatched in 796/1394; and, in his new governorship which was soon to become the sultanate of Dijnawpur, he was in charge of a region extending from Kanauj to Bihâr. When the sultanate al-shark achieved independence from Dihîf, Kanauj, as its westernmost stronghold, was often a point of contention between the sultanates of Dihill and Dijnawpur, and there were many battles in its vicinity. The town was taken by Mahmîd Tughluq in 804/1402-3, who held it as his temporary capital (probably with the connivance of the Sharkî ruler) against his recalcitrant wâris Malik Ikhlîl Khân Lodî [q.v.]; after the death of the latter it was recovered by the Sharkîs in 809/1407 (Ta‘rikh-i Mubârak Shâhî, 175). It again figured in the Dihill-Dijnawpur conflicts at the time of Bahîl Lodî versus Husayn Shâh Sharkî, and Sikandar Lodî versus his brother Bârbak [see SHARK!].

Humâyûn took Kanauj for his father Bâbur in the campaigns of 932/1526, to lose it, and his kingdom, to Shâh Shâh in 1469; and, in the Mughal recon- struction the history of Kanauj seems to have been largely peaceful, and the A’in-i Akhbar records it as the headquarters town of sarbâr. In the 12th/18th century, with the decline of the Mughul power,
Kanawdj was variously in the hands of the Nawwabs of Farrukhabad, the Nawwabs of Awadh, and occasionally the Marathás.

Kanawdj appears as a mint town, Khanwadj 'urf Shérchema, under Shēr Shāh and the later Sūrīs; its name was changed by Akbar to Shāhghar, although under the later Mughals it appears as Shāhghābd. Its monuments are poorly described, although there are many tombs and shrines in the neighbourhood. The Dājīmī mosque, built by Ibrāhīm Shāhī, using much Hindu and Jain temple spoils, shows the westernmost extension of the Shākhi style [see Dāwnpur, and Hind, Architecture].

**KANBĀNIYA** (also kanbāniya, with kanbāniya once attested in the Calendrier de Cordoue), from Spanish campañ, in general denotes in Spanish Arabic usage, the countryside, but in particular the Campiña, sc. the vast, gently-undulating plain which forms the southern part of the hūra of Cordova, al-Irdīsī, Description de l'Afrique et de l'Espagne, ed. and tr. Dozy-De Goeje, 174, 209, makes it an ikllm whose capital was Cordova and its main towns al-Zahrāʾ, Eclia, Baena, Cabra and Lucena. After leaving the capital, the approach to it was first through the Bāb al-ʿAnfara and across the Roman bridge spanning the Guadalquivir near the caliphal palace and the great mosque, and then through the famous Rabad (q.v.); several roads then ran across its expanse. In addition to cereals and fruit, this fertile plain produced a celebrated variety of grapes called kanbāni. The plain was much used for hunting, and the upper ranks of Cordovan society liked to reside in the numerous country houses (menya) built there; moreover, the Christians themselves had churches there.

The Campiña's strategic situation made it a route for the passage of troops to attack Cordova in times of trouble, and is specially mentioned in regard to the revolt of Umār b. Ḥaṣān (q.v.), who managed to capture the fortress of Bullay (Poley = Agualar de la Frontera), from which he was able to send out expeditions, lay waste the agricultural lands and seriously threaten the capital's food supplies.

**KANDĀBIL** (the earliest form of the name found in Arabic works), GANDĀBĀ (current from the 16th century), or GANDĀVĀ (the term found in classical Balātī poetry of the 15th century, and widely used since the 18th century) was a town standing on a high elevation (Balādūr, Futūḥ al-buldān, 445), alone on a desolate plain (Istākhri, Cairo 1966, 106; Ibn Hawkal, Beirut 1962, 281), and from it routes led west to Kūzdār, north to Mastandj, east to Multān and south to Manṣūra (cf. Ibn Khurraḍābīh, Leiden ed., 55-6; Istākhri, 106, 179; Ibn Hawkal, 282; Muqaddasī, Leiden ed., 408). Only the modern Gandāvā, situated 28°37′ N and 67°29′ E in the Kačchī district of Balāḍīstān Province, Pakistan, answers this description in all details. It stands on a hill 321 ft. high, at the head of the flat, desolate plain of Kačchī, and from it the old routes lead in the directions specified in the sources (see Elliot and Dowson, History of India as told by its own historians, London 1867, i, 385).

The founding of Kandābil was ascribed to the legendary Bāhman Ardashīr "to demarcate the boundary between the Indians (Sindians) and the Turks" (Muṣlaṣm al-tawārīkh, 177-8), i.e., between Turan or Kaykān and the flat Budha country of the Sindian people (Yākūt, Muṣlaṣm, s.v. Kandabl). In the seventh century, Budha included within its boundaries the present district of Kačchī and the western areas of the districts of Jacobabad, Surāk, Larkana and Dadu (Fathnāma-i Sind, 15, 39, 125). Kandābil was the chief town in the northern part, while the capital was at Kākārādī (= Kakar, in Dadu district) in the more fertile southern part. With the Arab conquest (93/712), the whole of southern Budha was integrated with the central province of Sind (ibid., 122-3) and the subsequent boundaries of Budha embraced only the northern part of Kačchī, i.e., the present Kačchī district and the country around it (Istākhri, 104). The country was called Budha, Budhiya or Bidhiya, not because of any links with Buddha or Buddhism but because the bulk of the inhabitants were Buddh; Zuṭṣī also lived there (Balādūr, Futūḥ, 436, 445). Both these communities (now Muslim) have survived, the Budhs living mainly in Mutt and the Zuṭṣī scattered over the whole country.

According to Fathnāma, 73, the Arab armies reached the Kandābil region as early as 23/644 but withdrew after receiving the news of Caliph Umār's death. From 23/644 until 92/711, the Kandābil region of Budha, though subjugated by the Arabs, became a refuge for Arabs fleeing from the Umayyad government and was occupied by the Brahmin kings of Sind. In 660, Ḥaṭḥ, the ruler of Sind, led a successful expedition through the country of Kandābil (Fathnāma, 49). During the caliphate of Muʿāwiya (42/661-680), the commander Sinān gained a victory in Kaykān (Balādūr, Futūḥ, 433), but when he advanced through Kaykān into Budha on his second expedition he was killed there (Fathnāma, 85). In 69/688, the Khāzādī rebel ʿAṭīya b. al-Aswad al-Ḥanafī was pursued by a section of Muhallab's army "to Kandalb in Sind" and killed there (Balādūr, Ansāb). Six years later ʿĪfāf rebels slew ʿAṭīb b. Aslam, commander of the Makrān district, at Kandābil (Balāḍūr, Futūḥ, 435). Al-Ḥadidjābī despatched Mudjdīdā in 85/704 to punish the ʿĪfāfs, but they fled to Sind before his arrival; however, he subjugated the "tribes of Kandābil" (ibid., 435), who had probably aided the ʿĪfāfs. Subsequently (704-11), Kandābil was occupied by Dāhrār, ruler of Sind, who appointed his nephew, Dhol son of Chandar, as the governor of "Budhiya" (Fathnāma, 94).

After the conquest of Sind, including "Budhiya",
by Muhammad b. al-KasIm in 92/711 (ibid., 121-4), the region of Kandabil became an administrative division of the Sind province and peace reigned, apart from occasional disturbances. In 101/720, the rebel sons of Muhallab reached Kandahel, regarding it as their last refuge, but their trusted ally WadA' closed the gates and barred their entry into the town; they died fighting outside the walls of Kandabil against the superior forces of HilAb b. Abwaz al-Tamlmi, who had pursued them relentlessly (see as-Muhallab. In 55/754 Kandahel was occupied by a group of Arabs, but they were ousted by HishAm b. 'Amr, governor of Sind. Some time in 222/837, another usurper, Muhammad b. Kbalh, occupied Kandahel, but 'l MrAm, then governor of Sind, attacked him, conquered Kandabil, and transferred the local chiefs involved to Kuzdar (BalAdhuri, FutA'I, 445). Firmly checking all disturbances, 'l MrAm brought lasting peace and prosperity to Kandabil. A century later it had developed into the central market-place of the Budha hinterland, where "the Budh people" sold their produce and obtained all their supplies (Istakhri, 105-6). Palm trees were planted later, and in the 11th-12th century Kandabil was a "big city, prosperous and pleasant, producing large quantities of dates" (Hudud al-'Adlarn, 123).

The city remained an administrative district of Sind, under the rule successively of the SumAmars, the Sammas, the ArgAmns and TurkAmns, the Moghuls and the Kalhora rulers [see SIND]. In the second half of the 9th/11th century Kandahel, then known locally as GandAv and associated with Sibi province, became the capital of the LashAb Baluch confederacy in alliance with the Sammas. In 924/1518, ShAb Beg Arghun, en route for his conquest of Sind, sent a force to occupy "GandjAbh". It fell to the Moghul Emperor Akbar in 1574, was included in the sub-division (mahdA) of Fatbhpur (Ta'rIkI-i SInd, 130, 186, 235-6) and was governed from Bahkhkhar. Nadir ShAh, who had subdued the Kalhoras of Sind, transferred the KalCh district, including GandAv, to KalAt in 1870 and thereafter (1740-1955) it became part of the khanate of KalAt, political capital of the KalCh district and the winter resort of the khans of KalAt.

The city wall, repaired by MurAd (an able officer of the Kalhoras) in the early 18th century, was still intact in the 19th century, but is now dilapidated and in ruins.

**KANDAHAR, a city in southeastern AfghanIstAn (in modern times giving its name to a province) situated in latitude 3°27' N. and longitude 65°45' E. at an altitude of 3,460 ft. (1,000 m.), and lying between the AfghanArd and GhOrB Rivers in the warmer, southern part of Afghanistan. Hence snow rarely lies there for very long, and in modern times the city has been favoured as a winter residence for KAbuls wishing to avoid the rigours of their winter (see J. Humlum et al., La geographie de l'Afghanistan, etude d'un pays aride, Copenhagen 1959, 142-2; Ibn BAt'tIla, iii, 84, likewise recorded in the 8th/14th century that the inhabitants of GhAnA moved to KandAhel for the winter). Since it is one component of the triangle KAbul-Kandahel-HArat, possession of which gives military control of Afghanistan, and is also at the end of a route via the modern railhead of Caman to Quetta and northwestern India, Kandahel has been of strategic and commercial importance all through recorded history. Even in the Stone Age, the inhabitants of the nearby settlements of Mundigak and Deh Morasi Ghundai (4th-2nd millennium B.C.) traded with northwestern India, eastern Iran and the Eurasian steppes. In Achaemenid Persian times, the region of Kandahel was possibly to be identified with the Achaemenid satrapy of Harahuvat; in the Persepolis Fortress tablets (c. 500 B.C.) there is more than one mention of the issue of rations for journeys between Susa and Kandaraqh (R. T. Hallock, The evidence of the Persepolis tablets [= ch. from the Cambridge history of Iran, iii, Cambridge 1971, 13, 29).

In Hellenistic times, the region of southeastern AfghanIstAn was known as Arachosia, and the town of Kandahel itself is probably to be identified with the mptoporqai 'Apa/'Apa of, e.g., Isodore of Charax (on the problem of the city's ancient name, Alexandria of Arachosia or Alexandria of Kandahel, see G. Pugliese Caratelli and G. Garbini, A bilingual graco-aramean edict by A'rekon, Serie Orientale Roma xxix, Rome 1964, 19-22). Then as now, Arachosia was famed for its grapes; the Indian author Kautilya (4th century B.C.) speaks of Harahuraka as a place whence wine was obtained. However, Greek rule here can only have lasted some 25 years, 330-305 B.C., for in the treaty between Seleucus I and Chandragupta, see G. Pugliese Caratelli and G. Garbini, op. cit., one in Greek in 1963 (see Schumberger, Une inscription greco-arameenne d'A'rekon, in CRAIBL (1964), 126-40) and an Aramaic one also in 1963 (see A. Dupont-Sommer and E. Benveniste, Une inscription indo-arameenne d'A'rekon provenant de Kandahel (Afghanistan), in JA, cxlvii (1958), 1-48, and Caratelli and Garbini, op. cit.), one in Greek in 1963 (see Schumberger, Une seconde inscription greco-arameenne d'A'rekon, in CRAIBL (1964), 126-40) and an Aramaic one also in 1963 (see A. Dupont-Sommer and E. Benveniste, Une inscription indo-arameenne d'A'rekon provenant de Kandahel (Afghanistan), in JA, cxlvii (1958), 1-48, and Caratelli and Garbini, op. cit.)

The name Kandahel is the ancient name of the ancient city of Kandahel, among the old city of Kandahel, including one in Greek and Aramaic discovered in 1958 (see D. Schumberger et al., Une bilingue graco-arameenne d'A'rekon, in JA, cxlivii (1958), 1-48, and Caratelli and Garbini, op. cit.)
possible that the name was transferred southwards to Arachosia by some migration of Gandhārans; there are stories, retailed by Chinese Buddhist pilgrims, of the Buddha's begging bowl being preserved in Kandahār (at a later date, it was shown in a Muslim shrine outside the city), brought thither by Gandhāran Buddhist refugees.

The actual site of Kandahār has varied at different periods of history. The old city, abandoned since the time of Nādir Shāh, lay 3 miles (5 km.) to the west-south-west of the modern city, at the foot of a rocky spur called the Kātyūl, the site being now called the shahr-i kuhna. Here archaeology has revealed a walled city, clearly dating back to Hellenistic times, and successively occupied in the ensuing Buddhist and Islamic periods (see Fussman, op. cit., 33 ff.).

Very little is known on Kandahār in the Kusān period, but under the rule of the southern branch of the Hephthalites, the Zabuls (see HAYĀṬILA), Kandahār fell within their kingdom (see R. Ghirshman, Les Chroniques-Hépatilates, Cairo 1948, 104 ff.). In the Umayyad period, Arab raiders penetrated into the region of Kandahār after their occupation of Sīstān and their establishment of a bridgehead of Muslim arms at Bust [q.v.]. Arabic sources call the region around Kandahār al-Rukhkhad (see Acchasia); the name survives today in the site of an Islamic settlement now called Tepe Arugh or Zamindawar; it was the centre of a powerful local dynasty who bore the title of Zumbils, epigoni of the southern branch of the Hephthalites; down to the Saʿfārīd period (later 3rd/9th century) they constituted the main obstacle to the spread of Islam in eastern Afghanistan. Baladhuri records that the governor of Sīstān under Muʿawiya, ʿAbbād b. Ziyād b. Abī Saʿīd, led a raid against Kandahār and captured it after bitter fighting; the poet Ibn Mufarrig probably accompanied the expedition, for he composed an elegy for the Muslim dead (these verses, not related to any specific occurrence by Ch. Pellat, Le poème Ibn Mufarrig et son oeuvre, in Mélanges Massisqou, Damascus 1956-7, ii, 217, can therefore be pinned down to ʿAbbād’s expedition). Baladhuri mentions the characteristic high caps (kaldan-i tūs) of the Kandahāris, and although his Arabic text is somewhat ambiguous here, it seems that ʿAbbād now re-named the town ʿAbbādiya after himself (Baladhur, Futūḥ, 434, repeated in Yākūt, Būdān (Beirut 1374-6/1955-7), iv, 402-3; cf. K. Fischer, Zur Lage von Kandahār an Landverbindungen zwischen Iran und Indien, in Denner Jahrbücher des Rheinischen Landmuseums in Bonn, clxvii (1967), 192-3, and Marquart, Erānšahr, 270). But Muslim control must have been thrown off by the time ʿAbbād was recalled from his governorship in 61/1260-1; the name of ʿAbbādiya is heard of no more, and at the time of the Muslim dāfolc in Zamindawar in 79/698 (see C. E. Bosworth, ʿUbaidallāh b. Abī Bakra and the "Army of Destruction" in Zābulistān (1979/36), in Ist., 1 (1973), 268-83), there was no Muslim-controlled territory east of Bust.

In this early Islamic period, Muslim authors tended to reckon Kandahār as part of the province of Sind (e.g., Ibn Khurraḍādjudhī, 65, and Yākūt, loc. cit.; Yaʿqūbī, Būdān, 281, tr. 90, links Kandahār with Sind also), probably because the indigenous religion of the people of Zamindawar, the cult of the god Šāh, was considered as related to Indian faiths. In the reign of the ʿAbbāsids caliph al-Mansūr there is mentioned a campaign by the governor of Sind, Hīshām b. ʿAmr al-Taḥlabī, against Multān, Kashmir and Kandahār, but Marquart, following Reinaud, identified this Kandahār with the classical Gandhāra on the upper Indus, and in particular, with Ψυχίνη, capital of the Buddhist pilgrimage places of the Buddha's begging bowl being preserved in Kandahār (at a later date, it was shown in a Muslim shrine outside the city), brought thither by Gandhāran Buddhist refugees.

However, Marquart commented how infrequently the name of Kandahār in Afghanistan appears in early Islamic sources. More commonly mentioned as the main centres of the region of Zamindawar are the towns of Panjwāy (al-Rukhkha), said to be “the name of a region, and Panjwāy is its capital”) and, then, one day’s journey further on from Bust, Tīgnābād. Ancient Panjwāy was apparently situated on the road from Kandahār to modern Panjwāy, according to Mir Husain Shah, Panjwainī-Fanjuwaī, in Afghanistan, xvii/3 (Kabul 1962), 23-7; cf. Le Strange, 346-7. The exact site of Tīgnābād, mentioned by Djuwainī in the 7th/13th century and appearing on an 18th-century European map as Tecniabād, is still unknown (see Fischer, op. cit., 191-2). Marquart thought that al-Rukhkhad, the "two Rukkhadiyān", mentioned in the account of a raid into the region by Hārūn al-Rashīd’s governor Ṣīsā b. Ṣallī b. Māhān, referred to these two places Panjwāy and Tīgnābād (Masʿūdī, Muraḏjī, viii, 127, cited in Erānšahr, 272). It is certainly these two towns which are mentioned in sources from the Ghaznavid and Ghurid periods (e.g., Gardīzī, Bayhaḵī and Dīḏgānī), but there is no doubt that Kandahār itself continued to exist and to flourish. The Islamic old city of Kandahār, in whose remains one can clearly discern the classical eastern Islamic division of a citadel (kāfār, khandizī), a town proper within the walls (madīna, shahrastān) and suburbs (rabād bārān), probably developed during this time (cf. Fussman, op. cit., 39-42).

With the destruction of the Ghaznavid centre of Lāšḵkāri Bāzār, Kal’a-yi Bīst by Ṣalāḥ al-Dīn Djiḏhuṣūz in 545/1150 (see GIORDANI), the name of Kandahār comes back into prominence and is henceforth mentioned continuously. In 680/1280 Kandahār was conquered by Ṣamḥ al-Dīn II b. Ṣukn al-Dīn Kart, the vassal ruler in Harat for the Ilkhanid Abaka (B. dhūrūn), the characteristicians (hāḏūrūn) of the Ilkhanid Abaka (B. Spuler, Die Mongolen in Iran, Berlin 1955, 158). Timūr conquered it and bestowed it on his grandson ʿIr Rūḥ al-Muḥammad in 785/1383. In 821/1418 Kandahār became part of Sūyūrghānīsh b. Shāh Rukh’s appanage, and in the later 9th/15th century it appears as a minting-place for Husayn Mīrza Bayḵārā of Harat (875/1470-912/1506). It was under this latter ruler’s lordship that the Ardabīlī ʿAbd al-Nūn Beg added the region of Kandahār and the adjacent parts of what is now northeastern Balūcistān, sći. Sībī, Mustang and Quetta, to his other territories and made Kandahār his capital. This eventually led to conflict with the Timūrid descendant Bābūrs, who was carving out for himself a principality on the Indo-Afghan fringes. Bābūr captured Kābul from Ḥujj al-Nūn’s son Muḥān in 910/1504, and Muḥān was allowed to fall back on Kandahār. However, Bābūr felt that his hold on the Kābul River valley would be insecure whilst the Arghunids remained in eastern Afghanistan, so he attacked Muḥān and his brother Shāh Beg in Kandahār in 913/1507-8. Nevertheless, Shāh Beg was able to obtain Shāyḵbānd help and return. Kandahār was not finally captured from him till 928/1522, after a drawn-out but intermittent siege (exaggeratedly enumerated in the sources as of five years’ duration), the city’s strong fortifications preserving it; Shāh Beg now retreated southwards permanently to Sībī, Quetta and Sind (Mīrza Muḥān-
The Mughals did not enjoy unchallenged possession of Kandahar for long. After Bābur's death it was held by his son Kāmrān Mīrzā, but was also coveted by the vigorous and aggressive Safavid state in Persia under Shāh Ṭahmāsp I. After prolonged warfare with the Ozbegs, the Safavids had fallen heir to most of the Timūrid inheritance in Khurasan, being in firm control of Harat after 934/1527-8; they accordingly wished to consolidate their position by the addition of Kandahār. Kāmrān Mīrzā held the city against Safavid attacks in 941/1534-6. In the inter- nal disputes of Kandahār and his half-brother Humayūn [q.v.], the latter was in 950/1543 forced to take refuge with Shāh Ṭahmāsp. In 952/1545 Humayūn and a Persian army took Kandahār, but a month later Humayūn turned on his Persian allies and seized the city for himself. In 965/1558 Ṭahmāsp recaptured it from the Mughal Emperor Akbar, and the latter did not regain it till 1003/1594-5. The Persians again took it from Dīhāngrā b. Akbar in 1031/1622, and after ten years' reversions to Mughal control it passed in 1058/1648 into the hands of Abbās II, remaining with the Safavids till 1111/1700. The Safavid province of Kandahār also included the southerly districts of Mīnsk, Sībī, Kākār, etc.; at various times in the 10th/16th century it was governed by royal princes of the Safavid house (cf. K. M. Röhrborn, Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhun- derti, Berlin 1966, 12-14, 35-6, 42). It is from the mid-11th/17th century that we have a drawing of the walled city of Kandahār as it existed before Nādir Shāh's destructions, given by J. B. Tavernier in his Travels; he passed through Farah, Kandahār and Kabul on his way from Isfahan to Āgra (the picture is reproduced in Fischer, Zur Lage von Kandahār, 149).

The end of Safavid rule in Kandahār came at the hands of the Ghilzays [q.v.], an Afghan tribe who had settled in the vicinity of Kandahār on lands left vacant when Shāh Abbās I had moved a considerable part of the original Abdali [q.v.] occupants to the Harat region. In the course of the 11th/17th century, the Ghilzays had generally supported the Safavids cause rather than that of the Mughals, but the leader of the Hōtak clan of the Ghilzays, Murāwīs, was now rebelled against the Safavids, and in 1121/1709 declared his independence, though he contented himself with the title of ḫāqān, "reign". On his death in 1127/1715, Murāwīs was buried in Kandahār, and his grave was, until recently at least, regarded as a source of baraka or blessing, despite its being overshadowed by that of Ahmad Shāh Durrānī (see below). Murāwīs's son Māhmūd (d. 1137/1725) consolidated his power, and it was from Kandahār that the Ghilzays streamed westwards into Persia and overthrew the decrepit Safavid monarchy (see L. Lockhart, The fall of the Safavid dynasty and the Afghan occupation of Persia, Cambridge 1958). However, the Ghilzays were unable to build a lasting state in Persia out of their conquests, and in 1150/ 1738 their original centre of Kandahār was lost when Nādir Shāh [q.v.], with support from the Abdālīs of Ilārār, captured it after a lengthy investiture (Shaw- wāl 1150/1738, 1-Ka'da 1150/February 1737- March 1738; Lockhart, Nādir Shāh, London 1938, 114). Kandahār was at this time apparently called Husayn- ābād after the city's Ghilzay governor Husayn Sūltān. Nādir now destroyed the "Ghilzay fortress", meaning here the whole of the walled city and not just the citadel. Today, the walls of the Islamic city are somewhat reduced in height, Nādir's destruction being aggravated by the depredations of local seekers of building materials, although as late as A. Le Murr's time, substantial remnants of the triple enceinte were still visible (see his Kandahār in 1879, London 1880, 245-6). Nādir built a new military encampment, Nādirābād, to the southeast of the old city; the camps were marked by walls inscribed with the names of both Nādirābād and Kandahār, but the former was abandoned on his death in 1160/ 1747 (see Lockhart, Nādir Shāh, 120).

The development of the present-day city of Kandahār is connected with the replacement of Ghilzay power in the area by that of the Abdali Afghāns, for Nādir (in whose army Ahmad Kān Abdālī had been prominent) allowed the Abdālīs to return to their original home. After Nādir's assassination, Ahmad established his power in eastern Afghanistan. He founded a new city of Kandahār to the east of the old one, enclosing it with a wall and making it his capital; the city was named Ahmad Shāhī and this name, together with the epithet Ashraf al-bilād, "most noble of cities", appears on the coins which he minted there (see Ahmad Kān Durrānī). He was buried there, and Elphinstone reports that 40 years after his death his tomb was much venerated by the Abdālīs or Durrānīs, and that a right of sanctuary existed at it (An account of the kingdom of Caubul, London 1839, ii, 132).

Under the Durrānī Amirīs, Kandahār still remained liable to vicissitudes. In the civil warfare among Ahmad's grandsons Sara Shāh, Māhmūd and Shudūd al-Mulk pursued the city from one to the other; the Bāarakzay amir Dūst Muhammad [q.v.] became unchallenged ruler in Kābul in 1241/1826 and transferred the capital thither, leaving his brother Kūhandil Kān as governor in Kandahār. During the latter's governorship, Shāh Shudūd [q.v.], of the line of Sādūzay Durrānīs dispossessed from control of eastern Afghanistan, had endeavoured to reconquer Kandahār (1250/1834) during the First Afghan-British War, Shāh Shudūd temporarily became amir of both Kandahar and Kābul (1255/ 1839). In the Second Afghan War, Kandahār became for a few months in 1297/1880 the centre of an independent Afghan state under a member of the Sādūzay family, Sādūzay Shāh 'Ali. But after the attempt to seize Kandahār made from Harat by 'Abd al-Rahmān Kān [q.v.]; for a detailed account of all these events, see Afghanistan, v, History.

The modern city of Kandahār had a population estimated in 1962 at c. 120,000, and the province of which it is the capital had in 1969 an estimated population of 724,000. The whole area round the city is a rich agricultural one, supplying the colder regions of northern Afghanistan, and also Pakistan, with fruit and vegetables; water is brought to many parts of this agricultural hinterland by a complex system of underground channels or kāris or the nearby hills (see kānār). In the 1960s Kandahār acquired an airport of international dimensions, and the roads connecting it with Kābul and Harat were metalled. As opposed to the capital Kābul, Kandahār is in the centre of a strongly Pashto-speaking region, and has thus had an important rôle in the govern-
mental policy of encouraging that language; it was, for instance, in Kandahar that the Pashto propagandist society *Wish Zalmyán, "Awakening Youth"*, was founded in 1947. It has nevertheless lagged behind the capital in social and educational progress. Holdich remarked on the tolerance towards foreigners of Kábul compared with the fanaticism of Kandahár (*The gates of India*, London 1910, 377). In connection with this, Kandahár was the scene of anti-government riots in 1959, primarily caused by grievances over taxation, but also involving an element of conservative protest at the permissory abolition of the veil for women.

**Bibliography:** Given substantially in the article. For earlier history, the two works of K. Fischer, *Kandahar in Arachosien*, in *Wiss. Zeitschr. der Martin-Luther-Univ., Halle-Wittenberg, Geschichte-Sprachwissenschaft*, vii/6 (1958), 1151-64, and *Zur Lage von Kandahar* ..., in *Bonner Jahrbücher* ..., clxvii (1967), 129-232, are valuable. For the Islamic and modern periods, see the bibliography to *Afghanistán*, v. History, and scattered references in the standard histories of Afghanistán by, e.g., Fraser-Tytler and Masson and Romodin. For the 19th century onwards, the accounts of travellers, diplomats and soldiers (e.g., Elphinstone, Masson, Bellew, Le Messurier, Holdich, etc.) contain much relevant information.

**KANDAHAR** (Deccan), locally often spelt Kandhrär, Kandhar to distinguish it from its illustrious Afghan namesake, is a plains fort and the surrogate of Nikki. Having been sent by his father to fight against the king of Niampangou, he was welcomed with so many gifts that he revealed the purpose of his mission; unable therefore to return to Nikki, he settled in Kandi, his mother’s homeland, where he fought against brigands and pacified the whole region. He gave himself the name Mo (*"elder brother"* in Bariba), which was corrupted to Mo by the local Mokoče. The seventh ruler, Guezere, was granted the insignia of authority by Nikki—a drum, covered with human skin, which was beaten with two human bones, and a commander’s baton which was provided with a new leather cover every year. The most celebrated of the subsequent rulers of Kandi was Zibiri II (1911-29), who helped Geay, the administrator, to quell the revolt of 1917.

Since there were five generations between the first ruler and the 18th, it appears that the installation of the first Saka in Kandi occurred during the early decades of the 19th century. Although the first migration of the Bariba from the Niger was set in train by the invasion of the Muslim conquerors, hostility to Islam largely disappeared. Contact with islamiﬁzed groups of Fulani led to the islamiﬁzation of Bariba villages. In the town of Kandi, islamiﬁzation appears to have been more rapid on account of the visits there by Hausa or Diérma merchants.
KANDIYA, Ottoman name of a town on the north coast of Crete, the Herakleion of antiquity, which was captured by the Ottomans in 1080/1669 after a twenty-seven month siege by the grand vizier Köprülümkâde Fâdîl Ahmed Pasha, this event marking the end of the struggle to wrest Crete from the Venetians which had been waged intermittently since 1055/1645.

The mediaeval Islamic name of the island of Crete, al-Ibrîtîsh [q.v.], was not known to the Ottomans, nor were they unaware that Crete had once before formed part of Dâr al-Islâm (cf. the post-conquest historical excursus in Silahdâr, Ta’rîkh, i (Istanbul, 1928), 530-5, which draws largely on the K. al-Rawd al-mâ‘atir of Ibn ‘Abd al-Mu’tamîm [q.v.] (wrongly attributed by Silahdâr to a certain ‘Abd Allâh b. Wâhîb); on Şhâhib al-Din Nûwaryî; and, for the 10th/16th century, in the Babriyye of Piri Re’is). In common usage, however, the Ottomans preferred the forms Giritî and the metropolitan Giritî (the “en-trenched” fortification set up on the site by the first Muslim conquerors) > Gk. χελβδας (accus. χελβδακας) > Venetian Candica or Cantiga (13th century) > (by false etymology) Candia (15th century) > Candia, although commonly used (with variants: ia Candie, etc.) in western sources during the entire period of Venetian and Ottoman rule to denote the island as well as the town, was used by the Ottomans to denote only the town and its encircling walls (hal‘-yi Kandiya) and the metropolitan sandjak which was dependent on it. Locally, among the Greek population, the name Khândak passed out of use after the Byzantine reconquest and was replaced by Megalokastron, or Kastron, the Castle par excellence (also occasionally found in 17th century western sources: Castron), which usage continued until the officially inspired revival of the ancient name of Herakleion, which the town has borne since the establishment of Greek rule in Crete at the end of the 19th century.

The fortress of Kandiya capitulated to the Ottomans on 5 Rabî‘ II 1092/2 September 1669; after the handing over of the fortress and its contents, and the ceremonial entry of Ottoman troops, a truce was concluded between the two commanders on 9 Rabî‘ II/6 September. The history of Kandiya in the period from the conquest to the temporary occupation of Crete by Muhammad ʿAll Pasha in 1821—i.e., the years of more or less undisputed Ottoman rule—is obscure. For the immediate post-conquest period Ottoman historical and literary sources, most accessibly reproduced in Râhid and Silahdâr, and the vigorous account given by Ewliya Celebi, combine eyewitness accounts of the surrender of the fortress and its immediate “Ottomanisation” (sc. the conversion of the churches and other public buildings to Muslim use) with texts of the more formal jehân-nâmes and diplomatic correspondence engendered by the occasion. Cf. also the Kanun-nâme for Kandiya, drawn up in 1081/1670 (text in Barkan, Kanunlar, pp. 350-3).

Both Muslim and western sources agree that the damage caused to the town and the fortifications by the prolonged siege was considerable. Despite repairs put in hand by Fâdîl Ahmed Pasha before his departure, and official attempts to encourage the inhabitants of the hinterland to settle in the town, the signs of depopulation and devastation remained visible for many years. An interesting byproduct of the destruction was the export to Venice or Zante of timber from the ruined houses. Described as “Cyprus wood”, it was used for the manufacture of chests or cabinets, which found a ready market in England.

The Ottomans had entertained high hopes for the riches to be garnered from Crete after the conquest of Kandiya: “a second Egypt”, as Ewliya Celebi called it, but these hopes, particularly for Kandiya itself, were not to be realised. Shortly after the conquest the population was estimated at “not above 100,000, with Greeks and Jews”, and Canea (Hanya) was ca. 1680 spoken of as “much better inhabited than Candia” and as the main centre for the trade of the island.

Perhaps the most important reason for the steady economic decline of Kandiya during the Ottoman period had little to do with its change of masters, being in fact the progressive siltling up of its port. Already in the 1680s it was described as having “not water enough for ships of any considerable bigness” and as being largely choked with rubbish washed into it from the town, despite the initiative of a French merchant in bringing “an engine” from Marseilles to clean it. At this time, galleys were still being repaired in those bays (“arches”, göz) of the Arsenal which had survived the siege, but no new construction of ships was carried on there.

There seems to be little to distinguish Kandiya in the 12th/18th century from other Ottoman provincial centres of similar rank and function. Authority was vested in a pasha of three years’ tenure (khândîk); appointed triennially; real power obviously resided in the local military forces. These, in mid-century, apparently consisted of the 6,000 or so Turks who were able to bear arms, for, according to Richard Pococke, “all the Turks belong to some military body”. The upkeep of the local military establishment was provided for from the ḥârâṣ and gümûrûk receipts, with the exception of the pay for the Janissaries, which was remitted from Istanbul.

Throughout the 12th/18th century, and into the nineteenth, Kandiya steadily lost ground to Canea (Hanya) as a port and commercial centre. The necessity of transhipping cargoes into small lighters offshore, and the character of the town as a garrison centre and seat of a pasha, together conspired to encourage particularly the economically-dominant Marseilles merchants and their consulate to settle at Canea. Although Kandiya remained, with its still splendid Venetian monuments and broad streets, the capital of the island until 1855, its day was long past. In the last decades of Ottoman rule its trade, largely in olive oil, soap, raisins and wine, amounted only to some 20% of that of the island as a whole, while administratively it sank to the level of a sandjak under the charge of a mutassarîf. With the rising tide of Greek nationalism, the Muslim population of Kandiya, which ca. 1889 had been estimated at 17,000 out of 24,000, shared the same fate as their co-religionists in other parts of the island.

With the abandonment of Ottoman rule, and through communal strife, emigration and population transfer, Kandiya had, by 1923, ceased to exist as a Muslim town.

KANDI — KANDIYA
KANDIYA — KANEM

KANDŌRI or kandūra or kandūrī a Persian word meaning a leather or linen tablecloth; in Hindustān this word means also a religious feast held in honour of a venerated person like Fātima. In this latter meaning the word has been imported, apparently, from India into the Indonesian archipelago. In Acheen the word is unchanged, while in Java it is slightly altered into kēndfūrī or kēndfūrā; and may be noted that nowadays the more usual terms in Java are sadekā or sadekā, from the Arabic sadakā, sīamān, from the Arabic salāmāt, or hādījāt, a well-known Arabic word, meaning need, want of a man's sustenance which give rise to it are numerous, for instance: dhakār, or the word meaning a leather or linen tablecloth; in Hindu-Arabic, dhikrs, or dhikrs, are sadekā, sedekah, or dhikrs, from the Arabic dhikr, prayer, the commemorative ones by the kandūrī, or kandūrī should have a religious character; the poor must be invited, forbidden things should be avoided, but the strong local 'iddat is always prone to look for means of effecting a compromise. Every complete kandūrī, especially those in commemoration of deceased relatives and those given on the anniversary of a saint, is sanctified by means of recitation of the Qurān, azrāk or prayers; popular superstition, however, regards such kandūrīs as consisting of actual offerings of food to the deceased. Almost every kandūrī is opened by a prayer, the commemorative ones by the do'a kwbur. In Acheen some months are called kandūrī with a second word indicating the food the sacred meal consists of.

(Ph. S. V. Ronkel?)

KANEM (A. Kanim), today the name of a prefecture (capital Mao) in the republic of Chad. It is bounded in the north by Borkou, in the east by Batna, in the south by Chari-Bagarmoss, in the southwest by the department of Lac and in the west by the republic of Nigeria (population 170,000). Its borders do not correspond exactly to those of the region which was one of the most ancient kingdoms of Africa and stretched, according to the most widely accepted view, as far as the caravan route from Kawar (q.v.) to Lake Chad in the west, to Babr al Ghazal (q.v.) in the south, to the depression of the Eguel in the east, and in the north to a line drawn from Belgashipari to Birpo by the lake. The most characteristic topographical feature of Kanem is the existence of numerous sand dunes running N.W. by S.E., separated from one another by hollows several hundred yards broad and sometimes four or five miles long. Dunes and depressions are specially marked in the northern part. The hollows, which are given the name of wad (sedah), are dry except during the rainy season, when ponds are formed in the deepest parts; their bottoms consist of soil impregnated with natron. Below this, to a depth of 3 to 30 feet, lies a vast waterbearing stratum. The climate of Kanem is that of tropical regions. The rains are unequally distributed and diminish from south to north. The date-palm grows wild in many of the wads. It even forms a regular oasis at Mao. Cultivation is limited to the area around the villages, built on the slopes of the dunes. The most common crop is the millet, to which may be added wheat, beans and cotton. The rearing of horses, cattle, sheep and camels is also a very important source of income for the inhabitants. The fauna is very rich and varied: the elephant, the rhinoceros, the hippopotamus, lion, buffalo and panther abound in Kanem proper and the ostrich, antelopes, gazelle and giraffe on the northern steppes.

The population is far from being homogeneous. The diverse elements which compose it belong some to the negro group and some to the Arab group. To the first belong the Kanembū, the Buddhama, the Kūrī; to the second the Ulād-Slimān and the Shōa; to the Tundjūr and Tubu are classed between the two. The Kanembū, descendants of the first settlers in Kanem, constitute basis of the population, upon whom they have imposed their language. They are dark grey (aarak) in colour and tall in stature. Industrious and peace-loving, they are settled and devote themselves to agriculture. They profess Islam and are fairly strict Muslims. In their midst live groups of individuals called Ḥaddād (in Kanembū dogos) who, although of the Kuri group, are not Muslims. Furthermore they have imposed their language. They are dark grey (aarak) in colour and tall in stature. Industrious and peace-loving, they are settled and devote themselves to agriculture. They profess Islam and are fairly strict Muslims. In their midst live groups of individuals called Ḥaddād (in Kanembū dogos) who, although of the Kuri group, are not Muslims. Furthermore they have imposed their language. In the course of last century. The Buddhama and the Kūrī inhabit the islands of Lake Chad. The Buddhama, who occupy the northern archipelago, live by fishing, cattle-raising and the cultivation of millet. They have, for the most part, remained fetish-worshippers. The Kūrī, on the other hand, while living the same sort of life as the Buddhama, are completely islamized.

The Ulād Slimān who came from Tripolitania and Fezzān in the middle of the 19th century, speak Arabic. Nomads and robbers, almost their sole means of existence was the slave trade and brigandage. The Shōa, long established in Kanem, continue to use the Arabic language but their physical type has been altered by admixture with the black population. The Islam which they profess is fairly strict. Nomads in the dry regions near the desert, they have become settled in the moister southern regions.

According to the Arabic sources studied by Marquart (see Bibl.), the kingdom of Kanem seems to have been founded by the Zaghistā. Al-Bakrī (de Slane, 29) mentions the inhabitants of Kanem as idolators and al-Idrist (ed. Naples-Rome 1970, i, 29), who cites the town of Mānlām, seems also to consider them as such. Islam was introduced in the 4th/10th
century by the Tubu (Teda). This occupation seems to coincide with the accession to the throne of the Yanzin, who claimed to be descendants of Sayf b. Dhi Yazan (q.v.) and became the disseminators of Islam, which had been introduced by al-Hādī al-
"Uthmānī, the predecessor of the Yanzins. The Kitāb al-
Istibdār (ed. von Kremer, Vienna 1852, 32, tr. Fagnan, 61) places the conversion to Islam of Kanem about 500/1106-7. According to a Hausa legend, Abū Zayd al-Fāṣārī (end of 6th/12th and beginning of 7th/ 13th century) preached Islam in Kanem and Bornu. Another tradition refers the introduction of Islam to the end of the 5th/11th century, under Sultan Omé (1085-97), who was probably assassinated during a pilgrimage to Mecca.

Sultan Selma (Abd al-Dhājjil) (1195-1220) enlarged the kingdom; his son Dunama I (1222-59) further extended it to Fazzān and Waday and in the west as far as Niger. During the latter’s reign, some Muslims from Kanem founded a Malik school in Cairo (between 640/1242 and 650/1252), and in 657/1257 an ambassador was sent to the Hafsid court in Tunis. The soi-disant descendants of Sayf remained in power as long as the kingdom existed. During a troubled period beset with the So and Būlala revolts, four kings of Kanem fell in campaigns against the Būlala. Their successor, after a brief period, eventually conquered the country. Sultan Dāwūd (1377-85) was driven from his capital, Njijimi. ‘Umar b. Idris (796/1394-800/1398) had to retire to the west bank of Lake Chad, where one of his successors founded the kingdom of Bornu (q.v.).

In the 16th century, the sovereigns of the new state took the offensive against the Būlala. ‘Ali Dunama (876/1472-909/1504) and his son ‘Idrīs Katakarma (876/1472-909/1504) forced the Būlala to submit, by Muhammad al-Amin, ruler of Bagirmi (1817). Became in 1902 the sultan of German Bornu. ‘Umar Sawda, Ḥāšim’s eldest son, finally became in 1902 the sultan of Bornu. Kanem, which was included in the French zone of influence at the Anglo-French conference of 21 March 1899, was occupied between 1901 and 1905. European domination provoked the hostility of the Sanūsyya (q.v.), but the capture of their ṣūwāya at Bp’r Alali in 1902 weakened the rebels and their chief, Shaykh Ahmad, submitted in 1905.

AL-KĀNEMĪ (AL-HĀḌĪḤ MUḤAMMAD AL-ĀMĪN B. MUḤAMMAD NIKHĀM), b. 1189/1775-6 1253/1837, a scholar of Kanem origin who founded the Shehu dynasty of Bornu (q.v.). Brought up in Murzik (Fazzān) where his father had property, he received an Arabic education, travelled in Egypt and the Hijāz, and eventually settled in eastern Bornu. There, his learning and the following he acquired among Arab and Kanem tribesmen enabled him to play a decisive role in Bornuan politics at the time of the Fulani rebellion. Eventually the Mai Ibrāhīm (1818-46) came completely under his control, and he shook a sect in his own name in 1235/1819-20. As the power behind the throne of the Mai, he succeeded in defending the ancient emirate of Bornu from the serious dangers which faced it. His support of the Mai Dunama ended the Fulani rebellion. Although he was unable to prevent the establishment of Sokoto emirates in the old western dependencies, he
engaged the Sokoto ‘ulamah’ in a famous correspondence which seriously weakened their resolve to continue their warfare against Bornu, and he obtained the emirates of Katagum and Hadejiya by a great campaign in 1826 which carried him as far as Kano before he was forced to withdraw. He secured the eastern frontier south of Lake Chad by operations against Bagarmi in 1821-4. In the first of these he was assisted by the Ottoman ‘alim-makâm of the Fazzâni [q.v.], and he later maintained the Fazzân connection (of commercial importance to Bornu) by alliance with the Awlâd Sulaymân, who also helped him strengthen his influence in Kâném as a buffer against Wadâ‘i.

As well as this, he radically reformed the structure of government in Bornu, replacing the ancient and ineffective feudal levies of the Maîs by a new army of Kânemî infantry and Shuwâ Arab cavalry with a mamlûk officer corps owning personal loyalty to him. The old Kanûni sieâf-holding offices remained in existence, but fiefs were progressively transferred to supporters of al-Kânemî, and a new council of advisers dominated the government. These advisers, mainly non-Kanûni, represented a new and reforming element in Bornuan politics.

Al-Kânemî, though a scholar of considerable standing, was not a prolific writer, only one short work of fikûh, Nasîhât al-akhkhâm, and a poem, Nasîm al-sâlah, being certainly attributable to him. A number of his letters, however, are preserved.

(Abdullâhi Smith)

KÎNGÁWAR [see KINIKWÂR].

KÎNGHILÎ, KÂNGÜÎ, the name of a Turkish people living in mediaeval times in the steppes of Turkestan and south-western Siberia. We do not find mention of the Kânîgî under the Arab and Persian geographers and travellers of the 3rd-4th/9th-10th centuries, as we do of several other Turkish tribes. For Mâ‘mûd Kâghgâri, kângûî was not an ethnic designation, but was, as a proper name, “the name of a great man of the Kîlpêqâq”, and as a common noun, “a heavily-loaded cart” (Dîwân lîghât-at-turk, tr. Aâtây, iii, 379). In some early Turkish sources on the legendary origins of the Turkish tribes, e.g., the Ôgûn-Ômâna, we find the story that the tribe got its name from the man who first constructed and used these heavy wagons for transport across the steppes (see Marquart, Komaran, 163); but Sir Gerard Clauson thought it equally likely that the wagon used by the Turks got its name of kângûî, kângîhîlî from the fact that it was introduced by the Kânîghîlî people to the steppe Turks, see his The name Uygur, in JRAS (1953), 147-8, and An etymological dictionary of pre-thirteenth century Turkish, 638.

The Kângilî are most frequently mentioned in the sources pertaining to the century or so preceding the Mongol invasions of the 7th/13th century, and are often spoken as part of the Kîlpêqâq federation, i.e., they belonged ethnically to the south-western group of Turkish peoples. They are also associated with the Kimâm [q.v.], themselves apparently one of the more ancient groups existing in the area. Concerning their habitat, Abu ‘l-‘âshî in his Sha’djâra-yi Tarâkîma retails a legend that the Kânîghîlî had a kâm, Gôk-‘Othîlî, whose centre was on the Yayik or Ural River (Barthold, Four studies, iii. A history of the Turkman people, 132), but by the beginning of the 7th/13th century they and the Kîlpêqâq were also close neighbours of the Mongol Bayan on the Irrîsh (idem, Zweif Vorlesungen über die Geschichte der Turkmen Mittelasiens, 151, Fr. tr. Histoire des turcs d’Asie Centrale, 118). Minorsky read a passage in one of the manuscripts of Dîrzî-

jânî’s Tabâhî-sî nûsûrî, where there is mentioned a punitive expedition into the steppes in 645/1248 by the Khârazm-Shâh’s ‘Âlî al-Dîn Muhammad, as referring to “Kâdir Khan Yughûr, ruler of the Kânîghîlî Tarars”, whose lands stretched far north into the region of perpetual twilight in summer (see Huddûd al-‘âlam, 309). It seems that the Kânîghîlî nomadised over an extensive area of western Siberia, but came as far south as the Sîr Darya and northern fringes of Transoxania, where Dîwûynî mentions them several times in his story of the irruption of the Mongols into Transoxania. Kânîghîlî and Karluq [q.v.] had been amongst the rebellious troops of the Kârâ Khândî ruler, and their unrelulous had led the latter potentate to call in the Kârâ Khâtây, with disastrous results to his line (see Kârâ Khâtây).

At the time of the Mongols’ appearance, the Kânîghîlî had a settlement called Karakûm on the lower Sîr Darya, not far from Lâmbâta (I. 373), as the place to which the Merkit lêd after Cîngî Khân had defeated them and the Bayan on the Irrîsh in 1208; it was also the place where in 617/1220 the Mongol general Cîn Temûr rested before going on to occupy Dîjand (Barthold, Turkestân down to the Mongol invasion?, 361-3, 370, 415). Many Kânîghîlî tribesmen obviously formed part of the Khârazm-Shâhî armies confronting the Mongols, and they suffered heavy losses when Buqjârâ and Samârcând were stormed by the Mongols; there seems to have been some dynastic connection between the Khârazm-Shâhs and the Kânîghîlî, if Dîwûynî’s report that Sûltân Dîjalî al-Dîn’s mother Terken Khâtûn was a Kânîghîlî is true (see Dîwûynî, tr. Boyle, i, 91, 106, 121, ii, 370, 465, and Barthold, op. cit., 415); Nasawî, however, makes Terken Khâtûn from the Yayûk or Ural River (Barthold, iii. 309). It seems that the Kânîghîlî were not massacred by the Mongols must have melted into the Turkish hordes making up a large proportion of the Mongol armies; western travellers to the court of the Mongol Khâns like John of Plano Carpinî and William of Rubruck mention them as the Chogtâi and Cangle respectively. Thereafter, they disappear from recorded history. They can hardly have been touched by Islam, indeed, the only reference to their religious beliefs is that the Mongol general Tolûy Khân or Ulûgh Noyan employed a Kânîghîlî versed in the art of using the yâx or rainstone (i.e., he was a shaman) to conjure up rain during his campaign against the Chinese in 628/1231 (Dîwûynî-Boyle, i, 193; Boyle, The successors of Genghis Khan, New York and London 1921, 37).

Bibliography: in addition to the references given in the article, see especially Marquart’s detailed discussion of the Kânîghîlî in his Über das Volkstum der Komanen, in Abh. G. W. Gött., N. F., xiii (1914), 163-72.

(Albert F. Bosworth)

KANGKHYER [see KANKHYER].

KANGRÀ, the Nagarkot of Muslim historians of India, occasionally mentioned, is identified as to Kôt Kangrâ, is also the headquarters of the tâkštî of the same name in the Indian Panjûb. Kangrà lies between 30° 5’ N. and 76° 16’ E. on the northern slope of the
low mountain ranges which run through the district, facing Dharamsāla, a fine hill resort in summer, and commands a view of the verdant Kangra valley below.

The pre-Mughal history of the town is not definitely known. It was, however, a stronghold of the Kaṭār and one of whom, Sansar Cand I, is mentioned in a Sanskrit inscription of c. 1430 A.D. found in the temple-wall of Devi Bādreshṛ, the local fire-deity. This historic inscription was unfortunately destroyed in the severe earthquake of April 1905.

Firighā describes Nagraṅk while recounting the exploits of Fīrūz Tughluq (cf. Brigg's tr., i, 454-5). The fabulous riches of the town of Nagraṅk had earlier tempted Māhmūd of Ghāzna, who in 399/1008 overran the valley, captured the fort, which stood on the lofty ridge south of the town and was surrounded on three sides by extremely steep and inaccessible hills, and is reported to have carried off as booty an incredible amount of gold and silver, jewels, pearls, diamonds and rubies. However, neither Sudjan Rāḥi Bhandārī, the Hindu historian of the reign of Awrangzīb, nor Muhammad Aslam Ansari, the author of Fūdiddr of Nurpur and the rebellious chief was pardoned and the rebellious chief was pardoned and was restored to the line of the dispossessed Rādīpūt princes of Kangra. In 1221/1806 the Gurkhas defeated Sansar Cand, who had attacked Bilaspur and obtained possession of the valley. They perpetrated scarcely credible atrocities on the population. In 1224/1809 Kangra was captured by Ranḍīt Singh, Sansar Cand's overlord. It passed to the British in 1826/1846 after the first Sikh War. During the military uprising of 1857, some disturbances took place in and around the valley but these were soon firmly suppressed.

Kangra now forms part of the Indian Republic; its sacred temple of Bādreshṛ is visited by thousands of pilgrims every year. Awrangzīb is said to have brought a canal here from the river Beas; when a burning torch or taper was cast into the water, the flames were not extinguished (cf. Muhammad Aslam Ansari, Farbat al-Nāṣirin, extracts, Karachi 1972, 222-3).

The terrible earthquake of April 1905 resulted in irreparable damage to the fort and temples as well as harm to other buildings of archaeological importance. The place, apart from being a hill-station, abounds in game including several species of pheasants, partridges, quails, snipe and deer. Mango grows wild in abundance, but the fruit is poor. The handful of Muslims living in the valley, mainly members of the lower class, were expelled during the communal disturbances of 1947 in the wake of partition.

A. S. BAZMEE ANSARI

History of the Kalhoras, in prose and verse, undertaken at the command of Ghulam Shah Kalhafa, (Rieu, iii, second volume, containing his humorous and satirical verses, many of which are extremely lubricious, contains what may be regarded as his more serious work. The circumstances of the compilation of the Tufyfat al-kirdm, a general history of the 12th/nineteenth century in 1202/1787, lives of saints and Sufi poets is divided into twelve chapters in honour of the Twelve Apostles (Ms. in Topkapi Sarayi, Emanet Khazlnesi, f. 5 5a) merely repeats the information found in Djevdet Pasha, Ta’rikh, Istanbul 1309, v, 234, which was itself taken from the history of the wa’k-nu’as of Edib Efendi; the brief notice on him in Siybdrar-zade Mehmed Emm (‘All Emm, no. 795, f. 576) is incorrect. Ali Emm, no. 794, 163-4) does no more than quote six ghazels and one na‘t from his poetry. The most recent study of Kani is in the anonymous article in the IA, vi, 158-9, to the bibliography of which should now be added Istanbul Kitabhaneyi, Türke tce Yazma Divanlar Katalogu, ii, Istanbul 1967, 862-6. (J. R. WALSH)

KANI, Mi‘ALL SHER, historian of Sindh, son of ‘Izzat Allah al-Husayni al-Shirazi, was born in Thatta, the capital of Sind in the Mughal and pre-Mughal period, in 1440/1727 and died there in 1792. In poetry he acknowledged as his teacher Abû BAKR, a prominent Ottoman poet and prose stylist of the 12th/18th century. He was a native of To kad, and although Ebu ‘I-Diyâ gives the date of his birth as 1112/1712, this conflicts with Edib Efendi’s statement that he was still a young man (new-diewdn) when he left for Istanbul. He received his education in To kad, where he also entered the order of the Meeweli dervishes, becoming the disciple (mûrid) of Shaykh ‘Abd al-Wâhid. Fa‘Ìn relates that at some period of his early life he was employed as a secretary in Erzurum, yet it was from To kad that he accompanied Hekim-oghîl ‘Ali Pasâ to Istanbul early in 1168/1755 when the latter passed through that town on his journey from Trabzon to assume the office of Grand Vizier for the third time. In the capital he entered the Imperial Divan as a secretary, rising rapidly to the high rank of hâddjegdn. When, and under what circumstances, he left Istanbul for the Danubian provinces is not known, but from the early 1180s the letters in the Mi nge6e the show him to be in such cities as Silistra, Ruse (in Bulgaria), and Bucharest, serving as secretary to both of the wa’qas of Wallachia and ‘Abd Yege’s Hâddj Mehmed Agha (later Pasâ; cf. the djevât of Ahmed Djawid to ‘Othmân-zade Tâ’ib, Hadithat al-Wisâretâ, Istanbul 1271, 32). When the latter became Grand Vizier in 1196/1782, summoned him to Istanbul; but once here Kani’s disrespectful attitude so angered his master that it was only through the intercession of the reis ul-kirdtâ Khayri Efendi that he escaped being put to death and was sent instead into exile on the island of Lemnos. The date of his return to Istanbul is unknown, but he died there in Rabî’ II 1206/Dec. 1791 and was buried near the türbe of Feridün Pasâ in Eyyüb. A portrait of him with the vâhid Alexander is said to hang in the Pelev Museum in Sinaia, Roumania.

Kani’s poetic work is represented by two divâns, both of which were collected posthumously. The first, and most important, was compiled by the wa’k-a-nu’as Khalll Nörl Efendi on the instructions of the reis ul-kirdtâ Mehmed Râshid (most probably during his second tenure of this office, Dhu ‘I-l-Qa’da 1206-Muhabarram 1209/July 1792-Aug. 1794 and contains what may be regarded as his more serious work. The circumstances of the compilation of the second divân, containing his humorous and satirical verses, many of which are extremely lubricious, have not been determined. Kani’s poetry is of such uneven quality that one should be cautious in accepting general appraisals of its value. Certainly there is throughout an intrusive facetiousness, a fondness for word-play and an unconventional recourse to the vernacular which often obscures the meaning; but there is, too, that same verbal inventiveness and freshness of imagery that marks his prose, and which must have had the charm of novelty to his cultivated contemporaries.

Kani is generally more highly esteemed as a prose-writer than as a poet, and in the personal letters which are included in his Mi nge6e the he does, indeed, show a highly individual style, and is himself presented as a personality of irrepressible wit and insouciance (Bosdeck). The Mi nge6e the, in the main, is a collection of the official correspondence written while he was secretary to Vehmen Mehemet or the voivods of Wallachia, the letters therein being grouped in accordance with the social station of the person addressed, and obviously intended to serve as models for this type of composition. Kani, also, enjoys the distinction of having composed the first phrase-book in Ottoman Turkish, the Bürüd-g Fûnân, divided into twelve chapters in honour of the Apostles (Ms. in Topkapi Sarayi, Emanet Khazlnesi, no. 1158). It was commissioned by Constantine, the Scarlet voivod of Wallachia, for the use of his brother (ti-i bursu’d-šârân oman Aleksandri Beg-zâde) and presents very interesting specimens of the formal polite language of the period. None of Kani’s works has yet been published, apart from a few extracts in anthologies.

Biographiy: Study of the Mi nge6e the could greatly supplement the biographical information found in Ebu ‘I-Diyâ Tewzik, Nûmûns-i edebiyât-i ‘Othmânîyye*, Istanbul 1239, 49-54, from which Gibb, Ottoman Poetry, iv, 159-74, derives. Of the teâşker-writers, Fa‘Ìn Efendi, Khâhmei al-egdr, Istanbul 1271, 352, gives some erroneous details of his life, while ‘Aref Hikmet (‘All Emm, no. 789, f. 55a) merely repeats the information found in Djevdet Pasha, Ta’rikh, Istanbul 1309, v, 234, which was itself taken from the history of the wa’k-a-nu’as Edib Efendi; the brief notice on him in Siybdrar-zade Mehmed Emm (‘All Emm, no. 795, f. 576) is incorrect. Kâni, and was sent instead. Asil Mutahhirkât (‘All Emm, no. 770, 163-4) does no more than quote six ghazels and one na‘t from his poetry. The most recent study of Kani is in the anonymous article in the IA, vi, 158-9, to the bibliography of which should now be added Istanbul Kitabhaneyi, Türkûcîcî Yazma Divanlar Katalogu, ii, Istanbul 1967, 862-6. (J. R. WALSH)

KANI, Mi‘ALL SHER, historian of Sindh, son of ‘Izzat Allah al-Husayni al-Shirazi, was born in Thatta, the capital of Sind in the Mughal and pre-Mughal period, in 1440/1727 and died there in 1792. His grave still exists on the nearby Makki hill. He received his education from local scholars, some of whom are mentioned in his Mâbâlî al-şüprî (Karachi 1957, 114, 150, 339, 359, 817). In 1715-1761 he was commissioned by the Kalhafa ruler of Sind, Ghulam Shâh ‘Abbâsî (1170-86/1757-72), to write a Persian history of the ruling dynasty on the lines of the Shâhânmâ of Firdawsi (q.v.), but this was never completed. Five years later he began compiling his Tuftat al-kirâm, which he finished in 1181/1767.

A born poet, Kani wrote many verses while still a boy of 12. In poetry he acknowledged as his teacher Mi‘Abû Turâb Haydar al-Dîn ‘Kâmil’, a great-grandson of Abû ‘I-Kâsim Namâkîn, a poet of no mean achievement and a nobleman of the times of Shâh Diâhân (q.v.).

The most important works in his large output in prose and verse are: (i) Tuftat al-kirâm, a general history in 3 vols., of which the last is mostly biographical and devoted to Sind (Lucknow and Bombay 1304/1886); (ii) Mabâlî al-şüprî (composed in 1174/1772, alphabetically arranged lives of the poets of Sind who wrote in Persian (ed. Karachi 1957); (iii) Mabîl Nâmâ o Bûstânn-i bañâr, a poetic description in prose and verse of the tombs and social scenes on the Makki hills, the necropolis of Thatta (ed. Hyderabad 1967); (iv) Tuftat al-ṣalâhîn-i tarikh (1202/1887), lives of saints and Sûf poets from the time of Muhâmmed to the close of the 12th/18th century in 12 mi‘yars (ed. Haydarâbâd 1968); (v) Ta’rikh-i Abbâsîya, an unfinished history of the Kalhfa, in prose and verse, undertaken at the command of Ghulâm Shâh Kalhfa, (Rieu, iii,
KANIK, Orhan Veli (1914-1950), Turkish poet who introduced major innovations to 20th century Turkish poetry. Kanik's early poems, published under the pen name of Mehmet Ali Sel, were formal lyrics written in traditional metres. After 1936 he adopted free verse, which had first been introduced in the 1920s by Nazim Hikmet (1902-1963). Kanik's first collection of poems, Garip (1941) also contained poems by his colleagues Oktay Rifat (b. 1914) and Garip (1947), Destan Gibi Yenis (1949).— sought to further the aesthetic principles set forth in the manifesto. His poetry, written in free verse without rhyme, utilized a straightforward style based on the natural rhythms and the idiomatic resources of colloquial Turkish, shunning conventional moulds and metres and avoiding the stereotyped metaphors which had characterized the work of most of his predecessors and some of his contemporaries. Kanik championed a form of poetic realism which often featured the man-in-the-street as the modern hero. His poems about the sea and the city of Istanbul are notable for mellifluous lyricism. Satire is a prevalent element in Kanik's poetry: some of his satirical lines have become proverbial among Turks. Kanik's later volumes—Vazgecemedigim (1945), Destan Gibi (1946), Yenis (1947), Kar9s (1949)—sought to reflect and address itself to the tastes of the masses. Kanik's complete poems were posthumously published in 1951 under the title Biiuin Siiiri, which had gone into eleven impressions by 1971. He was also a leading translator of French poetry and drama. In 1949 he published his poetic versions (in rhymed syllabic metres) of 72 selected anecdotes of Nasreddin Hodja.

KANISA (pl. kisata), synagogue, church, temple.

(i). Etymology and meaning. The word kanisa is the Arabicised form of the western Aramaic k*nisat (eastern Aramaic k*nishtâ), which means "meeting, assembly". Some Arab lexicographers (Ibn Manzûr, al-Fîrûzbâdî and al-Zâbîdî) give this etymology, but others (al-Khafâfî, al-Bustînî) derive the word from the Greek ékklesia, as does the 4th/10th century Coptic writer, Ibn al-Muqaffa, (cf. J. Assafal, Die Ordnung des Priestertums, Cairo 1955, 3). The word kanisa is not found in the Kur*an, unlike its synonym bû'a (pl. biya*), which appears once (XXII, 40). On the other hand it is found in hâdîth, archaic poetry, capitulation treaties made by the caliphs and their generals with the inhabitants of conquered cities, and also in papyri.

As used by Muslim authors, historians and geographers, the word kanisa designates equally the cultic place (muta'abbad) of the Jews (synagogue), of the Christians (church) and of the pagans (temple).
In the work of Christian writers, kanisa means both the assembly of the faithful and their meeting-place. In Bible translations, both it and itsa are used indiscriminately for the two Greek words άγραναι and συναγωγή, or the two Syriac words ʿiddā or ḵanāsī. The relative adjective is kanasi or ḵanāsī, "ecclesiastical" (al-Sifr al-khanāsī = The Book of Ecclesiastes).

(ii). The Christian building. Despite some differences depending on periods and rites (Chaldean, Syrian, Byzantine, Copt), all churches are built on much the same plan, whether in Mesopotamia, Syria, Palestine or Egypt. The eastern church is rectangular in form, always orientated towards the east, and is divided into two main parts, the sanctuary and the nave.

The sanctuary (kaykal) or Holy of Holies (Kuds al-aqdas) is separated from the nave in the Chaldean or Syrian church by a wall with two doors, and in the Byzantine or Coptic church by a marble or wooden screen with three doors. A veil (ṣarīr) hangs over the main door. In the centre of the sanctuary is the altar (maḏbah), surmounted by a ciborium (kubbah), except in the Chaldean church, where the altar is placed against the eastern wall. A lamp (kandil), which must be kept burning night and day, is kept in front of the altar. In the Chaldean church, at the far end of the sanctuary, in the apse which forms the eastern wall, is found the bishop's throne (kursi); the Chaldean sanctuary, which is topped by a dome, has no apse. In all rites, entry to the sanctuary is strictly forbidden to the laity. At the left of the sanctuary is the diaconicon or sacristy (bayt al-maʿmudiyya), at the right the baptistry (bayt al-maʿnaw), both covered by domes. The position of these two places relative to the sanctuary may be reversed.

The nave (ṣabn) includes a varying number of bays. In Chaldean and Syrian churches the aisles (minassas) are situated in the anterior bay, where in Byzantine and Coptic churches the apse is found (khsars), often covered by a dome. The Chaldeans and Syrians place the pulpit (kamāl) in the central bay, on the left side is the site of the ambo (aṃbīt) in Byzantine and Coptic churches. On the dais, in the choir on the pulpit two lecterns (karraṭa) are placed. The front of the nave is reserved for men and the rear, formerly separated by a wooden screen, for women. The nave may be preceded by a narthex on the western façade or bordered with a gallery on the north or south side.

In all rites, the church building is consecrated (laḏqān), and the dedication of the Church of the Resurrection in Jerusalem is celebrated on September 13. Oriental church symbolism is particularly rich, each part of the building having its own spiritual significance (cf. J. Perier, La pele précieuse, in Patrologia Orientalis, xvi, 58-70, 159-68).

After the Muslim conquest, the Christians were forbidden from building any new churches; all they could do was repair and restore existing buildings, in which theory they were permitted to keep. In fact, however, over the centuries numerous churches were confiscated and converted into mosques, or even destroyed (cf. A. Pattal, Le statut legal des non-musulmans en pays d'Islam, Beirut 1938, 174-203).

KANIZSA (Turkish Kânizhâ), a notable Hungarian fortress dominating the region between Lake Balaton and the River Mur. Kanizsa stood amidst marshes: "caenoos palustrique loco sita est, fluviolo stagnante, et nullis coercito ripis, sed magis late diffuso ac carectis, multaqua aino et arundine impedito, endique cincta" (Istvandios, 774). The Ottomans conquered the fortress in 1009/1600 after a wearisome siege, demanding the construction of approach roads across the marshes which were built of reeds and had to be renewed each day. Once taken, Kanizsa (with Szigetvár, Eszék, Siklos and Pécs) was entrusted to the care of Tiryakî Hasan Pasha. Alarmed at the loss of this important fortress, the Christians attempted to regain it in 1010/1601, but their attempts were foiled by the vigorous defence against them conducted by Tiryakî Hasan—a defence which became famous among the Ottomans and the details of which are recorded in the well-known Ghasawîl-i Tiryakî Hasan Pasha (cf. A. S. Levend, 99 ff.). Kaniza remained under Ottoman rule until the war of the Sacra Liga (1648-9), yielding to the Christian forces in 1651/1600 and then passing definitively into the control of Austria.

it seems that his mention of the powerful ruler of Djurfattan, whose ships traded with the Persian Gulf, 'Umnān and South Arabia, refers to the local ruler there (Rīḥā, iv, 82-3). Abūmad b. Māḏqid (wrote ca. 895/1490-90) certainly speaks specifically of the "Bay of Kannānūr" in his account of the Malabar coastline (G. R. Tibbett, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, 203, 457). In the 8th-9th/14th-15th centuries the dominant power in Malabar was the line of Hindu rulers in Kalikut (q.v. in Suppl.] (Calicut), the Zamorins, whose authority extended from Kannānūr in the north to Cochin in the south, and to whom the local Kolatirri Rādās in Kannānūr were tributary.

Islam must have come to Kannānūr with the arrival at an early date of Arab traders, one local tradition putting the origins of the family of Āli Rādās (Malayalam, "Lord of the Sea") at the beginning its name from its being admirals for the Kōlātirri, and these Āli Rādās were also heads of the local community of Malabar coast Muslims, the Māppillas (q.v.) or Moplahs, who were perhaps originally built round a nucleus of Arab merchants, but with increasing numbers of indigenous Malayali adherents; Kannānūr remains today an important Māppilla centre. From ca. 1500 onwards, the Kōlātirri Rādās of Kannānūr also exercised suzerainty over the Laccadive Islands (q.v.), and in the mid-16th/17th century they granted these to the Āli Rādās as a ḍāgīr (q.v.) or assignment in return for annual tribute; Kannānūr Māppilla merchants monopolised the lucrative coir trade of the Islands until the revolt in 1786 of the islanders against their harsh exploitation. The connection of the rulers of Kannānūr with the Maldives Islands (q.v.) comes also from an early date, with the king of the islands being tributary to the Rādās by ca. 1500.

The arrival of the Portuguese in South India was at first welcomed by the Kōlātirri Rādās, who hoped to throw off the control of Kalikut. Vasco da Gama was at Kannānūr in 1498, and Cabral in 1500, and on his second voyage to India in 1502, da Gama made an agreement with the Rādās and established there a stockade and a garrison of 200 men. The first Portuguese viceroy, Francisco d'Almeida, established four forts on the Malabar coast, at Anjediva Island, Kannānūr, Cochin and Quilon, the Kannānūr stockade being erected into a proper defensive position, Fort St. Angelo, in 1505, probably on the site of an existing stronghold. In 1506 and 1507 the Portuguese garrison there fought off naval attacks by the Zamorins of Kalikut; Almeida made it the headquarters for his fleet, and it was from Kannānūr that the destruction of the combined fleets of the Egyptian Mamluks and of the Zamorins at Diw (Diu) in Shawwāl 944/February 1500 was organised.

The Dutch captured Kannānūr and Cochin in 1663 and took over the Portuguese position on the Malabar coast. But by the end of the 17th century the trade of the Dutch East India Company in Malabar declined as that of the English East India Company grew, and the Kannānūr fort was reduced to one tower. Hence in 1771 the Dutch sold Fort St. Angelo and other forts to the Āli Rādās. In these decades, the latter showed themselves as generally unfriendly to the British East India Company, intriguing with the Dutch and French and consistently supporting the expansionist policies of Haydār Āli (q.v.) (Hyder Ali) of Mysore. The Bibī of Kannānūr (sc. the female representative of the Āli Rādās line) further supported Ħaydār Ālī's son Tīpū Sultan; hence in December 1783 Kannānūr was occupied by a British force under Col. MacLeod, and again captured in December 1790 by General Ralph Abercromby, when the Bibī submitted and 5,000 of Tīpū Sultan's troops surrendered. An agreement made in 1796 with the Bibī left her Kannānūr and the Laccadive Islands in return for an annual assessment of Rs. 15,000, an arrangement which continued in force down to the 20th century.

Kannānūr eventually became part of the Madras Presidency, with Kannānūr as the chief town of the District of Malabar. Its importance and size grew in the 19th century, especially as it was also till 1887 the military headquarters of British forces on the west coast of South India, and a cantonment was laid out, with Fort St. Angelo separating it from the Māppilla Old Town. In 1861 the Laccadive Islands were sequestered from the Bibī on account of misgovernment, and again in 1875, this time permanently. In modern India, Kannānūr is now in the northernmost part of Kerala state, and since the administrative re-organisation of 1958-9 has formed one of the eight constituent districts of that state; according to the Census of India 1961, Vol. vii, Kerala, Pt. iii/A, 40, 118, Pt. iic, 152-3, the population of Kannānūr district was then 1,760,294 (including 1,237,254 Hindus, 418,832 Muslims, 123,575 Christians, and 551 Jains), and that of Kannānūr town (municipality plus cantonment) 48,960.

**KANNAS (A.), lit. sweeper, is a term synonymous with kassākh; other words used in the Arab Orient for the same occupation are sammād and zabābāl, which denote "dung collectors" or scavengers who collected garbage, such as animal dung, to be used as fertiliser. The kannāsīn, the sanitary workers, swept public squares (riḥāb) and other places such as prisons (ṣudāsīn), dungeons (madābībāl) and latrines (hawībāl), and transported garbage in carts or by other means to places outside the cities. The earliest known report in Islamic literature of scavenging is a tradition collected by Abū 'Ubayd b. Sallām (q.v.), who noted that the indigenous Arabians (known to the Arabs as Ḥādā, sing. Ḥādā) cleaned a dung-hill at Bayt al-Makdis during the caliphate of ʿUmar b. al-Khaṭṭāb. The Ḥādā of Syria and ʿIrāk are reported as having been used occasionally as forced labour by the Umayyad government.

There is evidence to suggest that the kannāsīn and the kassākhān were organized into guilds throughout the ʿAbbāsīd period. Dībīr (q.v.) speaks of a certain ʿarif al-kannāsīn who was the chief of the scavengers living in the Karšī quarter of Baghālād in the 3rd/9th century. Al-Rāghib al-Īṣfahānī, writing in the 5th/11th and early 6th/12th century, also gives evidence that scavengers' guilds were found in Arab society during the later part of the ʿAbbāsīd period. The bulk of literary evidence relating to workers of the ʿAbbāsīd epoch gives the impression that the so-called "low crafts" such as those of the
dustmen, cuppers, weavers, leather workers, brokers and fishmongers, were stigmatized. Some of those groups of workers kept apart from each other and shared only a mutual dislike. In one anecdote, presumably not to be taken literally, a kannás was described as preferring to drink from a filthy pot for conveying human excrement than drinking from the clean cup of a cupper. A proverbial saying kanndsun was shared only a mutual dislike. In one anecdote, they are equally worthless. Similar attitudes prevail today among different groups of low-caste workers in India.

It is interesting to note a contrasting view on the status of scavengers presented by the authors of the epistles (rasā‘il) of the ʿIkhwān al-Ṣafāʾ [q.v.], who pleaded that the dustmen’s rôle in urban society was of greater public utility than that of the perfumeurs (ṣaffārūn). So the scavengers deserve honour (ṣara‘af), the ʿIkhwān writers argued, although there is no evidence that such logic had any influence on public opinion. The general contemptuous attitude towards the kannāsūn was not confined to the society of the Umayyad and ʿAbbasid periods; it is equally noticeable in Arab society under the Mamluks. Some Muslim jurists, while discussing the law of kafʿa [q.v.], stated that the kunnās are not acceptable as marriage partners by other groups in society. Scavenging therefore tended to be a hereditary occupation and the kannāsūn lived as a closed, endogamous group.

KANO, a city in northern Nigeria situated in lat. 12° N., long. 8° 30′ E. Its population was estimated to be 295,432 persons at the 1963 census. Kano State has an area of 16,630 square miles and an estimated population of 5,774,842.

History and Politics: Kano is reputed to have originated before the 4th/10th century as a pagan settlement at the foot of a hill said to be a hill, a large rock outcrop which dominates the present city. The traditional accounts of this early period suggest that the inhabitants adhered to an animist, spirit-possession cult similar to the bori cult which has survived in northern Nigeria to the present day, and that the cult head combined his priestly functions with those of a temporal ruler.

In the 4th/10th century the city was visited by “strangers” under their leader, Bagauda, who are described as having come from the north under pressure of famine in their own country. They settled in Kano with the consent of the indigenous inhabitants and then, by superior skills and cunning, established mastery over them. Whether these immigrants were Muslims is uncertain, although according to the traditional account Bagauda also bore the name Dāwūd. But they clearly did not belong to the indigenous cult and the Kano Chronicle (see Bibli. below) records that some generations passed before they became integrated into it. Their contribution to the development of Kano seems to have been that they set up a city state, with fairly clearly defined territorial boundaries and an administrative centre within the walled city, where previously there had existed only a stateless, hunting and primitive agriculturalist society living in scattered open hamlets and clearings in the bush.

After Bagauda, the first Islamic name to occur in the king-list is that of Osumanu Zannagawa, who reigned from 743/1343 to 750/1349 by the Kano Chronicle dating. According to the same source, his reign was followed by the arrival in Kano of the Wangarawa, that is Islamic missionaries from Mali, during the reign of Yaji (750-87/1349-85), but a recent account based on the discovery of a 17th-century chronicle of the Wangarawa (Muhammad al-Ḥaḍīḍ, A Seventeenth-Century Chronicle of the Origins and Missionary Activities of the Wangarawa), in Kano Studies, li [E], suggests that this event took place in the 9th/15th century and not in the 8th/14th century. Other evidence also tends to support the view that the 9th/15th rather than the 8th/14th century was the point at which an Islamic presence became firmly established in Kano, even though some indeterminate Islamic influences may well have been abroad at an earlier date. For instance, it is between 793/1390 and 813/1410 that the quilted horse armour (Arabic al-libd, Hausa hididi) together with mail shirts were introduced, a fact which suggests contacts with Islamic North Africa. Also, between 824/1421 and 841/1438 a “prince” and his followers arrived in the city from Bornu, a kingdom where Islam had already been established since, reputedly, the 5th/11th century. This was followed by the opening of trade relations with Bornu. By 856/1452 camels are said to have appeared in the city and slave-raiding in the country south of Kano had become a profitable occupation of the aristocracy. All of this suggests that Kano had, by the middle of the 9th/15th century, become involved in the trans-Saharan caravan trade and this, of course, offers a reliable indication for the chronology of islamization.

The next major landmark in this chronology is the arrival in Kano of the well-known ʿAbū ʿAbd Allāḥ Muḥammad b. ʿAbd al-Ḵarm b. Muḥammad al-Maḡīlī al-Tilmāsāni (d. 909/1504), a Muslim ʿālim and missionary from North Africa. This personality became the focus of the Islamic tradition in Kano, and indeed in Hausaland as a whole. He is credited with introducing the ʿŠarīʿa and Sulūm and indeed all things Islamic into the city. Whether he was a follower of Sūnūn or Maḡīlī. No doubt he was personally important; but the true significance of his presence in the city is that it signals the time when, as a result of increasing involvement in the Saharan trade complex

KANNAS — KANO
and political contacts with Bornū, Kano became opened up to the surrounding Islamic areas of North Africa and Egypt. A further step on the way toward fuller islamization took place during Muhammad Rumfa's reign (867-904/1463-99). He is said to have introduced Islamic segregation of the sexes, the public observation of Islamic festivals and he also appointed eunuchs to office, thus possibly copying a practice common in the courts elsewhere in the Islamic world during the Mamlūk and Ottoman periods.

Kano's relations with the other Sudanese and Saharan states during the period before the Fulani dżihad are both involved and sometimes obscure. They are treated in Johnston (op. cit., Bibl.) and Høgben and Kirk-Greene (op. cit., Bibl.) and need only be reviewed in outline in an article essentially concerned with Islamic aspects. In the 11th/12th century Kano was probably subject to Bornū, to the extent of paying tribute. In the early 10th/16th century it was defeated by Songhai, but the native dynasty remained in power, paying tribute to Songhai but apparently otherwise undisturbed. Songhai control seems soon to have lapsed and later in the century Kano came under the domination of the Sokoto kingdom after a period of debilitating wars against its neighbour Katsina. Throughout the 11th/12th century both the city and the state of Kano were the targets for constant attacks by the warlike Kwararafa from the Benue area. During the first half of the 12th/18th century Bornū again became overlord of Kano, but its place was later taken by the Gobir kingdom, whose king, Babari (1155-84/1742-70), established mastery and levied tribute. These military defeats, however, seem to have had little detrimental effect on the wealth and prosperity of the city, while the rulers appear to have retained all their authority within their kingdom and to have increased in pomp and circumstance.

For instance, Babba Zaki (1182-90/1768-76) introduced a uniformed bodyguard of musketeers into his court and is described as having deliberately imitated the ways of the Arabs—in the first instance presumably the life-style of the Arab merchants resident in Kano, but through them the ceremonial and protocol of North African and Egyptian courts. He ruled as an able but ruthless despot. There is evidence of some factional divisions in his court, however, while the account of the reign of one of his near predecessors, Kumbari (1143-58/1732-43), tells of popular resentment against excessive taxation. These scraps of evidence may point to a state of affairs that brought about the events of the reign of Muhammad Alwalli (1195-1222/1782-1807), namely the successful Fulani dżihad in Kano, the expulsion of Alwalli and the installation of the first Fulani amir of Kano, Sulaymanu (1222-55/1807-9), who founded the Fulani dynasty. Kumbari ruled the emirate since that time. Sulaymanu was followed in 1235/1819 by Ibrahimu Dabo, a renowned warrior who earned the Hausa epithet Ci gari, "conqueror city". During the following half-century frequent attacks on the city by the ousted Habe dynasty were defeated, while intermittent war was carried on against the Ningi pagans, a powerful group who still held an enclave on the southern border of the amirate which had not been pacified during the dżihad.

During the reign of the amir Usuman (1262-72/1846-55) the German explorer, Heinrich Barth, visited the city. He describes it as a thriving centre of trade, with a market plentifully stocked with goods of European and North African origin. He also provided a sketch map of the city as it was at that time and estimated its population at 30,000 (op. cit., Bibl.).

In 1311/1893 a civil war broke out in Kano, occasioned by a succession dispute between two contenders for the throne, Yusufu and Tukur. Tukur, the nominee of the caliph in Sokoto, proved unacceptable to Kano, but at the root of the trouble lay Kano's resentment at Sokoto's interference. The civil war subsided on the death of the two principal protagonists but served to establish the limitations on caliphal authority. The tension between Sokoto and its powerful feudatory Kano has continued to be a factor in their relations ever since.

Kano figured prominently in the events leading to the British occupation of Hausaland early in the present century. It was visited at the end of the 19th century by the British missionary Canon C. H. Robinson and again early in the 20th century by a party of which Dr. Walter Miller was a member. Both gave somewhat unfavourable accounts of Islam and of the Kano administration, which probably contributed to the climate of opinion in the United Kingdom which made the occupation possible. On the eve of that occupation the amir of Kano, Aliyu (1312-21/1894-1903) gave asylum to the Magajin Keffi, the murderer of Sir Frederick Lugard's emissary, Captain Moloney. This provided Lugard with part of his justification for military intervention and in Dhu 'l-Ka'da 1320/February 1903 the city fell to a British force after a brief and ineffective resistance.

During the colonial period, Kano developed both as a centre of the newly introduced Western system of education and as the emporium of the new ground-nut trade upon which the economy of northern Nigeria came largely to depend. It was the locale of the School for Arabic Studies, an institution set up by the colonial government to train teachers of Arabic and the Islamic sciences in modern pedagogic methods. Abdulahi Bayero College, a college of Ahmadu Bello University, was also founded in Kano.

The city has always been, and still is, an important centre for Sūfī activities. Muhammed b. 'Abd al-Karim al-Maghīlī is traditionally supposed to have introduced Sūfism to Hausaland, and Kano and Katsina were the two centres he visited. It may be assumed that the Kādirīyya (q.v.) was the first of the jāriḳas to be established there and it is still probably the jāriḳa of the majority even at the present day. But the Tijānīyya (q.v.) are also strong, reflecting, perhaps, the rivalry with Sokoto referred to above. The Sokoto ruling family is identified with the Kādirīyya and indeed bases its claim to political authority largely on the sīsāla of Shehu Usman Dan Fodio (Uṣūmān b. Fodil) linking him to 'Abd al-Kādir al-Ǧīlāṇī. This is perhaps not unrelated to the fact that the former amir of Kano, Muhammed Sanusi, became at one time the official head of the Tijānīyya in northern Nigeria.

During the closing era of the colonial period, which saw the rise of European-style political parties in northern Nigeria, the two jāriḳas were deeply involved in the political struggle for power which the prospect of independence provoked. The Kādirīyya in Kano was, on the whole, identified with support for NPC, the party of the establishment led by the late Alhaji Sir Ahmadu Bello, a scion of the Sokoto ruling house, while the Tijānīyya tended to favour the northern Nigerian opposition party, NEPU, led by Malam Mainu Kano. While
the Kano ruling dynasty was bound by its essential interests to support NPC, the rivalry with Sokoto was by no means healed and in 1963 the reigning amir of Kano, Sir Muhammadu Sanusi, “resigned” under pressure from the central government headed at that time by the premier of the Northern Region of Nigeria, the late Alhaji Sir Ahmadu Bello. This event, symptomatic of the clash of interest between the traditional “given” authority of Sokoto arising out of the Pulani ḍirīkā in the early 19th century, and the rising economic and political power of Kano in a changing world, gave rise to agitation for an autonomous Kano state. This has, in some measure, been conceded by the present military administration.

These tensions, which were real and which at times manifest themselves in a violent fashion, should however be seen in a proper perspective. They were inevitable in a society that has a long and sophisticated political tradition. But at a social and cultural level the people of Kano, and indeed their rulers, shared, and still share, with those of the rest of northern Nigeria, including Sokoto, a strong sentiment of their common Islamic identity and a corresponding sense of solidarity.

Learning and literature: The tradition of Islamic literacy in Kano goes back to the late 9th/15th century ʿAlītim and Islamic missionary, al-Maghīllī, who composed a set of ṣafāwī for the benefit of Muhammad Rumfā, ruler of Kano from 886/1473 to 904/1499. Later scholars such as, for instance, ʿAbd al-Rahmān b. ʿUmar b. Muḥammad Ākīṭ and a certain ʿAbd al-ʻAzīz b. ʿAlī b. ʿAbd al-ʿAzīz b. ʿAlī b. Muḥammad al-Kaṣāfīr are said to have visited Kano shortly after al-Maghīllī, although the exact chronology of their visits is uncertain. No record of any composition from their pens survives but they may reasonably be supposed to have nourished the tradition of Islamic learning established in the city by this time. Later, ca. 937/1530, Makkāhī b. ʿAll b. ʿAlīgīt al-Bilbīsī resided in the city and it is likely that, through his acquaintance with the fiḥāb al-ʿĀkīṭī b. ʿAbd al-ʿĀlīm al-Anṣāmūnī al-Massūrī, he was a link with the Egyptian polyhistor, Djalal al-Dīn al-Suyūṭī (see AL-SUYUTI), at that time by the premier of the Northern Region of Nigeria, the late Alhaji Sir Ahmadu Bello. This is a typical versification on fiḥāb al-ṭawīl metre, giving great prominence to the miḥḍāj and displaying late accretional influences which seem to reflect his familiarity with the writings of Ibn ʿArabī and such later popular writers on this sense as al-Ǧhayṭī and al-Dādirī.

Another well-known literary personality who was a native of Kano and received part of his schooling there before settling in Salaga, northern Ghana, was Alhaji Umaru Salaga (b. ca. 1271/1854; d. 1353/1934). One of his well-known Hausa works is Wakar Nasara, the “Song of the Christians”, in which he gives an account of the British occupation of Hausaland as seen through Hausa eyes. Some also attribute to him the otherwise anonymous works Wakar Bagauda (see Bībīl.), and Bakandamiya, also a Hausa versification on the occupation, but these attributions are uncertain. He composed a number of works in Arabic as well as in Hausa.

Among mid-20th-century authors in the Islamic tradition the best-known is probably Alhaji Muhammadu Šan Amu, a writer of muḥāfīb in Hausa, whose long Hausa māzuwina with the Arabic title Mansūma fi bayān al-din is widely read in Northern Nigeria. Much of this Islamic writing consists of panegyric to ʿAbd al-Ḵādir al-Dīlabī and ʿAbd al-Tīḏānī. Typical of this genre is the composition of Malam Abubakar Atiku, a well-known member of the Tīḏānīyya in Kano, which bears the Arabic title, ʿAybat al-ḏubarkar, and is a macaronic poem in Arabic and Hausa praising al-Tīḏānī. An important part in the Islamic life of Kano City is played by the makaranan simi, the schools of higher Islamic learning. There are at least twelve substantial establishments of this type in Kano city, although in fact the total number is much greater than this, for any Muslim literate may set up such a school. In these institutions higher Islamic learning—ṣīkh, ṣadīq, tāfṣīr and such classical literary masterpieces as the Muṣallakāt, the Makāmot of al-Harīf and the works of Ibn ʿArabī—is taught. Kano is now well known for the excellence of its higher Islamic schools and is a centre to which students come from all over the western and central Sudan. The makaranan simi, which exist independently of the secular, state education system, foster a continuing and still vigorous tradition of Islamic scholarship in the city and it seems probable that Kano has now overtaken Katsina and Sokoto—both earlier centres of learning—as the focus of traditional Islamic education in northern Nigeria.

Bibliography: Two main sources for the...
history of Kano are available in English translation: First, "The Kano Chronicle", in H. R. Palmer, Sudanese Memoirs, iii, Lagos, 1928; an Arabic text of the chronicle is also preserved in Ibadan University Library, a prose work originally in Arabic, written down at an undetermined date but probably ca. 1298/1880 (see M. Hiskett, The Kano Chronicle, in JRAS (1957)), and quite clearly the record of a very old oral tradition; second, Hakkar Baganda, the "Song of Baganda", a Hausa verse chronicle which is also a 19th-century record of an ancient oral tradition, broadly repeating the account given by the Kano Chronicle but diverging from it considerably in its early chronology, for the Hausa text, English translation and critical commentary see Hiskett, in BSOAS, xxvii/3 (1964); xxviii/1 (1965) and xxviii/2 (1965). An important source in Hausa is Alhaji Abubakar Dokaji Kano, Kano ta Dabo Cigari, Zaria 1959, the history of the city according to local tradition. In addition to these primary sources an Arabic Ta'rikh Kano is listed by Adeleye (op. cit., below) under Ibadan, 82/212; an unpublished Arabic account of the Kano civil war by Muhammad Buhhari, vizier of Sokoto (d. 1528/1910) is preserved in the Nigerian National Archives, Kaduna; it has not yet been transcribed (Kaduna 4, 2, 30). An unpublished Hausa versification in praise of Kano and its notable personalities by Aliyu San Sidi, amir of Zaria from 1321/1901 to 1339/1920 circulates in Ms. in northern Nigeria; Alhaji Muhammad dan Amu (see above) has also written an unpublished verse history of the city and its surrounding villages, a copy of which is held in the author of this article's personal microfilm collection.

Among the accounts of the 19th-century European travellers that of Denham, Clapperton and Oudney, Narrative of Travels and Discoveries in Northern and Central Africa, London 1826, is the earliest and those of Heinrich Barth, Travels and Discoveries in Northern and Central Africa, London 1857, and P. L. Monteil, De St. Louis d'Tripoli (1957)), the Treaty of Faydjakbadd made in 1775 with the Naurabs allowed the British to garrison two places in his territories. From 1778 onwards, Kano was occupied by General Henry Havelock on 17 July and only lost again for ten days in November when mutineers from Gwalior took it temporarily (cf. Sir George Trevelyan, Caunpore, London 1894; P. C. Gupta, Nana Sahib and the rising at Caunpore, Oxford 1963). Lesser incidents worthy of note include the Plague Riots of 1900, when six policemen were killed by a mob which attacked huts in which plague victims were isolated, and the 1913 Mosque Riot, when there was a disturbance arising out of road-widening plans involving the demolition of a latrine attached to a mosque and 18 Muslims were killed (see M. Yanuck, The Kano mosque affair of 1913, in MW, lxiv (1974), 307-21.

Kano has since grown into the most populous city in Uttar Pradesh and one of the largest in India. Social contours of an industrial city: social survey of the city accorded to the 1961 census, 973,907, of which the vast majority were Hindus, and of the district, 2,381,353 (including 2,059,930 Hindus, 286,147 Muslims, 24,397 Sikhs, etc.); 1971 census preliminary estimate, city 1,151,955, district 2,992,533. Situated as it is on the Grand Trunk Road connecting Dilli with Calcutta, and at a nodal point of the north Indian railway system, Kano has been well-favoured to become the modern industrial centre of the present day, with extensive textile, leather, food processing and general engineering plants (cf. D. N. Majumdar et alii, Social contours of an industrial city: social survey of Kano, 1954-6, New York 1960). Kano now has a university which includes the Indian Institute of Technology. The surrounding Kano district forms an extremely fertile part of the Ganges-Djamna Doab, and has flourishing agriculture and forestry.

Bibliography: In addition to the references given in the article, see Imperial gazetteer of India, ix, 306-20, and District gazetteer of the United Provinces, Allahabad 1903-11. (C. E. Bosworth)
Al-Ghawri’s situation at the outset was precarious. Two of his predecessors were still living. A more serious threat came from the veteran royal mamluks (karânisâ), since their privileged status was weakened on the accession of a new sultan who would recruit his own mamluks. In the first month of his reign, al-Ghawri sought to anticipate trouble by ordering the mamluks of al-Âdil to go to Upper Egypt. Nevertheless, in Diwân 911 (4 May 1506), Sibay held Damascus until his death at the age of about sixty years old, and he had not played an outstanding part in the politics.

Al-Ghawri’s efforts to improve his forces and armament in the face of the growing external threat from the Portuguese, who were establishing themselves on the coast of India and seeking to exclude Muslim shipping from the Red Sea. In Diwân 912/1511, an expeditionary force was sent to assist Muhâmmad Shâh, the ruler of Gudjarat [q.v.], against the Portuguese. It included royal mamluks, awwal al-nâs, negro archers (more probably, arquebusiers) and Turks, under the command of the amir Husayn Murshid al-Kurdi, who fortified Jeddah [q.v.].

A revolt against the Sharif Barakât of Mecca, which broke out in 907/1505, was finally suppressed in 913/1506. An ominous new danger appeared in the Portuguese, who were establishing themselves on the coast of India and seeking to exclude Muslim shipping from the Red Sea. In Diwân 912/1511, an expeditionary force was sent to assist Muhâmmad Shâh, the ruler of Gudjarat [q.v.], against the Portuguese. It included royal mamluks, awwal al-nâs, negro archers (more probably, arquebusiers) and Turks, under the command of the amir Husayn Murshid al-Kurdi, who fortified Jeddah [q.v.].

Extortion, practised upon disgraced officials or after the death of rich persons, was another expedient to fill the treasury. The strain on the finances of the Mamlûk state was increased by al-Ghawri’s efforts to improve his forces and armament in the face of the growing external threat from the Portuguese, Shâh Ismâ‘îl and Sultan Selîm I. Al-Ghawri organized (from 916/1512) a unit armed with handguns. Since such weapons were dispised by the genuine mamluks, this Fifth Corps (al-fabaka al-khâmsa) was recruited from heterogeneous elements: Turkomans, Persians, awâlî al-nâs [q.v.] and local artisans. The Fifth Corps was a cause of tension between al-Ghawri and his giûlbân. Al-Ghawri also made a serious and sustained effort to build up a stock of artillery. He established a cannon-foundry, and was frequently present at the testing of the new pieces from 913/1507 onwards.

During most of the reign, Damascus was governed by Sibây, who as governor of Aleppo had rebelled in 910/1504-5, but had subsequently made his peace with al-Ghawri. Appointed on 7 Shawwâl 911/13 March 1506, Sibây held Damascus until his death at Mârdî Dâbîk. Apart from operations against the local Beduins, he led expeditions against Muhammad b. al-Ânâsî, the powerful mukhâdam of al-Biqa‘î (Mubârram 912/June 1506), the Band Lûm tribe in the region of Karak and al-Ghawri’s (Sa‘fawî) (918), and the chief of Hawrân, Ibn Sâ‘îd (Rabî‘ II 916/July 1510), the last two of which threatened communications with the Hijâz. In 917-8/1517-18, friendly relations with each of these were established. As Şâfawî and Ottoman power developed on the Syrian frontier, al-Ghawri sought to ensure the continuing loyalty of Sibây by the marriage of Sibây’s daughter to his own son (920/1514).

A revolt against the Sharîf Barakât of Mecca, which broke out in 907/1505, was finally suppressed in 913/1506. An ominous new danger appeared in the Portuguese, who were establishing themselves on the coast of India and seeking to exclude Muslim shipping from the Red Sea. In Diwân 912/1511, an expeditionary force was sent to assist Muhâmmad Shâh, the ruler of Gudjarat [q.v.], against the Portuguese. It included royal mamluks, awwal al-nâs, negro archers (more probably, arquebusiers) and Turks, under the command of the amir Husayn Murshid al-Kurdi, who fortified Jeddah [q.v.] against a Portuguese attack. Husayn, who, in combination with the fleet of Gudjarat, won a naval victory off Cawl (Ramadan 913/January 1508), was heavily defeated by the Portuguese near Dîl [q.v.] in Shawwâl 914/February 1509, and withdrew from the Indian Ocean.

Al-Ghawri was meanwhile striving to construct warships in the gulf of Suez. He was obliged to obtain materials from the Ottomans. A gift of timber, iron and powder from Bâyazîd II reached Bûlâk in Shawwâl 916/January 1512. When in Mubârram 919/3 March—April 1513 the Portuguese attacked ‘Adan [q.v.], al-Ghawri appointed Husayn Murshid governor of Jeddah, while a force of the Fifth Corps and royal mamluks was ordered to Suez, to protect the fleet in building there. After prolonged procrastination the Fifth Corps left Cairo in Rabî‘ II 921/August 1535. By that time about 2000 Ottoman sailors under the command of Selmân Re’îs were at Suez. An expedition by Selmân Re’îs and Husayn Murshid coincided with the fall of the Mamlûk sultanate and laid the foundation of Ottoman rule in the Yemen.

The rise of Şâfawî power threatened Mamlûk control of northern Syria. A crisis occurred in the autumn of 913/1507, when the Şâfawîs invaded the Dulgâdir
KANSAWH AL-GHAWRI — KANSU 553

(Dhu l-Kadr, [q.v.]) principality, at that time, under al-Dawla, a dependency of the Mamluk sul-
principality, at that time, under

Kansu; Szechwan and Shensi and in the west and north by

suchou (Kiuchuan); both towns are already men-

in the form Khamdiu (in the Mongol period Kamdju)

and Gardizi, the former

mentioned in the

in the form Khuddi (or Hsi-hsia)

dynasty (1322-1352) with the capital at Ninghsia
(Yinchuan). Rashid al-Din, in giving a list of the
twelve provinces (sheng, Chinese sheng) of China,
divides the Tangut region into two, with Kindjanfu
(now Sien, the capital of Shensi) and Kamdju (Kan-
chou) as their respective capitals. In actual fact,
Kanchou was the capital of Kansu; Kansu and
Shensi were then, as later, combined in a single
government, the only difference being that the
residence of the governor was then in the capital of
Shensi and not, as later, in the capital of Kansu. The
boundary between Kansu and Shensi was formed by
the Hwang Ho, so that Lanchou, the present-day
capital of Kansu, then belonged to Shensi. In
connection with Quenguifan (i.e., Kindjanfu, Sian)
Marco Polo mentions Prince Mangalay (d. 1280, the
Mangar of Rashid al-Din) who definitely as ruler of Tangut, while Rashid al-Din refers to his
son Ananda; according to Rashid al-Din, he was the
founder of Muslim dominance in this area. Born about
1270 (at the beginning of the 14th century he was
thirty years of age), he was brought up by Muslim
foster-parents; but it was only after the conversion
of the Il-Khan Ghazan (i.e., ca. 1295) that he openly
professed Islam. He converted the greater part of
his army, numbering nearly 150,000 men to Islam,
and the people of Tangut, except the peasantry, were
likewise converted. Taken to task by his cousin the
Great Khan Temur Öldjörtü (1294-1307) for his
conversion, Ananda remained faithful to Islam and after
a period of interruption was restored to his dominion.
In 1307 a party wished to raise him to the throne of
the Khánate, but he was put to death after the
success of a rival candidate, Temür's nephew Khey-
ghan (1307-1312). It was not until 1323 that Ananda's
son Örüg-Temür was appointed prince of Tangut.
As Marco Polo shows, there were already Muslims
in Kansu before Ananda's time; however, he says
nothing about the dissemination of Islam south
of the Hwang Ho. The Turkish-speaking Salar, who
live at the present day on the southern banks of that
river, are mentioned as living there as early as the
Ming dynasty (1368-1644) and described as unruly
subjects, although no Muslim risings are recorded
during this period. The story which reached Timür's
territories about 1358 to the effect that the founder of
the Ming dynasty had ordered the massacre of
some 100,000 Muslims and had completely eradicated
Islam in China finds no confirmation in any Chinese
source.

1. In the post-Mongol period. After the collapse of the

Yuan dynasty which took place in 770/1368,
Muslims in Kansu, as well as those of other provinces of China, were put under the rule of the newly established Ming dynasty, which, at the beginning of the new régime, adopted a discriminatory attitude against non-Chinese. It oppressed Hui-hui or Muslims, and generally speaking, the Hui-hui under the Yuan dynasty were obliged to settle in China, and began to be assimilated to the Chinese way of life through intermarriage with native Chinese women. They were physically and linguistically incised as time went by; Hui-hui under the Ming dynasty gradually changed their original, Islamic surnames to Chinese ones (e.g., from Muhammad to Ma, etc.), and adopted Chinese languages; nevertheless, they adhered strictly to Islam. This process also affected Kansu Muslims, with some characteristics different from those of China proper.

In the early Ming period there were many Muslims in Kansu, while some of them are reported to have returned to Samarkand, according to the Ming Shih-lu or the Veritable Annals of the Ming Dynasty. At Kanchou, Liangchou and Suchou there were some Muslims who had newly emigrated from Central Asian countries in the middle Ming period (Ming Shih-lu, sub anno 1527), and some from the Komul region, with which the Ming dynasty had had political relations. Apart from such Muslims, native Muslims originating from the Yuan period greatly increased in number and were distributed in south-eastern parts of Kansu as far as adjacent parts of Shensi. There were also Muslims in districts of Kung-ch'eng-fu, Chinchou, T'aochou and Kuyian in the Kansu Province, according to the Ming Shih-lu and local gazetteers of the Ming dynasty.

Under the Ch'ing dynasty, which succeeded the Ming in 1644, the situation of Muslims in Kansu, Ninghsia and Shensi changed little; however, we have much more information on the Kansu Muslims under the Ch'ing, as seen in the Ch'ing Shih-lu and other historical sources and local gazetteers of the dynasty. In the Ch'ing period, Kansu had one of the densest concentrations of Chinese Muslims. Chinese-speaking Muslims of Ch'ing China were generally called Hui-min ("Islamic people") in Chinese. The main habitats of Kansu Muslims were Kanchou, Liang-chou, Lanchou, Kuyian, Ching-chou, Hochou, Ching-yian, Piliang, Fuchiang, etc.; other places lived in Suchou segregated from the Chinese there. Though his description is in some parts ambiguous, we may conclude that there were Muslims at Suchou with which the Ming dynasty had had political relations. One Ma Ming-hsin, a native of Antung, Kansu, started to spread the so-called "New Sect" in 1762. This propagated a mystical ritualism characterized by: (1) loud chanting of religious songs, as opposed to the low chanting by the Old Sect or Old Teaching; (2) prayers with head-shaking and body movement in a dance-like manner—foot-stamping, hand-waving, and face turning up towards heaven; (3) belief in miracles, visions, apparitions of spirits, and omens; and (4) worship of Muslim saints and their tombs. Ma Ming-hsin was revered as the saintly founder of the sect. However, one cannot consider the "New Sect" founded by Ma Ming-hsin as a reform movement reacting against the traditional sects, generally called Ancient or Old Sects (K'w-pai, Chie-pai and K'w-hsing-pai).

In ca. 1760-80 the centre of the Hsin-chiao was at Hsinhia, a town near Hsining, where Hsin-chiao adherents quarrelled incessantly among themselves in the 1760s and 1770s; and in 1781, Ma Ming-hsin and Su-ssu-shih-san led an attack on the Muslims belonging to the Ancient Sect. Government suppression of sectarian strife led Hsin-chiao adherents to open rebellion against the Ch'ing dynasty in that year, and, though it was suppressed by the Ch'ing army, a second revolt broke out in 1793 at Shih-fang-pao, Kansu. Since the 19th century, major centres of Hsin-chiao adherents have been in Chang-chia-chuan, Kansu, and in Chi-chi-pao, Hsinghsia.

In 1862 a new revolt broke out at Ch'in-chi-pao, where Ma Hua-lung who came from the direct "apostolic" line of Ma Ming-hsin, maintained his quarters. Ma Hua-lung is reported to have been a mystical saint who was able to perform miracles; but his rebellion was suppressed in 1871 by the Ch'ing army. The mystic order of Ma Hua-lung was called Djahriyya from the 19th century onwards (D'Ollone); the headship of the Order passed to Ma Yuan-ch'ang, a disciple of Ma Hua-lung, who had his headquarters at Chang-chia-chuan, Kansu. Ma Yuan-ch'ang is mentioned by G. Andrew who visited him in the early 20th century; he died in 1920 during an earthquake which occurred in Kansu during that year.

Besides Hsin-chiao, another characteristic of the Sufism of Kansu Islam is the institution of meng-kuan. Meng-kuan, especially the Four Great Meng-kuan, was reported in Ch'ing sources for the first time in 1786; the Six Great Meng-kuan were also reported in 1943. They are (1) the Hui-fei-yeh sect, including Pi-chia-chang kung-pei, Lin-chia-chang kung-pei, etc.; (2) the Ka-ti-lin-yeh sect, including Ta-hung-pai, Yang-men, etc.; (3) the K'w-pu-lin-yeh sect; (4) the Sha ta-lin-yeh sect; (5) the Sze-ai-lo-lo-lin-yeh sect; and (6) the Che-ko-lin-yeh Djahriyya sect.
KANSU — KANTARA

According to the missionary D'Ollone, who made a study of aboriginal peoples in the borderlands of China, 1906-9, the tombs of three Islamic saints were revered among Kansu Muslims. "followers of Tomb Teaching". Thus, the Djahriyya sect of Kansu Muslims may be said to be one of meng-kuan, tomb-worshippers.

KANTARA, pl. kantārī, means in Arabic (1) bridge, particularly a bridge of masonry or stone, one of the most famous of which is that of Sandía (q.v.); also (2) aqueduct (especially in the plural), dam, and finally (3) high building, castle (similarly ḥāšālī = aqueduct from ḥāšāl = castellum; see kantārī); cf. TA, iii, 509; Dozy, Supplément, li, 412; de Goeje, BG, vi, 334; and particularly R. Geyer in SB Ak. Wien, cxliii/6 (1905), 114-9. The original meaning of the word "arch, stone archway" is found in the earliest Arabic lexicographers; cf. Dozy-de Goeje, Description de l'Afrique et de l'Espagne par Edrisî, 369, Divri (q.v.), a bridge of wood or boats, or the opposite of kantāra, which is of stone in time; however, the two words came to be used as synonyms (see Dozy, Suppl., i, 194).

No satisfactory explanation has yet been given of the origin of the word. The oldest reference is found in a verse of Tarafa (iv, 22; see The Diwans of the six ancient Arabic poets, ed. Ahwardi, 1870, 55). On account of this early occurrence of the word, Yāḏūt (iv, 187) considers the word to be genuine Arabic. But we may with considerable certainty regard it as a loan-word. Vollers and Geyer thought that it was borrowed from Latin or Greek. The former connected (ZDMG, li, 376; ZA, viii, 100-1) kantāra with the mediaeval Latin word centrum (French centre, arch, vault), while Geyer (op. cit., 118-9) sought the original either in κανθγής = basket, κανθάρια = wickerwork used in the making of roofs and buildings, or in κανθταρά, κανθταρόν = depository (cf. also κανθτάρα = rounding, curve), from which Vollers (ZDMG, li, 302) derived Egypto-Arab. khamjar. But all these explanations are to be rejected, because there are phonetic objections to them and they partly rely for the meanings of the words cited on obsolete, farfetched glosses; cf. for objections to these explanations, Fränkel in ZA, xix, 270-1, and Nöldeke, op. cit., 408. Kansu is most probably to be derived from the Aramaic, and, as Nöldeke, op. cit., thinks, in the first place from kēṯārā = hoop, arch (see Payne-Smith, Thesaurus Syriac., col. 3591; note specially kēṯārā in Bar Bahlul, Lexicon, col. 1768). The above-mentioned word gisr also comes from the Aramaic (Fränkel, Die aram. Fremdwörter im Arab., Leiden 1886, 285 and D. H. Müller in WZKM, i, 31), but can actually be traced back to the Assyrian or Accadian (cf. Meisner in ZA, ix, 269, and Zimmerm, Akkadische Fremdwörter, Leipzig 1915, 31).

Al-Kantara has survived in Spanish in the diminutives alcantarilla = little bridge, gutter and alcantarillado = arched aqueduct; see Dozy-Engelmann, Glossaire des mots espagnols et portugais dérivés de l'arabe, Leiden 1869, 47; Diccionario de la Lengua Castellana por la Real Academia Española, xiii, Madrid 1899, svv; J. Oliver Asín, Historia del nombre Madrid, Madrid 1959, index.

Al-Kantara and al-Kanṭārī are frequently found —sometimes with descriptive additions, e.g., Kanṭārī Fiṛawn—as names for places like quarters of a city (notably in BaghdaĎ) in areas where Arabic was, or is, spoken in the mediaeval or modern East. In his geographical Dictionary (iv, 180, 180-92, vi, 179-80) Yāḏūt gives a dozen places named al-Kantara and four called Kanṭarī (cf. also, for example, the indices to al-Ṭabarī, Annales, 759-60, and Ibn al-Athīr, Kāmil, xiii, 790). For the numerous districts of BaghdaĎ named after particular bridges under the Caliphate see the index to GUY le Strange, Baghid during the Abbasid Caliphate, London 1900, 368. Of the places named al-Kanṭara, the following are worthy of special mention:

1. An oasis on the southern slopes of the Atlas in Algeria at the exit of a narrow pass through which run the road and railway from Constantine to the desert regions; it is a station on the Constantine-Biskra line, 35 miles north of the latter. This, the most northern oasis in Africa, consists of three villages with about 3,500 inhabitants and possesses a very dense date grove. From its situation it was an important military station and, as Roman inscriptions found there show, settled in ancient times. It is presumably identical with the station Ad Calcem Herculis of the Roman itineraries (see Dessau in Pauly-Wissowa, iii, 1345). The name al-Kanṭara is derived from the Roman bridge, restored in 1862 by the French, which spans in one huge arch the ravine, the 150 feet wide Fumm al-Ṣahārā = the mouth of the Sahārā (so-called by the inhabitants), through which flows the Wād al-Kantara (cf., for example, Vivien de St. Martin, Dict. de Géographie Universelle, Paris 1879, i, 66 and Kobelt, Reiserinnerungen aus Algerien und Tunis, 1883, 322).

2. Al-Ḳantarā, a little town of great antiquity in the province of Cæces, district of Estremadura, in the province of Caceres (district of Estremadura) in Portugal, which flows the Wad al-Kantara (cf., for example, Vivien de St. Martin, Dict. de Géographie Universelle, Paris 1879, i, 66 and Kobelt, Reiserinnerungen aus Algerien und Tunis, 1883, 322).

3. A small town with a mosque in Egypt, on the Asiatic side of the Suez canal, half-way between Port Ṣaţf and Isma'iliation, a station on the railway connecting these two towns. It lies on a low narrow
KANTARA — KANUN
tongue of rising ground, which runs out between the
large Menzaleh lake in the north and the little Balafç
lake in the south. It is unlikely to take its name
from this "land bridge", however, but from a bridge
which already existed here probably in the early
Middle Ages.

The Arab geographer Ibn Fadl Allâh al-Umarî, who
wrote ca. 741/1340, mentions the arch of a
bridge, called Kantarat al-Dîsîr, near the old caravan
station of al-'Akûda, under which the superfuous
water flowed into the desert at the time of the Nile's
inundation. There was still a bridge here at the be-
ginning of the 19th century, built over a canal con-
necting the two lakes already mentioned. The modern
al-Kantara arose on its present site after the making
of the Suez Canal. The old settlement was a short
half-hour's journey to the east and is marked by the
mouth of ruins Tell Abû Sêfe (on the maps also
called Tell al-Abmar). This place may be regarded
as the key to Egypt, for it has always been used by
conquerors as the gateway to the Nile valley. Its
strategical importance led to its being occupied in
remote antiquity. Tell Abû Sêfe (with ruins of a
temple of Ramses II and remains of the Ptolemaic
and Roman period) marks the site of the ancient
Egyptian town of Zaru (7, s w), the capital of the
fountain district of Lower Egypt, which was
already a fortress in the time of the Middle Kingdom.

In the later classical and Byzantine literature it
appears as Sile, Sele (Selle); according to a Latin
inscription found here, it had a Roman garrison in
888 and was later also the seat of a bishop. In the
Middle Ages it was called al-'Akûda (on the name
al-'Akûda = "the bend", cf. DAVR AL-'AKûl), a name
which was temporarily supplanted by that of the
castle of al-Kusayr during the Mamluk period. In
which was temporarily supplanted by that of the
Akula (on the name al-

288 and was later also the see of a bishop. In the Mid-

strategical importance led to its being occupied in
conquerors as the gateway to the Nile valley. Its

KANTARA — KANUN

considerable remains exist at the present day;
according to Arab legend, it was built by Queen
Zenobia (Zaynab); cf. Fr. Müller, Studien über Zenob-
bia und Palmyra (Diss. Königsberg 1902), 14-15.

6. Kanûrî Fir'awîn ("Pharaoh's aqueduct"), a
great aqueduct in the south of Syria, which,
beginning at Dilli, at the western foot of the lava
plateau of Lejjû (west of Hawrán), runs in a south-
western direction for some sixty miles as far as
Mukûs (Gadara), providing many villages with
the necessary drinking-water in the summer months. It
is identified by Wetzstein—probably rightly—with
the Kanûrî mentioned by Hamza al-Isfahání (An-
ales, ed. Gottwaldt, 117). But the Ghasâûnd Djabâla
b. al-Hârîth, who reigned about 500 A.D., can hardly,
as Hamza says, be the builder of this marvellous
piece of work (cf. Nödeke, Die phasaßen. Fürsten . . .
in Abb. Pr. Ak. W., iv, 1887, 50). It certainly dates
back to ancient times. For further information see
Wetzstein, Reiseberichte über Hawran und die Tracho-
en, Berlin 1860, 123-5.

The diminutive Kuna'yi'ra (popularly Kûnîtra
or Kenêtri) is occasionally used as a place name,
e.g., a town in Syria in the Djawlân (Golân) district,
to the north east of Jordan (see Baedeker, Palestine
and Syria', 1912, 268; R. Dussaud, Topographie historique de la Syrie orientale (Paris 1927, 387), and also a newly established town in Morocco,
called Knîtra, then Port-Lyautey, then Knîtra again.
The town was first a disembarkation area, then a
fairly important port, on the River Sebou, some way
from its mouth. This port superseded the ancient al-Mahdiyya
situated on the mouth of the same river.

(M. STRACK*)

KANUN, pl. KAWmüN, Arabic derivative from
Greek xwîôv, which meant firstly "any straight
rod", later "a measure or rule", and finally (in the
papyri of the 4th and 5th centuries A.D.) "assessment
for taxation", "imperial taxes", "tariff" (Liddell and
Scott, revised ed., London 1940; for its meanings in
religious literature, see G. W. H. Lampe, A Patristic
Greek lexicon, Oxford 1961). The word was adopted
into Arabic presumably with the continuation, after
the Muslim conquest of Egypt and Syria, of the pre-
Islamic tax system (C. H. Becker, Islamstudien,
Leipzig 1924, 218-62; F. Lokkegaard, Islamic taxa-
tion, Copenhagen 1950, 118-20). Whilst the word
preserved in Islamic states in general its special
meaning as a financial term belonging to the field of
land-taxes, it acquired also the sense of "code of
regulations" "state-law" (sc. of non-Muslim origin).
The two senses must be discussed separately.

1.—Law

In theory, the gharï'a regulates the whole of the
public and private life of the Muslim, but since works of
fiqh barely deal with the provisions of common
law, and also since it became apparent very early on
that the greater part of the Muslim penal system was
inapplicable, the guardians of public order (especially
the governors) took to issuing regulations (kawmün)
in these two fields, although they had no such legis-

ative authority. At the time, these developments did
not shock even the strictest of the 'ulâmî, because
in administrative matters there was no conflict
between the kânîn and the gharï'a, the latter general-
ly being silent on such matters. Similarly with penal
law, the kânîn did not appear to infringe on the
gharï'a, for the governors had the sense either to
restrict themselves to substituting the discretionary penalty
of the ta'zîr [q.v.], fine or flogging, punishments laid
down in works of fiqh, for the seriously mutilating
punishments of the Kur'an (hudud, pl. of ādād), such as cutting off the hand or stoning.

Under the Ottoman sultans, the term kânûn came to be applied mainly to acts in the domain of administrative and financial law and of penal law. The first kânûn-nâmas promulgated under Mehemmed II (855-861/1451-1481) were indeed confined to this restricted field, but a century later, through the impetus of Abu 'l-Su'ud, grand mufti of Istanbul from 952/1545 to 982/1574 (q.v.), kânûn-nâmas began to offer legal solutions to questions which had hitherto been exclusively the province of the shari'a, particularly property law. Abu 'l-Su'ud was a jurist of such great ability that this was done without the kânûn and the shari'a ever coming into opposition with one another.

Nowadays, in all Middle Eastern countries, the term kânûn denotes not only those codes and laws which are directly inspired by western legislation, such as civil and commercial law, administrative and penal law, but also those laws and codes which are confined to reproducing, albeit simplifying, the provisions of the shari'a. To name but a few examples, the Syrian Code (kânûn) of Personal Status (1953), the İrâfî Code (kânûn) of Personal Status (1959) and the proposed Egyptian Family Code (also called kânûn) fall into this category. The Order in Council is designated by the rubric kânûn. However, the word kânûn, which, as we have noted, originally signified a ruling of the administrative authority, is not used in this sense today, being replaced by lâ'îba (pl. lââ'îbât) in Egypt and by nişâm or tartîb elsewhere.

Whether it is inspired by western legislation or comprises only provisions adopted from Muslim law, the actual kânûn is prepared by a commission, passed by it or by the legislative assemblies if need be, and promulgated by the executive, the same procedure being followed in both cases. In addition, in the case of a kânûn concerning personal status or inheritance laws, and therefore one deriving from Muslim law, the discussions in the Assembly are no more than formalities. In such cases it is the preceding phase, the one developed by the commission, which is the most important.

Born in the East, the word kânûn as the designation of the superior form of legislation (Law and Code) is current only in the Middle East, or, more precisely, in those countries which came, however partially, under the influence of Istanbul. It was rarely used in Saudi Arabia, which escaped Ottoman domination; there the word preferred to cover the legislative work of the secular authority was nişâm.

---

ii.-Cadaster

The administration of taxes usually comprised two sections, one dealing with assessment and one with collection. The assessment of taxes was based on various principles and resulted in a basis for calculation, the aqîl. Kânûn was used to refer both to these principles as a whole and to the resulting sum due from the taxpayer, either in the case of a single property or all the properties in one district taken together. The assessed value of the revenue on an estate was known as the 'îbra. In those provinces—never the entire Muslim world—where many lands were assessed by the procedure of kânûn, this word came to mean a kind of fiscal cadaster.

In Egypt, traditionally subject to a special régime in which state control was particularly extensive and which is fairly well documented, the "cadaster" was made by measuring the area of each plot of land, placing it into a category according to its position in the Nile flood and thus determining the most suitable type of crop, and finally assessing the duty which, barring accidents, should result and could be fixed in advance. The general process of the cadaster is known as ra'uh (q.v.) (verb râha). These administrative operations give rise to the following documents: a) an original (ṣift) kânûn establishing the characteristics of a region so as to determine its 'îbra on a permanent basis—according to al-Maqrîzî, in his day this was revised every thirty years; b) an annual kânûn, established by a local dâlî, consisting, on the basis of the foregoing, of a statement of the characteristics of each plot after the flood, by which characteristics the dâlî decides which crops should be cultivated; c) a kânûn establishing the most suitable crops and the resulting fiscal distribution, listed both by holdings and by crops. Finally there was a series of other documents more specifically concerned with tax collection, such as the kânûn-proclamation.

The measurements were made by a bâsîb (from kâsâba, unit of length); the mâsîb (surveyor) calculated the areas on the basis of measurements taken. It would seem that sometimes he cheated in the geometry, and Ibn Mammâtî takes great pains to remind his readers of the rules for calculating areas. The various kinds of land were classified according to type, degree of flooding, and finally according to taxation, and the vocabulary used for such terms appears to be in part non-Arab and pre-Islamic (see *JESHO*, v (1962), 259-60, from Ibn Mammâtî and Malghâmî).

It would be useful to classify the published papyri in the categories listed above. Al-Nâbulusî's description of the Fayûm (Ayyûbid period) in fact gives a detailed picture of taxes in general, but not precisely, of the cadaster for this province, locality by locality and category by category.

Far less is known of the methods employed in the rest of the Muslim world. However, the main outlines seem clear. There it was impossible to draw up for fiscal purposes a precise survey of crops, nor therefore of the return anticipated from them, since there was neither a regular flood nor a sufficiently close administrative control. It was, however, at least possible to measure area, and even to classify land according to average yield, thus allowing a tabulation of taxes, subject to last-minute modification in the light of the actual harvest. This was done in the majority of regions, where a definite sum in money was levied by area and crop, as against those where a proportion of the crop was levied. There were also, however, regions which followed the Roman tradition. In these the unit was not of area, which gives a variable yield, but one of labour or of exploitation, where a variable area produces a fixed yield. A traditional vocabulary less complex than that of Egypt also designates the different types of land. As in Egypt, the 'îbra was determined. Measuring was done by the māsîb sometimes with the help of a controller (muwâsîr) or a divider (bâsîb). In fact, if not in law, their salary constituted an additional charge. However, even in Egypt, there continued to be many properties which for one reason or another were registered "without mîsâhā", and thus taxed outright without having been surveyed in
this way. On the documents see the article on DASTAR and, following the Ta’rikh-i Kumm, A. K. S. Lambton (Landlords and Peasants in Persia, 1953, ch. 2).

In the West, or at any rate in the Maghrib, cadastral survey seems to have been slower and less precise. It is possible that it was not introduced to Morocco before the time of the Almohads, when it was brought back by Ibn Tumart from his voyage to the East. Here, even less than in the East, not all estates were covered.

**Bibliography:** Scattered references can be found throughout the sources; only the most important are mentioned here: Ibn Mammâtî, Kawnîn al-da’wânîn, ed. 'Atiya, 1953, tr. R. S. Cooper, Ibn Mammâtî’s rules for the ministries, Ph.D. thesis, University of California, Berkeley 1973, unpublished; Ta’rikh-i Kumm, ed. (Cl. Cahen)

iii.—Financial and Public Administration

1. From the earliest days of the conquest onwards, Kânûn preserved the meanings of “registers and lists recording land-taxes” (Kânûn al-Khârdâd, also dâ’ârâd‘âd) and the regulations there laid down (al-kawnîn al-mukharrara, cf. al-Mâwardî, ed. Cairo 1936/1966, 215, tr. Fagnan, 465). This principle of assessing tax can be traced back to the time of the second caliph ‘Umar, to whom is attributed the measurement of the lands in the Sawâd and the imposition of a fixed tax on a specified area of land (Abû Yûsuf, K. al-Khârdâd, Cairo 1302, 36-8, 48, 60, 85, 218; al-Mâwardî, 148-52, 174-6; Løkkegaard, 106-25). This measure was considered to be the continuation of the Sasanian system of assessment for tax (Abû Yûsuf, 38, 57; al-Mâwardî, 78, 148, 173-5; ‘Tabarî, i, 62); and as in the old Iranian tradition so in the Islamic period strict adherence to the explicit entries and regulations of the official registers (hîṣâ al-a’zâlîn, al-Mâwardî, 215) was regarded as the foundation of sound and just administration (al-Mâwardî, 151, 215-8). In the period of the classical caliphate the Persian terms dâ’âr and muhâlî came to be used as synonyms of kânûn in the sense of “tax-list” (Løkkegaard, 170, 265). This kânûn also signified the conditions (qawînî) governing the levying of land-taxes by mukâhâ ‘a[q.v.] (Løkkegaard, 107). The term kânûn must have spread only later into Irâk and the eastern provinces, since though it is frequently used by al-Mâwardî (d. 450/1058) it is not used by Abû Yûsuf (d. 182/798). After the Abbâsid period kânûn remained in use as a financial term with some hâfîzî meaning (Ibn Mammâtî, Kawnîn al-Dawânîn, ed. A. S. ‘Atiya, Cairo 1943, 305; ‘Uthmân al-Nâbulûsî, K. Luma‘ al-a’zâlîn, see Brockelmann, GAL, S. I, 573); in Persia (Rawandî, Râhât al-ṣuyûr, ed. M. Iqbal, 856, 214-7, 398; Nasîr al-Dîn al-Ṭâ’î, reda‘ published in THTM, ii (1932-3), and in BSOAS, x (1940), al-Mâwardî, Ta’rikh-i Mubârâk-i Ḡâshânî, ed. Jahn, GMS, 306; ‘Abd Allâh b. Kiyâ, Resâlî-yê Falakiyyd, ed. W. Hinz, Wiesbaden 1953, 23, 172, 182-4; Muhammad b. Hindûshâ al-Nâbdûwânî, Dâ’sür al-kâtîb, i, ed. A. Allâzade, Moscow 1964, 123-5; al-Ṭâ’î, al-Mawârdî, 148-52, 174-6; Lokkegaard, 106-25, 274-6, 318).

Finally, kânûn might imply “rules of conduct” (as in kânûn al-a’sâda: Resâlî-yê Falakiyyd, 2); and also
the general principles or the basic information in one of the non-religious sciences (as in kānūn al-badgha or kānūn fi 'l-dīb).

3. Kānūn (in the sense of non-religious legal prescription) and its relation to the sharī'a. Even from the time of the first caliphs there are records of legal prescriptions imposed solely at the will of the ālu ʿl-amr [q.v.], e.g., ʿUmar's decision regarding the lands of the Sawād (Abū Yūsuf, 47-56, 97). Such prescriptions were usually incorporated into the sharī'a as it took shape. Administrative regulations and practices [see ṣamā', amr] entered the sharī'a just like ʿurf and ḍāda [q.v.], because of the broad interpretation of the concept of sūnna [q.v.] and thanks to recourse to the principle of istiḥlās [q.v.] (see J. Schacht, Origins, 99-112). But this process was ended after the time of al-Shāfiʿī, particularly of Ibn Ḥanbal and Dāwūd b. Khālaf [q.v.], with the narrower interpretation put upon sūnna and the rejection of istiḥlās.

Matters of public law were treated within the framework of the sharī'a firstly with regard to legal regulations concerning land-tax (as by Abū Yūsuf, Yahyā b. ʿAbdūn, Abu ʿl-Farādī Küdāmā), and later (from the 4th/10th century) in connection with more general matters: the source of political authority [see ʿamām], administrative law [see māṣūla], market regulations [see ʿibāda], and penal law [see ʿaṭāʾa] (see al-Māwardī, Abū Ḥaylā, Ibn Dāmās, Ibn Taʿmīyya, Ibn Kayyīm al-Ǧīziyya, ṣassīm). After al-Shāfiʿī, the boundaries of the usūl al-fiḥḥa were drawn so narrowly that new administrative regulations were left outside them and became the province of a new "state law" or "ruler's law". This process was encouraged also by political developments in the caliphate: in the "sultanates" establishing themselves in Persia (Būyids, ʿSāmānidūs, Ghānasīmīdūs, Sālūqūsīdūs), the native bureaucracy [see kātib] strove to revive the old Iranian traditions of the state and of state administration in order to strengthen the absolutism of their masters, and won for political authority and state law an independent status vis-à-vis the sharī'a. The conflict between kānūn and sharī'a in this period reflects the rivalry between sūlān and khalifa. It is in this period that al-Māwardī, 77-8, maintained the necessity of secular power (Kawāna al-salātana, or āmāra) to ensure the implementation of the sharī'a (tanzīḥ al-ḥakīm) and the protection and survival of the Muslim community (ḥirāsat al-dīn wa-strīyat al-dunyā). In other words, the public interest [see māṣla] was recognized as the basic principle justifying an independent political authority and its competence to make laws and issue regulations. This argument was regularly repeated in Muslim sultānates (including the Ottoman, cf. Tur- sus, Taʾrīḵ-i Abū ʿl-Fath, 13) as the basis for the sultan's authority as law-giver. In this period too the concepts of ʿaddā [q.v.] and kānūn, linked to the Iranian view of the state, began to be treated as a separate subject in works written by faṭḥiṣ on politics (cf. al-Māwardī, 77-95).

As to the matters regulated by this "secular" law, they fell, naturally, within the field of public law — a field distinguished by the sharī'a by the terms al-ʿamal al-sūmā, siyāsa [q.v.], and hubb Alāh [q.v.] — and covered such questions as military and governmental organization, taxation, especially land-taxes [see khārīdī] and the closely-related land-law, matters concerning the bayt al-ʿamal [q.v.], and penal law. The sharī'a conceded to the imām authority to promulgate and implement regulations governing the scales of non-Muslim taxes, the use to which con- quered land or mawādī [q.v.] land should be put, the severity of ʿaṭīr [q.v.] punishment, and the protection of the community's economic interests [see ḥisāb]. The sharī'a recognized also the authority of the imām-sulṭān to decide and to legislate, if the public interest required it, upon any matter not treated by the sharī'a. It came to be agreed that the individual was under a religious obligation to obey the sultan's command in matters not regulated by ḥaṣṣ [q.v.] (cf. the introduction to the Kānūn-i ʿOthmānī, in Istanbul Un. Lib., MS. T. 1809).

Furthermore, some fubāḥaʿ regarded decisions taken on the ruler's authority as essential for the solution of various problems which concerned the sharī'a (cf. the fatwās in Abūl-Su faʿdī's Maʿāḍī, MTM, i, 337-48 = P. Horster, Zur Anwendung des Islamischen Rechts im 16. Jahrhundert, Stuttgart 1935). In cases where the sharī'a permitted two solutions, the decision of the ālu ʿl-amr was decisive (Abū Yūsuf, tr. Fagnan, 103-4); again, in cases of serious ṣīḥīḥat [q.v.] among the fubāḥaʿ, the ruler might, in public interest, in order to ensure uniformity of practice and avoid rifts within the community, decree that the precepts of one specific madhhab [q.v.] were to be followed: thus under the ʿAbbāsīdīs [see IBN AL-MUKAFFA] and later under the ʿĀbdīl-kūtīs (see sīrat ʿAbbāsī, Khānasī, 1966) it was made obligatory for the kādīs to follow the Hanafi madhhab [see Abū Naṣīr], a new stage began, a period when new legal rules could be made in the forms of fatwās [q.v.] on the one hand and, on the other, the decisions of the Kādīs' courts and regulations promulgated by the sultans.

In the period following the Mongol invasions, the concept of independent state law was greatly strengthened: in the Ottoman Empire, in Central Asia, in India, and in the Timurid dominions, decrees issued by the rulers on matters of state organization, military affairs, taxes, land-tenure and penal law created a rich corpus of state law, entirely independent of the sharī'a.

In the ʿIkhšāni state, whilst the old Iranian concept of the state of law was making headway thanks to the efforts of Persian bureaucrats, the Mongol aristocracy was endeavouring to assure the supremacy of the legal system of the yasa [q.v.]. The traditions and beliefs current in the steppe empires of Central Asia encouraged the view that the state subsisted through the maintenance of the tūriʿ (Arabic ʿārāʾ), see ṭūrūk) laid down by the ḥaṣāṣ (see H. Inalcik, Kutadgu Bilig'de Türk ve Iran davet ve siyaset nasıriye ve gelenekleri, in Reşit Rahmeti Arat için, Ankara 1967, 259-71). This view was brought by the Turkish and Mongol ruling houses into the Middle East and survived in the states that they founded there (the Ottoman state included: for the Ottomans, the establishment of their sovereignty over a region was dependent upon the introduction there of the Kānūn-i ʿOltānā). It should not be overlooked that some early Ottoman writers (e.g., ʿAhmedi, see TM, vi (1936-39), 111) praised the yasa of Čingiz-Khan as having promoted justice, and that Ottoman state-regulations were often referred to as yasa or yasak-nāme. In Egypt and Syria, too, yasa merged with siyāsa (see D. Ayalon, in St. Isl., xxxviii (1973), 113), tended to be accepted as a legitimate law. In these new states the conflict between state law and the sharī'a overlay a politico-social struggle among the bureaucracy, the ʿulamāʾ, and the military
class. In Persia and in Anatolia, after the collapse of Mongol rule there was powerful pressure to do away with the Turco-Mongol state law (Afze Astarabadi, Basım u razm, Istanbul 1928, 223; Z. V. Togan, Umumt Türk tarihine giris, Istanbul 1946, 271, 320, 376; for the reign of Shahrukh, see MTM, ii, 357; for Syria and Egypt, see D. Ayalon, in St. Isl., xxxii, 97-140; xxxiv, 151-80, xxxvi, 113-58; for Iran, see Spuler, Moslolithen, Berlin 1968, 235-44.). Some ‘ulamā’ in state service attempted to preserve the legitimacy of the principle of an independent state law by appeal to such Islamic principles as istislah, maslaha, and especially ‘urf [q.v.].

In later years, the states which, on the basis of these principles, developed furthest the domain of state law were the Ottoman Empire and the Turco-Mongol states of India. Ottoman legists, emphasizing these points, accepted the principle that state law, as having from of old been the concern of independent yargu [q.v.] courts, should be applied by the kādīs; all the same, the special courts of the political and military authorities continued—the divešnās of the Grand Vizier, of the Agha of the Janissaries, of the Kapudan Paşası, of the Defterdar.

In the Ottoman state, the conflict of the sharī‘a and the ruler’s law manifested itself in various stages. Mehmed II [q.v.], as the promoter of a centralized and absolutist imperial system, strengthened the principles of kānān and ‘urf and encouraged the independence of “secular” law. He promulgated the Ottoman Kānānnāme, and brought the ‘ulamā’ more closely into an integrated state-controlled hierarchy of offices. According to a contemporary historian belonging to the bureaucracy (Tursun, 13), the “good order” (niṣām) of this world necessarily requires the absolute coercive authority of the sultan (yasadh-i fādshdhi) and the sultan’s promulgation of decrees of his own single will. The early years of his successor Baysız I saw a strong reaction by the upholders of the sharī‘a against his untrammeled legislative activity. Selim I relegated the intervention of the religious authorities in state affairs (cf. Ali Djemâl, cited in Bibi.), although Sulaymān I was inclined to assert the sharī‘a’s control over state law, the latter preserved its independence as being the province of the nișandji [q.v.]. It seems that the relative influence accorded to sharī‘a and kānān depended to a degree on distinctions of madhhab: thus Abu ‘l-Su‘ūd regarded the use of money to establish a waqf as entirely acceptable to the sharī‘a, on the ground of istislah, whereas Mehmed Birgewi [see BIRGEWI] regarded it as utterly illegal; Birgewi and the Kāfizadels were no doubt following Hanbali doctrine. From the 11th-17th century onwards the scope of the kānān evidently began to contract to the advantage of the sharī‘a. Fatwās of the muftis progressively restricted the law-making powers of the nišandji, and the influence of the Şaykh al-Islām in state affairs progressively increased—to such a degree that in 1007/1596 the use of the word kānān side by side with the word sharī‘a was forbidden by a firman of the Sultan (O. Nür, Medalle-i umr-i beledisyeye, i, Istanbul 1922, 568).

Nevertheless, in the later periods of reform the activity of making kānāns, independent of the sharī‘a, increased once more, and the struggle between kānān and sharī‘a, now exacerbated by social and political factors, revealed itself in overt collisions [see H. Veldet, Kamunlaştırmalar hareketleri, in Tansımatı, i, 139-209]. As a result of the challenge of Europeanization and modernization, new movements arose in the second half of the century. On the one hand, young intellectuals and ‘ulamā’ disputed the question of whether the “door of tādhīb” could be opened [see NAMIK KEMAL, SHAMAL AL-DIN AL-’ABDUH, MUSLIM MADHİ ‘ABDUL]; on the other, a section of the Ottoman intelligentsia [see VENI ‘OCTMANLI], influenced by the French school of sociology, maintained that the sharī‘a in regard to its mu‘āmalāt [q.v.] was a social and historical product of a high degree of mū’tamād al-‘ilm which could alter in accordance with the needs of society, and that these changing needs could be satisfied by new legislation within the framework of nasṣ through a national assembly, a şāhīr [q.v.]. These currents of thought facilitated a radical alteration in family law in 1917 and the placing of the kādīs’ courts, removed from the control of the Şaykh al-Islām, under the Ministry of Justice. Later still, merging with the agitation for the abolition of the Capitulations [see IMTIYAZAT], they produced the uncompromisingly secular legal system of the Turkish Republic. In other Muslim states, however, the desire to maintain the attachment to the Islamic sources of the law has continued into recent times [see İSLÂH].

4. The procedure for making and promulgating kānāns in the Ottoman state. The source and justification for kānān-legislation was the principle of ‘urf [q.v.], in the sense of the Sultan’s unrestricted executive authority (and its synonym, yasa). Hence every sort of kānān was issued in the form of a bukm [q.v.] of the sultan, the typical formula being: Kānān emr edeb buyurдум ki . . .”, “having ordered [the promulgation of a] kānān, I have commanded as follows . . .” (cf. Belleten, xi/44 (1947), 700, doc. 10). In practice, the procedure was as follows: a clerk attached to the office of the Nishandji or the Defterdar drew up a bukm in the form of a firman or a berād. This draft, after being checked by the Nishandji or the Defterdar, was confirmed by the Grand Vizier, with the word şah ("correct"). Important kānāns were confirmed by receiving the khaṭṭ (autograph minute) of the sultan. There is evidence that some kānāns were dictated personally by the sultan (cf. İstanbul, Süleymanıye Lib., MS. Reisülküttab 1004, fol. 34 a). Kānāns relating to timârs ("fefts"), agricultural taxes and land law were the province of the Nişandji; those relating to other financial matters were enregistered in the office of the baş-mulâzîme, under the Defterdar. Copies of the kānâns were sent to the Defterdar or the Nishandji for their implementation—variously, the kādīs, governors, müftis, emîns of the customs, etc. Kādîs and governors would register them and make the neces-
KĀNŪN

sary entries in the appropriate registers, either by a marginal note or by attaching a slip to the page. Kānūns which affected the populace in general were proclaimed by criers (mūndūd) in such public places as the market or the mosque courtyard or were read and explained by the ḥādī to the as-rūn [q.v.] and the aṣḥāf, who had been summoned to the court-room for that purpose. The original document was preserved in the bestdan of the city or in a chest under the kānūn. Bibli. Nat., kadi’s Belgeler, iii (1965), 49-145, or the promotion of reforms. A kānūn might confirm ḥādī [q.v.] ("custom") or amīdī (["precedent"], or—with or without modification—the kānūns of a state newly occupied by the Ottomans. Appeal to "traditional practice" is a common feature of Ottoman kānūns.

An indication of the independent status enjoyed by kānūn in the Ottoman state is the fact that they were entirely under the supervision of the Nişāḫandji. Their final and official promulgation lay in his hands, for he possessed the responsibility of affixing to them the tughrā [q.v.] by which they were authenticated. It was he who determined whether a kānūn remained in force, and whether new hālums issuing from the various departments of the administration were in conformity with the existing corpus of kānūns. Since kānūns so largely dealt with land matters and the timur-system, with the decline of the latter the scope for kānūn activity contracted, and the Nişāḫandji lost his former importance.

It is not correct that outside the Ottoman Empire, the principle of independent legislation by kānūn was established, particularly in India and in those Muslim states founded by Turkish dynasties who had migrated from Central Asia. There too the kānūn, or rather, to use the terms there current, the dābīja, dīn, dastūr, or shāhī tarmān, is to be traced back both to the Iranian concept of "justice" as the ruler’s principal concern and to the central Asian tūrū or tūsūk. According to Dīyāʾ al-Dīn Bārānī (writing c. 760/1359), a dābīja, or state law, is "a rule of action which a king imposes as an obligatory duty upon himself for realizing the welfare of the state and from which he absolutely never deviates" (tr. M. Hābib and Salim Khan, Political theories of the Delhi Sultanate, including a translation of Ziauddin Barani’s Faṣawa-i Jahandari, circa 1358-9, A.D., Allahabad-Bombay-Delhi, n.d. (esp. ch. iv); W. 456

IV.—BERBER USAGE

The word kanun was adopted by various Berber groups, especially in Kabylie and the Aurès, to mean the customs, mainly as regards penal matters, of the Kabyle and the Aures, to mean the traditions of the old Middle Eastern cultures and the other the traditions of the Turco-Mongol empires. The codes of the Mamluk Kaykabys, which were applicable to the whole Empire or to a particular region or social group. The practice in Islamic states of issuing official, codified kanun names has two apparent sources, one being the traditions of the old Middle Eastern cultures and the other the traditions of the Turco-Mongol khanates (see Kânün). To prevent abuses by officials, the old Iranian Empires established the practice of issuing legal clauses—particularly tax-laws—on stone, in places always visible to the public. This was possibly a tradition descended from the older Mesopotamian civilisations (see M. Tosun, Sumer, Babyl and Assyriularda Hukuk, in Belleten xxxviii/48 (1973), 563; W. Hinz, Steuerinschriften aus dem mittelalterlichen vorderen Orient, in Belleten, xliii/2 (1949), 745-2). Similarly, in Fez, the sultan, being the traditions of the old Middle Eastern cultures and the other the traditions of the Turco-Mongol empires, could have issued legal clauses in particular topics. In the collection of (KANUN) in the collection of taxes (Kiya Mazarandarâni, Resdâ-ye Falakhsyâ, ed. W. Hinz, 57). In the Mongol-Iranian Empire, the yasa [v. Kabyle, the qanun, the law, the term yasa, the term yasa, and the term yasak, continued as a name for collections of the old Iranian Empires established the practice of issuing legal clauses on a particular topic. In the 9th/10th century the term yasa was extended to refer to regulations which viziers and pashas had enacted (see Kânun), and in particular to the term yasa was extended to refer to regulations which viziers and pashas had enacted (see Kânun). While the Ottomans first occupied a newly conquered territory, they usually maintained existing kanun names and sometimes adopted them with slight modifications, in this way the codes of the Mamluk Kaykabys, the Aq-koyulu Usun Hasan and the Dulkadir 'Ali al-Dawla have reached us in their original forms under the name of Ottoman kanun names. An Aq-koyulu source confirms that Usun Hasan [v.] issued a penal kanun name for general use throughout his territory, whose application was compulsory (M. Schmidt-Dumont, Turkmenische Herrscher..., nach dem Tarih al-Giyâni, Freiburg 1970, 219; J. Woods, From clan to empire, 1758-1826, Princeton University, 1974). Usun Hasan's kanun names or yasas were current in eastern Anatolia, Adarbasâyân, 'Irak-i 'Arab and 'Irak-i 'Adjam (Sharaf Khan, Sharafnâme, ii, 120, cited by J. Woods, op. cit.). The Ottomans confirmed those in force in eastern Anatolia, applying them from 922/1516 to 955/1548. Thus the Ottomans, while abolishing Safarid yasas after the conquest of 'Irak, retained those of Usun Hasan [see H. Inalcik, Adletnamesleri, in Belleten, iii/54 (1965), 140-2]. The main purpose of these kanun names was to show the rates and methods of payment of 'süfi taxes and market taxes or bâdi [see TAMGA]. The Dulkadir (Dhu 'l-Kâdiriyeye) kanun names are essentially...
criminal kanunnames (see Ö. L. Barkan, Kanunlar, i, Istanbul 1943, 119-29). The Ottoman kanunnames for Cilicia, Syria and Egypt comprise the kanunname attributed to Kaythay (q.v.) dealing with 'urfî taxes, customs duties and gifts (see Barkan, op. cit., 200, 223, 226, 361, 364, 365, 370). Certain Indian collections of Sultanic laws and regulations, such as the Tüsükî attributed to Timûr (see Tüsükî-i Ti-mûrî, ed. Major Davy, Oxford 1783), the ʿĀrin-i Aḥbarî, or the ʿAbāhm-i ʿAṣâmîrî, are well known, but only the criminal code (kanunname) for Cilicia, Syria and Egypt comprises the kanunname intended to be enforced throughout the Empire. Apart from occasional legal clauses, obviously summarized from books. In particular, it fixes the amounts of fikh taxes levied by the sipdhis.

The opposition of the 'ulumâ to such compilations usually made the Sultans reluctant to give kanûns a permanent character by publishing them in codified versions. They preferred to issue kanûns in the form of single imperial decrees (fermdns) on a particular topic and, as a result, there are few codified kanûnnames. Mehemmed II (q.v.) appears to have been the first Islamic sovereign to issue a codified and officially promulgated kanûnname intended to be binding on posterity. In this he was perhaps conforming to the legal practice of the Turco-Mongol baghâns. He issued two kanûnnames, one for the reşîdî and one for state organisations.

Mehemmed II's kanûnname for the reşîdî aimed firstly to prevent the malpractices of the 'askerî (q.v.) class who gathered a number of taxes directly from the reşîdî, and secondly to fix the rates of taxes and money fines, and in this way to realise the state's ideal of bringing protective justice to the people. This kanûnname was issued on the pretext of fixing the rate of poll tax levied by the sipdhis and governors in settling disputes. The reşîdî kanûnname follows a specific pattern (for the theory that kanûnnames follow no set pattern, see Ö. L. Barkan, op. cit., liv-lxiii). The first three chapters contain criminal clauses applicable to both Muslim and non-Muslim reşîdîs. The arrangement of the subject matter is the same as in fîhbk books. In particular, it fixes the amounts of fines due to the 'askerî class from the reşîdî (see Inalcik, Osmanlılar da rûsûmu, in Belleten, xxii/29, 576-78). Added to the end of the third chapter are the rates of other taxes levied by the sipdhis decree (see Kraelitz, op. cit., clauses 11-18).

The fourth chapter of the reşîdî kanûnname lists the regular taxes which the reşîdî pay to the sipdhis. It comprises seven sections based on the seven duties which the reşîdî have to perform for the sipdhis and gives fixed taxes in lieu of these services (see Inalcik, op. cit.). This section again follows a clear pattern. It deals first of all with Muslim reşîdîs liable to cift (q.v.) tax. Then a separate section shows the organisation and obligations of the yârûks (kanûn-i yârûkhân) who were exempted from all services. The next section shows taxes paid by Christian reşîdîs liable to the ʿispândje (see Inalcik, Osmanlılar da rûsûmu, 602-8). The final section lists the sipdhis taxes, payable in town markets (Kraelitz, op. cit., clauses 9-28) and applicable to both Christians and Muslims.

In general, Ottoman kanûnnames were systematically drawn up according to the logic of the Ottoman tax and administrative system. Only kanûns added latter were contrary to the system. The four chapters in the kanûnname of the Conqueror, setting out taxes and relations between reşîdîs and sipdhis, follow the same system as the sanâjah kanûnnames and sbârîb registers. These lists, in turn, cift tax and similar imports, tithes (aštâb), orchard tax, beehive tax and the like, then taxes paid on animals and, lastly, fines (djârîm) and irregular taxes (bâdî-i haâd). Some sanâjah kanûnnames, like the kanûnname of Mehemmed the Conqueror, contain a supplement showing bâdî taxes (cf. the kanûnname of Aydınl in Barkan, op. cit., 6-18).

Most Ottoman kanûnnames can be classified, according to their form, under four main headings:

1. Kanûnnames in the form of decrees of the Sultan
   These were issued as fermdns or berâis in answer to particular administrative problems or needs, and required governors and sipdhis to put them into immediate effect. Most of them are in genuine kanûnname form and contain a number of clauses on a specific topic. Complete or abridged copies existed in official registers in the capital or in sipdhis' registers in the provinces. Valid official copies of the decrees could be issued from these sources (see Belleten, xi/4 (1947), 693-703).

   It is likely that such kanûns in the form of decrees were collected in book form to meet the needs of secretaries. The oldest known collection dates from the reign of Bayezîd II (see R. Anhegger and H. Inalcik (eds.), Kanûnname-yi ʿAbâhâm-i ʿAṣâmîrî, Ankara 1956). Other important collections, dating from the 10th/16th century are as follows: Library of the Topkapî Sarayî, MSS. Revan Nos. 1935, 1936; Istanbul University Library, MS No. T. 2753; British Museum, MS Or. No. 9503; Paris, Bibliothèque Nationale, ancien fonds turc, MSS Nos. 34, 85; Sarajevo, Orientalni Institut, MS Turcica No. 3; Istanbul Bayezid Library, MSM Velîyûdîn No. 1970; Istanbul, Süleymanîye Library, MS Rehûlûtûtûbû, No. 1085).

2. Sanâjah kanûnnames
   The government of Ilkhanid Iran maintained separate registers showing taxes and regulations for each region, known as Kânûn-i mamâlûkî. The custom, no doubt, went back via the ʿAbbâsids to ancient Iran. The Ottomans continued to practice with their regional viyâyet or sanâjah (list) kanûnname.
   These kanûnnames were confirmed by the Sultan's cipher (şugḥra, q.v.) and placed at the beginning of the detailed (muассâl) cadastral registers of each province. They existed for provinces where the system of state (mûrîd) lands and timars (q.v.) was in force, with the primary aim of preventing and settling disputes between the reşîdîs and the timar-holders.
   They were like the Kanûnname in the form of decrees in that they were official and in force at a particular date. The beylerbeys' councils and sipdhis' courts had to give judgement in accordance with these codes.

   The arrangement of clauses in Ottoman sanâjah kanûnnames follows a specific pattern (see above).
   Sanâjah kanûnnames followed well-defined principles in the formulation of reşîdî taxes and land laws. These principles probably took on the character of a system in the first half of the 9th/15th century, or perhaps a little earlier and, under the title kânûn-i ʿothmânî, displayed the peculiarities of the Ottoman régime (see Inalcik, Sulêiman the Lawgiver, in Archivum Ottomanicum, i (1969), 128-35). Mehemmed the Conqueror was the first to have these principles codified in his reşîdî kanûnname which was to be enforced throughout the Empire. Apart from occasional legal clauses, obviously summarized from
țărnăvă in the form of decrees, the detailed cadastral registers from Mefcemmed the Conqueror’s reign contain no sandiqlăț țărnănmățe. The oldest surviving sandiqlăț țărnănmățe is that of Khudavendigăr (Bursa), dated 892/1487 (see Barkan, op. cit., 1-6).

The practice of placing at the front of the detailed cadastral surveys for each sandiqlăț separate țărnănmățe showing the țărnăvă in force in the sandiqlăț, dates from Bayezid II’s reign. The Khudavendigăr țărnănmățe of 892/1487 appears to be a model for later ones. Some sandiqlăț țărnănmățe have been collected and published (Barkan, op. cit., contains about 80 sandiqlăț țărnănmățe. Other collections are J. von Hammer, Des osmanischen Reichs Staatsverfassung und Staatsverwaltung, i, Vienna 1815; Kanun-i kanun-name, Monumenta Turcica, series i, No. 1, Sarajevo 1957).

Since Ottoman Law was in general based on precedent, it is possible to divide sandiqlăț țărnănmățe into related groups based on chronology and geography. Taking the rate of taxation as a basis, we find that the țărnănmățe from the eyalet of Anadolu in western Anatolia form a group with the țărnănmățe of Khudavendigăr. Central Anatolia—Karaman, Icel and Ankara—forms a second category, similar to the first, whereas the sandiqlățs of eastern Anatolia—Malatya, Diyarbekir, Erzurum, Musul, Kharput and Mardin—and Syria form two separate groups.

The Rumelian sandiqlăț țărnănmățe form a special group. Here clauses from the typical țărnăn-i țăfnăți co-exist with Byzantine and Slav customary law and therefore, liable to tax exemptions (see Inalcik, Osmanliardta raııyet sıısıına, 594-601). In the 19th century these groups had ‘askeri status, but as their military importance declined in the 19th/20th century, they descended to țăfnă status and became subject no longer to their own, but to ordinary sandiqlăț țărnănmățe.

Secondly, certain groups engaged in production for the state had their own țărnănmățe for example the rice-field workers (elünkli) (for țărnănmățe, see Library of the Topkapı sarayi, Revan no. 1936) and the miners (ma‘dengli) (for țărnănmățe, see R. Anhieger, Beiträge zur Geschichte des Bergbaus im osmanischen Reich, 2 parts and supplement, Istanbul 1943-5; N. Beldiceanu, Les actes des premiers sultans, ii, Règlements miniers, 1590-1575, Paris-The Hague 1964). Most of the miners’ țărnănmățe are translations of local, pre-Ottoman statutes. Prisoners-of-war settled in a particular place (oraklı țıllar) occupied a special position among these groups (see Barkan, Osmanlı imperatorluğunun toprak işliğinin organizasyonu iehilleri, in İktisat Fakültesi Mecmuası, i-3). Similarly, the gipsies of Rumelia were subject to their own țărnănmățe (Barkan, Kanunlar, 249-50).

4. țărnănmățe relating to state organisations

These form a third category. Meşmeded II’s țărnănmățe deal with state organisations (see M. Țărif [ed.], in TOEM supplement, Istanbul 1330; A. S. Tvettonova [ed.], Badăş al-Wa‘ba‘, ii, Moscow 1961, 277b-283b) states at the beginning that it was written to regulate the affairs of the sultanate. Its pattern follows the logic of the Ottoman system of government, dealing in one place with matters of the Palace, government and protocol. Its claims deal in turn with the form of government, its notables and their sphere of authority, their relationship with the Sultan, their ranks and degrees, promotion, salary, retirement and punishment. Meşmeded II’s țărnănmățe is the only one of this type. Late Sultans did issue regulations for state organisations, but they are not comprehensive. Later țărnănmățe and regulations on this topic are the compilations of statesmen and bureaucrats (among the most important are ‘Aynül ‘Ali Efendi, Kusunun-i ali ‘Othmân der külü ça yi meşhâm-i deťer-i divân, Istanbul 1280; the țărnănmățe of Nihâlbâm 1 Chadurraman Paşa, in MTV ill [1931], 494-544; the țărnănmățe of Eyüb Efendi, Istanbul University Library, MS T 724; Hetârfenn Hüseyin Efendi, Taḥkīs al-bayân fi kusunun-i ali ‘Othmân; see H. Wurm, Der osmanische Historiker Hüseyin b. Gâfer, genannt Hetârfenn, Freiburg 1971; i. H. Usuńcarlı (ed.), Kanun-ı țărnămă meşhâm-i deťer-i kââbânî, in Billeten, xv/v (1951), 361-99, and a longer version of this work, H. Hadzicbić, Rasprava Ali țălul ..., in Glasnik zemaljskog Muzej u Bosni i Hercegovini, ii, Sarajevo 1947, 146-73).

The Ottoman archives, however, contain the
Some of the works written to recommend reforms or as handbooks for Sultans or Grand Viziers contain detailed facts about kânûnûmes relating to state organisations (e.g. Lutfi Paşa, Kiâtâb-i mustedâh, ed. Yaşar Yücel, Ankara 1973; Hızır al-Mulâb, MS. Library of the Topkapı Sarayi, Revan 1622; see K. Röhrborn, Untersuchungen zur osmanischen Verwaltungsgeschichte, Berlin 1973; Köçü Beg, Râsâle, ed. A. A. Aksüt, Istanbul 1939; Şafi Mehmed Paşa, Nasâbât al-unmarâ, wa'l-unmarâ, ed. and tr. W. L. Wright, Princeton 1993. Works concerning Palace statutes and organisation: Mehmend Khâlif, Ta'rikh-i 'âtîmdânî, in TOEM, supplement, 1340; Ilyâs, Letif-i enderûn; A. 'Aṭâ, Ta'rikh-i 'Afdâ, Istanbul 1291-3). There are also kânûnûmes for particular aspects of state organisation, the Kânûnûn-i yeniteriyen (Library of the Topkapı Sarayi, MS Revan no. 1230; Istanbul University Library, MS no. T 3203), for example, dealing with the Janissaries. There are other kânûnûmes and kânûnûmâyên dealing with timars, treasury affairs, muhâlâ'as, customs, the mint, currency, the capî bûllarî, the 'ulâmâyê, cadastral surveys, military campaigns etc. (See Library of the Topkapı Sarayi, MSS Revan nos. 1935, 1936, Baghdad no. 346; Süleymaniye Library, Refülkütûbât no. 1004, Es'ad Efendi no. 2352, Bayezid Library, Velîyûddin Nos. 1969, 1970; Şehîd Ala Paşa, no. 3832; Istanbul University Library MS no. T 1438; Âtîf Efendi Library, Istanbul, no. 1734; Staatsbibliothek, Vienna, Mxtt. 478, H. O. 154; Bibliothèque Nationale, Paris, ancien fonds turc, nos. 35, 85; Westdeutsche Staatsbibliothek, Marburg, Orient No. 2730; Staatsbibliothek, Munich, cod. turc. nos. 117, 118).

5. General kânûnûmâyên

This type of kânûnûmây was in force throughout the Empire. Mehemmed II's re'dîyâ kânûnûmây formed the nucleus of the codes of the following Sultans. This Kânûnûmây was promulgated under Bâyezîd II, in ca. 907/1501 in a much enlarged and modified version, under the title Kiâtâb-i kânûnûmây-i 'urfâyê-yi 'âtîmdânâyê (Koyunoglu MS facsimile edition, N. Beldiçaneu, Cûde de lois coutumières de Mehmed II, Wiesbaden 1967). It contains the amendments of Hersekâde Ahmed Paşa (q.v.) and forms the basis of the kânûnûmâyê later attributed to Sulayman I (see Inalcik, Addiletndmeler, 56; Suleiman the Lawgiver, 117-26; U. Heyd, ibid., 24-26). Their introduction and chapter headings are identical. It falls into three large chapters. The first chapter is a version of Mehemmed II's criminal code, extended and further systematised (Koyunoglu MS, 1-99; M. 'Arîf's edition, TOEM supplement, 1-10). The second chapter deals with the obligations of the sipâhî and laws affecting the sipâhî class. It then describes the sipâhî's rights over the re'dîyâ in their capacity of sahib-i re'yîyet and sahib-i arâ and the taxes which they received. This chapter also contains a bâdî kânûn related to bâdîyê and timar incomes, and a separate kânûnûmây on taxar and the piyây. The third chapter deals with the rights and obligations of the third chapter and the conditions of land tenure. Following this are special kânûnûmâyên for re'dîyâ groups performing military duties and subject to special statutes—nâshah, yûrûk, kaymanâ, etc. To conclude there are two special kânûnûmes obviously issued during the compilation of the kânûnûmây. One concerns illegal innovations (bidâ'at) in Kônîa, abrogated for contravening the kânûn-i 'ôtîmânî. The other contains regulations for collecting Palace firewood.

The compilation of the kânûnûmây seems to have followed this pattern. To start with, it makes large scale borrowings from the Kûdâvendîgâr kânûnûmây of 892/1487, and similarly from the kânûnûmâyên of the sandjarûks of Anadolu, Kârânâm and Rûm (Amasya). It also has frequent references to the kânûnûmâyên of frontier sandjarûks such as Vîdîr and Semendere (Smederevo) in Rumelia, obviously because laws outside the kânûn-i 'ôtîmânî were current in these regions. Clauses from the cadastral register of Semendere were added directly to the kânûnûmây (see Inalcik, Suleiman the Lawgiver, 120). Tax laws had a regional character, and for this reason the kânûnûmây contains no general regulations on the subject. It was rather in the fields of land law, timar holdings and criminal law that the kânûnûmây was of universal application.

Newly-issued kânûnûmes in the form of decrees and new sandjarûk kânûnûmes led to later modifications and re-issues of this kânûnûmây in the names of the Sultans following Bâyezîd II. Although Selîm I's kânûnûmây (for various versions see A. S. Vrtètînîva, Kniga zakonov Sultan Selima I, Moscov 1969) has not been widely publicised, the later version promulgated under Sulayman I has received widespread attention (for copies see U. Heyd, ibid., 24-42). In the period of the_recommendations-Tülükîdet made important changes in the general kânûnûmây, and a number of manuscripts contain kânûnûmes collected under his name (e.g., Süleymaniye Library, Refülkütûbat no. 1004). During the era of decline following the 16th/17th century, the kânûnûmây of Sulayman I came to be idealised as the foundation of the classical Ottoman régime (see Inalcik, Suleiman the Lawgiver, 105; Na'mân, Ta'rikh, v. 101). Nevertheless, the decay of the timar régime made it obsolete and in the 11th/17th century a new kânûnûmây replaced it, called kânûnûmây-yi 'efzad-i sulâhî. This was a detailed compilation widely used in Ottoman courts of the period. (There is no critical study of this text. Most versions end with a ferân dated 1084/1673 concerning taxes such as theches ("ughr")—cf. MTM, i, 330. Some versions are shorter. One version, with additions, is printed: MTM, i, 9-112, 305-48. Other important versions: Istanbul University Library MSS T 398, 400, 475, 969, 2664, 2730, 3586, 4107, 5828, 5845, 5846, 9623, 9550, 9737; Bursa Public Library, no. 1966; Library of the Topkapı Palace, Bağdad no. 347, 404; Istanbul, Millet Library, Fatih, Al Emiri no. 72, 76, 80; Tirana National Library no. 154 ff. 27-47; Vienna, Staatsarchiv, Kraft no. 470; Vienna, Staatsbibliothek, Flügel no. 149, ff. 1-43; Munich, Staatsbibliothek, cod. turc. nos. 113, 114, 115; Marburg, Westdeutsche Staatsbibliothek, Hs. or. quart. nos. 1023, 1102, 1835, Hs. or. oct. nos. 809, 843, 829; Sofia, National Library, Turkish MSS 1332/166, facsimile edition by G. Galabov, Turski Izvori . . ., Sofia 1961, 167-200; Paris, Bibliothèque Nationale, E. Blochet, supplement, 68, 71, 78, 79, 1311; British Museum, Rieu Add. 767, 7840; Istanbul University Library, Fatih no. 5424; Kônîa, Koyunoglu Museum, no. 12337, 11337, 12396, 12334, 12395; Ankara, Library of the Turkish Historical Society, Y 327, 325, 396).
The definite compilation of this Kânûnîmâme dates from 1084/1673, obviously as an answer to the new problems of the age of decline, in particular to land problems. Kânûns which the nîşâhîdî Dîjelâzîdî formulated in the classical age, and formulated by Nîşâhîdî Hâmzâ Pasha, the author of many reforming bânûns in the late 16th century, occupy a large part of this Kânûnîmâme. Similarly, bânûns promulgated between the years 1012/1603 and 1019/ 1609 are among the new features of this Kânûnîmâme which also makes mention of the Sultan Ahmed Khân. Another important point distinguishes it from earlier collections. This is the inclusion from the time of Ahmed I, of mûfîsî fetûds on topics previously dealt with by the nîşâhîdîs, in particular problems of land law and sometimes the law concerning sipâhsîs (see MÎM, i, 320). The compiler obviously drew them mainly from the fetûd collection of Pir Mîhmed [q.v.] (see Zâhîh al-Kudât, MS, Library of the Topkâpi Sarayî, Revan no. 1938; Süleymaniye, Esad Efendi, no. 1094; for details of the work see, Heyd, op. cit., 189-90), Şevîhü Ulî-Islâm Yâhûb (there are many copies of his fetûd collection, e.g. Süleymaniye, Esad Efendi, no. 1088; Beşîr Ağa no. 332) and Şevîhü Ulî-Islâm Bahâ (one copy of his fetûd collection, Library of the Topkâpi Sarayî, Revan no. 1938, f. 153-156).

The Kânûnîmâme-yi Dîjelâzîdî differed from the bânûn- nâmîs of the classical age which nîşâhîdîs prepared and the Sultan ratified, and which contained only 'ûrfî bânûns [see KÂNØN].

It has been claimed that none of the general bânûn-nâmîs was an official code to be enforced in the courts and offices of state (see Barkan, Kanunnlar, i, xxxiv; Osmanîs imperato-ruşânda sîrasî ekonomisinin hukukî ve mâli esaslarî, i: Kanunnlar, Istanbul 1943; H. İnalçîk, Osmanîs hukukuna giriş, in Sivasal Bilgiler Fakûltesi Dergisi, xiii (1958); idem, Suleimân the Lawgiver and Otto- man law, in Archivium Ottomanicum, i (1960), 105-38; U. Heyd, Studies in Old Ottoman legal law, ed. V. L. Ménage, Oxford 1973; N. Belicânû, Les actes des premiers sultans conservés dans les manuscrits turcs de la Bibliothèque Nationale à Paris, Paris-The Hague 1960-4). (H. İnalçîk)

KANURI. The name Kanuri, applied to both a language and to a people, appears to be of recent origin. The earliest known written occurrence is in the 18th century. The Kanuri language belongs apparently to the Teda-Daza group, mainly located east of Lake Chad. The most recent hypothesis is that Kanembu, the language of Kanem [q.v.], evolved from various older Daza languages, as speakers of these moved south into Kanem; and that Kanuri in turn developed, partly through the influence upon Kanembu of the Chadic family spoken west of Lake Chad, among nomadic and non-nomadic speakers as they moved gradually southwest into Bornô. Kanembu is still regarded as the classical language of tafsîr [q.v.] in Bornô. The Kanuri language achieved widespread importance through the political power of Bornô, the Islamic prestige of that state, and its position at the southern end of the ancient trans-Saharan highway to Tripoli.

The Kanuri people have undergone a similar development. Traditions speak of Sayîf b. Dhi Yazar [q.v.], the great Arab folk hero, becoming leader of the Magumi nomads, and of the Magumi gradually establishing their ascendency over a number of other groups in the Kanem region. The emergence of some of organized state, embracing disparate groups, in Kanem, which may be assigned to the 9th or 10th centuries A.D., is now seen less as the result of the imposition of rule by nomad immigrants than as a disorganized local peoples than as the interaction between nomadic and settled. Early Sefawa rulers, i.e., reputed descendants of the perhaps legendary Sayîf, who are probably more accurately to be regarded as heads of the Sefawa lineage of the Magumi clan, married women of various groups which were later to help make up the Kanuri, and the children of these non-Magumi women succeeded to the kingship, which was of the “divine” pattern. Sedentarisation advanced; the first towns in Kanem are mentioned in the 12th century.
Whether the name Kanuri may properly be used of the people of Kanem at this stage is a moot point, though many recent authorities do so. The further movement of people into Bornū, the region southwest of Lake Chad, had apparently begun early. Both Ibn Khaldūn and Ibn Baṭṭūta knew the name Bornū; and in the 1390s the ruler of Kanem and his court themselves tied into Bornū, driven from Kanem by their rivals, the Baluṭa [q.v.]. Gradually Bornū, rather than Kanem, became the centre of gravity in the area, even when the old Kanem capital, Njimi, was recaptured in the 15th century, the Sefawa never returned to settle there. In Bornū, a remarkable process of amalgamation went on, facilitated by the absence of natural boundaries, and involving immigrants from Kanem, the local peoples (loosely called the So or So [q.v.], nomadic arrivals and others, and large numbers of slaves from various quarters. From this melting pot came the Kanuri proper, far more homogeneous by the 18th century than Kanem, became the centre of gravity in the region southwest of Bornū, see the article BORNU. The process of assimilation continues until today: the outward sign of it is the adoption of the Kanuri language. The Kanuri are thus, like the Hausa [q.v.], less a tribe in the customary sense than a group of people of diverse origins bound together by a common language. When, earlier in the 19th century, Al-‘Amin al-Kānemī [q.v.] rescued Bornū from the threat of the Fulani [see BULU] gūjdūd, his chief reliance was upon his Kanembu troops, and these were quite distinct from the Kanuri of Bornū.

The Lake Chad area has from a very early date benefited from the trans-Saharan route running north through Kawar and Fazzān [q.v.] to Tripoli. Slaves were the principal export. Al-Yaḥṣūbī [q.v.], in the 3rd/9th century, refers to Zawīla, then the centre of Fazzān, where slave traders even from Asia were already established. Al-‘Iṣṭāqrī [q.v.] in the 4th/10th century contrasts the slaves passing through Zawīla with those from eastern Africa, the Zanj [q.v.] among them, and finds those from the Central Sudan blacker and better than all the others. It is likely that the slave revolt in Trākī in the late 3rd/9th century, particularly associated with Zawīla, then the centre of Fazzān, where slave traders even from Asia were already established. Al-Bakrī [q.v.] in the 5th/11th century mentions slave exports from Fazzān. Ibn Baṭṭūta comments upon the excellent slave girls from Bornū, its eunuchs (fīṣyāt) and saffron-dyed fabrics. Leo Africanus [q.v.] gives an interesting description of trade in Bornū at the beginning of the 10th/16th century. Barbary merchants bringing horses for the king in exchange for slaves. Trade in slaves and other commodities continued until the end of the 19th century.

Islamic penetration in the Chad region came from the north, along the trade route. ʿUkba b. ʿAbārī [q.v.] reached Kawar in 46/666-7. Al-Bakrī mentions the descendants of Umayyad refugees living in Kanem; legends of the Umayyad diaspora are, however, frequent, and should not always be taken seriously. The first Muslim ruler, or maī, among the Sefawa was Humāil, probably in the late 5th/11th century. Al-Maqrīzī [q.v.], on the contrary, affirms that Dunama Dibbalemi, the famous 7th/13th century maī, under whom the Kanem empire reached its peak, was the first convert. Dunama Dibbalemi is said to have opened the muṣaf, or sacred talisman, of Kanem, thus precipitating civil strife; it is possible, though the evidence is scanty, that he was trying to reform local Islam, hitherto too tolerant of non-Islamic survivals. Several maïs made the pilgrimage, among them Humāil’s successor (also named Dunama), who went twice to Mecca and was dramatized on his third journey. In the 1240s, perhaps during the reign of Dunama Dibbalemi, a hostel for pilgrims and students from Kanem was established in Cairo. It is likely that two maïs in the 8th/14th century were pilgrims. Idrīs Aluwa, towards the end of the 10th/16th century, renewed the tradition, which flourished particularly in the 15th/17th and 18th centuries. After the shift to Bornū, the Kanuri began to influence their western neighbours, the Hausa. Those Hausa words for writing and reading, as well as for gun, city wall, market, and a number of other key elements, are borrowed from Arabic through Kanuri, or from Kanuri itself. Constitutional patterns also spread; the title galadima, for example, originally the governor of the western provinces of Bornū, was adopted in Sokoto, and may be found in places as distant as Fazzān and Adamawa. At the time of the Fulani gūjdūd, Kanuri Islam was harshly criticized by Fulani critics, but Sultan Bello of Sokoto nevertheless admitted that the earlier rulers had been good and devout Muslims, many among them pilgrims.

Kanuri-speakers are found in various adjacent areas, such as Mandara, Baghirmi and Kwaraw. In Kwaraw, frequented in the 15th century, Muhammad al-Ḥākim, Abu and Tuareg, Kanuri: provide most of the u lamā. For further details, particularly on the later history of Bornū, see the article BORNŪ.

KANZ, BANU ’L (AWLĀD AL-KANZ), a clan descended from Rabī’ī tribesmen who migrated to the region of Aswān in the 3rd/9th century, intermarried with Bedja [q.v.], and ultimately gained control of the gold-mines of al-ʿAllāk [q.v.]. The eponym of the clan, whose personal name was Abu ’l-Makārim Hibat Allāh, received in 957/1007 from the Fāṭimid caliph al-Ḥākim [q.v.] the honorific of Kanz al-Dawla for his services in capturing the rebel Abū Rakwa. The title continued to be borne by his successors. As marcher-chiefs of the frontier of Islam.
with the Bedja and Nubians, the Banu l-Kanz were not easily controlled by the rulers in Cairo. Both Badr al-Djamali [q.v.] and al-Adil Sayf al-Din [q.v.] undertook operations against them in 460/1070-7 and 570/1174 respectively. During the Ayyubid and early Mamluk periods, the clan extended its power southwards into the Nubian kingdom of al-Mukurra, which was (after 717/1317) ruled for a time by a Kanz al-Dawla. With the subsequent disintegration of al-Mukurra, Banu l-Kanz appear to have directed their energies against the main northwestern frontier. In the late 8th/14th and early 9th/15th centuries they fought repeatedly against the Mamluk governors of Aswan, and devastated the town and its vicinity. Their domination was countered only by another tribe, Hawsara [q.v.], a fraction of which was established in Upper Egypt by Barluki [q.v.], ca. 782/1380-1. The arabized Nubian tribe of Kunz, living between Aswan and Kurusk (with some branches also in the Sudan), claims descent from Banu l-Kanz.

**KAPAN** [see also ı ğa r a c h]:

**Kapıl,** literally "gate" in Turkish, which by extension means "Ottoman Porte", that is, the sultan's palace, and is also used for the grand vizier's palace and the seat of government. The word kapıl was used concurrently with the Arabic bāb (e.g., bāb-i ğa r [q.v.] and the Persian darād (e.g., dar-ı devlet, der-ı siye, der-ı sefād). It appears, however, that unlike bāb and der, was rarely used with a non-Turkish epithet or determinative. On the other hand, it is very frequently employed to designate military or civil functions directly subordinate to the "Porte", e.g., kapıl sulları, literally "slaves of the Porte", that is, the sultan's troops, and kapıl kethūdası, or kapıl kāhāyaç, an agent "close to the Porte" of a high dignitary of an Ottoman subject or vassal. Originally two in number, the kapıl sulları were entitled to a timar of 19,000 aspers at the end of the 16th century. The most important of them who bore the title of bāš kapıl sulları, received a dirik of 400,000 aspers and were included among the săngālāb bey. They were responsible for all matters concerning the guards: nomination, retirement, transfer and promotion. Originally two in number, the bāš kapıl sulları were increased to 4, then to 6 in the reign of Mehemmed III.

After the destruction of the janissaries in 1826, only 30 bāš kapıl sulları were retained, increasing to 40 in 1839 and subordinate to the imperial stable. Both title and function disappeared in 1908.

**KAPLAN GİRAY I,** Crimean Tatar Khán, the third son of Hâşdi Selim Giray [q.v.], born on Rhodes in Şaban 1091/July 1686. In 1108/1697 he became temporary commander of the military forces in Buğlak [q.v.] and made a successful raid into Poland. During the negotiations at Carlowicz, he remained in defense of Ferah-Kerman, but Örek-Timur, the beg of the rebel Shirins, forced him to take refuge in Kiliya (Rafiv-UL-Abhir 1112/October 1699). He was afterwards appointed military commander of Circassia, where he fought the Kalmucks (1700) and the Beslenye Circassians (Dhu 'l-ḥidjdja 1712/ May 1701). However, Dawlat Giray did not want to...
promote him to the rank of nuradin (nur al-din) [q.v.], so he fled to the Ottoman Pasha in Kefe (Feodosiya). Dawlat Giray's influence at the Porte was instrumental in the decision to exile him to Rhodes, but on his father's request he was sent to Yanbolu. When his father became Khan on 26 Shawwal 1113/26 January 1702, he appointed him nuradin. Kaplan Giray marched against the former Khan, who had rebelled with the support of the Nogay tribes. The civil war came to an end when the Nogay mirzads deserted Dawlat Giray. On the death of Selli Giray, his second son Ghazi Giray became Khan and, on 3 Ramadan 1166/30 December 1704, he made Kaplan Giray kalghay [q.v.]. In contrast to Dawlat Giray and the new Khan, Ghazi Giray, who followed the mirzads of the Crimea in pursuing a hostile policy towards Russia, Kaplan Giray was prepared to support the Ottoman government's policy of peaceful relations. It was true that in Muḥarram 1119/April 1709 he was appointed Khan. Leaving the Russians free to act against Sweden, Kaplan Giray led a campaign against the Circassians, but was lucky to escape with his life when he fell into an ambush which they had set. The Sultan deposed him at once (Sha'ban 1120/November 1709), and his rival Dawlat Giray became Khan in his place. Eventually, the problem of the Crimean wars was solved when the Russian tsar Peter the Great signed a peace treaty with the Sultan in 1125/1713. He sent a force under the nuradin of the Ottomans' more expeditions, but the rebellions of the Circassians and the Nogays prevented his taking part in the Austrian campaign of 1128/1716, and he was again deposed from the khanate in Dhul-Qa‘da/November of the same year. The rebels who overthrew Ahmad III [q.v.] in 1143/1730 secured his re-accession, but since he afterwards became a major force in ousting the rebels, he kept his influence on the Porte. Under Muhammad III, there were clashes with the Russians in Daghistan. Crimean forces with the support of the Çeçens [q.v.] repulsed a Russian attack. In 1148/1735, on the insistence of the Porte, the Khan personally campaigned in Daghistan, but at this moment, Russian and Cossack forces advanced to Or-kapi (Perekop). However, the mirzads of the Crimea, like the Nogays, were hoping, by remaining neutral, to escape invasion and were in contact with the Russians. Ottoman sources claim that Kaplan Giray supported this policy (TV, xiv, 138), but this does not seem to be true (V. Smirnov, i, 127). He, in fact, requested military aid for the Crimea from Istanbul and tried to divert the Kalımds from their alliance with the Russians. The Ottoman commander in the Crimea, Ibrahim Pasha, agreed with him in these policies, but in Sha'ban 1184/November 1770 a decree for the Khan's deposition came from Istanbul, and in 1185/July 1771 Kaplan Giray died of plague at the age of 32.

KAPLAN GIRAY II, Crimean Tatar Khan (Shawwal 1189-Sha’ban 1189/Feb.-Nov. 1770). He was appointed nuradin (nur al-din) in 1182-1183/1768-1769 and Khan in Shawwal 1183/February 1770. He sent his kalghay and nuradin to the Crimea to defend it against the Russians, while the Ottoman commander Khâlid Pasha appointed him to the campaign intended to expel the Russians from Boghdan (Moldavia). He was unsuccessful against the Russian artillery on the Prut, and retired to Kalîm, whilst Rumyantsev crossed the Prut and routed the Ottoman-Crimean forces. The indiscipline of the soldiers prevented the commander and the Khan from carrying out their plans for a counter-attack; the fortresses of Kiliya, Bender (Bendery) and Issaill fell to the Russians, whom the Nogays then joined in Buhçak. After facing a siege in the fortress of Özi (Ochakov), Kaplan Giray was eventually able to reach the Crimea. Here, in the summer of 1184/1770, the kalghay İslâm Giray and the Ottoman commander İbrahim Pasha drove the enemy from before the fortress of Or-kapi (Perekop). However, the mirzads of the Crimea, like the Nogays, were hoping, by remaining neutral, to escape invasion and were in contact with the Russians. Ottoman sources claim that Kaplan Giray supported this policy (TV, xiv, 138), but this does not seem to be true (V. Smirnov, i, 127). He, in fact, requested military aid for the Crimea from Istanbul and tried to divert the Kalmucks from their alliance with the Russians. The Ottoman commander in the Crimea, Ibrahim Pasha, agreed with him in these policies, but in Sha'ban 1184/November 1770 a decree for the Khan's deposition came from Istanbul, and in 1185/July 1771 Kaplan Giray died of plague at the age of 32.
Turkish classified in two types:stüt üst ü ilâdja (open hot springs) and kapall ilâdja. It is possible that colloquial usage telescoped kapall ilâdja (covered hot springs) into kapALLDJA.

Hot and mineral springs are found not only in Anatolia but also in Czechoslovakia and European countries formerly under Ottoman rule such as Hungary, Bulgaria and Yugoslavia. The medicinal properties of some of these kapall ilâdja and mineral springs have been recognized from very early times; for this reason, miracles were attributed to them and it was believed that each hot spring was protected by its own deity. There were sacred cleaning and washing places in all Indian temples; the early peoples of Anatolia, the Greeks and the Romans made use of hot springs in different ways, even building special washing places in all Indian temples; the early peoples of Anatolia, the Greeks and the Romans made use of hot springs in different ways, even building special baking baths and even building new ones. In time they evolved a special kapall ilâdja architecture, a building divided into three parts: dressing room, rest room and the bath proper.

Some kapAllDjas in Turkey were built by the Anatolians themselves and are still in use today, for example Karakurt (Kuşehr) built in 529/1135, Yoncali (Kutahya) built in 630/1233, Ilgm (Konya) built in 633/1236, and Eskihir. Other kapAllDjas in north-eastern Turkey were built by the Ak-Koyunlu rulers late in the 8th/14th century, such as those in Erzurum (Evlîyah Celebi, ii, 203; I. Hakki Konyah, Sarajevi 1952). The presence of a kapAllDja (germedbe fâplldja) in the Persian text in Ilgm (Konya) led to the foundation of a town there ( Ibn Bibi, Taârîh-âlî-î Saldîgah, Recueilli de Textes Relatifs à l'Histoire des Seljoucides, iv, ed. M. Th. Houtsma, Leiden 1902, 150). A beautiful building was erected; among the people who came for treatment was Djalal al-Dîn Rumi, the famous mystic. His permission to anyone to enter the Inner Palace was granted; among the people who entered was his disciple Ewliya Celebi (Ewliya Celebi, ii, 223; I. Hakki Konyah, Istanbul 1963, 434, 435). "The ghazal kapall ilâdja" Mehmed Câvuoçuâli, Zât'inÂn Leydîfî, in Edeviyat Fakültesi Türk Dili ve Edeviyat Dergisi, xviii (Istanbul 1970), 7.

KAPU AGHASI, KAPU AGHASI (or Bâb al-Sâ'de Ḩâghsa), the senior officer in the Ottoman Sultan's Palace, until the dâr al-sâ'de Ḩâghsâ (q.v.) began to gain ascendancy in the late 10th/16th century. Like the other Palace Ḩâghsâ in continuous service, the Sultan himself selected him from the eunuchs. He had the authority to petition the Sultan for the appointment, promotion and transfer of Palace servants.

Kapall ilâdja architecture developed greatly in the Ottoman period; the building was now divided into four parts: dressing room, rest room (îâmehân), cooling room and the bath proper with private cubicles. The whole building was now connected by hot springs. Generally, the Turkish type of kapall ilâdja contains large pools and hot water pours from a hole into the pool draining out by another hole. The kapall ilâdja architecture of the Ottomans developed in Bursa where the first Turkish kapall ilâdja, called Eski Kapall ilâdja, was built by Murad I. Since it was established on the site of an old Byzantine kapall ilâdja, it was believed (see A. Gabriel, Une Capitale Turque Brousse (Bursa), Paris 1938, 155-70) that Eski Kapall ilâdja showed typical Byzantine architectural influence.

Pointing to the originality of its plan and technical construction, some Turkish art historians (Ekrem Hakki Ayverdi, Osmanlı mimarîsinin İlk Deyri, 630- 850 (1230-1402), Istanbul 1966, 280, 281, 282, 283) reject this idea, asserting that the architecture of Eski Kapall ilâdja is typically Turkish. Some kapAllDjas built in the Ottoman period are still in use in Turkey and in countries previously under Ottoman rule. The most famous are in Turkey: Buda (Budapest), Yezhildere, (Rudas) built in 1556, Hâmmâm of Vell Bey (Csarzar) and Taârîh-âlî Saldîgah (Evlîyah Celebi, loc. cit., vi, 242, 243, 249; V. Bierhauer, Les Bains Turcs en Hongrie, Budapest 1943). Some Ottoman kapall ilâdjas can be seen in Bulgaria: near Sofia (J. von Hammer, Rumeli und Bosna, Vienna 1812, 51, 88), Islîmîye, Yeni Zâgka, and in Bosnia-Hercegovina (H. Krsevlâ-Êi, Banya u Bosni i Hercegovini, 1462-1916, Sarajevo 1952).

As the sole mediator between the Sultan and the world outside the Palace, he sat at the gate known as the Inner Gate or Bâb al-Sâ'de ("Gate of Felicity") which divided the Inner (enderun) from the Outer (birûn) Palace. His office lay to the right of this gate. It was through him that the Sultan transmitted his permission to anyone to enter the Inner Palace and his commands to the government (Kânûn-âmâm of Mehemîd the Conqueror, TOEM, suppl. 1330/1923). The kapu Ḩâghsâ had the rank of vizier and in ceremonies took his place below the Grand Vizier and the shâykh al-îslâm (q.v.). Nevertheless, his daily pay of 100 aâches (q.v.) was well below the Ḩâghsâ of the Janissaries' 500 aâches (for other salaries see I. H. Uzunçar-şî, Osmanlı devletîsinin saray tevhîdî, Ankara 1945, 355).

In pre-Ottoman usage the post was known in the, 570 KAPU AGHASI — KAPU AGHASI
earliest Islamic states, as hadībī, hadībī al-hasdībī or amīr hadībī. In later times it acquired the titles hadībī al-sandād, amīr hadībī al-rūm, and hadībī al-sandād (see M. F. Köprüli, THIM, i, 208-217; hadībī in EI2; D. Ayalon, in St. Isl. xxxviii, 107-56). In the Turkish states of Central Asia it was known as agahī or sometimes ulugh hadībī (for its importance in Turkish states see Kütadgu Bilig, ed. R. R. Arat, Ankara 1959, 181-7). In the Ottoman Empire this official never, as in the ‘Abbasid and Mamluk states, annexed the role of commander of the Ottoman fleet and of supreme judge to hear non-sharia cases in the Sultan’s name. Nor as in the Saldık administration, did he ever overstep his position as chief palace official or chamberlain. To ensure that the Ottoman Sultan’s authority should remain inviolate, the commandery of his personal troops was delegated to the agahī of the Janissaries and the duty of hearing complaints to the Grand Vizier. Great pains were taken to keep these functions separate.

Nevertheless, the kapu agahī must have exercised considerable influence in the state. He played a vital part in the accession of Sultans, and was the ruler’s close adviser. Besides, he must have had some influence and authority as the one-time officer of the commandery and governors graduating from the Inner Palace. The kapu agahī’s power and influence in the 9th/15th and 10th/16th centuries was compared to the Grand Vizier’s (Kitāb-i mustaṭṭāb, ed. Y. Yücel, Ankara 1974, 44). His influence increased yet further when, in the reign of Sülüymān I, the superintendence of the waqfs of Mecca and Medina and later of about 70 large mosques passed to an office under his control. However, their influence decreased at the end of the 10th/16th century when, at the instigation of the waqī‘ sulūm, this superintendence passed to the dār al-sa’āde agahī. In 905/1537, this official became independent of the kapu agahī, eventually rising to the position of senior palace official. In 1116/1704, with the transfer of his powers to the siltādār (q.v.), the kapu agahī declined into insignificance.

In the 9th/15th and 10th/16th centuries, the kapu agahī could transfer to service outside the Palace and receive the highest governorships of the Empire, such as the beglerbegī-ships of Rumelia or Egypt. Khādīm ʿAlī, Khādīm Sinān, Khādīm Sulaymān and Khādīm Ahmad (q.v.) who are reckoned among the great statesmen of the early period of Ottoman history, are famous examples. Two more, Fīрид Ḥusayn and Mergān, are well known as founders of city quarters and charitable institutions during the reign of Bayāzīd II (q.v.) (for details of their waqfs see E. H. Ayverdi and Ö. L. Bark, Istanbul vaḵšfsa taḥrīr defteri, İstanbul 1970). From the second half of the 10th/16th century, the kapu agahī began to intervene more and more in state affairs, and became a bitter rival of the Grand Vizier in the power struggle (Meḥmed, Taʿrīkh-i şīrāzi, TOEM, suppl., 29, 39). Gazarīf Ağa, who was kapu agahī for 30 years in the late 10th/16th century is particularly noteworthy.

To judge from the entries in the Mūhimme Defteri, the term Kapuçan Paşa became current only towards 1575/1576 (when ‘All Paşa, the beglerbegī of Algiers, is referred to as Ġidżārī beq beglerbegī ve kapuçan paşa: see, e.g., Mūhimme, vol. 7, nos. 502, 507, 587, 752). Strictly speaking, therefore, it is erroneous to refer to earlier naval commanders as Kapudan Paşa: ‘All Paşa’s predecessor, Piyâle Paşa (who was granted the rank of vezir, and thus had a seat in the Divān, see İ, s.v., Piyâle Paşa, by Ş. Turan), first bore the title Kapudan Beg (Başbakanlık Arşivi, Kamil Kepeci, Ruşs register no. 214, p. 17); he is later referred to as Ġidżārī beq beglerbegi and as vezir ve Kapuçan (see, e.g., Mūhimme, vol. 1, no. 276; vol. 6, no. 112; vol. 7 nos. 138, 160).

In earlier days, the commander of the fleet stationed at Gelibolu (q.v.) had had the title Derya Begi [see DERYA BEGI], being at the same time sanjakbeği of the İzmir of Gelibolu. The Gelibolu register of 1751 uses the term re′fis kapuçan to designate the commander of the fleet (F. Kurtoğlu, Gelibolu yören ve tarihi, İstanbul 1938, 51). Gelibolu remained the principal naval base until the time of Sultan Selim I,
who ordered that a new fleet be constructed in the "new arsenal" at Istanbul (Terâne-i Âmire) in 92/1517 under the supervision of Dişdar Kapudan (cf. Ş. Tekindâğ, Hatît Terânesinde inâ-i edinin iiâ Osmanîman donanmas ve Cafer Kapudan’ın arzısı, in Bellegiler Türk Tarhi Dergisi, no. 7 (Nisan 1969), 66-70.

When Barbarossa (Khayr al-Dîn [q.v.]) entered the service of the Sultan in 94/1534, he was given the beylerbeyî of the eyalet of DJezârî (Algeria). This eyalet later became the seat of the kapudan pasha. Later on, two boz, Aynabakhti, Karll-eli, Mizistre and Midilli from the beglerbeglik of Anadolu, and those of Eghri-i, 94 ff.). The sandjâfs of Kodja-eli, Sughla and Bigha evâdlet later became the seat of the kapudan pasha. Twice, in 1026/1617 and 1027/1618 the sandjâfs of Saktö, Naksha and Mehdiye were also attached to it. In the first half of the 11th/17th century, the eyalet of the kapudan pasha consisted of twelve sandjâfs (cf. Ş. Turan, XVII. yüzylnda Osmanlı Imparatörliğinin irdar ta tramalı, in Atatürk Üniversitesi 562 Yüllü, 204).

The kapudan pasha’s residence was the Divânîhane of the Arsenal in Istanbul. His main duties were to oversee the Arsenal, to supervise all matters relating to the Ottoman fleet, to govern the eyalet of the kapudan pasha and to make all the necessary appointments in it. This entailed his visiting and inspecting each sandjaf annually. He also had to protect merchant ships against the activities of pirates in the Mediterranean and in the Black Sea (cf. Tekîfî ‘Abdürrahman Paşa Kanûnînâmî, in MTV, iii (1313/1922), 536-6). If necessary, he also cooperated with the land forces (see, e.g., Mütimme, vol. 104, no. 193; vol. 105, nos. 48-49).

The office of Kapudan Pasha carried great prestige. In the 11th/17th century it had an annual revenue of 885,000 akce (Ewlyâ Celebi, Seyahat-nâme, v, 315; P. Rycaut, The Present State of the Ottoman Empire, London 1668, 54). It also received an income of 70,000 kurush from the islands of the Black Sea on which this fortress is built. The yövoda for lîstâm (Ewlyâ, v, 316; D’Ohsson, Tableau Général de l’Empire Ottoman, vii, Paris 1791, 442); this sum was increased to 300,000 kurugh in the late 12th-13th/18th-19th century. The success of the Ottoman naval forces always depended on the ability and the seamanship of the kapudans, particularly the Kapudan Paşa. In the 10th-16th century Ottoman supremacy in the Mediterranean seems to have been largely due to the kapudans. In the following centuries the empire lost its naval supremacy, though in principle only an admiral (Kapudan-ı Hümâyûn) or a chief of the Arsenal (T popover Kethîhidâs) or, at the lowest, a sandjâf-beyî of Rhodes was eligible to become Kapudan Pasha, appointments were now made regardless of the holder’s ability. In 1014/1605 Derwish Pasha, who was Chief Gardener (Bostandîlî bağlı), was appointed Kapudan-ı Dersî, together with the rais of vizier (cf. C. Orhunlu, Osmanlı tarihimde ait belgeler: Tellüsler, Istanbul 1960, 188); in 1184/ 1170 a certain officer in the Janissary corps (sekbân bağlı) was appointed Kapudan Paşa, although Hasan Kapudan was considered a better candidate in view of his earlier achievements (cf. Topkapı Sarayî Arşivi, Istanbul, nos. E. 464 and 1032).

With the naval reorganization of 1804, in the time of Selim III, the post of the chief of the Arsenal was abolished and the office of Superintendent of Naval Affairs (Umâr-i Bahriyye Neşrâretî) established (Saﬂvet, Umâr-i Bahriyye Neşrâretî, in TOFM, no. 21 (1359/ 1912), 1350 ff.). In 1826 the title Kapudan Pasha was altered to Umâr-i Bahriyye Nâşrî. Four years later the senior admiral (baş amirî) became the commander of the Ottoman navy, and naval affairs were supervised by the Bahriyye Nâşrî or Naval Minister.

(S. ÖZBARNAN)

**KARA**, the Turkish word for "black" or "dark colour" in general. It is commonly used with this meaning as the first component of geographical names e.g., Karâ Âmîd (on account of the black basalt of which this fortress is built), or a chief of the Arsenal (sekbân bağlı) as well. Moreover, the transliteration of this term has been used in names like Karâ Oğlan or Karâ Arslan. It is also in this sense that we have the name Karâ Khan which the Karâkhâns or Ilek-Khâns (cf. sv.) assumed in Central Asia.

**Bibliography:** von Hammer-Purgstall, GOR, i, 80; Kâşhîhari, Diwan lughât-i turk, iii, 187, tr. Atlay, iii, 221-2; O. Prittsk, "Qara, Studie zur türkischen Rechtssymbolik, in Zehi Velâi Togan’a armağan, Istanbul 1950-5, 239-63; Clasun, An etymological dictionary of pre-thirteenth century Tur- kik, 613; IA, s.v. (J. H. KRAMER)

In order to preserve a logical alphabetical sequence and to place one after the other those words which comprise the element karâ, these last have been placed together in a somewhat arbitrary fashion, so that e.g. karâba comes after all the words beginning with karâ. Moreover, the transliteration of this term has been unified, and is always written as karâ, the second vowel -a being written with an alif in Arabic orthography; however, the modern Turkish orthography with a short a is indicated where relevant.
The founder of the family, Mehemd Muhyi 1-Din Efendi, was given the lahad Karä-Celebi-zade after his maternal grandfather, Karä Ya'kub. He held several positions as a müdderris, was the teacher of Sulaymân I's son Muştafa, and bâdiî in Edirne and Istanbul. His pseudonym as a poet was Hidîrî, and he is said to have left a divân of poetry. He died in 965/1557. (2) Karä-Celebi-zade Hüseyîn Hüsâm al-Dîn Efendi was born in 940/1533 in Kütahya, was bâdiî-'asker (q.v.) of Anadolu and of Rumelî, and died in Bursa in 1007/1598. His son (3) Mehemd Efendi (970-1042/1562-1632) held several posts as bâdiî and müdderris, and became bâdiî-'asker of Anadolu in 1023/1614 and of Rumelî in 1029/1619. He wrote poetry under the pseudonym Zuhûrî and built a mosque in Bursa (Bâyâkelet Aşrîvî, Kamîl Recepî, Defter no. 257, p. 233). (4) Karä-Celebi-zade 'Abd al-'Azîz Efendi, who was born at the end of 1000/September 1594, was brought to Istanbul by his elder brother, Mehemd Efendi (3), and studied canonical law under the sheykh al-Islâm Şûnî Allah Efendi. He was müdderris in madrasas in Istanbul, Edirne and Bursa and in one of the madrasas of the Suleymaniye Mosque in Istanbul. Later he became a bâdiî, being appointed to posts in Yehişhîr, Mecca (1036/1620), Edirne (1040/1630) and finally, in 1043/1633, in Istanbul. He remained in this last post for only seven months before he was dismissed and sentenced to death; through the intervention of Grand vizier Bayram Paşa, however, he was reprimed and exiled to Cyprus (1044/1634). Eighteen months later he returned to Istanbul and first became bâdiî-'asker of Anadolu. On 13 Rabî‘l ‘Awwal 30/15 Rabî‘al ‘Awwal 1044 he was nominated bâdiî-'asker of Rumelî (Bâyâkelet Aşrîvî, Kamîl Recepî, Defter no. 258, p. 59), a function he actually assumed on 19 Rabî‘ 30/August 1548 (Sadârât-i Rumeli defterî no. 79, in the Şeriye Sicillerî Arşivi in Istanbul, is concerned with this period). In recognition of his role in Mehemd IV’s succession to the throne, he was given the title of sheykh al-Islâm, an award unprecedented in Ottoman history, in Ramaçan 1058/October 1648; he in fact took up the post on 11 Diümâdî 1 1057 (2 May 1651). While sheykh al-Islâm he restored a number of old practices relating to this function, revealed some subtlety in distributing bâdiî and müdderris posts, and re-organized sakîf matters. On 15 Ramaçan 1061/September 1652 he was dismissed and a week later exiled to the island of Saîlz (Chios). He was transported to Bursa in Diümâdî 1 1061/April 1652 and died there in Rabî‘ 1061/20 October 1652. ‘Abd al-'Azîz Efendi’s periodic falls from grace were the result of his interference in the internal politics of the period. His extant poetry, written under the pseudonym 'Azîzî, consists of a divân, a mathnawi entitled Gûlcâm-i nûyân which contains details about his life as a bâdiî of Istanbul and as an exile on Cyprus, works on sakîf (Hâll al-îçhîbân 'an 'âbâ al-îçhîbân, Kâlid al-Tâhâsî fî 'l-fîh al-Hânîfîyya ve Kâfî) and on the life of the Prophet (Mir'âbî al-saîfî, consisting of bisâs, which he dedicated to Murad IV, and Hüyât al-anbîyât), and translations, one in the field of ethics (Muşsinî's Akhîb) and one...
in šīra (K̄ašarīnš Faust̄h al-mabāwiyya). His fame, however, rests on his historical works. Of these, the Sulaymān-nāme, a history of Sulaymān I’s era which he dedicated to Sultan ʿĪbārīm, and the Rawḍat al-abrār, dedicated to Mehemmed IV, have been printed (Būlāk 1248). The latter work contains a description of the events from Adam to the time of Sultan ʿĪbārīm; the printed edition relies on a defective manuscript (O. Köprüli and I. Parmaksizoglu, ʿSeyhülislâm Kāra-Celebi-Cebebi Efendi, Istanbul: Edebiyat Fakültesi, unpublished, doctoral thesis, 1944-5, no. 359, p. 18; this work is the most detailed study available of Kāra-Celebi-zāde and his family). According to M. H. Yınıc, Türkiye tarihi, (see Istanbul: Kültüphaneleri tari̇h coğrafya yasamalar hikayeleri, Topkapı Sarayı Türkiye yasamalar hikayeleri, and the catalogues of Flügel, Fert, Rieu and Togucht), the ḍiwalk of the Rawḍat al-abrār is more in the form of memoirs and narrates events down to 1068/ 1658. Another of his historical works is entitled Tarākhī-i feth-i Revān ve Bahgādād dar ʿAzāf-nāme and deals with Murād IV’s campaigns to Erīwān in 1635 and to Bahgādād in 1638. Many manuscripts of his works are extant in libraries in Istanbul and Europe (see Istanbul kültüphaneleri tarih coğrafya yasamalar hikayeleri, Topkapı Sarayı Türkiye yasamalar hikayeleri, and the catalogues of Flügel, Fert, Rieu and Togucht).

ʿAbd al-ʿAzīz Efendi is known to have been short in stature, stout, with a high-pitched voice, and a ruthless and inflexible character. In Bursa he constructed works, the Muftu ʿSuyū, carrying water from the Ulu Dagh to the town, and had the water distributed to forty different public fountains (O. F. Köprüli, ʿSeyhülislâm Kāra-Celebi-Cebebi Efendi ve Mufti ʿSuyū, in Belleten, xi (1947), 137-45).

Mahmûd Efendi (997-1083/1588-1653), the son of Mehmed Efendi, was known by the lacab ʿAbū ʿl-Fadl. He rose to the positions of ḍiwalk of Anadolu and Rumelif. In Istanbul he owned a madrasa in the Şehzāde-bahšī quarter (S. Eyice, Kaṭšāker Ebu ʿl-Fadl Mahmûd Efendi medresesi, in Tarih dergisi, x (1959), 147-62), and in Bursa a mosque in the Set-bahšī quarter (Başvekalet Arşivi, Divan-I Humayun, mūsārāt defteri no. 26, p. 78; and a teachers’ seminary (muʿālim-khāne (ibid., Defter no. 25, p. 183).

Uḥmān Efendi (s. 1062/1651), son of the above, held several posts as ḍiwalk. (7) Abīm朱īd Nڶndim (see ʿNdin), the famous poet of the 18th century, is related to the family of the Kāra-Celebi-zāde through his mother.

(Nejat Gőyńc) KARADAGH, the Turkish name for the land of Crna Gora (Montenegro), at present one of the six republics of the Socialist Federal Republic of Yugoslavia, located in the southwestern part of that country. It is the smallest republic in Yugoslavia, being 13,667 sq. km. in area with a population of 330,361 (census of 31 March 1971). The region is primarily mountainous, the inland area differing considerably from the coastal belt, both in natural features and in the way of life of the population. The capital is Titograd (formerly known as Podgorica). Until 1918 the capital of the principality (and from 1910 the kingdom) of Montenegro was the city of Cetinje. The population of present day Montenegro is made up as follows (according to the Institute for Statistics of Titograd): 66.55% Montenegrins, 1.81% Croatsians, 7.55% Serbians and 13.44% Muslims. This is the part of the population which speaks Serbo-Croat and which declared a national or religious affiliation (0.14% of the population did not declare any national or religious affiliation and 0.28% gave a regional affiliation). In addition to other less numerous minorities, 6.55% of the population is Albanian, of which some are Muslim and some Catholic.

The Muslim religious organization in the Socialist Republic of Montenegro is an autonomous region of the Islamic Union (Islamska zajednica) of the Yugoslavia S.F.R. which has four such regions with seats in Sarajevo, Priština, Skopje and Titograd. The supreme organ of the Islamic religious organization in Montenegro is — as in the other autonomous regions — the Islamic Union Council (Sabor Islamske zajednice) with an executive body (Starsljema) at its head. The Montenegrin Islamic Union Council has 16 members, and sends three delegates to the Supreme Council of the Islamic Union in the Yugoslavia S.F.R. which has 35 members. In Montenegro there are 70 mosques and 9 Boards of the Islamic Union which carry out the basic functions of Muslim religious organization in Montenegro (data of 1969).

Montenegro is so called from the region known as the Black Mountain (Crna Gora). Originally this area belonged to the medieval Serbian state. On the disintegration of the latter in the 15th century, a separate Montenegrin state was formed under the Cnojević dynasty. From 886/1481 it was an Ottoman vassal state, and in 1401/1496 came under Ottoman rule. Other parts of present-day Montenegro had already fallen under Ottoman domination, while most of the coastal belt was under Venetian rule.

Once it became part of the Ottoman empire, the country was officially named Karadag. Within most of the country — as well as in certain outlying areas — there developed a tribal system which was the basis for development of a type of military democracy in the internal life of the country. From 919/1513 the sandjak-beg of Karadag was Iskender Beg (q.v.), an Islamicized descendant of the Cnojević dynasty. At that time the country reached certain political and economic independence. The population was no longer required to pay the giyâr (q.v.) nor to submit to the ʿughr and other taxes, but had to contribute only a gold coin (fiuri) per house and field. After the death of Iskender Beg the land of Karadag was no longer a separate sandjak falling mainly within the sandjak of Iskenderiye (Scutar), but even then the population had certain privileges. From the middle of the 10th/16th century the role of the Montenegrin bishop became stronger. In the 11th/17th century the autonomy of Karadag was established under Ottoman rule headed by a native sipahi (Serb. špaha). However, the bishop played an increasingly important role, and in the second half of the 11th/17th century he became the only representative of the people vis-à-vis the Ottoman authorities. At the end of the 12th/18th century the people of Karadag drew nearer to the Venetians, whose influence led to a swiftly suppressed revolt against Ottoman rule. In the 12th/18th century the people, led by bishops of the Petrović family from the village of Njeuš, overthrew Ottoman rule and defended their independence in many battles. In the 19th century, first under the Petrović bishops and then under lay rulers of the same family, the land developed into a state and gradually obtained international recognition. It was recognized as an independent principality at the Berlin Congress of 1878, and in 1910 was proclaimed a kingdom.
Owing to the tribal organization which predominated in the area and to the struggles against the Ottoman authorities, Montenegro acquired a warrior-like society and a strong notion of freedom. In the 12th/18th century a folk tradition developed according to which Montenegro had never been under Turkish rule. This tradition still survives in some measure and for a fairly long time prevailed in historiography too.

Montenegro participated in the Balkan War (1912-13) against the Ottoman Empire, and in World War I (1914-18) as an ally of Serbia on the side of the Entente. During World War I, it was occupied by the Central Powers, and in 1918 was unified with Serbia, becoming part of the Kingdom of the Serbs, Croats and Slovenes (later renamed Yugoslavia). During World War II Montenegro was under Italian occupation, and the people participated en masse in the struggle for liberation of the Yugoslavs.

**KARÄ DENIZ, name of the Black Sea in Turkish.**

i. — The name. — The expression "Black Sea" is encountered from the 7th/11th century in the Arabic form of al-Bahr al-Aswas (in Abû ʿAmmār al-Fāṭimī, tr., Reynaud, ii,193,316), in the Greek form in the treaty concluded in 1265 between Michael Paleologus and Venice (*Fontes Rerum Austrarum*, Section ii, xiv, 63, Vienna 1857), and among the western sources in Schilbinger at the end of the 14th century. But other expressions have for long been employed in parallel with it ("Russian Sea", "Sea of Sinop", etc.). The most frequent has been "the Great Sea", "Mare Maius", in Odoric of Pordenone, ed. G. Strasman, Berlin 1968, 38; the same, in William of Rubruck, ed. Michel and Wright, Paris 1839, *Recueil de voyages et mémoires*, iv, 214; "Mare Magnum, in Plano Carpini, ed. d’Avezac, ibid., 743), a form which appears dominant mostly in the 13th and 14th centuries in the western sources and which persisted in various aspects ("mare maggiore", "mer majour", etc.), until the 17th century, from which date the term "Black Sea" finally becomes general, and very soon in widespread use in the eastern sources.

The origin of the Turkish expression thus poses a problem. The ingenious explanation of L. de Saussure (*L’origine des noms de Mer Rouge, Mer Blanche et Mer Noire*, in *Le Globe*, xxiii, 23 ff.), calling attention to the coloured quality attributed to the cardinal points by the Chinese (and transmitted by them to the Turks), cannot be upheld. J. H. Mordtmann (*Kara Deniz in Ebn*) found the solution in its equation with the "Great Sea" of Western sources, remarking of it that the epithet ǰar always means the meaning of "great, powerful, terrible" in Turkish, particularly in the proper names. This would be the initial meaning of ǰar in Kari Deniz, displayed in its medieval western translation. The contamination of the two meanings in fact seems probable, but the explanation appears inadequate. In fact, the existence of the doublet Karâ Deniz-Ağ Deniz ("the White Sea", the Mediterranean) does not plead in its favour. Above all the expression Black Sea seems to have been well attested before the arrival of the Turks. Constantine Porphyrogenetos (De adm. imp., ed. Bonn, 132) in the 10th century, speaks of the EHICLEIA ("dark sea"). Doubtless one must accept the thesis of Aurel Diaconu (article Kara Deniz in *I4*), who supposes the existence of an ancient Iranian name (from ašāsena "dark, sombre"), Hellenized in Αἰγαίος by false etymology, then transformed because of superstition into E ζεκος; this would have survived with its original meaning in the East-Pontic regions where the Turks came into contact with this geographical concept (see also Bahr Buntus).

ii. — The Turkish conquest. — The development of the Turkish seizure of the Black Sea lands was spread over almost three centuries. Since the turmoil of the end of the 5th/11th century, Byzantium had succeeded in preserving all its fortresses on the coasts of the Black Sea, and the Seljukid Empire of Iconium (Konya) remained practically cut off from the sea. It was only at the very end of the 6th/12th century that the Turks gained a foothold there. When in 587/1191, Kilij Arslan II, divided his states between his sons, one of them, Kilâb, received the Black Sea, in advance of Tokat as its centre, the territory extending as far as the coast of the Black Sea. According to Nicetas, he laid hold on Samsun. It was also without doubt before the death of Kilij Arslan in 588/1192 that the Turkish occupation of Samsun took place, a process which developed alongside the Greek town of Amisos, which survived as a Greek, and then Genoese, city until the 14th century. In 612/1214, the capture of Sinob (Sinop) by Izz al-Din Kaykâʿus I assured the Turks of Iconium of a second important base in this central sector of the Black Sea coasts, towards which the natural routes of penetration from the great valleys of the Kifl Irnak and the Yeghi Irnak had guided the Turkish advance. On the other hand, the Greeks held on in the eastern part of the littoral, in the shelter of the mountainous and forested barrier of the East-Pontic chains which protected the independence of the Empire of Trebizond, and equally in the western sector of the coast, where Heracleum (Eregli) was doubtless only sold to the Turks in 761/1360 (Heyd, ii, 358), while Samastri (Amasra) remained a Genoese colony until the 9th/15th century.

Sinop (Sanub) and Samsun also played their part in the regional export traffic of the products of northern Anatolia, sc. wool, fur, leather and mining products. But whereas the Black Sea trade remained unbroken until then directed essentially towards Constantinople at the beginning of the 7th/11th century a considerable southern trade appears between the Turkish ports of the south and the Greek towns of the north, such as Soldâla (Sudak), an outlet for the steppes at that time held by the Khïṭâf Turks, who were still pagans. From 602/1205-6 some merchants of Iconium, Syria and Mesopotamia banded together in caravans to go from Sivas to Trebizond and, from there, to the eastern and northern coasts of the Black Sea (Heyd, ii, 93). The appearance of Turkish footholds on the southern coast stabilized this traffic to Sinop and Samsun. From the north came furs and slaves in exchange for cotton goods, silk and spices (observations of William of Rubruck at Soldâla in 1253). The Mongol conquest and the ruin of Baghdad, in deflecting the trade of Inner Asia towards the north, made a powerful contribution to strengthening trans-Pontic relations in the second half of the century. They were essentially consolidated, following the Genoese-
tente with the Paleologus dynasty, by a whole series of Genoese warehouses established in the first place on the southern coast of the Crimean between Caffa (doubtless from 1266) and Cembalo (Balaklava), including Soldalaka taken by the Genoese in 1365. Some other establishments were added there around the Sea of Azov (Tana-Azov at the mouth of the Don, Copa-Kopil, etc.), and on the eastern coast of the Black Sea (Mapa-Anapa, Sebastopol-Sukhum, Kal’e etc.). The traffic in slaves (Turks and Circassians), fish and caviar, salt, cereals and furs was directed towards Constantinople and Europe, but certainly also in an appreciable proportion towards Asia Minor and across it as far as Egypt. Besides, Christian merchants passed via Trebizond as far as Bûltanîyya in Persia. The part of the Muslim merchants cannot have been negligible in this trans-Fontic commerce, but is difficult to evaluate with precision. It was on a Greek ship that Ibn Bah’tta made his way from Kerç to Sinop in 1333 (tr. Defremery, ii, 345; tr. Gibb, ii, 468).

The capture of Constantinople, with the occupation of the Straits by the Ottomans, upset these relations. The Khan of the Tartars then diverted the merchandise and slaves sent to Sâmsun or other ports towards the points of the coast situated outside the Genoese territory, such as Eupatoria (Kerç) and Calamita (near Inkerman) (Heyd, ii, 387). Nevertheless, the policy of Ottoman expansion in the Black Sea did not begin immediately. The Bank of St. George, heir of the rights of Genoa, was able to maintain relations for some time. In 859/1455 its ships succeeded in forcing the passage of the Bosphorus and reaching Caffa and Samastri. Mehmed II took this town in 862/1455, but the trade to Caffa, henceforth a tributary of the Sultan, continued during the following years. The corn of Caffa still passed to Genoa. It was only in 880/1475 that Mehmed II made some incidents between the Khan of the Crimea and the Tartars in connection with the nomination of the governor who had jurisdiction over them a pretext for seizing the town, and the speedily, all the other Genoese towns.

iii. — The Ottoman Sea. — From that time, when the principalities of Rûm, the Crimean Tartars, the Naygar, and the western Caucasians were made vassals, the Black Sea became an Ottoman lake, for approximately three centuries, to which the Sublime Porte jealously forbade access to foreign ships. The Ambassador of France, Girardin who, in 1686, solicited authorization for French ships to trade there, received the reply that "the Grand Seigneur would sooner open the doors of his harem to foreigners" (P. Masson, Histoire du commerce Français dans le Levant au xviii® siècle, Paris 1911, 65). A similar reply was made in 1699 to the Ambassador of Russia Ukrainetz (B. Nicsky, Le peuple russe: carrière historique 862-1945, Neuchatel 1945, 189). The Black Sea was to be the base for a policy of Ottoman expansion towards the steppes of Southern Russia and the Caspian, whose culminating point was the expedition of Astrakhan in 1569 with the project of a Don-Volga canal.

This exclusive domination did not prevent, however, incursions of Cossacks in the 17th century, whose boats came at times to pillage the Anatolian coasts, for example at Giresun (Ewliya Celebi, Seyahatnamesi, ed. Zuhuri Danisman, Istanbul 1970, ii, 81).

In the Ottoman period, Black Sea trade was organized at first essentially to supply the fleet of Constantinople and Istanbul, but to a large extent also to provision a considerable area outside the city and its suburbs, including Soldalaka taken by the Genoese in 1365. Some Russian ships also accompanied the plenipotentiary of the Tsar to Istanbul in 1211/1699. Retraced to Turkey at the treaty of Pruth in 1713, Azov returned to Russia at the treaty of Belgrade in 1739, with a portion of the littoral of the Sea of Azov, but Article ix of the treaty stipulated that the Russians' trade in the Black Sea should be done exclusively by ships belonging to the Turks. On a parallel with the treaty of Passarowitz, the limit for the movement of Austrian ships on the Danube remained fixed at the mouths of the river. From 1163/1750 a first French factory was established at Caffa, where the French dragon carried on trade from 1746, but it was done in ships flying the Ottoman flag (P. Masson, op. cit., 541-3). It was only the treaty of Kucik Kaynarca (1187/1774) which opened the Black Sea to the Russian merchant ships, while the annexation of Kerç, Yeni Kal’e and the mouths of the Dnieper considerably enlarged the sea coasts of the Empire of the Tsars. The conference of Aynali Kavak in 1193/1779 completed it by according to the same ships the free passage of the Bosphorus and the Dardanelles. The foundation of Kherson in 1776, the annexation of the Crimea and the occupation of Georgia in 1783, the capture of Oczakow in 1788, and in 1795 that of Hodja Bey, where in 1795 the new town of Odessa was founded, marked the decisive stages of Russian installation in the Black Sea at the end of the 18th century. The Russian privileges were rapidly extended to the other European nations. In 1784 Austrian ships, in 1799 English ships, in 1802 French ships, obtained freedom of traffic. European penetration entailed considerable disturbance in the commercial currents. In 1781 the first Russian ship passed from Kherson to Marseille. In 1784 a French factory was established at Kherson. At the beginning of the 19th century several hundred
ships already participated in the trade of South Russia (an annual movement of 900 ships, of which 552 went to Odessa and 230 to Taganrog; 421 Austrian ones and 329 Russian ones, according to Anthoine, 262). Ottoman trade was progressively reduced to the West coasts of the Caucasus (with which the slave trade remained active throughout the first half of the 19th century) and to the north coasts of Anatolia. Sinop remained an important Ottoman naval base and a great centre of ship-building yards. The trans-Pontic trade of Russia to the Anatolian coasts survived on a restricted scale (fabrics from Aleppo and nuts sent from Trebizond: V. Fontanier, *Voyages en Orient... de 1830 à 1833, deuxième voyage en Anatolie*, Paris 1834, 223). But a new fact was the great rise in transit commerce from Persia via Trebizond and Erzurum, which was the normal access route from the Black Sea to Persia until the development of the traffic from Persia to Russia by land at the end of the 19th century and, more recently, the diversion of Persian transit to the Persian Gulf (C. Issawi, *The Tabriz-Trabzon Trade 1830-1900: Rise and Decline of a Route*, in *International Journal of Middle East Studies*, i (1970), 18-28). Since this date, the Turkish trade of the Black Sea has been essentially a coastal traffic, notably concerned with passengers, wood, the coal of the Kürdabad basin sent to Istanbul and to which are added some direct exports of nuts and tobacco to Europe.

**v.** — Political and naval history in the modern period. — If the freedom of commercial navigation has never been called into question since the end of the 18th century, the same has not been the case in regard to the naval status of the Black Sea. The treaty of Yanklar Silesi (1249/1833), by which the Porte undertook to close the Straits at Russia's request had practically conferred on this latter power the control of the Sea. The Conference of London (1840), in closing the Straits to all warships, caused Russia to lose this privileged situation, but left her assured of dominion in the Black Sea. But after the destruction of the Turkish naval forces by the Russians at Sinop in 1853 and the victory of the Franco- Anglo-Turkish allied forces in the Crimean War, the treaty of Paris of 1856 provided for the neutralisation of the Black Sea (except for six steamships with a maximum length of 50m. at the water-mark and four light ships for each power, as well as two light ships per power at the mouths of the Danube). The Franco-German War of 1871 gave Russia the opportunity, through the Conference of London, to have this neutralization annulled and to regain her freedom of action, but the passage of the Straits remained forbidden to warships. The Conference of Lausanne in 1870, by giving Turkey the right to fortify the Straits once more, by restricting freedom of passage to the fleets of the powers bordering on the Black Sea (with exceptions for light ships) and by according Turkey the right to close the Straits in event of a war in which she remained neutral, has made the Black Sea once more a half-closed sea.

**KARA FADLI** [see FADVLI MEHMET].

**KARA GÖZ** [see KARGÖZ].

**KARA GÖZLÜ**, Turkish tribe in Iran. It is not mentioned in any 10th/16th or 11th/17th century sources. Originally a member of the famous Shâmlu tribe during the Safavids and the tribe of which a part have taken its name from one of its beys; it is probable that it originated in the Bey Dili sub-tribe of the Shâmlu.

The homeland of the Kara Gözli was the Hamadân region, but in the mid-20th century there was a small branch known by the same name in Fars. The Kara Gözli had abandoned a fully nomadic life as early as the beginning of the 19th century, and lived in large and prosperous villages on the Hamadân plain. Nevertheless, they were foremost amongst those peoples who preserved tribal unity. Today they are divided into two branches, the 'Ashkül and the Hâjjidül. All European travellers who visited the region describe them as a numerous community. Dupré (1807-9) gives their number as 12,000 (*Voyage en Perse*, Paris 1810); K. H. Macdonald Kinneir (op. cit., 1810) records that they were able to field an army of 7,000 men (*A Geographical memoir of the Persian Empire*, London 1813, 127); while Lady Shelï (mid-19th century) gives their number as 4,000 (*Glimpses of life and manners in Persia*, London 1856, 398). The population of the Kara Gözli was given as 300,000 in 1930. Travellers also describe them as one of the most warlike tribes. Macdonald Kinneir (op. cit., 49) calls them the best horsemen in Iran. According to Muḥammad Ḥāšim (*Rustam al-tawârikh*, ed. M. Moshîrî, Tehran 1348, 105), Kara Gözli Saʿid Beg was one of the most gallant amirs of the reign of Sultan Ḥusayn, the last Šāfawid ruler. Although the Kara Gözli were a closely-knit community, they chose to remain subject to other ruling dynasties; for this reason they settled in the Hamadân plain as early as the 19th century, leading a prosperous life in comparison with other tribes. This can be explained by the fact, that as members of the Shâmlu subtribe, they had had a long-established political tradition and experience.

Following the death of Nādir Shah Afshâr, the tribe accepted vassalage to Karîm Khan Zand; but in the struggle between the successors of Karîm Khan and Āḵā Muḥammad Khan Karāǰâr, the Kara Gözli promptly sided with the Kâdjar, and played an important part in Āḵâ Muḥammad Khan's accession. The tribe's loyalty to the Kâdjar dynasty continued in later years, and as a result many important military and political figures were appointed from it.
Foremost among these was Muhammad Husayn Khan (d. 1240/1824-5), who had rendered important service to Ākā Muhammad in the creation of his state. He was also known as a just and benevolent ruler (J. Morier, A Second Journey through Persia,. .., London 1828, ii, 263). Rustam Khān, son of the above-mentioned khān, and Ḥādīdī Muhammad Khān, Naṣr Allāh Khān, ‘All Khān, Māḥmūd Khān and ‘Abd Allāh Khān were the most famous political and military figures of the Kara Gözlű during the periods of Fāṭḥ ‘All, Muhammad Shāh and Naṣir al-Dīn Shāh (Mīrzā Muhammad Taẖtī, Nāṣīḥī al-lawdārī, ed. Djiẖāngīr Kā’īn Māḵḵānī, Tehran 1337, ii, 84; iii, 123; Rīdā Kull Khān, Rawdat al-saḥā-yi Nāṣīrī, Tehran 1339, ix, 636, 648; 445, 211, 226-7, 238-40, 458, 459, 467, 529). Of these, Māḥmūd Khān and ‘All Khān were married to girls of the Kaḏār dynasty (J. F. Ferrier, Voyage en Perse dans l’Afghanistan..., Paris 1860, i, 70-1). Chiefs of the Kara Gözlű were among those statesmen assimilated to Western European culture. One of these was Naṣr al-Mulk, educated at Oxford University, who was regent in 1914, while his brother Amīr Tūmān was ambassador in Washington.

**Bibliography:** For detailed information and bibliography of the Karā Gözlū see F. Sümü Kaškarlar devrinde Türk oymaklan, in Selçuklu Araştırmalar Dergisi, v (Atasözen) 1974, 3.59-66. KARA HİSAR, “black castle, black fortress”, name of several localities of Asia Minor distinguished from one another by means of other names or epithets, but nevertheless still frequently confused. One finds them already enumerated in the Mvğlum of Yāḏūt (iv, 44), in the Nuzhat al-kulub of Yāḏūt Mustawfi (ed. Le Strange, 97), in the Nuzhat al-kulub of Yafcut (iv, 44), in the Bāb al-Dawla took in the year 335/946-7 (ZDMG, x, 487; Yāḏūt, 168) must be without doubt the Colonia Cappadociae which, according to Niketas (ed. Sieveking, v, 178 = Leunclavius, Historia Musulm., col. 474); in the year 878/1473, the town was taken by the Emperor of the empire (Avicenna, Kvin al-akhbār); in the year 860/1457-8, the town is the Colonia of Justinian, it belonged to Armenia Prima; in the Novellae of Justinian, it belonged to Armenia Prima; in the Bibliography see F. Sümü: Tażrīkh, 378, 181, who designates the town as Kara Hisar of Kemâk; also Sa’d al-Dīn, i, 287 = ‘All, Kvin al-akhbār, v, 178 = Leunclavius, Historia Musulm., col. 474). In the year 978/1473, the town was taken by the Sultan of the empire (Avicenna, Kvin al-akhbār); in the year 860/1457-8, the town is the Colonia of Justinian, it belonged to Armenia Prima; in the Novellae of Justinian, it belonged to Armenia Prima; in the Bibliography see F. Sümü: Tażrīkh...
The old name of Colonia was adopted by the Seljukids under the Armenian form Kughuniya that we encounter (Ibn Bibi, ed. Duda, Copenhagen 1959, 151, 152, 306), in Hamid Allah Mustawfi (op. cit., where the readings of the manuscripts Limuniya or Lisiuniya must be corrected to Kighuniya), and on the money of Eretan (Ahmed Tawhid, Meshekub-i Kadiim-i İslamiyye, iv, 439). If, as appears almost certain, the Mavro-Kastran mentioned by Michael Attalista (ed. Bonn, 125) and by Skylitzes (679) as being "situated on a hill in Armenia difficult of access", can be identified with Colonia, it seems then that alongside the name of Colonia the name of Karahisar was already known at this period; likewise, we encounter among the Greeks of the 18th century, alongside Colonia, the term Garasar which is a corruption of Karahisar.

The majority of the population has remained Christian for a long time. A census of 925/1529 counted 213 Christian houses there as against 84 Muslims. In 1022/1710 there were still 240 Christian houses as against 217 Muslim. Ewliya Celebi, who has left us a highly imaginative description, counted 1600 houses there, 750 shops, 42 mosques (1057/1647). There were 70 houses within the citadel, where the villagers of the Black Sea coasts, exposed to the ravages of the Corsairs, came to store their precious objects. A. D. Mordtmann (1858) counted 2400 houses there, 500 of them Armenian and 100 Greek, and Vital Cuinet, 11,700 inhabitants (of whom 2,750 were Armenian and 1,650 Greek). Trade, judged to be in decline by Barth in 1858, appeared to have become active once more at the end of the century, according to Cumont and Cuinet.

The richness of the gardens and vineyards adjoining the town always formed a primary basis of this activity. Schilberger (Reisebuch, ed. Langmantel, 57) calls Karassere "a land rich in vines"; these vines, which still exist today, were always less famous than the rich mines of alum of the neighbouring village Shakhane, mines from which was extracted the "alume de rocca di Colonna" (that is to say Colonia) in the 16th century. It must be identified with the bucan of Kara Maçar, between Yozgat and Akdağ Madeni (and not the Carahisar Kemalisi), as is noted in the Djihannuma, 613. This locality is today the Karahisar Tatlısî marked by the Şakşer Yerler Kilavuzu (Ankara 1946) as a parish of the Kara Hisar that the old Ottoman chronicles cite in connection with Prince Mehmed's battles with the chief of the Yürük Gözleroğlu in ca. 805/1402 (Leclercq, Hist. Musulm., c. 386; Sa'd al-Din, i, 200). Kiepert's map marks in this place, a little to the north of the Alaca Höyük, two places with the name of Karahisar near to one another, one mentioned as a ruin, the other as a village. The Turkish 1/200,000 map marks in this place a ruin of a fortress on a hill at 1250 m. altitude, and two villages, to the north-west of Akdağ Madeni and 30 km. to the north-east of the former.

The town suffered greatly from the 1914-18 War, when it found itself close to the front in 1916 at the time of the Russian troops' advance, and was abandoned by a part of its population. After the disappearance of the minority population, there were no more than 7,091 inhabitants in 1927, and 7,600 in 1950. The castle, encircled by surrounding walls in which some old wells seem to indicate a pre-Hellenic settlement, is no longer inhabited; within these fortifications, on the summit of the mountain, there is a small keep with an octagonal tower. The fortifications date from the Byzantines and were completed by the Muslim governors of the town.

4. Karahisar-i Behramshah (Bayrampasha), already cited by Hamid Allah Mustawfi, Nuzul al-kulub, 97; Sitti Reş's (16th century) visited this place at the time of his journey from Siwás to Bozaş and Kırşehir (Miri'āt al-mamālik, Istanbul 1312, 96). In the age of Ewliya Celebi it was a jurisdiction (başk) of the eyâlet of Siwás (Djihannumā, 613). This locality is today the Karahisar Tatlısî marked by the Şakşer Yerler Kilavuzu (Ankara 1946) as a parish of the bucan of Kara Maçar, between Yozgat and Akdağ Madeni (and not the Carahisar Kemalisi), as is noted in the Djihannuma, 613. This locality is today the Karahisar Tatlısî marked by the Şakşer Yerler Kilavuzu (Ankara 1946) as a parish of the Kara Hisar that the old Ottoman chronicles cite in connection with Prince Mehmed's battles with the chief of the Yürük Gözleroğlu in ca. 805/1402 (Leclercq, Hist. Musulm., c. 386; Sa'd al-Din, i, 200). Kiepert's map marks in this place, a little to the north of the Alaca Höyük, two places with the name of Karahisar near to one another, one mentioned as a ruin, the other as a village. The Turkish 1/200,000 map marks in this place a ruin of a fortress on a hill at 1250 m. altitude, and two villages, to the north-west and to the north-east, called respectively Türk Kalehisar and Çerkes Kalehisar (surely for Karahisar).
several mistakes. Following the information of Ahmed Weflk (op. cit.), who mentions KARA HISAR as the chief place of a nāhiyye of the badā' of Serik in the sandjak of Adalia, and the information of Ewliya Celebi (Stedthainmesi, i, 290) according to which the place was built at the foot of a mountain called Serek dagi, Mordtmann in ETI and Besim Darkot in IA have sought to identify it with the large village of Serik, a real centre of a badā' in the plain between the Aksu and the Kopri Su, nearer to this last river. This identification of the last village is incompatible with the data of the same text of Ewliya, which place it to the west of the Aksu, four hours' journey from Antalya and an hour north of the village of Kündu (still existing) on the one hand, and on the other with the information of the same, as well as of al-Kalâbâshandî (Subâh, v, 340), which places it on a lofty hill. Sulejman Fikri Erten (Antalya vilayetê tarîhi, Istanbul 1940, 90) wisely incorrectly to place it at the ancient town of Sillyon, a hypothesis compatible with the data on the elevated site but not with the information on distance and placing in relation to the river. In fact, there is no doubt that it can be identified with the ancient town of Pergum in terms of the above characteristics. Recognized since the 19th century by Krause in his articles Pamphylia and Perga in the Allgemeine Enzyklopädie der Wissenschaften und Künste, S. 329, 244, and vol. xv-xvi (1841), 435, but without comment and information on sources, then by X. de Planhol (De la plaine pamphylienne aus lais pisidien, Paris 1858, 104, 123), it has been set out clearly in detail by Barbara Fleming (Landschaftsgeschichte von Pamphylien, Pisidien and Lykien im Spätmittelalter, Wiesbaden 1964, Abhandlungen für die Kunde des Morgenlandes, xxx, see equally the index, s.v. for the numerous mentions of this town). 7. DEVELI KARA HISAR, i.e., the Karaşızar of Develi (develenî Karişızarî in Nehrî, ZDMG, xv, 341, and Leucaopsis, Hist. Musulm., 334) also named after the district of Develi (Houtsm, Recueil, iii, 104) to distinguish it from other towns of the same name. This town, situated in Asia Minor, 45 km. to the south-west of the Kayseri, was mentioned in the history of the Sandlıkçıs (Houtsm, Recueil, iv, passim). It was first mentioned to the possessions of the Banû Eretna (cf. Max van Berchem, Materiaux, Pt. 3, 41 and 48), then that of the Karâmân-ogullarî and was conquered in 794/1391 by Bayazid I (Nehrî, loc. cit.); at the time of the conquest of Karâmân by Mehemmed II in 879/1474, it surrendered to the Ottomans (Sa'd al-Dîn, i, 550). At the end of the 17th century, the district of Develi Kara Hisar formed a badā' dependent on Kayseriyeye Dîshîhnâmû, 620. The town then declined, without doubt due to the insalubrity of the swamps (Sultan Sazlıgî) which extend to the approaches of the town, and the consequence of this was the transfer of the centre of the badā' to Develi (or Eversel), to the south of Kayseri and 40 km. to the east, whereas Karâ Hisar, at the end of the 19th century, was no more than a nāhiyye of the badā' of Ingilis. This transfer has been at the source of a whole series of confusions between the two towns (Ahmed Weflk, Lehdis, 586, and Cuinet, Turquie d'Asie, i, 304, 320, give information which is quite obscure and false). The town, established anew as a kâsa in 1946, took the name of Yeşil Hisar. Of the ancient fortifications of Develi Karâ Hisar, only insignificant fragments remain; the town, known for its fruit production, is situated at the foot of some hills, in the midst of extensive gardens (Kunneir, Journey, 109; Hamilton, ii, 284).

There were several hundred houses at the end of the last century, with an increase to 3,800 inhabitants in 1950. In the neighbourhood of Develi Kara Hisar, 3 km. to the south-west, are the ruins of Zindîbar Kal'esi, considered formerly to be the ancient Nora (W. F. Ainsworth, Travels and Researches in Asia Minor, London 1842, i, 210) and now identified with Cuzyustra (W. M. Calder and G. E. Bean, A classical map of Asia Minor, London 1958).

Bibliography: Apart from the works already cited, I. Beldiceanu and Steinher and N. Beldiceanu, Deux villes de l'Anatolie pré-ottomane, Develi et Qarahisar, d'après des documents indits, in REI, xxxix (1971), 337-86. 8. KARA HISAR in the land of 'Uğmân (Yâkût, iv, 45): perhaps this is meant to be the Karaşına Hisar, also named Karaşız Sheher, near İnönü in the territory of origin of the Ottomans Sultans, a place which is often described even in the ancient chronicles by the name of Karâ Hisar.

9. KARA HISAR, in the territory of Ibn Torgut (Ibn Faţî Châbhî, op. cit., 350); this is, however, impossible to identify, unless it is an ancient name for Torghudu Kâşabasi near Mânsa. 10. KARA HISAR, chef-lieu of the badā' of Na'lûkhan (Na'llihan), vilâyet of Ankara (Ahmed Weflk, op. cit.). One encounters several villages of this name in the boundaries of the Sanjak, vol. x (1839), 244, and vol. xv-xvi (1841), 435, but without comment and information on sources, then by X. de Planhol (De la plaine pamphylienne aus lacs pisidiens, Paris 1858, 104, 123), it has been set out clearly in detail by Barbara Fleming (Landschaftsgeschichte von Pamphylien, Pisidien and Lykien im Spätmittelalter, Wiesbaden 1964, Abhandlungen für die Kunde des Morgenlandes, xxx, see equally the index, s.v. for the numerous mentions of this town).

II. HAMMAM KARA HISAR, village of the nāhiyye of Günûnîzî, badā' of Sivri Hisar, vilâyet of Eskeşiher, 17 km. to the east of the chef-lieu of the kâsa. 12. VÂN KARAHİŞARİ (Ewliya, op. cit., iv, 275-6), which the traveller visited on the route from Van to Kotur, and of which he says that the Kurds call it Karadja Kale; this is today a village of the kâsa of Saray (newly called Ozalp).

A certain number of other places of the name of Karâ Hisar figure in the gazetteers of the Anatolian villages; none of them have any historical importance. See the article of Besim Darkot in IA for the enumeration of several of them. (J. H. MORDTMANN [X. DE PLANHOL])

KARA KALFAK [see KARA KALFAK].

KARA KHANIDS [see ILK KHANS].

KARA KHITAY, the usual name in Muslim sources of the sixth/12th and seventh/13th centuries of the Kitai people, mentioned in Chinese sources from the 4th century A.D. onwards as living on the northern fringes of the Chinese empire; during the course of the 6th/12th century a group of them migrated into the Islamic lands of Central Asia and established a domination there which endured for some eighty years.

In the Orkhon inscriptions of Outer Mongolia, the royal annals of the Tu-chuïche or Turks (ca. 732 A.D.), the Kitai are mentioned as enemies of the Turks and as living to the east of the Turkish heartland on the Orkhon and Selenga rivers. Ethnically and linguistically, the Kitai were most probably Mongols rather than Tungus, as some earlier orientalists surmised, though there is a possibility that they spoke a language of their own, unrelated to the above two groups (see the discussions in Wittfogel and Fêng, History of Chinese society: Liao, 21-3, and Sir Gerard Clauson, Turk, Mongol, Tungus, in Asia Major, N.S. viii (1960), 120-1, 123). There must also have been considerable Uyghur Turkish influence on them when they were subject to the Khans of the Eastern Turks.

In Chinese sources, the Kitai are first called the Ch'i-ťan (K'i-tian) and then, after 947, the Liao. In
the period of chaos after the downfall of the T'ang dynasty (907), the expansionist Kitai overran northern China and established there a ruling dynasty which, whilst retaining its basic steppe ethos, became at least superficially sinicized, so that Chinese annals account them a native dynasty; southern China, on the other hand, remained in the hands of the indigenous Sung dynasty (960-1279). The Liao empire stretched from the Pacific in the east to the Altai mountains and the Uyghur lands in the west, and their original name of Kitai, in the form Khitai or Кхатай, was applied by the Muslims to northern China, whence older English Cathay, Russian Kitay, Greek Kitâfa, etc. for the whole country of China (see Sir Henry Yule, Cathay and the way thereto, London 1913-16, i, 146; in Muslim usage Cin, Arabic form شن [q.v.] became the term reserved for southern China).

Between 1126 and 1123, however, the Liao of northern China were overthrown by a fresh wave of barbarian invaders from the north, the Tungusic Jürchen of the Amur-Ussuri basin and northern Manchuria, who formed the Chín ("golden") dynasty, Mongol Altun Khâns. A part of the Kitai remained in China with the Chin and later, in the time of Cingiz Kühn, were able to successfully rebel and restore the Kitai kingdom as a Mongol vassal state. Muslim sources mention raids westwards by the "Khitai" on Islamic territories adjoining the Semirechye during the 5th/12th century (see Ibn al-Áthir, ix, 209-10, incursion of the Khitâyya in 408/1017-18), but these attacks may well have been made by Mongol groups, perhaps the Nayman, pushed westwards by the expansion of the Kitaï proper in northern China (see Barthold, Histoire des Turcs d'Asie centrales, 95). It was the migration of ca. 519/1123 and thereafter by the Karâ ("black") Khitai (in the Latin of John of Polo Carpeni, 1246, нигри Китай), Chinese Hsi ("western") Liao, which was really significant for the eastern Islamic world. One more southerly group moved into eastern Turkestan, which is perhaps too early, since in a letter from the Saldjuk sultan of eastern Persia, Sandjar, to the caliph's vizier, dated 527/1133, the victory is described as a recent event.

The adventures of the other group of Khitai are described by Djouayni, tr. Boyle, i, 354 ff. It may be that we should regard these merely as the right wing of a general Karâ Khitai advance along a broad front, successful in breaking through where the left wing thrust into Kâshgharia failed. At all events, this second group came westwards by a more northerly route, through the Kirghiz lands on the upper Yenisei, building the settlement of Emil to the east of Lake Balkhash, which they used as a base for intervening in the Karakhanid principality in the Semireche. By this time, their numbers had swollen to 40,000 tents. The Karakhanid ruler tried to win the Khitây over as allies against his own unruly Karluq and Kanhil tribesmen, but instead found himself deserted. The Karâ Khandâd, whose name appears in Chinese sources as Yeh-li Ta-shih (d. 537/1143) now, after a half-hearted attempt to organize a revanche and regain the Liao homeland in China, made the town of Balasaghun [q.v.] in the Ău valley his base for a series of attacks on the surrounding Turkish tribes and principalities.
KARA KHITAY

in the Semireçye. The Chinese history of the dynasty, the Liao Shih (completed in 1344), mentions a census taken in 1186 by the Gür-Khan Yi-li. This enumerated 84,500 households with adult males in them, but this figure probably included the indigenous Muslim population of Bâlsâğhûn and its hinterland as well as the Kara Khitay tribesmen; even reckoning two fighting men per household, the numbers of the Kara Khitay cannot have been all that large (see Wittfogel and Feng, 659-60).

Nor was there any administrative centralization, despite the fact that they did not follow the practice in other nomadic empires of granting out appanages to relatives and others of high rank; the first Gür-Khân is said not to have entrusted to any man command of more than 100 warriors. Except in Bâlsâğhûn, where, as noted above, the local Kara Khânid ruler was displaced (although the population of the town remained largely Muslim), local dynasties continued elsewhere to exist as the Gür-Khân's vassals. In some places, there were appointed permanent representatives of the Gür-Khan (Chinese chien-kuo "state supervisor", Turkish baskab, Arabic-Persian shâbna) side-by-side with the local ruler; a province like Khârazm was only visited periodically by the Kara Khitay tribute-collectors; whilst at the beginning of the 11th/11th century the sadrs or religious leaders in Bukhârâ of the Khân family (on whom see O. Pritskâ, Al-i Burhân, in Isîl, xxx (1952), 81-96) took the tribute of the city in person to the Gür-Khân's ordu, just as later under the Golden Horde the prince of Moscow took his tribute to the capital at Sarây.

The Kara Khitay administration was therefore primarily a fiscal one, and beyond the collection of taxes, the subject territories were left largely to their local rulers. Ibn al-Alhîr, xl, 56, says that the Gür-Khân imposed a tax of one dinâr per annum on each household of the conquered peoples, but we know that tribute in kind was also collected. Barthold thought that the dinâr levy on each family was a specifically Chinese feature, but it seems to have been only one method followed amongst several in a far-from-uniform system; one Chinese source says that the rural populace around Bâlsâghûn paid a tithe on their crops to the Gür-Khân. The Gür-Khân coined their own copper currency on the Liao and Chinese pattern, with the regnal period inscribed in Chinese characters, but the vassal states continued to mint their own Islamic-type coins, and as we have just seen, the unit of the Gür-Khân's currency, the dinâr, was recognised by the Kara Khitay for tax-collating purposes (see Wittfogel and Feng, 664-72). Even the numbers of the Kara Khitay cannot have been all that large (see Wittfogel and Feng, 659-60).

The Kara Khitay administration was therefore primarily a fiscal one, and beyond the collection of taxes, the subject territories were left largely to their local rulers. Ibn al-Alhîr, xl, 56, says that the Gür-Khân imposed a tax of one dinâr per annum on each household of the conquered peoples, but we know that tribute in kind was also collected. Barthold thought that the dinâr levy on each family was a specifically Chinese feature, but it seems to have been only one method followed amongst several in a far-from-uniform system; one Chinese source says that the rural populace around Bâlsâghûn paid a tithe on their crops to the Gür-Khân. The Gür-Khân coined their own copper currency on the Liao and Chinese pattern, with the regnal period inscribed in Chinese characters, but the vassal states continued to mint their own Islamic-type coins, and as we have just seen, the unit of the Gür-Khân's currency, the dinâr, was recognised by the Kara Khitay for tax-collating purposes (see Wittfogel and Feng, 664-72).

Barthold also asserted in his E1 article KARA KHITAY that the "language of the government seems to have been Chinese", but the linguistic and cultural structure of Central Asia at this time was complex and reflected the mélange of races, cultures and faiths to be found there. The Kara Khitay undeniably set a Chinese imprint on the administration and culture of the lands under their control, and Muslim authors noted a few Chinese words like fu-ma "imperial son-in-law" for the Gür-Khân's son-in-law (Duwaynî-Boyle, i, 290, 292) and p'ai-tzu, Chinese p'ei-tzu, "tablet, insignia of a government official's authority" (ibid., i, 158; Aflî, Lubbâb al-albâb, ed. Browne, ii, 385). The Gür-Khân bestowed Chinese official titles and used the Chinese script for solemn decrees, but the number of Chinese litterati at their court can never have been very large. They must have called upon Muslim scholars and secretaries for their correspondence in Persian and the Arabic script with their Muslim vassals, and probably upon Uyghur officials for correspondence in Turkish and the Uyghur script with vassals in eastern Turkestan.

The Gür-Khân administration was designed to prepare the way for eventually the Mongol Khans in the Islamic world, but they displayed the traditional tolerance of the steppes towards all faiths. Even though Islam was especially identified with the resistance in Transoxania by the Kara Khânids and by Sandjar, they did not systematically persecute Muslims, as did their brief supplanter Khâlûq (see below) in Kâshgâriâ. A contemporary Muslim author like Nûrânî 'Ardû Samarbândi gives an anecdote about the first Gür-Khân's boundless justice, his deference to the Şudâr of Bûlghûr and his removal of an oppressive representative of the Kara Khitay administration there (Cahâr maḥâila, ed. Browne, 24, revised tr. 24-5). Diûdžânî, the historian of the Ghûrids, is also remarkably enthusiastic about them; he praises the first Gür-Khân for his just rule and respect for Muslim sensibilities, and even purveys a tale that one of the later Gür-Khânids had secretly become a Muslim (Tabâkât-i Nâsîrî, ii, 96, tr. 91-2). Muslims retained leading positions in the Kara Khitay administration; the wealthy merchant Mâhmûd Tay is mentioned by Duwayni, tr. i, 357-8, as being vizier to the last Gür-Khân.

However, the religious tolerance and impartiality of the Kara Khitay undoubtedly permitted adherents of non-Islamic faiths to flourish more openly in Turkestan than under the orthodox Muslim Karakhanids. A great period of missionary activity and enterprise opened for the Nestorian Christian Church in Inner Asia; the patriarch Elias III (1176-90) founded a metropolitan see in Kâshgâr whose jurisdiction also included the Semireçye; and the oldest of the Syriac-inscribed Christian gravestones from the Qû valley in the Semireçye stem from this period (see Barthold, Zur Geschichte des Christentums in Mittel-Asien bis zur mongolischen Eroberung, Tübingen-Leipzig 1901, 57 ff.; idem, Histoire des Turcs d'Asie centrale, 99-101; the earliest inscription published by Chwolson dates from 1186). There were Chinese artisans working in Samarkand at this time, and the Jewish communities in Khorasan, Samarcand and Bukhârâ were flourishing, according to the evidence of a Jewish traveller in Persia like Benjamin of Tudela (see W. J. Fischel, The Jews of Central Asia (Khorasan) in mediaeval Hebrew and Islamic literature, in Historia Judaica, vii (1945), 29-50). Grosset commented with some justice that "the foundation of the Qara Khitay empire may be viewed as a reaction against the work of Islamization accomplished by the Karakhanids" (L'Empire des steppes, Paris 1952, 221).

As for the Kara Khitay's own religion, we can glean very little from the sources. Ibn al-Alhîr, xi, 55, calls the first Gür-Khân a Manichæan. Muslim writers usually, however, simply call them "idolaters", but we may surmise that Buddhism, which had overlaid the original shamanism of the Ch'i-tan in China, was widespread amongst them. One may accordingly say that the receptiveness of the Kara Khitay environment to differing cultural and religious traditions, and the consequent encouragement of the flowering of these traditions under the dynasty's relaxed rule, constitutes a certain achievement in human civilization, one which anticipates some justice that "the foundation of the Qara Khitay dynasty's relaxed rule, constitutes a certain achievement in human civilization, one which anticipates..."
people can never have been wholly absent, and these
may have increased towards the end of ... the Tiu-
kiu or Eastern Turks under the prince Kiiltigin and
the rebellious Az people (possibly the Tiirgesh), cf.

KARA-KOL — KARA-KOYUNLU

V. Thomsen, *Altötürkische Inschriften aus der Mongolei*, in *ZDMG*, lxxvii (1924), 154, and T. Tekin, *A grammar of Örkön Türkic*, Bloomington, Indiana 1968, 270. The lake was a celebrated wintering-place for migrating wildfowl, and therefore much frequented by hunters and fishermen. The Mongol princes Çaghatay and Ögedey wintered there in 629-620

The steppelands and pastures of the Karaköl basin are especially famed as the original habitat of the Karakul breed of sheep, whose lambs produce a glossy, tightly-curved, rich black fur, commercially known as Persian lamb, and used for making Astrakan fur: the full-grown sheep produce dark-coloured wool for carpet making. The Soviet Central Asian republics, Afghanistan and Persia are today important breeders of this sheep and exporters of its fur.

Other lakes with this toponym of Karaköl are found in the Pamirs (Tadzhik SSR) and in the mediaeval region of Semirechye near the Isik-Köl (cf. Barthold, in *Studies on the history of Central Asia*, tr. T. and V. Minorsky, ii, 134). After the Tatarian Russian conquest of the Khânate of Bukhara in the late 19th century, a fort Karakul was built to command the Çardjuy-Bukhara road, and a modern town has now grown up there.

After the Tatarian Russian conquest of the Khânate of Bukhara in the late 19th century, a fort Karakul was built to command the Çardjuy-Bukhara road, and a modern town has now grown up there.

**KARA-KOYUNLU**, Turkish dynasty which ruled over parts of Eastern Anatolia, Ṭrāḫā, al-Dîjarzâ, and most of Ṭrân. Pir ʿAyni) Pir Hasan (Kara ʿIjasan in their works) was Kara Mefcmed’s nephew, but this is not confirmed by other sources.

Governors of the Mongols, lived in the Mosul area in winter and moved to the Mugh-ʿAlâḥāt region, and sometimes to Erzurum, in summer. Most of the local dynasties in the above-mentioned regions had been made either his allies or vassals, but although defeated, Malik ʿManṣūr, the Arūṭuk ruler of Mârdân, refused to recognize Bayram Khodja’s suzerainty, and complained to Sultan Uways, the Dialyûr ruler, about him. Thereupon Sultan Uways left Baghdad in the spring of 769/1366, took Mosul from Berdi Khodja, and after passing the month of Ramadan in Mârdân, marched against Bayram Khodja, who was with his forces on the plain of Mugh. Defeating the amir of the Kara-Koyunlu there, Sultan Uways went to Tabrız by way of Karâ Kilise (ʿAqrâ). After this defeat, Bayram Khodja seems to have become one of the tribute-paying vassals of Uways. Nevertheless, the Kara-Koyunlu beg continued his activities by besieging Mosul, which probably belonged to Uways, in 773/1371, and by capturing Sandjar in the next year.

When the Dialyûr ruler died in the same year (744/1342), Bayram Khodja severed his ties of vassalage, and, taking advantage of the situation, added Şûrmêli, Ala Kilise, Khôy, Nakhdiwân and some other places to his territories. However, Shaykh ʿUsayn, successor to Uways, and particularly ʿAdilĀkâ, who held the real power, were not prepared to overlook his activities, and the Kara-Koyunlu accepted vassalage under lighter conditions (779/1377). When Bayram Khodja died in 782/1380, the territory extending from Mosul to Erzurum was directly subject to the Karâ-Koyunlu.

Bayram Khodja was succeeded by his nephew Karâ Mefcmed, an energetic and capable amir. He gained an overwhelming victory against the Dialyûr army, which met him near Nakhdiwân in 784/1382 under the command of ʿShaḥ-ʾzâda Shaykh ʿAli of the Dialyûrs and Pır ʿAli Bâr Beg. Both the Dialyûr prince and the other commander were killed in the battle. This victory increased Karâ Mefcmed’s status, and secured the Dialyûr throne for Ṭâmâd, who probably married Karâ Mefcmed’s daughter after this defeat. His vassalage to the Dialyûrs came to an end with the murder of ʿShaḥ-ʾzâda Shaykh ʿAli. Sultan Uways, after a series of successes—forcing the ruler of Dîjar, Dōger Şâlım Beg, to take refuge with the Mamlûk sultan for robbing the pilgrims of Mosul; besieging Mârdân; defeating Malik ʿĪsâ of the Artûkids and marrying his daughter; defeating the Ak-Koyunlu with their ally Mutâḥhâr, the ruler of Ersûnjîn, and compelling them to enter the service of ʿKhâlî Burhân al-Ṭûn—Karâ Mefcmed defended his country heroically against the attacks of Tîmûr in 789/1387. In fact, taking advantage of Tîmûr’s return to Transoxania, he captured Tabrız the next year. After leaving troops to guard Tabrız, returning to eastern Anatolia, he was faced with the opposition of Pîr Hasan Beg, one of the amirs in his service. Pîr Hasan was the son of ʿUsayn Beg, who had been killed by Bayram Khodja, and he had distinguished himself particularly in the battles with Tîmûr. Encouraged by this, and determined to avenge his father, he severed his ties of allegiance to Karâ Mefcmed and attempted to capture his principality. His venture was successful; in a battle (Râbi‘ II 791/April 1389) Pîr Hasan killed Karâ Mefcmed and seized the principality. According to some Mamlûk historians (Ibn al-ʾFîrât, al-ʿAynî) Pîr Hasan (Karâ Ḥasan in their works) was Karâ Mefcmed’s nephew, but this is not confirmed by other sources.
Plr Hasan Beg's rule did not last long, and an important part of the Karä-Koyunlu Turcomans gathered round Mśr Kahdja, one of the sons of Karä Meğmed, and continued the struggle. But it soon became apparent that Mśr Kahdja was a man of weak character, and he was replaced by his brother Karä Yusuf. The bitter fighting between Karä Yusuf and Plr Hasan led to heavy losses on both sides. Finally, Dörper Sālim Beg intervened and stopped the hostilities. Although the death of Plr Hasan (793/1392) saved Karä Yusuf from his enemy, shortly afterwards he had to resume fighting with his son Huṣayn Beg. The rule of Karä Yusuf coincided with the expansion of Timūr's operations in the Middle East. Like his father, Karä Yusuf opposed Timūr and tried to defend his country against his attacks. Taking advantage of Timūr's departure, he captured Tabriz several times, and took prisoner Atlamsh, governor of Awīnik and one of Timūr's commanders, and sent him to Egypt (797/1395).

However, when Timūr started invading Anatolia, Yusuf Beg was obliged to take refuge with Bāyezid I [q.v.] (802/1400). In fact, Bāyezid's offer of shelter to the Karä-Koyunlu Beg was one of Timūr's pretexts for opening hostilities against the Ottoman ruler. While Timūr entered the Ottoman territories, Karä Yusuf left Anatolia (805/1402) and went to 'Irāk, where he helped Sultān Ahmad to suppress his son's revolt, but upon Sultān Ahmad's failure to keep his word, he attacked Baghdad (805/1403). Defeated in battle by the superior forces of Timūr's grandsons, he went to Damascus by the desert route. Karä Yusuf and Djalayir Afçamad were imprisoned in Damascus, closely, because he is a Turcoman. The refusal of Timūr to release them, the ruler of Egypt. In a short space of time, he had learnt from the modest level of a tribal chief to the exalted position of ruler of a large country. From around this time onwards, Shah Rukh in particular encouraged Karä Yūlūq Othmān, the Ak-Koyunlu ruler of Āmid, Urfa and Kamāl, the Shirvān-Shah Shaykh Ibrāhil and others, in hostility towards Karä Yusuf. The alliance of the Shirvān-Shah Shaykh Ibrāhil with Arlat Sayyidī Ahmad, the ruler of Shāk, and Kostendil (Constantine), the Georgian king, against the Karä-Koyunlu ruler, was also related to this situation. But in a battle fought on the banks of the river Kūr, they were heavily defeated (Ramadān 814/December 1412); while Shaykh Ibrāhil managed to save himself by paying a heavy ransom, the Georgian king for his own safety was put to death.

The Karä-Koyunlu territory in Anatolia covered the Erzindjan area in the north, and the Mardin area in the south. Karä Yusuf had captured Erzindjan from Shaykh Hasan, grandson of Muṭahhar (813/1410), and Mardin from Malik Sālīh of the Artuqids (812/1409). However, the Karä-Koyunlu border could be extended no further in that direction because of the resistance of Karä Yūlūq Othmān Beg of the Ak-Koyunlu. Although Karä Yusuf defeated this stubborn enemy many times, and even forced him to take refuge with the Mamluks, he was never able to subdue him. Besides this, Karä Yusuf's trespassing into Mamluk territory in an effort to catch Karä Yūlūq, and the plunder and destruction he caused there, gave rise to hostilities between the two states. Deeply concerned that Karä Yusuf, whom he knew well, would some day be a cause of serious danger, Shaykh felt compelled to support the Ak-Koyunlu Beg secretly. Returning to Mardin from Mamluk territory (November-December 1418), Karä Yusuf met with an unexpected disaster, the death of his favourite son Plr Budak; his death was
a source of deep sorrow to his father, who had returned to Tabriz. Shaykh could not forget the destruction wreaked on his territory by the Kara-Koyunlu and the threatening letter he had received from Kara Yusuf. He had started preparing for war, although he was suffering from gout at the time and had to be carried. When he received the news of Shah Rukh's attack on Kara Yusuf, he cancelled his war preparations.

Shah Rukh, who had brought under his rule the great part of the empire founded by his father Timur, would not tolerate Aqharbâyûdân, and in particular, a part of 'Irâk-i 'Adîm, remaining under the rule of Kara Yusuf. He had already made a number of attempts to crush him in 827/1420 and 827/1421, but had not been able to carry these through because of family squabbles. Peace negotiations came to nothing: Shah Rukh demanded that Kara Yusuf return the cities of Sultânîyya and Kazwîn and agree to be his vassal. The Kara-Koyunlu ruler refused, and set out from Tabriz, his capital, to meet the Caghatayid ruler. The news terrified the Caghatayid army of 200,000 horsemen, although Kara Yusuf's forces consisted of 50,000 horsemen at the most. As the historian Hâfiz-i Abru noted, everyone from the Caghatayid ruler down to the lowest-ranking soldier was doubtful of victory. Their fears turned to joy at the news of the death of the Kara-Koyunlu ruler. In fact, Karâ Yusuf had become seriously ill on his departure from Tabriz, but had insisted on being carried on a stretcher. His condition worsened when he was two leagues from Uçîn, and he died soon after (7 Dhu'l-Ka'da 827/13 November 1420).

Kara Yusuf's greatness transformed the Kara-Koyunlu dynasty. When he returned home in 827/1420, he and his retinue were in a miserable state, but at his death he left his successors a large country extending from Erzindjian to Kazwîn and from Shîrvân to Başra. He was buried at Ardjish, but the site of his lavishly-constructed tomb and zâwîya has not been found.

The panic caused by the death of their ruler and the arrival of the Caghatayid army was short lived. Most of the Kara-Koyunlu rallied around Iskandar, one of Karâ Yusuf's sons, who was known for his bravery. Iskandar defeated Karâ Yûlûk of the Ak-Koyunlu, who had attacked Mârdîn (Rabi\' II 824/ April 1422). This victory caused dismay among the forces of Shah Rukh, who then camped along the river Araz, but it raised the morale of the Kara-Koyunlu so much that they started preparing an army of 30,000-40,000 men for battle with Shah Rukh on the Alashgird plain between Erzurum and Aqhr. Knowing that elephants were employed in the Caghatayid army, they trained their horses against elephants made of mud. Shah Rukh would have preferred not to cross the shores of Lake Van and to return to Aqharbâyûdân, but on the request of Karâ Yûlûk and some local amirs he resolved to march against the Kara-Koyunlu. The three-day battle (20-30 Râjâb and 1 Shabân 824/30-31 July and 1 August 1422) fought on the Alashgird plain ended in victory for Shah Rukh thanks to the numerical superiority of his forces. He could not, however, find anybody among his sons, amirs or others, worthy to be appointed as governor of Aqharbâyûdân (which made him an object of satire by some poets); no one would accept the position for fear of Iskandar. The Caghatayid ruler therefore returned to Khurasan, leaving Aqharbâyûdân to its former owners. Although Tabriz was occupied by Isfâhân, brother of Iskandar, who had commanded the left flank of the Kara-Koyunlu army in the battle of Alashgird, he evacuated the city and withdrew to the Pasin plain when he heard that Iskandar was on his way. Some time later he went to seek his fortune in 'Irâk-i Arab.

Iskandar spent the years 825/1422 and 827/1424 punishing the amirs of Hakkârî and Bîdîsî who had betrayed him by becoming vassals to Shah Rukh, and annexing Van, Aghbâh and Mosh. Attacking the Shîrvân Shah Râkîl Allah, one of the vassals of Shah Rukh, in 831/1428, he plundered his territory, and in the next year captured Sultânîyya, Zandjian, Kazwîn and Abhar, which were subject to Shah Rukh. Concerned at these exploits, the Caghatayid ruler marched into Aqharbâyûdân with a large army. A two-day battle (17-18 Dhu'l-Hijja 832/17-18 September, 1429) fought at Salmâs ended in a Caghatayid victory. In spite of this, Shah Rukh realized that he would never be able to wipe out the Kara-Koyunlu; he therefore appointed Abû Sâ'id, the youngest son of Karâ Yusuf, as amir of Aqharbâyûdân and returned home in the spring of 833/1430.

Before long, Iskandar seized his brother and put him to death. His relationships with his other brothers were also strained. Shah Me'med had broken off relations with his family after he had taken the rule of Baghîdâd, which Isfâhân, refusing to be subject to Iskandar, went to 'Irâk-i 'Arab and captured one by one the cities in the territory of the ineffective and foolish Shah Me'med. Finally capturing Baghîdâd in 836/1433, he effectively robbed his brother of all his lands. As for Dîhnâ, whose reli was around Lake Van, he resented his brother's hostile attitude towards him. Through opening hostilities against his brother in 837/1434, he became, like Isfâhân, a vassal of Shah Rukh. The acquisition of these two vassals prompted Shah Rukh to carry out the third Aqharbâyûdân expedition, despite the opposition of most of his amirs, allied to the bitter complaints of the Shîrvân Shah, whose territories had been devastated (838/1434). Iskandar probably knew nothing definite of Dîhnâ Shah's action.

Calling Dîhnâ Shah to his presence at Ravy in 838/1434, Shah Rukh declared him the head of the Kara-Koyunlu and sent a large army against Iskandar. Withdrawing towards Erzurum, Iskandar met the forces of Karâ Yûlûk 'Ogîmân of the Ak-Koyunlu, defeated him in a bloody battle, and took refuge in Ottoman territory when pursued by the forces of the Timûrîds. Iskandar probably thought that he could deal with Dîhnâ Shah as easily as he did with Abû Sâ'id, but he suffered defeat near Tabriz (841/1438) and took shelter in the impregnable fortress of Allindjâk, which housed his family and treasury. Besieged by Dîhnâ Shah, Iskandar could hope only for military aid from Egypt, but the news of the death of Sulîn Barbây was received at Erzindjian and the Egyptian force returned. Iskandar was murdered one night by his son Shah Kûbâd (841/1438). He was one of the most courageous rulers of his time, and few were able to withstand him. It was mainly through his courage that he was able to rule his country for 18 years. However, he was devoid of political wisdom, a deficiency which led to the destruction of his lands, the misery of his people, and the sad end of his reign.

During the reign of Dîhnâ Shah (823/1323-1439-47), the Kara-Koyunlu territory grew into a large empire and enjoyed its most brilliant phase. On the death of Isfâhân in 848/1445, Dîhnâ Shah annexed 'Irâk-i 'Arab (849/1446), and taking advantage of the death
in 850/1447 of Shâh Rûgh, whose vassal he was, he attacked the cities of Sulṭânîyya and Kazvin. Not content with these victories, he later took the cities of Rayy and Isfâhan and the regions of Fârs and Kirmân. Although his Khurasân expedition failed, mainly because of the revolt of his son Hasan 'Ali in 862/1458, he signed a treaty of firm friendship with Abû Sa'id of the Ñimûrîs, and thereby obtained confirmation of his sovereignty over the territories he had gained from the Câghatayid. Dîhân Shâh had reached the height of his achievements, and was the bearer of such titles as hâkâm, hâkâhân and sultân. During his reign, the Kârâ-Koyunlu territory had become one of the major Islamic powers. Parallel to his renown as a ruler, the political, military and administrative organization of his state also reached a high level of development. Culture and learning were encouraged by Dîhân Shâh, who was also a great builder. A highly cultured man, he wrote poems in Turkish and Persian under the pseudonym of Haâkî.

Dîhân Shâh's expedition against Uzûn Hasan Beg of the Âk-Koyunlu ended in disaster through his own carelessness. He and his son Muḥammad were killed, while another son, Yûsfû, was blinded (872/1467). His son Fîr Bûdak had been put to death early (869/1465) for rising against his father. His son Hasan 'Ali, who was in prison, was therefore placed on the Kârâ-Koyunlu throne. Deficient in intelligence and weak in character, he could not hope to hold out against Uzûn Hasan Beg. In fact, he was defeated by him at Marrand, and had to take refuge under Abû Sa'id, whom he had called to his aid. When Abû Sa'id was also defeated, Hasan 'Ali fled towards Hamadân, convinced himself when he realized that he could not avoid capture (Şawwâl 873/April 1469). Although his brother Yûsfû, who had been blinded, was taken to Fârs and placed on the throne by the begs of the Bahârî, he was put to death by Uğurlû Mehmed, son of Uzûn Hasan Beg, in 874/1470. In that year all the Kârâ-Koyunlu territories passed into the hands of the Âk-Koyunlu, and Kârâ-Koyunlu power virtually came to an end.

The organization of the Kârâ-Koyunlu state was a continuation of that of the Djalâylîrûds. The fact that the last members of the dynasty, as well as some tribal begs, had such names as Yâr 'Ali, Fîr 'Ali, Hasan 'Ali, Husayn 'Ali and 'Ali Şeker may be taken as evidence of the existence of a tendency towards Shi'ism among the Kârâ-Koyunlu. Moreover it is said that Isfâhan (Ispend) had coins struck on behalf of the Twelve Imâms. On the other hand, the names of the Four Caliphs appear on the coins belonging to the reign of Dîhân Shâh, and no contemporary historian has any record of his having had any inclination towards Shi'ism. The tombstones carved in the form of rams that can now be seen in eastern Anatolia and Iran were normally erected in memory of men famed for their bravery and gallantry; some of these tombstones certainly belong to the Kârâ-Koyunlu.

KARA-KUM [see KARAKUM]

KARA MAHMÛD PASHA, ISKODRALI, BUGHATLI (ca. 1155-1211/1742-96), and important representative of the powerful north Albanian dynasty of the Bughatli (Turkish: Budjatli), which achieved local prominence in the mid-12th/18th century as holders of large mekânu'dî. This family was able, between 1163/1750 and 1247/1831, to maintain itself in control of the sandjåk of Ishkodra (İskenderiye, Scutari, Skadar, the present Shkodër) and the surrounding territories as a hereditary quasi-principality.

The origins of the Bughatli remain debatable: amongst other traditions, that of their alleged descent from Stanisha, the rebellious brother of the vâdikha Gjuraj, who, in the aftermath of the battle of Ljeshkopolje (863/1461), settled in the village of Bushât, may be balanced by a claim (unsubstantiated) to a Venetian origin, while Kara Mahmûd assigned to himself, at a critical point in his career (1201/1792), descent from Skanderbeg. Be that as it may, from the later 9th/15th until the end of the 11th/17th century, the Bughâtî are found as sandjâ'-beysî of Ishkodra. For example, ca. 1015/1604 a certain Tâhir Bey Bushâtî is found engaged as an auxilliary of the pasha against the Kilimani. After a period of confusion during the first half of the 12th/18th century, Şhâzî Mehmed Pasha, the restorer of Bushâtî power in Ishkodra, and the founder of their fortunes as aş'ârîn, succeeded from ca. 1163/ 1750 in eliminating all opposition to his rule. On his death (15 Dümâdâh 1289/14 July 1775—not, as commonly stated, in 1184/1770 or 1193/ 1779, or, as stated in EFP i, 657, in 1211/1796), power passed briefly to his eldest son, Muṣṭâfa, and then (1390/1776) to his second son, Mahmûd Pasha, who, on his own initiative, rapidly exercised “presque impunément une autorité souveraine dans ce pays” (Capriate, Venetian consul at Durazzo (Durrës), 1782).

As sandjâ'-beysî of Ishkodra, with the honorary rank of mirmîdân, Kara Mahmûd Pasha found it possible to profit from the internal weakness of the Ottoman state and its involvement in successive wars with Russia and Austria, by reducing to obedience much of northern and central Albania, and engaging in incessant warfare with, e.g., Ojihrîl Ahmed Pasha to the east and the much better-known Tepedelenî 'Ali Pasha to the south. With the wâlis of Bosnia, to the north, Kara Mahmûd Pasha also came into conflict, establishing his control over the fortresses of Podgoriçha (Podgorica) and Ishbuz (Şupër). Internally, he by reducing his power by an alliance with the highland Malisors and by an economic policy of encouraging trade—especially Venetian trade—through Ishkodra. Like his father, he drew considerable financial advantage from this commerce.

It was believed in Istanbul—and possibly with reason—that the authority of the bâhis had lapsed and that the Sharti was no longer enforced in the territories under Kara Mahmûd Pasha's control. The Porte, accordingly, declared him a rebel, sending (1199/1784-5) an expedition under the kapudan pasha Djezârîlî Hasan Pasha [q.v.]; Kara Mahmûd Pasha was forced to surrender, but was pardoned and reinstated as sandjâ'-beysî of Ishkodra. Shortly afterwards (1785) he invaded Montenegro, and at the same time began to intrigue with Austria against the sultan in exchange for a promise of recognition as an independent ruler, an act which may have precipitated an unsuccessful second Ottoman expedition against him in 1200-1/1786-7, led by Tepedelenî 'Ali Pasha and the wâli of Rumilî, Ayydoslu Mehmed Pasha. Pardoned once more, in exchange for his rendering military assistance against Austria, and after having demonstrated his loyalty to the sultan by effecting the massacre of an Austrian mission under Bruggard in Şabâbân 1202/May 1788, Kara Mahmûd Pasha was invested with the titular wâllîlık of Anatolia and appointed commander (ser'asker) of the Ottoman forces assembled at Yefi-
KARA MAHMUD PASHA — KARA MUSTAFA PASHA

589

pazar (1204/1789). The following year he acted as sercasker at Widin, but was soon once more in revolt, being dismissed from command.

Returned to Ishkodra, Kara Mahmud Pasha resisted successfully the new sultan, Selim III, who in 1208/1793 sent against him the wall of Rumili, resisted successfully the new sultan, Selim III, who in 1211/1796 in circumstances which are commemorated by the Montenegrin epic ballad Pjesen. His head was for long preserved in a church at Cetinje; his body was eventually buried at Podgorica.

There is no doubt that, compared with e.g. Tepedelenli 'Ali Pasha, the importance of the Bushati family in general, and of Kara Mahmud Pasha in particular, for the history of the Balkan a`yanate of the 18th-19th centuries, has been underestimated. Recent attempts, however, to read into the activities of Kara Mahmud Pasha an Albanian proto-national significance should perhaps be treated with considerable reserve.

KARA MUSTAFA PASHA, MERZIFONLU, MAKTEL, Ottoman Grand Vizier.

According to the "official" Ottoman accounts (e.g., Râşid, Ta`rikh, i, 430), Kara Mustafa Pasha was of Turkish origin, born in 1044/1634-5 into the Anatolian "feudal gentry", his father, whose name is given as Unlu Beg (but as Voontho Agha in S'O, iv, 402), being a member of the a`yan-i sipahiyyan and one of those who fell in the siege of Bagdad by Murât IV in 1048/1638. A friendship was said to have existed between his father and Köprüli Mehmed Paşa, in whose household, accordingly, the son was brought up, educated with Köprüli's own son, Ahmed.

The relationship that apparently emerged between the house of Köprüli and Kara Mustafa certainly determined, in large measure, the latter's subsequent political career, but other, and often conflicting, accounts of his origins and early years have survived from the time preceding his nomination to the Grand Vizierate in 1087/1676. According to a report prepared for the French ambassador de Noielt at some time between March 1675 and October 1676 (appendix to Ch. Schérer, ed., Journal d'Antoine Galland pendant son séjour à Constantinople (1672-1673), Paris 1881, ii, 186-207), Kara Mustafa Pasha was at that time "saêg de quarante-huit ans ou environ" (i.e., born ca. 1036/1626-7) and the son of a sipahi called Derwâş Beg, of Merzifon. His father gave him, at the age of eighteen (? ca. 1054/1644-5), to Mehmed Köprüli, who made him his id-âqlan in his service, promoting him to sipâkdâr on his own appointment as müstellim for the eyâlet of Şam (Damascus) (cf. Silâhbâr, Ta`rikh, Istanbul 1928, i, 225), and, subsequently, to be his mükhârdar (seal-bearer). On the appointment of Mehmed Köprüli to the governorship of the eyâlet of Trablîs al-Şâmr (report apud Schérer, 186: in 1065/1654-5, cf. Silâhbâr i, 226) he raised Kara Mustafa to be one of his aghâs; shortly afterwards, on assuming the Grand Vizierate (1066/1655-6), Mehmed Köprüli summoned Kara Mustafa from Merzifon—where he had retired because of illness—and appointed him to his teşhid-iştâd ("celuy que le Pacha despece au Grand Seigneur lorsqu'il a quelque chose de consequence à lui faire scavoir") (cf. Râşid, i, 430-1).

A third conflicting early account of Kara Mustafa Pasha's origins is supplied in a rélazione composed c. 1680 by the Venetian baiad Morosini, published by N. Barozzi and G. Berchet, Relazioni, Series v, Turchia i/2, Venice 1872, 207, and cf. 259), which seems to reflect a tradition current even in the 1660s.
KARA MUSTAFA PASHA

590

As Kapudan Pasha, Kara Mustafa accompanied Mehmed IV on an inspection of the fortifications of the Dardanelles (Safar to Rabî' II 1076/August to October 1665), and was subsequently put in charge of naval preparations for the planned final reduction of Crete. His actions at this time, in attempting to commandeer for transport purposes ships of the European maritime powers, were resisted by their representatives at the Porte, and contributed materially to the exaggerated accounts concerning him which became current in Europe.

In Shawâbâ 1076/February 1666 he briefly resumed the post of ka'îmmâ'âm, accompanying Mehmed IV on a hunting expedition to Cataldja. While there (1-14 Shawâbâ 1076/5-19 February) he was dismissed as Kapudan Pasha but received in compensation promotion to the rank of Second Vizier, as part of a complicated reassignment of posts (Silahdar i, 392-3). At this point, with the siege of Kandiey entrusted to the Grand Vizier, Kara Mustafa became once more ka'îmmâ'âm (5 Dhû ’-l-Ka’dâ 1076/9 May 1666), a post which he retained until the return of the Grand Vizier to Edirne on 8 Şafar 1081/27 June 1670 (Silahdar i, 409, 558).

During these years Kara Mustafa Pasha remained in close attendance on Mehmed IV, but his ascendency appears to have been threatened by the sudden rise to a position of influence of the sultan's boon companion Mustafa Agha, who was given the rank of Second Vizier on 28 Muḥarram 1077/31 July 1666 (thus causing Kara Mustafa's demotion to the rank of Third Vizier) and who was regarded in court circles as equal in rank to the ka'îmmâ'âm (Silahdar i, 430).

In Shawwâl 1078/March-April 1668 Kara Mustafa accompanied Mehmed IV to Yeśliğehir-ı Fenâr (Lârisa), in order to observe more closely the progress of the siege of Kandiey. Here he lived with great pomp and magnificence—his military band attracting the particular attention of foreign visitors—dividing his time between the reception of envoys and hunting with Mehmed IV in his frequent expeditions throughout Thessaly. It was on one of these excursions, while encamped at Livadya in Djumâda 1/1080/October 1669 that Kara Mustafa carried to the sultan the news of the capitulation of Kandiey (Silahdar i, 483 ff., 501 ff., 554-5).

In the interval of peace (1669-72) between the end of the Cretan campaign and the outbreak of war with Poland, Kara Mustafa Pasha, still with the rank of Third Vizier, remained close to the sultan (cf. Silahdar i, 562-8).

Kara Mustafa Pasha played an active, if subordinate, role in the Polish campaign of 1083/1672, this being the first time since 1068/1658 that he had seen service in the field. He was present at the sieges of Khotin and later commanded the right wing at the opening of the siege of Kamianëc (1083/1672). After the Ottoman capture of Buğask (Buczacz), an operation which he commanded, he was appointed chief plenipotentiary in the negotiations with the Poles and concluded with them the cessation of hostilities which transferred Podolia to Ottoman control and recognized the western Ukraine as an Ottoman protectorate (Silahdar i, 568 ff., 582-3, 592 ff., 610, 611 ff.).

It would seem that after his return from Poland Kara Mustafa Pasha was able further to establish his influence with the sultan. Having, earlier in his

Fâddl Ahmed Pasha (Silahdar i, 231 ff., passim; Knolles, Generall Historie, ii, 163).

(cf. Roger North, Life ... of Sir Dudley North, London 1744, 73). This relates that Kara Mustafa was born "among the dregs of the people" ("nato per castigo de' popoli") near Trabzon (? a dragoman's misreading of "Merzifon"). Kara Mustafa obtained a post as one of the lowest domestics of Mehemd Köprülü—who had indeed for a short time governed the eyâlet of Trabzon ca. 1054-6/1644-5 (cf. Silahdar, i, 225) (this providing some support to the chronology of the account published by Schéfer).

Amongst this conflicting evidence no clear path can be charted. The "official" account is circumstantially weak and appears to be a romantic ex post facto construction. Epigraphic evidence, however, confirms at least that Kara Mustafa was a native of Merzifon or, more precisely, of the nearby village of Maruéjda (now Bahêkent), where he founded a mosque, a fountain, and a library (A. Gabriel, Monumenta turca d'Anatolie, ii, Paris 1934, 71; Amasya II silâhi, n.p., n.d., 187-9). Only upon the appointment of his patron, Mehemd Köprülü, to the Grand Vizierate in 1066/1656 does Kara Mustafa become a visible public figure.

He participated in the campaign undertaken by the Grand Vizier against Transylvania in 1068/1658, and, on the Ottoman capture of the important fortress of Yanova (July 1068/1 September 1668) he was employed—as tebâhûndî to Mehemd Köprülü—to convey the news of the success to Mehemd IV (Mêhemd Khalife, Ta'vrâh-i Chîlîmânî, ed. A. Reiff, in TOEM, supp., 1340, 54) and as a reward was taken into the Outside Service of the Sultan, being appointed to the office of külük mirâghor (Silahdar, i, 127, 140). On 3 Djumâda II 1070/25 February 1666 Kara Mustafa "Agha" was appointed beşer beşîgî of Sîliâstre, from which office he was removed on 26 Shawâbân 1071/16 April 1661 in order to superintend the removal of the Wâlîde sulṭân from Edirne to Istanbul. Shortly afterwards, he was raised to the rank of Vizier and appointed vâlî of Diyarbârk (Silahdar i, 181-2, 217; Râşîldî, ii, 73; i, ii, 430).

His dependence on the continuing ascendancy of the Köprülü family was also soon apparent. Shortly after the death of Mehemd Köprülü and the appointment to the Grand Vizierate of his son, Fâddl Ahmed Köprülü (7-8 Rabî' I 1072/31 October-1 November 1661), Kara Mustafâ Pasha was appointed Kapudân Pasha on 1 Djumâda 1/13 December of the same year (Silahdar i, 221; Râşîldî, i, 23). In this capacity he commanded the Ottoman fleet in the Aegean Sea, returning to Istanbul in Dhûl Qa’dâ 1/22 January 1663, in time to take part in the great military parade held before the sultan at Edirne on 28 Shawâbân 1073/30 April 1663. In the official description of this event he ranked second in the list of participants—an indication of his steadily improving political fortunes.

He did not serve in the campaigns undertaken by Ahmed Köprülü in Hungary. On the departure of the army and the Grand Vizier from Edirne (5 Ramadân 1073/13 April 1663), he was appointed ka'îmmâ'âm [q.v.], a position which allowed him to exercise an increasing influence on the sultan and on affairs of state. At the same time he was permitted to retain the office of kapudânî-i deryâ, administering it through a deputy (Silahdar i, 241; Râşîldî, i, 26-7). During this period his duties, as recorded in the Ottoman sources, have been largely only ceremonial, but it was rumoured among western diplomats that he was already aiming at the Grand Vizierate and intriguing with the sultan against
KARA MUŞTAFA PASHA 591

career, married a daughter of Mehmed Köprüli, he was on 4 Rabī' II 1086/29 May 1675, as part of the ceremonies held at Edirne in honour of the circumcision of the sons of Mehmed IV, betrothed to the sultan's daughter, Küçük Sultan.

During the last illness of Fadıl Ahmed Pasha, Kara Muştafa was authorized by the sultan to take over the public functions of the Grand Vizier—functions which he exercised first at a dâ'wan held in the Ok Meydanı at Istanbul on 27 Dümâdâr 1087/28 July 1676. On 2 Şahbân/10 October of the same year he was appointed yol küimâhâtı for the journey of Mehmed IV from Istanbul to Edirne. The Grand Vizier himself, following behind, died on the road between Çorlu and Karşıklıran. The seals of office were brought on 25-7 Şahbân 1087/29 November 1676 to the sultan, who invested Kara Muştafa Paşa with the Grand Vizierate (Râşid, i, 332-4; Silâddar, i, 651-2).

Kara Muştafa Paşa occupied the Grand Vizierate for seven years (Şahbân 1087/November 1676 to 6 Muharram 1095/25 December 1683). His domestic policies were conservative, frequently rapacious, and designed both for the exigencies of a war economy and for his personal enrichment. Morosini di Alvise, for example, described him as "tutto venale, crudele e infame" (op. cit., 204), neither was on occasion allowed to override the financial interests of the state: thus in 6 Dhu¬l-Ka‘da 1091/November-December 1680 he decreed the (temporary) abolition of the khamr emdneti, the excise on wine, it being argued that for the state to profit from the sale of wine was contrary to the Şarî'a. In the same spirit he restored (1087/1676) the ancient custom that the Grand Vizier and his assistants should tour the markets of Istanbul on Wednesdays, and refused to admit to other than public audience the interpreters of western ambassadors, on the grounds that they were of rekâyâ status (Silâddar i, 735; R. Mantran, Istanbul dans la seconde moitié du XVIIe siècle, Paris 1962, 126, n; Knolles, op. cit., ii, 264).

In his dealings with the envoys of Christian states and with the merchant communities in Istanbul and the other ports of the Ottoman Empire, Kara Muştafa Paşa seems to have been animated by an "intense xenophobia" (Mantran, op. cit., 527), which had been remarked as early as 1074/1663 (cf. a harsh letter of that year to the English ambassador, omitting the customary salutations (Leicester, County Record Office), but which became more strongly marked after his assumption of the Grand Vizierate (e.g., the exactions laid upon the Dutch for the renewal of their Capitulations, upon the French over their bombardment of Chios, and against the English in a constant stream of avanias during the years 1676-83). Despite this, the Dutch ambassador Colyer could describe him in 1677 as "een stout ende prompt, onderneem enden man" (K. Heeringa, ed., Bronnen tot de Geschiedenis van den Levantschen Handel, ii (1661-1726), The Hague 1917 (= Rijks-MSS. Commission, Report on the MSS. of Allan George Finch, Esq., ii (London 1922), 62; Berchet, op. cit., 187, 209; Schefer, op. cit., ii, 205).

In foreign affairs, Kara Muştafa Paşa continued, but with less careful statecraft, the policies of his two illustrious predecessors. Circumstances, and perhaps—as was at the time alleged—his personal predilections, enforced a preoccupation with the northern frontiers of the Empire and with the Christian states—Russia, Poland and Austria—which lay beyond its borders. In his relations with these states he attempted, with little success, to make use of often refractory Ottoman vassals, such as the Cossack hetman Doroshenko, the Hungarian magnate Imre Thokoly, and the then çekân of the Crimea, Selim Giray II. His policy has been commonly regarded as war for its own sake, but some at least of his actions seem rather to have been attempts to consolidate or define the Ottoman presence in those disputed areas—most notable the Ukraine and Hungary—which formed buffer zones between the Ottoman state and the recognized lands of dâr al-ḫarb.

The years from 1087/1676 to 1092/1681 were entirely taken up with the problem of the Dniepr frontier. The settlement between Poland and the Ottoman Empire, which had been concluded at Izvandja/Zurawno shortly before the death of Ahmed Köprüli, had opened the door to Russo-Ottoman rivalry in the Ukraine, but the defection from the Ottoman camp of the hetman Doroshenko led directly to Kara Muştafa Paşa's unsuccessful first Russian campaign (1088/1679). In a second expedition which was launched in the following year, the Cossack stronghold of Çehrin was taken (Radjab 1089/August 1687) and later demolished (Silâddar, i, 672-722; the fest-nâmîs celebrating the event, ibid., 714). The essentially defensive nature of these campaigns was underlined by the construction (1090/1679) of new Ottoman fortresses on the Dniepr and Bug rivers, and by a third inconclusive campaign in 1091/1680, which led to a Russo-Ottoman truce (2 Szafar 1092/13 March 1681).

Ottoman relations with Russia and Poland being thus stabilized, Kara Muştafa Paşa was free to turn his attention to the affairs of Hungary and to the planning of offensive warfare against Austria. To this end he recognized (1093/1682) the Hungarian malcontent Thokoly as puppet ruler and refused to renew except on the severest terms the twenty-year truce of Vasvár, due to expire in 1684. At the same time extensive military preparations were undertaken; finally, in Muharram 1094/December 1682, a large army with Mehmed IV and Kara Muştafa Paşa at its head departed from Edirne for a major campaign in Hungary and for the fateful second Ottoman attempt to capture Vienna (Silâddar, ii, 2 ff.).

This final, disastrous phase of Kara Muştafa's career—the progress of the campaign, the unsuccessful siege of Vienna, and the failure of the Grand Vizier to survive politically the consequences of military defeat—cannot be treated in detail here. It has, in any case, received considerable (if often uncritical) attention from contemporary and later observers (see Bibliography, below). Nor, perhaps, should the defeat of Kara Muştafa before Vienna be viewed in the totally apocalyptic light cast on it at the time and subsequently. In the context of Ottoman warfare it may be regarded as no more than the unexpected failure of a single campaign: after the siege was lifted (20 Ramaḍān 1094/12 September 1683) Kara Muştafa Paşa fell back on Yanık (Raab, Győr) (22-25 Ramaḍān), and from there retreated to Buda, where he arrived on 30 Ramaḍān/22 September. There he attempted to regroup his forces and to restore the shattered defences of the frontier, e.g., by sending 6000 men from the Buda garrison.
to reinforce Ujvar (Sihâbdâr ii, 85-96, passim). There is no evidence that while at Buda his authority as Grand Vizier was in any way questioned, or that his standing with the sultan was impaired by his failure at Vienna; what is clear is that having strengthened, to the best of his ability, the defences of the frontier, and having left Kara Meşmed Pasha as sâdâr in Hungary, Kara Mustafa departed with the army for Belgrade, where he went into winter quarters on 28 Dhu 'l-Hijja 1094/18 November 1683 (Sihâbdâr ii, 107, 113). It was at this time that his political fortunes began to ebb. On 29 Ramazân/29 September his telkhisâtı, İsmâ'îl Ağha, had arrived at the sultan's camp before Belgrade with the news of the defeat of the Ottoman army and its retreat to Yanlış. The Grand Vizier informed the sultan that he would remain at Buda until rûs-i kâsim (46 October, old style, i.e., 5 November) and then would go into winter quarters at Belgrade, from whence, in the following spring, a large and victorious army would, with the sultan's permission, attempt to regain the losses of the past campaign (Sihâbdâr ii, 107f.). The result of this communication was a series of consultations among the officers attendant on the sultan; robes of honour and a bejewelled sword—signs of royal favour—were despatched to the sultan; other gifts such as mirrors and ostrich eggs, together with the usual courtesies of hospitality, were sent to the sultan's representative at Belgrade. By the end of the year the sultan was returning to Edirne after the unsuccessful winter campaign of 1683-4. The sultan was in a poor mood; much of the correspondence of this period reflects the sultan's despondency at this setback. The sultan was not in agreement with the suggestion of his young viziers, Azem and Cevazeddin (who also had brothers in the field), that the Grand Vizier should be recalled and that the Sultan should assume the command of the army. The Sultan was determined to carry out his plans for the following spring, a large and victorious army would, with the sultan's permission, attempt to regain the losses of the past campaign (Sihâbdâr ii, 107, 113).

Bibliography: Beyond the references given in the text, a necrology of Kara Muştafa Pasha is provided by Râşidî, i, 430 ff. and an appreciation of his character and account of his pious foundations at Istanbul, Ghalâta, Edirne, Dilîddâ, Merzifon, ibid., 431-2; cf. for further details, the article by M. Münir ii, 62 (in Turkish) on the Muştafa Paşa, Merzifonlu. The account given in SÔ is erroneous in its chronology. For general treatments of the period of Kara Muştafa Paşa see Hammer-Purgstall, vi, 334 ff.; J. W. Zinkeisen, Geschichte des osmanischen Reiches, Hamburg-Gotha, 1840-63, v, passim; I. H. Uzuncaşarî, Osmanî Tarihî iii, Ankara 1951-4; cf. further the works by Ahmed Refik and Cevat Ustîn (in Turkish) listed in Ep, by F. Babinger, op. cit., passim (167 ff., avânia levied on the Dutch ship Kleyser Oostenwanus; 228 ff., the negotiations following the renewal of the Dutch Capitulations); Roger North, op. cit., 71-102: "A Relation of diverse Turkish Avanias, since [i.e., in] the government of Cara Mustapha Basha, Vizier Azem"; Knolles, cont. Rycaut, ii, passim; Hist. Miss. Comm., Report on Finch MSS. (see supra), i (London 1913), 207 ff.; ii (1922), 62-106, passim (avânias on English trade as Kapudan Paşa, beytulmulkiyet and Grand Vizier); G. F. Abbot, Under the Turk in Constantinople, London 1920. For unpublished Turkish sources on the Cebirin campaign of 1687-8 see Ağah Surî Levend, Gazetâ-nâmele, Ankara 1956, 129-30 (an anonymous relatione), and 130: 'Abd ul-Kerim, 'Abdî-i sefer-i Cehrin; also J. Blašković, Die arabischen, türkischen und persischen Hts. der Universitätsbiblioth. in Brüssel, 1961, 346-52; extended notice of Gazanâme-i Cehrin, by 'All Beg el-Ulîçevi, who dedicated it to Kara Muştafa Paşa. The Ottoman sources, both published and unpublished, for the campaign against Vienna have been surveyed and analysed by Richard F. Kreutel, Osmanische Berichte über Kara Muştafas Feldzug gegen Wn, in W, NS xxii(4) (1969), 196-206; the dispatch to the sultan at Vienna by Kara Meşmed Pasha (supra), i (London 1913), 201 ff.; ii (1922), 62-166, passim (avanias for the campaign against Vienna, in English translation in Knolles, cont. Rycaut, ii, passim-; further the contemporary western pamphlet literature, much of it sensational and quite unreliable, is immense. For the beytulmulkiyet (invitations to submit) issued by Kara Muştafa Paşa in the course of the Vienna campaign see Khalîl Edhem [Eldem], Kara Muştafa Paşanın Şopron ahlâhisine beyân-nâmeleri, in TOEM, nos. 16-17; J. H. Mordtmann, Die Kapitulation von Konstantinopel im J. 1453, in BZ, xxi (1921): beyân-nâmé addressed to the people of Vienna; contemporary English translation in Knolles, cont. Rycaut, ii, passim. (C. J. Heywood)
Kara Othman-oghli amassed sufficient wealth and prestige for the members of his family henceforth to assume the name 'Othman-zade or Kara 'Othman-oghli. After, Kara 'Othman's death, the headship of the family passed to Mustafa, one of his four sons, the others being Ibrahim, Abd Allahu and Ahmad. During Ahmad III's reign, Hadidji Mustafa Agha increased his influence while seeking to avoid a direct clash with the government. The war with Persia led the state to neglect the Empire's internal problems, at the same time allowing influential and powerful men, such as Hadidji Mustafa Agha, to oust the less successful contenders for power in the provinces and to extend their own influence. In 1531/1532 he assisted in the operations to remove Shar Beyoglu Mustafa and other brigands marauding in the regions of Denizli, Aydin, and Sarukhan. He was later to take part in other campaigns at the summons of the government. His support of the government helped the Kara 'Othman-oghli dynasty to establish its hegemony in the region. Mustafa Agha, already emin for the best ul mal-i 'ammme and for the mukas of the Imperial domains in Manisa, profited from his activity on the government's behalf to become muhafiz of Sarukhan in 1538/1539. He retained his position until 1567/1574, when the population complained of his illegal activities as mutesellim. He was found guilty and executed in the same year (Wasif, Ta'rifah, Bollak 1534, 1, 59).

The family's influence, however, did not end with Mustafa Agha's execution. His eldest son, A'ta Allah succeeded in becoming mutesellim of Sarukhan, but in 1574/1575 he was deposed for incompetence and for improprieties committed during his term of office. He was recommended to retire to the village of Yaya, but chose instead to fight against the men who had played a part in bringing about his father's execution. He was defeated in the ensuing struggle and died in 1581/1582. The headship of the family soon afterwards passed to Hadidji Mustafa Agha's other son, Ahmad Agha, who gathered the other members around himself and succeeded, in 1583/1584, in becoming voyvoda of Akhisar. After being forced out of the post he became, in 1584/1575, voyvoda of Izmir and mukas of Sandjakburni (Sancakburnu). Close family ties and a sharp eye for opportunities enabled the Karan Othman-oghli dynasty to extend the areas under its influence. In 1587/1577, Ahmad Agha achieved the rank of kapitul baghi [q.v.] at the Palace and in 1590/1576 became a mutesellim of the sandjak. The fact that his other brother Mehmed Agha was a mutesellim of the sandjak of Sarukhan meant that the whole sandjak now came under the control of the Karan Othman-oghli family. The distinguished service of Omer and Othman Aghas in the Russian war of 1590-6/1577-92 brought further benefits to the family.

With the weakening of the provincial government towards the end of the 12th/18th century, officials of the second rank, such as mutesellims, mubassils or voyvodos, came to dominate local administrations, thanks to the wealth which they had amassed. The Karan Othman-oghli family is typical of these dynasties, which were now assuming a distinctive form under the general title of 'ayyan [q.v.]. Towards the end of the 12th/18th century, the Karan Othman family extended its power beyond the boundaries of Sarukhan. Various members of the family were respectively mutesellims of Aydin and voyvodos of Turgutlu, Menemen and Bergama. Hadiji Huseyn Agha became mukas of Izmir and, mubas of the quay. It was during the time of Omer Agha that the Karan Othman-oghli family, who by now had acquired the mutesellim-ship of Isparta and the voyvoda-ship of Gelenbe, became the most influential dynasty in western Anatolia. Omer Agha was said to be the richest of the ayyans of the period. He was among the influential ayyans of Anatolia and Rumelia who received invitations during the reign of Selim III [q. v.] to discuss the government of the empire, and he put his signature to the document of agreement (I. H. Uzuncarsli, Mebus Rumeli dyonlarindar Tirinsitk Isma, Ythkoglu Suleymdn Agalar ve Alemdar Mustafa Pas, Istanbul 1942, 142, 143, 144).

When Mahmud II attempted to establish a strong, centralised administration, he did not at first interfere with the powerful Karan Othman-oghli family. Their turn came only when the others had been removed. However, the revolt in the Morea and the opening of the Russian campaign seem to have regained for the Karan Othman-oghli family some of its former dignity, even if this was only for a short time. Then in 1824/1829 two members of the family died, one of whom was Omer Agha, the voyvoda of Bergama, and the other Huseyn Agha, the mutesellim of Manisa. No other members of the family were appointed in their places but instead the posts reverted to the government. When the central government re-established its authority in the provinces and the power of the ayyans diminished, the Karan Othman-oghli family was quick to adapt to the new conditions, as the careers of Pula Mehmend Mehmed's sons Eyyub Agha, and Yakub Pascha exemplify (Lufti, Ta'rifah, Istanbul 1835, v, 96). In 1829/1833 Eyyub Agha became mutesellim of Manisa. He was dismissed for incompetence and two years later achieved the rank of Chieftain. With his death in 1827/1826, the influence of the Karan Othman-oghli family in the district, already weakened, faded altogether.

Nevertheless, the family continued to produce some noteworthy members. Othman Beg and Khali Pascha, for example, worked with the organisations established to fight the War of Independence. When the Greeks entered Manisa, Khali Pascha began to fight at the head of a guerilla group which he had formed, but met his death on 23 June 1910. Between 1923 and 1950, the family produced such noteworthy figures as Mehmend Rida (Mehmed Riza), Suad Kani (Suat Kani) and Naim (Nain). The family's most famous member in the Republican era is the writer and politician Yakub Kadri Othman-oghli (Yakup Kadri Karacanoglu). Kadri Beg's son and Yakub Pascha's grandson. Members of the family are still living at Manisa and Kirka-aghac (Kirkaqac).

KARA 'OTTOMAN-OGHLI — KARA YAZIDJI

(C. ÖRonolu)  

KARA PAPAKI [see KARAPAPAK].  

KARA ŞU [see AL-FURAT].  

KARA ŞÇ-BAZAR [see KARASO-BAZAR].  

KARA TAKIN [see KARATIGI].  

KARA YAZIDJI (1497-1511/1540-1602), whose real name was 'ABD AL-IHHAN. In 792/1390 his family is one of the best-known leaders of the Djelali rebellions [see SUPPLEMENT, s.v.] in Turkey. It was previously believed that he started the rebellions, but investigations have proved that he appeared on the scene when they were at their height. Little is known about his life. Hüseyn Hüsam ed-Din Amasya tarihii, iii, 348 states that he was the son of a Turkman called Ali from Edessa. The 18th-century Armenian writer Arakel [see Brossot, Collection d’historiens arméniens: Arakel de Tauria, 359] described him as the son of a Turk from Corum, which is historically accurate.  

Kara Yazidji's civil function is obscure; little is heard of him until after he became a prominent rebel leader. Like very many Turkish youths of his time, he left home and joined the entourage of one of the sandiafr-begs as a sekbân (soldier). In 972/1565 his name is recorded for the first time as one of the su-bâghs of Kâsim Beg, the sandiafr-beg (governor) of Divrik. During Murâd III's reign, Kara Yazidji, who had enrolled in one of the mounted bûlûks (squadrions) of the Kapu-kûls, was garrisoned with his squadron in the fortress of Damascus. Shortly after, he returned to Anatolia and was given command of a squadron of the sandiafr-beg of Malatya. When in 1003/1595 the sandiafr-beg was summoned to join the campaign of Mehmîd III to Eğri [q.v.], he stayed behind as his deputy. During the preparation of the campaign to Eğri, the Djelâlî rebellions suddenly gained strength and spread in all directions. The government then formed voluntary squadrons consisting of timar-holds who had not joined the campaign and their dependents (the youths of each village), and sent them in pursuit of the rebels. Kara Yazidji and the voluntary squadrons of his sandiafr-beg also received orders to disperse the Djelâlî rebels. In 1003/1595 he was ordered to join the forces that had been sent against the rebellious medresse students who had assembled in the mountain range between Tarsus and Silifke. In the meantime the sandiafr of Malatya had been given to another sandiafr-beg, and Kara Yazidji, as the former sandiafr-beg, faced with retirement, refused to surrender their power to the man who came to accept it on behalf of the new sandiafr-beg. Having thereby resisted the order of the government (1595), Kara Yazidji joined the ranks of the Djelâlî rebels. He enlarged the garrisons under his command and within a short time rose to the position of an unchallenged Djelâlî chief. Some who had become Djelâlîs (the majority of them kapu-kül commanders [sûvaris] who had moved to Anatolia because they could not longer live with the Janissaries in Istanbul and had become kapu-aghas of the sandiafr-begs and beglerbegs, i.e., controlling the sekbâns) began to join Kara Yazidji to escape from the persecutions of the government. Kara Yazidji, learning that the government was preparing a large campaign against the Djelâlîs, retreated to the Marâş-Edessa region, which was densely populated with south-east Anatolian Turkomans who had lived lawlessly for a long time. There, the former beglerbeg Hüseyn Pasha, who was living as a rebel in the region of Karâmân, joined him too. It has been estimated that Kara Yazidji had at his disposal a total of 20,000 sekbâns. Defeating the government forces sent against him from the sandiafr of Marâş and the surrounding area, he attained great fame. As he undertook to collect provisions by force so as to feed his men, many wealthy people fled to Istanbul and there organized a demonstration against the government. The government then sent the vizier Sinân Paşa-zâde Mehmed Paşa with a fairly large army against the rebels. In view of this, Kara Yazidji occupied the fortress of Edessa, where he was surrounded. As neither Mehmîd Paşa nor Kara Yazidji proved able to gain the victory, the government made an agreement with the rebel chief and made him sandiafr-beg of 'Ayntâb in exchange for the extradition of the rebellious Hüseyn Paşa. Shortly after, Mehmîd Paşa attacked Kara Yazidji again. Both sides suffered heavy losses and the rebel chief retreated in the direction of Sivas. The government was reconciled with him once more, investing him with the added function of sandiafr-beg of Amasya. Sinân Paşa-zâde Mehmed Paşa was dismissed in 1009/1601 on the grounds that he should have admitted that his troops plundered the people and that they were becoming worse than the Djelâlîs. As the people of Amasya began to complain more and more about Kara Yazidji, he too was transferred to Corum as its sandiafr-beg, and received orders to join the forces raised to suppress the revolts of the students in the region between Tarsus and Silifke. Once more he turned to rebellion. To feed the large masses of sekbâns whom he had assembled around him, he continued to collect provisions from the people, and to demand ransoms from the towns which he surrounded, as in Sivas in spring 1009/1601. He was contemplating seizing the fortress of Kaştamonu and quartering his men there, when the government, determined to put an end to his activities, sent the wâli of Bağhdâd, Şololluâ-žade Hasan Paşa [q.v.], against him. The nucleus of this commander's troops consisted of southern Kurdish and Arab soldiers with a strong tribal spirit. A large contingent of Kapu-kül soldiers was sent from Istanbul under the command of the former wâli of Aleppo, Hadîdîl Ibrâhîm Paşa. But in the vicinity of Kayseriyye, before Hadîdîl Ibrâhîm Paşa had found the time to unite with the main forces, Kara Yazidji mounted a surprise attack on him, inflicting heavy losses, so that he was forced to retire to the fortress of Kayseriyye. Hasan Paşa, who had great difficulty in maintaining peace among his Arab and Kurdish troops in Diyarbakir, came too late to be able to help Hadîdîl Ibrâhîm...
Pasha. The Dielâl leader ceased harrying Kayseriyye and moved to the Marâqh-Göksun region, where he met Hasan Pasha. In this battle the Dielâl sekbân suffered a heavy defeat. Karâ Yâzidji thereupon fled with the remaining troops, took refuge in the mountainous region near Dînjâk (Samsun) and died there at the beginning of 1603. His brother Deli Hasan took command of the Dielâl in his place.

Since he had succeeded in maintaining a large part of Anatolia under his control for three years, Karâ Yâzidji was suspected by his enemies in Istanbul of intending to found a separate state, a rumour spread by the wealthy people who fled from Anatolia to Istanbul in order to rouse the authorities. He neither issued fermân nor founded a corps like the Janissaries, and never chose for himself a grand vizier. After Karâ Yâzidji's defeat, the sekbân and the other Dielâl leaders who had helped the rebel chief scattered in all directions; statements from those who were captured and brought to trial, and the sealed and signed documents relating to Karâ Yâzidji that were found in their possession, have proved that such assertions about his desire for independent power are fictitious.

Karâbâ (A.), kinship, from the root ë-r-b, which has the meaning of closeness, proximity. As a technical term, karba seems to be of post-Hijra usage. It is found in the works of the Muslim exegetes, but not in the Kur‘ân itself, where the preferred word is burba, also employed in pre-Islamic poetry (cf. Tarafa, Mu‘allaba). In fact, in these cases it is less a question of kinship than of relatives, more particularly close relatives, such as dâ‘î, dhawû, dîwî ‘l-burba (Kur‘ân, ii, 83, 177, iv, 8, 36, v, 106, vi, 152, VIII, 41, IX, 113, XVI, 90, XVII, 26, XXIV, 22, XXX, 38, XXXV, 18, LXXI, 23, LXX, 7). The superlative, al-abrâbûn, is also found, with the meaning of the closest relatives, those who have a claim to inherit from a man (ii, 180, 215, iv, 7, 33, 135). Kinship itself, however, is nowhere clearly defined. This was because Western Arabia was at that time under an essentially tribal system, dominated by patriarchal concepts. Thus the doctrine of kinship embraced all the members of the tribe, in whose veins, so they believed, the same blood flowed. Despite this extension of consanguinity, solidarity existed only within a relatively restricted group, the ‘açhîra [q.v.], whose members did not exact blood vengeance on one another. This is why Muḥammâd first called on his closest clan (Kur‘ân XXVI, 214).

The same practices are still current among the Beduîns, who also call all their kin the damaasıyya, to contribute towards blood-money.

What conception does the Kur‘ân have of kinship? Certainly it reflects, to a large extent, the notions of its era: patrilineal filiation, the superiority of men over women, the solidarity of agnates and collective responsibility. It is clear that Muḥammâd allowed a slight bias in favour of uterine siblings. From a purely patriarchal point of view, these latter are not part of the family and thus have no inheritance rights. Although Muslim doctrine concerning rights of succession follows paternal kinship, it is noteworthy that, in the absence of direct heirs, a part of the goods left by the dead man go to his uterine brothers (al-Bukhârî, Sahîh, Kitâb al-Farâ‘îd, 14; Ibn Rushd, Biddâya al-mugṭalîhîd, Cairo 1335, ii, 207). Furthermore, according to one tradition "the maternal uncle is the heir of him who has no others" (Ibn Rushd, op. cit., ii, 205), while another states that "the son of the sister is part of the group" (al-Buγhârî, op. cit., 23). Finally, one should note that the prohibited degrees of marriage affect the same degrees of relationship on the father's side as on the mother's (Kur‘ân, IV, 23), and that foster-relationship creates the same prohibited degrees for marriage as does blood kinship (al-Buγhârî, Kitâb al-Nîkâh, 21). On the other hand, marriage between parallel cousins and cross cousins is permitted, and even recommended.

As a result, in the Islamic conception, kinship is bilateral. However, this position is affected very hesitantly, since in practice only agnates are considered true kin. Matters of blood-vengeance and the payment of blood-money or wergild concerned them alone. This is why the diya due for a wife is incumbent on her ‘açaba, although succession to her reverts to her children and her husband (al-Buγhârî, Farâ‘îd, 10, Diyâl, 25). In the accounts of the heroic period of the Diqâlimiyya, uterine siblings often bear the costs of a vendetta, a law which was the same point of view with regard to the wife and the maternal nephew (cf. J. Chelhod, Le droit dans le sociétè bédouine, Paris 1971).

Did the extension of kinship to cognates go against pre-Islamic customs and meet with considerable resistance from them? In the thesis brilliantly presented by W. Robertson Smith (Kinship and marriage in early Arabia) precisely the opposite point of view is advanced. According to him, the patriarchal system was a late phenomenon in Asia, practically contemporaneous with the Hijra, and it was preceded by a system of filiation through female descent. Following studies by Morgan and MacLennan, this hypothesis has gradually been abandoned. Nevertheless, it does still have a small number of supporters (M. Gaudefoy-Demombynes, Mahomet, 636; M. Watt, Muhammad at Medina, 378 f.; Lecerf in ‘A‘lî), and must therefore be considered briefly. Smith was quite correct to reject the viewpoint of genealogists who saw the tribe as a large patriarchal family; he also rightly criticised the artificial nature of their neatly-organised structure. They can also be faulted for having lost sight of the tribal heterogeneity which is indicated by the structures of the kabîlî (q.v.). It nevertheless remains true that unity of blood shows itself effectively at the higher levels of the social pyramid, such as the fakhîd and the ‘açhîra. Besides, Robertson Smith's conclusions about the old system of filiation are based essentially on philological considerations and on later survivals. It is certain, however, that it is not through concentrating on a few isolated facts that we will be able to throw light on this problem. Rather, we need an approach based on a sound study of social and family structures before we can see to what extent they are compatible with matriliny. It would seem that warrior nomadism tends towards
patrilineal filiation and endogamy, while a life of settled cultivation encourages exogamy. Thus, to a large degree, the social system existing in pre-Islamic Arabia contradicts Smith's hypothesis. If we actually examine the traditions which give credence to the notion of a matrilineal system in pre-Islamic Arabia, we can see that almost all of them apply to the Arabs of the south (from Medina, Himyar and Sabah) that is, groups which had been settled for a long period, although some, like the Ansār, had reverted to nomadism for a short time. In fact, any conclusions, even provisional ones, about these groups are no more than speculative before further documentation can be provided by archeological research in the Yemen. The northern Arabs, on the other hand, were deeply imbued with desert traditions and their social system bears the stamp of patriarchy. This was the prevailing system in Mecca itself. Kur'ānic reform took its inspiration mainly from this background, but it did make a few concessions to the customs of Medina in enlarging the concept of karāba. Principally, the latter was concerned with agnates, but nevertheless it did not completely reject cognates.

This timid overture in the direction of uterine sibling was allied to an important trend towards restriction in the realm of karāba. According to pre-Islamic beliefs, mystical kinship (through adoption, blood-ties, communal descent) created links equal to those of actual kinship. Muhammad himself had recourse to such customs in making the Muḥāḍirūn the "brothers" of the Ansār and thus each other's heirs (Kmān, VIII, 72); but he reverted to a stricter concept of kinship, limiting it almost to true blood relations (LVIII, 2, XXXIII, 3, 40, VIII, 75).

**Bibliography:** Many works deal with this topic. Apart from those cited in the article, bibliographical details can be found in J. Chelhod, *Le mariage avec la cousine parallèle dans le système arabe*, in *l'Homme*, v (1965), 113-73.

[3] AHMAD B. ʿUMAR, a mathematician. The date of his death is unknown. Among those of his works which have been lost, a commentary on the translation of Euclid was especially celebrated. The one work of his which is still extant is *K. Misāḥat al-balāb,* which is preserved in Oxford (Bodleian Lib., Ms. Or. i, no. 913) and in Cairo (*Fihrist al-kutub al-arabiyya fi l-kutub ḥanāla al-ḥadīthiyya,* v, 204); see *Fihrist,* 265, l. 25, 282, l. 3; Ibn al-Kifti, *Taʾrikh al-balāhama,* Cairo 1936, 57, l. 5.

[4] ABU ʿALI AL-ḤUSAYN B. ʿALI B. YAZID AL-Maḥmāl, a traditionist and fakih. Initially, he was a member of the abī al-raḥf, but after al-Ṣaḥḥāf's arrival in Baghdād, he joined his group. In spite of this, he was an unreserved supporter of the doctrine of predetermination, ḍabār. None of his works of criticism or ṣīḥk survive. He died in 245/860 or, according to some, in 248/862.

**Karāsā**

Karāsā, a Turkic tribe of the North Caucasus. They call themselves Karāsāy and are known as Karāsāylar in Turkish and Karāsalı, in Russian. The Karāsāy language belongs to the Kpčak branch of Turkic. According to the 1926 Russian census, ethnically there were 55,123 Karāsāy and linguistically 55,349. In the 1959 census, the numbers recorded were 81,403 and 78,877 respectively. The Karāsāy occupy the mountain valleys of the upper Kuban, Taberda, Zelenčuk, Laba and Podkumok rivers on the northern slopes of the Caucasus.

Little is known of their history. Their ancestry goes back to the Hunno-Bulgarian conglomeration which lived along the Kuban River in so-called "Black Bulgaria" during and after the overthrow of the Khazar [q.v.] realm. They were Turkicized by the Turkic tribes, the Pechenegs and Kumlaks, which took over the Khazar kingdom in the middle of the 5th/11th century. In the high Middle Ages they lived as one group with the Balkar [q.v.] along the edge of the Caucasian mountain chain and mixed with local Ibero-Caucasian peoples. They later submitted to the authority of the Golden Horde. From the 7th/13th to the 9th/15th centuries they were slowly pushed by the Kbrdars [see KARABARD] towards the high chain. At this time, as a result of Kabard pressure, the Karāsāy-Balkar separated into two groups, the Balkar going to Dih-Tau and Koğhtān-Tau. In the 9th/13th century the Karāsāy became vassals of the Kabards, and from the 10th/16th century onwards, they also came under the influence of the Crimean Khānate. Sunnī Islam, of the Ḥanāfī madhhab, was slowly introduced at this time by the Crimean Tatars, and in the 18th/19th and early 19th/19th centuries by the Ottomans. The Karāsāy and Balkars did not play an active role in the Caucasian mountain-dwellers' resistance to the Russian conquest in the middle of the 18th century.

The social structure of the Karāsāy was influenced by that of Kabard, but the feudal system was less developed. The head of the tribe was the biy (bay) or taiv-biyi, followed by the most numerous class of özên or karahəden, consisting of free men. The kul, or slaves, formed the lowest class. With the influence of Islam under Ottoman rule the kul were freed and became azadīl. The traditional economy of the Karāsāy is based on cattle breeding, agriculture and handicrafts. Their land has important coal deposits and other mineral resources.

Karāsā was not a literary language until 1924, at which time, jointly with Balkar, a Karāsāy-Balkar literary language was created which adopted the Latin script. In 1938-39 it was replaced by the Cyrillic. According to *Letopisi* periodicheskikh isdannyi S.S.S.R. and *Pecat' S.S.S.R.* v 1960 godu, there were six newspapers published in Karāsāy-Balkar in 1935; in 1960 the figure had dropped to one.

Administrative position. With the onset of the Soviet régime, the Karāsāy became part of the Mountain Autonomous Socialist Republic (Gorskaia A.S.S.R.) on 20 January 1920, which included also
the Čerkes, the Balkars, the Ossetians, the Češens and the Ingushes, and had its capital in Vladi-
kavkaz. On 22 January 1922, they were joined with the Čerkes into the Karačay-Čerkes Autonomous
Oblast. In 1944, the Karačays were deported to
Central Asia and their national territory suppressed
for alleged collaboration with the Germans during
World War II. They were rehabilitated on 9 January
1957 and between 1957 and 1958 brought back to
their original land, their deportation being termed
a result of the “personality cult” of Stalin. They
resumed their former status in the Karačay-Čerkes
Autonomous Oblast, which was reformed on 9
January 1957. The region occupies a territory of
14,200 sq. km. In 1959, the Karačay and Čerkes
made up 33.1 % of the population of the region,
while 51 % were Russian.

According to the 1926 Russian census the mother
tongue of 99.9 % of the Karačay in their native
area was Karačay; none had Russian as their first
spoken language. The figures for 1959 showed that
their native language was the mother tongue of 99
% of the Karačay, while 51 % of those who used
Russian had risen from zero to 0.5 %.

Whatever the case, we have the transition $1 > r$
according to a habitual rule in Sindhi (cf. *Kölî*
in the Pandžab and *Kökrî* in Sind).

Being protected on the west by Cape Monze, the
most southerly point of the Kirthar mountain chain,
and sheltered from the force of the open sea and the
monsoon squalls by the rocky island of Manora,
Karăcă enjoyed an ideal situation for becoming a
great port. The town itself is situated between the
lower course of the Lyari river to the west and the
Malir river to the east, both of which come down
from the Kōhistān or mountain region. Lt.-Gen.
Haig, in his book on the Indus delta, thought that
one could identify the port of Karăcă with the port
of Alexander the Great which Nearchus reached on
leaving the western mouth of the Indus and where
he waited for 15 days, with his fleet at Manora,
until a favourable wind might blow and enable him
to continue exploring the coastline (326 B.C.).

It is shortly after 1327/1725 that Karăcă begins
to become known as a port. The effective cause of its
prosperity seems to have been the gradual deterio-
ration of the port of Daybul [q.v.], which was very
probably situated on the banks of the western mouth
of the Indus. Although the historians disagree on
the exact site of Daybul, it can nevertheless be asserted
that this port was already flourishing when the
Arabs, under their youthful general Muhammad b.
al-Kāsim, disembarked there in 93/712 in order to
conquer Sind. During the 10th/16th century the
maritime trade of the region relied on the port of
Larhibunder in the Indus delta, near Thatta, the
then capital of Sind; but after 1060/1650, Larhibunder
lost all its value as a port, since navigation became
very difficult through the silting-up of the lower
Indus delta. During the 12th/18th century, the land
encroached on the sea and left the port of Daybul cut
off from access to the sea. Karăcă, situated outside
the delta region and to the west, was not in such
danger of a rapid silting-up, but it could not yet
assume its later importance because of the uncertain
political conditions prevailing in the province of
Sind, where the various tribes vied for power and
the conquest of the province of Sind did not take place till four years later, when Sir Charles
Napier used Karăcă as his port of disembarkation
in 1843. But the British at first preferred to establish
them at Haydarābād, and it was only as a
result of Capt. Richard Burton’s report, which
praised the much fresher climate of the “fishermen’s
village by the sea”, that Sir Charles Napier came
along to make Karăcă the capital, and civil and
military centre, of Sind, and an important port
suitable for trading equally with the Pandžab as
with Sind.

Sir Bartle Frere improved the port by constructing
in 1854 the Napier mole connecting the island of

KARAČayı — KARAČI

Karăcă İ. [Hılya Salioğlu]
Kāmārī with the mainland. The Manora breakwater was finished in 1873. After 1861 a railway line connected Kārāčī with the town of Kōtīrī, and then in 1878 with the Pāndjāb, thus allowing the trade of Kārāčī to double in volume between 1864 and 1884. By 1900, it had become one of the greatest export outlets of the East, and the two World Wars of 1914-18 and 1939-45 contributed greatly to its prosperity.

But it was really 1947 which marked the turning-point in the development of this great city, which still had a provincial atmosphere at the time of the creation of Pakistan, and whose population increased almost tenfold within 25 years (1947-72), presenting successive governments with problems still not completely resolved. Suburbs like Nāzīmābād and Liyākātābād on the right bank of the Lyari river did not exist before 1947. Similarly, the satellite town of Korāngī and the new industrial complex of Lāndī on the left bank of the Mālīr river have only been created in the last decade or so. A planned policy of urbanisation and industrialisation, together with the bringing of water supplies and a sewage system, was undertaken by a body called the "Karāčī Development Authority" set up in 1958 by Field-Marshal Ayyūb Khān, the head of the Pakistan Republic.

The international airport of Karāčī is considered one of the best-equipped in Asia; its runways will accommodate the most modern aircraft and its geographical situation makes it an important crossroads between Europe and the East. Pakistan International Airlines (P.I.A.) flights connect Karāčī with London via Tehran, Beirut, Rome and Frankfurt or via Geneva or via Moscow, and a regular service also exists between Karāčī and Shanghai via Dacca and Canton. Since 1955, a pipeline over 300 miles long has brought the natural gas of Sīn to Karāčī, where it is used both for industrial and private purposes.

Karāčī has owed its great strides of recent times to its trade connections with the whole of northwestern India and to its rôle as the natural outlet for the most important products of its hinterland, such as cotton, cereals, oil-yielding plants and hides. Karāčī is the great industrial centre of Pakistan, thanks to an expanding iron-smelting industry, newly-built oil refineries (at Korāngī), recent petrochemical installations, the traditional activities involving wool, timber and hides, the increasing production of cement (limestone being plentiful on the outskirts of the city), various food-processing industries (flour mills, confectionary factories, fish canning and preserving), and many other activities such as production of knitwear, soap-making and plastic objects.

(Al)-Karādāg [see Kārā dāg].

Kārādāg, also known as Karādāj, is an ancient town in the Dīkāb province of Persia; the actual site is unknown, but it was situated to the south-east of Hamadān, almost half-way between that city and Iṣfahān. It derives its second name from al-Ḳāsim b. Ḥaṣā al-Iǧdīl [q.v.], better known by his kunya of Abī Dulāf, who probably enlarged (massāra) an existing settlement and constructed a fortress there; during the wars between al-Āmin and al-Maʾmūn, this commander carved out for himself a fief in Dīkāb and secured the privilege of paying in return a tax for this concession (Iḥdar [q.v.]; add to the Bibl.: Ibn Khurādā́bah, 241; Maʃāfīṯ al-ulām, 60; Yāḵūt, s.v. al-Iḏgārānī; and correct Mardī to al-Burdī of the district surrounding (al-)Karādāg and al-Burdī, whence the name of al-Iḏgārānī by which it is known. (Al-) Karādāg became the chef-lieu of this district and the residence of the Dulūfīs [q.v.]; add to the Bibl.: M. Canard, Hāmadānīs, 311-13 and the references cited there). The line of Dulūfīs ended in 284/897; town and district then reverted to dependence on the central government and soon became an autonomous administrative district.

Nothing is known of the town beyond the information in the geographers that it was built of unfired brick, had two markets, numerous baths and a crowded population, even though it extended over two parasangs; the sources stress the absence of orchards, but mention the fertility of the surrounding countryside, where stock-raising was practised. Various poets who frequented the Dulūfī court celebrated the town, but Ibn al-Ḳāfīk found it crowded-together, dirty, cold and poverty-stricken.

Bibl.: Taḥbīr, index; Balāḏūrī, Futūb, 314; Ibn al-Ḳāfīk, 237, 239, 261; Ibn Hāwāl-Wīl-Kramers, 352; Maʃāfīṯ, index; Muqaddasī, 394; Bakrī, 1123; Maḏkiš, Bad, iv, 74; Yāḵūt, i, 420, 548, iii, 873, iv, 250, 270; Kalkashandī, Ẓūbī, iv, 372; Le Strange, 197-8; Schwarz, Iran, 577; Canard, Hāmadānīs, 311. (Ed.)

Kārādāj, also known as Karādāy or Karādī, is a town in the province of Karādāj, probably the Byzantine Melangia, one of the first places in which the Ottomans settled after coming to the Eskişehir region. The district around Kārādāj was given by Sultan Alaʾ al-Dīn Kaykobād as winter quarters to Ertuğrul's commander, possibly enlarged (massāra) and secured the privilege of paying in return a tax for this concession (Iḥdar [q.v.]; add to the Bibl.: Ibn Khurādā́bah, 241; Maʃāfīṯ al-ulām, 60; Yāḵūt, s.v. al-Iḏgārānī; and correct Mardī to al-Burdī of the district surrounding (al-)Karādāj and al-Burdī, whence the name of al-Iḏgārānī by which it is known. (Al-) Karādāj became the chef-lieu of this district and the residence of the Dulūfīs [q.v.]; add to the Bibl.: M. Canard, Hāmadānīs, 311. (Ed.)

Kārādāj, also known as Karādī, is a town in the province of Karādāj, probably the Byzantine Melangia, one of the first places in which the Ottomans settled after coming to the Eskişehir region. Karadja Hisar — Karadja Oglañ 599

In the 11th/12th century, however, Karadja Hisar had become a nahiyye of Eskişehir (Topkapı Sarayi Müzesi Arşivi, N.D. 166 pp. 124-6). According to the census of 1830, the population of Karadja Şehir consisted of 3,725 Muslims and 575 non-Muslims (E. Z. Karal, Osmanlı imperatorluguunda ik😍 nüfus sayımı, 1831, Ankara 1943, 140).

Karadja Hisar, today bearing the name Karaçaşehir, is a village belonging to the centralkaza of the vilâyet of Eskişehir.

**Karadja Oglañ,** Turkish folk poet, the greatest and most typical representative of the aşikler. In many ways, the aşikler continued in the Ottoman period the pre-Islamic and early Islamic tradition. Sûfî Turkish musîcian-poets (ozan), who often improvised their poems, singing them to the accompaniment of a musical instrument, especially the kopuss. Aşik, a term originally applied to popular mystic poets of various dervish orders, was later taken over by wandering minstrels (saz şâ‘îrîleri), who gave up the old secular term of ozan. The influence of Sûfîsm on the aşikler was only superficial and did not substantially alter their realism. The impact of many young poets in their endeavours to renew and make more indigenous the form and content of popular poetry of the dervish orders, and wrote all his poems (numbering nearly 500) in the traditional Turkish syllabic metre (mostly in 6-5 and 4-4 patterns), and in the unsophisticated spoken Turkish of his time, coloured with occasional provincial words and expressions. These deals with nomadic life and the natural beauties of the Taurus Mountains environment. The poet’s own exuberant feelings of love and joie de vivre are also described in his unparalleled köşmas, semais, türkîs and destans. In the “National Literature” (*Millî Edebiyat*) movement of the post-1908 Constitution period, and again during the early Republican era up to the late 1930s, Karadjaoglan was the most loved folk poet, inspiring many young poets in their endeavours to renew and make more indigenous the form and content of Turkish poetry. According to local traditions, Karadjaoglan is buried on a hill in the village of Çukur near Mut in the province of Içel (Mersin), and his tomb became a frequently visited shrine in the area. In 1958 a film was made of a legendary version of his life based on a script by the novelist Yaşar Kemal (b. 1922), who later wrote a short story on the same theme (in *Ü Y Augadolu Efsanen*, Istanbul, 1967).

details on the construction and servicing of bandûs [pipes], subterranean tunnels (he makes an express allusion to those of Isâbâh, 31) for providing water in arid places. He likewise discusses the basis of the Shari'a, the legality of the construction of wells and hydraulic conduits and in what circumstances these might be prejudicial to the people.

**AL-KÂRÂFA** [see al-Kâhira].

**KARAFERYE** (in earlier sources also KARAFERYE), Ottoman name for Bêrbohia, Bêrbohia (mod. Gk., Vérria, Vêria; Slavonic, Ber), a small town in Macedonia, 60 km. WSW of Salonika, 8 km. from the left bank of the Aliakmon (Vistritza; Tk. Indje Kara Su), near the foot of the eastern slopes of the Olympean range (Tk. Aghustos Daghi) and overlooking a broad and fertile plain: "one of the most agreeable towns in Rumîli" (Leake). The Turkish epithet *kâr* [q.v.] was prefixed perhaps in order to distinguish it from Bêrbohia in northern Thrace, Tk. (Eski) Zagria (cf. Jorga, *GOR*, i, 213). According to Byzantine authors, the town was pillaged by Turks from Karas (q.v.) as early as 1331 (Hammer-Purgstall, i, 127). The district for a time belonged to the Serbian Empire of Stefan Dušan (Ostrogorsky, History, 524) and, after his death (1355), to a Serbian prince, Hlapen (Jireček, *Gesch. d. Serben*, ii, 105, 107).

The Ottoman chroniclers report that the town was taken (? by Lâlâ Shams) 28/1385 (Giese, *Anon.*, 26, 13), whence *Aškâbphâšâhöde* (§53), Neshri, etc.; cf. Sa'd al-Din, i, 92-2, with the date 776/1374-5. The Greek Short Chronicles give the precise date 8 May 1387 (cited by P. Wittek, in *BSOAS*, iv (1952), 661, n. 3); but the definitive occupation may have occurred only under Bâyezid I, who from there directed extensive raids into the Peloponnese (Giese, *Anon.*, 28-9; Hammer-Purgstall, i, 249).

According to a tradition preserved by Yâzîdîglîoğlu ʻAli [q.v.], some time after the Saîdîjk sultan of Rîm Kay-Kâ’ûs II (q.v.) had taken refuge with the Byzantine Emperor Michael VIII his two younger sons were made governors of Bêrbohia; the grandchildren of one prince embraced Christianity, and it was one of his descendants, a certain Lyalkos, who surrendered Bêrbohia to the Ottoman sultan (? Bâyezid I); thereupon he and his family were transferred to Zîkhna. And indeed Karaferye (and Zîkhna) are among the districts inhabited by Gagauz [q.v.] Turks, i.e., "followers of Kay-Kâ’ûs" (P. Wittek, *Les Gagauzes = Les gens de Kayhâus*, in *RO*, xvii (1951-52), 12-24: idem, *Yazîdîglîoğlu ʻAli on the Christian Turks of the Dobruja*, in *BSOAS*, iv (1952), 639-68; E. A. Zakhardiâdou, Ο χριστιανοί απόγοιν του θεολόγου Καλακωλή Β’ στη Βεροία, in *Macedónia*, vi (Salonika 1964), 65-74).

By the end of the 9th/15th century there were extensive rice-fields, state-run, in the meadows to the south and west of the town (M. T. Gökbelgîn, *Edirne ve Paşa Limâsi*, Istanbul 1952, 135-7; cf. *Filâha*, p. 907). In the 11th/17th century (and presumably also before) Karaferye was administered as a *hadda* of the *sânîb* of Selânîc (q.v.). Ewîya Gobî described it as unwalled and unengirnished, but with the remains of a citadel; it had 4,000 houses, in 16 Muslim and 15 Christian quarters, with two Jewish *джема’ль*. In 1885 the *hadda*, together with the nahiye

of Augustos (Naoussa), comprised 46 villages and tiftliks (Art. Seldnik, p. 347a).

In the First Balkan War (Oct.-Dec. 1912), Karaverye fell to the Greeks on 25 October, and since the Treaty of Athens (14 Nov. 1923) it has belonged to Greece.

KARAGOZ (Tk. "black eye"); the principal character in the Turkish shadow play, also the shadow play theatre itself; the shadow player is called a karagozêdi or khaydi.

The karagoz theatre is played with inanimate actors and flat, two-dimensional figures (sâret, ûzîwî), manipulated by the shadow player who, as in a puppet theatre, makes them move and talks to them. The shadow player is seen from behind a screen whilst he himself remains out of sight. The characters are presented in caricature; as well as human figures, there are also schematised representations of certain animals, plants and objects, as well as fantastic beings and some rudimentary scenery. All the figures are made from leather (the superior ones used formerly to be made with camel hide), prepared in a special way and painted in bright colours. The human figures are jointed at one point (rarely at two points) in order to permit the required movements. The size of the figures varies between 7.5 cm. and 46 cm. in height for objects, animals and scenic features, and between 21 cm. and 40 cm. for the humans.

A stick (two sticks for the figure of Karagoz and for a few other characters) 50 cm. long and as thick as a human hand has its pointed end inserted into a hole made in the figure's or object's body. The showman stands behind a screen made from muslin and one m. long by 0.60 m. high, and with the aid of the stick keeps the whole surface of the figure up against the screen and makes it move along it according to its movements in the play. He also makes the upper part of the figure's body move slightly in order to mark each character's replies, at the same time imitating the voice and accent appropriate to that character. The screen is illuminated from below by a lamp placed between the shadow player and the figures of the play. The shadow player retains the monologues and dialogues, and sings the songs; his assistant or apprentice passes the figures to him, does the sound effects and shakes a tambourine to mark the appearance of the characters on stage.

The karagoz theatre was played before a very restricted public only. It used to be staged in the cafés during Ramadan or else in the salons of private houses during circumcision festivities or during the winter evenings.

The shadow play figures can be divided into three groups: (1) Inanimate objects. These are either pieces of scenery and accessories directly connected with the play's theme, such as the shop where Karagoz functions as a grocer, the pickaxe which Ferhad uses to excavate a water channel in the mountain, etc.; or else a tree, a section of landscape, a group of figures, etc. without any direct connection with the play and called gostermelik, but shown on the screen before the actual play in order to attract the interest of spectators and fire their imagination. (2) Animals which may on occasion have a rôle in a play, such as Karagoz's ass, Ferhad's horse, etc. (3) Fantastic beings and objects, such as dragons, sorcerers, a magic poplar tree, etc. (4) Human characters, the actors in the play. Some of these appear only in a single play, when the latter is drawn from a work of popular literature, e.g., Ferhad and Şhrîn, Tahir and Zuhrê, but also in cases like that of 'Ăşgîk Hasan and his son Muslî, who only appear in the play The bloody poplar tree. Other characters may appear in all the plays, such as Karagoz and Hadji- vad, the two central characters; the Zenne ("ladies"), women of various types and ages; Celebi ("young man"); Matiz or Tuzuz-Deli-Bekir ("the strong man"), often portrayed with the characteristics of a drunkard, but occasionally in the guise of a judge or arbiter; various types of provincials and foreigners (e.g., the Frank), of Muslim minority groups (the Arab, the Laz) and of non-Muslim minority groups (the Jew, the Armenian, the Greek); persons depicted in caricature because of their physical or moral defects (e.g., Bebevi, "the drunkard", Tiryâki "the opium smoker") and so forth.

Hâdjîvâd represents the petty bourgeois, the educated man, temperate, highly opportunistic and universally respected; people often come to him for advice and help and often ask him to arrange complicated matters. His partner Karagoz combines within himself all the minor vices; he is illiterate, greedy, ill-behaved and scandalously outspoken. He calls himself a gypsy; although he is a blacksmith by trade, he is often out of work and in perpetual financial difficulties, leading to frequent quarrels with his wife and necessitating the intervention of Hâdjîvâd in order to find him a job. Hâdjîvâd appears in two introductory scenes in the finale, holding the stage then for as long as his partner, whereas his presence in the action of the play proper is brief. Karagoz, on the other hand, is present all through the proceedings; he is involved in intrigues, even in those plays originating from outside genres. Whatever the origin of the play, it is always set in a place called by the shadow players Küşkeri meydân "Küşkeri square", which derives its name from the learned Şayhî Küškî, who lived in Bursa and died there ca. 767/1366; the invention of the karagoz theatre is attributed to him in popular legend. The right-hand side of the screen (sc. the right-hand side as seen by the audience) is considered to be Karagoz's house; he always enters the scene from there, and he alone occupies this half of the screen. The left-hand side is reserved for Hâdjîvâd and all the other characters. All told, Karagoz himself takes up a good half of the whole performance.

The text of a traditional play comprises four sections: (1) The prologue. Hâdjîvâd comes in, chanting a semâî and then a ghazel, the so-called "screen ghazel", a poem couched in pseudo-philosophical terms, stressing the profound meaning of
the shadowplay and the lessons which the spectator may derive from it. Then he proclaims his desire to amuse himself by shouting for his "friend" Karagoz. The latter, disturbed by the noise, comes down into the street and beats Hadjivad. (2) The dialogue (muhdòwe) comprises either a discussion on any subject whatsoever between Hadjivad and Karagoz, whose comic effect comes from the contrast in character and the cultural levels of the two participants, or else it is the embellishment of an extrava- 
gant adventure of one of the two companions, usually Karagoz. The spectators are amused by the remarks and questions of the listener of the dialogue, and the verbose replies of the narrator; very often, the adventure turns out to be a dream or a delusion of hashish-taking.

The text of the dialogue may well be improvised, and the karagozdù (2), according to the circumstances and according to his creative powers, may prolong it as he likes. However, there are some traditional plot outlines, and it seems—on the basis of the texts which have been collected—that the artists always followed them. Some 60 texts of these dialogues have been counted, some of them clearly later versions of a basic original. In the most recent and most complete edition of karagoz texts (Cevdet Kudret, Karagoz, 5 vols., Ankara 1968-70), 53 are given.

Certain of these muhduweresi, of the type comprising a narration of extravan
gant adventures, are variations of the teklereme stories (see P. N. Boratav, Le "teker-
leme", Cahiers de la Société Asiatique, xvii, Paris 1963, 106-14, 174-5, types 51 J, 51 K, 52, 53). Tradition permits the karagoz to use the freedom of prefixing a muhduweresi of his own choice to the play of his programme, whence the fact that in many editions of texts one finds different plays accompanied by the same "dialogue", or even the same play preceded by different "dialogues" in the various versions. When the dramatic section (sc. the "play" proper) is only short, or when the shadow player wishes, for some reason or other, to extend the show, he may add a second muhduweresi after the first one; this is called an ara muhduweresi "intercalated dialogue". (3) The play proper (the fasil of which is of course the "main" category thus: (i) Karagoz is out of work; Hadjivad takes advantage of his misfortunes, whoresonk and generally disorganises Karagoz's life. (ii) Karagoz embarks, unwittingly and without foreseeing the unpleasant consequences, on various complicated adventures. Through improvised actions, he astounds and disarms his opponent, turns tragic situations into comic ones, and emerges completely unscathed. The themes of plays like The excursion to Yalova, The tavern, The lunatic asylum, Karagoz the hashish smoker, etc., are built around these themes.

Several of the plays in both these categories belong equally to the répertoire of karagoz and to those of two other types of Turkish popular theatre, the kukla or marionette theatre and the orta oyunu or traditional theatre with living actors.

The number of "plays" (fasl) so far counted is 47. Kudret has edited 36 of them, choosing one text for those attested in several versions; for three other texts he has been unable to give more than the titles. It has also been possible to draw up two lists of "older plays" and "newer plays". Out of the 47 plays enumerated, 27 are known to be "plays from the older répertoire". It was formerly the practice to stage a different play for every evening of Rama
dàn, with the exception of the evening of the 26th-27th, the "Night of Power" (see RAMADAN), when there was a break, out of respect for the especially sacred character of that evening. The conclusion is, therefore, that the traditional répertoire comprised 28 or 29 plays. It seems, too, that we should add to the total enumerated of 47 karagoz plays a large number of texts put together by "scholarly" authors, see Kudret, i, 45 and 56-9, bibliography nos. XXIV, XXX-XXXI, XXXIV-XXXVII, XL, XLI, and Aziz Nesin, "karagoz oyunu", ed. Düşün, Istanbul 1968.

Although scholars do not yet agree about the country of origin of the shadow theatre, it is generally recognised that it spread from eastern and southeast Asia towards the Near East and Europe. With regard to its appearance in the Ottoman territories, it was long believed that it had come from China through the mediation of the Mongols and via the traditional route through Central Asia and Iran. However, it has now been realised that scholars have been in error through their interpretation of a technical term: the khayal of Arabic, Persian and Turkish sources does not mean "shadow figure" (whose equivalent is Khayal-î sili, [q.v.]), but rather "figure" tout court, i.e., it is not connected with the shadow theatre at all, but with three-dimensional marionettes. Thus whilst the puppet theatre has been known from an early date amongst the Mongols and Turks of Central Asia, as also among the Iranians, the shadow theatre has only existed among them in recent centuries.

In the Near Eastern lands, the shadow theatre goes back to the 6th/12th century, see Ritter, art. Karagoz in I.A., and Metin And, Geleneksel türk tiyatrosu, Ankara 1959, 113. This is certain with regard to Egypt. Ibn Daniyal [q.v.]: 7th/13th century) has left three texts for performance in this theatre, those themes having striking affinities with the plays of the traditional karagoz répertoire. Furthermore, some actual figures of the Egyptian shadow theatre, probably of 7th/13th or 8th/14th century construction, have come down to us; these too have many features in common with the Turkish karagoz figures.

The tradition of the Turkish karagozdu purports to trace the origin of their art to the time of Sultan Orhun, and its invention to Shaykh Kushterfi. Ewliya Çelebi (11th/17th century) records a legend which would make the two main characters of the
theatre contemporaries of the Seljukks of Anatolia, and which makes the gypsy Karagoz a messenger for the Byzantine Emperor Constantine. These legends lack historical foundation. The oldest piece of evidence for the appearance of the shadow theatre in Ottoman territory comes from the 10th/16th century. The Egyptian chronicler Ibn Iyâs speaks of a shadow theatre performance at Dijzza in 923/1517 in front of Selim I after his victory over the Mamluks; the Ottoman sultan, delighted by this performance, wished to bring the shadow player to Istanbul. It is known from another source that under Ahmed I (1012-26/1603-17) an Egyptian shadow play artist came to practice his art in Istanbul. From the end of the 10th/16th century onwards, we have extensive information about the karagoz theatre, both in the travel narratives of western writers and also in Ottoman sources of various kinds; the most interesting details are given in the sûrnâmes, works describing festivities of various kinds, such as marriages, circumcisions, etc.

From the 11th/17th century, Karagoz is clearly mentioned as the chief character of the shadow theatre. In all the regions to which this theatre spread, including lands with such diverse non-Turkish populations as Greece, Tripolitania, Tunisia and Algeria, it is called by various metamorphoses of the word karagoz. Similarly, the Turkish karagoz came to Egypt from the Ottoman homeland and was in the last century a favourite form of entertainment; it also gave the name aragos to a type of Egyptian puppet.

It was probably only in the 11th/17th century that the karagoz theatre acquired its actual technique and style. Ewliya Celebi devotes a whole chapter to certain amusing dialogues of Karagoz and Hadjiydvad and of several other characters, as well as outlines of a few plays in the classical répertoire.

The karagoz theatre was an art form of the big towns in the Ottoman empire. In particular, it described the distinctive types and the manners of the motley peoples of the capital. It retained this emphasis even in the large provincial towns like Bursa and Izmir and in eastern Anatolia. Ewliya Celebi speaks of some famous shadow players of Erzerum; one wonders whether the karagoz theatre might have acquired peculiar local features in the regions from the capital.

Notes published on the karagoz at Kars by Fahrettin Kirzioglu, Kars jebrindâ karagoz oyunu, in Türk Folklor Araştırmaları, no. 112 (Nov. 1958), show this as possible, since the répertoire and the characters of the karagoz in that town display some local peculiarities.

**KARAITES, a Jewish sect which does not recognize the authority of the post-biblical traditions incorporated in the Talmud and in later rabbinic works. It is the only Jewish sect (not counting the Samaritans) which has survived for over 1200 years and is still in existence. The name (in Hebrew bârâ‘îm, bêne (or ba‘âde) Mihrâ‘î; in Arabic bâr‘îyyân, occasionally asbâb ‘Anân wa-Bîsîyânîm) is variously explained as “readers (bârâ‘) of Scripture (Mihrâ‘î)” and as “callers (to the Torah)”, from the alternate meaning of bârâ‘, “to call, to invite”, (cf. the Shî‘î “callers”, ǧûl, sing. dâ‘î).

(**x** History. Although Karaism as we know it, and as the Karaites themselves have always known it, is essentially the product of the intellectual and social ferment in the Jewish community of the Muslim empire, the influence of several historical factors can be discerned in the early period of its development. The basic factors are the dramatic performance of the ancient and uninterrupted resistance on the part of some segments of Jewry to the growing oral tradition (the Oral Law) and to the authority of its tradents and interpreters, which resulted in a number of dissident sects antedating or contemporary with the Talmudic era (Sadducees, Essenes, Qumran sectarians), all insisting on the monopoly of the Bible as the sole source of divinely inspired law. Contributing factors probably were: (1) The collapse of the messianic hopes which had been inspired by the spectacular fall of Persian and Byzantine rule and rise of the Muslim empire in the 1st/7th century, and sorrowful realization that the redemption of Zion and the end of the exile were not at hand; (2) the growing social unrest in the most populous autonomous Jewish settlement, that of ʿIrâk (Baibyloan), where the poorer classes of rural tenant-farmers and urban artisans and labourers felt themselves grievously oppressed by the official bureaucracy of the exilarch (raʿa‘ al-dîjâlî, the official representative of ʿIrâki Jewry before the caliph’s court) and of the geonom (sing. ga‘on; the presidents of the ʿIrâk talmudic academies); (3) the consolidation of the vast Muslim empire, which resulted in the opening of the sparsely populated mountainous lands to the east and north of ʿIrâk to settlement by discontented emigrants, both gentiles and Jews.

It was no doubt these malcontents who formed the nucleus of what later became Karaism. The earliest known sectarian leader, Abû ʿIsâ Obâdiyah (ʿAbd Allâh) al-Isfahâni q.v. of Isfahan, in Iran, organized an armed revolt against the government of the caliph ʿAbd al-Malik (65-86/685-705), but was quickly defeated and slain, although some of his followers asserted that he did not die but went into hiding, meaning that he would in due time reappear, like the Ƣffî hidden imâm. His successor, Yûddîn, was...
KARAITES

likewise thought to continue in hiding until his eventual reappearance [see ʿIsāwyya].

By the middle of the 2nd/8th century the schism penetrated back into ʿIrāk, particularly into the newly-built capital city of Baghdād, where it was joined by ʿĀnān b. David, a member of the highest echelon of the rabbinic aristocracy. The traditional rabbinic account (quoted by the 6th/12th century Karaite author Elijah b. Abraham) designates him as the actual founder of Karaism and gives as his motive for secession his dread of corruption at his failure to be elected to the office of exilarch. This oversimplified story would seem to be true only to the extent that ʿĀnān had lent his aristocratic and scholarly prestige to the budding schism, and what is even more important, composed the first code of schismatic law (Sefer ha-miswah), which is the earliest extant Karaite literary document. His followers, called ʿĀnāmites (ʿAnānīyyim, ʿAnānīyya), styled him exilearch, and his lineal descendants bore the title of Karaite prince (nāfiʿ); few of them, however, distinguished themselves as either leaders or scholars.

The 3rd/9th century produced several schismatic teachers, some of whom sharply criticized ʿĀnān’s views: Ismāʿīl and Mīshāwahy al-ʿUkrābī (of ʿUkrābā, in ʿIrāq), Benjamin al-Nāḥāwāndī, in Iran; the latter also use the coinage), and Malīk al-Raḥmī (of Raḥmā, in Palestine). Mūsā al-Zaʿfarrānī (of the Zaʿfarrān district in Baghdād) migrated with his followers to Tiflis, in Armenia, and became known as Abū ʿImrān al-Tiflīsī. With Daniel al-Kūmīsī (a native of Dāmghān, in the Iranian province of Kūnīsī), Karaism reached the 4th/10th century.

The names just listed indicate the fairly rapid territorial expansion of Karaism during this early period. Daniel al-Kūmīsī was the first eminent Karaite scholar known to have settled in Jerusalem, and other Karaite communities were established in Damascus, Cairo, and other smaller towns. Zealous Karaitic preachers undertook missionary journeys to seek converts among rabbinic audiences, but apparently with little success, for with the exception of ʿĀnān not a single early Karaite scholar is stated to have been a convert from rabbinism, and early Karaite writings are replete with sad complaints about the smallness and poverty of their communities. In any case, a more or less amicable modus vivendi prevailed for a long time between the schism and the rabbinic mother-synagogue, but in the first half of the 4th/10th century this peaceful situation came to an abrupt end. Saʿādīah al-Fayyūmī (882-942 A.D.), president of the rabbinic academy at ʿIrāq (in ʿIrāq), an exceedingly brilliant and influential teacher, published a series of polemical writings in which he condemned the Karaites as outright heretics who had cut themselves off completely from rabbinic Judaism. The effect of this sudden and unexpected blow upon the Karaites was cataclysmic: they deprived them of the only missionary field open to them and it extinguished all for a century their cherished hope of eventually persuading their rabbinic cousins to return to the true—that is, Karaite—faith. No wonder their reaction was most bitter, and polemics against Saʿādīah run like a scarlet thread through Karaite literature from that time on down to the 19th century.

On the other hand, the necessity to combat Saʿādīah’s scholarly criticism ushered in the golden age (4th-5th/10th-11th centuries) of Karaite scholarship, and brought about not only the consolidation of the various schismatic groups into a more or less unified sect, but also some modest but highly necessary reforms which softened to some extent the rigorous burden of Karaite practice. At the same time, ʿIrāq and Iran gradually lost their primacy as Karaite centres and were superseded by Jerusalem and Cairo, and new settlements were established in the Balkans (then under Byzantine rule; first half of the 5th/11th century), Cyprus (6th/12th century), Spain (where Karaism, under the leadership of Ibn al-Tarārīs, 5th/11th century, endured for a while but eventually disappeared entirely), Crimea (7th/13th century), and Lithuania (end of 8th/14th century). The First Crusade (1099 A.D.) put an end to all Jewish activity in Palestine and much of Syria, and the Karaite academy in Jerusalem, which had trained scholars from many countries, went out of existence. Some Karaite scholarly activity shifted to Cairo, but most of it moved to Constantinople where Greek-speaking Karaite translators turned some Arabic Karaite classics into Hebrew, thus making them accessible to later generations of Western Karaites who knew no Arabic. The liquidation of the Byzantine empire with the capture of Constantinople by the Ottoman Turks in 1453 A.D. gave a new impetus to Karaite scholarship, and the Istanbul community, now Greek and Turkish-speaking, gave its spiritual heart to the Crimean and Lithuanian settlements, where a Tatar dialect was, and still is, spoken. The decline of the Ottoman Empire in the 18th and 19th centuries resulted in the rise in importance of the latter settlements, which by the end of the 18th century came under Russian rule. Soon thereafter the Russian Karaites succeeded in obtaining from the Czarist government full rights of citizenship, thus escaping the crushing restrictions which were imposed upon their rabbinic cousins. During World War II the Crimean, Polish and Lithuanian Karaites were left unmolested by the German occupational authorities, on the ground that they were ethnically not of the Jewish race. In the post-war period, however, many Karaites in Egypt and ʿIrāq, including the entire ancient community in Hīt (on the Euphrates), found themselves compelled to emigrate to Israel, where they settled in compact colonies (Raḥmā, Ashdod, etc.). No accurate statistics of the Karaite population of the world are available; an approximate figure is 12,000–13,000.

(2) Literature. No writings by pre-Ananite schismatics have been preserved, although at least one of them, Abū ʿĪsā al-Īṣāfānī (the earliest Karaite document of which fragments have survived. Benjamin al-Nāḥāwāndī also composed a code of law, written in Hebrew, of which only a portion has survived, as well as commentaries on some biblical books. Daniel al-Kūmīsī wrote a code of law and a commentary on the Bible, likewise in Hebrew, known only in fragments. The overwhelming bulk of later literature, composed by Karaite authors resident in Muslim countries (except Turkey) down to the 15th century, was written in Arabic. After the First Crusade, the Balkan Karaite translators used a clumsy Hebrew heavily interlarded with Arabic and Greek loanwords. Later Karaite authors in Turkey, Crimea, Lithuania, and Poland, down to the 20th century, wrote in a more idiomatic Hebrew, and occasionally in the spoken Karaite-Tatar dialect, which was written in Hebrew characters.
The golden age of Karaite literary activity opened with the works of Abu Yusuf Ya'qub al-Kirkisani (or al-Karkasani, of Kirkisiya [Circesium] on the Euphrates, or Karkasen near Baghda), a man of encyclopaedic learning and a keen analytic mind who wrote two voluminous works entitled Kitāb al-anmār wa'l-ma'rūbīb (code of law) and Kitāb al-riyād wa'l-bada'īs (commentary on the non-legal portions of the Pentateuch). The former also provides the earliest, most detailed, and most reliable information on the sectarian leaders and groups which eventually coalesced into the unified Karaite sect, and has probably served as the chief source for all subsequent accounts, both Jewish and Muslim. His smaller works, not yet recovered, include commentaries on Genesis, Job, and Ecclesiastes, a refutation of Muḥammad's claim to prophecy (Kitāb fi ḫaḍā Ṣuwaruḥ Muḥammad), essays (ḵawālī) on textual interpretation (ṣ̄alāʿī ṣ̄īḥār waṣ̄ṣ̄ār al-maʿānī) and on the art of translation (ṣ̄alāʿī ṣ̄ardājamī) and others. His younger contemporary, Salom b. Jeroham (Ṣulaym, or Sulaymān, b. Rūḥāyym) wrote a violent tract against Saadiah (only the Hebrew version, entitled Miḥamāt ha-Ṣhem, has been preserved) and commentaries in Arabic on several biblical books. The end of the 5th/11th century produced the foremost Karaite Bible-commentator, Japheth b. Eli (Abū ʿAll Ḥasan ibn ʿAll al-Ḵāṣrī), who was still living in 395/1004-5 and wrote a commentary on the entire Bible, in Arabic, with a very literal and often grammatically awkward Arabic rendering of each Hebrew verse. Karaite study of Hebrew grammar and lexicography, necessitated by the Karaite preoccupation with biblical exegesis, resulted in the monumental Hebrew-Arabic dictionary (Ḍīlamī al-ʿalāʾ) by David b. Abraham al-Ḵāṣrī (of Fez, in Morocco). A zealous and expert Karaite missionary, Abu ʿl-Ṣurūr Sahāl b. Mašālah, wrote a long epistle in Hebrew (in which he promises to write an Arabic version also) in answer to his rabbinic opponents with whom he came in conflict, probably in Cairo. Japheth b. Eli's son, Abū ʿAll ʿAbīdīr Levi b. ʿAbī ʿAll b. ʿAbī ʿAll (Abu ʿAll al-Ḵāṣrī), who was still living in 415/1025 and wrote a very successful, the great rabbinic poets of the 5th/11th century produced a series of brief exegetical glosses (nuḥāt) on the Bible, as well as an authoritative code of law (composed in 397/1006-7), the latter known only under the Hebrew title of Sifer ha-miṣūṭō. The 5th/11th century saw the Karaite academy in Jerusalem, presided over by Joseph b. Noah (Abū Yaʿqūb ʿUṣuf b. Nūb), in full flourish and produced a number (reputedly 70) of eminent scholars. Joseph b. Noah himself wrote a commentary on the Pentateuch and a Hebrew grammar. His pupil, Aaron b. Joseph b. Jeshua (Abū ʿl-Faḥradi Ḥārūn b. ʿl-Faḥradi), composed a grammatical-lexicographical work entitled al-Muṣḥamīlī, another grammatical work entitled al-Kāfī, and a commentary on the Pentateuch. Another pupil of Joseph b. Noah, Joseph ha-Rōʾēh (Abū ʿAll ʿAbīdīr ʿUṣuf al-Ḵāṣrī; “the Seeing”, euphemistically for “the Blind”), the foremost Karaite philosopher of the 5th/11th century, composed an adaptation of the Muʿtaṣīlī ḥālāmī entitled al-Muṣḥawī (abridged by the author under the title Kitāb al-tamīrīs or al-Kiṭāb al-Manṣūrī), and a code of law entitled Kitāb al-ʾistibār. Joseph ha-Rōʾēh's advocacy of the relaxation of the suicidal severity of the original Karaite law of incest was developed further by his pupil Joseph b. Judah (Abū ʿl-ʾUṯrādī Ṣuḥrān b. Ṣaḏāq) in a work known only in its Hebrew translation entitled Sifḥer ha ʾdārāyōt; he also composed several theologico-philosophical works. The First Crusade marked the transfer of the centre of Karaite literary activity to the Balkans, where Hebrew was the literary vehicle, with a secondary branch in Egypt, where Arabic continued to be the literary language. The two most eminent Byzantine translators, Tobiah b. Moses and Jacob b. Simeon, turned a number of Karaite Arabic classics into Hebrew. Judah Hadassi (of Edessa, the modern Urfa, in Turkey, near the Syrian border) compiled a large encyclopedia (begun in 1148 A.D.) of early Karaite learning entitled Egkoi̇l ha-bōker. Jacob b. Reuben wrote a commentary on the Bible, mainly compiled from older Arabic-writing authors, entitled Sifḥer ha-Miṣūtō. In Egypt, Karaite efforts to write Hebrew poetry produced (about the middle of the 6th/12th century) the most eminent poet of the earlier period, Moses Darī (of Darī, in Morocco, but born in Alexandria, Egypt), who imitated, not very successfully, the great rabbinic poets of the Spanish school, and left an extensive dīvān of poetic pieces, both religious and secular. Japheth (Ḥasan b. ʿAbī ʿl-Ḥasan) al-Barkamānī, who lived in the middle of the 7th/13th century, wrote in Arabic a medical work (al-Maṣāḥa al-Muḥāsimyya fi ḫisā al-sīḥa al-badāmiyya) and a polemical treatise. Israel ha-Maʿārābī (al-Maghribī), an eminent theologian and jurist in Cairo (first half of the 13th century) wrote a number of works in Arabic. Samuel b. Moses al-Maghribī completed in 837/1434 a concise code of law entitled al-Murğhīd (the last Karaite code written in Arabic), and David b. al-Ḥitt (of Htt, on the Euphrates), his younger contemporary, wrote a brief but valuable Arabic chronicle of Karaite scholars of ʿĀnān down to his own time. Some eighty years earlier a lesser poet, Moses b. Samuel of Safad, in Palestine, left a dīvān of Hebrew poems, in which the most interesting piece is a long epic poem describing his troubled career as clerk (kāṭīb) in charge of the private estates of the amir of Damascus and his forced conversion (in 755/1354) to Islam and pilgrimage to Mecca; he finally escaped to Egypt, where he seems to have returned to his ancestral faith.

In Byzantine Karaism, the 7th-8th/13th-14th centuries marked a substantial literary revival. Aaron b. Joseph (Aaron the Elder) wrote (after 951/1349) a much esteemed philosophical commentary on the Pentateuch (Sifḥer ha-miḥbār), but is equally renowned also for his redaction of the official Karaite liturgy, in which he included a number of poetic hymns, many of his own composition. Another Aaron, Aaron b. Elijah (Aaron the Younger, of Nicomedia, the modern İzmir or Izanīt, in Asia Minor; d. 770/1365), produced a complete summa of Karaite theology, in three parts, philosophical (ʾEs ḥayyīm, obviously intended as the Karaite counterpart of Maimonides' Daʿlálat al-bārīn), legal (Gan ʿEden), and exegetical (Keter Tīrāḏ). In the 9th/15th century, Elījah Baṣ̄yākī, Ḥākam (rabbi) of the Istanbul Karaite community, died in 895/1490, leaving behind him an unfinished code of law entitled Addearet Eṣīyāḇā, which was continued, but not completed, by his brother-in-law Caleb Afebdopolos (d. after 1532 A.D.), an encyclopaedic scholar in his own right. It was recognized by most Karaites as the most authoritative manual of their law and ritual. The decline of the Ottoman empire once more shifted the centre of Karaite literary activity, this time to the Crimea. But in the 8th and 14th century town of Troki (now Wilna, in Lithuania) produced its most famous Karaite son, Isaac b. Abrahām (d. 1594 A.D. [1587?]), whose tract against Christianity, entitled Ḥissāt emānāh, evoked Voltaire's praise for
its skill and acumen. The interest shown in Karaism, from the middle of the 17th century onward, by Protestant theologians (Johann Rittang, Gustav Peringer, Johann Puffendorf, Lewin Warner, Jacob Trigland and others) resulted in several works by their Karaite informants, setting forth, of course from the partisan Karaite point of view, the history of the Karaite secession from the mother-synagogue, the elements of Karaite belief, and the history of Karaite literature: 

- Abraham Firkovic (1785-1874). Armed with the official authorization of the Russian government, he travelled extensively in the Crimea, the Caucasus, Syro-Palestine and Egypt, gathering original materials for the history of the Karaites. Unfortunately, in his zeal to prove that the Karaites had left Palestine before the advent of Jesus and therefore had not part in his crucifixion, he permitted himself to tamper with dates in manuscripts and on tombstones, and thus blemished his otherwise well-founded reputation for scholarship. The mass of manuscripts he collected (sometimes, to be sure, in a rather highhanded fashion) was later acquired by the Leningrad Public Library, and forms one of the largest, though least utilized, Karaite manuscript collections in the world. His older contemporary, Mordecai Sultansky (d. 1862), composed a number of works, the best known being Zeker saddikim, valuable as a detailed specimen of the present-day official Karaite version of the sect's history and its relationship to the rabbinic mother-synagogue.

(3) Dogma and Practice. Aside from the rejection of the authority of the post-biblical tradition, there is no basic divergence between Karaite and rabbinic dogmatics. The Karaite creed, as formulated in ten articles by Elijah Bashyahel (9th/10th century), postulates the existence of God, Creator of the world and all that is in it, the divine inspiration of all the biblical prophets, the authority of the Torah and the duty of the believer to study it, the certainty of the resurrection of the dead and of the final judgment, the responsibility of each human being for his own deeds, and the eventual advent of the Messiah. An earlier Arabic creed ('Abá-kud'), formulated by Israel ha-Ma'karé (8th/14th century), still adhered to by the Egyptian Karaites, has only six articles, and omits all mention of the Messiah—a puzzling peculiarity for which no satisfactory explanation has so far been suggested. None of these articles of faith conflicts with rabbinic teachings.

In fact the Karaite rejection of postbiblical tradition and the cry "Back to the Bible!" already proved impractical as early as the time of 'Anan, who found himself compelled to deduce new laws from the biblical text by the method of analogy (Hebrew khebbéh, Arabic biyád), supposedly borrowed by him from the imám Abi Ḥanifa, whom he is said to have met in prison. Life in the social and economic milieu of the Muslim empire simply could not, as a practical matter, be governed by a code of law enacted in Palestine a thousand or more years

earlier, 'Anan's successor as the second pater synagogae, Benjamin al-Nahawandi, freely borrowed from talmudic law. In this manner the monopoly of the Bible was gradually extended into the three official basic sources of Karaite law; the scriptural text (Hebrew káthab, Arabic naṣṣ), analogy based on it, and the consensus of the successive generations of scholars (Hebrew bikkás, 'iddá [inspired by the Arabic 'iddá], later sibél ha-yérúghah, "burden of inheritance"; Arabic iżmá), the latter term covering laws which have no direct or indirect root in the Bible, but which are not contrary to it or to reason and logic, and have been accepted by the generality of scholars after exhaustive study (masar, hálak). The early Karaite leaders developed a strong centrifugal tendency, expressed in the maxim attributed to 'Anan, "Search thoroughly in the Torah, and rely not on my opinion", and recognized the right of every individual, within certain limits, to draw his own conclusions from his own study of Scripture and to abide by them. But time and experience modified this tendency, too, and produced more or less general obedience to prevalent scholarly opinion, at least in the particular country or region. In matters of philosophy of religion, the earlier Karaite scholars chose to accept the Mu'tazzí kalám almost in its entirety, and the later philosophical writers felt duty-bound to stand by their predecessors and permitted themselves only as few deviations from them as possible. There was thus in Karaism no such further progression to Neo-Platonism and Aristotelianism as occurred in rabbinic philosophy.

The intense and impatient nationalistic-messianic tendency which inspired Abí Isá's armed revolt (1st/7th century) against the Muslim authorities subsequently subsided into a no less intense but more peaceful longing for an end to the exile and for the restoration of Zion in all its glory. One result of this was the unceasing and rather toughing effort on the part of the Karaites to maintain at least a small representative community of pious individuals in Jerusalem, who by prayer, fasting, and other devotional exercises besought God to "hasten the end". Some of these early Karaites produced the materials for the ascriptive order of "Mourners for Zion" (Hebrew 'Abólá Shiyón), which included rabbinic members as well. Another consequence of this powerful messianic feeling was the rather sombre and cheerless tone of the Karaite way of life, in which the elements of joy and pleasure inherent in such ancient institutions as Sabbath and Passover were as far as possible excluded, as incompatible with the sad plight of Israel in exile. Yet at the same time the usual concomitant of messianism, mysticism, which eventually came to flourish in rabbinic intellectual circles, was roundly condemned by Karaite scholars as impious and wicked.

It is in practical theology that Karaism parts ways with rabbinic usage, and here the earmark of Karaism is greater rigour and rejection of such relaxations or extensions of biblical law as were introduced by the rabbis in order to conform with changing public opinion and changing circumstances—for example, the replacement of the lex talionis by monetary compensation, the extension of the interdict of seething a kid's flesh in its mother's milk into an extensive dietary legislation, the substitution of a fixed mathematical calendar for the visual observation of the phases of the moon, etc. Hence radical reform in the modern sense and a foothold in Karaism. The only change resembling such basic reform was the modest
liberalization by Jeshuah b. Judah (5th/11th century) of the suicidal so-called catenary (Hebrew rikkub, theory of incest, which by endless compounding of analogy upon analogy to the forbidden relatives listed in the Bible had made it increasingly difficult for Karaites to find mates whom they could lawfully marry. A few other milder reforms were vigorously resisted and were adopted only locally under the pressure of practical conditions of life—for example, the relaxation of the biblical prohibition of light on the Sabbath, to permit lighting of the synagogue on Sabbath eve and leaving fire in ovens (kindled before the onset of the Sabbath) for heating of homes and keeping food warm during the Sabbath day, matters of vital necessity during the severe winters in Poland and Russia; or the introduction of a mixed visual and mathematical calendar, in order to secure at least some uniformity of holy days in the northern climes, where observation of the new moon is often impossible. Even with all these minor reforms, Karaitic law still remains far more restrictive than rabbinic law in matters of marriage (levirate marriage is forbidden), inheritance (the husband has no right to his deceased wife's estate), diet, Sabbath rest, ritual cleanliness, dates of holidays (Pentecost is fixed invariably on a Sunday, a custom which appears to be one of the most ancient and deepest marks of Jewish sectarianism), etc. Mixed marriages between Karaites and rabbinic parties seem, curiously enough, to have been quite frequent in the 4th-5th/10th-11th centuries in Egypt and Syria, even among the upper echelons of Jewish society, and in such instances clauses were added in the marriage contract to safeguard the right of each party to observe the customs of his or her faith. Later on, however, the practice dwindled and such mixed marriages became quite rare. Polygamy was never explicitly forbidden by Karaitic law (as it was by western rabbinic law), but seems to have been quite rare even in Muslim countries, and was certainly impossible in the West, where the law of the land (recognized by both Karaites and rabbinic Jews as binding) forbade it. The codification of the Karaitic law by Aaron the Elder (7th/13th century) has been mentioned above. Originally Karaitic rigorism led to an insistence that all formal prayer must consist exclusively of biblical psalmody, and the rabbinic practice of complementing biblical prayers with prose prayers and versified hymns composed by later authors was therefore condemned. But the passage of time and the example of the elaborate and poetically rich rabbinic prayerbook made their influence felt, and Aaron's order of prayer, supplemented by later additions in prose and verse, has finally developed into the voluminous liturgical corpus that it is today. The relationship of Karaimism to the older Jewish sects, particularly the Sadducees and the Dead Sea community, on the one hand, and to Islam, particularly Shi'ism, on the other, is still very obscure. Similarities and dissimilarities can be easily cited in both respects. The nature of Karaimism as we know it, as the product of the Muslim milieu, makes it highly likely that, while it represents another link in the ancient chain of Jewish heterodoxy, it is certainly not, at least chronologically, a direct heir to its Jewish sectarian predecessors. Nor has it ever made any visible attempt at Gleichschaltung with Islam—every feature of Karaimism, from its knowledge, a genuine product of Jewish history, Jewish tradition and Jewish thought.

(a). Printing. Unlike the rabbinic Jews, who eagerly seized upon Gutenberg's invention and produced a flood of printed books from the 1470s down to the present day, the Karaites ignored the printing press until well into the 18th century. The earliest Karaitic printed book, an edition of the liturgy, was set up by rabbinic typesetters in 1528-9 A.D. at the Christian press of Daniel Bomberg in Venice. The second Karaitic book was an edition of Ba'ashyâl's Adderet Elyyâhû, printed at Istanbul in 1530-1 A.D. by Gershom, a Karaitic family of masterprinters, the Soncinos. Two smaller Karaitic books appeared in 1581-2 A.D., likewise in Istanbul, from an unnamed but presumably rabbinic press. In the 17th century only one Karaitic book was published, that in 1643 A.D. by the rabbinic press of Manasseh ben Israel (the correspondent of Oliver Cromwell) at Amsterdam.

The first Karaitic printers were the brothers Afdah (Afiah) and Shabbathai Yerâkâ, who in 1733 issued a few sample sheets of the liturgy at Istanbul, but subsequently moved to Çufut-Kale in the Crimea, where they published a few books in 1734-41, whereupon they apparently went out of business. In 1804, soon after the Crimea was annexed by Russia, a new press was organized, likewise in Çufut-Kale, and four more books were issued from it in 1804-6. The first more or less successful Karaitic printing establishment was established in 1833 at Eupatoria (Gozlow), also in the Crimea, and published a series of important old texts.

The reason for this neglect of the printing press by the Karaites can only be conjectured. Presumably it was their traditional dislike of innovations, however beneficial, and the very limited circle of prospective purchasers of books, which made printing a philanthropic undertaking rather than a minimally profitable business.

Bibliography: No authoritative general history of Karaimism is in existence, and the older works by J. Fürst (Geschichte des Karäerthums, Leipzig 1862-9) and W. H. Rule (History of the Karaites, London 1870) must be used with great caution. Z. Cahn's The rise of the Karaites, New York 1917, is the only modern work on Karaitism (the book was not commended. But the passage of time and the example of the elaborate and poetically rich rabbinic prayerbook made their influence felt, and Aaron's order of prayer, supplemented by later additions in prose and verse, has finally developed into the voluminous liturgical corpus that it is today. The relationship of Karaimism to the older Jewish sects, particularly the Sadducees and the Dead Sea community, on the one hand, and to Islam, particularly Shi'ism, on the other, is still very obscure. Similarities and dissimilarities can be easily cited in both respects. KARAITES

(all published), Philadelphia 1913, is somewhat antiquated. L. Nemoy, Karaite liturgy and its relation to synagogue worship, Manchester 1957, is a useful comparative study, but is based solely on Hebrew Karaite sources, leaving the Arabic sources (particularly al-Kiršîsanî’s order of the liturgy; L. Nemoy, The liturgy of al-Qirqisânî, in Studies...in honor of I. Edward Kies, New York 1971) entirely out of consideration. See also S. W. Baron, A social and religious history of the Jews, New York 1957, v, 209-245 (for further references to Karaism see index to volumes i-vii, New York 1960); Z. Ankori, Karaim in Byzantium, New York 1959; N. Wieder, The Judean scrolls and Karaism, London 1962; A. Paul, Ecrits de Qumran et sectes juives aux premiers siècles de l’Islam: recherches sur l’origine du Qaraisme, Paris 1969 (defends more or less the traditional role of Anan as the founder of Karaism and the direct connexion between Karaism and Qumran); S. Poznanski, Karasche Druce und Don-Mamme (unfinished; published in hebrew, hebraische Bibliographie, xxi-xxii (1918-20). The Arab accounts of Karaism (in the works of al-Bîrûnî, al-Shahrastânî, al-Mahtzî and others) are all based on uncritical data supplied by Karaite informants and often misunderstood and distorted, and are therefore of little if any historical value.

For many years the main Karaite centre was at Krîı-yer, where in 1731 a Karaite printing-press was established. When the Crimean Khânate fell, contacts between the Crimean communities and those in Lithuania and Poland became stronger, resulting in the gradual Europeanisation of the Crimean Kairaîtes.

In the 19th century their main centre was at Guezlev (Eupatoria), where in 1857 the Taurid Kairait Religious Board was established, and later a Karaite religious college and library. On Lithuanian territories (integrated from the end of the 18th century with the Crimea), a separate Karaite religious board was established in 1857 at Troki. When, with the end of World War I, Poland regained its independence, Troki maintained its sway over the Panevėžys community in Lithuania and extended it to Halicz, a centre formerly isolated from the others (under Austrian rule). The Troki and Crimean Kairaites resumed regular relations after World War II, while on the other hand a separate Karaite Religious Board was established in 1945 in Poland (Warsaw).

After World War I, groups of Crimean Kairaîtes went to settle in other European countries (chiefly in Paris). One outstanding leader was S. Sapszal (1873-1962), elected head of the Religious Board at Troki (1927-1944), who contributed largely to the organization of Karaite communal life.

Anthropological research carried out on Kairaîtes in Poland and Lithuania (mainly by C. Gini, 1936) revealed their resemblance to the Tchuvash, evidence supporting the recognition of the Kairaîtes of Eastern Europe as a Turkic nation converted to Karaism. Their language belongs to the Kipcâg sub-group of the Turkic family. West-Kairaîte, somewhat different from that of Crimean Kairaîte, has two dialects; the northern (Troki, Panevėžys, and Vilna), and the southern (Luck and Halicz). Both in its vocabulary and syntax it shows numerous borrowings from Persian, Arabic, Hebrew, Slavonic languages and Lithuanian. In Kairaîte folklore there are visible traces of historic relations with the Khaizers (q.v.) (Hazâr oğhlı and Haçar biyl[i] in Crimean songs) and many wholly Turkic elements, such as the initial formula bir bar edi in a lullaby, many riddles and proverbs. In their general culture there are also similar vestiges of a Khazar past (tañ, an original dough-kneading device; the dishes baçar helvaşt or Haçar kaymâq ["Khaizar helva"], served at times of mourning occasions; katlama, a seven-layered cheese cake, etc.).

For centuries the main intellectual interest of the Kairaîte has been their religion. Apart from Hebrew, their scholars also wrote in the Kairaîte language: translations of the Bible, remarkable for their omission of anthropomorphic definitions of the divine attributes, and also original works. In the cultural field, the influence of the Christian world (in Poland) and of the Muslim (in Crimea) was felt. Towards the end of the 19th century secular works also began to appear, the most prominent Kairait authors writing in Kairaîte being I. Erak (Crimea, 19th century), Z. Abrahamowicz (Halicz, 1878-1903), S. Kobeccki (Troki, 1865-1933), A. Mardkowicz (Luck, 1875-1944), J. Lobanos (Vilna, 1878-1947), and S. Firkovič (Troki, b. 1897). There were several Kairaîte periodicals, published in Russian (Karaïmskaya Zhîn; Karaïmskoe Slovo), Polish (Między Karaïmuskim and Karaïmskie Gromadnicze Myśl; "Karaïm Voice"), Vilna 1927; Karaïm Asahy, "The Kairaîte Voice", Luck, 1931-38; Owaremnach, "Development";
Several Karaites in East Europe devoted themselves to Turkic studies (S. Szaplak, A. Jazieczkowski, and others). Several Karaites in East Europe devoted themselves to Turkic studies (S. Szaplak, A. Jazieczkowski, and others). Several Karaites in East Europe devoted themselves to Turkic studies (S. Szaplak, A. Jazieczkowski, and others).

**Al-Karak,** a fortress situated to the east of the Dead Sea, in the ancient Moab and at an altitude of ca. 3,000 feet. The name comes from Aramaic karakāh "town" and is found in the form ṣarrakwāmisc in Ptolemy (v, 16, 4), on the mosaic map of Madaba and in Stephen of Byzantium. Its situation on a steep-sided spur, separated from the mountain by a narrow and artificially-deepened moat, makes it an extraordinarily strong site. It is remarkable that we do not hear of it at the time of the Muslim conquest of the lands east of the Jordan, nor in the ensuing centuries. It is only at the time of the Crusades, when in 1142 it was fortified by King Fulk’s former cup-bearer Payen, that it began to play a role, but this was now a very prominent one. The Franks of that time, being little versed in geography, sought to localise the ancient city and called it Petra deserti. Since this stronghold dominated the pilgrim route from Damascus and the caravan way between Syria and Egypt, it caused the Muslims much trouble. It was during the period 1176-87, when it was in the hands of Reynaud of Chatillon, that it constituted a particular menace for the Muslim lands; it was at this time that Reynaud sent his expedition southwards towards Arabia, and although this failed, it caused great anxiety to the Muslims, who saw in it an attack against the Holy Cities, when it was rather an action impelled by economic motives.

From 566/1170 the fortress began to suffer siege by Nūr al-Dīn and the Salāḥ al-Dīn (Saladin), who aimed at restoring the authority of the Muslims in al-Karak. They had no success until finally, as a result of starvation, the garrison surrendered in 584/1188 to Saladin’s brother al-Malik al-ʿĀdal, and it fell again within the latter’s share of territory in the division of Saladin’s possessions after his death. It then belonged to various members of the Ayyūbīd family, and even after the various Ayyūbīd principalities had gradually disappeared, amir al-Malik Umar still held it, and in al-Karak until Baybars captured him by treachery and had him executed in 661/1263.

The Mamlūk sultan al-Nasir found refuge within the fortress’s mighty walls in 708/1309 when he fled from Cairo in order to make firm his royal power. Al-Karak was at that time the chief-lieu of one of the mamlakats into which Syria and Palestine were divided. The descriptions of Arabic authors show us how powerful the fortress was at that time; the local inhabitants were still in part Christian. Al-Karak lost its importance under Ottoman rule. In 1840 it was occupied by İbrahim Paşa, who had part of the ramparts destroyed; thereafter it was re-occupied by the Ottomans, who after 1893 erected there various public buildings. As the centre of an administrative district, al-Karak had in 1973 ca. 10,000 inhabitants. It is at times difficult to distinguish, both in the town and in the adjacent fortress, the traces of the Crusaders and of subsequent Islamic constructions, both of which are built upon ancient substructures. However, it is certain that the donjon and the external wall surrounding the lower courtyard are Muslim in origin and date to the time of Baybars.

... with reference to the geographers and travellers). (D. SOURDEL)

AL-KARAKI, Nūr al-Dīn 'Alī b. Muḥsain b. 'Alī b. Muḥammad b. 'Abd al-'Āmil, Ijmā'ī scholar, born probably not later than 870/1466 into a family of scholars. His nisba al-Karaki refers to Karak Nūn in Biḵāš, where he studied religious sciences, chiefy under 'Alī b. Ḥiīlā al-Dīzā'īrī. He also visited Egypt and heard some Sunni scholars there; and 900/1500 he settled in Naḵd; and in 910/1505-6 he was probably present at the court of the Šafawīd Shāh Ismā'īl in Isfahān. Along with other Ijmā'ī scholars from al-Naḵd, in 916-17/1510-11 he accepted an invitation to Harat and Mashḥad extended Shāh Ismā'īl with the purpose of enlisting their help in propagating ʿImāmīsm in the newly conquered eastern provinces of Persia. Shāh Ismā'īl is reported later to have sent him 70,000 dinārs annually to al-Naḵd for expenditure on teaching and for distribution among students. Under Shāh Tahmāsp, who succeeded Ismā'īl in 930/1524, he paid at least two extended visits to the Šafawī court. Shāh Tahmāsp recognized him officially as the Seal of the Muḥiṭahids (Khdtam al-muḥiṭahīdīn) and the Deputy of the Imām (nd^ib al-imām) and gave him full authority to direct the government in matters relating to the Šafawī court. Al-Karaki instructed the governors concerning the assessment of the land tax, ordered the removal of Sunni scholars and the appointment of Shī'ī imāms to lead the prayers and instruct the public everywhere, and had the kibla rectified in several Persian towns in accordance with his views on geodesy. He defended these latter views in a dispute with the sadr Ghīyāṭ al-Dīn al-Daghtākī. Shāh Tahmāsp, taking the side of al-Karaki, dismissed Ghīyāṭ al-Dīn in 938/1531-2, and on the recommendation of al-Karaki appointed a student of the latter, Muʿizz al-Dīn al-Isfahānī, in his place. During the interim before the arrival of Muʿizz al-Dīn at the court, al-Karaki acted as sadr and appointed his deputies and agents. This situation is perhaps reflected in a fırmaṇ of 939/1532-3 quoted in the sources in which Shāh Tahmāsp claimed the exclusive authority of appointing and deposing religious officials in the Šafawī kingdom and conferred on him as a hereditary wakf extensive land holdings in the area of al-Naḵd valued at 700 tāmāns annually. Al-Karaki died in Dhu ḫ-Ḥiḍđa 940/July 1534 in al-Naḵd.

Some of al-Karaki's commentaries on earlier legal works, like al-Mubākkīl al-Hillī's Shahrū bi-al-tālām, became popular books of instruction. His Risālat al-Ḍiṣaṣarīyya, on the rules of the ritual prayer, had commentaries written on it by several scholars during his lifetime and was translated into Persian. Other of his writings aroused controversy. In his Risāлат ḥāṣṣat al-naḍāṣdī fi taḥṣīḥ tīlī al-kharādī he upheld the legality of government grants of kharād land and thus defended himself against criticism levelled at him for accepting such grants. The treatise was refuted by his sharp-tongued opponent in al-Naḵd Ibrāhīm al-Ḵaṭṭī, who also wrote refutations of some of his other treatises, among them the Risāla fi salāt al-ḏiqlām's in which al-Karaki upheld that the congregational Friday prayer was obligatory during the absence (ghayba) of the Imām if a qualified legal scholar was present. In his Risālat naṣāḥat al-ḥaṣṣat fi taʿām al-ḡidr waʿl-pāḏāri he asserted the permissibility of cursing Abu Bakr and ʿUmar, thus defending the early Šafawī practice, though other Ijmā'ī scholars objected to this practice as a breach of tāḥiyā. With the exception of this last question, later ʿImāmī opinion generally upheld his views against his critics and gave him the honorary surname of al-Mubākkīl al-Thānī.

Sunni anti-Šafawī polemics singled him out among Ijmā'ī scholars for attack and variously accused him of being a Druze, of having concocted a new religion from the heresies of all other erring Muslim sects, of having converted Shāh Ismā'īl to his "false religion", and of having abolished the canonical prayers in Persia; but these accusations are without foundation.

KARAḴALPAḴ (Turkic "black hat"), a Turkic people of Central Asia. In the Russian annals, a people of this name (Cerneye Klobutsi) is mentioned as early as the 12th-13th century A.D.; but whether these “black hats” are identical with the modern Karaḵalpaḵ cannot be definitely ascertained. It is not until the end of the 11th/12th century that there are records of the Karaḵalpaḵ in Central Asia. According to the embassy report of Shkihīn and Toshī (1694), they were then living on the Indus, 10 days' journey below the town of Turkestan. There they are again mentioned in the 12th/18th century as neighbours of the land of the Khāns of Khiwa; in 1722 a treaty was concluded by the ambassador Vershinin between Peter the Great and the Khān of the Karaḵalpaḵ, Abu l-Muẓaffar Saʿdāt Ḥīnayat Muḥammad Bahādūr (Poiwzay Sotarmiya Zakonov, 1722, no. 4101). At that time the Karaḵalpaḵ lived not only by herding and raiding but also by agriculture—with artificial irrigation of their fields—and by fishing in the Aral Sea. They are said to have migrated to Central Asia from the Volga region. About the middle of the 12th/18th century the winter quarters of a group of Karaḵalpaḵ were on the central course of the Sīr Daryā at Khāwās (north of Ur-Tube); the prince (tura) of these Karaḵalpaḵ entered into an alliance in 1716/1755 with the Atalik of Bukhara, Muḥammad Rāhīm; 3,000 Karaḵalpaḵ families were settled at Samarkand. The Karaḵalpaḵ are said to have driven out of the lower valley of the Sīr Daryā by the Kazaḵ towards the end of the 18th/19th century; they are still mentioned in the 19th century a little farther south on the Yeli Daryā in connection with the campaid is of Muḥammad Rāhīm of Khiwa, against the land of the Kungrat (1222-6/1807-11). The Karaḵalpaḵ were then subject to the Khān of Kungrat. After the union of Kungrat with...
KARAKALPAK — KARAKORUM 611

Khlwa (1226/1811) the Karakalpak too had to submit to the Khan of Khiva. They made frequent attempts to throw off this yoke; in 1827 they even captured and held the town of Kungrat for a time. After the suppression of this uprising, a body of them migrated to Farghana. In 1855 the leader of the rebel Karakalpak, Ir-Nazar-bi, adopted the title of Khan, building a fortress near where the Kazak river flows into the Aral Sea.

After the Russian conquest of Khlwa in 1873, when the Khán had to cede to Russia all his possessions east of the main arm of the Amu Darya and the most north-westerly arm of its delta, the land of the Karakalpak became Russian. The area, then separated from Khiva, was first administered as a separate department (otdyel), and later as part of the "government" of Sir Daryâ. On 11 May 1925 the Karakalpak Autonomous Oblast' was formed as part of the Kazak A.S.S.R.; on 20 March 1932 its status was changed to an Autonomous Soviet Socialist Republic (A.S.S.R.); and on 5 December 1936 this A.S.S.R. was transferred to the Uzbek S.S.R. The capital of the Karakalpak A.S.S.R. is Nukus. The Karakalpak, who at the time of the Revolution were on the verge of being totally assimilated by the Kazak (and to a lesser extent by the Uzbek), were preserved as a distinct group by the Soviet régime. Linguistically the Karakalpak language is merely a dialect of Kazak; their tribal divisions are the same as that of the Kazak. Karakalpak was first written (i.e., established as a literary language) in 1925 using the Arabic script; in 1928 this was changed to a Latin script; and since 1940 it has been written in Cyrillic. The 1970 Soviet census lists 236,009 Karakalpaks in the U.S.S.R. Of these 230,258 (97.6 %) live in the Karakalpak A.S.S.R., 8,668 in Bukhara Oblast', 1428 in Tashkent, and 732 in Farghana Oblast' (the Farghana Karakalpaks are rapidly being assimilated by the Uzbeks).

KARAKAY. The cross-reference to this from KARULK is erroneous; see KARAKOL, KARAKUL.

KARAKOL, modern Turkish term for "police-station", "(military) patrol", a popular etymology ("black [i.e., ominous] arm [of the authorities]" or "patrol"); for Ottoman karakash, karavas, a loan-word from Mongol (attested from the 8th/14th century), see Tarama sözlükü, Ankara 1969, iv, 228 f. The Mongol word also passed into Persian as karavas, karavul. For full references and details of the diffusion of the word (as far as Swahili), see Doerfer, i, no. 276.

In the Ottoman Empire the maintenance of security and order in different quarters of Istanbul was entrusted mainly to the Janissaries [see VESİÇER], and the ortas (companies) patrolling the city were called kulek. During the military campaigns, apart from the tarhâğı (vanguard) forces, the Ottoman army used to send out small units called karavul müfrezeleri. In the same way the Ottoman navy, when at sea, sent out two mail ships as karavul sefsineri, with the purpose of taking any sudden attack on the fleet. About ten ships under the command of the tersâne hethâvnâisi (Intendant of the Admiralty) brought up the rear as ard karavul to help ships in trouble when necessary.

After the suppression of the Janissaries in 1826, public security in Istanbul became the responsibility of the ser'asher [q.v.]; an autonomous administration, the Dâbiyye Müştiiriyeti, which was founded in 1846 to take charge of police functions, was changed into a neşâeti (ministry) in 1870 and in 1909 attached to the Ministry of the Interior as a directorate with authority extending over the whole country [see PARİYÂ]. At that time, a police-station was called karakol-khâne, and later karakol. The word karakol was used also in the Turkish army and navy to designate a unit charged with security or observation duty (isimâd karakol, sîri karakol, nîşâm karakolu, etc.).

KARAKOL DHİMEYİYET, a secret society founded in Istanbul towards the end of 1918 by a group of former members of the Union and Progress Committee [see İTİBAH WE TERAŞÊI DHİMEYİYET]. Its aim was to organize guerrilla resistance bands against the Allied forces which had occupied strategic points in Turkey following the armistice of Mudros on 30 October 1918. After the organization of the Nationalist Movers in Anatolia under the leadership of Mustafâ Kemâl Pasha, the Karakol society supplied the movement with intelligence, officers and arms. The society tried to gain control over the nationalists of Anatolia, and Karâ Wâsiî, one of the founding members, became their representative in Istanbul. However, Mustafâ Kemâl succeeded in checking the activities of the Karakol society and ordered its dissolution in the spring of 1920, on the grounds that a delegate of the society had signed a pact of military assistance with the Bolsheviks on 10 January 1920 without the authorization of the nationalists. Nevertheless, the Karakol society seems to have continued its underground activities until the end of the Turkish War of Independence.

KARAKÖRUM (KARAKÖRAM), a chain of mountains in the centre of Asia lying north of and almost parallel to the Himalayas. The range extends westwards as far as 73° long.; it has not yet been definitely ascertained how far it runs eastwards. At one time the eastern limit was thought to be the pass of the Karakörum, the plateau of Dipsong and the upper part of the Shyok, but, according to the views of several famous geographers, the range runs much farther into Tibet, and the Tang-la (to the north of upper Saluên) should, they think, be re-
Karakorum

The Karakorum is the most important watershed in Central Asia, dividing the rivers which run northwards, emptying their waters into the deserts of this part of the world, and those running southwards into the Indian Ocean.

The principal pass is the col of Karakorum (5,574 m.), through which runs the important trade route between Chinese Turkestan and Kashmir. It is difficult and dangerous. In their long journey countless beasts of burden perish of exhaustion or in the avalanches. The mountains take their name from the pass, which is Karakorum; but the name is not very appropriate. It is found for the first time in a map by Elphinstone published in 1815. On this map the range in question is indicated by the name Moor Taugh (instead of Mur Tagh, "Ice Mountain") or Karakooroom Mountains.

The first traveller to write on the mountains now called Karakorum was Mirza Haydar Dughlat, a propos of his journey from Yarkand to Leh, capital of Ladakh, in 1600. The exploration proper of the Karakorum only began in 1808 when Elphinstone visited these regions. The more systematic and detailed exploration of the high mountains proper was only begun in 1892 by Sir Martin Conway's expedition, which was followed by many others (including 5 expeditions of Ph. C. and J. Visser between 1922 and 1935).

century the town lost all importance. At the present
day, the Buddhist monastery of Erdeni-Dzu is
adjacent to the site.

(W. BARTHOLD-J. A. BOYLE)

KARAKUL [see KARAKUL].

KARAKUM (Turkish "black sand"), a desert in
Russian Turkestan, between the Amu Darya, the
Üst Urt and the ranges of hills on the Caspian,
contrasted with Khlz-Kum ("red sand"), the desert
between the Sûr Darya and the Amu Darya. The
Karâkum (area ca. 300,000 sq. km.) is a still more
dreadful place and possesses even fewer fertile areas
than the Khlz-Kum. The sandy stretches north of the
Sûr as far as Lake Çalkar are called "little Karâkum";
cf. F. Machatschek, Landeskunde von Russ-
sisch-Turkestan, Stuttgart 1921, 15 ff., 285, and index.
A good deal of the Karâkum is still used by Turco-
man nomads as pasture for sheep and camels. In
the south, the Karâkum is traversed (since 1883-6) by
the railway from Khlz Suw (Russ. Krasnovodsk) to
Çalkar. Djuyu (Russ. Cardjuy) is the Karâkum canal
built out of stones from the Pyramids at Memphis,
and to Arcman on the northern slope of the Köpet
Dagh (since 1862). The Karâkum mentioned by
Djuyaynî in the Ta'rika-i Djihan Ghdjâ as popu-
lated by the Karâkon (see KARAKUL) is, in the opinion
of the editor, probably identical with the little
Karâkum (the readings of the Ms. are not certain;

union, Stuttgart 1950, index; Th. Shabad, Geo-
graphy of the USSR, New York 1951, index; W. Barthold, Turkestan*, 415 f.

(W. BARTHOLD-B. SPieler)

KARAKUSH, BAHÀ AL-DIN B. 'ABD ALLÂH (i.e. son of an unknown father) AL-ASADI (mamûk of Asad al-Din Shîrkhû) AL-ROôMÎ AL-MALIKI AL-
NÄSÎRî, officer of Malik al-Nâşîr Yûsûf (i.e. Saladin), a eunuch, received his liberty from Shîrkûh and was appointed an amir. By the time of Shîrkûh's death (564/1170) he was already playing an influential part; it is said that it was due to him and the šâhid 'Adâ ni Hakkârî that the shâhid al-'Adîd appointed Saladin vizier. After the suppression of the revolted faction after al-'Adîd's death by his chamberlain, the eunuch Mu'tâman al-Khîlàfà, Karâkush was appointed chamberlain. In this capacity he had the surveillance of the family of the late caliph and is said to have administered his office with great strictness. To prevent the family of the caliph increasing, he separated men and women. Saladin gave him the task of building the citadel of Cairo and extending the city walls to include Cairo and Fustât; later he was asked to fortify and defend 'Akkâ. When the town fell in 587/1191 after eighteen months fighting, he was taken prisoner; Saladin ransomed him a few months later for the high sum of 20,000 dinârs. After the death of Saladin in 589/1193 he entered the service of his son al-Malik al-'Azîz 'Ugman and was appointed to represent the Sultan when the latter was out of Egypt. When the Sultan felt his end approaching (in 595/1199), he designated his son al-Malik al-Mansûr his suc-
cessor and Karâkûsh his regent. In keeping with this
wish, the young ruler appointed him sque, although Karâkûsh himself was now very old. He only held his post for a very short time as most of the amirs and the head of the chancellerie, Ibn Mam-
mâtî, declared him incapable of ruling, presumably
on account of his great age.

His supporters, who considered him the most
worthy, consulted Saladin's adviser, al-Kâdî al-
Fâdîl [q.v.], but the latter, who had retired from
political life, would not be drawn into the question.
Finally the amirs asked al-Mansûr's uncle, al-Malik al-
Afdal, to take over the regency. After this we
find only one mention of Karâkûsh, when Sultan
al-'Adîl, who had seized the throne in 596/1200, had
two of his nephews taken to the house of Karâkûsh
as prisoners. He died a year later. Contemporary
historians, like 1mâd al-Dîn al-Kâtîb al-Iṣfahânî,
bewest the highest praise upon him, as do later
writers, like al-Makrizî and Ibn Taghrîbirdî, and
describe him as the ablest man of his day. They
give him particular credit for his activity as a builder.
Besides the buildings already mentioned, his house,
his hippodrome and the bridge at Gîzeh, which he
built out of stones from the Pyramids at Memphis,
are mentioned.

In the same period a "Karâkûsh" became no-
rious as a byword for stupidity. A series of absurd
verdicts are related in a work entitled Kitâb al-
Fâghûf fi Ahkâm Karâkûsh, "the book on the
stupidity in the judgments of Karâkûsh". According
to Hâdidî Khalîfà, the above-mentioned Ibn Mam-
mâtî was the author of this book. Casanova (see Bibl.) in his elaborate study on Karâkûsh quotes
three manuscripts: (1) a Cairo manuscript which
contains a brief selection from the Kitâb al-Fâghûf;
the author is there given as Ibn Mammâtî; (2) a
Paris manuscript the author of which is given as al-
Sîyûfî, certainly wrongly, as in the introduction
Ibn Taghrîbirdî is wrongly quoted and given a
wrong praenomen, which one can hardly credit
with; (3) a Cairo manuscript which is a later
version, in which Karâkûsh is called a sulûn and
the number of his "judgments" is increased, by
Abd al-Salâm al-Lakâmî, dating from 1200/1786.
These "judgments" have nothing to do with state-
craft but are court verdicts; they are typical, well
known anecdotes, current among other nations also.
A special investigation has not yet been made of the
problem. Casanova endeavours to show that the
work is a pamphlet against Karâkûsh, whom, he
says, Ibn Mammâtî hated as an exceedingly severe
man. It is not known whether Ibn Mammâtî collected
and published these anecdotes in the life-time of
Karâkûsh. Ibn Khallîkân rightly points out that it
is impossible that a man such as is described in the
anecdotes could have held high offices of state. Nor
is anything known of a particular feud between Ibn
Mammâtî and Karâkûsh, except that Ibn Mam-
mâtî had protested in 595/1199 against the appoint-
ment of this then very old man; Karâkûsh, as do later
by the Frankish chroniclers as advanced in years
even in 585/1198 at the siege of 'Akkâ; he is said
even to have known Godfrey de Bouillon. One thing
is clear from Ibn Khallîkân's observation: the
Gafsa, Karakūsh may have offered his submission to the Almohads and that in Tripoli, the sûlādār may have done likewise (Lévêque-Provençal, Trente-sept lettres almohades, 198, and Recueil, 62), but it is equally possible that this manoeuvre took place some time later. Whatever may have been the case, Saladin, who had rejoiced at Karakūsh’s successes (cf. Abu Shama, ii/2, 547), at this time needed the support of the Almohad fleet against the Franks, and there is extant the text of a letter drawn up in his name by al-Kādī al-Fāḍil [q.v.], dated 587/1192 and addressed to al-Mansūr, asking for his intervention (apud al-Kalkashandi, Subh, vi, 526 ff., tr. and comm. in Gaudroy-Demombynes, op. cit., 279-304). Karakūsh had then to pretend to rally to him, probably on Saladin’s orders, who in the following year (28 Şa‘bān 586/30 September 1190) sent an embassy to al-Mansūr with a letter (apud Abu Shama, Rawdatayn, in RHC, Hist Or., iv, 497-505) in which he unequivocally disowned the reprehensible actions of the sûlādār and the mamīlūk (according to Abu Shama, ibid., ii, 508, the former was handed over at Tunis by Karakūsh, whilst according to Istibyār, 111, this person, here called Abū Zubār al-Fārisī, was expelled from Tripoli and sent to Marrakesh). After having stayed for some time with the governor of Tunis, Karakūsh took to flight and successfully evaded the Authority of the Almohads was not yet firmly established, and it was his mamīlūk who undertook this enterprise (most probably with Saladin’s blessing) from 586/1192 onwards. He had made various raids (cf. Abu Shama, Rawdatayn, Cairo 1936-62, i/2, 548), on Barka, Tripoli and Awjīla, and then returned to Cairo, where he was thrown into prison; but he soon began his activities once more (15 Rabi‘a 583/11 October 1187). Returning once again to Tripolitania (cf. Abu Shama, op. cit., i/2, 692) at the head of a force of Ghuzz [q.v.], he occupied the eastern and southern parts of the country as far as Fazzān, and then, with the aid of bedouins of the Banū Hilāl and Sulaym, seized Tripoli. It seems to have been at this point that he was rejoined by Taṭk al-Din’s sûlādār, a person whose role and even personal name remain obscure (Gaudroy-Demombynes, Une lettre de Saladin au calife almohade, in Mélanges Rene Basset, Paris 1925, ii, 290-1, put forward the idea that Waddan is further mentioned of another of his sons who fled there after betraying the īlikīya in his turn, Yahyā also fled to Waddān (606/1209) and besieged the former ally of the Banū Ghāniyya, who was unable to withstand him; Yahyā had him and one of his sons executed in 609/1212. Thus there came to an end the life of an adventurer who had carried on warfare for forty years as much for Saladin’s benefit as for his own. The presence at Waddān is further mentioned of another of his sons who fled there after betraying the Hafṣīd al-Mustansīr (647−75/1249−77); he was eventually put to death by the king of Kanem.

KARAKŪSH, generosity [see Supplement].

AL-KARAM, Banū [see ZVRAYIDS].
KARAMA may be considered as the masdar of karuma "to be ... in the determining lines of its own nature. In the light of this perspective of existential determinism, a recognition freely and in superabundance. More precisely, the word comes to denote the "marvels" wrought by the "friends of God", awliyd* (sing. wali), which God grants to them to bring about. These marvels most usually consist of miraculous happenings in the corporeal world, or else of predictions of the future, or else of interpretation of the secrets of hearts, etc.

The notion of karama differs from that of mu'qdisa [q.v.]. Each involves a "breaking of the natural order of things" (khulis l-il-'dda), that is, an extraordinary happening which breaks this "divine custom" (sunnat Allah) which is the normal course of events. But while mu'qdisa is a symbol of a public act, preceded by a "proclamation" (da'wa) and a "challenge" (ta'addadi), by means of which the prophet demonstrates incontrovertibly the "impotence" (sad) of his hearers to reproduce likewise the miracle thus brought about, the karama is a simple, personal favour. It should be kept secret, and is in no way the sign of a prophetic mission. There is a risk of ambiguity if one translates both terms by "miracle" (of a prophet, of a saint). If mu'qdisa is rendered, as has become common, by mu'dizdt (*tazills are unanimous in attributing this to the Prophet, and did not attribute any miraculous nature to the inimitability of the Kur'an (ed. Nyberg, 28-9), turning into a personal attack. But the conclusion is clear (ibid., 275): the karama are all tricks, and the accounts which later repeat them are only restating popular superstitions.

(2) Falsaifa (Ibn Sinā). To illustrate the position taken up by falsafa, we shall take the example of Ibn Sinā, who dealt with this question on several occasions. Ibn Sinā's cosmology undertakes to place mu'qdisa and karama in the existential order, preceded by a "proclamation" (da'wa) and a "challenge" (ta'addadi), by means of which the prophet demonstrates incontrovertibly the "impotence" (sad) of his hearers to reproduce likewise the miracle thus brought about, the karama is a simple, personal favour. It should be kept secret, and is in no way the sign of a prophetic mission. There is a risk of ambiguity if one translates both terms by "miracle" (of a prophet, of a saint). If mu'qdisa is rendered, as has become common, by mu'dizat (*tazils are unanimous in attributing this to the Prophet, and did not attribute any miraculous nature to the inimitability of the Kur'an (ed. Nyberg, 28-9), turning into a personal attack. But the conclusion is clear (ibid., 275): the karama are all tricks, and the accounts which later repeat them are only restating popular superstitions.

(1) The Mu'tazilī schools of thought. The generality of the partisans of istišā' denied the reality of karāmāt. The most prominent argument from scripture is that put forward by al-Zamakhshāri commenting on Kur'an, LXXII, 26-7, "He (sc. God) knows the Mystery, but does not reveal to anyone His Mystery, except to the one whom He designates as His messenger". This text is understood as justifying the miracles which God performs openly by "the hands" of the prophets in order to demonstrate the truth of their missions, but as setting aside all other supernatural happenings. Al-Djūbbārī says that if the awliyā' possessed this power, how would one be able to distinguish them from the prophets?

A detailed exposition of the Mu'tazilī interpretations of these "miracles of a prophet" will be found in the article mu'qdisa. Briefly, if the heresiographers (al-Isfārā'ī, al-Baghdādī, al-Shahrastānī, etc.) can be believed, al-Nazzām and al-Murdār for example regarded as doubtfully every miraculous happening traditionally attributed to the Prophet, and did not attribute any miraculous nature to the inimitability of the Kur'an (cf. A. Nader, Le système philosophique des Mu'tazīs, Beirut 1936, 318 and refs.). But this statement must be strongly qualified. Al-Khayyāt, for instance, in his Kuisā l-Intisārī, ed. Nyberg, 28-9, tr. Nader, Beirut 1957, 25-6, states that for al-Nazzām, the Kur'an is only "the proof of the Prophet's mission". Moreover, Ibn Mattawayh says that the mu'qdisāt merely confirm a teaching (sc. the kürānic revelation) which is conformable to reason, and it is this fact which justifies them. They are bound up with the missions of the prophet-messengers who are, like all mankind, responsible for their own actions. Nevertheless, the Mu'tazīs are unanimous in denying the authenticity of karāmāt, which they ig-
tion of the possibility of "prophetic miracles" leads logically to admitting the possibility of karāmāt. The explanation is common to both, the differences lying essentially not in the deeds as such, but in the superiority which raises the prophet over the saint.

(3) The Ashʿaʿrī reply. It seems that some Ashʿaʿrīs, such as al-Isfārāʿīnī and al-Ḥaṣnī, shared the severe judgment of the Muʿtaṣiṣīlīs in regard to karāmāt. The generality of the school, however, recognised their authenticity on the following grounds: (a) Rational probability. The raison d'être of a muʿḍīṣat is not the moral perfecting of a prophet, but the freely-exercised will of God, who brings about this miracle "by the hands of the prophet", a public miracle, preceded by a "proclamation" and a "challenge". It is therefore possible (ṣuʿūd) for God to create, through the intermediacy of a saint, a supernatural occurrence without either a proclamation or a challenge. (b) Existence of the occurrences. They are authenticated above all by the miraculous happenings which are mentioned in the Kurʾān and whose beneficiaries have not in any way received a prophetic message to proclaim. Thus sūra III, 37, tells of a marvel brought about for Mary, mother of Jesus, and XXVIII, 9 ff., stress the "miracle" of the story of the Seven Sleepers, in themselves "miraculous signs" (ṣūrāt) from God. Finally, XVII, 40 explains the extension of these happenings which came about at Solomon's request, whether through an ʿifrīt or through "The one who had knowledge of the Book", particularised by tradition as the vizier Asaf. (c) Karāmāt are therefore possible, but should not be confused with muʿḍīṣat. God grants the former to saints in order to honour them and to confirm them in piety and God-fearing reverence, but He brings about the second ones "by the hands of the prophet!" as a proof of his mission. The former should be kept hidden, but the second ones proclaimed before all men. Both, then, should in any case be carefully distinguished, not only from acts of trickery (biṣyal), but also from divinatory acts (ḥikāḥāt), those of permitted magic, sīrān, and those of sorcery (nārāndjāt). Al-Bākīllānī devotes a whole work, his Kitāb al-Bayyān (ed. R. McCarthy, Baghdad-Beirut 1958), to defining the kinds of "signs", some of them authentic, and the rest deceptive and illusory, and to tracing back to their subject the rules for the "discernment of spirits". It is virtually the Ashʿaʿrī thesis which Ibn Khaldūn sums up in his Muḥaddīsima (ed. Cairo N.D., 67, 332, tr. de Slane, i, 191-4, iii, 112-12, tr. Rosenthal i, 188-91, iii, 167-8).

(4) The Sūfī attitude. The existence of "saints' miracles" (karāmāt al-aqwāliyya) is affirmed. In Sunnī tasawwuf, the explanation given is in general terms very close to the Ashʿaʿrī position. There is a freely-given stress on the distinction between karāmāt and muʿḍīṣat; the saint who performs marvels cannot accordingly be recognised as a prophet, and must remain subject to the religious law laid down by the Messenger of God. However, whilst the Ashʿaʿrīs insisted on the objective difference of the two types of "signs", the Sūfī texts deal with the differences in spiritual attitudes.

The problem comes up in almost all the Sūfī manuals, e.g. in the Kitāb al-Lumaʿ of Abū Naṣr al-Sarrāḍī (ed. Nicholson, GMS, 1914, chs. 113-18, Kalābādī's Kitāb al-Taʿarrūf (ed. Arberry, Cairo 1952/1933, ch. 26), the Rūṣdī al-khawāṣṣirīya (ed. Cairo N.D. 158 ff.), al-Hujwirī's Kashf al-mahdīj (tr. Nicholson, GMS, 1911, 218-19). The "signs" (ṣūrāt) of saints resemble externally those of prophets, but whereas these last bring them about publicly (and with a "challenge" hurled forth), the saints strive to keep them secret. One of the charges made against al-Ḥallādī was just this "divulging of marvels" (ṣūrāt al-karāmāt) by means of which he could apparently aspire, in the eyes of contemporaries, to the role of prophet.

Subjectively, muʿḍīṣat are an aid to the prophet-messenger, in that they confirm his mission; karāmāt on the other hand can become a subject of disquiet for the saint, who may be afraid of being the dupe of an illusion (cf. al-Sarrāḍī, loc. cit.). Al-Kalābādī, op. cit., 44, relates that according to Abū Bakr al-Warrāk, it is not the power of working miracles which constitutes a prophet, but the mission with which God has entrusted him. Saints able to perform charismatic acts do not take any offence at this mission, once they recognise it and remain faithful to the message proclaimed. Also, when they receive the gift of working marvels, according to al-Kalābādī, 46, "they display towards God all the more humility, submission, godly fear, abasement and self-contempt, and all the more promptness in responding to God's claims over them". This humility and abasement on the saint's part are a sign of the authenticity of the karāmāt, whilst the "enemies of God" who work apparently similar deeds, become puffed up and attribute the merit to themselves alone (loc. cit.); in this respect they become the dupes of "God's plotting" (mahār Allāh), who has allowed these swindles in order the better to confound them. We find the same teaching in al-Hujwirī, who stresses the impeccability of prophets but the fallibility of saints. He adds that the karāmāt accomplished over the ages by the Muslims are precisely a muʿḍīṣat of the Prophet of Islam: the kurʿānic law, necessarily permanent, thereby acquires a proof of authenticity also permanent (Kashf al-mahdīj, tr. 222). The remainder of the text gives a series of examples of karāmāt, some kurʿānic or contemporary with the Kurʾān, others post-kurʿānic, including those of inter alios Abū Saʿīd al-Khārāzī, Ḍhū l-Ḥāram al-Miṣrī, etc.

On one side, the Sūfīs often teach that saints must not seek after this gift of marvel-working, but must even mistrust it, and that to become attached to it would make a serious obstacle on the road to union with God; on the other side, however, the biographies of the leading Sūfīs abound in marvellous acts and supernatural charismatic deeds. This dual note is for example found all through the Lāṭif al-mīnān wa l-ʿāḥlāk ofʿAbd al-Wahhāb al-Ṣāfī al-Khārāzī (ed. Cairo N.D.) studied by Asīn Palacios. It should be finally noted that in general Shiʿism also admits karāmāt and distinguished them from muʿḍīṣat. The great Imāms, since they are endowed with impeccability and perfect knowledge, can work "marvels". Strict Imāmi thought accords this power to them alone, or at most, will only admit the possibility of karāmāt performed under the influence or through the intermediacy of the Imāms.

Bibliography: Given in the article.

(L. GARDET)

KARĀMĀN, the name of a Turkoman leader, founder of the Anatolian dynasty of the Karāmānids or Karāmān-oghullarī [q.v.]; hence the name of the Ottoman province into which the territories of this principality were subsequently formed, with Konya as its administrative centre, see below. Karāmān was also the later Ottoman name for the town of Laranda [q.v.]. The term Karāmānîl/Karāmānî was applied to the turchophone Greek Christians of the Karāmān region, and Karāmānlîlî核桃 (Grk. Karamânlîhika) to their dialect of Turkish and their literature (written in Greek characters). Emigrants from this
ethnico-religious group (who were not Greeks, but probably descendants of the ancient Lycaonians) who were brought to Istanbul after the Ottoman conquest and gave their name to a quarter near Yedikule [see ISTANBUL, i, vii]; in the early years of this century, the Karamanlı community in Istanbul published its own newspaper, Nea Anatoli. See A. M. Scheider, Die Bevölkerung Konstantinopels in XV. Jahrhundert, in Nachr. der Akad. der Wiss. in Göttingen (1949), 238 ff. (Tk. tr. in Boll., xxvii (1952), 35 ff.); S. Salaville and E. Dalleigne (eds.), Karamanlidha, Bibliographie analytique. . . . i, Years 1584-1850, ii, Years 1850-66, Athens 1958-66; S. Vryonis Jr., The decline of medieval Hellenism in Asia Minor, Berkeley and Los Angeles 1971, index; and Turks, section on languages. Emigrants from the Karamanlı region have further given their name to some 19 other places in Turkey, see Son teşkilat-i müülkiye'de köylərimizin adları, Istanbul 1928, and Türkiye'de mesbun yerler kiita, Ankara 1946-50.

What follows relates only to the administrative province of Karaman under the Ottomans and after the definitive disappearance of the Karamanlı dynasty.

In 888/1483, the Karamanlı lands became a beylerbeylik divided into two parts: the first comprised the sandjak of Tă-i-li (q.v.) in the western part of the area adjacent to the coast (see the map in ANADOLU) and included Mut and the administrative centre Konya, whilst the second comprised the interior regions, called Khàrdî. In the middle of the 10th/16th century, the sandjak of Tă-i-li was separated from it. In the 11th/17th century, the province (eyâlet) of Karaman comprised the sandjak of Aşarar, Aşqehir, Beyşehir, Kayseri, Karaman, Konya and Nigde (q.v.). With the administrative reform of 1284/1864, the former eyâlet became the vilâyet of Konya. KARAMÂN MEHMET PASHA [see MEHMET PASHA, KARAMÂN]

KARAMÂNLI, family of Turkish origin, of whom several members governed Tripolitania from 1123/1711 to 1231/1835, constituting themselves into a real dynasty. Its founder was Karamanlı Ahmed Bey, of whose origins scarcely anything is known apart from the fact that he himself or his father or an ancestor came from Anatolia, probably from the town or the region of Karaman, to serve as a soldier in the oğlubey of Tripoli; certain authors put forward the view that one of his ancestors may have come to Tripolitania with the corsair Turghut (Dragut). The chronicler Ibn Ghalbûn, who lived at the time of Ahmed Bey, calls him Ahmed b. Yusuf b. Muhammed b. Muṣṭafâ.

In 1122/1710, and for several years earlier, the Ottoman province of Tripolitania had been plunged into anarchy due to rivalries that brought into opposition Janissaries, bulğlıs and Arab notables. Ahmed Karamanlı, then qâmil or governor of the region of the Manşhaya and of the Sâbîl, had succeeded at the end of 1122/1710 in restoring order there and making himself appreciated by the local population. Resolved to put an end to the disorder, and supporting the Arabs against the bulğlıs, Ahmed seized Tripoli, took the title of bey (commander of the troops) and in fact exercised control over the province (13 Dîvân-mâdâ II 1125/20 July 1711). Shortly afterwards, he had Khalîf Pasha, the governor sent by the sultan, executed, and had a large number of Turkish officers and functionaries assassinated, at the same time sending a delegation to Sultan Ahmed III in order to justify himself. Finally, the Sultan accorded him the title of beylerbey (governor), recognizing him also as chief of the province; but it was only in 1734/1722 that the Sultan bestowed on him the title of Pasha, making him his official representative.

Having little confidence in the Janissaries, Ahmed Bey created an indigenous militia and favoured the corsairs. He had to face several local revolts from 1125/1713 to 1135/1723 in the south-east of Tripolitania, in Cyrenaica and Fazzân. Following these revolts, he took under his direct control the whole province by making terror reign when necessary: he had a number of people put to death, including dignitaries and notables, and even, over a libel, the chronicler Ibn Ghalbûn, who nevertheless had written his work for his glory. While encouraging piracy, Ahmed Karamanlı avoided entangling himself with the great Western powers and concluded or renewed, notably with England and France, treaties of peace and commerce. He had the fortifications of Tripoli restored and the mosque and madrasa which bear his name constructed in Tripoli. He died (by his own committed suicide) on the night of 26th or 27th Ramadân 1157/3rd or 4th November 1745; he was approximately 60 years old.

His son Mehmed (Muhammad, 1158-65/1745-54) was proclaimed governor and recognized without difficulty by the Sultan. He maintained the country in peace and renewed the agreements with England and France, although there had at that time enjoyed a great prosperity, which led to several incidents with Venice and Naples. He died in Shawwal 1167/July 1754. His son Ali succeeded him (1167-1207/1754-93) and received the agreement of the Sultan. Until 1171/1758 he had to face several revolts, notably in the Manşhaya and the Sâbîl, revolts which were drowned in blood. However, after this, the country enjoyed a sufficiently long period of calm until 1204/1790. From the middle of the reign of Ahmed Karamanlı, Tripolitania saw its economic activity increase and became an important staging post of commerce in the Mediterranean; but a serious epidemic in 1181/ 1770, and then the plague and famine in 1198-1200/1784-6, led to a certain decline of Tripoli and its commerce. During this period, the authority of the Karamanlıs was incontestable: they had a firm grip on the central power (bey, âghâ of the Janissaries, kâhî, ra's (al bahr, kharâb, âghâ al-balad, diwan) and on the provinces where they were represented by the kâ'îl; the military forces comprised about 400 Janissaries, 200 to 300 renegades, 500 Albanians and 600 Arabs; the navy was composed of Albanians and Arabs.

The situation deteriorated with the old age of Ali Pasha; in 1790 his elder son, Hasan Bey, was assassinated and his second son, Ahmed, then became bey, but had to face the hostility of his brother Yusuf, who was supported by the Arabs. In view of this situation, the notables of Tripoli and some military leaders intervened with the Sultan and asked him to name another governor, to which Yusuf replied by having himself proclaimed governor with the support of the Nuwayr (1207/1792-3); he then undertook the siege of Tripoli (June 1793). Shortly afterwards there arrived unexpectedly Ali Bulghur, a high dignitary ousted from Algiers, who claimed to have been invested with the governorship by the Sultan: he bene-
fited from the gathering of notables and officers of Tripoli and entered the town (July 1793), while Yusuf and 'Ali Pasha retired to Tunisia. 'Ali Bulghîr having seized the island of Djarba, the bey of Tunis Hamûda then favoured the action of the Karamanîls to regain power. Finally, the vanquished 'Ali Bulghîr fled to Egypt (February 1795), while 'Ali Pasha, resident at Tunis, renounced the governorship in favour of his son Ahmad. In Shaban 1210/November 1795, profiting from the departure of Ahmad for Tadjura, Yusuf entered Tripoli and had himself proclaimed governor there; Ahmad did not persist in his claims and retired to Malta. The following year, Yusuf received from the Sultan the investiture firman; he then took severe measures to repress disorder, reinforced the fortifications and increased the corsairs' fleet.

During Bonaparte's expedition in Egypt, Yusuf Pasha refused to break off relations with France; constrained to do so, following an English threat, he hastened to conclude a treaty with France as early as 1799. In 1800 an incident occurred with the United States of America, which resulted in the severing of relations, and then in acts of hostility. The Americans were on the point of reintroducing Ahmad Bey to Cyrenaica and having him proclaimed governor, but English mediation put an end to these events; a new treaty was concluded with the Americans, while Ahmad Bey retired to Egypt (June 1805).

From 1806 to 1830, numerous revolts broke out in different regions, repressed with more or less success; in 1810, the region of Ghadamès was once more joined to Tripoli. In 1819 a Franco-English fleet arrived before Tripoli and, under threat, had the slaves and Christian prisoners freed. From 1823 to 1826 at the request of the Sultan, a Tripolitanian fleet to participate in the operations of the Ottoman fleet on the coasts of Morea and returned by the same route, but this provoked severe reactions by the Kingdoms of Sardinia and Naples (1825-6). The assassination of Major Laing, son-in-law of the English Consul Warrington, who held the French Consul Rousseau responsible, placed Yusuf Pasha in a delicate situation: he had finally to sign a new treaty with France (August 1830). In 1832, having imposed taxes on the inhabitants of the Manghiya and the Sahîl in order to recover his debts, they revolted, proclaimed a grandson of Yusuf, Mhemed (Muhammad) Bey governor, and besieged Tripoli. On the 5th August 1832, Yusuf abdicated in favour of his son 'Ali; the latter could count on the support of Cyrenaica and the good will of the French, whereas Mhemed Bey enjoyed the favour of the English. An emissary of the Sultan, Mhemed Shikhîr Efendi, tried in vain to arrange an agreement between the parties. He returned in September 1834 with a firmân of investiture for 'Ali Bey that the rebels and England refused to recognize. Meanwhile, the Ottoman Government took careful note of that what was necessary, in view of the French pressure that was being exerted on the Karamânîls and on account of the presence of the French in Algeria which constituted a serious threat, to display more energetically the suzerainty of the Sultan over Tripolitania; in February 1835 the Ottomans decided to send a fleet and troops to Tripoli under the command of Muştafa Naqîb Pasha. This fleet arrived before Tripoli on the 26th May and the disembarkation of the troops took place on the 27th; the next day, 'Ali Pasha and a certain number of Tripolitanian dignitaries were arrested, while Muştafa Naqîb Pasha had the imperial firman read, naming him governor of the province and decreeing the removal of 'Ali Pasha. Mhemed Bey committed suicide, his brother Ahmad took refuge in Malta, and all the other members of the Karamânîls family were sent to Istanbul with the exception of Yûsuf Pasha who, owing to his great age was authorized to live in Tripoli; he died there on the 4th August 1838.

Thus the dynasty of the Karamânîls came to an end. Its initial originality lay in its support for the Arabs of Tripolitania against the Turks and the bulghîrs, without however rejecting Ottoman suzerainty. Later, the Karamânîls did not escape the rivalries and internal quarrels that rendered null and void the efforts of the first members of the dynasty, and facilitated the province being taken once more into control by the Ottomans, aided in this by the implications of the "Eastern Question". Like the Husaynids in Tunisia, but to a lesser degree on account of the extent and disparity of the land, the Karamânîls were able momentarily to cut a figure as a local dynasty, but not as a national one.

The defeat of the Salduk army for the second time by the Mongol commander Baydu in 654/1256, and the beginning of a struggle between Sultan Izz al-Din Kaykawus and Rukn al-Din Kildji Arslan, his brother and rival, allowed the Turkmen peoples living along the frontier regions to enjoy greater autonomy and gain greater political importance. Karaman Beg's emergence in the Ermenek-Mut region was part of this development.

According to Shikar'i [q.v.] and to some later chronicles, inscriptions and archival records, Karâman's father was Nûr al-Din Şoff or Nûre Şâfi. Shikar'i claims that Nûre Şâfi was interested in religious matters rather than in state affairs and was a follower of Bâbâ Iyyâs; leaving the administration of his principality to his son Karâman, he led a life of seclusion. He is buried at Değirmenlik, in the Sinanlu district of Ermenek. Like the majority of the Turkmen begs, Karâman was a supporter of Izz al-Din Kaykawus. It is, therefore, probable that he took part in the battle between 'Ali Bahadur, commander of the army of Kaykawus, and Rukn al-Din Kildji Arslan near the Altnap a (Altn Apa) caravanserai to the west of Konya in 660/1262. Zayn al-Hâdîdî, one of his brothers, was killed in this battle.

The Parwâna Mu'ûn al-Dîn Sulaymân, who held administrative authority in Anatolia with the support of Rukn al-Dîn Kildji Arslan and the Mongols, put many amirs who had sided with Kaykawus to death and pacified Karâman, whom he was unable to seize, by granting him an amirate (possibly the governorship of Ermenek). He also appointed his brother Buñus as Amir Dîndür. Karâman made frequent attacks on the territory of the neighbouring Kingdoms.
of Little Armenia. In fact, according to contemporary Armenian chroniclers, in a battle fought between Karaman and the Armenian king Hethoum at the fortress of "Manlaun" (probably Mennan castle near Ermenek), his brother Buṣūsz and his brother-in-law were killed. Karaman also died after a time from the wounds he received in the same battle. The claim by the Armenian chronicler that Buṣūsz was killed in battle is not correct. Şiķāṛī, 33, claims that Karaman was buried in Ermenek. However, the text of the inscription attributed to Karamān in the village of Balkasum (Išqalall Edhem, Karamān Oghullarlî biṅdîa weṭhîk-i maḥkîhî, in TOEM, ii, 699; i. H. Konyalî, Karaman Tarîhi, Istanbul 1967, 693) makes it clear that the inscription belongs to his son Mahmûd Beg, the builder of the tomb, in which he also is buried.

Although the Saldjûk Sultan Rukun al-Dîn Kılıç Arslan was enraged at Karaman's refusal to obey his orders, he left him unmolested. When he heard of his death, however, he imprisoned his brother Buṣūsz, who was in Konya as Amîr Dîndâr. Karamān's young children were taken into custody in the castle of Gevele, near Konya. His sons were transferred to other castles after Kılıç Arslan's death (663/1265), and were later released by the Parwâna; one of them, "All Beg, was still held hostage in Kaysari. The Beglerbegi, Shâh-oglu Sâhîrî Diwânî, who had revolted against the Mongols in 675/1276, dismissed the governor of Ermenek, Bard al-Dîn Îbrîhîm, the son of Kâdi Khuteni, and appointed in his stead Karaman's son Shams al-Dîn Mehmêd Beg. Mehmêd Beg occupied Iç-îl down to the sea, and started raiding the Mongol detachments. Following the dismissal of Khâšî-oglu, the Parwâna sent the former governor Bard al-Dîn Îbrîhîm against the Karamâns, but he suffered a heavy defeat in a battle with the forces of Mehmêd Beg. Following this, Saldjûk forces under the command of the Nâsîb al-Sâlîzano Amin al-Dîn Mîkhâḍîlî and Şâhîb Fâhîr al-Dîn "All's sons failed to gain any victory over the Karamâns. At about this time, the Mamûlîk Sultan Baybars had defeated the Mongols on the Albidstân plain (10 Dhu'-Ka'da 673/15 April 1277) and entered Kaysari.

Baybars gave Karaman's son "All Beg—at his own request— anirates and "sandjaks" for himself and his elder brothers. The Karamâns, taking advantage of this situation, began hostilities under the command of Mehmêd Beg, supported by "All al-Dîn Siyâvûsh, the Saldjûkî prince, who was called "Dijîrî" ("miserly"). He was one of the sons of "Izz al-Dîn Kaykâwûs. Mehmêd Beg first came to Aşsârâyî with a fairly small army (a contemporary source gives this as 3,000); because of the few forces at his disposal, he turned towards Konya. He captured Konya (9 Dhu'-Hijâdja 675/15 May 1277), infecc- tionally defended by the Nâsîb al-Sâlîzano, and put "All al-Dîn Siyâvûsh on the Saldjûkî throne; the khutba was read in his name, and coins were struck; one of these is still extant (O. F. Sağlam, Şimâseve hadar gûrümşeney Cîmri sîkhîsî, in III. Tarîh Kon- greisî tabûlarî, Ankara 1943, 224-8). Mehmêd Beg be- came "All al-Dîn Siyâvûsh's vizier. One of the first decrees passed at the first meeting of his council was that no language other than Turkish should thenceforth be spoken in government offices and the court.

Mehmêd Beg, learning that the sons of Şâhîb Fâhîr al-Dîn "All were moving towards Konya with a large army, went to Aş Sheikh, taking "All al-Dîn Siyâvûsh with him. In the ensuing battle he defeated and killed the sons of Şâhîb. Although Şivîr-Hişâr opened its gates to him, he met with resistance at Kara Hîşâr (Afyon) and therefore returned to Konya. He declared that he would go to Erzurum to fight the Mongols, but as he could not raise the necessary troops he abandoned the plan. When he heard that a Mongol army was approaching, he returned to Iç-îl. In fact, the Mongol ruler, Abâka, sent the vizier Şâms al-Dîn Muḥammad Djuuwaynî and some Mongol commanders to Turkey at the head of a large army for the purpose of establishing peace, and applying the Mongol financial system in the country (Râbî' II 676/September 1277). Djuuwaynî came to the country of the Karamâns along with the Mongol troops. After some plunder and destruction he moved to Kaz Ova (in the Tokat region) for the approaching winter. As a precaution, a Mongol unit was left under the command of Ghiyâth al-Dîn Kay-Khusraw. In spring, the sultan and the vizier Fâhîr al-Dîn "All marched against the Karamâns with the Saldjûk and Mongol forces under their command, and reached Mut. Mehmêd Beg, who had taken up a position near the fortress of Kurbâgha for the purpose of reconnaiss- ance, encountered a Mongol detachment and was killed together with two brothers and a cousin. Upon this unexpected success the sultan and the vizier swept down to the Mediterranean in order to put an end to the Karamâns (676/1277). Meanwhile, "All al-Dîn Siyâvûsh succeeded in gathering a considerable force in the west, to which he had escaped, but he was defeated and killed by Ghiyâth al-Dîn Kay-Khusraw (Muβârram 676/5 May 1278). This success, far from wiping out the Karamâns, helped to strengthen their will to fight.

Following this, they were headed by Günêri Beg, who seems to have been a member of the Karamânî dynasty. The defeat of the Mongol army by the Mamûlîks at Hîms in 680/1285, and the death of Abâka following this, led to disturbances in Turkey. Karamân Oghû Günêri Beg carried out frequent acts of plunder in the Konya region, while Ashraf Oghû Sulaymân Beg started making raids from Beg Shehri on Konya and Aş Sheikh. Finding himself helpless in the face of the raids of the Türkmen begûs, Sulûmân Ghiyâth al-Dîn Kay-Jân, w. sought help from Aḥmad, the successor of Abâka. Ahmed sent his brother Konghurst to Anatolia at the head of a large army. After plundering Aşsârâyî in a manner without prece- dent, Konghurst arrived in Karamânî territory. Great destruction was caused there by forest fires, pillage and plunder, and massacre. Large numbers of people were killed. Women and children were captured and sold as slaves. The savage destruction wrought by Konghurst in Karamânî territory created deep sorrow and anger among the Mamûlîks, and in a letter written to the Ịlkân Aḥmad, the savagery was described as something incompatible with Muslim brotherhood. The fact that Aḥmad summoned Konghurst and had him executed (682 Shawwâl/January 1284) may be related with feelings of anger at a broth- er in the faith's cruelty. In spite of this, Konghurst's acts of violence could not break down the resistance of the Karamâns. The new sultan, Ghiyâth al-Dîn Masûd, was a weak man who preferred to live in Kaysari as he did not feel safe in Konya. The invading Mongol troops were stationed in eastern parts of cen- tral Anatolia; taking advantage of this, the wife of the former sultan, Ghiyâth al-Dîn Kay-Khusraw, had her two sons acclaimed as rulers in Konya. To gain their support, Karamân Oghû Günêri Beg and Ashraf Oghû Sulaymân Beg were given a beglerbegilik and regency respectively (684/1285). Shortly afterwards, the two children were put to death by the orders of
Karaman-Oghullar! 621

Arghun Khan, but neither Sultan Masud nor the Mongols were able to establish peace and order in the western part of central Anatolia. The city may possibly have been in the hands of Badr al-Din Ibrahim Beg prior to 718/1318. We know that Turkmens in the army of Sulayman belonged to the Karamanids.

The first half of the 8th/14th century constitutes the least-known period in the history of the Karamanids, owing to the scarcity and contradictory nature of the available historical evidence, Guneri Beg was succeeded by his brother Mahmud Beg, who is known to have built a mosque in Ermene in 702/1302 and a turba for himself and his father, Karaman Beg, in the same year. According to Neghri, Mahmud Beg died in 707/1307-8 (Diyaban-numa, ed. F. R. Unal—M. A. Koymun, Ankara 1949, i, 48, 49). Although he gives no source, I. H. Uzuncaşrlı (Anađolu beyislər, Ankara 1969), refers to an inscription on a mosque dated 711/1311 mentioning Mahmud Beg. In the same year the Karamanids and Aldun (?), a powerful Turkmen Beg, defeated and killed Kazangul, a Mongol commander, in one of the passes of the Taurus Mountains. Neshri mentions that Kyakshl Beg had two sons, Yakhshl and Sulayman, and that Yakhshl succeeded to his father's title in Ermene (ibid.). The Yakhshl Beg referred to by Neghri is the Yakhshl Khan mentioned in other sources as the successor of Mahmud. Mahmud had several other sons, named Badr al-Din Ibrahim, Pasha Musa, Khalil (and perhaps Yusuf), but nothing is clearly known of their political lives, and not even the dates of their deaths. It is understood that Yakhshl Khan, who succeeded to his father's title in Ermene, overthrew Akhi Mustafà, ruler of Konya, and captured the city. It is probable that this event occurred during the early months of 714/1314, because it is suggested that the main reason for Coban Beg's being sent to Turkey was the capture of Konya by the Karamanids (Koban, Ta'rikh-i Uldiyatu, ed. Mahin Hambly, Tehran 1969, 168-70). According to the same historian Karaman Oghlu, who ruled Konya for some time, fled to Laranda during a famine which broke out in the city; he was pursued and forced to come before Coban, who pardoned him. After leaving officials in Konya and appointing his son Demir Taș (Timur Taș) as his regent in Anatolia, Coban returned to Iran. Before long Konya was recaptured by the Karamanids. According to Neghri, Yakhshl Beg died in Ermene in 727/1327-8, and was succeeded by his brother Sulayman Beg. It is presumed that Neghri's source for this was an old calendar (İstanbul'un fetihinden once pasim yarlı iki demet, ed. O. Turan, Ankara 1954, 32, 33), which mentions that Yakhshl Beg was killed. The next year, "Karaman Oghlu" Ibrahim Beg's ambassador came to Cairo, stating that his master had read the kdsba in the name of the sultan and also struck coins in his name. This statement might confirm that Yakhshl Khan was killed in the year already mentioned, and that Badr al-Din Ibrahim had replaced him, but Yakhshl Khan is referred to in other calendars as living at a later date. The date of his death accordingly remains uncertain.

Pasha Musa Beg, one of the sons of Mahmud Beg, restored Laranda, which had been destroyed by Gaykhatu, in 715/1315-16 and took up residence there. The city may possibly have been in the hands of Badr al-Din Ibrahim Beg prior to 718/1318. We know that
at this time Naqim al-Din Demir Khan b. Karıman was in the service of the Mamluks, being either the commander or one of the commanders of the Mamluk forces sent to Mecca as early as 725/1325; he died in Damascus in 734/1333-34. Three years earlier 'Ali Bahadur b. Karıman had been appointed to one of the jabîl-hânas amirates. Unfortunately we do not know the names of the fathers of these Karımanid princes.

The appointment of Demir Taş, Cübân's son, as commander of the Mongol forces in Anatolia led to the strengthening of Mamluk domination in Anatolia, and to the expansion of the territories under Mongol occupation. Demir Taş took measures to establish the long-awaited peace and order in central Anatolia, and was so popular with both villagers and townsmen that he was called "Mâhdi-i âghir zamân". His aim was to bring the Turkmen begs under his control and to become the sole ruler of Anatolia. According to Aflâkî (Manâbîb al-šurûf, ed. T. Yazar, Ankara 1964, ii, 977), Demir Taş took Konya from the Karımanids in 720/1320. It is more probable, however, that this conquest took place, as recorded in the anonymous Saylûkûnûma, 94, in 723/1323, or that he conquered the city for the second time on the latter date. As well as conquering Konya in 723, he also captured Mûsâ Beg and the Hamîd-oghlu Dûndar Beg, but is understood to have set Mûsâ Beg free, although Demir Taş wiped out the principalities of Ağfrah Oghullarî, he was more lenient to the Karımanids, and pursued a policy of friendship towards them.

When he fled to Egypt in 727/1327, his lieutenants Eretna and Sungur Âgha escaped to Laranda, where Badr al-Dîn İbrahim Beg was living. Quick to grasp this chance, the Karımanids re-took Konya, where Badr al-Dîn Ibrahim Beg was in Laranda, his son Ahmet Beg was in Konya, Yakhshî Khan was in Ermenek (?), Khalîl Beg in Bey Shehri and Mûsâ in Mecca. As Ibn Battûta visited neither Konya nor Laranda, he did not meet the Karımanids beg, and what he wrote about them is based only on hearsay, Mûsâ Beg, who stopped at Cairo on his way to and from Mecca, was entertained and even offered a larger Mamluk sultan al-Malik al-Nâsîr, but he refused the sultan's offer on the grounds that he could not live away from his people and country. While he was returning to his country under the protection of Mamlûk amîrs, partisans of the Armenian king tried to capture him, resulting in further destruction and plunder of the Cilician Armenian kingdom by the Mamluk forces.

Mûsâ Beg was probably the builder of a madrasa (the Tol Madrasa) in Ermenek in 740/1340-41; he probably died in Ramadan 745/January 1345. İ. H. Konyaî believes that the Amîr Mûsâ Madrasa, which no longer stands, was built in Laranda by "Karıman Oghlu" Mûsâ Beg (Karıman Tarîhi, 720). Yet this is highly improbable, because there was, during the reign of 'Ali al-Dîn Kaykubâd, a Saljûk governor by the name of Amîr Mûsâî in Laranda, who had a madrasa built in the city for the father of Jalâl al-Dîn al-Rûmî (Aflâkî, i, 25-8, 303). It is therefore more likely that the Saljûk Amîr Mûsâ was responsible for the madrasa in Karıman.

Badr al-Dîn Ibrahim Beg is known to have been alive in 741/1341. His ambassador to Cairo departed with the standards sent by the caliph and the sultan and the mounds for minting silver and gold coins on behalf of the sultan. It is difficult to assess why Ibrahim Beg accepted the suzerainty of the Mamlûk sultan. Historical calendars record that Khalîl Beg, one of the sons of Maḥmûd Beg, came from Bey Şehri to Konya, where Ahmad Beg was living, and fought with Yâshîb Beg (or Khân). The date of this event is given as 742/1341-2 and 743/1342-3 in calendars (Nurosmaniye no. 5080, f.4a, ed. O. Turan, 32, 33), while in two other calendars we have the dates of 761/1360 and 762/1361 (ed. Atsiz, Osmanlı Tarihine ait takvimler, Istanbul 1961, 22, 23; ed. O. Turan, 49). Of these dates, 742 or 743 is approximately correct. It is probable that Khalîl Beg killed Yâshîb Khan Beg in this battle. The fact that, like Gûnerî Beg, Yâshîb Beg was not mentioned by Shikârî, is puzzling. Khalîl Beg is understood to have built a mosque in Ermenek, zûwiyas in the villages of Ermenek, and a zûwîya in Laranda. There is a copy of a waḥfiyya dated 745/1344-45 made by him. The year of his death is not known, but it must have been between 745/1344-5 and 750/1349-50.

Fâlîr al-Dîn Ahmad Beg, the son of Badr al-Dîn İbrahim Beg, was then left as the sole ruler. Shikârî's claim that he was killed in one of the endless battles with the Mongols is acceptable, because the adjective al-gâhid appears on a burial inscription dated 750/1350. Fâlîr al-Dîn was succeeded by his brother Şams al-Dîn Beg, who died in 753/1352. According to Shikârî (p. 60), Şams al-Dîn Beg was poisoned by his brother Karımanî. The word al-gâhid occurs in his inscription (İ. H. Konyaî, op. cit., p. 460). Sulaymân Beg, one of the sons of Khalîl Beg, succeeded to the throne. Konya was then under the rule of the Eretna Dynasty, and Bey Şehri seems to have been in the possession of İsmâ'îl Âghâ, one of the Mongol amîrs. It is probable that the Karımanids lost Konya during the time of Eretna (d. 753/1352).

The various Mongol tribes settled by Demir Taş (Tîmrîr Taş) in the western parts of Central Anatolia became a continuous source of trouble for the Karımanids, a situation that endured until the tribesmen were taken back to Turkistan by Tîmrû. Although a kind, good-natured and religious ruler, Sulaymân Beg was killed in a plot organized by begs of his family (762/1361). The titles of "Sâhib al-Dawla al-Nâsîr, Sayîl al-Dawla wa'l-Dîn", which occur in the inscription of the Hâşîlî Begler Dîâmî, dated 757/1356, refer to Sulaymân Beg.

Sulaymân Beg was buried in the Akhî Mehmêd Beg or Kalamîyya zûwîya, and his tomb was built by his brother 'Alî al-Dîn Beg in 772/1370-71. According to Shikârî (p. 90), Kâsim, one of the organizers of the plot, succeeded to the throne, but later he and his supporters were killed by 'Alî al-Dîn Beg, who obtained the throne. As this Karımanî Beg is referred to merely as 'Alî al-Dîn in inscriptions, coins, waḥfiyyas, historical calendars and in reliable contemporary foreign and native chroniclers, calling him "'Alî al-Dîn 'Alî" is simply the perpetuation of an error in some historical works. 'Alî al-Dîn Beg differed from his predecessors (perhaps with the exception of Mûsâ Beg) in being an educated ruler. Yar-dînî's Şahûnûma on the Karıman dynasty, which was Shikârî's principal source, was written at his command. During the reign of 'Alî al-Dîn Beg the borders of the Karımanî state were extended in every direction, and the Karımanî rulers were no longer mere "rulers of the Anatolian mountains" (Sâhib dîbâl al-Râmî), as Mamlûk chroniclers used to call them. During this period the Mamlûks occupied the whole of Cilicia, bringing to an end the Armenian kingdom (777/1375). The Eretnas were also in a state of confusion. Taking advantage of this situation, 'Alî al-Dîn Beg captured certain Armenian castles, and took Konya in 767 or 768/1366-67 and later Ak Saray, Nîgde, Karabîşrî (Yeşil Hisar), Ak Şehri,
Ilghin, Ishaklu and even Kayseri. The latter, however, was soon recovered by the Eretnas. Following on these successes, the Babaş Beg, Devlet Shâh and other Mongol begs entered the Karamanid service. If Bey Şehri and even Seydî Şehri were taken by ‘Alâ’î al-Dîn Beg, they must have been captured following the death of Isma‘îl Aghâ (780/1379). It must, however, be noted that ‘Alâ’î al-Dîn Beg’s rule, like that of his successors, was devoid of consistent diplomatic principle. He abandoned the traditional alliance with the Mamlûk sultans, and Karamanid-Ilghin, Ishaklu and even Kayseri. The latter, however, was soon recovered by the Eretnas. Following on these successes, the Babaş Beg, Devlet Shâh and other Mongol begs entered the Karamanid service. If Bey Şehri and even Seydî Şehri were taken by ‘Alâ’î al-Dîn Beg, they must have been captured following the death of Isma‘îl Aghâ (780/1379). It must, however, be noted that ‘Alâ’î al-Dîn Beg’s rule, like that of his successors, was devoid of consistent diplomatic principle. He abandoned the traditional alliance with the Mamlûk sultans, and Karamanid-Ilghin, Ishaklu and even Kayseri. The latter, however, was soon recovered by the Eretnas. Tadj al-Dîn Ibrahim Beg was the last great ruler of the Karamanid state. An energetic and warlike

Tadj al-Dîn Ibrahim Beg was the last great ruler of the Karamanid state. An energetic and warlike
man like his father and grandfather, he was over-ambitious. After making an agreement with the Serbs and Hungarians, he captured Eğirdir and Ispira (837/1433), but was forced to sue for peace from Murad II, who had marched against him. Murad wanted to give the Karamanid territory to İşaa, a brother of İbrahim Beg in his service. But as he had failed to overcome İbrahim Beg on a previous occasion (830/1426-7), he made peace with his brother-in-law on the condition that the territory belonging to the Hamid Oghullar would be under Ottoman rule (838/1433). However, İbrahim Beg won a great victory against the Dulkadir Oghlu Nâşır al-Din Mehemed Beg, and took Kara Hisar, Develi, Uç Hisar, Urgub and Kayseri. This achievement had been possible through the approval and aid of the Mamluk sultan Bârsbay. İbrahim Beg continued his policy of hostility towards the Ottomans. In concert with the Hungarian attack on the Ottomans in 846/1442, he sent an army under the command of his son-in-law Turgut Oghlu Hasan Beg, effecting large-scale destruction and plunder in Ankara, Beg Pazarı, Kütahya, Kara Hisar (Afyon), Bolvadin and Hamid II, but sharp Ottoman retaliation followed. When Murad heard that the Hungarians had broken the Treaty of Szegedin, he accepted İbrahim Beg's peace offer, but the ensuing treaty contained some of the harshest terms that the Karamanids had to accept and rendered them to vassals of the Ottomans. (For the text of this treaty see: I. H. Uzuncaşırlılar, Karaman oğulları devri vesikalarından İbrahim Bey'în Karaman emaretî vakfîyeyesi, Belleten li, 1, 120-1.) In 1448 İbrahim Beg captured the fortress of Corycos, which his grandfather 'Ali al-Din Beg had failed to take. However, this conquest did not worsen commercial relations between Cyprus and the Karamanids: on the contrary, İbrahim Beg granted the Venetians special trade concessions within his country.

Of the many sons of İbrahim Beg, Pîr Ahmad, Kâsim and 'Ali al-Din were born of Celebi Mehemmed I's daughter. According to early Ottoman chroniclers, İbrahim Beg disliked these children because they had Ottoman blood in their veins and he made İshâk, son of another wife, his crown prince. Upon his father becoming seriously ill, Pîr Ahmad declared himself ruler in Konya. Realizing that he could not hold the city, İbrahim Beg fled with his son İshâk, but died on the way to the fortress of Gevele (86g/1464). His body was taken to Laranda and buried in his tomb near his Hmaret. İbrahim Beg, an active and brave ruler, was also a great builder: apart from bridges and irrigation works, he raised on the Konya plain between Konya, Aksaray and Laranda were famous and were valued not only in Turkey, but also in the Arab lands and Europe, whither many were exported. The Turkish tribes raising these horses used to be called Atçeken until one or two centuries ago. Carpets and rugs were formerly exported from Karaman lands, and of these, the Ak Saray carpets were particularly in demand in foreign markets.

Although taxes on land and animals constituted the main source of revenue in the Karamanid state, customs duties collected at the ports and gates in the south were also considerable. The Karaman horses raised on the Konya plain between Konya, Aksaray and Laranda were famous and were valued not only in Turkey, but also in the Arab lands and Europe, whither many were exported. The Turkish tribes raising these horses used to be called Atçeken until one or two centuries ago. Carpets and rugs were formerly exported from Karaman lands, and of these, the Ak Saray carpets were particularly in demand in foreign markets.

Garcin de Tassy (ii, 162) says that he competed for the prize offered by Sir Charles Trevelyan for the best Hindustani essay (see Bibli.) on the influence of the Greeks and Arabs on the Renaissance in Europe, but that his essay was not accepted for want of an English translation. He was thus interested, unlike the majority of contemporary Indian Mawlaws, in the relation of Islam to the wider questions of the world at large. He died on 3rd Rabī‘ I 1290/30th May 1873, and was buried in Rampūr (Tadżallī-ī-Nur i, 336), in the province in which he had laboured for the regeneration of Islam all his life. He was succeeded in his work by his son, Mawlāwī Háfiz Aḥmad (d. 1898), and his nephew, Mūḥammad Mūhsin. His following was so large that there was hardly a Bengal village without his disciples.

He wrote chiefly in Urdu. Rājamān ‘Ali (Tadhkīra-i ‘ulāma’) Hind, Lucknow 1894, 172-2 gives a list of 46 of his works, without claiming that it is exhaustive. One of his works, Miftah al-Dījnānat, has run through numerous editions and is accepted in India as a correct statement of Islamic principles. His writings may be divided into four classes: (1) general works, like Miftah al-Dījnānat; (2) works on the reading and interpretation of the Qur’ān, and formal prayers and ablutions; (3) works on the doctrine of spiritual preceptorship (Fi’rī Mūrīd), the cornerstone of orthodox Islam in India; in accepting this doctrine, Karamat ‘Ali stands in sharp opposition to the Wahhabī sect and merges insensibly into the Ṭasawwuf sect, which he brings into relation with the traditional religious orders; (4) polemics against Shī‘ī Allāh, Dūda Mīyān, the Wāh hābi, etc.

The common conception that Kāramāt ‘Ali was a Wahhabī is refuted by the detailed exposition of his own views as set forth in Miftah al-Dījnānat; he had not seen any Wāhābī books, but had made oral enquiries and found that they were so fanatical (diddi) that they called all who did not agree with them muṣrīk (38-9); he and his school carefully distinguished between shirk, which was the negation of Islam, and bīda’, which was only an error in doctrine (39). In his Ḥudūdī-ta’lī’ī he draws a clear distinction between a fāsik (sinner) and a hāfīz (infidel), and inveighs against those sectaries who would deny funeral prayers to those who did not pray but repeated the kalima (21); if non-Muslims conquer Islamic lands, the Lūmen’ī prayer and the two Īd (q.r.) prayers were not only lawful but obligatory (23 bā‘) he based his doctrine on the orthodox Sunni books of the Ḥanafi school (Mūkābahūf-i Rāmhāt, 37). He accepted the six orthodox books of tradition (Ṣibā‘ sitta), the commentators (tafṣīlī), the principles of ceremonial law as interpreted by the masters, and the doctrines of ṭasawwur and piri mūrīd (38, 45), even basing the mission of Sayyid Aḥmad on a hadīth from Abū Hurayra (p. 32); in every century a teacher is born to revive the faith: Sayyid Aḥmad was such a teacher for the 13th century and should be followed until another teacher arises for the 14th century (34). All this was in direct antithesis to Wahhabī teaching, and in fact appended merely to the abolition of rites and ceremonies introduced through ignorance (36), or to a revival of Islam according to the accepted orthodox schools (50). The political effects of Sayyid Aḥmad’s life brought his followers into conflict with the authorities, but the writings of the school show that there was no connection, political or doctrinal, with the sect founded by Mūḥammad b. ʿAbd al-Wahhāb in Ṭabāsī.

Bibliography: The European accounts of Kāramāt ‘Ali are unsatisfactory, being based on secondary information and failing to distinguish between this school of reform and Wahhabism, and in some places there is confusion between the subject of this article and Mawlāwī Sayyid Kāramāt Aḥmad Rampūr (1796-1870), who represented the British Government at the court of Dōst Mūḥammad Khān at Kābul 1832-1835, and was superintendent (muṭawwīl) of the Hughlī Imāmābād, 1837-1876 (Nineteenth Century, May, 1905, cf. 780-2; Sir W. W. Hunter, The Indian Muslims, 114; C. E. Buckland, Dictionary of Indian Biography, 259; Nūr al-Dīn Zaydī, Tadżallī-ī Nūr, i, 39); Census of India, 1901, vol. vi. part 1 (Bengal, 174); Calcula 1902; Journ. As. Soc. of Bengal, ixii, part 3, 54-6, Calcula 1894; Garcin de Tassy, Histo. de la Littérature Hindouie et Hindoustanie, ii, 162, Paris 1870; (it is doubtful whether the Muḍgīta-i ṣagīr-i Maštā, Dīhil 1868, mentioned there, was a work by the subject of this article); Sayyid Nūr al-Dīn Zaydī, Tadżallī-ī Nūr (biographies of the famous men of Dījawnpur), Dījawnpur 1900, 125-6.

A correct appreciation of Kāramāt ‘Ali’s doctrines can only be gained by a study of his own writings, the most important of which are the following: Miftah al-Dījnānat, Calcula 1234 (frequently reprinted); Kauhāb-i dūri, Calcula 1253 (translates passages from the Qur’ān); Bay’ā’ī-ī Tābia, Calcula 1260; various practices of the religious orders; Zindī al-ṣāhi, Calcula 1264 (on reading the Qur’ān); Fayyād-i ṣamm, Calcula 1282 (a tract on the doctrines of Shāykh Aḥmad Sirhindī); Ḫudūdī-ta’lī’ī, Calcula 1282 (a polemical tract against the school of Ṣafī’ī Allāh and his son Dūda Mīyān; Nūr al-Ḥudā, Calcula 1286, on the doctrines of ṭasawwur, of the muṣjdāddīyya school, apparently the new school of Sayyid Ahmad Brēlī); Mūkābahūf-i Rāmhāt, Calcula 1286, (gives an account of the life and work of Sayyid Aḥmad Brēlī, and discusses and disowns the Wāh hābi); Zināt al-Mūjālātī, Calcula 1259; Zād al-Tābīna, Calcula 1287 (the beliefs and practices of Islam and ṭasawwur; accepts the Nakhshbandiya teaching).

(A. Yūsuf ‘Alī)

KĀRAMĪD [see KHAZAF].

KĀRAMĪṬA [see KARMATI].

KĀRANFUL, the clove. According to the Arabic dictionaries, varying names were given to this plant, including kāruful and karruful, whilst popular pronunciations included kāranful and kārunful.

It seems that before the end of the Middle Ages the clove had not yet spread beyond the Moluccas, and since the Muslims who sailed towards China left these islands on their right hand, the old Arab writers could not pin down the origin of the clove. Ibn Khurrawadhibbīn thought that it came from “Ṣalāḥīhīt”, but he also mentions the island of Ṭawkā [q.r.]. Ṣalāḥīhīt was probably the southern part of the Malayan peninsula. On the other hand, al-Masūdī says that it comes from the kingdom of the Mahārājī called Ṣābāqī situated in the islands of the Sea of Annam (Ṣaḥīf); this must be the kingdom of Šīńjavīya, of which Palembang in southeastern Sumatra was the centre. Later Arab geographers, such as al-Idrīsī and al-Kaẓwīnī, merely repeat these items of information. However, al-Kaẓwīnī also relates that the clove grows in Sumatra, in Ceylon and in the other islands of the Indonesian archipelago. Ibn Bāṭīṭa claims to have seen it in Sumatra and Java, but the description which he gives makes it suspect that he confused it with other fruits. The stories in medieval Arabic literature about cloves being obtained by...
"dumb barter" further point to uncertainty about
the origin of this spice.

The clove, sc. the dried flower-buds of the tree,
were employed in cooking as a spice, but above all,
in pharmacy. In Morocco it is also used for perfuming
milk. Arab physicians, such as Istâb b. Hunayn
and Ibn Sinâ, recommend it as a medicament for sharpening
the faculty of vision. Ibn Sinâ, and before him
Istâb al-Israîlî (Isaac Israel) further considered the
clove as good for the digestion, since it strengthened
the stomach and liver. The celebrated physician Istâb
b. İmran notes its effect on powers of procreation;
like other medical authorities, he says that it strengthens
the sexual powers, and brings about, or lessens,
according to the procedure followed, obesity. The
clove was also used by the Arabic physicians as a
specific against diabetes and other diseases. The in-
structions of various physicians concerning its use are
cited in extenso by the Spanish botanist and pharmacologist Ibn al-Bayârî in his al-Dîjamî l-
musraddad al-advisya wa l-âdkhîya. Because of its pleas-
sant smell, it was used for chewing and as an ingredi-
ent in perfumes; the Bedoons (and their womenfolk)
in Morocco use it as part of necklaces. Thus the
clove was an important item in the spice trade. From
caliphal times onwards, it was imported into the Middle East via the Red Sea, histori-
signments were conveyed to Cairo and Damascus.
In the later Middle Ages, some of these cargoes were
resold in Alexandria and Beirut to Italian merchants.
Nevertheless, the clove did not play as big a role in
the Indian trade as pepper or ginger, on the evidence
of what we know of the cargoes of Venetian, Genoese
and Florentine ships. Moreover, the clove was a very
costly spice, costing less than three times more than
pepper; 100 manic were generally sold at Alexandria
in the 9th/10th century for 70-80 ducats, though the
stems were cheaper.

**KARÂR** [see MÜST].

**KARASî [or KARASI].** I. The name of a Turkish
chief in Asia Minor and of the dynasty arising from
him; his territory has retained this name until the
present time (sc. the ancient Mysia, the coastline
and hinterland of the Asiatic side of the Dardanelles).

**KARAPAPAKH** (Turkish, "black hat"), a
Turkish people whose language belongs to the
western Oghuz division, and differs little from Azerî
and the Turkish of Turkey. In the Georgian S.S.R.
It is often confused with Azerî, and in Turkey itself
Karapapak is no longer spoken (having been repla-
ced by Turkish). In 1828, the Karapapakh emigrated
from the region along the Debeda or Borçala river in
eastern Georgia partly to the region of Kars (where they formed about 15% of the population) and partic-
ally to the Sulduz region of Persia, south of Lake Riğđâyîya (Urmia). In 1883 they numbered 21,652, of whom
11,721 were Sunnis and 9,931 Shî'as (K. Sadowski,
Kratasy sametka o Karâshoyy, in Sbornik Materia-
lov. . . Kavkaza, iii, 347 ff.; E. ASHTOR, Histoire des prix et
des salaires dans l'Orient médial, Paris 1969, 334,
417 ff.; W. Heyd, Histoire du commerce du Levant,
i, 603 ff.)

The Byzantine historian Ducas, who wrote 150
years after the events in question, classes Karasî
amongst those dynasties which established them-
selves in western Anatolia in the reign of the Emperor
Andronicus II (1282-1328); this clearly provides no
exact or firm chronology. On the contrary, the name's
absence from Muntaner's account of the Catalan
expedition (1304-6) and from the list of principalities
laid down by Pachymeres (d. 1312), leads one to
conclude that Karasî was established—as one would
expect—somewhat later than its sister-states further
to the south and east. Muntaner, Pachymeres him-
self and the very well-informed historian of half-a-
century later, Nicephorus Gregoras, certainly testify
to the presence of Turks who were infiltrating into
the region from the beginning of the century, but
only the second authority, whose pieces of informa-
tion are of various dates, is familiar with the name of
the dynasty (the equation of the Lamisai of Pachy-
mere with the Kalamês, father of Karasî, of Gregoras,
put forward by Mordtmann is improbable, because
of the geographical order followed in Pachymeres' list,
which would place the Lamisai in southern or central
Anatolia; the list also omits Sârûkhân).

Whatever the solution may be, the most important
thing is to determine the origin of the Turks settled
in Mysia. Later authors include the dynasty amongst
the Turcoman ones of Anatolia, but this blanket
designation in fact covers several possible distincts.
On the basis of a funerary inscription, in which a
person with the name Karasî claims descent from the
Dânishmendids [q.v.], an attempt has been made to
connect the famous 6th/7th century central
Anatolian dynasty with the petty principality of the
8th/9th one; but this inscription is at Tokat, in the
former Dânishmendid territory, and not in Karasî-
li, homonymy does not imply identity, and the
genealogical pretensions of the party concerned
point more to the undeniable fame of the Dânish-
mendids. It is true that ca. 600/1200 we hear of the
Dânishmendids on the western fringes of Anatolia,
but there is nothing to allow us to suppose any more
links with the new Turcoman formations at the end of
the 7th/8th and beginning of the 8th/9th cen-
turies than those links of other ancient families.
Moreover, if there was apparently, in the case of the
Turks of Karasi, infiltration from the east, as in the neighbouring principalities, it is also clear that one element amongst them is of an entirely different origin. Thus it is known that, at the time of the collapse of independent Seljuk Anatolia in the face of the Mongols, certain Turks and Turcomans fled with Sultan ʿizz al-Dīn Kay-Kāwūs into Byzantine territory and were finally established in the Dobruţa [q.v.], where, mixed with other people coming from South Russia, they were more or less Christianised. During the troubles of the opening years of the 8th/14th century, some of these, either called in by the contending parties or else acting on their own initiative, banded together under a certain Ḫâlîl and returned to Thrace and Mysia, in the end constructing some kind of bridge across the Dardenelles. With the recovering of contact with other Muslim Turks, those of Mysia at least became absorbed once more into the fold of Islam; some memories of these happenings can still be discerned in the legend of their great saint and mystic Sarf Saltuk.

We are on much firmer ground with the information of Ibn Baṭṭūta and of al-Umari, who both bring us up to ca. 1330. There must at that time have been two principalities in the hands of two brothers (the discussion on this relationship arose from the inadequacies of old editions of al-Umari), Demir Khan and Yâkhsî Khan, of Ayvalîk, Bur-

kadd* 2 of Erdek in 1846 provided another outlet, on the gulf of Karasl, centred on the plain of Bahkesir, and comprised the fra#d*s of Ayvalîk, Bur-

less retained the boundaries of the former principality, today can largely establish its precise limits. After Munedidiim Bash! in the 12th/18th century and we

for its name to be perpetuated there.

Perhaps as a vassal ruler—until around the time of Orkhan's death, and intervened in the Turco-

Khan (which is also a title, "the good khan") could well be (despite the bias of the sources) equated with Adjlan Beg son of ICarasi; he is said to have had two sons, who quarreled. One of these two, Dursun, together with his vizier yadidji Ilbegi, called in the help of Orkhan, promising him part of the province of Bergama, always remained in the hands of the Byzantines or their Genoese vassals.

Until now, except in error, no coin, inscription or seal/ of the rulers of Karasi has been recorded, although al-Umari mentions coinage of theirs, on the strength of information derived from a well-in-

formed Genoese merchant. It may well be that the multitude of small coins found here and there contain some Karasi ones, but this is for the moment pure hypothesis.

The historical significance of the principality of Karasi lies in the fact, deliberately obscured by the Ottoman historians, that it paved the way for the crossing of the Dardenelles, attributed by those historians exclusively to Murâd. Al-Umari already mentions the naval raids made by the rulers of Karas, and in this regard, their seamen were tutors of the Ottomans. Several Karasî chiefs rallied to the Otto-

man side and then (and probably in 1342) the latter at Balikesr (of which al-Umari records the ancient name Aktras) and the latter at Bergama. Al-Umari also gives the name of the dynasty's founder, their father Karasî, and not that of Kalamâs (Kalam-ṭâb or ʿAlam-shâb?), which is nevertheless not that of the real founder. Ibn Baṭṭūta further attributes to Demir Ḫân's father (not named by him) the foundation (sü); of Bergama, which in a traveller's time had no real mosque of its own. The two names are con-

firmed by Cantacuzenos. The Ottoman sources, on the other hand, all of them more or less connected with ʿAshkpašazâde and none of them really concerned with Karasî until the time of Ottoman intervention in its affairs, call the prince who died 1375/1335 ʿAdîlân Beg son of Karasî; he is said to have had two sons, whom one, Dursun, together with his vizier Ḥâdîjî Ilbegi, called in the help of Orkhan, promising him part of his territory; then, when Dursun had been killed by his brother, Orkhan annexed the whole principality. The chronology of the Ottoman sources is for this period vague and tends to simplify events. One might infer that ʿAdîlân was Karasî's title, for the unnamed son, allegedly of bad reputation, might well be (despite the bias of the sources) equated with the Demir Ḫân of Ibn Baṭṭūta, who also describes him in unfavourable terms. In this context, Yâkhsî Ḫân (which is also a title, "the good Ḫân") could well be Dursun. Furthermore, it is certain that the Ottomans' annexation of the Karasî territory was not so immediate as the sources allege, since a further prince called Sulaymân retained certain places— perhaps as a vassal ruler—until around the time of Orkhan's death, and intervened in the Turco-Byzantine struggles of this period. However, the principality did then disappear, and unlike its neigh-

bours, absorbed by the Ottoman state at a later period, was not subsequently revived by Timûr. It had nevertheless left sufficient mark on the region for its name to be perpetuated there.

Because the Ottoman province of Karasî more or less retained the boundaries of the former principality, Mûnedîdîm Bâshî in the 12th/18th century and we
today can largely establish its precise limits. After the absorption of certain Byzantine towns which had remained unconquered longer than the open country-side, it embraced a rectangle of territory bounded on the north by the western half of the Marmara Sea and the Dardenelles straits, on the west by the Aegean, on the south by the valley of the Bekir Çay, and on the east by the Simav Su and Susurû. The island of Mytilene or Lesbos (Midili [q.v.]), which lay opposite the province of Bergama, always remained in the hands of the Byzantines or their Genoese vassals.

2. An administrative division carried the name of Karasî for more than five centuries after the end of the dynasty (see above) and its annexation by the Ottomans. However, the sanâgâs of Karasî did not correspond exactly to the old area which was under the rule of the Karasî Oghulârî. The region of Canak-kalâ's and the Dardenelles was detached as a separate district, an indication of the Ottomans' pressing interest in the control of the Straits. The sanâgâs of Karasî, centred on the plain of Balikesr, had therefore only one opening to the sea, on the gulf of Edremît and Ayvaîk. Its attachment to the ḥaddî of Erdek in 1846 provided another outlet, on the Marmara, which was gradually enlarged at the expense of the province of Bursa. From 1913, the vilayet of Karasî took the name of the vilayet of Balikesr, and comprised the ḥaddîs of Ayvaîk, Bur-
The text from the document is as follows:

"... such as Byzantium, the Genoese and the Ottomans held the southern shoreline up to the Yayla range, while the khans of...

Principles of dynamics, going back to Aristotle, became the principle of displacement operations; Karastun, sc. in brief, of the equilibrium of a lever, basing himself on Thabit b. Qurra in effect determines here the condition that of the Banu Musa, that of Kusta b. Luka and that of Thabit b. Qurra. As late as 1911, three manuscripts existed of this last work, those of the Library of the Jesuit Fathers in Beirut and of the India Office; today, only the latter manuscript exists (Arabic No. 767, vii, fols. 198-208). This translation differs in certain respects from the manuscript surviving today. In particular, the meaning of proposition 4 (proposition 6 of the Liber karastonis) completely escaped the translator. Ibn Kurra's work has also been translated into German in 1911 by E. Wiedemann; this is a good translation, although the order of the propositions is not clearly indicated and the German orientalist was mistaken concerning the number of propositions in the work. A French translation, differing substantially from the two others, has been made by K. Jaouiche (to be published shortly).

Ibn Kurra further mentioned the karastun in his more popular work Fi ẓīfat istiwaḍ al-waqṭ wa ʾkbīlāšīkhi ("Concerning the equilibrium and disequilibrium of weights"). This book is intended for workmen who had no mathematical knowledge and is more about the balance with two pans than the lever proper; it has only come down to us in the version transmitted by al-Khazin and in his K. Mīzān al-hikma, ed. Haydarabad 1359/1940, 338.

(K. Jaouiche)

Karasun (see Al-Furat). Karasu-Bazar (Byz. Mavron Kastron; So- vatrin, Belogorsk), an important commercial centre in the Crimea, particularly under the Giray [gər] dynasty of the Krim Tatars (826/1423-1197/1783). Situated on the well-watered meadows of the northern slopes of the Yayla Mountains, Karašubazar (Turk. "Blackwater market") took its name from the Karašu river, a source of the Salghir. From Byzantine times, the Crimea was subjected to a recurring geo-political pattern of importance for all Crimean towns: imperial powers such as Byzantium, the Genoese and the Ottomans held the southern shoreline up to the Yayla range, while the khāns of
nomadic states (Khazars, Pechenegs, Kumans, the Golden Horde (Batnids [q.v.]) and the Kmrn Tatars [q.v.]) controlled the Crimean steppe (and often the steppe of the mainland) and dwelt in theswelt the attractive towns between steppe and mountain such as Baghčes- saray [q.v.], Akmedşidj [q.v.] (Russ. Simferopol), and Karasubažar.

Politically, Karasubažar was important as the seat of power of the senior Crimean tribe of Shirin, whose leaders controlled the district from the Karası to the Strait of Kerč. Seldom was a khan powerful enough to rule without the support of the Şhrın begs, who had easy access to the Ottoman governors at Kaffa (Russ. Feodosia), the centre of Ottoman power in the Crimea and a city so prosperous in the 1oth/17th century that it was called "little Istanbul". Generally the Şhrın begs and the Ottomans exercised power on the side of conservatism and against the centralizing tendencies of the khan.

The valley of Karasubažar was enclosed on all the north side by hills and to the north-west imposing white limestone cliffs (ab baya) towered above the town. At these sacred cliffs the Kmrn Tatar tribal leaders (mirzds) customarily met to coordinate important Crimean affairs such as the choosing of a rival khan or preparing for war. Because of the hills, the town was easy to defend and Don Cossack raids, a factor of decisive importance for a trade centre close to the steppe. Moreover, a Krm Tatar vizier, Sefer Gızâl, had built in 1655-1654-55 a fortress-like covered bazaar with its own water supply, mosque, bath and iron gates in which merchants could safely store their merchandise and defend it. Karasubažar was chiefly an entrepot and manufacturing centre for Tatar pastoral and handicraft products. It lay on the main east-west caravan route 45km. east of Akmedşidj and 60km.west of Kaffa via Eskı Krm. It probably served also as a way station for slaves in transit to the huge slave market in Kaffa.

According to A. L. Yakobson (Sredne-vekovy y Krym ("Crimea in the Middle Ages"), Moscow 1964), Crimean towns in proximity to the Genoese coastal towns enjoyed high prosperity until the Ottoman conquest of 1880/1475. They then experienced a period of readjustment in the 16th/17th century, but enjoyed great prosperity in the 17th/18th century. At first the artisan classes consisted mainly of long-established Karaitе [q.v.] Jews, Armenians, Italians and Greeks. This situation changed gradually in the 17th/18th century as Krm Tatars joined the craft guilds. Travellers in the 16th/18th century (e.g. M. Guthrie, A Tour Performed in the Years 1705-96 . . . , London 1802, and Yakobson, 139 fl.), make a distinction between Krm Tatars who had become cultivators and craftsmen and the Nogay elements who continued their pastoral life. The chief products of the Karası region were fruit and vegetables, grain, mostly millet and wheat, Moroccan leather made from the hides of Tauric goats, woolen products and some wine. Dyestuffs, such as madder, sumac, saffron etc. grew wild and there were also close at hand forests of oak, beech, linden and poplar. The town boasted a goodly number of craft guilds including armourers, coppersmiths, tinkers, dyers, felt processors, weavers and others.

Ewliya Çelebi (Seyyidatnâme vii, 644-9) in the mid-11th/17th century observed in the town 8 wooden bridges, a number of water mills, 28 mosques, 5 madrasas, 8 Krmn sarays, 140 shops, 10 coffee houses and 40 taverns (meyykhâne). Apart from the less elegant houses of the poorer Christians and Jews, he estimated that the town possessed 5,500 two-storey houses with tiled roofs (at 6 persons per house about 33-35,000 inhabitants). These figures contrast sharply with the estimated 15,000 inhabitants, 12 mosques, 2 Christian churches and a synagogue recorded by Demidoff in the 13th/19th century (M. Anatole de Demidoff, Voyage dans la Russie méridionale et la Crimée, Paris 1854, 394).

By the late 11th/17th century, Don Cossack raids had become a common occurrence, but the town prospered even after 1550/1557 when Karasubažar served as a temporary capital after the burning of Baghčes- saray and thus invited an attack by the invading Russian and Kalmuk [q.v.] troops of General Münnich. The town was damaged but the raid was beaten of by Ottoman artillery. In 1875/1771 during the Russo-Turkish war (1182/1768-1184/1774) the town was partially destroyed by Russian troops. After the Russian annexation in 1597/1783, thousands of Krm Tatars fled to the Caucasus and to Istanbul. Periodically new exoduses occurred as Russia oppressed the Crimea further.

The decline in Tatar population and the influx of cheap manufactured goods made serious inroads upon the prosperity of Karasubažar in the 19th/20th century. Henceforth the town shared the fate of the Krm Tatars as a whole. The first stirrings of Tatar nationalism and Turanism were ideas swept in by theosophists under the tutelage of Isma’il Gasprall [q.v.]. This movement led to the publication of newspapers, the founding of modern schools, and the formation of political parties, prior to World War I.

After the Russian Revolution, between 1917/1929 and 1930/1941, the Krm Tatars were killed or deported by the thousands as national consciousness and the traditional social cohesion of Tatars came into direct conflict with Stalin’s plans for the Sovietization of the Crimea. Thereafter, caught between Hitler’s concept of Untermenschen and hatred for Soviet injustices, the Krm Tatar remnant was partly executed and partly deported to Siberia in 1933/1944 by the USSR after the German army was expelled (E. Kirimal, Der National Kampf der Krimtürken, Emsdetten 1952, passim).

W. Fisher, The Russian Annexation of the Crimea 1772-1783, Cambridge 1970, particularly with reference to the Treaty of Karasubažar of 1772 (pp. 44-51). (C. M. Kortepepet)

KARATA (self designation, Kirtle, pl. Kirtlei; Russ. Karatai, Karatin(ist), Kirdis; Avar Kalalal; other Kirdi Kalal) along with Andi [q.v.], Akhwâsh, Bagul, Botlilh, Camalal, Godoberi and Tindi forms the Andi division of the Avar-Andi-Dido group of the Ibero-Caucasian languages; the Karata-speaking peoples.

According to an estimate of 1886 (Dagestanskaia Oblas‘) there were 7,217 Karata at that time; in 1926 there were 5,305 and in 1933 (estimate by Grande) 7,000. The Karata inhabit the northern part of Achkvâl district, in the valley and on the right bank of the Andi Kosu, and two outlying areas in Andalall and Vedeno districts, an isolated territory of high, rugged mountains in the western part of the Daghî- sotan A.S.S.R., in several villages: Arzhip, Tokita, Mağta, Raçabalda and Cabakoro.

Islam was introduced through the Avar country, probably at the end of the 5th/11th century. The
KARATA — KARATIGIN

Karatige are Sunni of the Shafici rite. According to the testament of Andunik, nutsal Gruler of Avaristan [KhSaev, Obshhestvennaia Stroy Daghestana v XIX Veke, 135], in 890/1485 the Karata country was one of the seven territories owned by the rulers of Avaristan and, enjoyed at this period a semi-independence. At a later period it was annexed by the Avar Khanate, and Karatigin also became involved in the last fighting in Farghana before the final subjection of this country by the

Formed one of the frontier lands of Islam and was

Su), one of the rivers which form the Amu Darya,
[52x-16]c

middle course of the Wakhsh or Surkhab (Turk. Kizil kubi,

The traditional economy was based on herding (sheep and goats) with a transhumance system, agriculture and home industries. The Karata women were well known for their weaving of woolen cloth.

The karata language has three dialects: Karata proper, Anelgh and Tokita. The Avar language is genetically closely related to Karata, which is a proper, An£ikh and Tokita. The Avar language is described by Ptolemy.

As has been so far ascertained, only the embassy sent by Shah Rukh to China (822-31/1419-22) used on its return journey the road between Farghana and Balkh described by Ptolemy.

Like all the highlands on the upper course of the Amu Daryä, Karatigin also was under its own rulers down to quite modern times; in the pre-Mongol period only one amir of Rägh, Dja'far b. Shämänkü (Garbätz, ed. M. Názim, 36), is mentioned. Under Timür and later the name of the country Kayir Tigin (or Tügin) is found (in the edition of Şaraf al-Dîn 'Ali Yazdi's Zafar-nâma by Mawlawi M. İhâddâ, i, 258, 188, erroneously Tim Tügin). When and how the present form arose is unknown. In the manuscripts of the Bâbûr-nâma (ed. Beveridge, f. 33b and f. 63b, Karatigin, f. 69a and f. 81, Kayirtîgîn), and of the Ta'rikh-i Râşûl (tr. Ross, esp. 241) both forms are found. Karatigin is popularly explained as a Turkish word for "blackthorn" (cf. W. Radloff, Wörterbuch, St. Petersburg, ii, 135, Ottoman Kara diken) or as the name of the two first Kirgiz titers of the name, Kirghiz, Manypa (in Karatgin o stranakh po verkhovam Amu Dary, St. Petersburg, 241, following Arendarenko). As is narrated in the Baby al-Asrdr of Mahmûd b. Wall (India Office Ms., Ethé, Cat. no. 575, f. 277v, in Râjdâb 1045 (Dec. 1635-Jan. 1636) 12,000 families of Kirghiz, then still pagans, went through Karatigin to Hishār. At the present day the Kirghiz (Kara Kirghiz) form part of the population of Karatigin and with the Tadjik (and a small number of Odzhebs).

In the 19th century, the princes of Karatigin, like the princes of Badakhshân [q.v.], claimed descent from Alexander the Great. Karatigin was then under the suzerainty of the Killer Khan of Khokand; their subjection is said to have taken place under Muhammad 'Ali Khan (1238-58/1822-42) in 1250/1834 (V. F. Nikolkin, Kratkaya istoriya Kok. Khokand, Kazan 1886, 134 f.). Already under 'Ali Khan (beginning of the 19th century) we find men from Karatigin forming a considerable part of the standing army founded by this Khan (Ta'rikh-i Shahrub, ed. N. N. Pantusov, Kazan 1885, 42 f.). A campaign from Khokand against Karatigin in 1275/1858 under Mulla Khan (1858-62) is also mentioned (Nalivkin, op. cit., 190); the ruler of Karatigin was at this time Muzaâfar Khan (later also called Muzaâfar Shâh). In 1869 Karatigin was occupied by the troops of the amir of Bukhârâ and Muzaâfar Khan taken as prisoner to Bukhârâ; the conflict was only settled by the verdict of the Russian governor-general, (K. P. von Kaufmann), and Muzaâfar Khan again restored to his principality. After his death, Karatigin was definitely incorporated in Bukhârâ as a district of 10,792 sq. km. with (about 1890) 60,000 inhabitants (mostly Tadjiks, the others Kirghiz). Karatigin also became involved in the last fighting in Farghana before the final subjection of this country by the
Russians (1874-76). The frontier between Farghana and Karatigin (on the heights east of the valley of Kik Karamuk Su) was defined by a treaty concluded between M. D. Skobelev and another brother of the Beg, Soff Khan on Sept. 9 (new style), 1876.

It was not till 1878 that Karatigin was for the first time visited by a European (V. Oshaggin). In the following decade a mountain road, one of the best in Central Asia, was built through Karatigin on the right bank of the Wakhsh, which made Karatigin much more accessible. Oshaggin and later travellers (especially A. Regel, 1861-62) describe Karatigin as a fertile country with numerous villages and orchards, and as one of the most prosperous provinces in the kingdom of the amir of Bukhara. It was said (Logofet, 322) that in Karatigin all the inhabitants without exception made a living by agriculture (including gardening), and that there were no landless proletariat there. Anyone who neglected his piece of land for three years lost any right to it. On the other hand Rickmers (p. 340) says that many peasants went from Karatigin to Farghana, worked there as day-labourers and servants and brought their savings home. The only town is Garm; as regards the number of inhabitants, estimates are very contradictory: according to Oshaggin 2,300 houses, to Masalskii 4,000 people, to Logofet 15,000. Information regarding administration, taxes, etc. is given in particular by A. Semenov (journey of 1898).

AL-KARAWIYYIN (MASJID), a celebrated mosque and Islamic university at Fas, in Morocco.

i.—Archaeological Study

The architectural history of the mosque, already sketched in the last H. Terrasse, in the article Fas [q.v.], heading "Monuments", is sufficiently well-known. It has been revised by the same author in a comprehensive work: La Mosquee al-Karawiyyin a Fas, avec une etude de G. Deverdun, sur les inscriptions historiques de la mosquee, Paris 1968. Three stages can be distinguished there (Pl. 1).

A. The first edifice was built, on the left bank of the Wadi Fas, in 245/859 and was the work of a pious woman, Fatima bint Muhammad al-Fihri, who came from Kayrawan to Fas with her family. She very probably received the authorization to build from the Amr Al Ya’b by Idris, grandson of Idris II. The first oratory measured on the inside 46.50 m. from east to west and 17.20 m. from north to south and included a prayer hall with four parallel bays in the kibla wall. The mihrab was on the site of the present great chandelier, the minaret in the place of which is today that of the "sahn". It was later in the centre of the mosque. The Idrisid bays are larger than those of later extensions (4.10 m. as against 3.70 m.) and contain 12 archways: 5 on the west of the axial nave and 6 on the east. There has been no success in finding the motive for this abnormally high arrangement; perhaps it should be connected with the alteration suggested by the inscription of 263/877 (G. Deverdun, Une nouvelle inscription idrisite, in Menehges d’histoire et d’archeologie de l’Occident musulman, ii, Hommage a G. Marquis, Algiers 1957), and whose author would be the amr Dadjid, a grandson of Idris I. The eastern and western boundaries of the initial oratory are marked in the present monument by a line of cruciform pillars which separate it from the extension of the 6th/12th century. The court (sahn) extended in front of the prayer hall. It was of meagre dimensions. So it is established, by its overall lay-out and its exterior, that this first mosque resembles the sanctuaries which were erected in the 3rd/11th century in the Magrib al-Aksa and of which al-Bakri gives us information.

B. The population of Fas having greatly increased, the Karawiyyin was enlarged in 345/956, a century after its foundation. In 309/921, it had already become the khutba mosque of the Kayrawan’s quarter, whose name it has preserved. This was the work of the Zanata amir Ahmad b. Abi ’l-Sa’di who acknowledged his holding the land as a vassal of the Umayyad caliph of Cordova. The buildings, etc. is given in particular by A. Semenov (journey of 1898).
obtained from the amīr ʿAlī b. Yūsuf, the great builder of the dynasty, the authorization to enlarge once more the famous oratory. The funds were gathered together, thanks to the correct resumption of the mosque’s revenues, which had been fraudulently diverted by some administrators, and doubtless with the help of the state treasury. About 528/1134 the work was begun. As early as 531/1136 two new cupolas received their final inscription, but the construction was not completed until 537/1143. As for the new minbar, it was not finished until 538/1144. It may then be concluded that the work lasted fifteen years, at the end of which the mosque was augmented in the direction of the kibla by three supplementary bays, which, as in all the rest of the building, preserve the arch as a thoroughly-exaggerated curve providing a new and magnificent miḥrāb. The arcades of the enlargement, for the twenty-one naves, take on once more exactly the dimensions of those of the Ḥaḍid oratory, such as it had been transformed by the Zanāta prince. It was traditional in the mosques of the west to mark the pre-eminence of the axial nave which leads towards the miḥrāb. The Almoravids wanted to mark it exactly on the outside, and they built a raised principal nave that dominates the roofs of the bays with a doublesloped tiled roof. This high nave is richly decorated, abounding in a luxurious series of five cupolas. The first, on a square plan, is situated in front of the miḥrāb; then a huge dome covers the two other bays corresponding to the enlargement. Some very beautiful Kūfic inscriptions attribute the work to the reign of the amīr ʿAlī b. Yūsuf. “The seven ancient bays of the axial nave were reshaped and decorated: today there are still five cupolas to be found which predate the Almoravid extension are covered by two domes with stalactites forming a flanged cupola; another dome with stalactites has taken the place of the cupola of al-Muẓaffar; on the three remaining bays a flanged ʿAlawite cupola is situated between two doubly-sloped roofs” (H. Terrasse). Finally, at the same time there was erected behind the miḥrāb a mosque of the dead (diqām al-dānaʿa), the first without doubt in Morocco of this genre of edifice, and the most beautiful. This annex, like the median bays of the prayer hall, presents an elegant cupola with stalactites, sheltered beneath a roof in a pavilion, in accordance with the Andalusian method. Also, to reconcile the pious desire to pray over the dead in the mosque itself and the necessity of not polluting the oratory by the presence of a corpse, the mosque of the dead connects with the mosque of the living by three doors, each bearing a twin arcade. If the work of the Almoravids was conceived with the greatest respect for the ancient parts of the building, one must recognize there the desire to magnificently ornament the Karawiyyīn in the manner of the great mosques of the Empire, those of Tlemcen (Tilimsān) and Marrākāsh in particular. The ornamental richness that they brought together in the axial nave testifies to the expertise of the artists of the time and to the opulence of the Hispano-Moorish art of the 6th/12th century. But all these decorations were to be covered again in plaster, towards 1150, for fear that the Almohad conquerors would get rid of them, as happened at Tlemcen and Marrākāsh where this precaution against the rigour of the partisans of God’s Unity was not taken in time.

For the study in detail of the Almoravid decoration, the epigraphy of the bronzes, the minbar etc., one should consult the work of Terrasse, mentioned at the beginning; this has served as a basis in the preparation of this article.

Later, the dynasty of the Almohads [see AL-MUWAHIDĪN], doubtless satisfied by the arrangements made to erase the name of the abhorred and cursed ʿAllī, brought to the mosque some utilitarian arrangements and above all an admirable reconstruction of great splendour.

The dynasty of the Maṛfīnids [q.v.] respected the work of the past, built the present ʿanāna [q.v.], enriched the liturgical furniture, added several splendid mountings on the bells taken from the Christians and proceeded to undertake numerous restorations. Finally, what was an illustrious feat, they created the Library. The Saʿdīds [q.v.] had two fountain-pavilions constructed which survive today in the ṣāhn, in imitation of those which still exist in the Court of the Lions at the Alhambra of Granada. No concern for utility explains their construction (pl. xv of the art. FAS).

The ʿAlawīs were not sparing in their care for the venerable mosque. It is under their reign that the exceptional competence of H. Terrasse allowed the rediscovery, with their original freshness and sometimes colour, of the richness of the Almoravid décor that was believed to have been destroyed for ever and which had remained choked with plaster for eight centuries.

Al-Karawiyyīn is thus not only the great sanctuary of the town of Fāṣ, but an eminent witness of the Hispano-Moorish art in architecture as in the decorative arts.

**Bibliography:** In addition to the sources given at the beginning of the article and to those that are found in the art. FAS, one should add that the two essential Arabic texts for the history of the mosque in the Middle Ages are the Rawd al-kīraš of Ibn Abī Zahr and the Zahrit al-Āṣ of al-Dījazmāṭ. The comprehensive plan of the mosque and its annexes was sketched and published by E. Pauty, *Le plan de l’Université Karawiyyn à Fès*, in *Hesperis*, ill.4 (1923) (pl. I). The mosque of the dead has been studied by B. Moslow, *Les Mosquées de Fès et du Nord marocain*, P.I.H.E.M.T., xix, Paris 1938; whilst G. Marcais, *L’Architecture musulmane d’Occident*, Paris 1954, 387–8, has given what is essential on the Saʿdīd portions of the ṣāhn.

For the Arabic inscriptions, see the *RCEA*, iv, No. 1478; vi, No. 2099; viii, Nos. 3031 and 3061; ix, No. 3545; xv, No. 5626; xvi, Nos. 6080 and 6081. See also the critical article of ʿAbd al-Ḥādī al-Taʾzī, ʿAbd al-Ḥādī al-Taʾzī, *al-Karawiyyn, in Dījazmāṭ al-Karawiyyīn, al-Kitāb al-dhahabi*, Muhammadiyya 1379/1959.

**ii. Organization of the Teaching**

At exactly what date can one speak of higher education of the Karawiyyīn? It is really difficult to answer this question with precision. Muhammad al-Manūlī, *Taʾrīkh al-Karawiyyn, in Dījazmāṭ al-Karawiyyīn, al-Kitāb al-dhahabi*, Muhammadiyya 1379/1959, thinks that it is in the reign of the Almoravids that the University really became attached to the mosque; but the Karawiyyīn was not the only place of worship where there was teaching.

From the beginning of the 6th/12th century until our own time, the glory of the Karawiyyīn was its body of scholars (ʿulamāʿ). It attracted a host of students from all the regions of Morocco, North Africa, Andalusia and even the Sahara, and the Moroccan dynasties and the people of Fāṣ were actively concerned with housing them, in order to be
able to provide instruction; the Marinids in particular erected the charming madrasas [q.v.] which still excite the admiration of visitors. The university attained its apogee in the 8th/14th century, but, later, the masters, in devoting their efforts to reconciling the requirements of custom and those of the religious law, could not prevent the decline of the intellectual and teaching methods, above all after the definitive rupture with Spain, and, consequently, with Europe. When, under the Sa‘dids, Fez lost its rank of capital in favour of Marrākāsh, al-Karawiyyīn remained turned in on itself and set in its traditional teaching. It continued to exist, without damage but without progress, by virtue of the Islamic institutions which took centuries to disappear. In reading Leo Africanus, as also Marmol, references are to be found that lack neither interest nor pungency. Finally, some reforms were imposed under the dynasty of the ‘Alawīds. In 1203/1788 the Sultan Muhammad b. ‘Abd Allāh decided to limit the authors, programmes and hours. The essence of this regulation is to be found in the work of Ibn Zaydān, al-Durar al-fāshira bi-ma‘ālîthir al-mulāh al-‘Alawiyyīn bi-Fās al-sāhira, Rabat 1356/1937, 60-t. But fifteen years later, if one believes a Spaniard who travelled under the name of ‘All Bey al-‘Abbād, things were going no better. Nevertheless, it is reported that the Sultan Mawlay Sulaymān (1207-38/1793-1822) used often to visit the classes, question the students and reward the best replies. Mawlay ‘Abd al-Rahmān, nephew of the above, devoted himself to new reforms and, by a šahār dated Mubarram 1261/January 1845, reorganized the teaching of the Karawiyīn (see Ibn Zaydān, op. cit., 73-82). In the present state of our knowledge, we have few means of attempting to evaluate the results attained by this new regulation of the studies, inspired by a sound and clear teaching method.

The general organization of the university before 1912 is described in R. Le Tourneau, Fās au moyen le Protectorat, Casablanca 1949 (book vi). It aimed at giving to the faithful as perfect a knowledge as possible of the truths of belief and of the line of conduct to adopt in the light of these truths. Dogmatism and conformity were the dominating factors in the teaching, which no longer embraced the universality of human knowledge, as before; it was reduced to the strictly religious disciplines. Among the branches of learning professed, certain had gradually disappeared; such was the case of Qur’ānic exegesis (tafsīr), of which the classes must have ceased in the reign of the Sultan Muhammad b. ‘Abd Allāh, of astronomy (ta’dīḍ), dialectic (kalām), mysticism (laṣīr), which disappeared in 1906, lexicography (lugha), philology (taṣrīf), geography (diğādsīyā), medicine (tibb), divination (qiṣāyla).

The university was not organized in the European manner, nor even in that of Cairo or Tunis. It was placed under the control of the chief bāḥī of Fās, a kind of rector, but without a proper specialised administration. The scholastic year was unknown. No registration was imposed; the teaching was free; the duration of studies was not fixed, but custom demanded that classes be pursued for five years at least. No examination ratified the studies, a simple certificate (iqtisā [q.v.]) being handed by the professor to every student who had given proof of application and of a certain ability. Three weeks of leave were accorded on the occasion of the great Muslim festivals, and a month on the occasion of the Spring festival during which the Sultan of the taḥa (plur. of ūlā, student) was chosen (see E. Doutté, La Khutba bur-lesque de la fête des Tolba au Maroc, in Recueil de mémoires et de textes publiés en l’honneur du XIV° Congrès des Orientalistes, Algiers 1905).

It is impossible to know the number of students at the end of the 19th century—a thousand perhaps, but certainly less at the beginning of the following century. They were divided into two categories: the Fāsīs by origin and the strangers at Fās (dā‘īyyīyīn), who lived, especially the poor ones, in the madrasas. The two groups mixed together little.

Nomination to the rank of professor (mudarris) depended on the Sultan following an empirical process which seems to have been always accepted by all. The salaries were only small, but, each year, the government made some gifts in kind; it was well understood that in return one had to demonstrate loyalty towards it. The professors enjoyed the most complete freedom, although tradition demanded that they give at least one lesson a day. The first-class professors, numbering 17 in 1904, enjoyed great renown and were called the "Great Scholars" (al-‘ulamā‘ al-ḥikār). It cannot be said that the masters of the Karawiyīn formed a genuine body, except for granting investiture to a new sultan, along with other personages, or for replying to the consultations that the sovereign sometimes demanded of them. Fās held its doctors in high esteem, but there is no doubt that they were no longer as illustrious as their illustrious predecessors had been. In their social milieu, their influence, however, remained considerable.

After the establishment of the French Protectorate in 1912, the Sultan Mawlay Yūsuf signed, on 23 Dju- madād II 1332/19 May 1914, a šahār which created a council of improvement charged with looking again for means to improve the studies and their administration, as well as to study the situation of the teaching personnel. Some years later (1918), the university had been entrusted to a Council of Direction and reattached to the Ministry of Justice. In 1346/1927, the professors were submitted to progress and received a fixed salary corresponding to the class in which they were ranked (for further details, see Ibn Zaydān, op. cit., 135-8).

After many plans, often keenly contested by the conservative milieux of Morocco and especially of Fās, an important reform was introduced to the Karawiyīn by two šahārs of the future King Muhāmmad V, the first dated 12th Dhu ‘l-Ka‘āda 1349/1st April 1931, the second 15th Mubarram 1352/10th May 1933. The teaching was divided into three cycles: elementary, secondary and final or higher. The last comprised two sections: the first was reserved for the Religious Law, the sources of this law, hadīth and tafsīr; the second entirely modern, was devoted to literature, Arabic language, history and geography. The hours were imposed on the professors as on the students; some examinations were organized and the vacations regularized. The masters received professional recognition, general supervision was reinforced, discipline enjoined, etc. (see Ibn Zaydān, op. cit., 146-60). The old university, now rejuvenated, became a State institution in 1947.

After independence, al-Karawiyīn was thoroughly reorganized by the royal decree No. 1.62.249 of 12th Ramaḍān 1382/6th February 1963. Now a public establishment, endowed with a civil corporate nature, the university was placed under the control of the Ministry of National Education. It is before all charged with (1) assuring the education of specialists in the Islamic disciplines and the Arabic language; and (2) promoting academic research in the fields of the sharī‘a and the Arabic language*. It comprises: (1) the Faculty of the Sharī‘a (Muslim law) which was opened
in Fès in October 1960; (2) the Faculty of Arabic Studies, whose centre is at Marrakesh; (3) the Faculty of Theology (Usul al-din) created at Tádám, and (4) some institutes attached to it, of which the most important is the dár al-hadîth, at Rabat, which produces scholars in the Islamic sciences. Each faculty is directed by a dean, assisted by a deputy, both of them appointed by the Directorate of Higher Education of the Ministry. The university at present (1972) comprises about a thousand students and each year grants an ever-increasing number of degrees (110 in 1970). Each academic year also produces a generation of educated young people who find a place less and less easily in modern Morocco. The Moroccan Government is not unaware of the problem, for which there is no easy and satisfactory solution.

Today, the university no longer functions at the foot of the pillars of the ancient mosque; it has been transferred to an old French barracks where the students no longer lead the mediaeval life of yester-year. Meanwhile the professors, even the less aged, continue to teach in a traditional spirit and, consequently, to form young people who do not move in the same atmosphere as their companions in modern education.

**KARAY, REFIK KHALİD** (modern Turkish essayist and novelist (d. 1888/1965). He was born in Beylerbeyi on the Bosphorus, Istanbul. His father, Mehmed Kâlid of the Karakaylîsh Ogullari (later shortened to Karay by Refik Kâlid), was chief treasurer at the Ministry of Finance. Trained at the Galatasaray lycée (1900-6), which he left before graduating, Karay became a clerk in a department of the Ministry of Finance and at the same time attended the school of law (Mehteb-i Hukuk) until the restoration of the Constitution in 1908; he then abandoned both job and study and became a journalist. After contributing to various papers, he founded in 1909 his own shortlived *Son Hauwdîth*. In the same year he joined the new literary group Feğri-i Ali (Dawn of the Future), formed for a brief period by the young generation of poets and writers, which was no more than the closing phase of the *Terek-i Fûnum* movement.

His real personality as a writer took shape in 1910 when he began to contribute, under the pen-name Kirpi (“hedghog”), to the humorous magazines *Kalem* and *Diem*, of which he soon became a leader writer. His powerful satirical essays, mixed with subtle humour, were written in a masterly style and were directed against the leaders of the Committee of Union and Progress, the party in power, and these immediately established his unchallenged reputation. Following the assassination of Grand Vizier Sâlih Pasha in June 1913, Refîk Kâlid, although he did not belong to any party and was not a militant, was arrested together with several hundred opposi-
tion “suspects” and banished to Sinop, on the Black
Sea. Talcat Pasha himself, who had been the target
of one of his ruthless satirical articles, included his
name in the list of people “to be punished” (R. H.
spent the following five years in exile in Sinop, Çorum,
Ankara and Bilecik, during which time he
remained silent except for a few essays and short
stories which were published, under the pen-name
*ayde*, in the Istanbul daily *Payam*, and later, under
his own name, in *Gökalp*, *Akbaba*, *Minelbab*
and *Memleket Hikayeleri*. On his return from exile
towards the end of World War I, he contributed to the
newspapers *Zaman* and *Sabah* (of which he became later a leader writer). When in 1918 the war was lost and the Unionist
leaders fled the country, Refik Khalid’s satires against
them and the committee became more vitriolic. He
joined the Liberal Union Party (*Hürriyet ve ilhâl Fırkası*)
and became increasingly involved in the
anti-Nationalist politics and activities of the Istanbul
governments of the 1919-22 period. His many articles
and satirical essays, in which he tried to discredit the
resistance movement in Anatolia led by Muştafa Kemal Paşa, depicting it as a resurgence of Unionist
ambitions, and his efforts to disrupt the telegraphic
communications of the Nationalists while he was
general-director of Posts and Telegraph during the
colony of Unionist governor in Edirne, made him
persona non grata in the eyes of the Ankara
government. His arrest and trial was one of the
conditions put forward by the Nationalists for any
compromise with the sultan’s government in October
Following the victory of the Nationalists in Anatolia
in September 1922 and soon after the arrival in
Istanbul of Reşit Pasha (Bele), as their special
representative, the writer and journalist 4 All Kemal,
a close friend and collaborator of Refik Khalid, a
leading opponent of the Nationalists and former
minister of the Interior, was kidnapped and murdered
in Izmit on the way to his trial in Ankara (F. R. Atay,
*Çankaya*, Istanbul 1969, 341-42). On learning this,
Refik Khalid joined a group of leading members of
the Liberal Union Party, who had collaborated with
the army of occupation in Istanbul, and took refuge in
the British Embassy. He was taken later to Taşkale
barracks with other refugees, but managed to slip away from there and left Istanbul on a French ship on 9 November 1922. (Later he was included among the 150 “undesirables” (*yözelli köleler*) excepted from the amnesty provisions of the Lau-
sanne Treaty of 1923). He went to Dişliiyeva in the
Lebanon where he wrote his political memoirs; their
serialization in the Istanbul daily *Akşam* in 1924
century modernists (*Tanzimî School*). He avidly read
everything the *Therouâl’s* Fünân, his immediate pre-
decessors, published in the last years of the century. He
admired their technique but rejected their French-
inspired themes and characters and their artificial
and precious style (excepting, however, some writings
of Khalîd Diyâr, Mehemd Ra’ûf and Hüseyn Dîkâhid).
Thus he started his epoch-making career from
scratch. Apart from one or two forerunners at the end
of the 19th century, he pioneered realism in the novel
and short story and switched his attention from the
over-exploited capital (Istanbul) to the Anatolian
countryside; he specialized in subtle social and
political satire without having recourse to gross and
obscene language. He advocated and practised the
use of spoken Turkish as a literary medium as early as
1909, i.e., before Ömer (Umar) Seyf ed-Din and his as-
sociates inaugurated the movement of Yenî Lisân (New
Language) which aimed at the simplification of written
Turkish. Refik Khalid’s published works, numbering
37, can be divided into the following categories:

1. Humorous and satirical essays, on
incidents of everyday life, topical events or political
personalities, which reveal his real personality. These
have been put together in the following volumes:
*Kirpinin dedikleri* (“What the Hedgehog said”),
containing essays published between 1909-19, second
enlarged edition, Istanbul 1936 (1936); *Tandikham* (*My Acquaintances*),
Istanbul 1335 (1935), in Roman script 1941; *Sahin
dandanma, inanma, kanma* (“Don’t be deceived, don’t
believe, don’t be taken in”), Istanbul 1335 (1935), in
Roman script 1941; *Ako Pashanîn Khârifalari* (*Me-
moirs of Aggo Pasha the Parrot*), Istanbul 1338
(1922), in Roman script 1939; *Ayyezân* (*In
Pursuit of the Moon*), Istanbul 1339 (1923); *Çapangâ-
kuš sâl-at* (“The Cuckoo Clock”), Istanbul 1341
(1925), in Roman script 1940; *Bir avuç saÎma* (*A
Handful of Nonsense*), Aleppo 1932.

2. Short Stories. Refik Khalid’s short stories
have been collected in *Memleket Hikayeleri* (*Stories
from the Country*), Istanbul 1335 (1935), in Roman
script 1939 (French tr. Belkis Tavad, *Contes turcs*,
Istanbul n.d.), sometimes considered as his master-
piece. Except for a few stories which belong to his
early period (1909-12), these stories were written
during his five-year exile in Anatolia where he was
able to study closely the types and customs of vil-
lagers and provincial townspeople. An invaluable
documentary on everyday life of pre-World War I
Central Anatolia, these stories are told with a rare
vividness of natural style unprecedented in modern
Turkish literature. He observes and describes land-
scape, provincial towns and local types—peasants,
shopkeepers, notables, teachers, köşjas and civil
servants—with powerful realism, without always
seeking to penetrate the soul of his characters. His
*Gurbet Hikayeleri* (*Stories of Exile*), Istanbul 1940,
contain mainly sketches using much autobiographical
material, a feature of his later works.

3. Novels. Refik Khalid wrote only one novel
between 1909 and 1929, *Istanbul’un İ’t Yüzi* (*The
inside Story of Istanbul*), Istanbul 1336 (1920), in
Roman script as *Istanbul’un Bir Yüzi* (*One Face of
Istanbul*), Istanbul 1939, perhaps his best. Written
in the form of a diary of a woman of humble origin,
bring up in the mansion (konak) of a Hamidian pagha,
this novel is a series of masterly sketches of Istanbul
“society” between 1900-20, where the last
vestiges of the old regime, the noble and imperial
protagonists of the all-powerful committee of Union and Progress and the degenerate nouveau-riche of the war
years
are depicted with scintillating and merciless sarcasm. After 1930 and particularly after his return from exile in 1938, he serialized in newspapers and magazines a great number of popular novels (19 of which were published in book form and some also filmed) of mediocre literary value, written mainly for the purpose of making a living, as he himself admitted (Mustafa Baydar, Edebiyatısalırmıs ne DISyorlar?, Istanbul 1960, 108). But some of these novels, particularly Sürûn ("The Key"), Istanbul 1947, and Bu Bizim Hayatımız ("This is our Life"), Istanbul 1950, are worth mentioning for many important autobiographical data and period descriptions. Among his non-political and non-satirical essays the volume Üç Nesil Üç Hayat ("Three generations, Three ways of Life"), Istanbul 1943, contains lively sketches of everyday life in Istanbul from the 1860s onwards. A considerable number of his essays and articles published in his very popular humorous magazine Aydede (from January 1922, 90 issues, and again in 1948-49, 125 issues) have not been collected in book form.

(4) Plays. Refik Khâlid wrote two plays: Tiryâkî Hasan Pasha, a historical play about the famous defender of the fortress of Kaniza in Hungary in 1601. The play, which had a great success at the time (1900), has not been published. He wrote his second play, a one-act comedy, while in Syria: Deli ("The Madman"), Aleppo 1931, in Roman script, Istanbul 1939. It is a story of a mental patient restored to health who, on experiencing the effects of the radical social reforms of the 20th, goes irrevocably mad again. Kemal Atatürk, stated on reading the play that "it did not satirize the reforms but emphasized them" and on his suggestion, Refik Khâlid (together with Nihat Pasha, Istanbul from the 1860s onwards. A considerable number of his essays and articles published in his very popular humorous magazine Aydede (from January 1922, 90 issues, and again in 1948-49, 125 issues) have not been collected in book form.

The Caliph al-Mutawakkil in 236/850-1 destroyed the tomb and its annexes and had the ground levelled and sown; he prohibited under threat of heavy penalties visiting the holy places (al-Tabarti, iii, 1407;HAND Allâh al-Mustawfî, Nûzhat al-Kulâb, ed. Le Strange, 32). Ibn Hawkâl (ed. de Goeje, 166), however, mentions about 366/977 a large maqâm with a domed chamber, entered by a door on each side, over the tomb of Husayn, which in his time was already much visited by pilgrims. Dabîb b. Muhammad al-Hasadî of 'Ayn al-Tamr, supreme chief of a number of tribes, devastated Maqâm al-Hâ'ir (Karbala) along with other sanctuaries, for which a punitive expedition was sent against 'Ayn al-Tamr in 369/979-80 before which he had fled into the desert (Ibn Miskawayh, Tâdîrîb al-Umam, ed. Amelroz in The Eclipse of the Abbasid Caliphate, ii, 335, 414). In the same year, the Shî'î Büyûd 'Adud al-Dawla (q.v.) took the two sanctuaries of Maqâm 'Ali (= al-Nađaf) and Maqâm al-Husayn (M. Hâ'îrî) under his special protection (Ibn al-Athîr, viii, 516; HAND Allâh al-Mustawfî, loc. cit.).

Hasan b. al-Fadî, who died in 414/1023-4, built a wall round the holy tomb at Maqâm al-Husayn (Ibn Taghribirdî, Nûdûm, ed. Popper, ii, 123, 141), as he also did at Maqâm 'Ali (Ibn al-Athîr, ix, 154).

Ibn Râbi'î 1407/Aug.-Sept. 1016, a great conflagration broke out caused by the upsetting of two wax candles, which reduced the main building (al-bubba) and the open halls (al-arwîba) to ashes (Ibn al-Athîr, ix, 209).

When the Sâlqâk Sultan Malik Shah came to Baghdad in 479/1086-7, he did not neglect to visit the two Maqâms of 'Ali and al-Husayn (Ibn al-Athîr, x, 103). The two sanctuaries at this time were known as al-Maâhâdan (al-Bundarî-al-Isfahânî, Zûdîb al-nûmra, ed. Houtsma, in Recueil des textes ..., ii, 77) on the analogy of the duals al-Îrâkân, al-Bâsrâtân, al-Hîrâtân, al-Mîrân, etc.

The Îlkhân Ghâzîân in 702/1303 visited Karbâlâ' and gave lavish gifts to the sanctuary. He or his father Arghân is credited with bringing water to the district by leading a canal from the Frât (the modern Nahr al-Husayniyya) (A. Nödeke, Das Heiligtum al-Husains zu Kurbelâ', Berlin 1900, 40).

Ibn Batûtâ, ii, 99, visited Karbâlâ' in 727/1326-7 from al-Êilha and describes it as a small town which lies among palm groves and gets its water from the Frât. In the centre is the sacred tomb; beside it is a large madrasa and the famous hostel (al-zamîya) in which the pilgrims are entertained. Admission to the tomb could only be obtained by permission of the gate-keeper. The pilgrims kiss the silver sarcophagus, above which hang gold and silver lamps. The doors are hung with silken curtains. The inhabitants are divided into the Awlaîd Râjîlî and Awlaîd Fâyîz,
whose continual feuds are detrimental to the town, although they are all Shi'is.

About the same date, Hamd Allah al-Mustawfi (op. cit.) gives the circumference of the town as 2,400 paces; he mentions there also the tomb of Hurr Riyā (b. Yazid), who was the first to fall fighting for Husayn at Karbala.

The Safawid Shāh Ismā'īl I (d. 930/1524) made a pilgrimage to al-Nadīf and Mashhad Husayn.

Sultān Sulaymān the Magnificent visited the two sanctuaries in 941/1534-5, repaired the canal at Mashhad al-Husayn (al-Husayniyya) and transformed the fields which had been buried in sand into gardens again. The Manārat al-'Abd (q.v.), formerly called Engušht-i Yār, was built in 982/1574-5. Murād III in 991/1583 ordered the Wāli of Baghdaḍ, 'All Pāsha b. Alwand, to build or more correctly, restore, a sanctuary over the grave of Husayn. Soon after the capture of Baghdaḍ in 1032/1623, Abbas the Great won the Maṣḥads for the Persian empire. Nādir Shāh visited Karbala in 1156/1743; while he is credited with gilding the dome in Matschhad 'All, he is also said to have confiscated endowments intended for the priests of Karbala.

The great prosperity of the place of pilgrimage and its large number of inhabitants is emphasised on the occasion of the pilgrimage of 'Abd al-Karim, a favourite of Nādir Shāh. Rādīyya Sultān Bēgüm, a daughter of Shāh Husayn (1105-34/1694-1722), presented 20,000 mādirūs for improvements at the mosque of Husayn.

The founder of the Kāḏārī dynasty, Aḡmā Muḥammad Kān, towards the end of the 13th/18th century, presented the gold covering for the dome and the mausoleum of the sanctuary of Husayn (Jacob, in A. Nöldeke, op. cit., 65, 4).

In Dhu l-Hijjah 1215/April 1801, in the absence of the pilgrims who had gone to al-Nadīf, 12,000 Wahhābis under Šaykh Saʿādī entered Karbala, slew over 3,000 inhabitants there and looted the houses and bazaars. In particular they carried off the gilt copper plates and other treasures of the sanctuary and destroyed the shrine. But after this catastrophe contributions poured in for the sanctuary from the whole Shi'ite world.

After a temporary occupation of Karbala by the Persians, Nadīb Pāsha in 1259/1843 succeeded by Aḥmad Khan, towards the end of the 12th/18th century, won the Maṣḥads for the Persian empire. Nadir Shāh entered Karbala 3 in 1288/1871 began the building of government offices, which remained incomplete, and extended the adjoining market place (documents on the history of Mashhad Husayn are given in A. Nöldeke, op. cit., 51-66).

In 1965 Karbalā had 81,500 inhabitants (1970 estimate, 107,500), a number swollen to well over 200,000 during Muḥarram with its influx of pilgrims. Karbala has always been a particularly rich town, not only because of its possession of the shrine but also because it has been a starting-point for Persian pilgrim caravans to Nadīf and Mecca and a "desert port" for trade with the interior of Arabia. The old town with its tortuous streets is now surrounded by modern suburbs. About half of the resident population is Persian, and there is a strong mixture of Indian and Pakistani Muslims; there have long been Indian connections through the shrine’s benefiting from the former use of Oudh’s harbours. Shīʿite Arabs, the most important tribes amongst them are the B. Sa’īd, Salahma, al-Wuzūm, al-Ṭahāmā and al-Naṣiriyya. The Dede family has been especially prominent; it was rewarded with extensive estates by Sultan Selim I for constructing the Nahār al-Husayniyya.

The name Karbalā strictly speaking only applies to the eastern part of the palm gardens which surround the town in a semi-circle on its east side (Musil, The Middle Euphrates, 41). The town itself is called al-Mashhad or Mashhad al-Husayn.

The sanctuary of the third Imām lies in a court yard (saḥn) 354 x 270 feet in area, which is surrounded by liwāws and cells. Its walls are decorated with a continuous ornamental band which is said to contain the whole Kurʿān written in white on a blue ground. The building itself is 156 x 138 feet in area. The rectangular main building entered by the "golden outer hall" (picture in Grothe, Geog. Charakterbilder, pl. lxxviii, fig. 136) is surrounded by a valued corridor (now called mašām; A. Nöldeke, op. cit., 20, l. 3) in which the pilgrims go round the sanctuary (saʿād) (Wellhausen, Reste arab. Heidentums, 109-12). In the middle of the central domed chamber is the shrine (sandāba) of Husayn about 6 feet high and 12 long surrounded by silver masqarabiyya work, at the foot of which stands a second smaller shrine, that of his son and companion-in-arms 'All Akbar (Mas'ūdi, Kišāb al-Tanbīh, ed. de Goeje, BGA, viii, 703).

"The general impression made by the interior must be called fairy-like, when in the dusk—even in the daytime it is dim inside—the light of innumerable lamps and candles around the silver shrine, reflected a thousand and again a thousand times from the innumerable small crystal facets, produces a charming effect beyond the dreams of imagination. In the roof of the dome the light loses its strength, only here and there a few crystal surfaces gleam like the stars in the sky" (A. Nöldeke, op. cit., 25-6).

The sanctuary is adorned on the Kibla face with magnificent and costly ornamentation. Two manāras flank the entrance. A third, the Manārat al-'Abd, rises before the buildings on the east side of the Saḥn; south of it the face of the buildings surrounding the court recedes about 50 feet; on this spot is a round wall mosque. Adjoining the Saḥn on the south side is a large madrasa the courtyard of which measures about 84 feet square with a mosque of its own and several mīrābs (on the present condition of the sanctuary: cf. A. Nöldeke, op. cit., 5-26, on its history 35-50 and on its architectural history, 51-66).

About 600 yards N E of the sanctuary of Husayn is the mausoleum of his half-brother 'Abbas. On the road which runs westward out of the town is the site of the tent of Husayn (ḵaymagdā). The building erected there (plan in Nöldeke, pl. vii; photograph in Grothe, pl. lxxxiv, fig. 145) has the plan of a tent and on both sides of the entrance there are stone copies of camel saddles.

On the desert plateau (ḵammād) west of the town stretch the graves of the devout Shi'īs. North of the gardens of Karbala lie the suburbs, gardens and fields of al-Bkēr, to the north-west those of Kurra, and to the south those of al-Ghādhrīyā (Yākūt, iii, 768). Among places in the vicinity, Yākūt mentions al-‘Akr (iii, 695) and al-Nawāyīb (iv, 816).

A branch line diverging north of al-Ḫīla connects Karbalā with the Baghdaḍ-al-Ḫasra railway. The sanctuary of Husayn still has the reputation of securing entrance to Paradise for those buried there, hence many aged pilgrims often protest in failing health go there to die in the holy spot.

KARBALA — KARIM KHAN ZAND

He is the author of the following works:

1. A pastoral in which is recorded the names of his masters and also the ghadan given by certain of them, such as al-Kühn and al-Durra-madd.

3. A treatise on the need for modernising the army, Kaff fi al-ghumma fi bā'yin anna karb al-nisā'īn wadīd 'al-dādāl 'al-umma (lith. Fez 1303/1885).

He died at Fez, where he was buried outside the Bab al-Futūb, near the tomb of Yūsuf al-Fāsī.

Bibliography: E. Lévi-Provençal, Chorfa, 217 and n. 1; M. al-Kattānī, Fihris al-fāharīs; A. Ibn Śūdā, Dālī, i, 149, ii, 288, 324, 471.

KARIM KHAN ZAND (MUHAMMAD B. KARIM), (ca. 1164/93-ca. 1751-70), the founder of the Zand dynasty and the de facto ruler of the greater part of Persia. Having no claim to the title of shah, he instead, assumed, that of wākil, "regent, lieutenant".

Brought up during exile of the Zand tribe imposed by Nādir Ṣāḥib Afgān, on the latter's death he succeeded in conducting the Zands from their exile in northern Khūrāsān to the village of Pīrīya, modern Pārī, 30 km. south east of Kermān. When Kārīm, originally a lateral branch of the Lakk [g.v.], had had their settlements prior to their deportation.

In the course of clashes with neighbouring chieftains, he displayed great military skill. In alliance with the Bakhtiyāri 'Ali Mardān Khan [g.v.], he seized Ṣaḥān; there, in 1164/1751, they placed on the throne a Safawid boy of eight, whom they styled Ismā'īl III. In his service Kārīm held the offices of commander-in-chief, and 'Alī Mardān that of guardian of the sovereign, wākil. Fearing 'Alī Mardān's duplicity, Kārīm captured Ṣaḥān, took Ismā'īl III under his own guardianship, assumed the title of wākil and put 'Alī Mardān Khan to flight.

When the latter's attempt to win support for a new Safawid puppet failed and the Bakhtiyāri chief was assassinated by a Zand commander, Kārīm found himself obliged to defend Ṣaḥān and Shīrāz against the rival claimants, including the Kāджār Muḥammad Ḥasan Khān, the Afgān Fath 'Allī, and the Afgān Āzād Khān. At the end of a fierce struggle for the vacant throne, during which Muḥammad Ḥasan was assassinated by his own tribesmen in 1172/1759, Fath 'Allī and Āzād Khān had no option but to join forces in 1176/1765 and in 1179/1765; Kārīm, already more popular than the other contestants, emerged as the undisputed ruler over the whole of Persia except Khūrāsān, which he purposely left in the hands of Nādir Ṣāḥib's descendants. Although subsequently he had repeatedly to suppress local revolts, such as those of the Kāb tribes in Khūsūstān, the Līrāvī nomads in Kūh-i Gīlīya, of Taḵī Durrānī in Kīrmān, Naṣīr Lārī in Fārs, Mr Muḥānā in the Persian Gulf region, and Ḥusayn Khūl Kāḏārī in Astārābād and Māzandarān, on the whole his rule brought a policy of sorely needed peace to Persia. When Ismā'īl III, who had deserted Kārīm in 1165/1752, returned in 1172/1759, he formally deposed him as incompetent, holding him, however, in honoured captivity with a large pension in Abāda [g.v.]. Kārīm did not regain the title of wākil, using it thereafter in the sense of wākil al-raṣā'il ("regent for the people") rather than that of wākil al-dawla. Under Kārīm his capital in Shīrāz, enriching it with magnificent buildings, some of which stand to this day. Through prudent husbandry he developed commerce, handi-
crafts and agriculture, encouraged foreign trade, and granted some commercial privileges to European companies in the Persian Gulf, mainly in order to utilize their power to enforce order and security on the coasts. His sole expedition beyond the Persian frontiers was the capture of Basra in 1190/1776, which was a challenge to the commercial supremacy of this Ottoman port rather than an attempt to destroy Ottoman rule in Mesopotamia. Karim's last years were darkened by the loss of a young son, the death of a beloved wife, and a series of illnesses (colds, tuberculosis, etc.). He died in his death in 13 Safar 1193/2 March, 1779. He was buried in Shiraz, whence the hostile Kadjars transferred his remains to Tehran and later to Namaf. Karim's rule was a paternal monarchy, based on tribal traditions common among the Lakk and Lur nomads. His bodily strength, his skill in arms, his sense of humour, his concern for his people's welfare, and his anxiety to secure prosperity for the inhabitants of Shiraz, have provided materials for a series of folk tales, specimens of which can be found in Tadgirdat U-Abrār, Fārs-Nāma-yi Nāsiri, Rauḍat al-Safā-yi Nāsiri; cf. also J. Malcolm, History of Persia.

(A. H. Zarrinkoob)

KĀRIMĪ, name of a group of Muslim merchants operating from the major centres of trade in the Ayyūbid and Mamlūk empires, above all in spices. No satisfactory etymology has yet been given of the word Kārīmī, Kārim or Kārīm. Quatremère follows al-Kalḳashandi’s statements and maintains that the name derives from Kānim, a territory in Western Sudan, which was altered into Kārīm. Al-Kalḳashandi commented that the word occurred as such in the disūns and had no meaning in Arabic, and Ibn Mājdīd (q.v.) does indeed mention the ancient (ṣādim) pepper route from the Bilād al-Kānim (Western Sudan). Littmann proposes an Aramaic origin, deriving it from the word Kuararīma, a spice imported into Ethiopia by the Kārimī.

It is certain that the Kārimī were in the first place merchants of the Indian Ocean and the Red Sea, so that Littmann’s idea that the word Kārīmī may be connected with the name of some kind of merchandise is suggestive. From al-Maqrīzī’s description of the Cairene markets it is clear that the amber (= kārim or kahramān) market was very active. Yellow amber is still named Kārim in Egypt, and the origin of the term Kārīmī may thus be explained. Blochet also advances this derivation. G. Wiet remarks that the source of yellow amber is to be sought in the Baltic region and not in the merchandise of the Indian Ocean. Wiedemann, who did not occupy himself with the Kārimīs, cites Nuwasyr, who mentions the import of amber from the Byzantine empire, i.e. through Byzantine markets. Fischel, Goitein, Ashlor, Naura, R. de Miglio, Darrag, Sublet and Cahen on the other hand concentrated more on the development of the Kārimī corperation than on the origin of the term.

It is evident from the Arabic documents that the word Kārīm was also used to design a fleet, especially a merchant fleet. The Geniza documents point to a similar meaning of the term.

In any case, the term Kārīm occurs for the first time in a text transmitted by al-Kalḳashandi. It relates that the Fātimids established a special fleet (five, later of three ships) to protect the Kārīmī ships on their journeys between Aydīshāb and Sawākīn against the pirates of the neighbouring islands, especially the Dahlah group. The command was committed to the wālī of Kūs (q.v.), sometimes however to an emir in direct contact with the government in Cairo. Saladin lent growing support to the Kārīmī trade, which yielded high revenue from the taxes imposed. Al-Maqrīzī reports that Saladin demanded beforehand the taxes for four years when the Kārimī merchants (Tdjudīřār al-Kārimī) came from Aden in 577/1181. It is worthwhile to note that al-Maqrīzī speaks of “merchants” and not simply of “Kārīm”, in the sense of a trade or a fleet.

One year later (578/1182) the Kārīmī encountered their most serious crisis, with the attempt of the Crusaders to establish themselves into the Red Sea. This constituted a very great danger to Islam, for the Crusaders would thus threaten the sacred territory of the Hīḍāzā, but Saladin’s greatest concern was the danger to the Egyptian monopoly of the transit traffic in the Red Sea. However, Saladin’s victory over Renaud de Châtillon enabled him to keep the Frankish powers and merchants away from this most important trade route between the West and the Far East, and promoted the expansion of the Kārīmī merchants.

In 579/1183 Saladin’s nephew and deputy in Egypt, Taḵt al-Dīn ʿUmar, built the famous funduq al-Kārīm in al-Fustāṭ, the port district of Cairo. At this period both Jewish and Coptic merchants had more or less to abandon their major enterprises in the Red Sea. They were replaced by Muslim merchants, principally the Kārīmīs.

Lack of sources makes it difficult to write the history of the Kārīmī during the Ayyūbid period after the death of Saladin. The Mamlūk sultans, however, maintained the commercial policy of their predecessors and thus promoted the expansion of the Kārīmī enterprises.

The transition from Ayyūbid to Mamlūk government in Egypt was full of interior and exterior problems: the crusade of Saint Louis and the advance
of the Mongols on the one side, and on the other the revolts of the Arab tribes settled in Egypt. During this critical period the Karimī and other wholesale merchants thought it wise to reduce imports into Egypt, especially when al-Malik al-Mu'izzar Kuţuz [q.v.], to help finance his campaigns, imposed such drastic levies on the merchants of Egypt that they lost one third of their wealth. Baybars I [q.v.] abolished these measures, and ordered his wali in Kūţ and Ayyūhāb to treat the merchants well, so that ships sailed without delay from Yemen ports to Ayyūhāb. Ibn Wāsīl [q.v.] reports that no one took action against them and that their property did not suffer any losses at all.

The activities of the Karimī started a new chapter in the history of the development of the Egyptian capital and of commercial financing. If the capital of a wholesale merchant, Muslim or Karimī in Egypt is estimated before the Karimī period at 10,000 to 30,000 dinārs, the fortune of a Karimī-merchant amounted to one million dinārs or more. Because of his financial capacity, the reputation of the Karimī Naṣr al-Dīn Muḥ. b. Musallam al-Bālīsī (d. 776/1375), whose fortune was calculated to amount to ten million dinārs, went beyond the boundaries of the merchant circles of Egypt. Muslim merchants from India, who carried on trade in Egypt, Mecca and Aden, confirmed that no Indian possessed such a huge fortune, except one (Indian) unbeliever,—and he was associated with Naṣr al-Dīn. Tādž al-Dīn al-Karimī, known as al-Damāmīnī (d. 731/1331) left 100,000 dinārs, a more credible figure than the one reported about al-Bālīsī. Describing the enormous wealth of the Saha, the unbelieving Indian merchants from Dawlatābād [q.v.], Ibn Baṭṭūṭa remarks (iv, 49): “They resembled the Karimī-merchants in Egypt”. Elsewhere (iv, 259) he compares the Sati of China with the Karimīs.

The Karimīs earned higher profits than the third of the purchase-price allowed by Muslim law. Besides bartering, they paid both in cash and by cheque. Indeed, through their network of markets and transactions, the Karimīs operated as a kind of banking institution, the most important clients of which were sultans and amirs whom they assisted not only with credits but also by supplying troops and arms. The Mamlūk sultan was not the only ruler to borrow money from the Karimīs. The king of the Yemen also was given credits when he found himself in financial difficulties. Even Mansā Mūsā, the king of Māli who owned the gold-mines in western Sudan, borrowed money from a Karimī-merchant before he left Mecca to return home.

The Karimī commercial houses were primarily family-owned firms, each generation inheriting the experience, assets and clients of the preceding one, and the younger members being sent away for training to the various markets of the huge enterprise. Freemen as well as slaves represented the firms, studied the markets, brought in clients, imported and exported merchandise. One Karimī is reported to have sent his slaves as representatives to the markets of the Indian Ocean and in the western Sudan in order to trade and carry through transactions in his name. Of the Karimī Naṣr al-Dīn Muḥ. b. Musallam, whose father, grandfather and paternal uncle had also been merchants, it is reported that none of his slaves died while they were trading on his behalf in India, the Yemen, Ethiopia, Mālī and Bilād al-Takrūr, so that his affairs had not sustained any loss on that account.

During the reign of sultan al-Nāṣṭr Muḥ. b. Kalā-
to Egypt in 786/1384, had made costly gifts to sultan Barqûk and the leading emirs. He was attacked by Shihâb al-Dîn al-Fârîqî, an influential Yemeni merchant resident in Egypt (possibly the head of the Yemeni Kârimîs and brother of the contemporary Yemeni vizier al-Asghaf). Al-Kharrûbî then produced a letter addressed to him by the Yemeni king, in which was cited a letter by al-Fârîqî, alleging that corruption was rife in Egypt since there was no effective ruler; al-Fârîqî had therefore suggested to the Yemeni king that he should send no more tribute, because the ruling Egyptian sultan was one of the basest and most contemptible of the Mamlûks. Barqûk ordered that al-Fârîqî should be imprisoned, have his tongue cut out, and his property confiscated; al-Kharrûbî on the other hand was presented with a costly robe of honour and granted the title Kabîr al-Tudjûdâr. This passage tells us something about the conditions required to obtain this title: it was a symbol of the most privileged position among the merchants, acquired by loyalty, unimpeachable religious and political behaviour and wealth.

Government policy was to favour the Kârimî merchants. The násîr al-bahâr wa’l-kârim, inspector of spices and Kârimî-merchandise, was responsible for the interests of the Kârimis in the Red Sea and Egypt and collected customs and taxes from them. This function was so esteemed that it was sometimes assigned to the vizier or the násîr al-kâdîss. The final decision however was with the sultan since the dues levied on Kârimî merchandise accrued to his treasury. Under al-Mu’ayyad Shâyi’kî, the importance of this function is demonstrated in a diploma of appointment, the text of which has been transmitted by Ibn Hâjîd al-Hamûdî [q.v.] and in which the post is offered to the Shâfi’i fâhîk Kamâl al-Dîn al-Bârizî. Since Upper-Egypt was during a long period the ordinary trade-route for the import of oriental merchandise, another letter of appointment emphasized that the chief wâlî of Upper Egypt, Wâlî Wûdûd al-Šâfî’d, should pay special attention to the commercial aspects of his post, as being “the gate to the Yemen and Hîdjarî”. A third letter of appointment mentions the great importance of Kârimî activities in Upper Egypt: it is the chief wâlî’s duty to treat them well and to promote their interests.

In 832/1429 Barsbây [q.v.] introduced his monopoly of pepper and a rigid supervision of the market. He bought pepper in Djudda on his own account and even forbade the merchants to deal in it before he had concluded his own affairs. He also curtailed the pepper and spice trade with the Franks in Alexandria by fixing prices. The Franks were hard hit since they had to acquire the pepper at a price which was about 50 dinãrs above the market-price. They were forced to limit their purchases and often had to return home without having sold their merchandise. The Egyptian merchants also sustained losses. When the Kârimî-merchants tried to trade clandestinely with the Franks, Barsbây threatened in 833/1430 to bar them completely from trade. Two years later he forced them not to trade at all without his permission. In 838/1435 he curtailed the spice-trade in Djudda and fixed the prices for the trade with the Occident. The ensuing difficulties between Egypt and the western traders were further increased by the Catalan and Turkish pirates. Çâmikû [841/1438-756/1453] restricted the period of residence of the Frankish merchants in Egyptian ports to six months at most.

The deteriorating situation of the Kârimî-merchants during the 9th/15th century was however due not only to the policy of the Mamlûk sultans, but also to increasing economic crisis in Egypt, and to the policies of the Yemeni king al-Mâjîr âl-Âhad, who tried to extend his power over the Hijâz and to oust Egypt from its privileged position there, while in the Yemen he established a reign of terror. The Kârimîs fled to India or Djudda, leaving part of their fortunes behind in Aden. Also the merchants and ships’ captains from China sustained losses. When despatching a gift in 839/1435, the emperor of China made a strong protest against the measures of the Rasûlid ruler. The Egyptian government meanwhile not only tried to lure the merchants and captains from Aden to Djudda, but to establish a state-monopoly.

On the northern frontiers of the Mamlûk domains the political situation remained tense during the 9th/15th century and necessitated continuous Egyptian expeditions, which burdened the state-finances. By increasing the prices of monopoly merchandise, Kâthbây [q.v.] financed sixteen military expeditions, which cost altogether 8 million dinãrs, besides the soldiers’ pay. Since the rural economy was not able to cover these expenses, they had to be borne by imposts on trade, which caused a set-back to the Kârimî-merchants. From then on they started losing their lucrative business. Many of them entered the sultan’s service, and became the wholesale merchants of Egypt par excellence. Others emigrated to India, especially to Kâlikât [q.v.] and Cambaya, and many turned to monetary transactions, less profitable to themselves but causing many difficulties to the State. They exported so many copper coins, that the sultan in 832/1429 strictly forbade their export to Djudda. The prohibition, however, had to be repeated in 839/1437. How difficult the merchants’ position was during Barsbây’s administration is clearly indicated in a contemporary’s note that a merchant had to contract a loan in order to cover his expenses while he possessed a stock of merchandise valued at 10,000 dinãrs.

The Red Sea merchants, in contradistinction to their colleagues in Cairo, tried openly and expressly to assert their rights with the sultan. Even Shah-Rûkh, the Timûrid ruler, became involved in this quarrel. He denounced the collection of taxes in Djudda which were not in accordance with the shari’a, and called the fubâkhî and fûtûlî- experts in Cairo “the riding animals of their master’s wilfulness”. Shah-Rûkh tried to intensify the tension between the Mamlûk sultan and the oriental merchants, but did not succeed in forcing the sultan to abandon his monopolizing policy or to collect taxes solely according to jurânic prescriptions. The short-lived penetration of the Chinese fleet to the East African coast and the Gulf of Aden in the first decades of the 9th/15th century could not avail the Kârimîs against the arbitrary behaviour of the sultans, nor could the establishment at this period of close relations between Ethiopia and Europe alter the policy of the sultan of Egypt towards the Kârimîs. Nûr al-Dîn ‘All al-Tawrîsh, the sultan of Egypt, endowed his fatwa with many of the prerogatives of a Kârimî Muslim of Persian origin, who sold arms and European cloth in Ethiopia, was arrested on the charge of high treason. He was accused of having gone to Europe via the Maghrib by order of the Negus in order to incite Alphonsus of Aragon against the Muslims. He was convicted and executed in Cairo in 832/1429. Ibn Hâjîâl al-‘Âskalânî and his pupil al-Sâkhâwî questioned the legality of this verdict and were of the opinion that al-Tawrîsh had promoted the cause of Islam in Ethiopia where he was said to have been in high esteem because of his activities. The envoy’s of Negus Yeshâk did indeed reach the court of Alphonsus V (C. de la Roncière, La découverte de l’Afrique au

**Karim (a.)** means "companionship" in the largest sense (synonym of musâkhāb in L. and the Şâhid, and of bâyat, Baydâwî, and al-Mawardî of the merchant-class. The Egyptian wholesale trader had already, before the Ottomans took over in Egypt, two merchant classes: those who dealt in luxury goods, and the rest. The Mamluks extended their power over both Massawa and Sawaïk, the princes of the latter becoming a vassal of the sultan and receiving his diploma from the chancellery in Cairo.

According to Ibn Taghribîrî, the Karimis did not appear on the Egyptian market in 859/1455, and after 880/1474 they are no more mentioned in contemporary sources. So far as we know, the last two Karimis in Egypt, All b. Mu. b. Yâsuf Kâlyûbî and All b. Badr al-Dîn Hasan b. 'Ulayba, died in 897/1491-92.

Not only the Karimis but the merchant-class as a whole lost their high entrepreneurial position. The Revolt of Wandad-Hurmuzd.

We know scarcely anything of the Karinid princes before the revolt of Wandad-Hurmuzd in 165/781, and we must have recourse to the history of Tabaristan and of other local princes for some incidental references. According to the local historians (Ibn Isfandiyar, 98), a new dynasty was created about 45/665 in the Shawk Mountain situated in the south-east of Tabaristan (Ibn al-Fakhth, 305) with Firrûm as centre (Hudud al-Salam, 135-6); it is very difficult to recognize in these different names mountains that form the eastern chain of the Elburz, for they have changed in name or their names may be easily confused, even when one does not come across several names for one and the same mountain (Rabino di Borgomale, Mzandaran and Astarâbâd, 2). Always according to the local historians (Ibn Isfandiyar, 98-9, 237; Zahâr al-Din, 206-7, 323-4), the inhabitants of Kûh-i Karin helped Surkhâb son of Bâw to regain his throne from the usurper Aghur-Walâgh (the Zar-mihrid?), who had assassinated his father ca. 59/670-80 and had maintained himself for 8 years. Surkhâb was crowned Pâdshâh at Firrûm, which would suggest a return to the Karinid patrimony, but the suzerainty remained with the son of Farrughšâh Gilângâhî, Gil Gâwrârâh, who took the title of King of the Mountains (Farshwâdgar gâhrî; Ibn Isfandiyar, 97; Zahâr al-Din, 42).

It was not until 917/216 that Yaâdî b. al-Muḥallâb, strengthened by his success at Gûrûn, tried to annex Tabaristan also to the Umayyad empire, but he fell in his turn in an ambush (like Maṣâkâla b. Hubâyra in 54/674, Muhammad b. al-Āshâa in 55/675), and had to content himself with imposing a tribute sufficiently heavy for him to turn back against Dîrûdjan, which had revolted in his absence (al-Tabari, ii, 1320-1, 1327-9; al-Baladhuri, 336-8 etc.). Nevertheless, the inhabitants of Tabaristan revolted fresh under Hâshim (105-25/724-43) (al-Ya’qûbî, Taʾrîkh, ii, 381), then under Marwân ii (al-Baladhuri, 338; Ibn al-Fakhth, 308). The ʿAbbâsids were meanwhile recognized in the course of their rebellion (al-Tabari, ii, 2016; Ibn al-Fakhth, 275-7), and al-Mansûr himself succeeded in imposing on the local princes the payment of the tribute they had paid to the Sâsâni, following their complicity in the revolt of Sunbâhî in 137/755 (Ibn Isfandiyar, 118). The conquest of Tabaristan was achieved in the course of the years 142-3/759-60 and resulted in its annexation to the ʿAbbâsîd empire, which led to the installation of military garrisons in the mountainous regions, notably at Firrûm and at Khurramâbâd (Ibn Isfandiyar, 122-3). The Bâwandids profited from the disappearance of the Dâbâyids by taking the title of Padâsawshâr-gâhrî (Ibn Isfandiyar, 120), indicating by it their pre-eminent position in Kûhîstân. The local princes appear to have adapted themselves poorly to ʿAbbâsîd tutelage, and they revolted in 165/781, when the governor of Tabaristan tried to apply an increase in the taxes ratified by the jurist Aḥmad b. Ḥanbal, arguing that Tabaristan had surrendered by force (Ibn Isfandiyar, 125). The inhabitants of Um-mildar-Kûh (to the South of Amûl) were some time the internal affairs of these principalties (Balîfamî, iii, 492-3; al-Tabari, i, 2659-60). But even these slight disputes (compared with the tribute paid to the Sâsâni; Ibn Isfandiyar, 118) were not to be discharged regularly or in full, judging by the evolution of the proportionate forces maintained by the central power and the local princes (al-Baladhuri, 337-8), for numerous expeditions were launched against these regions to restore the caliphal authority.

KARINIS, a local dynasty of Tabaristan, who reigned over a part of the mountainous regions from the age of Khusraw (Chosroes) I (531-79 A.D.) until 225/840.

Origins. The Karinids claimed descent from Kûrîn son of Sûhrâb, whose ancestor was none other than the legendary blacksmith Kâwâh [q.v.]. According to the Arab and Persian chronicles, Sûhrâb was the most powerful among the great men of the Sâsâni Empire at the time of Kâwâh I (488-531 A.D.), but the conflict of sources with which A. Christensen concerned himself in Le Rigne de Kâwâh I et le communisme mandate, 94-5, led him to ask himself whether Sûhrâb and his elder son Zarmîhr are not in reality one and the same person. The Karinids traced the origin of their power to the age of Khusraw I, who allegedly rewarded Zarmîhr and Kûrîn son of Sûhrâb for the help they brought him to repel an attack of the Turks (Ibn Isfandiyar, 93-5; Zahâr al-Din, 37). In fact, it is probably a case of a legend invented for the glory of Kûrîn, confused further with a name of the chief of the great noble family of Kûrîn (Christensen, L'Iran sous les Sasanides, 98-9). Kûrîn son of Sûhrâb received as a legend invented for the glory of Kûrîn, confused further with a name of the chief of the great noble family of Kûrîn (Christensen, L'Iran sous les Sasanides, 98-9). Kûrîn son of Sûhrâb received as a local dynasty of Tabaristan, Kûrîn son of Sûhrâb received as a local dynasty of Tabaristan, Kûrîn...
KARINIDS

Hurmuzd assured himself of the alliance of the other local princes (Sharwin the Bawandid in the Sharwin Mountains, Shahrwān Bawandī in the Bawandī Mountains, Masmūghān Walsāsh (the Zarmihrids?) at Miyāndūrūd near Sāryā, Wandād-Safān the Kārinīd in the Wandād-Safān Mountains to the west of Tabaristān), and proclaimed a revolt, which began with a massacre of the Muslims (Ibn Isf., 122-3). Exploiting the lie of the land, Wandād-Hurmuzd held the mountainous regions for several years (1255/785-5) and inflicted numerous defeats on the caliphal armies. Al-Mahdī had to organize four expeditions, each of growing importance, at the head of which he placed generals of ever-greater renown (Sālim al-Farghānī, the Amīr Fīrāšah, 'Umar b. al-ʿAllā'ī in 167/785, Taym b. Sinān, but in vain. He had to send the heir to the throne, al-Hādī, in person, accompanied by the general Yazīd b. Mazyād, to obtain the surrender of Wandād-Hurmuzd (Ibn Isf., 44-5 126-3; Zāhīr al-Dīn, 155-5; al-Tabārī, iii, 517-8, 551, 703; Ibn al-Fakhr, 304). The latter was imprisoned in Baghādād (al-Yaʿqūbī, Taṭrīkh, ii, 487), and his brother Wandād-Safān had sought his own destruction in executing a client of the caliph, Bahram b. Fīrāz, recently converted to Islam. Wandād-Hurmuzd was meanwhile freed after having promised to give up his brother to the caliph, but once in his mountains, he did nothing about it (Ibn Isf., 130-2; Zāhīr al-Dīn, 160). His hostility to Islam persisted as before (Ibn Isf., 140), and he profited by acquiring 1,000 giārīb of demesne lands in the environs of Sāryā that had been put up for sale (Ibn Isf., 131; Ibn Rusta, 150, tr. 173). Wandād-Safān continued his opposition to ‘Abbāsīd penetration by having executed ‘Alīyar b. Hārdūn, sent by the caliph in 127/831 to carry out again the cadastral survey (Ibn Isf., 141-2). These multiple acts of insubordination forced Ḥūrān al-Raṣḥīd, at the time of his move to Rayy in 189/805, to summon Wandād-Hurmuzd and to reaffirm solemnly the sovereignty of the caliphate and to exact guarantees of submission: Wandād-Hurmuzd had to join in paying tribute, to send troops in event of war, and at the same time was constrained to “set aside all the titles that he had used, including that of the caliph (the Maʾmūn lands) and to send his son Kārin as hostage to the court. In exchange, he was reinstated as “Ispahbadh of Kurāshān” (Ibn al-Fakhr, 304; al-Tabārī, iii, 705; al-Yaʿqūbī, Taṭrīkh, ii, 514; Ibn Isfandiyār, 44, 142-3). Despite the fame of the revolt of his grandson Mazyār, it seems to us that the personality and movement of Wandād-Hurmuzd merit more consideration on the part of historians, for he effected a coalition that only Ḥasan b. Zayd was able to recreate in 250/864, and opposed with success the attempts to repress his revolt, whereas Mazyār collapsed without fighting in 225/840.

Kārin was sent back to his father in 192/808 (al-Yaʿqūbī, ii, 520; Ibn Isf., 143). In the course of the struggle between al-ʿAllā’ī and al-Maʾmūn, “All b. Ṭāṣ b. Māḥān in 195/811 offered some presents to the “princes of Daylam, the mountains of Tabaristan and the neighbouring regions” and made them promise that he would cut the route from Khurāsān to Baghādād (which was dominated by the mountains of Tabaristan) and that he would hinder the arrival of reinforcements for Tāhir b. al-Husayn, commander of the troops of al-Maʾmūn. The local princes promised their help (al-Tabārī, iii, 820), but “All b. Ṭāṣ b. Māḥān then killed Mazyār in his mountains. According to the local historians, Wandād-Hurmuzd died in the time of al-Maʾmūn (198-218/813-33) after having reigned 50 years. His son Kārin succeeded him for 40 years (Ibn Isf., 144-5; Zāhīr al-Dīn, 321), but this information is certainly false, for, if one adds the 30 years of ʿAll b. Ṭāṣ b. Māḥān’s reign, we get 70 years, which is impossible. Apart from these sources attribute to Mazyār, one cannot see how these two princes could have reigned 40-30 years, when there were 27 years between the accession of al-Maʾmūn (in 198/813) and the execution of Mazyār (in 225/840). Besides, Ibn Isfandiyār (145-7) recounts the participation of Kārin in the campaign of al-Maʾmūn against the Byzantines (the first dating from 215/830), whilst this information contradicts himself in saying that Mazyār profited from this campaign to eliminate his adversaries.

The fact remains that Kārin lost his possessions bit by bit, following the attempts of his rival Shahrīyār to nibble them away. Then, when he succeeded his father, Mazyār found himself at the head of a diminished principality (Ibn Isfandiyār, 146). He even lost his possessions completely following a battle against Shahrīyār, who annexed his domains. Mazyār took refuge with his cousin Wandād-Ummīd, son of Wandād-Safān, but the latter was constrained to give him up to the Bawandid (Ibn Isfandiyār, 146-7). Whilst, according to Ibn Isfandiyār, Mazyār escaped from prison and made his way to Baghādād and to the caliph al-Maʾmūn (ibid., al-Tabārī (iii, 1019) attributes to the governor of Tabaristan, Ṭāḥīb al-Allābī b. Khurāshāb, the victory over Shahrīyār the Bawandid and the sending of Mazyār to al-Maʾmūn in 201/816-7 (then at Marw, since the Caliph did not return to Baghādād until 204/819; cf. Ibn al-ʿAthir, vi, 253; Balʿamī, ii, 518). Whatever may be the case, Mazyār had to become a convert to Islam and received the name of Abuʾl-Ḥasan Muḥammad b. Kārin, with the title of “mawld of the Commander of the Faithful” (al-Tabārī, Taṭrīkh, ii, 150; al-Tabārī, iii, 1298; Ibn Isf., 147). He was afterwards named, in 207/822-3, co-governor of Tabaristān, Rūyān and Dunbawand with Mūsā b. Hafs, and charged specially with the control of the mountainous regions that he knew best (al-Tabārī, iii, 1066, 1096; Ibn Isf., 148). On his return to Tabaristān, Mazyār appears to have begun by eliminating the other local princes, both his own kinsmen, notably his brother Kūhyār (al-Tabārī, iii, 1295; al-Balāḏūrī, 339) and his nephew, Kārin, son of Shahrīyār (al-Tabārī, iii, 1283), as well as his rivals, the Bawandīs: ca. 210/ 825-6, he invaded the Sharwin Mountains, defeated Shāpur, son of Shahrīyār, and even had him executed on learning that he would become a convert to Islam and a “mawld of the Commander of the Faithful” like himself (al-Tabārī, iii, 1095; Ibn Isfandiyār, 148). He annexed the Sharwin Mountains and added the title of Malḵ al-Dībāl to his already pompous titulature: “Gīl-Gīlān, Ispahbadh of Kurāshān, Padishkhwargarshāh” (al-Yaʿqūbī, Buldān, 276, tr. 81), which is identical to that of Farruḵḥān Gīlānshāh at the time of the Arab conquest (cf. Balʿamī, iii, 493). These titles do not indicate any claim to Khurasān, in contradiction to what several historians have thought (Ażẓi, 186; Minovī, 24; Minorsky, in EI, art. Māzāyār), otherwise al-Maʾmūn would not have used this titulature in his correspondence with Mazyār (al-Tabārī, iii, 1298 gives the variant Ispahbadh/ Ispahbaḏlān).

This policy of concentrating power for his own sole profit is at the origin of the “treason” of his own kinsmen in 225/840, who saw in it the only means of their being restored as princes (al-Tabārī, iii, 1283, 1291, 1295).

Mūsā b. Hafs died in 211/826-7 and was replaced by his son Muḥammad (Ibn al-ʿAthīr, vi, 286), but
Mazyar seems not to have had a high opinion of him (Ibn Isf., 148). He sought to extend his control over the plains of Tabaristan with brutal methods, which alienated the Muslim population of the towns against him after already attracting the hostility of the local Zoroastrian landowners (Ibn Isf., 148-9). Complaints were then addressed to the Caliph, but Mazyar refused to go to Baghdad for fear of being removed from office on this occasion. On the insistence of al-Ma'mun, he sent the ādān of Amul and Ruyān to inform the Caliph of his actions. The ādān of Amul claimed that Mazyar had abjured the faith, but the Caliph did not believe this accusation (cf. al-Tabari, iii, 1270-1). Despite his ever more independent bearing (he called himself “ally” and no longer “client” of the Caliph; cf. al-Ya'qūbī, Ta'rīkh, ii, 582), al-Ma'mūn named him later as sole governor of Tabaristan (Ibn Isf., 150-1), and al-Mu'tasim confirmed him in his post in 218/833. Having also become a veritable petty king, with an administration modelled on the central power and a considerable personal strength (cf. al-Tabari, iii, 1292), he reached a new degree of insubordination in refusing to send his kharājī to the Tahirids of Khurāsān, to whom he was administratively subject. The Caliph agreed to spare him (probably against the advice of 'Abd Allāh b. Tāhir), and his agents received the kharājī from Mazyar at Hamadān and sent it on to the Tahirid agents (al-Tabari, iii, 1268).

According to a version of al-Tabari (iii, 1269), “Mazyar was also in correspondence with Bābak; he encouraged him (in his revolt) and proposed to help him”, but this sentence is perhaps truncated like the sentence on the stirring-up of the peasants (also 1269), whose correct reconstruction (1278-9) gives a completely different meaning. Let us note that there is no question anywhere else of any complicity of Mazyar with Bābak, although the rumours and accusations hurled against al-Afših are very numerous. Towards the beginning of 223/end of 837, there was planned an expedition of al-Afših against Mazyar, but only because of his tyranny and his insubordination (al-Tabari, iii, 1269-71; al-Baladhuri, 339; Ibn Isf., 159; Zahār al-Dīn, 167). The thesis of a vast “anti-Arab plot” fomented by Bābak, al-Afših, Mazyar and the Byzantine Emperor Theophilius at this period is only a fabrication made up by the historians (M. Minovi, 26; M. Azizi, 212, 304, etc.).

Feeling himself threatened also, Mazyar ordered the cadastral survey to be carried out again and the kharājī to be levied before the end of the month of Tir/August 838, and his agents surveyed in two months what had usually been surveyed in twelve months and in three sessions (al-Tabari, iii, 1270-2). Besides, the tension between Mazyar and the Tahirids worsened the more 'Abd Allāh b. Tāhir succeeded in setting the Caliph against this “tyrannical and insubordinate prince-governor”, the one who led him to rebel, revolt, refuse the kharājī and impose his ascendancy over the mountains of Tabaristan and its adjacent parts (al-Tabari, iii, 1269). Certain sources even assert that this insubordination was encouraged by al-Afših, who urged Mazyar to revolt (al-Tabari, 1269, 1305, etc.). It is undeniable that one meets with this accusation against the rival of the Tahirids, who had become ambitious after his victory over Bābak in 222/837 and over Theophilius in 223/838, it is not certain that it corresponds to reality, for as al-Ya’qūbī suggests (Ta’rīkh, ii, 583), Mazyar addressed himself in these terms to Mazyar: “...By God, your falsehood will not save you from death. Don’t perpetrate a falsehood to end your life”, then Mazyar regained his composure and protested that he was ready to fight. By God, he has not written to me or entered into correspondence with me.” The position of al-Afših is made clear by the sources: having heard of the conflict that set Mazyar in opposition against the Tahirids, he “hoped that this conflict would be at the root of the dismissal of ‘Abd Allāh b. Tāhir from the government of Khurāsān” (al-Tabari, iii, 1269), for “he believed that, if Mazyar revolted, he would hold out for a long time against ‘Abd Allāh b. Tāhir and would resist until all the Tahirids were driven out of the country, as al-Mu'tasim wasxr: it is possible that he wished to go to Turkestan, to which alerted the inhabitants of Sāriyā, Amul, Ruyān and western Tabaristan (al-Tabari, iii, 1274, 1278, 1283). He had the ramparts of Āmūl, Sāriyā and Tamšīla demolished, which alarmed ‘Abd Allāh b. Tāhir (Ibn Isf., 150-2; al-Tabari, iii, 1274-5). However, the inhabitants of Amul solicited the intervention of al-Mu'tasim, who decided finally to put an end to this prince-governor who had revolted (Ibn Isf., 153-4).

Tabaristan was surrounded on all sides by five armies sent by ‘Abd Allāh b. Tāhir (to the east and south-east) and al-Mu'tasim. Mazyar believed himself secure, for he had recalled his brother Kūhār, whom he had entrusted the defence of the Kārin Mountains (al-Tabari, iii, 1295), and his nephew Kārin b. Shahrīyār, charged with defending the Shārwin Mountains and the eastern chain as far as the Diūr-dān (al-Tabari, iii, 1283). As for the rest of the routes of entry into Tabaristan, his confidants Sarḵhastān and al-Durra had to prevent the entrance of troops, the first from Diūr-dān, the second from al-Rayy (al-Tabari, iii, 1295-6).

Seeing himself surrounded, Mazyar tried to disencumber himself of the prisoners by rousing al-ḥarakāt al-makhkārīn min bayn al-dāhākīn, but his manoeuvre miscarried (al-Tabari, iii, 1278-80 and not 1269, which has inspired more than one commentary of it as a social, agrarian, Mazdakite movement etc.). The collapse of Mazyar was quick; some soldiers of Sarḵhastān brought in some soldiers of al-Ḥasan b. al-Husayn with whom they had fraternized, and not Tamšīla was taken by surprise (al-Tabari, iii, 1278-80). Kārin b. Shahrīyār, when al-Afših addressed himself in these terms to Mazyar: “...By God, your falsehood will not save you from death. Don’t perpetrate a falsehood to end your life”, Two
brothers, Muhammad and Djacfar b. Rustam, rallied the soldiers of Ruyan and some fortresses of Kalân and Shâlân against their commandant, the brother of al-Durrî, who had surrendered to Muhammad b. Ibrâhîm (al-Ṭabarî, iii, 1299). Having learnt of these successes and the execution of Sarkhâstanî and al-Durrî, who had both tried to take flight, the inhabitants of Sâriya and of Marraw rebelled the same day, as did the inhabitants of al-Damlrî, Cairo 1356/1937, i, 233). Finally, with a third group the two animals blended into a famous
denoting primarily the Rhinocerotidae of karg.

It should be remembered that the more or less extravagant accounts about China, the east Indies and this Asiatic animal which were already known in Persia had been channelled through India or heard from the mouths of merchants. It was highly praised for the special virtues of its nasal spur, which was believed to be a horn. In fact, it is only an excrescence of the skin made of compressed hair and without any bony support. It was, therefore, in simple good faith that one of the ancient Greek doctors, Ctesias, who described the "white donkey", the unicorn (see PŁ), became the propagator of a fable which he had told to him. He had been in the service of Artaxerxes, the Emperor Domitian depicted them on his coins. An excellent picture of one is preserved in the celebrated Palestina mosaic. In Islam, with the arrival of the 'Abbasid dynasty, the term karkadan seems to have become synonymous with harîgh.

Because they live in the same habitat, the rhinoceros is often found in literature associated with the elephant (see PŁ). They are both known for their weight and prodigious strength, but the elephant, long subjugated to the use of man in the Indies and Persia, was familiar to all, while the fierce and sensitive one-horned beast (nahîd al-barn, from the Greek μονόκερος) was almost unknown in the Near East. In fact, it became the source of a group of fabulous legends which resulted in the myth of the Unicorn, not only in Islam but also in Christianity. Popular credulity soon served to place it among the fantastic animals, and the Emperor Domitian executed by the Daylami guards of Mazyar for his "treason" (al-Ṭabarî, iii, 1293-4). Tabaristân was then thereafter administered by the Tâhirîs (Ibn al-Hâkî, ii, 381, tr. 370). Bibliography: Sources: Apart from the chronicles of Ya'kûbî, Balâdhurî, and Tâbarî—whose information is taken up by the Kitâb al-Uyard: Historia Chalifatus al-Motacim, Leiden 1849—Miskawayh, Bâlâmî, Ibn al-Athîr, etc., one should note above all: Ibn Isfandiyar, Anltrie (summarized 1300 years after Photius, patriarch of Constantinople) in which he mentioned the "white donkey", the unicorn of the Indies (bāχîd karm), the name is taken up again by Aristotle (Hist. Anim., i, 118) and translated bîsîr hindî by al-Dâlahi (Hayaâmî, vii, 123).

From the description given by Ctesias arose the perpetual confusion on the part of most subsequent authors, whether Muslims or not, between two animals: the single-horned rhinoceros and the swift Antelope Cervicapre with straight spiralling horns. This animal took pride of place in Hindu mythology. The confusion was carried over into Arabic by cosmographers, naturalists and lexicographers with the terms harîgh and karkadan. With certain writers these terms denoted only the rhinoceros, and then with others only the Cervicapre (so al-Kawâlid and Abû Hüyâyân al-Tawhîdî—see the margin of al-Damlrî, Cairo 1356/1937, i, 233). Finally, with a third group the two animals blended into a famous
quadruped figure like that already presented in Greek by the Latin zoologist Aelian (De natura animalium, XVI, 20) under the hellenized Indian name of kṣatākṣōn or kṣatākṣōn. The Persian kargaddan can be recognized in this word, and some philologists would see the Sanskrit kariśājan (in the sense of “master of the wilderness”). By contrast the same Aelian speaks in another chapter (XVII, 44) of a pūνδεκαξ, “horned nose”, a formidable enemy of the elephant which he impales on his horn, but Aelian makes no comparison with the previously described “monoceros”. Later, Pline the Elder and then Julius Solinus (Polykístería, tr. A. Golden, 1387) augmented the unicorn’s monstrosity by giving him a horse’s body, elephant’s feet, swine’s tail, a deer’s head and a long slender horn, with a terrifying appearance, in the middle of the forehead.

In the end, the animal became the terror of man and every beast in his vicinity fled “a hundred parasangs away”. Such an animal had been supposedly produced by the crossing of an elephant with a mare, and it was the only horned soliped. It was famed for the speed of its running. According to the sources, the fertile female of the species carried its young from three to seven years, and the young acquired all its teeth in the first year so that it could push its head from its mother’s womb and browse on the foliage in passing. As soon as it was born, it ran away swiftly to escape the licking of its mother’s tongue which bristled with prickles, and this formidable lancing was one of the “Chinese tortures” inflicted on condemned men.

The karkaddan could live 700 years, but was not able to reproduce until the age of 50. Its impenetrable leathery skin was used by the Chinese to cover their breastplates, yet the monster was moved by the cooing of a turtle dove, whose company it sought. Similarly, it would dart to the side of a young virgin in the jungle, and is found in every region of India; the horns which come from these beasts are very beautiful. In the horn there may happen to be the picture of a man, a peacock, a fish or even other pictures. The Chinese make belts of these and the price of them in China reaches 2,000-3,000 dinars or more according to the beauty of the picture.” The Chronicle further adds that there were imported into China “ivory, incense, copper ingots, sea shell ... and this vičkān which I have described and which is the rhinoceros”.

The reason for the fame in China of the rhinoceros horn, itself called kargišāhr, kṣiti, kharatū, and khusū (see Ibn al-Afsfān, Nihkhab al-dakhkā'il, in Machriq, xi (1908), 764 f.), which is given here, is not the only one. Indeed, the alchemists and magicians of antiquity in Ethiopia as well as in the Indies had noticed a chemical reaction, in that this organic matter swollen when brought into contact with certain poisonous substances. This property immediately aroused the interest of eminent persons. Those who were ceaselessly exposed to intrigues and plots saw in this the “touchstone” to reveal poisoned drinks and dishes. The Chinese and Abyssinian princes then became accustomed to fashioning bowls, goblets and even the handles of knives from it, imagining that they would thus protect themselves from the treacherous intentions of their enemies. To plunge again into the realm of the fabulous, it was but a short step for the therapists from the idea of a poison test to that of an aphrodisiac and from there they did not hesitate to attribute exceptional properties to the horn, whole or pulverized. From east to west it was presented as a panacea which was sought after at great expense.

The one who possessed this sovereign remedy was protected from the evil eye and spells; he escaped all accidents, including his horse falling; mere contact with its horn instantly cured colic and sciatica, and enabled physicians to substitute products, introducing not only unicornum verum but also unicornum falsum to the drug market. For most of the time, both of them were in fact no more than the long tooth on the spur of the narwhal (Monodon monoceros) parish al-bafyr, the tusks of the walrus (fīl al-bahar, faqis) or even those of the mammoth exhumed from the Siberian soil. All this ivory would arrive from the far north by the fur-traders’ route; Bulghār [q.v.] was one of the chief exchange centres. The true rhinoceros horn actually reached China by caravans from the kingdom of Assam (Kāmartisa), or by Muslim coasters which obtained it from the ports of the Irrawadi delta, from the gulf of Siam (Kirdaṣdi), in Cambodia, Cchampa (Annam), Malaya [see Bahr al-Hind] and in the Red Sea from Ethiopia. Considering the fact that the traffic was so intense, if there had not been some falsification in the rhinoceros horn trade, this not very prolific animal would certainly have totally disappeared from all the countries which knew it for many centuries, as is the case in Borneo. A census of 1937 showed that only 70 were recorded in the whole of Malaya.

In the west, confusion persisted until the 12th/13th century about the identity of the one-horned beast/unicorn and this confusion had been reinforced by the way the Septuagint translators in their transla-
tion of the Bible into Greek had translated the Hebrew term *re'em*. The term occurs seven times in the Bible, three in the Psalms of David, and designates a fierce and dangerous desert animal they rendered as *monohoros*, after hesitation, without any other precise details. The Latin Vulgate took over the name as *unicornus* and so established the unicorn in vulgar Latin.

Meanwhile, there were some clear minds on the Arab side who could present all those extravagant ideas about the position of the *karkaddan-harîsh*; they were certain that they recognized in this term the true pachyderm, the Asian species as well as the African. Among these was the geographer al-Ya’qîbî (Buldân, tr. G. Wiet, Cairo 1937, 191). Of course, al-Dîjâfî himself does not allow himself to tell stories about the animal, and he denounces the ridiculous credulity of the scholars of his time on this subject (Hayyându, vii, 124); but he was not able to draw the parallel between the *kimâr hindî* of Aristotle and the *karkaddan-harîsh*. His suggestion about the route followed by the horn-traders is particularly imaginative (op. cit., vii, 129). According to him, it arrived by caravans in Bâdîgh and left again by sea from Bâṣra for China. Unfortunately, he does not say from where it came, and so it is not clear whether he is drawn from India or Abyssinia or the false horn from Lapland.

Two centuries later the naturalist and Christian doctor ‘Ubayd Allâb b. Dîjâfî Ibn Bukištîshû [see suvrirîf], a polyglot like his ancestors, removed all ambiguity by affirming that "... the *karkand* is the animal which the Arabs call *barîsh* and the Armenians *rimirîm ..." (in *Ṭbd al-dîjamân*, ms. Dîr al-kutub, Cairo). It must be made clear that the Biblical *rimirîm* has no connexion with the white gazelle (*Gazella leptoceros*) to which the Arabs later gave this name [see *GAZÂL*]. With these far-sighted authors can be included other "debunkers" of the fabulous one-horned beast, invented by some traveler-explorers who had encountered the rhinoceros in the course of their wanderings in Asia. Among the Christians there was Marco Polo, who saw the pachyderm in Sumatra in 1291 and who gave an accurate description of it, though slightly permeated with disappointment (Description du Monde, French version by L. Hambis, Paris 1955, 243). Ca. 40 years later the Muslims had the evidence of the Moroccan Ibn Bâṭûṭa [q.v.], who had had the opportunity of observing the beast three times in the Punjab in 1341/1333 (Riba, Cairo 1346/1928, ii, 4). He was impressed by the size of its head and quotes the local saying that "the *karkaddan* is all head!" Mounted on an elephant, he even had to take part in a hunt, together with the Sultan of that place, and he was able to see the rhinoceros brought down and the trophy with its horn displayed in the prince's encampment. But the traveler does not say whether or not he tasted the flesh of the animal, as did the writer of the Chronicle...

As the legends surrounding the *karkaddan* were gradually forgotten, the question of the permissibility of eating its flesh no longer met with any objection, for the animal was recognized as an herbivore. But in the Middle Ages, in an atmosphere charged with the miraculous, certain strict legal writers were able to envisage a prohibition on its consumption if it could be shown that the beast resulted from the cross-breeding of a mare and an elephant. The question has been resolved in time with more exact knowledge of the pachydermata. In our own time, in Islam as elsewhere, the rhinoceros is no longer regarded as a curiosity except in a zoo, and there are only but a few small Muslim tribes in black Africa who hunt it as meat.

**Iconography.** In the plastic arts of Islam, the rhinoceros has not aroused the interest accorded to many other better-known animals, especially the elephant [see §11]. Without the legends and the wonderment provoked by its nasal exsiccence the *karkaddan* would have remained completely unknown to Muslim artists in Arab countries, and so it is rather in the works of Persian, Moghul and Indian artists that attempts to depict the formidable pachyderm are to be found.

Arab painting itself seems to have been limited to imaginary interpretations of the fabled one-horned beast without defining it in any greater detail than the unicorn was defined in Christian iconography. It can be found depicted in the most varied of guises—antelope, equida, bovida, feline and, above all, as a true camel; this last is perhaps due to a linguistic type of confusion arising from the similarity of spelling in Pahlavi of *gurg* (= "wolf") and *karg* (= "rhinoceros"). The "Histories" of Gughtâş and Isfandiyâr, as well as the accounts of Iskandar and Bahrâm [q.v.], give examples of word plays between *sutsur* (= "large"), *butsur* (= "big"), *gurg* (= "wolf"), *tarq* (= "helmet"), *tagarg* (= "hailstone"), *marg* (= "death") and *karg* (= "rhinoceros") which are perhaps due to a linguistics type of confusion. Further, these four creatures are believed to have succeeded in the exploit of killing a *karg* (= *karkaddan*), an exploit to be compared with one of the twelve tasks of Hercules (see W. Ley, op. cit., 19). The rhinoceros can be discovered in very rare *ṭfrâkî* manuscripts of the 7th/13th and 8th/14th centuries included among the monsters and the fantastic animals. These are illustrated and describe various types of beast and cosmography like those of al-Karîmî (*Aḏābī*, in ms. B.N. Paris, no. 2775, 682/1283; ms. Bayer. Staatsbibl. Munich, C, Ar. 454, 678/1280; ms. Freer Gallery of Art, Washington, no. 5451, ca. 782/1380; of Ibn Bukhîštîshû [Manâfîs] al-hayâwân, ms. Pierpont Morgan Libri, New York, no. 500, ca. 694/1295; of the anonymous Na‘î al-hayâwân (ms. Brit. Mus., no. OR. 2784); of Ibn Durâyhim, al-Mawṣîli (Manâfîs al-hayâwân, ms. Eusclial, Madrid, no. Ar. 898, dated 755/1354; see E. de Lorey, Le Bestiaire de l'Eccrusial, in Gazette des Beaux Arts, xiv (1935), 1-21; of al-Dîjâfî (al-hayâwân, ms. unich. Bibl. Ambros., Milan, no. Ar. A.F.D. 140; see C. J. Lamm and O. Lödgren, Ambro- sian fragments of an illuminated manuscript containing the Zoology of al-Ghîshî, in Unv. Ars., Uppsala 1940); and of Ibn Ḫânim al-Mawṣîli (Kashf al-asrâr, ms. unich., Sûleymaniye, Istanbul, Kara Ismail 565).

With the initiative of the non-Arabic styles from the second half of the 7th/11th century, and with the Persian schools which followed them up to the
KARKADAAN — KARKANA

12th/18th century, pictorial art took on a much more realistic approach in its treatment of animal subjects. In it the rhinoceros again became simply a large game animal, a trophy which every prince would like in his bag and which he tracked from high up on his elephant, rounding them up in great droves like the Sasanid monarchs. The Bābur Nāma [q.v.] in its Persian translation of the 10th/16th century by ‘Abd Rahim Khān (ms. Brit. Mus., no. Or. 3774, fol. 352; see pl.), pl. XXIII, and S. I. Tulajev, Miniatures from a 16th century manuscript: Bābur Nāmah, in Marg, xi (1958), 45-8), offers a typical example of a return to the more accurate forms of the animal (see Eletr M. Riaz, Birds and animals in Mughal painting, in Bull. Coll. Arts, Baghdad Univ., i (1939), 12-18). The miraculous element has remained and it is a very commonplace animal, worthy of popular imagery, in what can be made out to be the rhinoceros in certain miniatures of the 10th/16th century, like the one which H. R. d’Allemagne has reproduced on the frontispiece of his fine work on Persia (Du Khorassan au pays des Bachtiaris, Paris 1931). He has taken it from a Persian manuscript (Collect. Vervey), and it represents the animals coming in a delegation up to the mullah Dījamī [q.v.] to complain of their ill treatment at the hands of the winds which blew the elephant which has rather the profile of a bear. But it is interesting that the miniaturist has dressed it with the same elaborate ornaments as its noble neighbour, wishing thus to put them both on an equal footing and giving the impression that the karkaddan too was in the service of man. Also distinctly ingenue are the animal figures illustrating a copy of the Cosmography of Shāhīz Abū Ahmad Mihrī (Kāndūn al-dunyā, wa‘āḍārū bi-kāndūn, ms. Bibl. Musée Topkapı Sarayi, Istanbul, Revan 1385, 570[1565]) as are those of a copy of al-Kazwīnī’s ʿAḍār al-dīn, ms. Bayer. Staatsbibl., Munich, no. C. Ar. 463, of the 12th/18th century), both designed for the intellectual curiosity of a very wide public.

Apart from the miniatures, the rhinoceros appears in the animal compositions of great woolen Indian carpets woven in the 18th century and intended seemingly to decorate the mosques and palaces of the great Mughals. The technique is Persian, but the motif is typically Indian, like the fragment preserved with arable beds on the larger island. There are numerous banks it is possible to reach the south and south-east of the islands only by the "holes" (bahrīa—light depressions of 3-4 metres surrounded for several feet by shallows) and by the "wādīs". These under-water wādīs are vast depressions hollowed out in the middle of the sandbanks; they can be from 5-12 m. deep and as much as 20-30 m. wide. These wādīs never occur just on the coast and are all south of the islands or on the southern slope of a bank; they have been formed by swell currents and are maintained by the interplay of the ebb and the flow. An incoming wave is partially absorbed by the sand and it goes out again in "a little river in the shape of a hair". This then develops into a large wādī of which one or the other branch merges into a hole where the current carries away the silt.

The islands are of great height and the highest points of these little pieces of land, which hardly rise from the sea, scarcely exceed 13 m. But the "land" of the Kerkenians is not restricted to the 36 km. on which their archipelago is stretched, from the marabout of Sidī Yūsuf (Mellita) to Bord Inf al-Rahlk or to the little island of Roumedia. Their "land" also includes the many banks which surround the archipelago where they have "sown" their fisheries. Their maritime life is largely governed by the underwater geography.

The archipelago is supported by an immense underwater shelf which extends from Ras Kapoudia (La Chebba) in the north to the Maharet parallel in the south. It is partially separated from the "Channel of Kerkenah" where the depth of the water is almost 20 m. Otherwise, to find depths of 10 m. it is necessary to go up to 40 miles north of the archipelago. The depth of the water around these islands varies from zero to 5 m. with long, inshore stretches of one metre. Al-Bakrī (Descrip. de l’Afr. Sept., 51) remarked: "In the sea around Sfax there is an island called Karkina, which occupies the centre of El-Casir. It is situated ten miles from Sfax beyond a sea which is dead and not very deep, and the surface of which is never rough." El-Casir here denotes the broad sandbanks, and because of these numerous banks it is possible to reach the south and south-east of the islands only by the "holes".”

stock and for watering the ground and most of these
give brackish water. Before the sinking of an artisan
golden well in 1953, the Kerkenians used cisterns for their
drinking water.

History. The Greek authors scarcely mention
Cercina (Herodotus, Hist., IV, 195; Agathemerus,
Hydropotamia, V.21,22; Diodorus Siculus, Bibl. Hist.,
V.12,4; Plutarch, Parallel Lives, Dion, 25, Marius, 40;
that at the time of the second Punic War the consul
Cn. Serv. Germanus landed at Cercina (217 B.C.) after
he had ravaged Menynx (Djerba), and spared it only
on the payment of a ransom of 10 talents of silver.

There are numerous details in Latin writers. In 195
B.C. while trying to flee towards Antioch from Syria
to escape from the Romans, Hannibal took refuge at
Cercina. But fearing lest he be followed by the boat-
owners from the port, he had tents pitched for him-
self and his retinue, using yards and sails. He offered
his hosts a sumptuous feast and leaving them to enjoy
their libations seized the opportunity to flee (T. Livy,
Hist. Rom., bk. XXXIII, ch. 48). In 88 B.C. Marius and
his son took refuge there in a fishing boat. At the time
of the civil wars between Pompey and Caesar, Sallust
resolved the order to take revenge with his vessels on
the island of Cercina for "the republicans had laid up
some provisions there". (Bell. Afr., VIII, 2, 3 and
XXXIV, 1-3). Towards the beginning of the Christian
era, as a punishment for his culpable relationship
with the daughter of Augustus, C. Sempr. Gracchus
was sentenced to be deported there for fourteen years
and he was executed in the year 15 (Tacitus, Ann., I,
53 and IV, 3). Under Diocletian the archipelago paid
allegiance to Byzantium under the supervision of official-
s living in Hadrumete (Sousse). There were two
cities there; Cercina on the larger island and Cercinits
on the little island of Mellita, of which there still
some remains on the northern coast. A type of Chris-
tianity seems to have developed there (Notic. episc.
Byz., 47), for ruins of Christian sanctuaries have been
brought to light.

No more mention is made of the archipelago until
the 5th/11th century. In 491/908 it was in the hands of
the Zirids (that is to say, greater Karkan, for
Mellita was used for pasture by the Sfaxians who
sent their animals there (Yakut, IV, 66-7). For the
period from 1158 he had to face a revolutionary move-
ment. The Kerkenians could not resist; their
subservience in a limited economic pattern
and at village level there was a strong social cohesion.
Kankan life. As islanders the Kerkenians seek
their subsistence and find their livelihood primarily
from the sea. Isolated by the shallows which encircle
the archipelago, these sea-folk try to take full advan-
tage of them by erecting barrages to catch fish and
establish fishing grounds (gâbh farna) there. The palm
tree is very extensive on the archipelago, and its
branches mark the paths in the fishing grounds and
serve as hurdles in the fishing traps. They hang up
their nets (drina) on the projecting points of
the trunk. As lagoon fishermen, they also know how to
take advantage of the natural habits of the fish like
the flying mullet. To kill it they use the water falling
from a simple channel (ammadât al-baw) which is
discharged into the sea in the direction of the flow.
Overpopulation necessarily drove the workers more
and more to the sea. A man by purchase or by hiring
would lay claim to an area for fishing, such as the
very smallest part of a sandbank, where it was possi-
bile to establish a fishing ground, set bait for the
octopus or gather sponges.

The shallows extend very far out to sea. To travel
among them the Kerkenians have devised a boat, the
lât, which is broad and without a keel and therefore
well adapted to the contours of the sea-bed. They use
it for going to sell their fishing produce on the coast
and for going even far as Greece to deliver and trade
of Ahû Fâris, there were in 1423 fresh sightings of the
men of Aragon. The Kerkenians could not resist; their
population was decimated and a great number were
taken prisoner—3,450 to judge from the Fragment,
Hist. Siculae, (cols. 1995-6). In 1520 the archipelago
became the bone of contention between the Turks and
the Spaniards, and Peter of Navarre led an unfor-
tunate expedition there against an island which he
found almost empty, "with a few poor Berber ham-
lets" (Marmol, l’Afrique, 5-7:8). For a time it became
a vassal to the Spanish, but it was taken again by the
Turks in 1560. It had to suffer a new Spanish inva-
sion in 1576 in which 1,000 Kerkenians were taken
captive, and 15,000 sheep were carried off. Other
raids occurred in 1596 and 1611.

The people who remained in the seven villages
mentioned by the Relación anónima de los mercos y
servicios de D. Alvaro Basan (1576) "live on the pro-
duce of the palms and by fishing, raising numerous
sheep, weaving wool and growing vines, figs and
olives".

The Karkan islands were gradually repopulated.
One account from the beginning of the 19th century
mentions ten villages on the larger island and the
small town of Mellita on the smaller one. The suc-
cessive influx of inhabitants was founded on certain
origins. Many came from eastern Tunisia, a few mara-
bout families must have been of southern Moroccan
origin, others came from little Siret (Djerba, Zuwa-
gha), but the houses, clothing customs and language
all point especially to a sub-Saharan influence. The
case of Mellita must be examined separately, because
this island was only recently populated by people
from bâd el-arâb, from semi-nomadic regions of the
Sahelian or the Sfaxian hinterland. While the inhabit-
ants of greater Karkan pronounce their words like
city dwellers, those of Mellita have a bedouin type of
speech.

The population of the archipelago scarcely exceeds
13,000 inhabitants, but more than 25,000 live on the
mainland. Kerkenian emigration is beginning to de-
velop since Karkan is no longer isolated. Indeed, for
a long time now, the inhabitants were forced by isolation
to be self-sufficient within a limited economic pattern
and at village level there was a strong social cohesion.
Karkan life. As islanders the Kerkenians seek
their subsistence and find their livelihood primarily
from the sea. Isolated by the shallows which encircle
the archipelago, these sea-folk try to take full advan-
tage of them by erecting barrages to catch fish and
establish fishing grounds (gâbh farna) there. The palm
tree is very extensive on the archipelago, and its
branches mark the paths in the fishing grounds and
serve as hurdles in the fishing traps. They hang up
their nets (drina) on the projecting points of
the trunk. As lagoon fishermen, they also know how to
take advantage of the natural habits of the fish like
the flying mullet. To kill it they use the water falling
from a simple channel (ammadât al-baw) which is
discharged into the sea in the direction of the flow.
Overpopulation necessarily drove the workers more

KARKANA — AL-KARKH

in dried octopus. Renowned as sailors, they have tackled the business of transporting goods from port to port along the coasts and they have crossed the sea as far as the Orient on board their two-sailed santel, which is well suited to them.

The coastal trading with the stops made on land gives them the opportunity to learn new techniques here and there and to bring back working materials, together with a useful replenishment of supplies. They obtain esparto (baulla mahbiba) in this way, and to gather it they have to cross Sahelian hinterland or the gulf of the lesser Syrte.

The Kerkenian sea is not really sufficient to guarantee a food supply, so they have to look for complementary activities in the limited agriculture the archipelago permits or as craftsmen. They use everything from the palm-tree: the fibres of the trunk, the tigelies, the palm branches and the stem. Taking advantage of the magnificent retting bed for the esparto offered by the shallows, they undertake there the twisting of alfa for ropes or for plaiting baskets and camel panniers.

The day comes when the islander's ease of adjustment to difficult circumstances, his connexions with the coast, his success in his studies—Karkana benefits from an exceptional percentage of children attending school—gives him the chance to emigrate, and then he will leave the archipelago, but not without leaving some of his family there. Doing seasonal activities or employment in the fishing or shipping companies, being a minor civil servant in the large towns, holding important management posts—almost 30,000 Kerkenians live in this way in Sfax, Sousse, La Goulette, Tunis, outside the archipelago to which faithfully they love to return: "yâ karfrna, yâ karfrdra", "You Karkana, you always bring back your children to yourself".

Louis, Documents ethnographiques et linguistiques sur les îles Kerkhena, Textes en arabe dialectal avec trad., commentaire et glossaire, Algiers 1961-2.

AL-KARKH [see BISBARAY].

AL-KARKH, a loan word from Aramaic karka meaning "fortified city", "city" (Fraenkel, Fremdwörter, xx; Pauly-Wissowa, iv, 2122, 2124; Supplément, i, 275, 285). In Islamic times, the word is associated with various towns. With the Aramaic culture before the Islamic conquest, such towns are distinguished from one another by adding the name of their geographic location, e.g., Karkh Baghdād, Karkh Sāmarrā (cf. Yākūt, Muṣṭafarīk, 368-70; Muṣ'īram, iv, 252-7).

In Baghdād, al-Karkh refers to a specific area (Bāb al-Karkh) and more generally to the whole of the west side below the Round City of Caliph al-Mansūr, the founder of Islamic Baghdad (cf. 1ṣtafāk, 84; also Ibn Hawkal. ed. Kramers, 241-2). According to Ya'qūbī, whose account reflects conditions of the 2nd/8th century, the limits of al-Karkh in length were Kašr Waddāb (north) and the Tuesday Market (south). The limits in width were the flef of al-Rabī' (west) and the Tigris (Buldān, 246; see Le Strange, Baghdad, Maps III, IV and VII).

As the Aramaic name shows, the al-Karkh quarter was already in existence before the foundation of Baghdād by al-Mansūr (145/762), as a small independent township said to have been founded by the Sassanid Šāpūr II (309-379 A.D.), and which like the other earlier settlements on the site of the future capital of the caliphs was no doubt mainly inhabited by Aramaic Christians.

Before the building of the city of al-Mansūr, the old market of the west side (Sūk Baghdād) was situated at al-Karkh, and there is reason to believe that the Karkh markets continued to service the large population of that area when the Round City was built (Tabari, ii, 910, 914). Towards the end of his reign, in 157/774 al-Mansūr decided to redevelop the commercial districts to the south of the Round City and re-locate certain markets that had been situated there. To this end government funds were allocated to various entrepreneurs to build their own establishments in al-Karkh. The government on its part also widened the network of roads leading in and out of the suburb (Kaštīl al-Baghdādi, Cairo, i, 79-82; Tabari, Annales, iii, 323-4; Ya'qūbī, Buldān, 241).

Al-Karkh was watered by the Nahr 'Isā, the most northerly large canal of the Euphrates in Irāk, as well as by its branches, the Šarāt and the Karkhāyā. The latter is the "Karkhānī Canal" which left the Nahr 'Isā below the small town of al-Mubahwall near the village of al-Barāṯā (see Yākūt, i, 665) and supplied the southern part of the western half of Baghdād, i.e., the mercantile quarter and its neighbourhood, with its branch channels, which in places ran underground. Numerous bridges carried the busy traffic over it. On the Karkhāyā and its canal system see Ibn Serapion, ed. Le Strange in JRAM (1895), 17-26, 286-8, 292-3; Suhārī, ʿAḏḏāʾīb, ed. von Mīlāk, 123-4; al-Khaṭīb al-Baghdādi, Cairo, i, 79-82; Yākūt, ii, 252; Streek, Babylonien, 85-90; Le Strange, Baghdad, 52-56, 63-80; Herzfeld in Sarre-Herzfeld, Archäologische Reise, ii, 170. What made al-Karkh commercially advantageous was this intricate network of canals, the most important of which was the Šarāt, a waterway large enough to allow for the passage of deep boats, and which connected the Euphrates and the Tigris, the major river systems of Irāk.

The suburb, which had its own Friday mosque, was probably considered a municipal entity unto itself, one of several urban aggregations which made up the general metropolitan environment (J. Lasner, in JESHO, x, 53-63). Detailed descriptions of the various locations in al-Karkh are preserved by al-Khaṭīb al-Baghdādi, Ya'qūbī, and the unedited Masḥīḥd Ms. of Ibn al-Fakhlī, K. al-Buldān. The most systematic
presentation is that of Suhrab, AʿdHb = Ibn Sera-
pion, which is arranged according to ... during
which the river receives its name of Karkha; in this
region around Bisutun it is swelled by the Shadiu,

Under the Buyids, who had ʿAlid sympathies, the 
already frequent encounters and frictions between 
the Sunnis and Shiʿis of the capital became more and 
more serious. Bloody street fighting between the two 
hostile sects, often accompanied by pillaging and 
incendiarity, was the order of the day. Al-Karkh 
was usually in the very centre of this civil strife; 
itself inhabitants always at daggers drawn with 
the Sunnis of the adjoining quarters (Bāb al-Asrār, etc.). Djalāl al-Dawla (416-35/1024-44), under whom 
the situation had become usually serious, was even 
on one occasion, in 422/1031, reduced to take refuge 
with his Shiʿi co-religionists in al-Karkh. In 443/1053 
a considerable part of this area was laid in ashes 
as a result of these feuds. A great fire had previously 
devastated al-Karkh under the Caliph al-Wathik (227/ 
842-232/847), but the destruction was very soon made 
good. Al-Khatib al-Baghdādī (5th/11th century) ob-
erves that much of the canal system had become 
silted up in his time and no trace of them can be 
found today. By the modern period, this once great 
urban area had been reduced to a truncated section 
along the river bank.

In course of time, numerous mosques and tombs 
arose in the area of al-Karkh in the wider sense, 
by which the whole southern half of Bagh-dād west of 
the Tigris was often meant. The most celebrated is 
the tomb-mosque of the local saint Muʿāṣir b. al-Fay-
zurān al-Karkhī (d. 200/816) and the alleged tomb 
of Nihawand of a certain number of watercourses:

Unlike Karkh, Baghdad which was entirely a com-
mercial district, and was the only area of Bagh-
dād that was entirely devoid of a military colony, 
Karkh Sāmarrā was a military cantonment housing some 
of the caliph's Turkish guard under the command of 

Moreover, the Turkish forces were isolated from 
the general populace. They were permitted to 
marry only women chosen for them, and no com-
mercial establishments other than a distributive out-
let for foodstuffs was to be found there. With the 
decline of Sāmarrā many areas were abandoned, but 
al-Karkh continued to be occupied.

KARKHA (KARKHA), a river in Luristan and 
Khwāzistān, whose source lies in the region of Nīhā-
wand. Its upper and middle course is strictly a 
tributary of the mountain system of the Zagros, 
where the valleys run in the same direction as the 
chains, the watercourses passing at times from one to 
the other by short transverse gorges. From which 
results the uncertainty over nomenclature, the rivers 
changing name with the divided regions that they 
traverse. The Karkha is made up of the union in the region of Nīhāwand of a certain number of watercourses: Čaşm-i Kāṭim, Sura Kunč, Kar Sara, Āb-i Kulan 
and Sirwān Rūd. On the first part of its course in 
a north-west direction the river bears the name of 
Gamasāb or Gamasāyāb (corrupted toGarasayāb).

Then begins the crossing of some of the folds of 
the Zagros in a general south-west direction, during 
which the river receives its name of Karkha; in this 
region around Bisutūn it is swelled by the Şābdīn,
which itself receives the Kangarshah, then by the Kara §u from Kirmanshahan and finally by the Karind. Then striking the chain of the Kabîr Kûh, the river turns towards the south-east, taking the name of Ábî Şaymara and receiving its first important tributary from the left bank, the Kashgan, swelled itself by the Maydan, the Khorramâbâd and the Kûlûk. On the right bank it is joined by the Lay- lum and the Ábî Zâl.

After the confluence with this last, the river, having become the Karkha again, begins its lower course towards the south, its powerful alluvia contributing, with those of the Kârûn, to the obstruction of the Tigris’s course. All this region constitutes a genuine delta formed by the confluence of the Karkha, the Kârûn and the Ábî Diz. As soon as the Karkha reaches the region of Pâl-I Kul, the canals begin which link it to the Ábî Diz and its tributaries, such as the Nahr Tabal Kûhl and the Nahr Daghdari. The ruins of Susa lie on one of its eastern branches, which later takes the name of Sha’ar. The Karkha ends in the region situated to the south of Nahr Hâshîm, where it receives the Sha’tâl-Al-Dîâmûz, but one of its branches, thrown back towards the north-west by the thrust of the alluvia of the Kârûn, continues as far as the region of Sinângîrd and the marshes of the Hor al-Hawza (al-Æuyawa).

In antiquity, the river, called El-Câospas, a tributary of the Tigris on the left bank, whose waters were so pure that they alone had the honour of being drank at the table of the kings of Persia. The Arab geographers refer to it without giving it a particular name, except, on occasion, that of “river of Susiana” (nahr al-Sas). Ibn Khurraídahîbîh locates its source in the district of Dînawar and makes it a tributary of the Dûdjîl (Kûrdîn). Al-Ya’kûbî, while recapitulating this last source, makes the river rise in the region of Hamadîn and gives it the name of Hinduwân. Ibn Rusta speaks of a great river running at the foot of Mt. Bîhistûn (Bisûtûn), with an important source driving five mills. On the two banks in the region of Nîhâwand a black sealing-clay of excellent quality was extracted, according to Ibn al-Fâkhî. On the map of Al-Îsçâd-ibn al-Hawkal, the Nahr al-Ábî Diz marked as waterfalls, the town of Susa and finishing near a watercourse (or canal), the Nahr Tûr; in the riverbed lies the tomb of the Prophet Daniel, an object of veneration and procession on the part of the People of the Book, particularly during the periods of dryness. Al-Muqaddasî, also speaking of the tomb, refers, with regard to the town of Basînna, to a river called Tigris (Dîjhîl), which is without doubt the Karkha; the river in question ran within a bowshot of the town and drove seven mills up on some boats. As for the “Hûdûd al-Álam”, it tells us that the river of Shûh rises in the “environ of Karkha on one of the spurs of the mountains of al-Dîjâbîl” and then runs towards the regions of Shûhâr (Tustar) and Shûhî (Susa) which it irrigates; however, before reaching the boundaries of the land of Basînna (Basînna), this irrigation exhausts completely the waters of the river.

As a final note the bridge situated between al-Šaymara (Šâymerè) and al-Îrâbân (cf. Yâkûtî, iii, 439, Schwarz, op. cit., iv, 472), considered as a masterpiece of construction, may well correspond to the Puli Khusraw on the Karkha.

(P. SCHWARZ-A. MIQUEL)

AL-KARKHI [see AL-KARKH]

KARKISIYA (also KARKISYA), a town in al-Dîjâzar on the left bank of the Euphrates, close to the confluence of the Khbûr, a little above 35° N. Lat. Karkisiya is simply an Arabic reproduction of the Graeco-Roman name (τὸ) Κηρκίσιον, (τὸ) Κηρκίσιον πόλις or Κηρκίσιον (Κηρκίσιος in the Notit. episcop., ed. Parthey, 87). Circesium, Syriac Kerkusio, Latin = castrum Circense, “the castle with the circus”; cf. Noldeke, op. cit. (see Bibl.), p. 3. Hamza al-İsfâhânî in Ḥa[dî]bînî, iv, 65, ii, 21 ff., still knew the etymology of the place-name (Karkesiya, arabicised from Kirkisiya, from kirkis = Ar. kalba, hippodrome). The name Circesium for the place at the mouth of the Khbûr in any case first appeared, when a Roman military station was built there. This perhaps may have been even before Diocletian. It was, however, this Emperor who first made the place of great importance by making it a powerful fortress on the extreme frontier of the Roman Empire in Southern Mesopotamia. From this it seems quite impossible that Circesium could have been a latinisation of the Aramaic Karka = town [see AL-KARKH], as Moritz, Palmyrene, 37, supposed; for the opposite view, see Streck, in ZA, xxvii, 259.

In the fourth century A.D. Circesium passed into the hands of the Persians by the shameful treaty made by the Emperor Jovian (363). The Arabs next captured it in the conquest of al-Dîjâzar. The occupation by the Muslims, which took place, apparently without fighting, under the commander Ḥabîb b. Maslama who was sent by Ṭyâbî b. Ḥann, probably happened in the year 19/640, not 16/537, as many sources say. Cf. al-Baladîhîrî, Futûkh, 176, and also 171, 175, 179; al-Ṭabîrî, i, 2478; Ibn al-Ábîrî, ii, 409 ff.; Yâkûtî, Muṣ’ilâmî, iv, 65 ff.; Weil, Gesch. der Chalîfên, i, 82; Caetani, Annali dell’ Islam, ii, 402, ii, 732, 755 f., 799. Karkisiya became the capital of the district of Khbûr in the province of Diyâr Bakr. On account of its very characteristic situation, Karkisiya is mentioned by all the Arab geographers in their descriptions of the river-courses and roads, but no detailed account of it is given. The place probably did not attain any great size in the Islamic period either. The high percentage of Jews (500 families) found by Benjamin of Tudela in the second half of the 12th century there is remarkable; see his travels ed. and tr. Grünhut and Adler (Jerusalem 1903, Frankfurt a/M. 1904), i, 49, 21 f. and ii, 47.

In the history of the wars of mediaeval Islam, we find Karkisiya often mentioned. When ‘Abd al-Malik was engaged in his campaigns against the caliph Abdallah b. al-Zubayr, he had to devote his attention to...
KARKISIYA — KARKUR

Karkisiya in 71/690, where the Kays! Zufar b. Al-Ijarith was ruling independently and had successfully resisting the governor of Hims, who had been sent against him. After a siege of some length, Zufar had to submit to the caliph’s army; cf. Ibn al-Athir, iv, 275 f.; Weil, Gesch. der Chalifen, i, 431; J. Wellhausen, Das arabische Reich und sein Sturz, Berlin 1903, 115-6, 119-120, 126; Canard, Hamadnides, 138. In the wars fought in the 5th/10th century on Mesopotamian soil in the Hamadnides area, we find Karkisiya playing a part along with al-Raba, a day’s journey down the Euphrates from it; cf. Canard, op. cit., 492, 545-7. The rulers of Egypt repeatedly extended their power as far as Karkisiya, for example the Tulfudid Abu Ahmad, from whom, however, the Caliph al-Mu’tamid’s vigorous brother al-Muwaqqaf was able to retake it in 268/881; see Wüstenfeld, Die Statthalter von Ägypten zur Zeit der Chalifen, in Abh. GGW (1876), xxxi, part 3, 20. Several centuries later the Egyptian Sultan Baybars again advanced his frontier up to the Khubb, when he took Karkisiya from the Mongols in 663/1264; cf. Weil, Gesch. der Chalifen, iv, 96.

At the present day, the site of Karkisiya is marked by a miserable village of 30-40 houses and hovels of clay and an extensive ruined site adjoining it. It is now called Busayra (Beséra; sometimes written Bugeyra); older travelers’ names for it are probably a corruption of Abū Seray, as, along with other authors, Moritz, op. cit., 37, thinks; it has been less probably taken as a derivative from Basr, the older name—recorded by Abū l-Fidā’ī for 732/1331—of the present Dayr al-Zor, as believed by Herzfeld. According to Herzfeld, the old name Karkisiya still survives locally in the form Karkisīa.

Busayra lies on an irregularly-shaped tongue of land formed by the Khubb at its junction with the Euphrates and is about half an hour’s journey distant from its mouth. Communication with the hinterland is broken by a ditch so that we have a well-marked peninsula. The plan of the old fortress can still be easily recognised; it forms a rectangle, the longer side of which runs along the Khubb, while the shorter faces the Euphrates from which it is now about 1,000 yards distant. Four more or less well preserved towers and a fort-like building (praetorium, serai) can still be seen, from which Moritz (op. cit., 37) thinks; it has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but this casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, certain sacred neighbourhoods, or all these things together—and gets rid of it by throwing it or depositing it with the stone on a place suitable for absorbing it; the accumulation of these expiatory pebbles forms the sacred piles of stone often becomes one of the obligatory rites of the pilgrimage and the rite losing its primitive character has been sometimes taken for a true offering-rite. The piles of stones are often built at the place where a man has been killed and buried; this has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but this casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, proximity of disturbing magical forces). It appears, therefore, that we always find rites of purification as the origin here (see Djemal Effendi, op. cit.), and the sources give other examples (see T. Fabi, La divination arabe, 188-93).

Pre-Islamic Arabia knew the rite of casting stones and sacred heaps of stones. The rites of the Badgī have preserved evidence of this, but several varying interpretations have been made [see DJAMRA, HADJDJ, RAGU], and the sources give other examples (see T. Fabi, La divination arabe, 188-93).

Islam found the cult of piles of stones in all or almost all the lands that it conquered and although orthodox looked askance at it, it had to accommodate itself, as to so many other popular practices, which owed their origin to paganism in the remote past. Piles of stones are especially numerous in certain regions [see RAGU], but nowhere has their cult been so developed and is so vigorous as in North Africa, especially in the south of Morocco, where it has been especially studied by E. Dousté (Marrahech, Paris 1905, 58-108; Magie et religion dans l’Afrique du Nord, Algiers 1908, ch. x; see also E. Westermarck, The Moorish conception of holiness (Baraka), Helsingfors 1916, 26 ff.). There, one may say, there is not a pass, or ravine or cross-roads which has not its little pyramids of stones or its great karkūr to which every passer-by adds his pebble, not a rustic sanctuary but has its sacred piles of stones.

KARKūR, more exactly karkūr (the word is only known in Maghribi colloquial Arabic, cf. Berber acharbur), “a heap of stones”, and more especially “a sacred heap of stones”. The cult of heaps of stones is extremely ancient and distributed all over the world. It seems to come not from an act of litholatry in the strict sense but from a rite of transference or expulsion of evil; the individual, picking up a stone, causes the evil of whatever kind that afflicts him to pass onto it—as the case may be, fatigue, physical or moral suffering, sin, the dangerous power that attaches itself to a man in certain sacred neighbourhoods, or all these things together—and gets rid of it by throwing it or depositing it with the stone on a place suitable for absorbing it; the accumulation of these expiatory pebbles forms the sacred piles of stone often becomes one of the obligatory rites of the pilgrimage and the rite losing its primitive character has been sometimes taken for a true offering-rite. The piles of stones are often built at the place where a man has been killed and buried; this has been explained from the desire to bury more deeply a dead man whose spirit might be tempted to come out and avenge itself or, less plausibly, as a kind of homage to the dead; but this casting of stones can also be explained rather as a rite for the expulsion of evil (a dangerous place, the infection of death, proximity of disturbing magical forces). It appears, therefore, that we always find rites of purification as the origin here (see Djemal Effendi, op. cit.), and the sources give other examples (see T. Fabi, La divination arabe, 188-93).

Islam found the cult of piles of stones in all or almost all the lands that it conquered and although orthodox looked askance at it, it had to accommodate itself, as to so many other popular practices, which owed their origin to paganism in the remote past. Piles of stones are especially numerous in certain regions [see RAGU], but nowhere has their cult been so developed and is so vigorous as in North Africa, especially in the south of Morocco, where it has been especially studied by E. Dousté (Marrahech, Paris 1905, 58-108; Magie et religion dans l’Afrique du Nord, Algiers 1908, ch. x; see also E. Westermarck, The Moorish conception of holiness (Baraka), Helsingfors 1916, 26 ff.). There, one may say, there is not a pass, or ravine or cross-roads which has not its little pyramids of stones or its great karkūr to which every passer-by adds his pebble, not a rustic sanctuary but has its sacred piles of stones.
Sometimes the karkür itself, as in other cases a spring, a tree or a rock, has given rise to a sanctuary which has become a marabout fashion. It is also very common to find under the aegis of a saint several of these cults combined—strange sanctuaries which perpetuate the ancient rites of paganism, still vigorous after twelve centuries of Islam.

**Bibliography:** given in the article.

**KARLŁ-ILI,** also KARLO-ILI, "the land [see Il] of Carlo," Ottoman name for a district of north-west Greece (Acarania and most of Aetolia), as corresponding approximately to the territories of Carlo Tocco I (1381-1430).

Carlo's father, Leonardo, had been created count of Cephallonia in 1357; he had extended his original dominions of Cephallonia, Zante and Ithaca to embrace the island of Leucas (Leucadia, Santa Maura; Turkish: Aya Mavra), and, on the mainland, Venitsa, (1562). Laying claim to the Despotate of Epirus, in 1417 Carlo made himself master of the regions of Arta (Ambracia, Larta; Turkish: Narda) and Ioannina (Turkish: Yanya [q.v.]). At his death his territories extended to the south to the Gulf of Patras (Lepanto, Turkish Aynabakhi [q.v.], remaining in Venetian hands); he had also acquired a foothold in the Morea with the port of Clarentza. When he died at Ioannina in 1430, leaving no legitimate heir, Menmon, one of his five bastard sons, appealed to Murād II against Carlo's nephew Carlo II (1430-48). As soon as Thessaloniki (Selanik [q.v.]), which had joined the revolt, was taken, (1430-48), the guardians of his son Leonardo, a minor, appealed to Venice for protection. The sultan thereupon took Arta (1449), and in 1460 Angelokastron was lost, leaving to Leonardo on the mainland only Venitsa. In 1479 Venice, annoyed at Leonardo's approaches to the king of Naples, did not include Leonardo in the treaty concluding the war of 1463-79. Mehemmed II was already planning his descent on southern Italy, and for this purpose Leonardo's island principality in an alleged slight to an Ottoman sandjakbegi (probably a member of the Tocco family). Upon the approach of the fleet under Gedik Ahmed Paşa [q.v.], then sandjakbegi of Valona (Turkish: Awlonya [q.v.]), Leonardo fled, and Ahmed Paşa occupied Venitsa, Santa Maura, Cephallonia and Zante. In 1481 Cephallonia and Zante were recovered by the Tocchi, only to be lost to Venice; Venice retained Zante (until 1797); she had to cede Cephallonia to Bāyezid II in 1485 but recovered it in 1500.

The earliest references to "Karliili" in Ottoman sources are confused. The statement in the *Aşkıpşahazade* (§ 56) that in 781/1385 Timurtash Paşa raided "as far as Karli-ili" has been condemned as a misreading (for the "land of Kraljevica", i.e., Frilep; see, most recently, Irène Beldiceanu-Stehren, *Recherches sur les actes...*, Munich 1967, 197-8), though H. Inalcik suggests that this is the "land of Carlo Thopia" (see *Arnavutlu*, col. 635b). *Aşkıpşahazade* seems again to be in error when, in describing (§ 130) Mehemmed II's campaign of 864/1460 in the Morea, he calls certain fortresses there (Mistra, Leonardi, ... *Astro*) "Karli-ili", a statement repeated by Neşri, Ibn Kemal, Sa'd al-Din, etc.; nevertheless, southern Aetolia was evidently occupied by the Ottomans in the course of this campaign: see Hopf, *Gesch. Griechenlands*, ii, 136, and cf. Sphrantzes, *ed. Grecuro, 124 (a subaşı in Angelokastron in autumn 1460).

When Karliili was formally constituted a sandjak (with Angelokastron as its chefi-lieu) is not clear. It is not named by Promontorio de Campis (ca. 1475, ed. Babinger) among the 17 sandjaks of Rümeli; but the dżiya returns for 894/1489 mention "liwa-i Karlo" (Begleri, i [1964], 101), and a sandjak-begi ("mir-i liwa-i Karli") is named for 909/1503 (M. T. Gökbilgin, *Edirne ve Paşa Lüdiyler*, Istanbul 1932, 481). For slightly later appearances of Karliili in lists of the sandjaks of Rümeli, see Ivt. Fak. Mecm., xv (1953-4), 303; *Bell*, xx (1956), 253, 260, and n. 170; and cf. *IA*, art. *Romelli* (H. Inalcik), 771-2. For the number of households, overwhelmingly Christian, about this time, see *JESHO*, i (1937-8), 32.

The "Beşlerbegilik of the Sea" [see Bâzâlî-l-bayr-i safrî], created for Khayr al-Din (Barbosa) [q.v.] in 949/1543, comprised at first, besides Gelibolu, only Rodos, Eghriboz and Midilli [q.v.] (see Ramberti, in A. H. Lybyer, *The government of the Ottoman Empire...*, Cambridge, Mass. 1913 (repr. New York 1960), 256, 259, and cf. for Ramberti's reliability, 314); Karliili was added later, perhaps in 957/1551, when Turkh Reşî [q.v.], entering Ottoman service, was appointed its sandjakbegi (see *Asim Samih Itur, Sultan-i Türkler*, ii, Istanbul 1937, 189 and 194, discussing Pêşevi [i, 346-7] and Hâdîdî Khâlîfa, *Tuhfât al-kibdr* [Istanbul 1329, 67-8]); it certainly figures among the sandjaks of this eyalet in the 11th/12th century, e.g., *apud* 'Aynî-i 'All, ca. 1018/1609 (*JA*, ser. 6, xxv (1870), 266); Kocî Beg, ca. 1050/1640 (*ed. A. K. Aksüt, Istanbul 1939, 110); and Hâdîdî Khâlîfa, *ca. 1050/1656 (Tuhfât al-kibdr, 147): his inclusion of Karliili in "Rümeli" in the Dîhnânmî is an anomaly: he was perhaps here using a list of the 10th/16th century, see *IA*, art. *Romelli*, col. 772b).

Hâdîdî Khâlîfa (J. von Hammer, *Romeli un Bosna*, Vienna 1812, 127-9) names seven hâdâh's: *Preveza* (an error?); Aya Maavra, Vonitsa, Angelokastron, Xerómeron, Válvitos and vrâkhirion. Evliyâ Celebi travelled through the region in 1081/1670. His itinerary is not easy to follow. He names six hâdâh's (omitting Preveza) (vii, 626). The eastern boundary of the sandjak (p. 623) is the Yllan Çayî = R. Phildharis/Evivos. He describes further the territories of "Zebân" (Zapandi), "Bhûr" (Bokhörü, Hypokhorion), Mesolonghi, Anatolikî = Eitolikon, and "Kalîve" (Kalivla).

Aya Maavra and Vonitsa, falling to Morosini in 1595/1684, were ceded to Venice by the Treaty of Karlovitz (Karâoçâ [q.v.], 1110/1699) (see further, for the history of the Ionian Islands, *Vedi adalar*). At the end of the 18th century, Karliili came under the sway of 'All Pasha Tepependeni [q.v.]. In the very first weeks of the War of Greek Independence (1821-9), Mesolonghi and Vrâkhirî had joined the revolt, and the district was the scene of much fighting. The northern frontier of the new kingdom, as finally drawn (1832), left all Karliili to Greece.

Babinger, *Beiträge zur Geschichte von Qarly-eli vornehmlich aus Osmanischen Quellen*, in *Eiz* *muḥayn* *N. Aḏirmu*, i, Athens 1933, 140-9 (= Aufsätze und Abhandlungen...*, i, Munich 1962, 370-7) (on members of the Tocco family in Ottoman service); Piri Reçî, in *Kitab-i Bahriye*, Istanbul 1935, 317-24; Evliyâ Celebi, *Sezîhna mâmê*., viii, Istanbul 1928, 620-37; I. G. Giannopoulou,
The first notice is of A.D. 1308, when it was known as Karon. In the later middle ages under Hungarian rule—its castle (kula) was, as the seventeenth-century Ottoman traveller Ewliya Celebi pointed out, the work of the kings of Hungary—Karlofca came under Ottoman rule in Şahbâan 927/ July 1521, in the course of the campaign which culminated in the conquest of Belgrade. Its reduction was the work of the Bosnian ghãdzis under the future beglerbegi of Belgrade, Yâhya Pasha-zade Kütük Bâli Beg (F. Tauer, ed.), Histoire de la campagne du Sultan Suleyman Ier contre Belgrade en 1521, Prague 1922, p. 152; cf. Feuchtwang, 508-10).

In Ottoman sources, the encountered forms of the name are: in a late 10th/16th century defter-i mufassal, Karloviç/Karlović (? = Hung. Karlofca); in the mid-17th/17th century, Kârlıva; by the early 17th/18th century (Râghid), Kârlovci (this last form perhaps reflecting the by then current Austrian (i.e. German) usage of Karlowitz).

Under Ottoman rule, Karlofca came initially under the authority of the beglerbegi of Belgrade; later, after the conquest of Budin and the formation of that eyâlet (1641), Karlofca became and remained subject to that place. Within the sandjak of Sirem it formed a nîyâba of the kadâ of Varadin (Peterwardein). In the later 10th/16th century, according to a defter-i mufassal from the reign of Selim II (B. McGowan, ed.), Defter-i Lüne-i Sirem, unpubl. (Columbia Ph.D. thesis, 1967, 241-9 [= text, ff. 65b-68r]), Karlofca possessed the largest Christian population in the sandjak. Within the five quarters of the town was a civilian population of 487 households, all Christian. By the time Ewliya Celebi visited Karlofca the population was partly Christian and partly Muslim. The collection of the kadâ and bâhid-i bâzâr taxes was in the hands of Ottoman officials from Budin; the kadâ contained a garrison of about fifty officers and men.

Karlofca’s subsequent fate, and its sole claim to historical significance, were both determined by the course of the war of 1094-1110/1683-99 between the Ottoman Empire and Austria and her allies—Poland, Venice, and, belatedly, Russia—of the Sacra Liga. After the Ottoman defeat at Mohács (1687), Karlofca passed under Austrian rule. Its historical significance—however, lies in its almost fortuitous selection as the site for the diplomatic gathering generally known as the Congress of Carlowicz which assembled there in October 1698 and by the end of January 1699 had brought laboriously to birth a series of agreements regulating the territorial and other adjustments consequent upon the war.

Within the limits of this article no extensive treatment of the Congress of Carlowicz can be attempted. Lacking as we do not only a corpus of documents for the congress and for its essential diplomatic “pre-history”, but even a satisfactory edition of the Turkish and Latin Italian texts of the treaties themselves, recent attempts to place the Ottoman side of the congress proceedings on a more secure basis must be regarded as (in some ways) provisional. Some general remarks concerning the significance of the settlement may however be made. Congress diplomacy, which had evolved rapidly in Europe after the end of the Thirty Years’ War (1648) was for the first time applied to a settlement involving an Islamic state. Thus was brought about the simultaneous culmination and incipient erosion of the Islamic concepts of dâr al-İslâm and dâr al-ḥarb which had determined in large measure the settlement of, e.g. previous conflicts between the Ottomans and the Austrian Hapsburgs. With the unwilling Ottoman acceptance of (a) diplomatic mediation (lawasassid) by the representatives at the Porte of England (Lord Paget) and the United Provinces (Colyer) and (b) the provisions in the treaties of (a) the demarcated frontier, the assumptions which had hitherto determined the Ottoman state’s relations with the lands of dâr al-ḥarb were no longer tenable, and the military and diplomatic balance for the first time tipped steeply against them.

The Ottoman negotiators at Carlowicz—the na’ls ul-hâkim Râmi Mehmed Efendi and the chief dragoman Alexander Mavrocordato—were well aware of this long before the congress opened; indeed, there is much to recommend the view that the real transformation of Ottoman attitudes took place in a series of secret negotiations between ‘Amuqja-zade Husayn Köprülü, the Ottoman grand vizier, and the Austrian chancellor, Kinsky, with Mavrocordato and Paget serving as intermediaries, during the latter part of 1697 and the early months of 1698. The basis for the settlement which was then worked out was that of sīl possidetis/sâlah bâzâr, i.e. that each side should hold what it possessed at the conclusion of hostilities. Ottoman diplomatic objectives, which went some way beyond the strict application of this principle, were to be achieved only in part at the congress, despite skilful diplomacy by Râmi Mehmed Efendi and Mavrocordato. The Ottomans failed to obtain the evacuation by Austria of Transylvania and its restoration to the rather ambiguous status which it had enjoyed before 1683, but were able to maintain their authority over the strategic salient of Temes-vár (Timişoara) as far as the Mureş and Tisa rivers. They were also able to hold the immediate hinterland of Belgrade in Sirmium and to retain a foothold in Slavonia and Croatia. Conversely, against Poland the Ottomans were obliged to relinquish the strong fortress of Kâmanîcë, which had never surrendered, and thus lost control of Podolia in exchange for Turkish abandonment of claims to Moldavia. No permanent settlement with Russia was reached at Carlowicz: a truce for two years was regularised at Istanbul in 1121/1701. The latter stages of the congress were mostly taken up with the imposition of terms on Venice, the weakest of the Sacra Liga powers, who was in the end forced to give up her conquests north of the Morea.

No conclusive assessment of the Carlowicz settlement should yet be attempted. Diplomatically it was...
perhaps less of a defeat for the Ottoman Empire than has been commonly accepted, and the Ottomans were able to withdraw from a retrograde war with their pride, if not their territories, intact. Within governing circles of the Empire the settlement nonetheless was to generate considerable opposition, particularly from military elements, and it is probably in these internal repercussions, leading up to the Edirne Incident of 1115/1703, as much as in the actual territorial adjustments, that its significance lies.

The Generall Historic of the Turks, iii, London 1700, ad finem, for the first English edition of the treaties. For important Ottoman works still in MS. form, cf. the references given in the article by I. Parmaksizoglu, S. V. Karlofa, in IA. The account by J. von Hammer, Gor, vi (Pest, 1828), 636-78, is based in part on these, and is still useful on that account. The studies on the Congress of Carlowicz by Popovic (1893) and Munson (1940) are now superseded; the results of recent research by R. A. Abou-El-Haj are to be found in his unpublished dissertation, (Princeton 1963) and in articles in JAOS, lxxxviii/4 (1967) and lxxxix/3 (1963), and Islam, li/1 (1974). (C. J. Heywood)

**KARLUK**

early Arabic form Kharkhuk, Persian Khurulkh (whence frequent confusion in the sources with the Khalalj [q.v.], Chinese Ko-lo-lu (northwestern Middle Chinese *Kàr-ì-lùjuk), a Turkish tribal group in Central Asia. They were originally a small federation of three tribes (whence the name given to them in the Uyghur Shine-usu inscription of 760 of Ue Karlik; the *Hûdâd al-*âlam, 98, on the other hand, mentions seven tribes of the Karlik), and comparatively unimportant. Their paramount chief never bore the title of *khaghan* or *khan*, but in the 7th and 8th centuries had that of *äbelber* (perhaps *possessor of a land or people*), one of only moderate rank (see A. Bombaci, On the ancient Turkish title *Elîbâr*, in Proceedings of the IXth meeting of the Permanent International Altaic Conference, Naples 1970, 24, 57-8), and Kâshghari does not mention them amongst the twenty Turkish tribes listed in the introduction of the *Dawân iklâd al-tur* (tr. Atalay, i, 38). Kâshghari does, however, mention the Karlik in connection with certain Turkish words or phrases, and defines them as a nomadic tribe, distinct from the Oghuz, but, like them, counted as Turkmen (tr. i, 473, cf. Barthold, Four studies on the history of Central Asia, iii, A history of the Turkmen people, 78).

Our first information on the Karlik comes from Chinese sources, which mention them as having been subjugated by the Western Tu-chietch or Turks ca. 640-50. At this time they were a pastoralist people located on the upper reaches of the Irtysh River and north of the Tien Shan. In the early years of the 8th century they passed under the control of the Eastern Tu-chietch empire, and the Okhon inscriptions mention the rebellion of the Karlik against the Khaghan in 711-14 (see Sir Gerard Clason and E. Tryjarski, The inscription at *Ike Khusholu*, in RO, xxxiv/1 (1971), 27-8, 29). The Karlik took part with the Basmill and Uyghur in the general upheaval which brought about the disintegration of the Eastern Tu-chietch empire (743-5), but were in turn defeated by the Uyghur and compelled to move westwards to wards Transoxiana (on all these events, see E. Chavannes, Documents sur les Tou-kiue (Tures) Occidentaux, St. Petersburg 1913, cf. also R. Knolles, *The Generall Historic of the Turks*, iii, London 1700, ad finem, for the first English edition of the treaties). For important Ottoman works still in MS. form, cf. the references given in the article by I. Parmaksizoglu, S. V. Karlofa, in IA. The account by J. von Hammer, Gor, vi (Pest, 1828), 636-78, is based in part on these, and is still useful on that account. The studies on the Congress of Carlowicz by Popovic (1893) and Munson (1940) are now superseded; the results of recent research by R. A. Abou-El-Haj are to be found in his unpublished dissertation, (Princeton 1963) and in articles in JAOS, lxxxviii/4 (1967) and lxxxix/3 (1963), and Islam, li/1 (1974). (C. J. Heywood)

These Karlik on the northern fringes of Transoxiana were long a refuge for political and religious dissidents and refugees fleeing before the Arab advance into Central Asia (pp. 92, 93). Their paramount chief now appears in Muslim sources with the title of *yabghu* (Arabic form *gâbbâya*, probably reflecting a western Turkish dialectal pronunciation of the word), adopted equally by the chief of the Oghuz (see *Oguz*). There were also Karlik who had penetrated southwestwards into the upper Oxus basin and Turkhâristân, where Arabic sources mention them in connection with the Arab campaigns against the epigoni of the Hephthalites in this region; the prince of the Karlik here also bore the title of *yabghu*.

where these Khans were under the suzerainty of the
Karluk Khan [q.v.] (Dawwan-Boyle, t, 74-5; Barthold, Four studies ... i. History of the Semirechyt, 103-4). Karluk tribal contingents joined the army of Chingiz-Khan in 616/1219 and took part in the invasion of Transoxiana, but after the Mongol period, the name of the Karluk becomes less frequent in the history of Central Asia, without ever disappearing completely. Thus the Tahâ‘i Ra‘idât of Mirâ‘ Muhammad Haydar Dughât, tr. Elias and Ross, 309, mentions a commander (sirâdâr) of the Karluk tribe in Transoxiana involved in warfare of the early 9th/15th century. At the present time, various Turkish groups of northeastern Afghanistan, in the regions of Badakhshan and Kattagân, call themselves Kaluq or Karluq; see g. Jarring, On the distribution of Turk tribes in Afghanistan, an attempt at a preliminary classification, in Lunds Universitets Arsskrift, N.F. xxxvi4 (Lund-Leipzig 1939), 72-3 and index.

KARM (A.), the vine. Toone who knows the official attitude of Islam towards wine [see KHAMR], the vitality of the cultivation of the vine in the majority of mediaeval Muslim countries may appear paradoxical. Nevertheless, it is incontestable, and is explained by the force of tradition which is even more solid than the laws. Indeed, where the vine has long been established, by the multiple uses of the grape (fresh fruit, dried raisin, vinegar, pharmaceutical uses, the lees as fertilizer, etc.), by the survival of non-Muslim communities, and also by the laxity of many Muslims themselves. This vitality is attested in particular, perhaps due to the written tradition, by the very considerable and exceptional place that Muslim agronomists accord to the vine in comparison with the other species studied, from the easterner Ibn Wašhiyya or the Calendar of Cordova to the Andalusians of the 5th/11th and the 6th/12th centuries, to whom we owe the essential part of that which will be summarized below. Their knowledge resulted from the combination of the data of the ancient authors, rediscovered and assimilated (with, in Spain, Junius = Columella added to the sources known in the Orient) with the intensive day-to-day experience constantly renewed.

To summarize this knowledge is difficult, since one of the principal characteristics of the cultivation methods described is precisely the meticulousness of their application and the multiplicity of the methods followed. Nevertheless, it appears generally that the vines cultivated, more numerous than in our days and transported by the Arabs from one end of their conquered lands to the other, did not remain stabilized and were the object of experiments of selection and acclimatization that we know particularly with regard to Spain (between the plain and the mountain, for example), but that were also tested in the East, where Ibn al-Fakhir (DG4, 125) and the Persian agronomists of the Mongol period in particular preserve for us the names of various kinds of vines. The vegetative cycle of each vine-plant being different, the agronomists, applying the principle of the complementary nature of a defect and a quality (such as adaptation to dryness or humidity, etc.) mainly made use of the diversities of the climates and soils of the Mediterranean zone and the Near East.

Some systems of cultivation predominate in the Andalusian treatises: (a) The low vine, planted in holes or trenches (recommended, but little practised) about 1.40 m. apart, supported or in low clumps, thinned out very little in order to protect the grape against the sun; a method of cultivation reserved for warm sites; (b) The climbing vine, classical in the Mediterranean region, where the creeper was used as support for the fruit trees with shallow roots, whose height had to be controlled so that they did not injure the vine; in contradiction to the ancients, the Andalusians rejected the intercalary cultivation that exhausts the vine, and especially the association of the vine and the fig-tree. The best soils were alluvial, humid, but not saturated, according to the westerners, and also sandy according to Ibn Wašhiyya, but one might also make use of the rich soils for the species that derive nourishment easily; the principle of complementarity took the place of the modern idea of forced cultivation. The choice of sites was adapted to the vines' wants; slopes and hillsides for the low vines, valleys and plains for the climbing ones, mountains in order to test the quality of a vine-plant; it was barred from the marshlands, sources of the vine's diseases. The preparatory work was a deep tillage with the spade, with trenches larger than the furrows of tillage in the earth of mediocre quality and holes for the good localities with a depth of at least 2 cubits (almost a metre) for protection against the sun. The surface work of the end of the first year was a loosening with the pruning knife to spare the roots, those near the surface being cut back to strengthen the deepest.

Reproduction in the nurseries was done in the form of taking cuttings, layering (tâkbâta) and sowing in a manner conforming to the practices of our days. The stratification was systematic. As for the shoots, cuttings and layered branches, it is often pointed out that they should not be planted together in the same hole, which proves that it was done. Most authors agree in recommending planting in spring, although the early species might be planted in autumn (hesitations that one would still encounter today); the Egyptian fiscal treatises speak of planting in February or March. The vinestocks, once tested for three years in very poor soil, they were transplanted in the vineyard chosen to receive them.

Well spread out fertilization was especially necessary in the planting and pruning, above all when vines were made to follow another vegetable insufficiency treated with animal manure, usual in the Middle Ages; it was reduced to a powder, and, according to an Aristotelian principle, the ashes of the stems of the plant itself were preferred; this preference for dry fertilizer is a particularly modern aspect of Andalusian viticulture. Irrigation depended on the climate, the soil and the plant chosen; watering by hand was frequently carried out in order to proportion better the quantity of water needed to obtain really syrupy and not-too-full grapes.

Among the measures taken to increase the vine's productivity, pruning (sabr) was the principle practised in winter with the iron pruning knife (mindâj) already described by Columella; the aim was to draw the sap towards the wood in order to test the quality of a cutting, already known to the ancients, was the subject of descriptions and experiments infinitely more varied among the Muslim agronomists. Everything was taken into consideration, form and colour of the
grape, the syrupiness of the juice, the early or late quality of the vine-plant, the degree of alcohol, etc. In order to improve the species for the achievement of precise needs, fantastic means were sometimes adopted (e.g., grafting the vine on the olive-tree). On the technical level it was grafting by terebration (lajat'ama according to Ibn Ḥadīḍādī cited by Ibn al-ʿAwrām).

Like today, the protection of the vine against diseases and bad weather distressed the vine-grower, who was impotent before the scourge. More than the Romans, the Andalusians feared the proximity of the sea and, with good reason, drizzle. The symptoms of diseases, very exactly described by Ibn Wābāḥiyya, correspond to anthracosa, rust and jaundice; the remedy prescribed drew its inspiration from the curative panacea, namely a mixture of oil, wine and water applied to the stock of the exposed level; Ibn Ḥadīḍādī added straw there, which moreover protected against frosts.

Without our being able to furnish for all the Muslim countries the same precise details as for Spain and ʿIrāk, we can assert, thanks especially to the geographers' information, the presence almost everywhere of the vine, at least until the nomad invasions of the later Middle Ages, and often later: in Arabia, Mesopotamia, Iran, Central Asia, Syria, Egypt; in the Mongol period, Muzaffar al-ʿAṣbāwī al-ʿAnfūsī was still to see in Turkish Asia Minor the vines inherited from the Armenians and Greeks. The princely courts never had difficulty in providing wine, and the poets who used the vine on the Syrian coast. There is no doubt, however, that the vine declined at the end of the Middle Ages, and often later: in Arabia, Iraq, we can assert, thanks especially to the abundant because of the later Middle Ages, and often later: in Arabia, Iraq, we can assert, thanks especially to the ʿAbdān the vineyard on the Syrian coast. There is no doubt, however, that the vine declined at the end of the Middle Ages, and often later: in Arabia, Iraq, we can assert, thanks especially to the

(Le Bôlens and C. Cahen)
known as Abū Ghānim Nāṣr, to his followers among the Banū Kalb. They sacked Buṣra and Abī Ḥanīfa again attacked Damascus, pillaged Tabarisiyya and the suburbs of Hit. In Ramadān 293/July 906 Nāṣr was killed by some of his supporters who wanted to gain amnesty from the government. Zikrawayh now sent another messenger to his remaining supporters announcing to them that the day of triumph and of his personal appearance was near. Joined by Zikrawayh’s supporters in the sawdāw, they entered al-Kūfa in a surprise attack, but were driven out again. In Dhū ’l-Hijjah 293/Oct. 906, Zikrawayh came forth from his hiding place in al-Sawwān near al-Kādisiyya. They defeated an ‘Abbasid army and overwhelmed the caravans of Khurāsānian and western Persian pilgrims on their return from Mecca killing most of the pilgrims. In Rabi‘ I 294/Jan. 907 Zikrawayh was wounded and captured in a battle and died a few days later. Many of his supporters were rounded up and executed. The Karmāṭī revolts in Syria came to an end. Some of Zikrawayh’s followers in the Sawdāw denied his death and expected his return. In 295/907–8 a dā‘ī, Abū Ḥātim al-Zutṭī, was active among the Karmāṭīs in the Sawdāw. He forbade them to eat certain vegetables and to slaughter animals. His followers were therefore named Bakliyya (q.v.), a nickname which was subsequently applied to the Karmāṭīs in the Sawdāw in general. Most of the Karmāṭīs there clung to their earlier belief that Muhammad b. Iṣmā‘īl was alive and would return as the Mahdi. In al-Bābrayn, Abū Sa‘īd al-Dīnābādī (q.v.), sent by Ḥamdān and Abī Ḍabān, had begun his career in 273/886–7 long before the schism. After the murder of Abī Ḍabān he sided with the rebels against ʿUbayd Allāh and killed Abū Zakariyyā. His father, with whom he had previously cooperated. Abū Zakariyyā had been sent before him, probably by Ibn Hawshab, the dā‘ī in the Yaman (the nisba al-Zumāmī seems to refer to Zamam, a market town in Lā‘a where Ibn Hawshab first resided), and like Ibn Hawshab remained loyal to the Fatimids. According to the dā‘ī Abī al-Dībār, Abū Sa‘īd, after killing Abū Zakariyyā, claimed to represent the Mahdi. Muhammad b. Abī Ḍabān b. ʿUbayd Allāh b. Muhammad b. al-Hanafiyya, who would appear in the year 300/912–3. In the Yaman the two dā‘īs, Ibn Hawshab [see MANSūR AL-YAMAN] and Abī Allāh b. al-Fāḍil, working separately in the region of Dībār Maswar and in the Bilād Yāḥī‘, at first remained faithful to ʿUbayd Allāh, though the loyalty of Ibn al-Fāḍil was not above suspicion and his relations with Ibn Hawshab, the senior dā‘ī, were at times strained. As both endeavoured to expand their territories, Ibn al-Fāḍil proved more successful. After reoccupying Sā‘īd, in Ramadān 297/May 912 he repudiated his allegiance to the Fatimid caliph, abolished the ghāfī‘a, and claimed to be the Mahdi. Rejecting the reproaches of Ibn Hawshab he demanded the latter’s submission and besieged him on the Dībār Maswar for eight months. The siege ended in failure, though Ibn Hawshab was forced to surrender one of his sons to Ibn al-Fāḍil as a hostage. Ibn al-Fāḍil then turned Sā‘īd over to the Ya‘fūrid Asād b. Abī Ya‘fūr, who recognized his suzerainty, and returned to his residence in al-Mudhakhrī. After his death in Rabi‘ II 303/Oct. 915 his son al-Fā‘ī‘a (?) succeeded him and killed many of his associates. Asād b. Abī Ya‘fūr revolted and took al-Mudhakhrī after a long siege in Rajab 304/Jan. 917. Four months later he ordered the execution of al-Fā‘ī‘a and other Karmāṭī leaders and sent their heads to Bagdad, thus extinguishing the movement of Ibn al-Fāḍil.

In the area of al-Rayy, the Iṣmā‘īlī community, known locally after its first dā‘ī ʿAla‘ al-Hallajī as Khulafayya, was well established before the split. Circumstantial evidence indicates that it did not recognize the imāmate of ʿUbayd Allāh and continued to expect the return of Muhammad b. Iṣmā‘īl as the Kā‘im. The dā‘ī Ghiyāth, after engaging in disputations with the Sunnis, was forced to flee to Khurāsān, probably during the last decade of the 3rd century/903–13. There he al-Fāḍil, who had returned to al-Rayy, lost the support of his followers and disappeared soon afterwards.

Information about the early Iṣmā‘īlī movement in Khurāsān and Transoxania is extremely fragmentary. Anti-Iṣmā‘īlī sources state that the first two dā‘īs there were sent successively by ʿUbayd Allāh after his rise to power in the Maghrib in 297/909 and were active in Naysābūr. Yet there is evidence that Iṣmā‘īlī activity was important in eastern Persia from an early date. The fact that the Imāmī al-Ḥaḍir b. Shāḥbāz in Naysābūr found it necessary to write a refutation of the Kā‘imīta may indicate their presence there before 260/874. At the time of the split al-Ṭālīkhān was a centre of Iṣmā‘īlī propaganda from where dā‘īs were sent all over the region. The first notice of the Imāmī author Sa‘īd b. Abī Allāh al-Kummi writing ca. 290/903 indicates that at this time ʿUbayd Allāh’s doctrine, which traced the imāmate after Dā‘ī al-Ṣādik through his son Abī Allāh, rather than Iṣmā‘īlī, had numerous adherents in Khurāsān. On the other hand, Ghiyāth, the dā‘ī of al-Rayy upholding Karmāṭī doctrine, during his stay in Khurāsān made a journey to the east and had a notice of the Imāmī author Sa‘īd b. Abī Allāh al-Kummi writing ca. 290/903 indicates that at this time ʿUbayd Allāh’s doctrine, which traced the imāmate 

From ca. 300/912 to the accession of the Fāṭimid caliph al-Mu‘izz (314/925). In the first decade of the 4th century/912–23 the Karmāṭī movement appears to have regained its ideological unity which prepared it for the great outburst of activity during the following decade. An important role in this process was played by the Kūš al-makhṣul of the Transoxanian dā‘ī al-Naṣṣī (q.v.), who introduced a Neoplatonic cosmology into Iṣmā‘īlī gnosis and reaffirmed the imāmate of Muhammad b. Iṣmā‘īl, who was to return as the Mahdi. The book evidently soon gained wide acceptance in Karmāṭī circles. Equally important was the activity of Abī Ḥātim al-Rāzī (q.v.), a disciple of Ghiyāth, who took over the leadership of the dā‘ī in al-Rayy during this decade, dislodging the descendants of Khalaf. Abī Ḥātim displayed great energy, sending dā‘īs to Tabaristān, ʿIsāfān, ʿAḥbarbāyjān, and Dīfūrī and carrying on a correspondence with Abī Tāhir, the leader of the Karmāṭīs in al-Bābrayn. He seems to have claimed to be the lieutenant (khalīfah) of the absent imām having superior authority to all other dā‘īs, a rank that was also later held by the dā‘ī of al-Rayy. Abīd b. Abī Allāh, governing of al-Rayy 307–11/919–24, the Daylamī leader Abī Bār b. Shīrāz, and Mardwīdī, the founder of the Ziyārid dynasty, came at least temporarily under his influence. The succession of Abī Ḥātim’s dā‘ī among the Daylam is also indicated by the conversion of Siwāṣaṣṣ (killed ca. 316/928), Dūstānīd king of Daylam, in Alamūt.
In al-Bahrayn, the Karmatis, after the murder of Abū Sa'īd in 300/913, remained peaceful until 311/923. In this year they began under the leadership of Abū Sa'īd's son Abū Tāhir al-Djamānī [q.v.] a series of devastating campaigns into southern 'Irāk during which they sacked al-Baṣra and al-Kūfa repeatedly and raided pilgrims' caravans. Like Abū Hātim, Abū Tāhir at this time was predicting the appearance of the Mahdi for the near future, interpreting the conjunction of Jupiter and Saturn in 356/968 as a sign for the end of the era of Islam and the advent of the final religious era. In 312/925 some thirty Ismā'īlīs, whose dā'ī kept up a correspondence with Abū Tāhir, were arrested in the mosque of Bārāthā [q.v.] in Baghdad. With them were found white clay seals bearing the inscription: "Muhammad b. Ismā'īl, the imām, the Mahdi, the friend of God". In 315-6/927-9 Abū Tāhir led a new campaign threatening Bārāthā itself, which he apparently expected to take. While he pushed as far as al-Raḥba, the Karmatis of the sawād of al-Kūfa, joined by the Arab tribes of the Banū Džuḥūl, Rifa'ā and ʾIdjī, rose under their dā'īs, among them ʾĪsā b. Muṣā, a nephew of ʾAbdān. They ravaged the area of al-Wāṣīt and entered al-Kūfa by force, but were soon subdued by an ʾAbbasid army. Those escaping joined Abū Tāhir as he returned to al-Baḥrā. They stayed. When they were known as the ʾAḏgāmiyyūn. Abū Tāhir's activity reached its climax in his conquest of Mecca during the pilgrimage season in 317/928. The Karmats committed a barbarous slaughter among the pilgrims and inhabitants and carried off the Black Stone of the Ka'ba, thus palpably demonstrating the end of the era of Islam. In Ramadān 319/Sept.-Oct. 931, Abū Tāhir handed the rule over to a young Persian from Ifṣāhān in whom he recognized the expected Mahdi. However, events took a different turn from what had commonly been expected for the advent of the Mahdi. The date was evidently chosen to coincide with the passing of 1,500 years after Zoroaster (= end of the year 1242 of the era of Alexander) for which prophecies attributed to Zoroaster and Djamāsp predicted the restoration of the reign of the Magians. The young Persian was said to be a Magian and a descendant of the Persian kings. Ifṣāhān, his home town, had long been associated by the astrologers with the rise of a Persian dynasty which would overthrow the Arab caliphate. The chief priest of the Magians, Ifṣāndiyār b. Adharbād, was executed a few years later by the caliph al-Rādi for his complicity with Abū Tāhir. The Persian ordered the cursing of all the prophets and among them Abū Yaʾḳūb al-Sidjīstānī [q.v.], who in his Kitāb al-nuṣrā defended most of al-Nasafī's views, including their antinomian implications. Despite such internal dissension the daʿwa soon regained strength, though engaging more in literary than in revolutionary activity. ʾĪsā b. Muṣā, who had been captured by the government troops suppressing the Karmātī revolt in the Sawād in 316/928, escaped from prison in 320/932 and remained in Bagdad writing philosophically-tinged books which he ascribed to ʿAbdān. This was also the practice of other dā'īs in ʿIrāk in this period, like the brothers Abū Muhammad and Abū Bakr b. Ḥmmād in al-Mawsīl and ʿAll b. Wāṣīf, who resided in al-Raḳkā and later in al-Mawsīl. The sons of Ḥmmād in al-Mawsīl and Ibn Naftī in Baghdād, according to Ibn Nadīm, high-ranking dā'ī subordinate to Abū Yaʾḳūb, the khalīfā of the imām residing in al-Rayy. This Abū Yaʾḳūb was the successor of Abū Hātim (d. 322/934) and may well be identical with Abū Yaʾḳūb al-Sidjīstānī who at this time did not recognize the Fatimid imāmate, as is evident from his Kitāb al-nuṣrā. The Ismāʿīlī missionary activity in the northwestern Persia remained successful in this period. The Sallārīd al-Mazrubānī b. Muḥammad, ruler of Adharbāyjān (330/941-346/957), and his brother Waḥṣīdān, ruler of al-Tarm, were both converts. On his accession al-Mazrubānī took ʿAll b. Djamār, an Ismāʿīlī dāʾī, as his vizier and permitted him to preach the doctrine openly. A coin of Waḥṣīdān minted in 343/954-5 attests his adherence to Karmatī Ismāʿīlism. There is no tangible evidence that the Fatimid Ismāʿīlī daʿwa during this period made any progress in winning over the dissident communities in the east. The story related by the anti-Ismāʿīlī polemicist Ibn Riżām that the dāʾī al-Nasaf, who during the last years before his execution in 332/943 was active at the Šāmānīd court in Transoxania, imposed a fine on the ruler Naṣr b. Abīhād, whom he had converted, to be sent to the Fatimid caliph al-Kāʾim, must be viewed with reserve.

The Karmats in al-Baḥrāyin also returned to their former beliefs, claiming that they were acting on the orders of the hidden Mahdi. Abū Tāhir carried out raids on a minor scale to southern ʿIrāk and the coast of Fārs and continued to obstruct the pilgrimage. After the failure of earlier negotiations, he reached an agreement with the ʿAbbasīd government in 327/939 under which he promised to protect the pilgrimage in return for an annual tribute and a protection fee to be paid by the pilgrims. The aggressiveness of the Karmats now subsided. After the death of Abū Tāhir in 322/934 his surviving brothers, ruling jointly, continued his peaceful policy. In 339/951 they finally returned the Black Stone of the Kaʿba for a high sum paid by the ʿAbbasīd government, after having rejected earlier offers, including one by the Fāṭimīs. See also the ʿAbdānīs.

After the accession of the Fāṭimīd al-Muʿizzī (341/953). The fourth Fāṭimīd caliph, al-Muʿizz, from his early in reign made determined
efforts to regain the support of the dissident Ismā'īlī communities in the east for the Fatimid cause. For this end he revised the Fatimid Ismā'īlī doctrine so as to accommodate some of their tenets. Thus he reaffirmed the central Ka'armatī belief that Muḥammad b. Ismā'īl was the Kā'īm, whose acts, he maintained however, were to be carried out by his lieutenants (Mawla'allī), the Fātimid imāms, who were his descendants. These efforts were to a good extent successful, though few specific details are known. Abū Ya'qūb al-Siqūṣī, now the chief representative of Ismā'īlī Neoplatonism, was won over and in his works written after the accession of al-Mu'izz fully supported the Fātimid imāmate. Al-Mu'izz utilized the introduction of the Neoplatonic cosmology into Fātimid Ismā'īlī doctrine, including the works of his earlier representatives, al-Nasafī and Abū Hātim al-Rāzī. Others of the dissidents, however, resisted his efforts. Ibn Hawkal, writing ca. 369/978, refers to the numerous Ismā'īlī community in Ḍūḥār-bayḍān as Ḍālīyya, indicating their Ka'armatī persuasion. The šarīf Abū Ṭūl Mubūsin shortly after 372/983 states that the school of Ṭṣā b. Mūṣā in Baghdād conserving the doctrinal heritage of ʿAbdān continued to exist in his time. Most notable, however, was the failure of Abū Ṭūl to win the allegiance of the Ka'armatīs of al-Bayrān. 

The encyclopaedia of the Iḥšāsun al-Safīʿ [q.v.], composed in al-Baṣra about the middle of the 4th century/960 by a group of secretaries and scholars, should be regarded as an attempt to reunite the non-Fātimid Ismā'īlīs on a common doctrinal basis countering the ideological offensive of the Fātimid. While adopting the Neoplatonic cosmology, the authors avoided touching on the points which had previously provoked controversy among the ḍā'īs. They put their teaching under the auspices of the hidden seventh imām whose reappearance in glory they predicted for the future. They expressly affirm that the descendants of the seventh imām had “fallen from his rank”, thus repudiating the Fatimid claim to the imāmate. Written in al-Baṣra, at this time practically a dominion of the Ka'armatīs of al-Bayrān, the encyclopaedia must have had at least their passive approval if it was not actually encouraged or commissioned by them.

The latent antagonism between the Ka'armatīs of al-Bayrān and the Fātimids erupted into an open clash after the Fātimid conquest of Egypt in 358/969. The Ka'armatīs had before demonstrated their interest in the Syrian political scene by establishing friendly relations with the Ḥanādānīs and the Ikhsāṣīs. In Rabiʿ II 353/Dec. 964 they had pillaged Tabāriyya. In 357/968 al-Ḥasan al-Aṣām [q.v.] invaded Syria at the head of the Ka'armatī army, took Damascus and, after defeating the Ikhsāṣīs al-Ḥasan b. 'Ubayd Allāh b. Ṭuḥdī, sacked al-Ra'mla. That the campaign had not been undertaken on behalf of the Fātimids is proved by coins minted in al-Ra'mla immediately after the withdrawal of al-Aṣām, on which the suzerainty of the ʿAbbāsīd caliph together with the Ka'armatī rulers of al-Bayrān is recognized. In Dhu'l-Ḥijjah 358/Oct.-Nov. 969, three months after the Fātimid army had occupied Egypt, a Ka'armatī army under al-Aṣām's cousins Kīrṣā and Salāḥī again attacked and defeated al-Ḥasan b. 'Ubayd Allāh at al-Ra'mla, but then a peace was concluded under which Ṭuḥdī promised to pay annual tribute. As the main body of the Ka'armatī army withdrew, a small force was left and was defeated together with al-Ḥasan b. 'Ubayd Allāh by the Fātimid army conquering al-Ra'mla in 359/970. In 360/971 al-Aṣām, aided by the Buyid ʿizā al-Dawla and the Ḥanādānī Abū Ṭuḥdī with arms and men, retook Damascus and al-Ra'mla, expelling the Fātimid army, and everywhere proclaimed the ʿAbbāsīd suzerainty. He then besieged Cairo, but after a minor setback in Rabiʿ I 361/Dec. 971 he withdrew and returned to al-Aṣām, probably because important internal decisions were pending there. By Ramadān 361/June 972 he reoccupied al-Ra'mla, defeating a strong Fātimid army. After the arrival of the Fātimid al-Mu'izz in Cairo (Ramadān 362/June 973), he proceeded to attack Egypt by sea and by land while an ʿAlīd ally invaded Upper Egypt. After a defeat before Cairo in Rajab 363/April 974, al-Aṣām returned to al-Aṣām and then concluded a truce promising obedience in order to secure the release of his secretary Abū ʿI'man al-Munadīdī who was captured by the Fātimid army in Damascus. The truce, under which al-Mu'izz agreed to pay the tribute formerly paid by the Ikhsāṣīs, was kept until the death of al-Mu'izz in Rabiʿ II 365/Dec. 975, but immediately after the accession of al-Azīz a Ka'armatī army under Dji'far, Kīrṣā, and Salāḥī, cousins of al-Aṣām, joined the rebel Alfāṭikīn (Alṭeṭkīn) in Damascus and then occupied al-Ra'mla. Before the advancing Fātimid army under Dji'far, they fell back to Ḍūḥār. Strengthened by the arrival of al-Aṣām, Alṭeṭkīn and the Ka'armatīs besieged Dji'far first in Zaytūn al-Ra'mla and then in ʿAškālān for about 17 months, finally permitting him to withdraw to Egypt. They were defeated by a massive Fātimid army under al-Azīz near al-Ra'mla in Mubarram 268/Sept. 978. The Ka'armatīs under Dji'far, who had taken over the command after the death of al-Aṣām in Rajab 366/March 977, left for al-Aṣām and agreed to a peace under which al-Azīz paid a sizable annual tribute to them.

After the death of the Buyid ʿĀṣūd al-dawla (372/983) the Ka'armatīs of al-Bayrān sought to reassert their hold over southern ʿIrāk. In 373/983-4 they attacked al-ʿIrāq and had to be bought off by a tribute. In 375/985 a Ka'armatī army under Isfāk and Dji'far occupied al-Kūf. As the Buyid government tried to reach a peaceful settlement, they began to confiscate crops and money in the country. The government, forced to act, inflicted two humiliating defeats on the awesome enemy near al-Dārāmīyān. The Ka'armatīs were forced to withdraw and were permanently deprived of their influence in ʿIrāk. In 379/988 al-ʿĀṣāf, chief of the Banī ʿAlī-Muṭṭafik of ʿUkayl, defeated the Ka'armatīs severely, laid siege to al-Aṣām and pillaged Ka'armatī al-Qūf, carrying off the booty to al-ʿIrāq. The Ka'armatīs lost their privilege of escorting and taxing the pilgrims' caravans, claimed now by al-Āṣāf and other tribal chiefs, and were reduced to a purely local, self-contained power. Little is known about their later history. In 382/992 they renewed their nominal allegiance to the Fātimid al-Azīz, presumably in return for a resumption of the Fātimid tribute, which had been cut off after the victory of al-ʿĀṣāf. These ties cannot have lasted long. During the reign of al-Ḥākim (386/996-411/1021) their relations with the Fātimid caliphate were hostile. Nothing is known about their relations with the later Fātimids. In religious doctrine they remained permanently apart from the Fātimid Ismā'īlī ʿaṣāra. Outside al-Bayrān, Ka'armatī communities after the decline of the Ka'armatī state were rapidly absorbed into Fātimid Ismā'īlism or disintegrated. No information definitely concerning such communities after 378/988 is available, though reports about a wealthy sectarian leader named al-Shabbās (d. 444/
The Karmati state in al-Bahrāyn. Karmati religious propaganda, though promising the replacement of the injustices and oppression of established Islamic society with a rule of justice and equity, did not elaborate a specific social programme. Some early experiments with communal ownership of property remained ephemeral. Historical factors and a concern for the welfare of Karmati subjects combined to produce a state in al-Bahrāyn whose order and justice evoked the admiration of non-Karmati observers like Ibn Hawkāl, al-Mukaddasī and Nasir-i Khusrav.

Abū Saʿīd al-Ḍajjānābī conferred in major decisions with a ruling council known as al-ʿĪqāmīyya, which comprised the most important officials of the government. Most prominent among them was al-Ḥasan b. Sanbar (or Ṣanbar), the head of a powerful family from al-Kaffa who had become an early supporter and father-in-law of Abū Saʿīd. After the latter's death, his seven sons joined the ruling council. In accordance with the will of Abū Saʿīd's eldest son, Saʿīd, at first succeeded to the leadership and was replaced by the youngest son, Abū Tāhīr, when the latter reached maturity in 310/922-3. Abū Tāhīr ruled with the aid of his brothers and a council of seven viziers, most prominent among whom was Sanbar, the son of al-Ḥasan b. Sanbar. After Abū Tāhīr's death the leadership was held collectively by his surviving brothers, known as al-ṣāda al-ruʿaṣāʾ. The sons of Abū Tāhīr, though highly regarded and property owners, remained excluded from the rule. In 358/969 Sābūr, the eldest son of Abū Tāhīr, died, and the rule in succession to his father, was arrested by his uncles and died, probably murdered. Partisan strife within the ruling family persisted after the incident and in 360/972 the caliph al-Muṭṭaḍī is reported to have endeavoured diplomatically to restore concord. Numismatic evidence suggests that at least after the death of Saʿīd in 361/972 grandsons of Abū Saʿīd came to be admitted to the ruling council, though a position of pre-eminence was retained by Abū Yaʿṣūb Yūsuf, now the only surviving son of Abū Saʿīd. When Yūsuf died in 366/977, six of Abū Saʿīd's grandsons succeeded to power, perhaps representing the descendants of the six sons of Abū Saʿīd other than Abū Tāhīr, whose descendants seem to have been permanently excluded. When Nasir-i Khusrav visited al-ʿĀṣāb in 443/1051, the ruling council continued to consist of six descendants of Abū Saʿīd, presumably co-opted, and six viziers, now apparently all descendants of Ibn Sanbar (Ṣanāʾīra). Descendants of Abū Saʿīd called tāda were still known in al-ʿĀṣāb in the early 7th/13th century.

In the time of Ibn Ḥawkāl, the income from the fruit and grain estates in al-Bahrāyn was assigned to the members of the Karmati community (muḍmīn). This arrangement probably dates back to the time of Abū Saʿīd. The revenues received from the customs collected on the island of Uwāl on all ships passing through the Persian Gulf were distributed among the male and female descendants of Abū Saʿīd (ca. 400). All other revenues from taxes and fees, the tribute of ʿUmān, the protection fees paid by the pilgrims and governments, booty from military campaigns was disposed of by the ruling sons of Abū Saʿīd in agreement with Sanbar. Whatever was not used for purposes of government was divided up annually. One fifth was put into the treasury of the Mahdī, three fifths were distributed among the male descendants of Abū Saʿīd according to a fixed ratio, and one fifth was given to Sanbar for distribution among the members of his family (ca. 20). In Būyīd times there was a Karmati customs house at the gate of al-Baṣra besides the one of the Būyīd government. Permanent representatives of the Karmatis resided in al-Kūfah and al-Dīshāfira, a town in the desert near al-Baṣra which they had occupied. They were granted extensive land holdings in the region of Saḵy al-Furāṭ by ʿĪzāz al-Dawla and in the area of al-Wāṣīf by ʿAḥūd al-Dawla. During the reign of ʿAḥūd al-Dawla and the beginning of the reign of Ṣaṁṣām al-Dawla a permanent representative of the Karmatis, Abū Bakr b. Šabḥyā, resided in Baghdaḏ and wielded considerable political influence.

The able-bodied Karmati sectarians living in al-ʿĀṣāb were well trained militarily and constituted the backbone of the Karmati army. In addition Arab tribal auxiliary troops regularly joined the Karmati campaigns. They belonged chiefly to the Banū Kilāb, who gradually seem to have been fully integrated into the Karmati community, and the Banū ʿUkayl. In the last phase of the Karmati state the ʿĀmīr b. Rabīʿa of ʿUkayl were charged with the external defence of al-ʿĀṣāb and were paid for their services by a share of the crops of the Karmati farms.

In the time of Nasir-i Khusrav, 30,000 purchased negro slaves were employed by the council on the farms. No taxes or tithes were paid by the inhabitants of al-ʿĀṣāb. Anyone impoverished or indebted could obtain a loan until his affairs were re-established. No interest was taken on loans, and all local business transactions were carried out with token money of lead. Any artisan newly arriving in al-ʿĀṣāb was given a loan for the purchase of tools and material needed to establish himself. Repairs of houses were carried out by the slaves of the rulers free of charge. There were mills maintained by the government where grain was ground for the inhabitants without cost. Since the time of Abū Saʿīd prayers, fasting and other Muslim rites had been abolished. A foreign merchant had, however, been allowed to build a mosque for the use of Muslim visitors. People strictly abstained from drinking wine. Fine fabrics were woven and exported to al-Baṣra and elsewhere.

Bibliography: Besides the chronicles relevant for the period the following sources are important: al-Nawbaṭāl, ʿIrāq al-ṣaḥāfa, ed. H. Ritter, Istanbul 1931, 61-4; Saʿīd b. ʿAbd Allāh al-Kumānl, al-Mahālāt wa ʿl-firaḥ, ed. Muḥammad Ḏjawād Maṣǧūr, Tehran 1963, 83-8; Masʿūdī, Tanbih,
Karmatî — Karnal

Karmisîn [see KIRMANSHAH].

Karmûna [today Carmona], town in Spain situated 40 km. to the North-East of Seville and numbering 42,738 inhabitants. The ancient Roman Carmona was conquered by Môsâ b. Nu^ayrî in 93712 (Ibn al-Shâbîbât and others say that it was occupied by Târîkh b. Zîyâd), and Karmûna was the name given to a madina and a hâra adjacent to those of Ithhîliya and Kûrtûba. Of ancient construction, Karmûna was endowed with strong walls, and its fortress was almost impregnable. According to al-Kîmîyârî (Râsîl-i-matn, text 150-9, tr. 190), it possessed an arsenal, public baths and a great number of quarries of lime and clay, as well as garnets "which sparkled there in the night as though they were lamps" (Fâgnan, Extraits, 62). The mountains of Karmûna being populated by Berbers, the territory felt the effects of the great rebellions which affected the south of the al-Anfîlîs, notably that of the Yemenis who supported the pro-"Abîsâdî al-Alâî b. Mughîlit and who, in 1493/753, besieged Abd ar-Rahmân I in the town for two months. In 228/844 Karmûna was the refuge of the Seljuks fleeing the Mâqûsî (q.v.), and, during the years of the agitation of the Muwâlladîs, Berbers and Arabs of Seville against the Amîr 'Abîd Allâh (end of the 3rd/9th century), it was one of the centres of the insurrection, and fell in 300/913 and 301/914 to the power of Muhammad b. Hâdîdâhil, who held it until the bâdîb Badr was able to subdue in 305/917. Even before the fall of the Caliphate, it was governed by the Berber Banû Bîrzâl, who made it into a practically independent principality in 414/1023-4. During the war against al-Mu^ta'dîd, Karmûna was for some time, probably in 459/1067-8, in the hands of al-Mâ'mûn of Toledo, who restored it by error to the petty kingdom of Seville. Occupied by the Almoravids in Rabî' I 484/May 1094, it passed to the power of the Almohads in 542/1147. For a certain time (555-6/1160-1) it was dominated by Ibn Hamûshî. After its fields had been ravaged by the Christians in the time of Alphonso VIII, it was conquered and repopulated by Fernand III of Castille during the summer of 645/1247.

(J. Bosch-Vilà)

Karnál, town and district of the province of the Pandjâb.

1. The town is situated a few miles W. of the Djâmânî R. in 29°41' N. 76°59' E. and 73 miles (117 km.) north of Dilm. It was in British times the administrative centre of a district of the Pandjâb, but historically and ethnologically it belongs to Hindùstân rather than the Pandjâb. It is now in the Ambiala division of the Hariana province of the Indian Republic. In 1961 its population was 72,109.
The language commonly used by the inhabitants is a dialect of Western Hindi. It is no doubt a place of great antiquity, and the name is traditionally derived from Karna of the Mahābhārata (Karnālāy = Abode of Karna). But it was not of great importance in early times, and it is not mentioned in the accounts of the invasions of India by Mārmūd Ghażna and Mū'izz al-Dīn. Its prosperity seems to have commenced with the construction of the canal from the Diamnā by Fūrūz Shāh Tughlūk (see Shams-i-Sirāj, Tarikh-i Fūrūz Shāh, in Elliot and Dowson, India, iii, 300). The country became productive and rich, and being on the direct road to Dihlī from the north became an object of attention to invaders and rebels. Thus in 980/1573, while Akbar was engaged in Gujārāt, Karnal, Pānpāt, and Sūnpāt were plundered by Ibrāhīm Husayn Mīrzā. Dīhāngīr halted at Karnal in 1013/1604 during his pursuit of his rebellious son, Khusraw (Elliot and Dowson, vi, 296, also Beveridge's tr., Jāhanger's Memoirs, 1). In 1120/1708 during the reign of Bahādur Shāh, Karnal was attacked and plundered by the Sikh rebels (Elliot and Dowson, vii, 419). But the most noteworthy event in its history was the great victory of Nādir Shāh over Muhammad Shāh in 1152/1739 which was fought just outside the walls of the town. The imperial army was kept in the battle encamped on the banks of the canal, where it was re-enforced by the 30,000 cavalry of Būrān al-Mulk, Nāṣim of Awadh (Oudh). But Nādir Shāh's army was better disciplined and provided with abundant artillery, and the defeat of Muhammad Shāh's forces was sudden and complete. After the break-up of the Moghul empire following this invasion (and those of Ahmad Shāh Durrānī and the Mahrattas), Karnal and the surrounding district were for a space until driven out by a British force under Skinner in 1803, after Lake's defeat of Gurdit Singh, the Sikh chief of Ladwa, then held it for a space again before the Sikhs. Gādiapat Singh of Dīlūn possessed it in 1763 after the battle of Sirhind, but Nādir Khān recovered it in 1775. After this the Sikhs and Mahrattas contend for its possession with varying results. The intrepid adventurer, George Thomas, drove out the Sikhs in 1798, but only held it for a short time. Gurdit Singh, the Sikh chief of Lādwa, then besieged and captured it for a space, under Rājā Lāhī of the Manjharī, a chief of the Ghorewāha and Juriwar clans. Some of these clans have sections which still retain the Hindu religion. The conversion to Islam is generally asserted to have taken place in the reign of Fūrūz Shāh Tughlūk.

**KARNĀTAK**, properly the Kanarese (Kannādā) speaking district of southern India, Sanskrit karnāṭaka; the word seems to be derived from Dravidian roots meaning "black country", i.e. the country with the "black cotton soil" which characterizes the south Deccan plateau. The region is approximately that of the modern Mysore (Mysuru) state; but it was already applied in mediaeval times to part of the Telugu-speaking region as well, as in the time of the Vidīyānagara (q.v.) kingdom. After the Deccan confederacy had defeated the Vidīyānagara forces at the battle of Tālkōfa in 972/1564-5 the Muslims took over the Vidīyānagara Karnāṭak lands, and used the term to apply not only to the plateau lands but also to the coastal lands on the east coast below the Ghāfs; with European involvement in south India in the 18th century the term came to be erroneously applied, as "Carnatic", to the coastal region alone. In this sense it figures in the title of the nawwāb of the Carnatic, more correctly called nawwāb of Arkāt.
The town of Arkat (24°54' N., 79°20' E.) became a hereditary holding in the family of Sa'dat Allah Khan in the early 18th century; Sa'dat Allah was a Nawâdî (a Muslim tribe of southern India reputed to be of Hāshimite descent, driven from 'Irāk by al-Hādīdādī in the 2nd/8th century) who had commanded Arangwâzîb's forces in the operations against Mysore. His nephew, Dost 'Ali Khan (1145-1372/1730-40), is usually recognised as the first nawâdîb, nominally a dependent of the first Nizâm of Haydarābâd but in practice exercising considerable independence. The town and its surrounding district changed hands many times between Haydarābâd, English, French and Haydar 'Ali's armies, still held by the latter when the nawâdîb Muhammad All, an ally of the British, assigned the revenues of the "Carnatic," nominally to be especially abhorrent. Ibn Karram also held that God has been eternally qualified by the names attributed to Him and, whom he later discovered to be unreliable, Ibn Karram was accordingly jailed by the governor for eight years until he was released in 251/865 (some sources state that he had already been briefly imprisoned during his first stay in Nishāpūr by 'Ali b. 'Abd Allah, Muhammad's predecessor as governor). He then left Nishāpūr and ended his days in Jerusalem, where he died in Safar 255/January-February 869, being buried near the Bāb Arbâb or Jericho Gate (see Mujīr al-Dīn al-Ulama, al-Uns al-gailāl, Cairo 1283/1866, i, 263).

(2). Doctrines. Ibn Karrâm's theological ideas were set forth in his 'Adhâb al-bâhr (Punishment of the grave), referring to the questioning of the corpse in its grave by the twelve Transmitters on the authority of Ahmad b. 'Ali b. 'Uthmân in Marw, and in Balkh, Abd Allah traditions on the authority of Ahmad b. 'Ali b. 'Uthmân (targhib).

Ansdb, Ascetic in Nishapur, Ibrahim b. Yusuf al-Makiyam is given in his obituary notice in Ibn al-Athir, vii, 53-4; and Safadi, ed. Cureton, 79-85, tr. Haarbriicker, i, 263-7. Baghdâdî personally disputed with an adherent of the Karrâmîya, 'Ibrâhîm b. Muhâdîr, before the Sâmanî commander-in-chief in Khurâsân, Muhammad b. 'Ibrâhîm b. Sîmûdîr, in 370/980-1, and exposed, so he claims, his abysmal errors. Another of Ibn Karrâm's works, the Kilâb al-Sirr, is known only from two citations by Ibn al-Dâ'î, a later author. A salient feature of Ibn Karrâm's doctrines was, according to his orthodox opponents, that of literalism and anthropomorphism, so that many heresiologists counted his sect amongst the Mudjâssima or Mushabbiha (though Ashârî, Muhâdîl al-islāmiyyân, Cairo 1369/1950, i, 205, made it a sub-sect of the Mursîla [q.v.]). Ibn Karrâm considered that God was a substance (dwârah), thus approaching, in Baghdâdî's view, the beliefs of the Christians, and that He had a body (ısîm) finite in certain directions when He comes into contact (mumâsa) with the throne, thus interpreting the much-discussed kur'ânic verse XX, 5, al-Rahmân ʾâlā 'l-lârgh istawâ, "the Merciful One has sat down firmly on the throne"; some of his adherents later substituted the more ambiguous term mulkî ("contiguity") for mumâsa. Ibn Karrâm was also exercised by the questions of the eternity of the world and the kur'ânic act of creation, which he reconciled by subtle reasoning. In accordance with the difference between substance and accident, God is subject to certain accidents, such as willing, speaking, perceiving, coming into contact etc., over which He has power, but not over the world and the created object in it, which come into existence not by His power and will but by the divine fiat kus! Baghdâdî holds this limitation of God's power over created objects which originate in His essence to be an innovation of Ibn Karrâm's and to be especially abhorrent. Ibn Karrâm also held that God has been eternally qualified by the names attributed to Him.
from His acts, i.e. that He has been eternally a creator and sustainer of mankind because of an innate, even if unexercised, power of creation (khâlîkîyya) and of sustaining (râsiyya).

Concerning God's justice, Ibn Karrâm held the moderate view that He does not permit the killing of children or of infidels who might come to embrace Islam at maturity or at some later point in their life. He also adopted a moderate view over the Imâmâth, allowing that 'All and Mu'âwiyah could exist side by side as imâms requiring the obedience of their partisans, even though 'All was imâm in conformity with the Sunna and Mu'âwiyah an usurper. He regarded faith (imân) as constituted simply by a single utterance of the doubt 'ghâdâa', enduring for ever and only rendered null and void by apostasy; a person thus declaring his faith remains a mu'tamin even if he is an unbeliever in Muhammad's apostleship or is a hypocrite (mûnâfik). Nor were those holding heretical views (ahl al-ahwâz?) to suffer punishment in hell eternally.

Finally, Ibn Karrâm held distinctive views on certain legal points, most of these being in the direction of greater flexibility. He taught that the zaydî could be validly performed in dirty garments and with a dirty body, and he did not require the lesser ablution for contact with unclean objects, anqâs; furthermore, he regarded the washing of the dead and prayer over them as only a custom (sunna) and not an obligation (fard) like enshrouding and burial.

The ascetic and pietistic strain was very strong in Ibn Kârâm's teaching and practice, and did much to win over adherents in Khurasân; it remained, indeed, a prominent characteristic of the Karâmîyya all through the sect's existence. That emphasis on tâbâkhûf, self-mortification, and tawâkhûl, utter dependence on God for all aspects of life, derived from his master Ahmad b. al-Îjarb (176/792-234/849), and that of the nucleus of the later strong Kârâmîyya community there; after his death, his tomb became a retreat-centre for his disciples, the forerunner of a special hermitage of the sect, and their mausoleum was to be found in Guzgan, as well as for the ascetic life, and that they formed a sub-sect, the Hâkâniyya (see Yâkût, Buldân, ii, 393, s.v. al-Khâniqâ). The Kârâmîyya were, like other Islamic sects, to a certain extent fissiparous, without however these sub-sects departing significantly from the central teaching of Ibn Kârâm. Baghdâtî, 202, tr. 18, enumerates three sub-sects, the Hâkâniyya, the Târâ'îfiyya (read thus, rather than Târâ'îkiyya) and the İshâkîyya, but says that they do not regard each other as heretical.

Shahrâstânî, 79-80, tr. i, 119, says that there were twelve sub-sects, and names six of them as the İshâkîyya again, the İshâkîyya, the Nûnîyya, the Zâbîrîyya, the Wâhîbîyya and the Hâyâsîyya. Finally, Fâhhr al-Dîn al-Râzî in his Istîhâlî fîrâk al-mu'âlîmîn wa'l-mu'tassîn, Cairo 1375/1956, 67, numbers the sub-sects at seven. The founders of some of these groups are amongst the later scholars of the Karâmîyya, such as Ahmad b. 'Abdûs al-Târâ'îfî (d. 349/958) and Mu'mâmmad b. al-Hâyâm (d. 407/1016-17), who is described by Shahrâstânî, 80 ff., tr. i, 120 ff., as the musâkallîm of the sect, elaborating its theology and its technical vocabulary. The İshâkîyya presumably relate to Abu Ya'kûb İshâk b. Ma'mâhîdî (d. 383/993), whose family became the mainstay of the Kârâmî cause in Nishâpur (see below).

It is not easy to give a just appraisal of the significance of the Karâmîyya in the development of Islamic religious thought, but the movement was clearly an important one. It is regrettable that we know only of the sect through the eyes of its opponents; the sole surviving Karâmî work appears to be an anonymous collection of ethical and mystical traditions, British Museum Q 804, which Massignon, Essai sur les origines du lexique technique de la mystique musulmane, Paris 1954, 267-8, tentatively attributed to the Karâmî leader of Nishâpur, Abu Bakr Muhammad b. İshâk b. Ma'mâhîdî (d. 421/1030). Many Sunni divines, including Hanbâll and Zâhirî, were strongly opposed to the sect, and the Shâfi'i b. Abû Dâ'fîr Muhammad b. Muhammad b. İshâk compiled a polemical work on the errors of its leader, the Fadâ'ilî Ibn Kârâm. However, the geographer Makdisî, who in the course of his travels had many contacts with Kârâmî groups, came down firmly on placing them within the bounds of orthodoxy, calling them "an ascetic and God-fearing folk" who derived from Abu Hanîfa (Ahsan al-tâlîsîm, 365).

It seems that we should consider the Karâmîyya as a Sunni group engaged in defending a central position against the Mu'tazîlî on one side and the Ahl al-Haḍîth on the other; a later authority like Makrîzî considered them to be essentially opponents of the Mu'tazîlî (Khifat, ii, 357). Massignon, op. cit., 263-4, speaks of Ibn Kârâm as one of the great thinkers in Muslim scholasticism, who supplied a new and profound examination of the theological questions raised by Mu'tazîlîsm, one which was not purely theoretical but which took root in the light of mystical and moral experience. Notable is Ibn Kârâm's introduction of a new philosophical-theological terminology, e.g., bayâfîyya, "the quality of God" and bayhâfîyya, "the ubiquity of God", stigmatized by Baghdâtî as 'ibârî saltîfâ, "ridiculous expressions" but which nevertheless show Ibn Kârâm's inventiveness and his awareness of need here. Certainly, the sect flourished for some three centuries, and it was suggested by an older generation of orientalists, including Van Vloten and Ribera y Tarragó, that the khânâkâhs and madrasas of the Karâmîyya which sprang up in widely-separated parts of the Islamic world (see below) were centres for instruction and evangelism as well as for the ascetic life, and that they formed a model and stimulus for the Ash'arî, Hanîfî and Hanbâll madrasa-building movement of the 5th/11th century; this link remains, however, unproven [see also Khânâkân].

(3) Subsequent history. During the course of the 4th/10th century, the Karâmîyya spread over many parts of the central and eastern Islamic world. In Jerusalem, they had a numerous representation, with their own khânâkâhs and sessions for âhâfîs; and in Fustât or Old Cairo they had a special quarter of their own; but the sect was unrepresented in the Maghrib (Makdisî, 179, 182, 202, 238). It was Khurasân, Transoxania and the eastern Iranian fringes which became the most enduring stronghold of the sect, and their khânâkâhs were to be found in Gâzgân, Khuttal, Farghânâ, Marw and Sâmarqand (Makdisî, 323). In Harât, the main âsapîyya or factional strife (probably with some social as well as religious basis) was at this time between the Karâmîyya and the 'Âmilîyya.

We know most about the Karâmîyya in Nishâpur, where they were a strong and bellicose faction under
the leadership of the Banu Mafcmashadh (see above). Here as elsewhere, the hold of the Karramiyya on the populace doubtless stemmed from the exemplary asceticism of their leaders' lives and their evangelistic teaching activity; Abū Ya' ḥūb Isḥāb b. Mafcm-
shadh is said to have converted large numbers of dhimmis and Zoroastrians by his trenchant preaching. Supported by the secular power, in the shape of patronage from the founder of the Ghaznavid dynasty Sebiktlgin and then from his son Sultan Mahmūd, the Karramiyya enjoyed a temporary ascendency over their opponents in Nishapūr, comprising the Ashšāfī 'Ulamā', the 'Alids and, as appears from the biography of the famous Shaykh Abū Sa'd al-Mayhānī, the Sūfīs. They felt from power, however, after 402/1012-12, when Mahmūd withdrew his patronage, but they nevertheless continued to be an appreciable element in the city. The local historian of Baybāk, Ibn Funduq, and Ibn al- Ḥāibre recorded civil strife in Nishapūr and Baybāk during 488/1095 or 489/1096 between the local Karramiyya on one side and the Hanafis and Shāfīs on the other, and this ended in Nishapūr with the killing of the Karrāmī leader Mafcmashadh and the razing of their madrasa (see on all these events Barthold, Turkestān down to the Mongol invasion, 285-90; C. E. Bosworth, The rise of the Karramiyyah, in MWW, 1 (1966), 5-14; Idem, The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040, Edinburgh 1963, 185-9; R. W. Bulliet, The patricians of Nishapūr, a study in medieval Islamic social history, Cambridge, Mass. 1972, index).

The last stronghold of the Karramiyya was in Ghūr, the mountainous region of central Afghanistan, one of the last long converted, ruled by a governor of the Ghūrids, Dājārdjād, the Ghūrid sultans Ghiyāth al-Dīn Muhammad (d. 599/1202-3) and his brother Muḥizz al-Dīn Muhammad (d. 602/1205-6) who were originally adherents of the Karramiyya, in conformity with the beliefs of the masses of their subjects, but transferred their allegiance to the Shāfīī law school. Sultan Ghiyāth al-Dīn's favour to the great Shāfīī scholar 'Abd al-Razzāq al-Razzāq (d.n.), who disputed in the Ghūrid capital Fīrūzkūh with the popular Karrāmī divine Ibn Kudwa, caused a popular uprising there, compelling Razzāq to return to Harāt. Razzāq's polemics with the Karramiyya are important evidence for this last phase of the sect's existence, and contain much information on Karrāmī theology. After the Mongol invasions, we hear nothing of the sect, which must have been submerged in the general holocaust in Kurāshān; when later authors like Ibn Taymiyya write against the Karramiyya, they are merely drawing on material in the older authorities (see Bosworth, The early Islamic History of Ghūr, in Central Asiatic Journal, vi (1961), 128-33, and A. Marcq and G. Wiet, Le minaret de Djam, la décadence de la capitale des sultans ghūrides, Paris 1959, 49-50).

Bibliography: largely given in the article. The most complete and sympathetic account of Ibn Karrām's thought is given in Massignon's Essai sur les origines du lexique technique de la mystique musulmane, 260-8, 318-19; see also A. J. Wensinck, The Muslim creed, Cambridge 1932, index; H. Lautou, Essai sur les doctrines... d'Ibn Taymiyya, Cairo 1939, 81, 159; A. S. Tritton, Muslim theology, London 1947, index; W. M. Watt, Islamic philos-

KARRAMIYYA — KARS

the importance of Kars in 19th/20th century

(K. E. Bosworth)

KARRI [see KERR].

KARS, a garrison town and administrative centre in Eastern Turkey, situated on 40°57' N. and 43°06' E, chef-lieu of the ii (province) of the same name, which is bounded by the U.S.S.R. and the iis of Artvin, Erzurum and Ağrı and contains the içes (districts) of Posof, Hanak, Çıldır, Ardahan, Göle, Susuz, Arpaçay, Selim, Digor, Sankamis, Kağızman, Fuzluca and Aralik, with that of Kars itself. In 1960 the population of the provinces of Kars was 543,000; in 1965 (provisional), 606,521, of which 20% was urban and 80% agricultural or rural (Kars II yIliligi 1967, Ankara n.d.).

The etymologies suggested tentatively by Barthold (EI)—Georgian—and by Kirzioğlu (İ.)—Turkish—for Kars cannot be sustained. In medieval Armenian sources the forms Karuc (Karmir) or Karuc berd are encountered (A. K. Sanjian, Colophons of Ar-

onian Manuscripts, Cambridge 1932, index; N. Adontz, Armenia in the period of Justinian, Lisbon 1970, 206). A 16th-century identification of "Chars" with the Chorsa of Ptolomy should perhaps be noted (G. T. Minadoli, Historia de bello inter Turcas et Persas, in P. Bizanos, Rerum persicarum historia, Frankfurt 1605, 316; cf., however, C. Müller (ed.), Claudii Ptolomaei geographical, Paris 1883-1907, ii, 941 and n.). Byzantine usage (Tō Kāpç) is supplied by Constantine Porphyrogeni-
tus, De administrando imperio, ch. xlv; Muslim forms are Kars in Ibn al- Ḥāibre (ed. Tornberg, x, 27; xii, 169, 295, 300, 306), Karş or Kars in Yākūt (ed. Wustenfeld, iv, 57), Ghars in al-Fārīqī (quoted in V. Mi-

From Umayyad times the region of Kars lay on the frontiers of the Muslim world. The decline of Arab power after the middle of the 2nd/8th century gave more independence to Armenia under the Bagratid dynasty and early in the 3rd/9th century the Armenian prince Smbat (held hostage at Samarra from 190/506 to 210/825 and called Abu 'l-ʿAbbās al-Kārisī by the Muslims) ruled over Kars as a vassal of the ' Abbāsīds (J. Laurent, Arménie entre Byzance et Islam, Paris 1919, 290-1 and n.; cf. the De administr.

imperio, ii (Commentary), ed. R. H. Jenkins, London 1962, 158). In 222/837 Isbāk, the amir of Tiflis, halted in the vicinity of Kars an army sent by the Byzantine emperor Theophilus as part of an unsuccessful attempt to detach Armenia from Muslim suzerainty (Laurent, op. cit., 211-2).

The importance of Kars in the 4th/10th century derived in part from its situation on the important trade route Ânî-Kars-Kâllišalā (= Erzurum) - Trebi-

zond (Minorsky, Studies in Caucasian history, London 1953, 90-1) and in Duvayni, Ta ḫīh-ı Dzhāhān-Gūshā (ed. Mīra Muhammad), ii, 161. Ottoman usage favoured the form Kârş.
KARS

It served as the capital of the Armenian kingdom of Vanand, which was erected by the ruler of Anl, Ashot III, for his younger brother Mushegh, and his successors (cf. EJ, AnI).

By 1022 the kingdom of Vanand was surrounded on three sides by Byzantine territory (Honigmann, Osotgrens, 173); its last ruler, Gapik (1028-64), continued to hold his position even after Anl had been incorporated into the Byzantine Empire (1044). In face of the Saljuk threat—in 446/1054-5 Tughril Beg had destroyed the forces of Gapik and besieged Kars for three days (Honigmann, op. cit., 181)—he was induced to renounce his rights voluntarily in favour of the Emperor Constantine X Doukas, receiving in return a town in the Cilician Taurus.

The early history of Kars as a Muslim town is confused. In 456/1064 its inhabitants appear to have submitted voluntarily to Alp Arslan (Ibn al-Athir, x, 272); ten years later, however, in 1074, King Giorgi II of Georgia received Kars from one of his vassals. In ca. 472-3/1080 he was attacked by a Turkish force under the amir Abmad, who "shortly before" had conquered Kars; subsequently, for much of the 11th/12th century, Kars lay within the Saljukid amirate (cf. Minorsky, Studies, 84, n. 1). In 548/1153 Kars was occupied and destroyed by the Khtsars, but in the same year it was retaken by the Saljukid Malik 'Iziz al-Din (cf. the Arabic inscription, commemorating the reconstruction of the citadel in that year, discovered by the Ottomans in the course of their own rebuilding in 987/1579). The text is provided by Ewliya Celebi, Seyyidname, ii (Istanbul, 1314), 330. During the mid-6th/12th century Kars also lay within the sphere of influence of the Shaddadid amirs of Anl: in Shahin 556/August 1161 troops furnished by "the lord of Ghars and Surmari" assisted in an attempt by the Shaddadid amir Faqdin b. Minuchir to regain his capital from the Georgian king Giorgi III (Minorsky, op. cit., 88-91, quoting al-Farikhi).

Kars remained in Muslim hands until 603/1206-7, when it was taken by the Georgians (Ibn al-Athir, xii, 169). It was besieged in vain by the Nizamshah (Ibn al-Din in Hakamshah, ii, 633-637; 636/1239 it was occupied by the nuyun Cormaghun and incorporated into the Mongol Empire. Hethum, king of Little Armenia, who visited Kars ca. 649/1251, found there the Mongol camp, from which Baydu governed the territories under his command. According to Hamd Allah al-Kazwin (Nasihat al-Kullah, ed. Le Strange, 93), at a later period Kars besieged, with Anl, to the Ilghizhan province of Georgia (Gürdjidstân va Abghazar): it was described at this time as one of the chief towns of Georgia (Le Strange, 181).

In 759/1358 Kars passed to the Daláyirds; and in 782/1380 to the Karakoyunlu. In 788/1386 the region of Kars, at that time under the local ruler Pir Huseyn b. Sahat, was devastated by Tmîr and turned into a wilderness (cf. Sanjjan, op. cit., 152), while Kars itself, it is said, was levelled to the ground (cf. Zafar-nama, ed. Tauer, index). The years 796/1394, 805/1400 and 805/1403 again saw Tmîr pass by Kars en route for summer pasture in the Bingil area of Çetdir, but soon after his death the Timùrid province of Anl, within which Kars was situated, reverted to Kar Koyunlu control. The local ruler Pir Huseyn b. Sahat is said by Armenian sources to have rebuilt and restored Kars in 813/1412; later, in 871/1467, Kars passed into the hands of the Ak-Koyunlu ruler Ulun Hasan.

Kars suffered much from the strife which accompanied the rise to power of the Safawids: for example, in 920/1514, when the Ottoman sultan Selim I encamped close by Kars on his return from the victorious Çaldûrân campaign, the town was said to be once more in a ruinous condition.

By 940/1534 Kars was in Ottoman hands, and in 955/1548 the sultan Suleymân I ordered work to be done on the fortifications. It was not until the renewal of the Ottoman-Safawid conflict in the late 16th/17th century, however, that Kars fully came into its own as a fortress of the Empire (1044). In face of the Safawid incursions into north-eastern Anatolia, and a base forward of Erzum from which the difficult task of keeping open the road to Tiflis and holding the new Caucasian conquests could be supported.

In the opening campaign (Djumâdâ II 986/August 1578) of the long Ottoman-Safawid struggle for the Caucasus, Kars was the scene of the first engagement —"una fiera scaramuzza"—between Ottoman forces under Lâlâ Mustafa Paşa, and those of the Safawids (Cesare Campana, Compendio storico, delle guerre . . . tra Christiani, & Turchi . . ., Venice 1597, f. 20). On 2 Djumâdâ I 'l-Akher 987/27 July 1579 an Ottoman army under Lâlâ Mustafa Paşa encamped at Kars, and proceeded rapidly, in the face of acute difficulties caused by a lack of suitable workmen and by the dense fogs and bitter cold which set in after 2 Radjab, 25 August (Minadoi, op. cit., 537), to fortify the town for use as a base from which to relieve Tiflis (Campa-

Under Ottoman rule Kars was raised (988/1580) to be the administrative centre of an eyalet of six or seven sandikâhs. Ewliya Celebi, who visited Kars in 1057/1647, variously lists (op. cit., i, 185, 192; ii, 329) the sandikâhs and their revenues (for other statistical accounts of the revenues and divisions of the eyalet of Kars, dating from the mid 17th/17th century, and giving alternative readings, see P. Rycaut, Preseni State of the Ottoman Empire, London 1670, 54, and J. von Hammer, Osm. Staatsverfassung, ii, 259). The town and its principal monuments at this time are described by Ewliya Celebi, op. cit., ii, 349-353, which can be supplemented by J.-M. Thierry, A propos de quelques monuments chrétiens du vilayet de Kars, in Revue des Etudes arménienes, n.s. iii (1966), 73-90, and by the several works of K. M. Fahrettin (= F. Kürzeholu). According to Ewliya Celebi, the Ottoman forces in Kars, together with those of Vân and Akbişhe, were renowned for their courage and bravery as borderers (op. cit., ii, 331), and in the Ottoman chronicles of the 11th/17th century Kars figures prominently and frequently in the accounts of the wars with the Safawids during this time.

European travellers to Kars were few before the 19th century. G. F. Gemelli-Carreri, who was there in May 1694, described Kars as a "large, but not populous city", with two walls of earth and a good garrison, which sent out forty horse every night to patrol the border with Safawid territory (A collection of voyages . . ., iv, London 1704, 109).

During the campaigns of Nadir Shah, Kars was besieged several times (1735 twice; 1744) (L. Lockhart, Nadir Shah, London 1938, passim; cf. also the despatches of Stanhope Aspinwall, London, Public Record Office, S. P. 97/32). By the end of the 18th century the eyalet of Kars had become one of the poorest in the Ottoman Empire, and was one of several provinces unable to provide sufficient revenue.

As part of the administrative reforms of the *Ta’ restart* period, the cedet of Kars was reduced to the status of a sannah in the wilayet of Erzurum (cf. *Sal-name* for 1922), but the military and strategic importance of the fortress itself was underlined once more by the Russian expansion southward through the Caucasus during the early 19th century. Kars was besieged successfully by Russian forces three times: in 1828, 1855 and 1877 (details and bibliography in W. E. D. Allen and P. Muratoff, *Caucasian Battlefields*, Cambridge 1953). Kars at this time took on also a considerable, if specious, significance for both British diplomacy and English public opinion, which regarded it as the "traditional bulwark against Russian expansion southwards" (B. Sumner, *Russia and the Balkans 1870-1880*, Oxford 1937, 316), and for the Russians themselves, as a war objective (*ibid.*, 623-4).

By the terms of the abortive Treaty of San Stefano (3 March 1878) and article 56 of the Treaty of Berlin (13 July 1878), the sandjaks of Kars and Ardahan, and the port of Batum, were ceded to Russia.

The number and composition of the inhabitants of town and province of Kars were seriously affected by the Russo-Turkish wars of the 19th century and by the events of World War I. As early as 1828 the majority of the original Armenian population were said to have deserted Kars after the Russian evacuation, while in the years after 1877 a steady migration of Muslims into Ottoman territory was counterbalanced by the settlement of Armenians and Russians in Kars itself and by massive colonization of the evicted rural districts (the statistics in *Brohhaus-Yetem Enislik, Slovar'* (1895) svv. Kars', Karskaya Oblast', were adapted by Barthold for the *EI1* version of this article).

Kars was the scene of fierce fighting in World War I. By the terms of the Treaty of Brest-Litovsk (3 March 1918) it was returned to the Ottoman Empire, but in fact remained in the hands of the Armenian nationalists until Turkish troops entered the town on 25 April 1918. Under the terms of the Mudros armistice (30 October 1918) the Turkish armies were obliged to withdraw to the west of the 1914 Russo-Turkish frontier. The Turks of Kars, however, established (6 November 1918) a provisional government under Fahrettin Pirioğlu (Fahrettin Pirioğlu), which claimed suzerainty over the province of Kars and the surrounding Turkish-speaking or Muslim districts as far as Batum and Gumrü (Aleksandropol’). After a period of confused fighting against Armenian, Georgian and British units, the Turkish regime in Kars was overthrown by a British expedition from Batum (19 April 1919) and some of its leaders were deported to Malta. During May 1919 Kars reverted to Armenian control, while the local Turkish leaders who survived took the hills and began to look to the Kemalists for aid. With the British withdrawal from Transcaucasia, and the Turco-Soviet rapprochement (1920), the independent Transcaucasian republics were quickly liquidated, and with the rapid collapse of Armenia the Turkish XViith Army Unit under Kazım Karabekir Pasha recaptured Kars on 30 October 1920. The *hadis of Chahar Posof* (23 February 1921) and Ardahan (7 March 1921)—all nowadays within the *ii* of Kars—also soon came under Turkish control.

By the Treaties of Gumrü (Aleksandropol’) with the Armenian Republic (2 December 1920), of Moscow (March 1921) with the Soviet régime, and of Kars (13 October 1921) with the Soviet Armenian, Georgian and Adzharian republics, the present boundary between Turkey and the U.S.S.R. was established. By this time, after seven years of warfare and enforced migration, the non-Muslim population had disappeared, and the province and town of Kars had taken on their present ethnic characteristics.

KART (possibly kurt), the name of a dynasty which ruled Herāt from 643/1245 to 791/1389. It was founded by Shams al-Dīn Muḥammad I Kart, who was descended from the Shamsābānī house of Ghūr, the family to which the brothers Ghiyāth al-Dīn Muḥammad and Mu'izz al-Dīn Muḥammad b. Sām belonged. As Herāt recovered from the devastating raids of the armies of Čingīz Khān, Shams al-Dīn gradually gained power, and by 643/1245 had established himself as ruler of the state, and used the title of Malik, borne by his descendants. In 649/1251 the Great Kān Mōŋgik, when reorganizing the administration of his empire, confirmed Shams-al-Dīn Kart as governor of Herāt, Balḵ and the country lying between those provinces and the Indian frontier. During the latter part of Shams-al-Dīn’s reign his son Rūkn al-Dīn acted as his coadjudtor, but predeceased him, dying in 682/1282, and when Shams al-Dīn himself died in 684/1285, he was succeeded by Rūkn al-Dīn’s son, Fakhr al-Dīn. As the power of the Mongol Il-Khāns of Persia declined, that of the Kart Malikīs of Herāt increased, and they governed for the first time nearly the same territory as modern Afghanistan, which was protected by them against Mongol devastations. Fakhr al-Dīn befriended the powerful amir Coban, who had been regent of Persia during the minority of Ābū Sa’īd, the fourteenth Il-Khān. When Ābī Sa’īd died, the amir Coban sought asylum with Ghiyāth al-Dīn, who received him, but in 727/1327 treacherously put both himself and his son Dīlay khan to death. Ghiyāth al-Dīn himself died in 728/1328 and his two elder sons, Shams al-Dīn II and Ḥafiz, who succeeded him in turn, died in 729/1329 and 731/1331. The historian ʿAlī detained him on various pretexts while he followed the lot of its administrative capital and its ruler and his eldest son, Pīr Muḥammad, after a few days’ siege. Some of its leading citizens were deported to Shahr-i Šabz and its defences were dismantled, but the Malik and his two sons, the younger of whom had been induced to surrender the strong fort of Ishkāla, were pardoned, and Ghiyāth al-Dīn Pīr ʿAllī was permitted to retain Herāt as a vassal of Timūr until 791/1389, when the dynasty was extinguished.

KARTADIJANNĀ, a name by which three places are known: Carthage, Cartélia (Kartādijannāt al-Dzāizirā) and Carthagena. This synonymy seems to be the cause of numerous confusions between the ancient Ħamān and the Kartādijannāt al-khalfa (and not al-khuladā as Yākūt interprets it). These confusions have been studied by J. Vallvé, Carthage et Carthagène au VIII° siècle. The name of the town, seat of a bishopric, must be the translation of Cartag-Spartaria, alluding to the abundance of esparto grass in the region.

According to al-Himyārī (Rauz al-miḥfar, no. 139, who copies al-Idrisī), “Carthagena is the port of Murcia. It is an ancient town, which dates from antiquity. It possesses an anchorage where large and small ships can anchor. Provisions abound there and are sold there permanently at a cheap rate. In its dependencies is a district by the name of al-Fudūn: there are few places where the soil is of such good quality, and it is reported that a single fall of rain is sufficient to assure the harvest, and the grain which grows there is excellent. By land it is 40 miles from the town of Carthagena to Murcia. It is near this town of Carthagena that ʿAbd al-ʿAzīz b. Mūsā b. Nuṣayr defeated Tūṭmīr b. ʿAbdūs, who has given his name to the kāra of Tūṭmīr.” The text of the treaty between ʿAbd al-ʿAzīz and Tūṭmīr is the only one of Muslim Spain which has been preserved in extenso and of which we have several versions.

The town, in so far as it was one, does not seem to have enjoyed much importance, despite the enthusiasm of the description which Abuʾl-Ḥasan al-Kartādijanni gives of it in the 12th-13th centuries (cf. his Kaṣīda maḥṣūra; a summary analysis in E. Garcia Gómez, Observaciones sobre la Qasida . . ., in al-And., 1933/5, 81-103) and the Arab sources—geographical as much as historical—are exceptionally laconic. A part of the gjund of Egypt was installed there by Abūl-Ḥaṭṭār (q.v.) in the district of Tūṭmīr (q.v.), of which we may have a reflection in the Crónica del Moro Rasis which placed it under the government of ʿAbd al-Malik b. Kaṭān. It is in this region that ʿAbd al-Rahmān al-Šīk_IR (in 143/763, following the orders of the ʿAbbasīd al-Mahdī), in his attempt to overthrow the Umayyads, at the time of the alliance of Ibn al-ʿArabī (q.v.) with Charlemagne. Subsequently, the confrontation for power between the descendants of ʿAbd al-Rahmān made this place the domain of Sulaymān b. ʿAbd al-Balānis. When the continual feuds between Muḥarīs and Yemenis wearied of the ascendency of the Murcian-Carthagena region was the apple of discord that made Yūsuf b. Tāshuifin (q.v.) resolve to dethrone the petty kings. The province was subdued by Ibn ʿĀṣīra (q.v.).
It then passed into the power of Ibn Hamushk and of Ibn Mardanî [q.v.] and, after its submission to the Almohads, it followed the general decadence and became part of the domains of Sayyif al-Ádíl when he rose up in the Levant. It then belonged to Ibn Hûd and finally to Zâyûn b. Mardanî who, after the loss of Valencia in 635/1238, took refuge in Murcia, from where he was pursued by Bâhâ al-Dawût, the last great public (display) of his myriad talents. The latter surrendered to the future Alphonsus the Wise, but there was an uprising there in 1246 and the last indomitable rebels were not exterminated until 1274.

Carthagena, judged too coastal in situation and exposed to the attacks of the corsairs and Turks, does not seem to have had so many Moriscos [q.v.] as one would reasonably suppose, by contrast with Murcia where there must have been a heavy enough immigration of Granadans deported to Castille, at least those from the region of Cuenca. The port of Carthagena was one of the points of which the expulsion of the Moriscos was effected in 1612.

(Ρ. Χαλμέτα)

**KARÔKH,** a town in the region of Bâdghîs [q.v.] of modern northwestern Afghanistân and, according to Ibn Hawkal (4th/10th century), the biggest town of the region after the capital Harât. It had a Friday mosque and was famed for its fruits, especially apricots and raisins. Its particular claim to fame in mediaeval times was as an enduring centre of the Khawaridjî on the eastern Iranian fringes. In 259/873 the Šâffârîdî amîr Ya'bûkî b. al-Layyî had to cope with a serious rebellion of the eastern Khawaridjî centred on Kârûkh under their "commander of the faithful" 'Abd al-RâhÎm al-Mutawakkîl (b. 'Ilâhî; over a century later, according to Mâkulâshî, Karûkh was still a Khawaridjî centre. A modern village with the same name survives at Karukh.

**KARÔN**, the Biblical Korah (Num. XVII), is mentioned three times in the Korân (XXVIII, 70-82, XXIX, 39-58, and the latter verses, he appears with Hâmîn as a minister of Fitâ'awîn, and all three of them behave proudly towards Moses, stigmatising him as a magician and impostor. In the first passage (XXVIII, 70-82), Kârûn is one of Moses' people, but treats them in an insolent fashion because of the immense riches which have been given to him, as he believes, because of the knowledge which is in him (Sâli 'dînm 'indî). He makes a great public display of his wealth, and is swallowed up by the earth with his palace (dâr), an example of those who prefer the fleeting wealth of this world to the recompense of Allâh in the next world awarded to those who believe and do good works.

Encyclopaedia of Islam, IV

This tale, which alludes vaguely to the rebellion of Korah and, more explicitly, to his punishment (Num. XVI, 31-3, XXVI, 10), is probably an echo of some moralising story. The commentators and the writers on the *kișâs al-anbiyâd* have added to it a lengthy legend, in part derived from rabbinical literature (see Jewish encyclopedia, vi, 356 ff.; Sale's notes to his Kûr'ân tr.; and al-'Idhâbî, *Kûsâ*, Cairo 1314, 120 ff.). In this legend, the latter accumulated a vast horde of gold and silver, but at the request of Moses, was punished by God for his arrogance, his pride and the evil behaviour which his recently-acquired riches had led him into". According to al-Ṭabarî, Zotenben, i, 382-4, he was originally a goldsmith, and according to al-Kišâ, op. cit., 229, Moses' sister was Kûrîn's wife, and it was she who learnt about alchemy in order to teach her husband (according to the commentators, he was Moses' nephew). (2) In Egypt, his name is associated with various lakes. Thus what is left of Lake Moeris in the Fayûm bears his name (Birkat Kârûn; see Guides Bleus, *Égypte*, 1956, 241-2, where a popular etymology Birkat al-Kârûn "Lake of the Horns" is erroneously given), and a Madinat Kârûn has recently been begun in the neighbourhood. Also, beside the Birkat al-Álî the south of Cairo, near the Mosque of Ibn Tûlûn, there was formerly a Birkat Kârûn which had evidently associations of supernatural legend. Al-Mâkri describes it (Khîtâb, Bulûk 1325, iii, 261-2) and tells that Kârûf [q.v.] who built beside it a house was said to have been driven from it by djinn. It figures also in the Story of Djudhar the Fisherman in Zotenben's (cf. *Nat. et Extr.,* xxvii, i, 169 ff.) Egyptian Recension of "The 1001 Nights" (Nights 606-24) as a place where spirits take refuge from magicians. Von Hammer suggested ("Der Tausend und Einen Nacht noch nicht übersetzte Märchen", tr. Zinnerling, ii, 32; tr. Trébutien, i, 291) that Kârûn had here become confused with the Egyptian Charon.

(D. B. Macdonald*)

**KARÔN**, the largest river in southern Persia. It rises in the north-eastern Bakhûtâr mountain system or, to be more accurate, on one of the ranges named Kâhidî Rang, one of the highest mountains in south-western
Persia (estimated at 13,000 feet). The actual source of the river, according to Sawyer (Bibl., op. cit., 486, with a picture), is about 10 miles above the place called Ser-i Chehme-i Kurang "main source of the Kurang (Kuran)". The Zayända-Rúd likewise rises on the Zarda-Kúh and flows eastwards towards Isfahán. As the source of the Kárún is only about 100 miles from Isfahán, Sháh ‘Abbás I thought of leading the Kárún into the Zayända-Rúd by a tunnel through the mountains. Although almost finished at his death, the work was not continued by his successors; the remains of it may still be seen (cf. Layard, Bibl., op. cit., 50 f.).

The upper part of the river's course extends from its source to its exit from the mountains at Shústár, and the middle course from Shústár to al-Ahwáz or Naṣériyya, where it breaks through the spurs of the Díabál Hamrín; its lower course runs through the alluvial plain formed by the Kárún system. As a result of its very meandering course, the river covers about 500 miles from its source to its mouth in the Shájt al-‘Arab, although a straight line between the two points is only about 150 miles. In its upper course the Kárún makes two great loops in about 32° N. Lat.

A little above Shústár, the Kárún divides into two navigable arms which unite again about thirty miles away at the village of Eshkáz-‘Ir (known in the mediæval literature as ‘Askár Mukram) and thus form an island. The western arm is the main stream, the Kárún proper; it is now called Áb-i Shútayt (Shútayt = little river) and further down also Áb-i Buzurg Shústár (= great water of Shústár). The eastern arm is artificial in origin, and is now called Áb-i Gargar; the Arab geographers of the Middle Ages know it by the name of Masrúkán (Masgrułák, Masgrunn), which probably explained as a corruption of the Persian Ardashr-‘Kán (= "Ardashr's trench"). The form ArdaghbraIán is noteworthy: it occurs in a Syriac chronicle edited by Guidi in the Actes du 8° Congres des Orientalistes, Leiden 1891, 32 (and cf. thereon Ndolde in SB Ah. Wien, cxxviii (1893), Abb. i, 42). The first Sasanian king is said to have been the maker of this water-course. The Persian geographers of the 9th/10th century call the western branch, which carries the bulk of the water, Chádár Dániška ("four-sixths"), the eastern Dá Dániška ("two-sixths") (cf. Le Strange, 236). These names are still known locally, according to Layard (op. cit., 27). In the 4th/10th century, according to Arabic sources, the Masrúkán canal did not enter the main stream, the Kárún proper, at ‘Askár Mukram, but ran parallel to it and reached the Persian Gulf by a course of its own.

The Kárún delta begins a little above the village of Sábla. Three channels break off from the main arm, which continues its course till its junction with the Shájt al-‘Arab at Muḫtammará; these all run South-east to the Persian Gulf and finally end their course in estuaries (khawr, khór), which are at times swamps. Their names are: (1) The Shájt (or Rúd) al-‘Kádimi (= "the old stream"), which leaves the Kárún about an hour's journey above Sábla and broadens out into the Khór Músh (also called Khór Moi Alláh). This is probably the oldest course of the Kárún; (2) The Shájt "al-Amáyá" (= as it is usually written on maps) or al-‘Ámá (= the blind stream), probably so called because its bed is usually choked with mud. It is also called Shájt Kóbán (Gobán) from the district which lies on its right bank; Portuguese writers of the 17th century reproduced the name as Río de Gabão (cf. Tomaschek, 75 f.). This second arm begins at Sábla and finally expands into the Khór Sílidj (Selige in Kinneir, 292); it is perhaps the second oldest arm of the Kárún; (3) The Shájt Bamişh (Bamimishr, Behe misuse), which leaves the Kárún about 6 miles below Sábla and expands into the Khór Bamimishr before entering the sea. This third branch of the Kárún is considerably wider and holds more water than the other two. According to the Persian Gulf Pilot, 284, it is 54 miles long (40 as the crow flies). This may now be regarded as the natural mouth of the Kárún.

The two western branches of the Kárún, the Shájt al-Á’má and the Bamişh, form two long islands with the Shájt al-‘Arab, which runs parallel to them, the main Kárún in the north and the Persian Gulf in the south. The eastern one, bordered by the Shájt al-Á’má (Kóbán) and the Bamişh, is called Kóbán (Gobán, Gobbán); the western, between the Bamişh and the Shájt al-‘Arab, is now usually called Dzairarat ‘Abbábdán, a name it already had in the Middle Ages, from the town of ‘Abbábdán (q.v.), which probably originally lay at the mouth of the delta. The latter island is also called Dzairarat al-Khír after the prophet al-Khír (q.v.), highly revered in Muslim popular belief especially in Irák as a patron of water, who had or still has a sanctuary near ‘Abbábdán ("Chodder Abbadan" in Niebuhr, Reisebeschreibung, ii, Copenhagen 1776, 206), which is mentioned as early as the 7th/13th and 8th/14th centuries by al-Dimáškí (Nákhat al-Dáhhr, ed. Mehren, 97, 18) and Ibn Baţţúta (ii, 19). Alongside ‘Abbábdán, the most important place in the Middle Ages seems to have been al-Mubrizá (Mubrizí) and the island seems occasionally to be called after it. For Mubrizí see Yáḵt, i, 502, 712, iii, 598, iv, 709; al-Dimáškí, 97; al-Kázání, Aẖár al-Bišád, ed. Wiistenfeld, 280. The Persians gave this island the name Miýán Rúdán (= "between the rivers", "Mesopotamia"); see, e.g., Yáḵt, iv, 708, and Le Strange, 48).

As has been noted, the Kárún at an earlier period probably entered the sea through the Shájt al-Á’má, apart from the riverbed represented by the Shájt al-Kádimi, which is perhaps the oldest bed. According to the mediæval Arab geographers, the different branches and tributaries of the Dzúdíya, which is divided at a place called Híšn al-Mahdil, whether the Nahr Sídri (= Lotus-river), which also enters there, must be considered the main arm of the Kárún from al-Ahwáz onwards is doubtful: cf. Le Strange, 237; Schwarz, op. cit., 306. The reunited Kárún, called Nahr Híšn al-Mahdil (see Schwarz, op. cit.), then enters its estuary (Fâydh Dzúdíya), which ends at Sulamánnán on the coast (for Híšn al-Mahdil and Sulamánnán cf. Le Strange, 48, 243, and in JRAAS (1895), 302; Schwarz, op. cit., 306, 329-330, 400). Híšn al-Mahdil perhaps lay in the neighbourhood of the present Sábla; Sulamánnán is perhaps to be located somewhere in the region of the Khór Sílidj; the end of the course of the Kárún in the Middle Ages would thus practically coincide with the modern Shájt al-Á’má. In the Middle Ages there must have been several other separate smaller mouths of the river. In these topographic investigations it should not be forgotten that southern Irák and Khúzístán, the delta of the great rivers, have undergone far-reaching changes in their hydrographic structure in the course of thousands of years. In ancient times the Persian Gulf extended much farther into the present mainland, so that the Kárún, Karkhá, Euphrates and Tigris all had separate mouths; cf. Andreas in Pauly-Wissowa i, 1394, 2812. During the Middle Ages and in modern times the coastline has steadily advanced southwards.
The bed of the Karun from Sābla to Muhammara seems to be the work of human hands. In the 4th/10th century the Būyid ʿAḍud al-Dawla [q.v.] constructed a canal, which was called ʿAḍud after him, to secure direct communication between the Tigris and Karun (from al-Ḥasra to al-Ahwāz). As in those days the Karun apparently flowed into the Persian Gulf through the Shāṭṭ al-Aʿmān, in its main lines the ʿAḍud probably corresponded with the present course of the Karun between Sābla and Muhammara. It is very doubtful that that work was something entirely new; more probably he undertook the restoration of an older channel which had fallen into neglect. A century earlier we have evidence from the Arab geographers of the existence of a canal called Nahrah al-Djādīd (= New Canal) which led from Ḥīn al-Mahdī (near Sābla?) to the Tigris and may well have coincided with the ʿAḍud. From a still earlier period we have the Bayān canal, the course of which may wholly or in part have coincided with the ʿAḍud or Nahr al-Djādīd. Whether there was in ancient times—about the period of Alexander—an artificial channel connecting the Karun and Tigris and following the same direction cannot be ascertained with certainty; on this question, see Andreas in Pauly-Wissowa, i, 1394. In modern times, the name Ḥāffār (= “digger”, usually spelled Ḥafar in books of travel and in maps) has come into use for the stretch of the Karun between Sābla and Muhammara, and the name suggests that here too we have the work of human hands, not a natural bed. At the present day, however, this name is limited to the short stretch, only about an hour’s journey long, from the beginning of the Shāṭṭ Banīghr (the mouth proper of the Karun at the present day) to Muhammara. It should also be noted that in the second half of the 12th/18th century, Sulaymān, the powerful shaykh of the tribe of Kaʿb (on him see below), destroyed the connexion between the Karun and the Shāṭṭ al-ʿArab by placing a dam (band) across the Ḥāffār at Sābla and leading the water into the Shāṭṭ al-Aʿmān. The district of Kōbān thereby soon became very prosperous. But during Karun Kōbān’s [q.v.] second Invasión, the dam of the Ḥāffār was destroyed (cf. Kinneir, op. cit., 90). On the communication between the Karun and Tigris by the ʿAḍud, Nahr al-Djādīd, Bayān and Ḥāffār canals see Kinneir, 90, 293-294; Layard, 55-56; Tomaschek, 76-77; Ainsworth, 1, 174, 184; Persian Gulf Pilot, 296; Le Strange, 48, and JRAS (1895), 308-9; Schwarz, 309, 311, 390.

While still in the mountains, the Karun receives a number of abundant tributaries, for example, above Sūsan the Ab-i Bāzūft on the right and the Ab-i Bars (Bors) on the left. A little above Camani Yorqah the Tālak joins it. The most important tributary is the river of Dīzfūl, the Dīzfūl-Rūd or Ab-i Dīz. It and its tributaries, the Shāwūr, were at one time (and in part still are) connected with the Karakha and the Karun by canals. On the Dīzfūl-Rūd and Shāwūr, see Hamed Allāh Mustawfl, Nusha, 215, ii; 218, 13, 15; Le Strange, 233, 239, and JRAS (1895), 312; Schwarz, 303-305; Ritter, ix, 193 f.; Layard, 56 f.; see also von Bode, ii, 193; Loftus, 329, 342, 346; J. Dieulafoy, passim; Sawyer, 490 f.

The Karun is not only connected with the Tigris and Karakha in the west, but in the east it is linked up with the Dījarrah of the Arūd or Ab-i Kurdistān (the Tāb of the Arab geographers; see Le Strange, 270; Schwarz, 5 f.). At Sābla a canal navigable by boats leaves the Shāṭṭ al-Aʿmān and runs to Dawrak (Dōrāk-Fallāḥiyya [see DAWRAK]) on the Dījarrah.

The more important towns on the Karun in mediaeval as in modern times lay on its central course between Shustar and al-Ahwāz. At the two termini of this stretch stood the two capitals of the mediaeval province of Khūrizistān, al-Ahwāz and Tustar (Shustar). Al-Ahwāz [q.v.], formerly the capital proper of this district, is situated at the important point where the Karun, breaking through its last barrier, the Dījābal Shāmīn range, enters the plain. For Tustar see Susan, and in the site (particularly the bifurcation which begins there) Graadt van Roggen, 174 f.

The lower course of the Karun from al-Ahwāz to Muhammara has no places of great importance on its banks. Muhammara, at the junction of the Karun and the Shāṭṭ al-ʿArab, is, however, a place of unusual importance. It was at the beginning of this century the best harbour in Persia, easily accessible at any time.

In the mountainous upper course there are no longer any towns of importance. In late antiquity and in the Middle Ages the most prominent were Sūsan (also called ʿArūd or ʿArūb and Dījābalīk) on the right bank, and Tādādīl [q.v.] or Māl-Amīr opposite. Along the upper course in parts runs a road protected by many fortes, mostly in ruins. The Karūn in general is historically one of the most interesting rivers in Persia owing to the numerous ruins from ancient times which are everywhere found on its banks.

In the military history of the Middle Ages the Karūn basin only occasionally occurs as the scene of fighting; cf. Schwarz, 299-300. During World War I possession of this territory became very important on account of its oil-fields; cf. Schweer, 140-4.

As early as the Sassanians, powerful dams (ghadkh-ravān) with the necessary sluices had been erected at various places to enable the water thus dammed to be led by numerous small canals to fields on a higher level, especially on the central stretch of the Karūn. Throughout the Middle Ages this irrigation system was kept in excellent repair and transformed the land it watered into flourishing gardens. Since then, however, most of these works have fallen more and more into ruin as a result of neglect, and great stretches of once fertile country have become desert again. The most celebrated was the gigantic dam at Shustar, which was regarded in the east as one of the wonders of the world. Its erection is ascribed to the Sassanian king Shāpur I (241-272 A.D.). On this great system of dam and sluices here, which after considerable restoration is still partly in use to-day, see Ritter, ix, 186 f.; Nöldke, Geschichte der Araber und Perser zur Zeit der Sassaniden, Leiden 1879, 33; Justi, in Gr.I.Ph., ii, Strassbourg 1896 f., 318; Le Strange, 235; Schwarz, Iran, 296. At Wālīs, a few hours’ journey below Band-i Kīr, the ruins of a great dam may still be seen (cf. Herzfeld, 76). In al-Ahwāz, at the rapids there, considerable remains of a triple ancient system of dams still exist. Band-i Kīr (= “Bitumen-dam”) took its name from the ancient dam coated with bitumen.

The Kūrūn is the only river of Persia that admits of navigation. Communication is maintained with the Persian Gulf through the Shāṭṭ al-ʿArab and the Shāṭṭ Banīghr. There is evidence that as early as the Umayyad period there was regular traffic up the river as far as al-Ahwāz (cf. Schwarz, 300). The Karūn was into the 20th century navigable as far as Shustar. The only obstacles were the rapids caused by the gypsum rocks below al-Ahwāz (see the very full description by Wells, 156 f.), which made unloading
and reshipment necessary. Movement along the river has since expanded. The valley possesses rich oil fields in modern times. In 1888 the Karūn was opened to international navigation.

**KĀRĀN, a word ostensibly of Iranian origin, later arabized, whence Eng. "caravan," Fr. "caravane," Ger. "Karawane," etc. Its early form kār-bān, meaning "supervising work," probably evolved from the Pahlavi period. The Pahlavi form may have been kār-pūnde, in which case it would be a noun made up of kār meaning "army" or "war" plus the suffix -pūn, signifying a group of travelling merchants. Convoy provisions, goods and animals also were called kār-bān. However, this may well be a popular etymology for a word of uncertain origin. The more widespread meaning dates from the early Islamic period (M. Muʿīn, *A Persian dictionary*, iii, 2817; caravans are described in the works of the 5th/11th century poets Ferdowsī and Farruhbīd [qq.v.]). Caravans demonstrate the distribution and direction of trade routes, although the latter existed before the caravan system was developed. Journeys of various kinds were undertaken in caravan-like "convoys." In the pre-Islamic period the Arabs had for long used the word fārē (v), and later the more usual word kāfīlā, as the equivalent of kārūn; the word kāfīlā was current at the beginning of the 7th century A.D. for gatherings of travelers (cf. Ibn Hīšām, *Sīra*, Cairo 1396, i, 253, 312). In Turkish, the word arık-bahī or arık-bahī'm, meaning caravan, is attested from the 8th century A.D. (Clauson, *Etymological Dictionary*, 216-7).

Caravans were composed of horses, mules, donkeys, and especially camels. Camel-caravans were used over open plains and deserts, while in the mountainous regions mules, donkeys, and more rarely horses were used. In some regions, however, the nature of the caravan was quite different: in India, caravans made up of 100-200 carts each pulled by 10-12 oxen were used for the bulk transport of grain (J.-B. Tavernier, *The six voyages . . .*, London 1678, ii, 28 ff.; Peter Mundy, *Travels . . .*, ii, pp. xxxvii, 45, 249, 250, 281, 283).}

**HISTORICAL SURVEY**

Camel caravans became widespread because of the greater load that the animal could carry (on the domestication of the camel, see BADW). The size of the load a camel can carry varies according to the climate: in hot countries such as India the camel can carry only a small load of 600-650 ibs, whereas those employed between Tabriz and Istanbul and accustomed to the cold, could carry 1000 lbs (Tavernier, i, 49-50).

The oldest feature in the history of the western Asiatic caravan trade is the so-called "Silk Route". This route connecting China and Central Asia was extended to Farghāna and thence to southern and western Asia, and provided a means of transporting the products of distant countries by means of large caravans of hundreds of camels. In the Islamic middle ages, Baghādād was the point of departure for routes to east and west, the principal itineraries being: (1) From Baghādād northwards along the Tigrīs to Mosūl - Ḥatra - Harrān - or Sinjūr - Nisibis - Rakha - Manbij - Aleppo - Ḥama - Bābābak - Damascus - Ramla - Cairo - Alexandria, and thence by ship to North Africa; (2) From Baghādād the route along the west bank of the Euphrates, which it crossed at Hit, and thence to Damascus, was the shortest route across the desert; and (3) The eastbound route went from Baghādād to Hamadān, thence to Rāyī - Nīshāpūr - Marw - Bukhārā and Samarqand, and so to the western terminal of the silk route at Farghāna, by which China could be reached. One route ran from Khūwa in Khūzistān to the mouth of the Volga, and thence up the Volga to the Baltic countries; another passed north of the Caspian Sea to the northern ports of the Black Sea. The organization and marching arrangements of a caravan may be illustrated by the account of one consisting of about 600 camels and 400 mules which made the journey from Dīyārbakr to Mawšīl in 1838. The camels, tied together in groups of fifteen or twenty, walked in single file; their owners rode small donkeys or horses, travelling in front, while the servants walked. The camels would not move un-
KÄRWAN 677

less led by the donkey. When the caravan came to a site where it was to spend the night, the leader of the caravan would move on ahead and point out the camping-place. The cargo was unloaded and the large bales were arranged to form a rectangular enclosure, within which each traveller prepared his own sleeping quarters. Then the camels and mules were untied and driven out to graze, but the horses were tethered. As it grew dark, the camels were rounded up and tethered in line within the enclosure (Lettres du Marchal de Molhe sur l'Orient, Paris 1872, 229-30).

From early times, commercial journeys had been made at set periods, so that several important cities grew up at the terminals of regular routes: most notably, Mecca's existence depended entirely upon the caravan-trade. Once a year, a caravan was organised to set out in a specific direction, such a caravan comprising some 2500 camels, as well as horses and mules. At this period, a caravan of 2000 camels was regarded as medium-sized, while a caravan of 450 camels and 100 mules and donkeys, operating between Baghdad and Aleppo, was considered small. The camels in a caravan might be used as mounts, but generally were beasts of burden. The distances covered each day varied according to the climate. On average, it travelled 6, 8, 10 or 12 hours each day, each day's journey being made in two stages: from 3 or 4 in the morning until 10, and in the afternoon from 2 or 3 o'clock until 8. Since a single camel can carry a load equivalent to that of three, four, or even five horses, it was a much cheaper mode of transport. In the Mediterranean region, caravan journeys were closely linked to maritime traffic: during the winter months, when transport by sea was impossible, three caravans, setting out from Sijilmása on the northern Saharan fringe, would travel to Cairo via Kayrawán, Tripoli and Barka. Such caravans operated also in the summer months, covering the distance between Tunis and Cairo in two or three months. Caravans covering long distances were known as "seasonal" (mausim) caravans, in India "monsoon" caravans (S. D. Goitein, Studies in Islamic history and institutions, Leiden 1968, 303). Caravans operated in the summer months in Anatolia, in the Balkans and in Ardhabaydjan: thus caravans arrived at Izmir between February and June and in October (Tavernier, i, 46-7); but Anatolia and the Balkans lie outside the desert regions—caravans would arrive in Egypt and in other countries of North Africa in September-October, and even in April, May and June. During the summer, it was quite impossible to cross the desert between Baghdad and Aleppo. In ca. 1640, caravan traffic out of Hormuz operated between December and March. In north-west Africa, caravans arriving south of Oran (Algeria) in November were of importance in this century (F. Braudel, The Mediterranean ..., Eng. tr. London 1972, i, 259-60).

CARAVAN ROUTES AND THE DEVELOPMENT OF THE CARAVAN TRADE

There were along the caravan routes fixed points at which the caravans halted for the night, and in desert regions there were furthermore water cisterns at intervals of 15 km. These halting-places were regarded as "guest-houses", and were often organized by the pious as waqf-foundations, the usual designation for them being ribāṭ (mawsim). The establishment of such ribāṭs dates from the 4th/10th century and reached its peak under the Great Seljūḳs. In various works composed in the 6th/12th century, the word ribāṭ is used as a synonym for "caravansersai" and spread to Central Asia as a result of the Mongol invasions. The caravanserai reached its highest development in Seljūḳ Anatolia, especially in the 7th/13th century; caravanserai or khāns were built at intervals of 30-40 km. along the north-south and east-west routes as international trade increased. Their strong walls and towers provided security; and their facilities might include sleeping--quarters, kitchens, store-houses, baths, mosques even hospitals for the sick (O. Turan, Selçuk heroanarsarayları, in Bell., X3/X 39 (1946), 477-95). In this period, the central authorities appointed to each caravan an official entitled Amir-i Kārībānsādār, under whom was an escort commanded by a rāḥdār or tutkavül.

Whatever the object of the caravan, whether trade or the fulfilment of the pilgrimage, its rate of travel varied from period to period. A pilgrimage caravan of 30-40,000 camels could travel from Cairo to Mecca in forty days, helped on its way by its military escort. In the 9th/15th and 10th/16th centuries, in spite of the Portuguese development of the Cape maritime route, trans-Saharan trade developed considerably, although there was some modification of the traditional routes (Braudel, op. cit., i, 181-2). In the 11th/17th century the route between Persia and Izmir was particularly popular, although it took 100 days: the journey to Isfahan via Mawsil and Hamadān took 38 days; the busiest route to Persia, that from Aleppo via Birejdik, Diyārbakr and Tabrīz, took 42 days, and 66 days to Isfahan. Towards the middle of the 11th/17th century, however, the importance of the caravan trade between Persia, India and the Ottoman Empire diminished, as a result of the formation of English and Dutch trading companies operating by sea; the only major commodity left for overland transport was silk. The spice trade continued, but the old spice routes were abandoned (N. Steensgaard, Carrahe, caravans and companies, Odense 1973, 174, 192).

With the development of other means of communication, the composition of the caravans changed and the number of animals decreased. Yet although the number of animals employed in a single caravan might decrease, the number of caravans organized each year might increase. Commercial caravans travelled between Baghdad and Baṣra four times a year in the 10th/16th century and small caravans travelled regularly between Syria and southern Irāq: there were three caravans a year between Damascus and Baghdad. The Baghdad caravan went to Damascus once a year and to Aleppo twice. This situation continued unchanged until the end of the 12th/18th century. In Anatolia, caravans were organized on a smaller scale; because of the broken terrain, mules and donkeys were used in some regions instead of camels, as was the case in northern Irāq.

ORGANIZATION

Security was a vital consideration. Caravans usually had an armed escort, sometimes of professional soldiers, and at every halting-point would be joined by new groups of travellers. During the night a continuous look-out had to be kept against raids by bandits, and at intervals the sentinels would call to one another khaṭārādūr and a drum was beaten (P. Mundy, Travels, ii, 41-2; Thévenot, part 3, 19). A leader responsible for organizing the whole caravan was known as the kārdān-baḡī (in Persia and India, kārdān-baḥg or kārdān-bāšā). The establishment of such kārdāns dates from the 4th/10th century and it was under the general supervision of the main leader, who determined the route to be followed, the
halting-places, and the order of the constituent groups in the caravan, and who was responsible for the general security. To travel in a caravan was slower but safer, since special, additional guards, supplied by the government, were available in desolate areas.

In the mid-11th/17th century, the leader of the caravan was sometimes elected by the merchants. If a merchant had six camels, one of the six beasts, and if he had three, one of the three, carried his essential gear. For every horse or camel in the caravan its owner paid a fixed fee to the leader; thus, if the caravan was a large one, the leader might make a great deal of money, part of which he paid to the guards and part of which he spent on necessities along the way. At places where customs duty was collected, 4 kurush was taken for every camel-load and 2 kurush for a horse-load (Taverney, part 1, 7, 8, 9, 10, 45, 46; Travels of Mira Ş Abu Taeb Khan in Asia, Africa and Europe during the years 1799, 1800, 1801, 1802 and 1803, London 1814, i, 112-15).

In desert areas, where water was scarce or unobtainable, paid scouts called takshif were employed to find water. When the wind obscured the track, the takshif had to go on ahead to find the way, so that occasionally he was the first to die (Ibn Battuta, lv, 381-3; cf. Leo Africanus, The history and description of Africa, London 1898, i, 173-4). In some places, such as the Western interior, guides and part of which he spent on necessities along

Caravan leaders in the Sahara had links with the Berber tribes; here four main routes connected north and east Africa: (1) the route by Sidjilmasa and WALATA to Senegal and the upper Niger; (2) the Ghadames-Ghat route to Hausaland and Air; (3) the Tripoli-Fezzan-Kasar route to Bornu and Lake Chad; and (4) the route from Taghaza to Timbuktu, perished of thirst (E. W. Bovill, The golden trade of the Moors, London 1926, 52, 235, 236). The traditional caravans continued to operate in Africa into this century: thus in 1908 a caravan of 20,000 camels set out from Air to travel via Ghadames and Ghat (Bovill, op. cit., 236, 238).

Records of the late 19th century give detailed accounts of caravan travel in the desert. In Tripoli (North Africa), after several merchants who wished to organize a caravan had reached agreement among themselves and obtained permission from the provincial authorities, they would, by the intermediary of a shaykh, known to be competent and trustworthy, conclude agreements with the shaykh through whose tribal lands they would pass. If the shaykh accepted the proposal, he would come to the provincial capital, and the next was called peshek, who knew the routes and the places where water was to be found. In the capital all details of the wages to be paid, etc., were settled, committed to writing, and confirmed by the provincial authorities; a mansur or formal document incorporating these conditions was given to the shaykh who was to act as conductor of the caravan; he was empowered to take all measures to protect the lives and goods of the participants and to determine any legal or criminal questions that might arise. The promoters of the caravan would cause public proclamation to be made. Not all who responded were necessarily professional merchants; private individuals might take part as a speculation, informing the shaykh that they needed camels (three for the goods that they hoped to sell at a profit, one to ride on, one for water, and one for food). On the basis of this information, the shaykh would arrange the disposition of the caravan (Müsevvel-zade Derviş, Osmanlı Imparatorluğu ait vesikalar, in İstanbul Dergisi, n.s. 10-12 (İstanbul 1940), 393-4). The shaykh of the caravan and the leaders of the armed guards were each given a burnous according to rank. Such a caravan travelling to Central Africa, where coinage was unknown, would carry goods for barter.

CARAVAN TRADE BETWEEN THE 9TH/15TH AND 19TH CENTURIES

In the Ottoman Empire, an extensive caravan network satisfied all the requirements of transport and communications. Towards the end of the 9th/15th century the most important caravan route across Anatolia was that between Bursa and Tabriz; it began with a northern and a southern branch (Kastamonu-Bolu; Ankara-Corum) and then traversed Amasya, Tokat, Erzindjan, Erzurum and the Aras valley. This was principally a silk route (H. Inakik, in Bel., xxiv/93 (Ankara 1960), 45-96). A document of 1670 gives the following information about the composition of a caravan travelling from Baghdad to Aleppo: its 120 merchants had baggage amounting to 94(1/4) yûks, one yûk being the two bales slung across a beast of burden (Başbakankan Arşiv Genel Müdürülüğü, MM 7499). There were also smaller caravans operating between cities; termed makhâris (“for hire”), they would transport merchants and travellers for a fare. In Istanbul in the time of Murâd IV, 3,000 people were engaged in this business (Ewliya Celebi, Seyhâhatname, i, 520; H. Ongan, Ana karavan s numarası sırsı siciili, Ankara 1958, 64; see, for the makhâris operating between Damascus and Baghdad, Mustafá Dîya, Rehnumâ-ylı Bagdad, Damascus 1314, 4-5). Most of the people comprising a caravan were merchants engaged in trade with foreign countries, but travellers would also join a caravan in Xer, to enjoy its security: in the late 11th/17th century it was impossible for small groups of travellers to move about in the Ottoman Empire otherwise, because of the threats from Arab tribesmen and bandits (C. Le Bruyn, Travels, London 1718, ii, 329; Bašbakankan Arşivi, MD no. 115, pp. 285, 306). Caravan operations were carried on also in the European territories of the Ottoman Empire, numerous khâms surviving in Yugoslavia, Bulgaria, Albania and elsewhere (cf. Hamdija Kresevljakovic, Hanovi i Karavansaraji u Bosni i Hercegovini, Sarajevo 1957). Regular journeys were made between Istanbul and Belgrade by what was known as the “Belgrade caravan”; it continued to function into the 19th century (for a document of 1803, see Bašbakankan Arşivi, Cevdet tasnifi, liktisâr no. 209; also S. Dimitrijevic, Les caravans de Dubrovinck dans la Serbie du sud au XVIIe siècle, Belgrade 1958).

Mule caravans operating in Anatolia had their own special characteristics. The leading animal, which kept some way ahead of the others and carried a smaller load, was called peshek, the next was called djindar, and the next again peshek. All the animals carried small bells around their necks, which could be heard an hour's distance away. The驼s were made at kâms either to deliver the goods carried or to transfer them to other animals. Cameleers and muleteers formed a trade-guild (see C. Cahit Güzelye,
Gaziantep'teki kervancılar, in Gaziantep Kütüür Dergisi, v/79 (Gaziantep 1962), 79, 80, 94.

Whereas caravans travelled in Persia by night, in the Ottoman Empire travelling was done by day, for protection against bandits. A leader of a caravan could determine the hour by the position of the stars. He was followed by a bayrahçak "standard-bearer", who had a standard wrapped around a staff which he would wave at times of danger in order to warn the muleteers protecting the caravan. The Baghdad–Aleppo caravan also included coffee-makers, a launkía who transmitted the leader's orders, a muşâhdhin, and various tradesfolk—shoemakers, barbers, farriers and carpenters. The group of people at the rear was termed hamla (J. B. L. J. Rousseau, Voyage de Bagdad à Alep (1808), Paris 1899; cf. Tavernier, Voyages, 47, 60).

According to Peter Mundy (ii, 45), a caravan travelling from Surat to Agra in India in 1630 contained 250-300 carts and about 1800 people; the number increased as it proceeded, since inhabitants of famine-stricken regions would join it in order to escape starvation. There were no khâns in India, but in the cities there were public buildings termed sârads. According to Peter Mundy again (ii, p.xxxvii), the last caravan of the season contained 268 camels and 109 carts.

PILGRIM CARAVANS

Caravans of pilgrims travelling to the Holy Cities were under the supervision of the Amir al-hadjdî (Ewliya Çelebi, x, 424-5, 435, etc.). It was the regular practice to make money payments to the Bedouin chiefs through whose territories the caravan passed (Tavernier, 62-3). In Ottoman times, the provisioning, watering and protection of the pilgrim-caravans was a major enterprise of the Cairo caravan (consisted of 4,000 people). The Cairo caravan was in two sections; 10,000 people from North Africa formed the rearward journey, but came back first. For descriptions of the pilgrim caravan, see H. Maundrell, A journey from Aleppo to Jerusalem in 1697, Beirut 1963, 171-3; F. Hesselequist, Voyages and travels in the Levant in the years 1749, 1759, 1782, London 1785, pp. 17-22; E. L. Lengyel, Die Manners and customs... chs. 24, 25; J. L. Burckhardt, Travels in Arabia, London 1829, 247-8; and see MAHMAL.

DECLINE

The caravan trade declined as a result of the great changes in the technology of transport which occurred in the 19th century. In some regions, caravan journeys were discontinued after the introduction of steamships. The opening of the Suez Canal in 1869 brought a swift decline, yet caravans continued to have accelerated the decline: (1) the requisitioning of animals by governments and local authorities; (2) attacks from bandits; and (3) lack of bridges and the foul road conditions after rain.

KARWASHA, originally the name of the argot of the Maghribis practising the trades of sorcerer and treasure-seeker in Egypt, today applied to the Dakhîna (sing. Dakhîna) of Sudanese origin installed in the Village of the Sudanese close to Madâmîd in Upper Egypt and in the women's role. They are street manufacturers, amulets at the markets. These are carried under the armpit wrapped in a square red case. They are effective, it is said, against the evil eye or diseases, to attract customers into a shop, to obtain the favours of a woman, to keep or regain the love of a husband and to speak "without fear" in front of the judge, the mayor or any other magistrate. The Dakhîna make use of a secret language among themselves (rufayndî, in the spoken Arabic of Upper Egypt rufînâ) which is called karwasha (from the verb karwash to speak" or again balhama from the verb balhâm "to speak in an incomprehensible fashion"). A part of the vocabulary is of Maghribi origin: miskâh "good", bizâf "much", sîhâ "cigarette". They sometimes even affect the Moroccan accent: “fîshima "head" and not diyâq. The grammar is that of the spoken language of the region of Luxor. The man is called diyyâbî pl. diyyâblî (of Spanish origin: diabolo "devil"). Buddha: "I want!". Es-budd-âh "what do you want?". Dîyâl (after a vowel dîyl, used for forming a possessive genitive, is in current use: el-yusufa dîyl-u "his wife", el-habûbâr dîyl-ha "her husband", es-suwa dîyl el-muhsa "the door of the house"). Bi-dîyl has become a preposition; diyyâna es-sîhâ bi-dîyl en-nâra "light the cigarette with the match"; nûd bi-dîyl-i "leave me"; diyyâm el-nilî min es-diyâblî lî bi-dîyl-âh "take the money from...
the man who is with you." The prefix ka of the verb tends to disappear: lamma ka-ykun ... watering place of Mutayr long before 1338/1919, when Turayfīb b. Bandar b. Shufayr of the Dushan clan, Muwaha second.

Connection with Cirta is rejected by Noldeke, who [q.v.]; moreover, Polybius (37, 3, n) has sýprocv. (e.g., Sodom "to bring". This small vocabulary is important town. Mecca (XLVII, 14), Medina (II, 5), and the coastal town (VII, 163: al-fyaryatayn [q.v.]) has been or will be destroyed by Allah for its in-

Arab philologists derive the word from the roots h-r-y or h-r-a, "to collect", "to store", or "to head for some place", and "to collect people for hospitality", "to investigate a country in order to choose a residence" and "to head for some place".

KARYA AL-SUFLA, a village in northeastern Arabia (27° 29' N, 47° 52' E), about 200 m. above sea-level and having a population of about 1000 (1958 estimate). It is popularly known as Kurayya, after its larger twin village, Karya, or Karya al-Ulîyâ [q.v.], 19 km. to the west-north-west. The settlement of the site as a hígira of Ikhwan [q.v.] was contemporaneous with the immigration of Fatimids in 1338/1050 of Karya al-Ulîyâ. The colonists were Mutâyar tribesmen led by Hâyîf al-Fugm, chief of the Dhauwâ'awn section of that tribe's I'lla division. For notes on events connected with the founding of both villages and for a bibliography, see Karya al-Ulîyâ. (J. Mandaville)

KARYA AL-ULÎYÂ, a village in northeastern Arabia. Situated at 27° 33' N, 47° 42' E about 170 m. above sea-level and having a population of 2,200 (1963 estimate), it was founded as a hígira, or colony of the Wahhâbi Ikhwan [q.v.] by members of the ruling clan of the Mu'tâyir tribe. From about 1930, it has been a minor Bedouin market centre. It is often called simply Karya, the full name being used to differentiate it from neighbouring Karya al-Sufla [q.v.]. The two are sometimes referred to together as Karayâ (a town masculine plural). The establishment of Karya was a major incident in the 1919-20 boundary dispute between 'Abd al-'Azîz b. 'Abd al-Ra'mân Âl Su'îd, known as Ibn Su'îd, and the ruling house of Kuwait; it led to the bloody battle of al-Dîjârâ' (Mubâram 1339/October 1920), when the Ikhwan attacked the forces of Sâlim b. Mubârak Âl 'Abdi al-Dîjârâ', 30 km. west of Kuwait town.

Karya al-Ulîyâ was a well-known place of Mutâyar long before 1338/1050, when Yu'ayyûb b. Bandar b. Shu'ayr of the Dughân clan, Muwaha sec-
tion, of that tribe founded a kāṣīra there with the approval of Ibn Su‘ūd. Relations between Najd and Kuwayt had already been strained in 1337/1919 by news of Sālim’s plans to build a fort at Dawbat Bilbūl, 110 km. east of Karya on the Gulf coast. Ibn Shūkayr’s building activities at Karya, probably encouraged by Ibn Su‘ūd as a counter-measure, led to protests from Kuwayt and finally the dispatch of a 400-man Kuwayti force, which was routed by Muṣṭayr at the wells of Hamāma, south of Karya, in Shawrān 1338/May 1920. Ibn Su‘ūd, whose Ikhwān led by Faysāl b. Sulṭān al-Dawāsh had attacked before arrival of a letter from their sovereign urging restraint, agreed to return loot taken from Kuwayti tribes but maintained his territorial claim. The Ikhwān marched on al-Dhilā and as negotiations and British mediation broke down and after an abortive move toward Karya by Kuwaytī forces reinforced by Shammār tribesmen. Both Karyas in 1928–29 were important military bases of Muṣṭayr in raids against Kuwayt and ‘Irāq; they were also dissident centres during the concurrent Ikhwān rebellion against Ibn Su‘ūd. After the collapse of the aggressive Ikhwān movement in early 1930, Karya remained as a market for Bedouins and as a customs station on the main motor track between Kuwayt and al-Riyād. A large motor port for which the Saudi Arabian Government ordered to be built there in 1355/1936–37 was in good repair in 1974. The track gradually fell out of use, but the village continued to serve Bedouins on a route into the wells, pastures, and settlements of al-Summān [q.v.]. The village is administered by an ‘āmīr who reports to the governor of the Saudi Arabian Eastern Province in al-Dammānī.

Karya al-Kubrā, a town in South Arabia in the Wādī Baybān and the main town of the area called Baybān al-Kaṣāb [q.v.]. As the population has grown and the inhabited area extended, the town itself has come to be known as Baybān al-Kaṣāb or Baybān al-Kaṣāb, and it is now usually mapped under one of these names. At the end of the 19th century the town had 12 citadels and 400 houses and was surrounded by palm-groves. Cotton was, and is, an important crop and is used for the manufacture of high-grade cloth in great demand in the area. Indigo has long been extensively cultivated and is used in local dyehouses to produce the dark-blue cloth popular in South Arabia, and is sold for use on the body. The town had a large Jewish quarter, its habitants, as elsewhere in Southern Arabia, specializing in working silver and leather. These people have now gone, emigrating between 1948 and the independence of Southern Yemen. The soil in and around the town is fertile and, in addition to cotton and indigo, it produces barley, red millet, summer millet, grapes, dates and vegetables. Since the end of the Second World War wells have been bored and agricultural development generally has been fostered. Educational facilities have been expanded and health centres opened in the town and the area generally.

Bibliography: C. Landberg, Arabica, v, Leiden 1898, 30–34; A. Grohmann, Südara rabien als Wirt-
journalism and the literature of political satire, Teodor Kasab played an important part in the development of Turkish theatre in the 1870s, through his skilful adaptations of French plays and his numerous articles in which he discussed the principles and techniques of the developing modern Turkish theatre. He is the author of the following adaptations: (1) Pinti Hamid ("Hamid the Miser"), Istanbul 1290/1873, a successful adaptation, superior to Ahmed Vefik Pasha's better known Astarja, of Molire's L'Avarre (1668). Although Pinti Hamid is a well known popular character who symbolizes stinginess, the prince Hamid Efendi (the future 'Abd al-Hamid II), suspicious as he was and known to be rather close, tried unsuccessfully to stop the performance of the play at the last minute (for details see the letter of Kasab's son Diogenes to Ismail il Habib Sevik quoted in the latter's Tasmaliman bari, i, Istanbul 1940, 218). (2) Izkilimi Memo ("Memo the Suspicious"), Istanbul 1291/1874, from Molire's Sganarelle ou le cocu imaginaire (1660), in Roman script Izkilimi Memo, Istanbul 1965, ed. Cevdet Kudret with an introduction on Teodor Kasab; (3) Para Messelyes, Istanbul 1292/1875, translated from Alexandre Dumas fils' La question d'argent (1857); (4) Lükressya Bongiysya, Istanbul 1292/1875, from Victor Hugo's Lucrece Borgia (1853). He also translated many novels, the best known among them being Monte Cristo, Istanbul 1291/1875, from Alexandre Dumas père's Le Comte de Monte Cristo (1845), the popularity of which inspired Ahmed Midhat's famous novel Hasan Mellâh (1292/1875).

Teodor Kasab contributed considerably to the liberal and reformist movement of the Young Ottomans and advocated a larger use of the techniques and concepts of the traditional Turkish theatre, such as Karagöz and Orta ıyımu, in modern plays. Both in his articles and his plays, Kasab used colloquial speech and avoided a flowery style.

KASAB ( aç), noun of unity kaşaba, any plant with a long and hollow stem like the reed (Arundo donax), to which the term is especially applied (see Muukassas, xi, 40). The bamboo is called khaysûran, but kasab is a component of certain expressions denoting in particular the sugar cane (kasab al-sukkar, etc.) [see following article] and the sweet flag (or just kasab al-bardi [see PAPYRUS]), the bamboo is called khayzurdn, to which the term is especially applied (see Yaksab al-bardi, [see PAPYRUS]).

The reed had various uses: for making hurdles and wattles; lattice-work mats, pens [see KALAM] and children's toys (e.g. see Ibn Bassām, Dabhêra, i, 165). It is further known that it was used in many places for making light huts; at Başra, when it was first laid out as a military camp, even the mosque and the governor's residence were made from reeds, which were rolled up before departure in an expedition and used again on return (Ibn al-Fakheri, 188; al-Baladhuri, Futuḥ, 346-7; al-Tabarî, i, 2384; Yâkbtî, i, 640). These structures, susceptible to fire and wind, were later replaced by ones out of sun-dried brick. It should be noted that reeds were especially abundant in the neighbouring countries [e.g., Iraq], and their value was such that it was said to Ziyād that "a reed is more valuable than a palm-tree". Al-Dâbîrî, who recounts this saying (K. al-Buldanî, ed. Pellat in Machrîq (1960), 200-1; ed. Ş. al-İzî, Baghdad 1970, 504), adds that "I did my utmost to catalogue the advantages of different kinds of reeds, their uses and the things that can be made out of them, but failed and had to content myself with a regrettable that he in fact gave up this plan, since he could have certainly composed a whole monograph about the reed in civilisation.

Amongst the numerous other meanings of kasab (see Dozy, Supplément, s.v.), one should note that it denotes a coloured linen cloth manufactured at Tinnis, or a white one made at Damietta, or sometimes a cotton cloth made at Kâzarûn (Mee, Renaissance, Eng. tr. 461-2), out of which women's fine veils were woven (Abû 'l-Kâsim, Ükîhâya, 54), some set with precious stones [ibid., 53]. Dozy further mentions a silken material, as well as a kind of brocade encrusted with little strips of gold or silver.

Bibliography: Given in the article. (Ed.)

KASAB AL-SUKKAR, sugar cane, also called kasab al-mas, because it looks it (see below), and kasab kâlör (Gloss. Idrisî). Cultivated sugar cane may be from a wild variety, but the attempts which have been made to cultivate the wild species which is related to it have not been successful. The country of origin of sugar cane cultivation is Bengal, from where, in the 7th century B.C., it must have passed to China. Herodotus did not know of it, nor did Ctesias, physician of Artaxerxes Memnon (ca. 410), but in the age of Alexander the Great, Nearchos, his admiral, and Onesicritus, who composed a history of this ruler's expedition, speak of a reed of India producing "honey without bees", as does Megasthenes, who was the ambassador of Seleucus Nicator. Theophrastus, author of a history of plants who died in 287 B.C., speaks of a meli kalaminos, an expression that is translated as "reed honey". Pliny did not know of sugar cane but Dioscorides mentions a kind of coagulated honey from India and Yemen that is gathered from a reed.

It is not known exactly when the cultivation of sugar cane passed from India to Persia. The scholars of the celebrated School of Medicine of Djundaysâbûr, which flourished between 532 and 579 A.D., knew of sugar cane through their relations with India. It is not impossible that they had a part in the introduction of sugar cane into Persia, where it found favourable ground for its cultivation in the hot and humid swampy land of Lower Mesopotamia and Khuzistan (cf. Heyd, Histoire du commerce du Levant au Moyen-Age, ii, 680-1). After the conquest of Persia by the Arabs, the cultivation of sugar cane was developed by them fairly rapidly, wherever the conditions of the climate responded to the needs of the plant, and it reached as far as the Muslim West.

I. — MUSLIM EAST

The zones of cultivation of sugar cane in the Eastern Muslim world are quite numerous, for several regions have low ground enjoying a hot and humid climate favourable to its cultivation and able to be irrigated easily. The cultivation of sugar cane has also developed: in Khuzistan or Ahwâz, in the region of Tustar, watered by the Masrûkân canal diverted from the Daudjâyl, in that of Djundaysâbûr, that of Sûs (Susa)
on the banks of the Karkha, a tributary of the Dudjayl (see al-Istakhri, ed. Cairo 1961, 65; Ibn Hawkal, 253-4, 257; Ḥudūd al-ʿilām, 130; Le Strange, 236-46; Heyd, op. cit., ii, 680-1).

In the region of Baṣra, in the 4th/10th century, according to Bayḥaḵl, who wrote in the age of al-Muḳṭadīr (Kūṭb al-Maḥāsīn wa-l-maṣūrī, ed. Schwally, 62); in the region of Tābāsirīn toward the Caspian, in the region of Mīlā (Ḥudūd, 134); in Fārs, Makrān, Kirmān (see al-Istakhri, ed. Cairo 1961, 65; Ibn Iϩawkal, 302-3, 232, 313, 325; Le Strange, 329; Ḥudūd, 124; cf. Yāḵūt, ii, 6, 346, at Sābūr and Shahrastān); in the region of Baḥḵ (Ḥudūd, 108); in Sind (al-Iṣṭakhri, 102; Ibn Hawkal, 320; Ḥudūd, 91); in Qum (cf. EI, art. ʿomān; Lippmann, 151); in Syria-Palestine, at Kābūl, Tyre, Beirut, cf. Ibn Hawkal, 176 (Beirut); al-Muḵkaddāsī, 162 (Kābūl), 180; Nāṣiri Ḫusrav, Safar-Nāma, 40 (Tripoli); Tafel and Thomas, Urkunden der älteren Handels- und Staatsgeschichte, ii, 368 (Tyre, plantations in the hands of the Venetians at the time of the Crusades); Foucher de Chartres, at Bulunyas (in Cl. Cahen, La Syrie, 473; cf. M., Renaissance, 410, 439); in the Ghawr of the Jordan valley (Ẓaymirūn: yamūṣun al-kasab), cf. al-Kaḵkṣāhī, Šubāb, ii, 87; at Tiberias (al-Muḵkaddāsī, 161; cf. also Le Strange, Palestine, 17; Heyd, ii, 685); in Egypt, the cultivation of sugar cane has been attested there by some papyri in the 2nd century A.D. (see M., Renaissance, 410 and n. 2); yet, if this cultivation was not exactly introduced there by the Arabs, it was in fact they who developed it, along with the science of sugar production, and who exported it to the Mediterranean area where it is grown at present, sc. Cilicia; in Syria-Palestine, at Kabul, Tyre, Beirut, cf. Ibn Hawkal, 320; Ḥudūd, 91; in the Yemen, al-Hamdanī, in the Yemen, al-Hamdanī, Sifat Ḍazirat al-ʿarab, 45-8; Nuwayrī, Nihydāt al-ʿarab, xxxi-xl.

It is curious that the Arab geographers do not mention at all the cultivation of sugar cane in this land (the kasab fārisī that Ibn Hawkal, 122, mentions there may not be sugar cane, see BGA, iv, 325, although Lippmann, 110, thinks that it does designate sugar cane). Nevertheless, it is certain that, towards the middle of the 4th/10th century, sugar was already being manufactured in Sicily and this sugar was being consumed in Ifriqiya, for the Riyād al-nufūs of al-Malīkī, dedicated to the scholars of Qayrawān, mentions that a faḥīk called Abūl-Faḍl al-ʿAbbās b. ʿĪsā, who died between 332/943 and 335/947 in the war against Abū Yazīd, refused to eat a cake that he believed to have been made with sugar from Sicily, as a result of rights conceded by the (Fātimid) usurper. It is certain that Roger II and his successors encouraged the cultivation of sugar cane in Sicily, and the diploma cited by Amari, Storia dei Musemani in Sicilia, ii, 509, 808, show that this cultivation was flourishing in the 6th/12th century and that sugar was being manufactured at Palermo. This cultivation continued until the end of the 9th/15th century. We are informed about the cultivation of sugar cane and its complicated technique (repeated ploughing and harrowing, division of the field into small squares—abūdā—which the water reaches by channels, planting, irrigation, measures to bring on growth, struggle against weevils by means of tar, the two successive harvests, the first called al-raʿs, the second al-bikhīf, which usually gives better sugar than the first, etc.), by the Arab treatises on agriculture, and the works relative to financial administration, especially on Egypt. We are unable to give the details here and to explain the technical terms. We will only say that the planting was done in February-March (month of phamenōt) and that the harvest took place in November-December (month of koyak), that three kinds of cane were distinguished, the black, the white and the yellow of which only the two last were pressed (cf. Ibn al-Bayṭār, Mufradāt al-adwiyā wa-l-agdiyā, ed. Būláq, 1291, ii, 304; al-Dīnawarī, Kitāb al-nabāt, cited in Abūl-Bakr ʿAbd Allāh al-Miṣrī, Nuzhat al-anām fi maḥāsin al-Ṣām, Cairo 1341, 354). The details on the cultivation of sugar cane are to be found in the following works:

Sugar cane, reached the West (Maghrib, Spain, Sicily, the Balearic Islands, Provence, etc.) in the wake of the Arab expansion in the Mediterranean. Greek and Roman antiquity seems, in fact, to have recognized it as a botanical curiosity only (Dioscorides, Pliny, Strabo, etc.). The exact dates of its first cultivation in the Muslim lands are not known precisely. It can, however, be presumed that they followed closely on the advance of the Muslims, geographers or voyagers as of European ones. As a result, we have precise evidence that sugar cane contributed to the economic prosperity of the Muslim lands of the West for almost eight centuries.

**Bibliography:** A complete bibliography will be found in P. Berthier, *Les anciennes sucreries du Maroc et leurs réseaux hydrauliques*, Rabat 1966, as well as an account of the research and excavations carried out in Morocco from 1948 to 1960. (P. Berthier)
situation, which al-Mukaddasi translates figuratively by saying that if the āmsdr are like the kings and the mudun like the army, the kasaba are like the chamberlains. The insistence on the function, and not on the actual situation of the town, is so strong that one finds, on occasion, the word kasaba to designate, as in the West, the heart of a town, as in connection with Palmyra where it refers to the central quarter situated in the ruins of the temple of Baal.

2. North Africa. The term in the sense of “fortress-citadel”, in the dialectal form kasba, plural kasbî (diminutive kišba), is widespread in the whole of Northern Africa as far as Timbuktu (Mali). It was none the less so in the Iberian Peninsula where it has survived, until our own days, in the form alcasaba (Spanish), alcáçova (Portuguese). The word has been gallicised for a long time, in several forms, of which the most commonly accepted by the dictionaries is casbah.

Essentially, in origin, the kasaba is a citadel which, while being attached to the wall surrounding a fortified town, remains sufficiently independent to constitute a keep capable of holding out even after the fall of the city, or to serve as a refuge for the governor if the population revolts against his personal authority or that of the prince that he serves.

Its position is naturally fixed according to the best strategic situation, and is sometimes blended with that of an older military establishment. It proudly dominates the town from the height of a hill and may be situated on a watercourse, a cliff, a sea front. According to the countries and local means of construction it may be of hewn stone, rubble or puddled clay (ābya). If on a plain, its plan is generally a fairly regular quadrilateral; if on a mountain it espouses practically all the facilities for defence furnished by the topography and relief. A door, generally the sole one and with a single angle, joins the kasaba to the town that it defends or from which it holds itself aloof. Frequently, an emergency escape postern, called the Gate of Treason (Bāb al-rābi‘), would in the old days connect the citadel directly with the country. It allowed the reception of information, reinforcements and provisions or the secret abandonment of the kasaba, so as to have no need of surrender.

Such were the kasabāt of the network that the caliphs of Cordova set up in Spain or the Magrib, and such were those that the Almoravids built for the defence of their empire in the Atlas and the Rif and, in particular, at Marrakesh.

Under the Almohads in the 6th/12th century and under the dynasties succeeding them, the Ḥafsids at Tunis and Marinids at Fās, the sense of the term was enlarged in proportion to their creations. Al-Kalkashandi (Subh, v, 103) and al-ʿUmarī (Masālik al-ābār, French tr. Gaudefroy-Demobynes, ii, Paris 1937, index) definitely insist that the Magribī kasaba is equivalent to the Eastern kal’a (q.v.), but the term is applied to every fortified town and even to the imperial towns of Marrakesh, Tunis and Fās al-Djadld. Those enclosed in their walls not only the palace of the sovereign and his confidants and the dwellings of his dependents, but one or more mosques, the fiscal services, the guards’ barracks, baths, prisons, shops and even markets. They also had great main squares (āṣar-ag from the Berber asarrag) where the people could assemble for the festivals and the army participate in ceremonies. Finally, some gardens more or less large (āgdāl [q.v.]), and, then, some princely or private cemeteries completed the new urban complex. The great gates with a single angle, which were then constructed between town (masālik) and citadel (kasaba), are among the finest monuments which remain to us from this brilliant period (at Marrakesh: Bāb Aġnah; at Rabât: Gate of the Wāḍiya).

Under the Šārifian dynasties of Morocco, the Saʿdiids in the 10th/16th century and especially the ʿAlawīs from the 11th/17th century to our own days, the word serves currently to designate small fortresses of a very simple plan erected in places and analogous with the Turkish burgās and kumās of Algeria, but more solidly constructed. Mawlay Ismāʾīl [q.v.] must have had sixty-six kasabāt constructed and had many others restored. Some constituted fortified outposts against hostile tribes, and frequently Berbers, whilst the others, in being spread out the length of the principal roads of the empire, watched over crossing points and bridges and sheltered travellers at the end of a stage (a list of them and the strength of their garrison is to be found in the study of Lt. de la Chapelle, Le Sultan Moulay Ismaill à les Berbères Sanhadja du Maroc Centrale, in AM, xxviii (1937), 25-29). Finally, in the neighbourhood of certain towns (Meknès, Saïd) some fortified surrounding walls had been built which served as a dwelling for the black slaves (ʿabīd) or which were reserved for the contingents furnished by the tribes of whom military service was required. A certain number of these kasabāt, after the final disbanding of the troops, have today been transformed into residential quarters.

A very large number of Moroccan agglomerations bear the name of kasba, or its diminutive kišba (P. Lancre, Répertoire alphabétique des tribus . . . et des agglomérations de la zone française de l’Empire Chérifien . . ., Casablanca 1939). The most important is Kasba-Tadla, a small town of 12,000 inhabitants on the Wāḍī al-rābi‘, whose bridge has made its fortune. By extension the Europeans apply the word more or less legitimately to the beautiful and sometimes immense half-civil, half-military dwellings of the important ḫāḍids of the Moroccan Atlas and the Saharan oases. These vast kasabāt express in a material form the power that some powerful chiefs had acquired during the 19th century at the expense of the petty Berber republics, weakened by the strife of the opposed lejjīf [q.v.]. The Europeans have in the same way Arabised as kasabāt the tkṛmnīs and āgdāris, defensive forts or fortified granaries of the same regions. These magnificent pieces of architecture, some of which go back to the 16th century, have been judiciously studied by H. Terrasse, Dj. Jacques Meunier and R. Duru (see Bibli.). They testify to the vitality of the rural Moroccan civilization, but the fragility of their construction and their decoration and the decadence of the Berber institutions render their conservation difficult.

In certain cities, Algiers for example, all the quarters of the ancient town combined bear the name of Casbah. This toponym, due to historical circumstances, has since 1830 enjoyed a great literary, cinematographic, and especially journalistic fame.

Bibliography: Apart from the references given in the art., see İmām, Būrg, ʿĪṣān, and the details given for all the large towns in the Muslim West in the collection Guides Bleus (Hachette-Paris). G. Salmon, La Qāṣba de Tanger, in Archives Nationales, i (1904); Capt. Maitrot, Une

KASAK [see ČERKES].

KASALA (variant, Kasl; conventional spelling, Kasala), a town and province in the east of the republic of the Sudan, extending from the frontier of Egypt to that of Ethiopia. Geographically, the province contains five distinct types of country. (1) A rough triangle in the south, bounded by the railway, the river Atbara and the site in succession of the ports of Ba'lī, Sawakin (Suakin) and Port Sudan. The town of Tūkar (Tokar) lies in the delta of the Baraka. Traditionally the granary of the region, it now produces cotton.

Until the 19th century, most of what is now the province of Kasala was tribal territory, open to trade and cultural influences through the Red Sea ports, and, from the 10th/11th century, within the sphere of influence (rather than the effective control) of the Fundūlī sultanate of Sinnār. Holy men played an important part in the region. The Fundūlī sultanate, the Shukriyya emerged as the dominant tribe in the central Butān, based on the herding of flocks and the export of horses to Sinnār and other Sudanese states; he maintained a slave-household and army (see Yûsuf Padl Hasan (ed.), Muḥammad al-Nūr b. Dayy Allāh, K. al-taṣabbūt fī ḫuṣūṣī al-anwār wa-l-ṣalāḥīn wa-l-suwar wa-l-madhīn, Kharj 1971, 133-48; cf. S. Hillelson, Sudan Arabic texts, Cambridge 1935, 194-99). In the 12th/13th century, the holy clan of the Maǧǧāḥīb, propagators of the Shāhdhiliyya ġarba, acquired great influence among the eastern tribes from their centre at al-Dāmir at the junction of the ʿAṭbārā with the Nile. Burckhardt in 1814 noted the security that they afforded to travellers passing between al-Dāmir and Sawakin (J. L. Burckhardt, Travels in Nubia, London 1829, 268). The devastation of al-Dāmir in 1822 by the Turco-Egyptian commander, Muḥammad Bey Khursaw al-Ḍaftardār, and the flight to Sawakin of the chief of the clan, led to a further strengthening of Maǧǧāḥīb influence among the Hadanduwa. In the later 19th century, on the disintegration of the Fundūlī sultanate, the Shukriyya emerged as the dominant tribe in the Butān (See H. A. MacMichael, A history of the Arabs in the Sudan, Cambridge 1922, i, 250-3.)

The establishment of Turco-Egyptian rule in the riverain areas made possible the conquest of the nomadic tribes. Although the Hadanduwa were raided in 1823 and again in 1831-2, their effective subjugation was achieved by the būkūmādīr (governor-general) Ahmad Paşa Abū Wīlān, who invaded al-Tākā in 1840 and established a garrison-post, from which developed the town of Kasala. The resistance of the Hadanduwa was finally broken by his successor, Ab-\mad Manālī Paşa, who made a punitive expedition in 1844. Meanwhile, a new Şūfī ġariba, the Khātimiyya, was being propagated among the Beḍja by al-Ḥasan, the son of its founder, Muḥammad ʿUṯmān al-Mīrānī. He established his headquarters at al-Khātimiyya, near the town of Kasala, where he died and was buried in 1869. In 1864-5 he played an important part as a mediator during serious mutinies of Sudanese (i.e., black) troops at Kasala. (See J. S. Trimming-
The Red Sea littoral, and more specifically the ports of Sawakin and Maşawwa, had been part of the Ottoman Empire since the 11th/16th century. The two towns were granted to Muḥammad ʿAlī Pāša on an annual lease in 1846 but reverted to the vilayet of the Ḥidjaz in 1849. In 1865 they were assigned to the Ḥalīm Imām Muhammad Abū Sīnne, gave loyal support. In May 1883 the Mahdi sent as his emissary ʿUmmān b. Abī Bakr Diğna al-Sawakīn (Osman Dīma), a pagan named of Sawakin and of partially Bedja descent. Rivalry between the Maḏjudīb and the Khmatniyya gave him all an ally in the head of the former group, Shāykh al-Tāhir al-Tayyib al-Madjadhib, who brought over to his side the Shukriyya, or the verb ʿaksama, or the verb ʿaksama, or the verb ʿaksama, which figure expressly in the surat of the Meccan period (vi, 109; xvi, 38; lvi, 75; lxviii, 17; lxxxii, 15; lxxixix, 5; xc, etc.) or which are implied in many of the other suras of the same period, apply, in general, to the oaths pronounced by God himself, which are known to cause some difficulties for commentators of the Qurʾān, and محمد al-Nasir, to be delivered from the bond or oath, for, in the Kurʾān, the word ʿamin [g.v.] and the verb ʿalājfa almost exclusively. But even in that which concerns the extra-judiciary oath, with which the discussion that follows is concerned, the word ʿamin has a tendency to supplement ʿasām. It is also a fact that, in the treatises of ʿiyām, whichever school is considered, and in the collections of ḥadīth, the chapter dedicated to [extra-judiciary] oaths is almost always entitled ʿabīr or ʿasām al-ʿayman.

In the lines that follow, the judiciary oath will not be discussed; nevertheless, there will be occasion to consider, in the field of penal procedure, the kasama, an oath pronounced fifty times, which, although connected with the judiciary oath, derives etymologically from the word ʿaksama. The extra-judiciary oath is that by which a person binds himself to do or not to do a certain specific physical or juridical act, by invoking the name of God or one of the divine attributes (al-Raḥmān, al-Kādir, al-ʿNasir, etc.). At least, that is the definition that the works of ʿiyām give of it, for, in the Kurʾān, the word ʿasām or the verb ʿaksama, which figure expressly in the surat of the Meccan period (vi, 109; xvi, 38; lvi, 75; lxviii, 17; lxxxii, 15; lxxixix, 5; xc, etc.) or which are implied in many of the other suras of the same period, apply, in general, to the oaths pronounced by God himself, which are known to cause some difficulties for commentators of the Kurʾān. Already in the Medinan suras, the word ʿamin is frequently substituted for ʿasām (v, 225; v, 99) and marks the first stage of an evolution leading to the concept which becomes that of ʿiyām with regard to extra-judiciary oaths which bring about voluntary bonds, while the verb ʿaksama is still to be found in these Medinan suras (for example, v, 53).

The bond undertaken under oath is not, in general, a juridical obligation, in the sense that the one who has sworn to perform an act cannot be constrained judicially to carry it out. In a case where he did not respect his oath, he would be perjured (ḥind), but it is then a matter of sin, a moral fault, for which he must account to God alone. Nevertheless, ʿiyām, following very close to the Kurʾānic text (v, 39) pro-

vides him, in the hypothetical case where he has involuntary broken his oath, with a means to put his conscience in order, that is, by expiation, kaffara. Expiation for a broken oath may be to give sustenance to 10 paupers, to distribute clothing to them or to free a slave; and, if, through lack of resources, any of these expiations is not possible, the perjured man must fast for 3 days. These regulations, having been laid down in the Koran, are evidently common to the teaching of all the Schools. The latter are all divided, however, on the methods of application of each of them. For example, should the fast last for 3 consecutive days? Yes, reply the Hanafis and the Hanbalis, but no, according to the Malikis and the Shafiis (Dimashki, Râmah at-\textit{Umma}, ii, 79-80). The same divergences are found in that which concerns the quantity of food to be given to the poor, or the quality of the clothing which is distributed to them. It must be emphasized that, as with the oath itself, the expiation, which sanctions its non-execution, has no characteristic of juridical obligation, and no-one, not even the public authority, can constrain the perjured man to perform expiation. All this is laid out on a strictly moral and religious plane.

The \textit{fsbak\d}e were asked if it was not possible for someone, who had sworn to accomplish a certain act deliberately, to substitute the expiation for the performance of his oath, although nothing prevented him from accomplishing his vow. Strangely enough, the Hanafis and Hanbalis refuse him this option, a prohibition that is not in accordance with the character of vows freely consented to as with the oath and expiation.

The statement of the jurists with regard to oaths (\textit{aym\d}) is, in form, very close to that which they adopt in that which concerns a real juridical act. Necessary capacity, conditions of form and substance, null and void formulas, moment of performance of the vow undertaken, effects of the suspensive condition, expedients (\textit{hiya\d}) to change the law, all would let us suppose that it was concerned with vows which, although unilateral, bound their author by strict juridical obligation. Certainly, a careful examination of the explanations of each School, and especially the non-juridical sanction, which consists of kaffara, quickly restores to these dispositions their real character of strictly religious and moral rules. That is not to say that all the works of the jurists on the question were devoid of practical interest. Throughout the centuries, the pious Muslim did not generally attach great importance to the distinction, familiar to specialists, between moral and juridical sanction. His concern was to know whether his conduct here below was reprehensible or not, and whether it would bring him chastisement in the next world. So it was that the long discussions dedicated in the books of fikhr to oaths (\textit{aym\d}an) often associated with vows, \textit{nud\d t\d}r [\textit{q.v. Nadr}] presented him with a very great interest.

It is not possible to enter into detail on the solutions proposed by authors (different, moreover, according to the schools) for particular cases of oaths and all the kinds that were imagined.

Only one example will be given because of the long discussions that the works of fikhr dedicate to this particular case. It concerns the oath called \textit{shar\d}, which may be translated very vaguely as "incestuous comparison". The word is derived from \textit{zahr}, "back". Presumably the husband says to his wife: "I am for me like my mother's back", \textit{ka-zahri ummi}, or any other comparison of a part of the body of his wife with that of a woman he could not marry without committing incest. In pre-Islamic Arabia it was a general form of repudiation, but the Kur'an condemned everything of that kind (XXXIII, 4 and LVIII, 2-3). Its pronunciation constituted nothing other than a sin, and a serious one, which could only be wiped out by expiation. This is different from the ordinary expiation for oaths not respected, and consists of freeing a slave, or in default, fasting for 2 months (during the day only, of course). If not, the husband would have to distribute the midday and evening meal to 60 paupers.

In a general manner, the solutions of fikhr hinge on two essential points. In the first place, it is concerned with knowing when one may consider that an oath has been respected, the expressions used by the one who swore being borne in mind. On this point, the replies are very often of a lexicological order and battle all systematization. The second point concerns expiation; this is not automatically incurred by the simple fact that the oath has not been performed. There are actually some oaths which, due to an actual or theoretical fault, do not call for expiation, although they have not been respected. It is in this category that one places the \textit{yamin al-gham\d}, or oath to perform a deed that one knows to have been already performed. There would not be any kaffara, except in the Shafi\d school. I have elsewhere mentioned that the kaffara, an oath taken by mistake (through a slip of the tongue) or in a thoughtless manner, does not require expiation (Dimashki, \textit{op. cit.}, ii, 73). The same applies, if one follows an oath with an \textit{isti\d t\d ng\d}, a reservation, of which the most usual is "If God wills". No more can someone who is not \textit{mukallaf} (fully capable) bind himself validly by oath, but the majority of the schools (except the Hanafi school) admit that the oath of the unbeliever (kafir) is valid, and that he will be held liable to expiation if he does not carry out his vow.

During the centuries, the usages, variable according to the regions, have added different ceremonies to the very simple form of the oath that was foreseen by fikhr, in order to render the vow more solemn, and to bind further its author. There were also oaths pronounced in sacred places such as the Ka\b\dba at Mecca, or simply within a mosque, which conferred on them a higher value in popular belief.

In the same fashion, oaths are sworn by touching the tomb of a saint or holding bread and coffee in the hand, or placing on the heart an excerpt from the Kur'an or the \textit{Safy\d\d}li of Bukhar\d. Sometimes this supplementary ceremonial represents a pre-Islamic practice, still strongly marked by paganism, such as pronouncing the oath and throwing salt in the communal fire of the tribe, or within a circle in which cinders and pieces of fabric have been scattered. There are some moments of the day when oaths acquire a particular importance, such as that which follows the evening prayer.

On all these practices which are unknown to fikhr, see Musil, \textit{Arabia Petraea}, iii, 235, 342; Jaussen, \textit{Costumes des Arabes au pays de Moab}, 311; Landberg, \textit{Arabica}, v, 133-4; Snouck Hurgronje, \textit{Mekka}, ii, 306; Lane, \textit{Manners and Customs}, i, 168, 470.

Oaths judicially sanctioned. As has been stated and repeated above, the whole theory of the extrajudiciary oath is placed on a moral and religious plane, and consequently very often means that the question may be treated in the first part of the works of fikhr, dedicated to ritual (\textit{chad\d d}). Nevertheless, in two fields of law, i.e. enfranchisement and repudiation, the oath involved in the past (and sometimes today) a juridical sanction, in the sense that
the one who swore to free his slave or repudiate his wife was held liable to carry out his vow, without being able to substitute a kaffara or expiation, through which he would have been able to free himself from his obligation.

In the matter of enfranchisement, every declaration to this effect, even not dependent on the fulfillment of an act by the master or the slave or any other person, had the validity of an oath of enfranchisement, al-half bi’l-faldk and this oath (which did not, however, mention the name of God) irrevocably entailed the liberty of the slave or the slaves alluded to in the master’s declaration.

Ancient fikhl had set up two institutions both based on an oath which, although not having as principal object the breaking-up of marriage, led indirectly to this result. The first of these institutions is the lar6, or “oath of anathema”, by which the husband accuses his wife of adultery or disowns the child that she carries in her womb. To this end, the husband prayed five times an oath in the form asghadu bi-lal6ki, and the last oath was followed by the formula “may I be cursed, if I lie”.

The lar6 was an “oath of continence”, the husband swearing in the name of God not to have sexual relations with his wife for at least 4 months. When this time had passed without a resumption of conjugal relations, the marriage was not automatically broken up except in Hanafi law, the other schools allowing the wife to judge the occasion for the severance, which would take place by a repudiation that the husband would pronounce, or that the kadi would formulate in his place.

Very soon the rules of precedent, especially those relating to the lar6, had fallen into desuetude. The jurists do not dedicate very long discussions to them, except on account of the importance of the scriptural evidence relating to these two institutions, and not for their usefulness, which had become practically nil.

The oath of repudiation. On the other hand, the oath of repudiation, al-half bi’l-jalab or still more al-yamin bi’l-jalab, has always been in very current usage among the Arabic-speaking Muslim populations. In certain circles, notably that of the small traders, it is not rare in the course of a conversation for one of the speakers to swear two or three times, in order to assert his determination or his good faith: “May my wife be repudiated if such a thing does or does not happen, if I am right or if I am wrong, etc.”. The matters are of no consequence, each one knowing that he is uttering idle words, pronounced mechanically and without attention being paid to them. The moralists have always severely reproved this bad habit, for, in any case, it leads to a blameworthy result, whether the one who has sworn does not respect his oath on the pretext that he had formulated it without a serious intention to repudiate and he finds himself perjured, often several times a day, or whether he respects it and separates from his wife, from whom he had no intention to separate and whom he had no occasion to reproach.

What juridical validity did the jurists attach to these oaths of repudiation? Only the Djafarris (and the Zahiris in the past) have always denied them all legal validity, for the reason, among others, that they do not contain the name of God in their formulation. The other juridical schools regard them as conditional repudiations, and as such, involving the breaking-up of the marriage when the condition is realized. Whether the wife avails herself or not of the oath or the husband respects it in separating from his wife or does not respect it in continuing to live with her, are questions of fact, which do not modify at all the principle itself, i.e. the oath of repudiation determines, in law, the repudiation of the wife, if the tacit or explicit condition that it contains is realized. This troublesome solution of the jurists is still applied today in a certain number of Muslim countries.

Egypt is the first Muslim state to have attempted to restrain the execution of the rule of precedent. The Egyptian law of 10 March 1929 declares as null and void conditional repudiations and oaths of repudiation, when these are dependent on an act being done or not done by the wife; but if the condition is different (i.e. if it is not dependent on the will of the wife) the oath of repudiation is valid. Several Muslim countries (Sudan, Jordan, Syria) have adopted in their turn the Egyptian distinction. One must turn to the Moroccan Code of the Personal Statute of 1958 and the Iraqi Code of the Personal Statute of 1959 to find a radical condemnation of every oath of repudiation, whatever may be the nature of the condition on which the repudiation is dependent.

Kasama.—Derived etymologically from basam, this differs from it in its mode of being taken and its strict field of application. It is concerned with an oath repeated 50 times (either by the ‘asaba of the victim of a murder (Maliki rite), or by the inhabitants of the place of the crime (Hanafi rite) an oath by which is asserted the guilt or, on the contrary, the innocence of an individual presumed to have killed someone. This oath dates from the pre-Islamic period, when it always constituted a procedure of accusation, a weapon in the hands of the members of the victim’s tribe, seeking to make use of retaliation (kisda) against the man presumed to be guilty. The juridical schools of Islam, in adopting this pre-Islamic custom, do not make it produce the same result. Actually, in fikhl—merely quoting the Hanafi and Maliki doctrines which are clearly opposed—the basama is, in the first of these systems, a procedure for the defence of the one presumed guilty, and, in the second, a procedure of accusation.

According to all the early Hanafis (sc. those of Kufa), when in a non-public place (which excludes the mosque, quarter of a town, house, boat, etc., the corpse of a person was discovered, when there were not two male witnesses to point out the murderer, and when the niil al-dam, the nearest ‘asab relative of the victim, came to demand justice, 50 people had to be made to swear to having found it in this place, that they were not involved in this crime and that they did not know the murderer. If 50 people could not be gathered (if the crime was committed in a house, for example), it was possible to make the same person swear several times, in such a manner that the total of 50 oaths was reached. In the light of this, the niil al-dam could not apply retaliation and had to content himself with the pecuniary compensation (diya) provided in such a case.

The Maliki school, following the teaching of the scholars of Medina, has kept the characteristics of the basama which it had in pre-Islamic Arabia, that is to say, those of a procedure of accusation. It is also a fact that in the hypothetical case of a murder of which the author is unknown, the ‘asaba relatives of the victim swore 50 oaths (by the ‘asaba person could swear several times provided that this was not more than 25 times) that such an individual, against whom is weighted serious presumptive evi-
ence, was the one who committed the murder. The notion of serious presumption (lawth) has acquired thereby in this school, and in those that have adopted the same conception of kasāma, a fundamental importance. Serious presumptive evidence was held to be not only the fact that the victim, before dying, had accused the presumed murderer, but also the presence of this last person, with his blood-stained clothing, not far from the victim, or even the testimony of a single witness to the murder. With these conditions combined, the wali al-dam would bring retaliation against the one presumed guilty, such that he could then, as a result, have him put to death. The Malikī version of the kasāma, in which oaths liable to bring about death were taken by the relatives of the victim who, ex hypothesis, were not present at the murder, has formed the subject of some criticisms on behalf of one party, that has nevertheless remained a minority, of the ancient doctrine (Ibn Rushd, Bidāya, ii, 419).

Finally, it does not appear that this institution functioned much, even in the past when the penal law of Islam had a certain practical application.

AL-KĀSĀNĪ, ʿALĪ al-DĪN ʿABŪ BĀKĪR B. MAṢ‘ĪD, called Mālik al-ʿulama‘ “King of Scholars” was one of the greatest jurists of the Hanafi law school. His niṣba stems from Kāsān, in Farghānā, to the north of the Syr Darya in Central Asia. He was the pupil of ʿAlī al-Dīn al-Samarkandī (d. 539/1144), the author of a treatise regarded as the original model. In Hanafi legal literature, the Badā‘i‘ constitutes a masterpiece of a quality which was never reached subsequently. The term “commentary” has been attached to al-Kaṣānī’s work simply because his biographers wished to stress an aspect of his life which they thought worthy of remark, and said ḡarāha Tuhfahāhu wa-tasawwudajī bināh “he wrote a commentary on his Tuhfa [of al-Samarkandī] and married his daughter”.

Despite his qualities of clarity, methodicalness and learning, al-Kaṣānī’s work nevertheless did not exercise any great influence on the later development of Hanafi law. It does not seem that legal scholars of his own time were particularly impressed with its importance; thus properly speaking, he had no disciples, and the Badā‘i‘ was not made the starting-point for numerous commentaries, as was the case with the Ḥīdāya of his contemporary al-Marghīnānī (d. 593/1197). At a later date, his ideas are hardly mentioned in the great compilations of Hanafi law, and even then with no more weight attached to them than to those of other Hanafi jurists. The appearance at the beginning of this century (1328/1909) of the first edition of the Badā‘i‘ quickly gave rise to a real excitement over this work amongst contemporary jurists, and it can be said that the teaching of Hanafi law became then concentrated around it. Apart from the Badā‘i‘, al-Kaṣānī apparently wrote a work called al-Sulṭān al-mubīn fi wujūl al-dīn, apparently lost; and Brockelmann mentions a Kur’ān commentary called the Kitāb al-Tawāṣīl which exists only in manuscript.

(W. Heffening-Y. Linant de Bellefonds)

KASB (see ūṣīrāt al-dīn)

KASB (A.), in economic life, gain. As is well known, in its main trends Islam is not a doctrine of renunciation of the world, but one of respect for the commandments of God according to the uses of the world, which He has given to man for his benefit. There is therefore no objection whatsoever to a man’s realising, as long as it is by legal means, the gain which is known, in its main trends Islam is not a doctrine of renunciation of the world, but one of respect for the commandments of God according to the uses of the world, which He has given to man for his benefit. There is therefore no objection whatsoever to a man’s realising, as long as it is by legal means, the gain which is

KASAM — KASB

KASAM (see ūṣīrāt al-dīn)
by means of which a “gain” might be realised.

Ibn Khaldūn, considering the problem of gain or profit at the end of the classical Muslim period, as it might be presented to a sociologist (although in accord with the Book of God), enumerates (tr. de Slane, ii, 223 f. = Rosenthal, ii, 311 f.) the different means of obtaining it and the two different forms it can take: gain for simple subsistence, or true profit, premium, each resulting to some extent from the application of human effort to the gifts of nature. They can thus be procured, apart from by force or through political power (taxes), by means of agriculture, industry and commerce. This last source is far and away the most respected in Islam.

As would be expected, reflections on the legitimacy of gain became more common from the time of the great economic leap forward of the 3rd/9th century; in fact, it was nearly always the legitimacy of commercial gain which was considered. The affirmation of the legitimacy of gain, as long as it was the fruit of honest toil, was underlined in the face of the ascetic tendencies of some spiritual groups outside Islam, and inside it of the nascent Sufism, which sometimes preached a strict ideal of poverty and sometimes relied on God, that is on begging, on the charity of the faithful, in fact on the efforts of others and not on oneself (unless intercession with God can be so called) for the acquisition of whatever is necessary for oneself and one's family. It is symptomatic that it was among the Ḥanbalis, who had most contact with poorer people and with the petite bourgeoisie, that the reaction against anti-economic trends is most pronounced. "Two kinds of food taste best", says a celebrated ḥadīth widespread in this milieu, "those produced by your own hands and those carried on your own back". Hence, subsistence is in question, but even so, true profits are permitted, though under the strictest regulations. A polemic discovered by S. D. Goitein is highly relevant here. Deriving from a Ḥanafī milieu (always in this period closest to practice), it is a tract attributed, perhaps wrongly, to al-Shaybānī, but one which certainly dates from the 3rd/9th century; it is true that it has come down to us through the medium of a successor, but it is sufficiently clear. In essence, it gathers together all the relevant ḥadīths and therefore all the guarantees legitimising gain. This indicates that the problem was indeed faced by pious men, but that their conclusion was frankly positive, as it has been in all religions during periods of economic development. The attitude remained the same after the great expansion. H. Ritter has recently drawn attention to the contributions of various authors to the subject, al-Ghazālī in particular (end of the 5th/11th century). As would be expected, al-Ghazālī stresses spiritual values and condemns the dishonest merchant, but he equates the honest merchant with a fighter in the ghārdad, thereby demonstrating his regard for commerce.

Teachings from other sources were combined with those of Islam stricto sensu. Ritter and Plessner have demonstrated the importance of the ideas of Neopythagorean Bryson, whose work was translated into Arabic at a fairly early date, in the economic thinking of Islam, both Sunnī and Shiʿī, and of Judaism. Through his works were channelled Platonic and Aristotelian traditions. Incidentally, although this was not their own perspective, the Ḥanbalī al-Ṣaḥḥa also admit work as a source of gain, at least for subsistence (cf. Y. Marquet, in Arabica, vii (1961), 225 ff.).

Without wishing to lay stress on this aspect, which will be more amply covered elsewhere, we must consider practice alongside doctrine. As has been noted, this is mostly concerned with commerce. The conception of merchants entailed here is one of a permanent accord, which can be traced back to antiquity: the purpose of commerce, as expounded by the author of the Tabāṣṣur bi'l-tidjara (3rd/9th cent., ʾIrāk), by Abū ʿAbd Allāh al-Dīnābādī (probably 5th/11th century, Fāṭimid region), and by Ibn Khaldūn, is to realise through the differential between the purchase price in one area and the selling price elsewhere. It has therefore an essentially speculative aim; commerce certainly needs production, but it is not its conscious aim to stimulate it, even though only agriculture and industry are, in the material sense, properly productive. Here we must introduce the ideas developed in Islam concerning prices: in one sense they are willed by God and must therefore be left free, but even so a Muslim ruler is obliged to preserve them from excessive speculation, particularly in the case of basic commodities, just as he is obliged to regulate manufacture, weights and measures, currency, etc.

As in all ancient and mediaeval societies, lending an interest, in all the guises by which it was then known, was highly unpopular and officially forbidden. Early Islam stigmatised a term of credit (ribaʿ) whose meaning is unknown. It entailed, evidently, a condemnation, from a moral point of view, of those who grew rich through the misery of others, without the loan granted helping the borrower in any way to retrieve his fortunes, such as lending dates to a starving man, etc. However, as is often the case with sacred texts, this was applied literally to quite different circumstances as early as the 3rd/9th century, and the economic decline of later Islam drew attention to its faults without their being sufficiently analysed. It was therefore concluded, right up to the present day, that all lending at interest was forbidden. In fact, in periods of economic expansion, in the Islamic world as elsewhere, the interdiction was twisted, in the most transparent fashion, by being applied to non-Muslim communities. Thus it was generally accepted that lending at interest was prohibited amongst coreligionists but not between one faith and another, which in the practical life of a multi-confessional society amounted to its reinstatement (see further riwāḥ). Above all, Islam knew, practised and officially ratified customs aimed at securing a profit for money put to work, principally by means of investments in commercial enterprises or domains. This could be done through partnership, ǧirkā (q.v.), or through capitalist merchant commenda, kirdā, mudāraba (q.v.), the money placed acquiring part of the profit in reward for the service rendered or in compensation for the risk taken. Muslim practice, whatever the original reasons behind it, was considered by merchants of all confessions as preferable to previous traditions (A. Udovitch, Partnership and profit in Medieval Islam, Princeton 1965). It was in continual usage, which attests the fact that the Muslim economy certainly relied on profit. The forms it took were those which in large measure soon became general in the Mediterranean and Western world. At the end of the Middle Ages, only the latter gradually outdistanced the Muslim economy. Bibliography: it is impossible to give here a general bibliography of a subject so amply treated at an elementary level; see the specialised articles, particularly Tabāṣṣur bi'l-tidjara (tr. by Heffner), ʾIrāk, kirdā, ǧārī, etc.; to the first, while awaiting the new edition, add E. Bussi, Il concetto

(C. CAHEN)

As a theological term kasb means “acquisition”, “appropriation”. The verb hasaba, usually in the 3rd form and sometimes in the 8th (i'ktasab), is frequently found in Kur’ānic vocabulary, mainly with the sense of “acquiring” those rewards or punishments which are the fruit of moral acts, and so a loose translation could render hasaba here as “carrying out an action”. Therefore, “Each soul is paid a fair price for whatever has accrued to it” (Kur’ān, II, 281; cf. inter alia, XIV, 51; XL, 17, LXXIV, 36, etc.). According to the text, this is the very reason for the creation of the world, “God created the heavens and the earth in truth (bi'l-haqq) and so that each soul could be rewarded for whatever it had acquired” (XLV, 22). Kasaba alludes to the “acquisition” (of the fruit) of each act, good or evil; iktasab, which is very close in meaning, is used in the Kur’ān only for human actions in general (IV, 36), or for acts which merit punishment (II, 286, XXIV, 11, IXXI, 58). Verbs II, all (as also kasb), is given that which it has acquired (hasabat) and against each (is recorded) that which it has acquired (iktasbat). It should be noted that when discussing this verse, al-Zamakhshari, followed by al-Baydawi, stresses the meaning contained in the 8th form.

The masdars of these two verbal forms, kasb (pl. ašaab) and iktisab, have had a long history in the "ilm al-kalām, especially in the Ash'āri school, where they were employed to define which act was reattributed to man in a “freely” accomplished and morally qualified act. The Ash'āri kasb is a narrow margin in which is inscribed the relationship between the act created by God and human responsibility. The school’s subtle analyses tend to safeguard both the notion of “free choice” (iḥtiyāṭ q. ā‘ī) strongly expressed within the subject, and the just, frequent attribution augured in the Kur’ān, while at the same time taking nothing away from God, who “created you, you and that which you do” (Kur’ān, XXXVII, 96). Some writers prefer to use iktisab (al-Ghazālī:) the majority use one term or the other indiscriminately. According to al-Zamakhshari, commenting on Kur’ān II, 286, it appears that iktisab, in its reflexive connotation, lays stress on psychologically proven reality. The discussions about kasb were famed for their very elaborate dialectic, as witness the maxim of their opponents (notably the Hanbalis): “more tenuous than al-Ash’āri’s kasb”, adakht min kasb al-Ash’āri. But perhaps this subtlety, or obscurity, can be clarified when the historical evolution of the committed arguments is taken into consideration.

1. Pre-Ash’āri kalām. It was, in fact, from his predecessors that al-Ash’āri took the concept of kasb as the “acquisition” of acts (see W. Montgomery Watt, The Origin of the Islamic doctrine of acquisition, in JRAS (1943), 234-7; idem, Free will and predetermination in early Islam, London 1948, passim; idem, The formative period of Islamic thought, Edinburgh 1973, index).

It seems to have been in Ghazālī’s teaching and in Murtūjā’il circles that the root k-s-b first took on a technical meaning: to distinguish between science and knowledge “acquired” by man’s efforts, ʿilm muktasab, and “necessary” science or knowledge, ʿilm daruri. Kasb here remains very close to its initial sense of acquisition of profit. Muktasab (associated with nasari “discursive”, “speculative”) and daruri (associated with “immediate” and “self-evident”) became traditional distinctions in the study of the sources or “channels” (asaab) of knowledge (cf. Gardet and Anawati, Introduction à la théologie musulmane, Paris 1970, 375-83).

Dirār b. Amr was the first to employ the root k-s-b in analysing human action, applying it to the problem of man’s free choice in the face of divine omnipotence. According to Dirār, human action arises from “two agents”: God, who creates it, and man, who acquires it (see apud al-Ash’āri, Makālāl al-Islāmīyyīn, ed. ʿAbd al-Hamīd, Cairo 1369-73/1950-4, i, 313). The stress Dirār lays on the two agents (fāʿilān) tends to indicate that this “acquisition” arises from an intrinsic efficacy of human action, but one which cannot exist without a divine motion operating at that moment. A little later, al-Najdīdār divorced this union of causes and opposed khalīk (creator, always God) and fāʿil, “agent” (ibid., i, 315). Action comes under God’s power in the sense that God wills it at the moment that it is accomplished and does not wish it when it is not brought about, but its actual execution belongs to man. Therefore, man possesses “power over the kasb”, he is kādār “able” (cf. XXXIV, 118). One of al-Najdīdār’s disciples, Muhammad b. ʿIsā al-Burghūthī, emphasised, on the basis of Kur’ānic texts, that the same term could not be applied to man, and to God (ibid., ii, 198): whether fāʿil is the province of man, as the texts of the Makālāl seem to indicate, or whether, as al-Baghdaḍī says in al-Farāb bays al-firāb (ed. Cairo 1926, 197), God is Agent, the same term cannot be applied to man, who remains no more than the “acquisitor”, the muktasib, of his action. The Rāfiḍī Hishām b. al-Ḥakām, and after him Ḍjaʿfar b. Ḥarb, also used kasb and iktisab to describe the relationship between man and his voluntary actions: it can be said that human action is “free” (iḥkiyāṭ) in the sense that man wills it and acquires it (iḥtiyāṭ), but it remains “constrained” (iḥtiyāṭ) in the sense that man plays no part in its efficient cause, which is created by God (ibid., 1, 200).

These early musahalātīn therefore tried, by employing the concept of “acquisition”, to retain for man his own position in the act he accomplished. But while for Dirār this part remained a positive action, a participant in the single divine creator Action and thus subordinate to It, al-Najdīdār and al-Burghūthī, anxious to preserve the division between Creator and creature, would not allow of such a conception. For them, man possessed nevertheless “power over the acquisition of his actions. Judging from this evidence, al-Shahrastānī’s dubbing such scholars...
Djabariyya in his Kitab al-Milal wal-nifral (ed. Badran, Cairo 1370/1951, 138-9) must be revised. The thesis of man "the acquisitor" (muktabis) was certainly opposed to the Mu'tazilists thesis of man "the creator" (kaddib) of his actions. Al-Djubbari questioned the very notion of kasb. His arguments have been preserved, scattered throughout the Mahardini and more concisely in the writings of 'Abd al-Djubbbar (Sharh al-usul al-lhamsa, ed. 'Abd al-Karim 'Uthman, Cairo 1384/1965, 365-79) and 'Abd al-'Aziz ibn al-Majidt, the latter editor of Fikh Akbar II (a.7; Eng. tr. A. J. Wensinck, The Muslim creed, Cambridge 1932, 191, where the text is reported at the end of a.6) affirms that all men's actions are in truth their "acquisition" (aash) just as Ash'ari thinkers. The earliest discussions which form the basis of the trends known as Maturidi ignore the problem of kasb, however it was defined precisely, based their belief in man's responsibility for his own actions. For them, the (ontological) root of an act arises from the power (kudra) of God, and its (moral) qualification, which obeys or disobeys divine Law, arises from the power (kudra) of the individual (cf., for example, the brief summary of 'Abd al-Rahim Ibn 'Ali, Nasafi, al-Tawfiq, Al-Sanusi, al-Badjuri, etc.). Their definitions and analyses appear always to be linked to the ideas of kudra khaqi (the "contingent power" created by God) and istisla (the ability to act).

Ash'ari kasb and istisla are undoubtedly heirs to the first trends of 'ilm al-kalcam, those predecessors whom al-Ash'ari linked to call ahli al-atibhit. But the preoccupation with combatting the 'Itizd, and with allowing man nothing that was not subject to the immediate and sole power of God, which was what al-Dyir for example saw as the real and positive nature of kasb, or even with al-Nadjdjar's "power over kasb" and istisla (the capacity to act) is "imputation" extrinsically created by God in the human subject. The extreme subtlety or obscurity imputed to Ash'ari kasb by opponents like Ibn Taymiyya perhaps derived from the fact that in the direct reference to an act freely completed, which is the basic meaning of the root k-s-b, became no more than a psychological semblance, without any reality at all. In Dirar and al-Nadjdjar, kasb and istisla can still be translated as "acquisition" or "appropriation"; but the strict Ash'ari concept demands that we speak of "extrinsic attribution" and "juridic imputation".

To sum up: Ash'ari kasb or istisla is the link between the "contingent power" to act and the accomplished act, but with no concomitant intrinsic effect of the first on the second (e.g. al-Djiwayni, frshhd, ed. and Fr. tr. Luciani, Paris 1938, 101-2). The power, action and kasb are directly created by God within the human subject, which is, as al-Djubbbari states (Sharh al-Mawdhib, ed. Cairo 1325/1907, vili, 48), more than no receptacle, the place (mahall): an expression frequently found in the manuals of this school. Subsequently, kasb was conceived of as pure "connection" (ta'alluk), and its "positioning in annexation" (istikhdafa, cf. Fr. tr. Fih al-milal, ed. Cairo 1347, iii, 48) of the effect produced and the subject from which it derives, without a man having any efficacy over his act, "without even his being assured of the production of that act" (al-Badjuri, Hikhyt al-dalal al-Tabarid, ed. Cairo 1353/1934, 61). In strictest Ash'arism, this concept of kasb attributes to "acquisition" an "imputation" deriving solely from the inscrutable divine Will.

Other analytical essays, perhaps influenced by the legacy of Dirar or al-Nadjdjar, or by Maturidi elucidations (see below), suggest that kasb should be defined as a "wish" (irda) which is created as it were by accident (farad), but always acknowledging that the three conditions present—contingent wish, contingent power and effect produced—are directly created by God, without their being an intrinsically subordinate link between them. The Mu'tazils objected that an accident (the kasb) could not be inherent within another accident (the human act). In reply, Ibn Hazm asserted that this inheritance was possible (op. cit., iii, 52). Al-Badjuri (loc. cit.) discussed both trends and their respective definitions, acknowledging both as valid, but declaring that the theory of kasb will be less "reliable" than that of kasb-relations.

3. The Hanafit-Maturidi tradition (including some Ash'ari thinkers). The earliest discussions which form the basis of the trends known as Maturidi ignore the problem of kasb, however it was defined precisely, based their belief in man's responsibility for his own actions. For them, the (ontological) root of an act arises from the power (kudra) of God, and its (moral) qualification, which obeys or disobeys divine Law, arises from the power (kudra) of the individual (cf., for example, the brief summary of 'Abd al-Rahim Ibn 'Ali, Nazm al-fardg, Cairo n.d., 72). Kasb is precisely this qualification, and therefore derives from human "power". Subsequently, some measure of an effect by man on his action was acknowledged, which was a return, beyond Ash'ari, to the older views of Dirar and al-Nadjdjar. The definition of kasb as siha, a moral quality (ibid., 73), is the usual response in tracts of a Maturidi bent (cf. al-Nasaf, al-Taftzn, al-Lakani, etc.). Some Ash'arists, while adhering to their school's viewpoint on the analysis of human action, especially on the "capacity to act" (istikhdafa), opted for a theory very close to kasb-siha. Among these latter, the Hanafis-Maturidis are fond of citing al-Bakhilani (ibid.): Fakhrit al-Din al-Razi (Muhassal, ed. Cairo n.d., 143) can also be included here.

Thus we have three appreciably different concepts, all three permitted in the official doctrine of 'ilm al-kalcam: kasb-relations (strict Ash'arism), kasb-will (secondary Ash'ari trend) and kasb-siha (Maturidis and some Ash'arists). It should be noted that through their theory of kasb, however it was defined precisely, the Ash'arists, like the Maturidis-Hanafists, deliberately opposed Djabariyya as well as Mu'tazila, and on this basis their belief in man's responsibility for his own actions...
actions. Whether as pure relation, contingent will or moral quality, it was, they stated, in... its own governorship, or at times two distinct governorships. Renowned from the Seljukid period for its madrasas, its

KASBAH (see KASABA).

KASF (see KUSUF).

KASH, the modern Shahr-i Sabz (‘green town’) on account of the fertility of its surroundings, a town in Özbekistān on what was once the great trade route between Samarkand and Balkh. According to Chinese authorities, Kash (Chinese transcription K’ia-tsa or Ki-shuang-na, also K’usha, as a town Ki-she) was founded at the beginning of the seventh century A.D.; cf. J. Marquet, Chronologie der alttürkischen Inschriften, Leipzig 1898, 51; Ernāmah etc., Berlin 1901, 304; E. Chavannes, Documents sur les Youshine (Turco) occidentaux, St. Petersburg 1903, 146. In 572/982 it is mentioned by Huddud al-Samām, 113 (§ 25, 15) as well-irrigated and protected by a citadel; it exported mules, manna and red salt. Yākūt’s statement (Mu’jam, ed. Wüstenfeld, iv, 274; Barbier de Meynard, Dict., 488 f.) on the authority of Ibn Makūlā, who died in 473/1080-1, that in Transoxiana the name was everywhere pronounced Kiss is very doubtful. For the later period the pronunciation Keš (Kish) is proved by the frequently recurring expression Keš-i Dilkesh. The accounts of the Arab conquest are discussed by Marquet in particular (Ernāmah, see Index). The Keš of the Samanid period is described very fully by the Arab geographers (al-Istakhrl, 324 f.; Ibn Hawkal, cf. N. Sitnyakowsky in Protobul Turk. Kruška Lyub. Arch., v, 114 f. As late as the 10th/11th century Kash or Shahr-i Sabz is described by Ūfī al-Tanīsī (‘Abd Allāk-Nama, Ms. of the Asiatic Museum, 574 age, f. 5b) as an important town usually protected by a prince of the ruling house, while the administration of Nafās or Karšī [q.v.] could be

left to a military official (Darvāga). In the 10th century, the amr Nāṣr Allāh of Bukhārā (1826-60) tried during the whole of his reign to subjugate the town; he succeeded only in 1860, but his successor lost Kash as early as 1865. In 1870 it was ceded by the Russians to the amirs of Bukhārā. At the present day the situation is reversed and Shahr-i Sabz is an unimportant town in comparison with Karghī, the result of the political changes in the 12th/13th century. The district of Shahr-i Sabz is surrounded to the N. by the Hazret-Sultān hills, to the S. by the Bay Suntaw-mountains and irrigated by the Kara-Daryā with its affluents.

(K. W. Barthold/B. Spuler)

KASHAN (Kāsān, Kāshān; 33°59’ lat. N., 51°27’ long. E.), a town of the Jīlībāl, on the ancient N.—S. axial route of central Iran, chief town of a shahrīstān of the central province (Ustān-i markaz); it gives its name to an oasis adjoining the Dašt-i Kāvīr on the N.E. and on the E., closed on the W. and on the S. by the buffer of the median chain of central Iran (3,900 m. at the extreme Kaftān, 944 m. altitude (945 m.), the town has a warm climate (average of 38° C. in July, obs. 1881-4), has a bad reputation for scorpions and suffers from lack of water. This has been supplied by the perennial spring of Fin and by the traditional systems of kanārs and ab anbars (cisterns); constructed under Šāh ‘Abbas the Great, the Kurūd Dam also supplied the town; and likewise from the Safawid period, the Kamsar Dam served for irrigation until the floods of 1958. Today, the sinking of deep wells and water supply works allow a much greater provision of water for drinking and for irrigation. Apart from its craftsmanship and textile industries, the district is renowned for its natural products (figs and pomegranates from Fin, rose water from Kamsar, melons, grapes etc.).

At the S.W. exit of the town, the site of Tepe Sialk/Sialk testifies to a new occupation of the oasis (3 periods from the 5th to the 3rd millenium; a small Indo-European “state” destroyed around the 8th C. B.C.; objects preserved in the Louvre and Tehran Museums; see R. Ghirshman, Fouilles de Sialk, i—ii, Paris 1938-9; idem, L’Iran des origines à l’Islam, Paris 1951). The region abounds in Sasanid remains (shahr-i disks of Nīyāštār/Nīyāsār and Natanz). Although the name Kāsān/Kāshān may not be attested before the 4th/5th C. and its origin remains uncertain, the importance of the Sāsānīd town is proved, notably by its resistance to the Arab invasion (anecdote of the scorpions: see al-Mukaddasī, 390; the town furnished soldiers for the Sāsānīd army: see H. Narādī, Tarikh-i igīmānī, 28; the legend of the Magian kings having left from Kāshān for Jerusalem was circulated in an early period: see Monneret de Villard, Le leggende orientali sui magi evangelici, Vatican 1953, 83 ff. and index s.v. Qāšān).

According to various authors, the Islamic city was founded (or fortified) by Zubayda khātān, wife of Hārūn al-Rashīd, and then claimed by the Imāmī Shī‘is, who are said to have constructed a fortified surrounding wall to protect the town from the attacks of the Daylamids (Mirju-i kāšān, 6-7). Subsequently attached to the governorship of Fasānī, it then formed with Kūmān its own governorship, or at times two distinct governorships. Renowned from the Saldjukid period for its madrasas, its
scholars, its calligraphers, its administrators (known by the nisba Kashan, Kāshānī, Fīn, Rawandi, etc.) and its glazed ceramics (safl, rauh or mudhir), it was relatively spared by the Ilkhānids, the Timūrids and the Turcomans, who derived profit from its craftsmanship (pottery, brassware, textiles). It enjoyed its greatest prosperity under the Safawids; a true cultural capital of Islamic Iran in the 10th/16th century, it was favoured by Shāh 'Abbās and his successors who embellished it with a palace, gardens, avenues and covered bazaars. From 5,000 to 5,000 hearths in 1524 (Tehrān), it counted 5,000 to 6,000 in 1565 (Mestre Afsarī) and Chardin enumerates 6,500 houses in 1763 (counting 5 to 6 persons per hearth or house). The town was then renowned for its gold brocades (sar baft, sari), its silks (thread and fabric), its velvets (mashkahn), its wool or silk carpets (sometimes embroidered with gold and silver), its painters and calligraphers, its scholars and theologians and above all its famous kāfrī [q.r.] widespread in the Islamic world. After having suffered the Afghan and Afshārīf domination, with their massacres and exactions, the town was destroyed by an earthquake in 1192/1779 in the time of Karīm Kāshānī Zand. Although reconstructed by this sovereign and "embellished" by Fatḥ 'All Shāh Kāshānī, it has only recently recovered a part of its prosperity (modernization: the textile industry, improvements of the roads and railways, of which the Tehran-Zahidan line is in the process of completion).

After the depression of the 18th century (ca. 15,000 inhabitants at the beginning of the 19th century), the city was repopulated (ca. 30,000 inhabitants in 1840, ca. 50,000 in 1908). Nevertheless, the development of the oasis has been checked mainly due to the transfer of the axial N. - S. route to the W. of the median chain. While the census of 1956 reflects the exodus towards Tehran (ca. 46,000 inhabitants), that of 1966 seems to indicate an improvement (58,468 inhabitants). Numerous authors have stressed the enthusiasm for work and natural disposition of the Kāshānī for the arts, literature and philosophy, as well as their spirit of independence. Although their devotion to the divination and the twelve Imāms may be generally attested since the Saltānīd period, the majority of the settlements of the district were Sunni at the time of the conquest of Shāh Ismā'īl, and the faith of the people of the town itself also poses a problem (see B. Scarcia Amoretti, in AFIQN (1969), 263-8; M. Mazaouei, THE ORIGINS OF THE SAFAVIDS, STī'īm, STī'ISM AND THE OVLĀD, Wiesbaden, 1972, 31, n. 3). The ancient Jewish community of the town, which served as a refuge to the Jews of Iran were Sunnī at the time of the conquest of Shāh Ismā'īl, now in decline (2,000 persons in 30,000 inhabitants in 1907, 525 in 1956). As elsewhere in Iran, factionalism divided the social body there, practically until the end of the Kāšānī period. Despite natural destructions and sackings, the town has preserved a part of its historic architectural appearance: from the Saltānīd period, a minaret of the Dīmūrī Mosque dated 468/1074, the solitary Zayn al-Dīn Minaret with a height of 47 m, the remains of the Djalālī Fortress and a part of the fortified double surrounding wall; from the Mongol period, the Khādājī Tādī al-Dīn Mausoleum; built in 687/1443, the Mausoleum of the Dīmūrī, the tomb of Shāh 'Abbās the Great (mīrūrī of the ancient mausoleums of the Shī'ī poet Muḥtāram Kāshānī (d. 966/1558) [q.r.] and of the Shī'ī theologian Muḥtaṣīm-i Fayz Kāshānī (d. 1901/1680).

The act of lifting and tearing away the veil [which comes between man and the extra-phenomenal world]. Al-Djurđjanī's Ta'rīḫī (ed. Flügel, Leipzig 1845, 193) states that, according to the Arabic lexicon, kashf means "to take away the veil", but in technical terminology (istilāḥ) it means "to make appear in a complete and actual realisation the mysterious senses and the realities which are behind the veil". It is worthy of note (see below) that this definition copies word-for-word a text of the Iṭlāmi scholar Ḥāḍir Amlī, some twenty years the senior of Al-Djurđjānī. Experience of kashf works within and brings about mukaddama, which may be translated as "unveiling" in the sense of "illumination" or "epiphany". Their opposing correlates are satr and istilāḥ, the acts of veiling and occultation.

The technical environment of the word's use, as evoked by Al-Djurđjānī, is essentially that of ṣaṣawwuf and of Shi‘i theology. The verb kashf (but not the maḍar kashf) occurs several times in the Kur‘ān in its current sense of to uncover (part of the body) and to take away (misfortune, evil, danger, torment). However, two texts serve as the basis for future elaborations: "We have lifted thy covering off thee (kashfuna), and today thy sight is sharp" (L, 22) and "The portending [Last Day] is near at hand, Short of Allāh, there is no-one can lift it away" (LIII, 57-8). The first of these two texts is cited by al-Ghuṭalī at the opening of his Munḥīb.

1. Some examples of Sufi elaborations:

(a) Al-Kalābādī. It seems that in the first centuries (e.g. in al-Hallādī) the opposite (mubābah) of satr or istilāḥ was not so much kashf as tādālīl ["divine" irradiation]. Al-Kalābādī, K. Al-Ta‘arruf, ed. Arberry, Cairo 1352/1933, 90, headed his ch. ivii. The tādālīl wa l-istilāḥ. He distinguishes three types of tādālīl: that of the essence, that of the attributes of the essence and that of the status...
defines mukāhsafa as “a state which bayān cannot in any way describe”. Kashf and mukāhsafa are thus freely put into connection with the superior worlds, those beyond the senses, ājiwarūl and malakūl, beyond mulk [see ‘ālam]. Also, some of the general treatises on Sufism employ the term kashf in their very titles, as in the famous Kashf al-mahdīb of al-Hudžwirī, written in Persian (Eng. tr. by R. A. Nicholson, GMS, Leiden-London 1911). The spiritual steps forward envisaged by al-Hudžwirī are destroying the veil of the world of reality. The raising of the veil will be the supreme state of enjoyment in Paradise, and it is only the state of kashf “which is the degree of closeness (kurb) which makes possible the miracles of saints (ibid., 111, 226). There is thus no question now of any intermediary stage. Al-Hudžwirī seems to place himself more in the line of al-Sarraideg than in that of al-Kushayrī, and does not hesitate to bend into a new sense the borrowings which he makes (without naming any source) from the latter. Thus when he compares mukāhsara and mukāhsafa (ibid., 374-5), he defines the first as “the presence of the heart in the subtleties of bayān”, and the second as “the presence of the inner secret (sirr) in the field of intuitive vision (‘iyān). If mukāhsara definitely refers to the miraculous signs (āyiid) of God, as al-Kushayrī says, then mukāhsafa is already a kind of direct vision (mukāhsafa); contrary to the analyses of the Ristā al-kushayriyya, he no longer seems to distinguish them apart. It is described as a continuous and admiring tremendum in face of the infinite grandeur of God. A little later, al-Hudžwirī compares the diurnal state of kashf to the nocturnal one of sāiir (“occultation”) and suggests that a divine meeting (mukāhsara) may be necessary to very different activations, the troubled and burning desire for an “other place”, which is that of the bai al-baidīb (lit. “state of the veil”), and also the peaceful vision of the bai al-kashf.

2. A certain usage in theology: that of al-Ghazallī. Kashf occurs frequently in this scholar’s vocabulary. But it is a question here of a usage not merely “mythical” of this term, but of a “theological” one, seeing that spiritual experience and states are for al-Ghazallī in effect an article of faith. References to kashf are to be found not only in the Iḥyāʾ, but equally in the Iḥtiṣād, the Mucṣafa and the Munkidh; kashf lays the foundation for yaḵīn, the assured certainty of genuine faith (as opposed to faith received purely by being handed down, ṣabīḥ). The Munkidh states that “The key to most of the branches of knowledge is the light (nir) which God shines into the heart”. Also, “Whoever imagines that kashf depends on logically-arranged arguments reduces the immensely-wide mercy of God to narrow proportions... Kashf must be sought from this [divine] light” (Munkidh, ed. Ābd al-Halīm Māḥmūd, Cairo 1372/1953, 55). Kashf, the unveiling of the world of mystery, is mentioned several times in the Iḥyāʾ; see the main references in Farid Jabare, Essai sur le lexique de Ghaṣdī pl, Beirut 1970, 244. Also, the Iḥyāʾ, ed. Cairo 1352/1933, IV, 218, doubtless in conformity with the tradition from al-Kushayrī, places kashf and bayān in connection with each other.

If kashf appears in many of al-Ghazallī’s works, mukāhsafa is found in the vocabularies of the Iḥyāʾ and the Faygul only. As Jabare notes, op. cit., 245-6, this second term is used in a double sense: (a) subjective, an interior state brought about by kashf, and (b) objective, meaning “the truths, the objects
of the act of unveiling". Al-Ghazâlî's famous distinc-
tion between *ulum al-mu’dmala (ritual observ-
ances, social customs and ethical rules) and *ulum al-
mukdshafa, by means of which realities are ap-
prehended, is well-known. The *Ihya*, i, 18, says
that the *‘ilm al-mukdshafa is the knowledge of
what is concealed (bâjin), and is the aim of all the
sciences. It is the science of the saints (siddîdbân)
and those "brought near to God". It is a light
which shines into the heart if the latter is purified
and freed from its reprehensible qualities, a light
which bears upon God. His angel, His acts, the
prophets and the future life (cf. ibid., i, 48). It is not argumentation, nor simple acceptance,
but an intuitive and sure grasping of the subject.
"By *‘ilm al-mukdshafa, we mean the pulling-aside
of the veil so that the Real One Shows Himself in
all his splendour; and this is effected with a clari-
ty which sets the object present right before the eyes,
without any possible grounds for doubt" (i, 18; see
other references in Jabre, op. cit., 246, and idem,
La notion de certitude selon Ghazâlî, Paris 1958,
index, s.v.). Muhâkafaât and mukdshafa appear
equally all through the *Ihya*.

Hence for al-Ghazâlî, kashf is a light, a freely-
bestowed grace from God, which at the same time
alone bestows its quality of certain knowledge. In
so far as the later *‘ilm al-mukdshafa was open to in-
fluences from al-Ghazâlî (or directly from Sûfiism),
kashf and mukdshafa were sometimes freely accepted;
but the most classic treatises hardly ever refer to
them.

3. Brief references in Shi’ism. In Shi’ism, the
spiritual experience of kashf inevitably came to
form a theological (or "theosophical") dimension.
The apprehension of the "hidden meaning" (bâjin),
which is the perfection of Islam and which is the
prerogative of the great Imams, led to a high value
being placed on kashf. To give only one significant
example, the two treatises of the Imâm Sayyid
Haydar Amûlî, ed. Henry Corbin and Osman Yahya
as La philosophie ghîrite (Tehran-Paris 1969), deal
with kashf as a manner and a method of knowledge.
The Diûrdjani al-asrâr mentions it, after waqâya (reve-
lations, although angelic, divinised) and itâdâm (divine,
inner inspiration), as a participation stemming
from the universal intellect and the universal
soul (La philosophie ghîrite, 448-53). When
Amûlî defines kashf (ibid., 452), it is in the same
lexicographical and technical terms as to be taken
from his works by al-Diûrdjani, as already men-
tioned above. The ending of the chapter distinguishes,
among other things, (a) kashf swârât (the "imaginal"
perception of reality) whose irradiations (lajâjaliyyât)
reach the senses of sight and hearing; mention is
made in this connection of the master Ibn ʿArâbî
and (b) kashf ma’nawî, which is of the spiritual
order (râkî); the text emphasises strongly mukdshafât
received in this fashion (ibid., 462-72). In his Risâla .
fi ma’rifat al-wudâd, Amûlî enumerates three
modes of knowledge: by the intellect (ʿâbî), by
transmission (makhlûk) and by kashf (ibid., 632), and
only the last one leads to the apprehension of Reality.
Hence it is with some justification that, in regard
to Haydar Amûlî, the phrase "the method of kashf"
has been used (cf. Peter Antes, Zur Theologie der
Schi’îa, Freiburg 1971, 49, 68), this method being an
intuitive one in which certainty is sought from
spiritual illumination. Amûlî’s admiration for Ibn
ʿArâbî and for the latter’s deliberate scheme for
"reconciling" the Sûfis and the Imânîs, is well-
known. Amûlî’s work was to influence all later
Twelver theology, and is in fact the applying of the
Šîf kashf to the Šîtî search for the hidden meanings of
things. If we bear in mind that his definition of kashf was adopted as it stood by Ibn
Diûrdjani, we can accordingly discern, despite the
divergencies of various climates of thought, a
continuity of viewpoint.

Ismâ’îlî writings put the accent on the idea of the
"state" of kashf from a double point of view,
both gnostic and cosmic. The title chosen by al-
Hujjârî in the 5th/11th century, Kasjîf al-mabdîjîb, designates equally the 8th/14th century tradition
of the Ismâ’îlî scholar Abû Ya’qûb al-Sîdîjînâ, and
kashf now introduces an ontology and cosmology
gnostic type. Furthermore, the classic opposition
or mukhâlaf of kashf-satr is frequently found, this
set forth according to wide cosmic perspectives,
in the Ismâ’îlî cycles of metaphysics. The sever
of "proto-history" (Corbin) and of post-history are
unfolded according to alternate phases of "unveiling"
("epiphany", as tr. Corbin) and "occultation". The
length of these cycles may vary, and may refer
indifferently to the "premordial Adam" (the "Per-
fect Man"), to the "partial Adam" (the Kûrîânic
Adam) or to the "spiritual Adam" for the intelligible
realities. According to al-Husayn b. ʿAll, a Yemeni
al-ʿârî of the 6th/12th century, the cycle of unveiling
(daur al-kashf) is 50,000 years, and the cycle of
occultation (daeur al-satr) is seven millennia. The
present age, since the creation of the "partial Adam",
is the fourth millennium of a cycle of occultation,
which has been preceded and will be succeeded
by a cycle of unveiling (cf. al-Husayn b. ʿAll, Risdla .
de l'âra d l-mabdîb gegen 'ma‘âd, ed. and Fr. tr. Corbin,

An exhaustive study of kashf in Shi’i thought—
Imâmî and Ismâ’îlî—would in fact require an ex-
tensive exposition.

(L. Gârdet)

Kâshghar, a town in Chinese Turkestan
(Sin Kiang); the same name is still used in Chinese
official documents. The name Kâshghar first appears
in Chinese transcription (K’iu-châ) in the Tang-chu
of E. Chavannes, Documents sur les Tou-Kiue
in Chinese transcription (Kashghar; the story of Kutayba’s campaign in
3
The pre-Islamic Kâshghar and the ruins of Buddhist buildings in the vicinity, see A. Stein,
Ancient Khotan, Oxford 1907, i, 52 f.; idem, Serindia,
Oxford 1921, 80 f. Arab armies did not reach
Kâshghar; the story of Kutayba’s campaign in
96/715 is, as shown by H. A. R. Gibb in BSOS, ii
(1923), 467-8, a mere legend. Since ca. 1317/50,
Kâshghar was under Karluk rule and turkicized
by them. On the flight of a prince of Farghana to
Kâshghar in the time of the Caliph al-Mansur
(36-58/754-75) see the article Farghana. In the
Sâmânî period a Dîkhân of Kâshghar with the name or title Tughân Tîgin is mentioned (Ibn
Al-Athîr, viii, 37), with whom the rebel prince
Ilyâs b. Inâbît took refuge; whether this Dîkhân had
already adopted Islam is not mentioned. At a later
date Satûk Boghîr Khân is mentioned as the first
Muslim Khân of Kâshghar; in the oldest reference
to him that we have (Djâmîl Kurâshî in Barthold,
Turkestân, ii, 255, 257) the date of his death is given as
344/955-6. This story already contains features
which are certainly legendary; in the story of
the building of the first mosque we have the well-
known folklore motif of the cutting of an ox-skin into
stripes. The later legend, reproduced by F. Grenard
(JA, Ser. 9, vol. xv, i, 1), has not this feature but
KASHGHAR — AL-KASHGHAR

contains many other legendary traits and absolutely false dates. The year 344 A.H. is perhaps too early, as probably the story of the adoption of Islam by a numerous Turkish people (200,000 tents) in 349/960 must be referred to the Turks of Khashghar; this story is found not only in Ibn al-`Atif (vii, 396) but also in Ibn Miskawayh (The Eclipse of the Ab-basid Caliphate), ed. Margoliouth and Amedroz, Oxford 1921, text, ii, 182, tr. v, 196; the original source is probably Thāl al-Sabīh (cf. Ibn al-`Atif, viii, 476, 491; The Eclipse etc., Index). The tomb of Satuq Boghār Khan is in Añīq (now pronounced Artuș) north of Khashghar, where it is still shown.

Under the rule of the Ilīgh Khāns [see Ilek Khans], who confessed Islam since ca. 950, Khashghar was politically the most important town in the Tarim basin; perhaps it was also the most important from the point of view of culture. In the 5th/6th century there was already in existence a work in Arabic on the history of the town, composed by Abu `l-Futūḥ `Abd al-Ghāfīr (or `Abd al-Ghaffār) b. Husayn al-Alma`ī al-Kashgharī (sic); the author's father, who survived his son (according to al-Sam`ānī by about ten years), died in 486/1093. On father and son and the works of the latter, see al-Sam`ānī, Kitāb al-masālik, ed. M. 'A. M. Z. H. al-Sam`ānī, Leiden-London 1912, ii, 470a, 472a; Dīmāl Kūrāshī in Barthold, Turkestān, i, 123 f. The rulers—since 1130 under the overlordship of the Karakhitay—were in a special mausoleum (Arabic al-dinbadha al-khakāniyya) on the bank of the Tümen; the first prince buried there died in Muharram 424/Dec. 7 1032-Jan. 5 1033, and the last in Radjāb 601/2 Feb.-3 March 1076. During their rule, Mahmūd al-Khashgharī [g.v.] wrote his great Turkish dictionary in its library was the copy of the Diwdn lughdt al-turk, ed. Margoliouth and Amedroz, Oxford 1921.) with plan of Kashghar on p. 268, oblong., xv, 313 f.) with plan of Khashghar on p. 326, and M. Hartmann, Österreich-Türkestan, Halle a/S. 1908, especially 45 f., 89 f., with a plan of the town from Kornilow. The most important building in Khashghar and vicinity is Hāḍrāt Apāk, the tomb of the famous saint of the 11th/12th century. Khashghar has now approximately 70,000 inhabitants (mostly Sunni Uyghur Turks).

(W. Barthold—B. Spuler)

AL-KASHGHAR, MAHMUD B. AL-KASAYN B. MUHAMMAD, Turkish scholar and lexicographer of the 5th/11th century whose work, the Diwan lughat al-turk, is one of the most significant records of the Turkish languages and also an important source for the history of the Turkish peoples. The only information which we possess on his life comes from his own work, and that much is only fragmentary. It seems that he came from Bars ḡān on the southern shores of the Isk-Köl (cf. Huddād al-İlam, tr. Minorsky, 98, 292-3), and was born into a noble family connected with the Kārā-Khānids [see Ilek Khans]. Khashgharī was deeply grounded in Islamic culture and learning, and he himself states that he had travelled extensively and visited many of the Turkish lands before journeying to Baghdad. It may well be that internal conflicts within the Kārā-Khanid federation led him to undertake these travels and to go to Baghdad. It is there that he mingled with the circles of scholars, and realised that there was a great interest in the Turkish peoples and their languages; hence he was stimulated to compose two works on them. He began to write his Diwan lughat al-turk in 464/1072. According to the information in the book itself, he wrote four reductions of it during the period 464-76/1075-94). The original of the Diwan is lost, but the unique surviving manuscript, dated 27 Shawwal 1266, is a good copy, though not entirely free from errors. Khashghari's second work, a Turkish grammar called the K. Diwanīh al-nahu fl lughat al-turk, has been lost, and is known only from the author's own reference to it.

Khashghari's work is of particular importance for the Turkish languages, and also for the history, geography and folklore of the Turkish peoples, for this linguistic corpus consists not of coherent texts in one particular Turkic language, but of a comparison-oriented explanatory dictionary and a modest grammatical outline of the language. In fact, it represents the first scholarly approach, and thus the first description of the linguistic material by a particular method, to these languages. At the same time, both in its introduction and in the individual entries, Khashgharī's work contains a number of facts and remarks—occasionally supported even by personal experience and observation—about the process of the differentiation and spread of Turkic languages, cited in order to elucidate the situation in the 5th/11th century. The information he gives on the writing of Turkish peoples (sc. the Uyghur script) is also useful from a linguistic point of view.

Although he aims at a fairly comprehensive coverage of the Turkish languages, and includes several of them in his dictionary, the linguistic material in the work is primarily a record of the 5th/11th century
Turkish spoken in Kāshgār, which he terms Kāshānī Turkish. Kāshghārī's work is related essentially to Karakhanid linguistic records. Aside from the material on Kāshgār, the linguistic date from the Oghuz and Kıpchak are of considerable value. The dictionary was originally designed as a language-manual for scholars in Bağdād who had some contact with Turkic peoples. Hence he deliberately adopted the methods of Arabic grammar and lexicography in describing his linguistic material. While Arabic grammar served, to some extent, as a guideline, the products of Arabic lexicographic literature also furnished him with a complete entry-word list, a sort of lexicographic questionnaire, with which he confronted the Turkic word-stock, his own mother-tongue. It is highly probable that this starting point considerably enlarged the word-stock in his work.

The fact that the Turkic linguistic material had to be fitted into the categories of Arabic grammar certainly impelled Kāshghārī carefully to study his material. Yet the fact that the work was prepared in Bağdād—at a great distance from the homeland of the Turkic peoples—made him unable to complement and control his linguistic material to the fullest extent; and it is open to question how far he grasped those modest opportunities for such control which were probably available in Bağdād. Also questionable is the extent to which the assumed—repeated reductions of the work enhanced or diminished the authenticity of the linguistic material. Since we do not possess the autograph manuscript of the work and the copyist was not a Turk, the relation of the copy to the original raises similar questions.

Kāshghārī's dictionary pays particular attention to place names, tribal names, proper names, ranks and titles. Except for Kāshgār, the Oghuz and Kıpçak linguistic data and personal experiences as well as specimens of Turkic folklore, verses, proverbs, etc., which make the work an important source for these last, which are of particular significance as coherent Turkic texts, in addition to their historical-folkloristic value. Kāshghārī's comparative remarks are also highly instructive, though his material is less rich in this respect. The elements in the author's mother-tongue included in his work should be regarded as a record of the standard usage of local scholars, for, as we have noted, Kāshghārī's main aim was to make Arab scholars acquainted with the Turkic languages. He rightly regarded his mother-tongue as one representative idiom of this language-group. At the same time, and understandably enough, he refused to include those Arabic loan-words which he considered irrelevant in this context. However, those words already played an important role in the Kutadghu bilig, the most significant literary monument of the period, and it seems highly probable that they had also found their way into the spoken language. One major merit of Kāshghārī's work, however, lies precisely in the fact that he tends to focus his attention on the word-stock of the "everyday" spoken Turkish languages. His dictionary thus complemented the assumed repeated reductions of the work, which are of particular significance as coherent Turkic texts and translations of the Divan: Maḥmūd b. Muḥammad al-Kāshghārī, Kitab divān-i lugāt at Turk, ed. İlisiş MüallaMit Rifat Bilge, Istanbul 1925-7; B. Mutallibov, Divan lugat-it-Turk cemcesi, Ankara 1939-41, see A. B. Taymas, in TM, vii-viii (1940-2), 212-52, xi (1954), 75-100; idem, Divanü Lügat-it-Türk tarihhsam, Ankara 1941; idem, Divanul Lügat-it-Türk disini, Ankara 1943; D. Dilcin, Arap alfabetesi gelen Divanul Lügat-it-Türk disini, Ankara 1957; Maḥmūd Koşlagıyı, Türk irşal dilvleri (Devonu lugâtî turk, ed. S. M. Mutallibov, Tashkent 1960-5); G. Abdurahmonov and S. Mutallibov, Devonu lugat-it turk (Indeks-lugat), Tashkent 1967; Mutallibov, "Divanul lugat-it-Turk" Maḥmud Kāshgārskogu (Perevod, kəmentarnyi, issledovanii), thesis, Tashkent 1967.

Kâşgârî, a Persian word designating the tiles or trimmed pieces of faience serving to cover completely or partially the main fabric of buildings in a design principally decorative but also, at times, to protect them against humidity. This term, which also exists in Turkish, is an abbreviation of Kâşgârî; the town of Kâşgâr [q.v.] was in effect the most important and most famous centre of production in Iran. It appears already in Abîl-Kâsîm, author of the first treatise dedicated to this subject (ca. 700/1300) in the form kâşgî-karî, which means literally “the art of making the kâşgî”, but for this author it had a wider sense and designated the art of faience. (See J. W. Allan, Abîl-Kâsîm’s Treatise on ceramics (Thirteenth century B.C.).) The development of Çughâ-Zanbil (Kâshîstân) have brought to light several types of glazed tiles (11th century B.C.). (See P. Amiet, Élam, Paris 1966, pl. 261).

The origin of the kâşgî is linked with the techniques of pottery and with that of baked brick. So it has connections with a very ancient art. The excavations of Çughâ-Zanbil (Kâshîstân) have brought to light several types of glazed tiles (11th century B.C.). (See P. Amiet, Élam, Paris 1966, pl. 261). There have also been discovered (ibid., pl. 383-92) some polychrome-coated tiles with zoomorphous decoration at Susa (ca. 5th and 7th centuries B.C.). The famous Frieze of the Archers (Louvre, 5th century B.C.) is a well-known example of the enamelled brick of the Achaemenids (M. Ruten, Les arts du Moyen Orient ancien, Paris 1962, pl. xxx) that the Assyrians and Babylonians also knew about (Assyrian Palace of Khoşâbâd, 722-705 B.C.; Gate of the Lion at Babylon 6th century B.C.). Later on, in the period of the Parthians and Sâsâns, this art experienced a certain decline and appears to be represented only by mosaics (Bîghârû, 2nd half of the 3rd century, see R. Ghirshman, Par Isaiah Sâsâns, Paris 1966, p. 60).

Moreover, it is the technique which prevailed at the beginning of the Muslim period and the mosaics of this era are of Hellenistic or Byzantine inspiration. They were also much used for floors (rest room of the bath of Khîrbât al-Madjdar; D. and J. Sourdel, La civilisation de l’Islam classique, Paris 1968, pl. 124), as well as on the walls (Dome of the Rock, dated 691, above, art. ARCHITECTURE, pis. IV-VI; Great Mosque of Damascus, dated 775, Sourdel, op. cit., pl. iv), but the use of kâşgî in the form which later spread seems to emerge in the 5th/11th century. One of the first examples of its tentative appearance is to be found at the top of the minaret of the masjid-i dîavân of Dâmghân (2nd half of the 11th century, C. Adle and A. S. Melikian Chirvani, Les monuments du vi° s. du Dâmghân, in Studia Iranica, ii, 1972); the monumental arch at the end of the 8th century B.C.) is a well-known example of the enamelled decoration at Susa (D. and J. Sourdel, The Manârs of Isfâhân, in AI, 1936/2, fig. 212). Approximately at the same period points of turquoise blue enamel appeared on buildings (Gonbad-i Surk, dated 1147 at Marâgâh, A. U. Pope, A Survey of Persian Art, repr. Tokyo 1964, viii, pl. 341). This new type of insertion of quite small enamelled tablets drew inspiration from the embossed joints of plaster which are already in existence on the buildings of the 5th/11th century. The arrangement of these small tablets then developed without interruption and various decorative schemes were adopted (frieze of tower of Mu’îmsîn Kâshîtân, dated 1186, in Nakhîjîvan, ibid., pl. 345; Gür-i Amlî, dated 1105, at Samarkand, ibid., ix, pls. 541-3). Emanating from these first productions, two techniques saw the light of day: that of the faience mosaic or kâşgî-yi mu’arrab-kârî, and that of the faience tile or kâşgî-kârî. Kâşgî-yi mu’arrab-kârî (or simply mu’arrab-kârî): this technique consists of cutting, according to precise forms, pieces of monochrome kâşgî of different colours to compose a polychrome design (technique described by Godard, op. cit., 383-4; H. E. Wolf, The traditional crafts of Persia, Cambridge Mass. 1966, 121-5, figs. 188-94; Pope, op. cit., pl. 546). One of the
first examples of the use of this process in Iran is
the Imamzada Diacfar (dated 1325) at Isfahan
(Godard, 386). Perfection was achieved at the
Imamzada Darb-i Imâm (dated 1453), situated in
the same town (ibid., 386) and especially at the
Blue Mosque (Masjd-i Kabîd, 1453) of Tabriz
(ibid., pls. 145, 146; Pope, op. cit., viii, pls. 452-6).

Kâshî-kâri: by contrast with the above, in this
process the design is reproduced on tiles of baked
earth which are then painted, generally with
different metal-oxides, to become polychromatic, then rebaked.
This technique, which varied widely according to
periods and places, has given birth to two great
schools, the kâshî-yi falazari-rang (glazed) and the
kâshî-yi haft-rang (polychrome/seven colours).
The first are from the 3rd/9th century at Baghdad
and at Sâmarrâ. They were even exported as far as
Kâyrawân (D. Talbot Rice, Islamic Art, London 1965,
fig. 35) to be used in the Great Mosque (ca. 862).
But it was the kâshîs manufactured principally at
Kâshân, from the 7th/13th to 9th/15th centuries,
that were the most famous. Their metallic glints were
produced by “a thin film of metal obtained by
reducing in the kîn a metallic oxide applied on the
enamel” (J. Sauvaget, Introduction à l’âude de la
céramique musulmane, Paris 1966, 36-8; Wolff,
op. cit., 219-20).
Two categories of glazed tiles exist:
first, the flat kâshî in the form of a star or
a cross (cf. panel of the Louvre dated 1267; Art de
l’Islam, catalogue de l’exposition de l’Orangerie des
Tuteries, Paris 1971, pl. and no. 58), and then much
greater kâshîs, often modelled in a manner to
constitute the elements of a mîbarî (cf. that of
the sanctuary of the Imâm Ridâ at Mesjid, dated
1215, and that of the Mosque of the Maydân of
Kâshân, dated 1226). In Bâbista, on les carreaux de revêtement dans la céramique
sanctuary of the Imam Rûmâ at Mashhad, dated
702 KASHî — AL-KASHî
of Kubadabad (7th/i3th century) had very fine
productions were not numerous (Madrasa Madar-i Shah,
dated 1612-28, at Isfahan; Godard, 384). Perfection was
achieved at the instigation of Kâdd-zâda al-Rûmî, he
settled in Samarkand. From this town he wrote to his
father (Eng. tr. E. S. Kennedy, in Orientalia, xxix/2 (1960),
192-213) describing the lifestyle of the court, his
relationship with Ulugh Beg and Kâdd-zâda al-Rûmî,
and the problems with which the latter was particu-
larly concerned. This document is of exceptional
scientific interest; in some passages he brings to
mind, in quite a different context, the tests under-
gone by poets when they were admitted to the sov-
ereign’s court. He assisted in the establishment of
Ulugh Beg’s tables and took part in the construction
of the great observatory, the ruins of which can still
be seen and which, in the opinion of Sayhî (The ob-
servatory in Islam, Ankara 1960, 260-8), probably
influenced the first European observatories.
In 826/1423 he completed his al-Risâdâl al-Muhiyya
(ed. with Ger. tr. by P. Luckey, Der Lehrbrief über
den Kreisumfang, Berlin 1953; Russ. tr. by B. A.
Rosenfeld, V. S. Segal and A. P. Yushkeviç, Mos-
cow 1956) in which he established the value of π
with extraordinary exactitude, so that 2 π = 6 16,
e.g. 59, 2 3, 34, 51, 46, 14, 50 in sexagesimal
notation and 6.2831853071795865 in decimal notation.
Allied to the mathematical work of this work is the
determination of sine x° worked out by an iterative
method (cf. A. Aaboe, in Scripta Mathematica, xx
(1954), 24-9). This problem, one with which Kâdd-
/zâda was preoccupied, was recorded by his grand-
son, Miram Celebi, in his commentary on the tables
of Ulugh Beg entitled Dâstar al-samâl wa-tabâk al-
gijdâsî. It can be seen here that al-Kâshî employed
the equation: sine d = 3 sine d — 4 sine 3d, which was
used in the Western world by F. Viete (1540-1613)
and established the value of sine $\frac{i}{6} = 0.017452406437283571$. In 829/1426, he composed a book, *al-Manadik*, in which he described an equational interpolation scheme, enabling the rapid calculation of linear interpolations. These two works are edited and translated by E. S. Kennedy, *The planetary equatorium*, Princeton 1960.

In 830/1427 he dedicated to Ulugh Beg's library his *Miftah al-hisab* (ed. with Russ. tr. B. A. Rosenfeld, V. S. Segal and A. P. Yushkevich, Moscow 1951). In the prologue to this work he gives an (incomplete) list of his works and in the explanatory part expands the arithmetical operations, teaching the method of extracting roots by the system which today is called after Ruffini-Horner, calculates the Tartigian triangle (see *al-Karaqī*), demonstrates that he knew the proof by $\div$, works out the sum of series up to the fourth power of natural numbers (cf. F. Woepcke, *Sommations de séries*, in *Journal de mathématiques pures et appliquées*, x (Paris 1865), 32-6), develops, like the ancient Babylonians, the sexagesimal system, and devises decimal fractions which, despite the endeavours of Emmanuel Bonfils of Tarascon (14th century), were not recognised in Europe before Stevin of Bruges (1585); he also indicates the rules for passing from one system to another, gives auxiliary tables for various computations, deals with trigonometry and algebra and solves some undetermined systems (see *al-Karaqī*).

Al-Kāshī died on 19 Ramadan 832/22 June 1429 at Samarqand. *Bibliography:*

**KĀSHIF, MUHAMMAD SHARIF B. SHAMS AL-DIN AL-DJANADJI AL-NADJAFI.** Shaykh Dja far was born in al-Nadjaf in 1154/1741 or, more likely, in 1164/1751, according to conflicting records. His father, whose family belonged to the Arab clan of Banī Mālik, had come from Djanadiya (Kanakiyā), a village in the region of al-Hilla, to al-Nadjaf, where he won a high respect for his piety and religious learning. Shaykh Dja far studied in al-Nadjaf and Karbalāʾ under the most famous Imāmi scholars of the time, among them the Āḵā Muhammad Bākīr al-Bihbānī and the Sayyid Mahdī Bahāʾ al-ʿUlama al-Ṭabāṭābāʾi. After the death of the latter in the 1221/1779, Shaykh Dja far was recognized as his successor in the leadership of the Imāmī community.

Shaykh Dja far was actively engaged in the local affairs of al-Nadjaf as well as in the concerns of the Imāmī community, entering into close relations with both the Ottoman authorities in Baghād and the Kāḏīrī ruler Fāṭḥ ʿAlī Shāh (1212-50/1797-1834) of Persia. In reply to a pamphlet of the Wahhābī ruler al-ʿAzīz b. Saʿūd (d. 1218/1805) espousing Wahhābī doctrine and attacking Shiʿism, he wrote a rebuttal *Risālat manḥādī al-rasūl li-man arādā al-saddād*. During the siege of al-Nadjaf by the Wahhābīs in 1220/1805, he led the successful resistance of the inhabitants. In 1221/1806 he served the Ottoman governor of Baghād, ʿAlī Pasha, as an envoy to the Persian army advancing on that city and brought about a peaceful settlement. To Fāṭḥ ʿAlī Shāh, during whose reign he visited Persia frequently, he dedicated his general *fisḥ work Kāshī al-ghīrāʾ* "an muḥāmāt al-sharīʿa al-ghirara." The book became popular with students of Imāmī law and earned him his nickname Kāshī al-ʿArāf. He repeatedly authorized Fāṭḥ ʿAlī Shāh to lead ǧīhād.

In treatises and in public debates in ʿĪrāk and Persia he vigorously supported the ʿUṣūlī doctrine of ʿidāḥād [q.v.] against the Akhbarī position. This brought him into sharp conflict with the Akhbarī leader Mīrzā Muhammad al-Nāṣībī al-Khājiyā. When the latter found refuge at the court of Fāṭḥ ʿAlī Shāh in 1223/1808 and tried to defame him personally, he wrote a scathing attack on him entitled *Kāshī al-ghīrāʾ* "an maʿāṣīb Mīrzā Muhammad ʾadwaw al-ʿulamāʾ* and sent it to the shah. Towards the end of his life he became involved in a bloody conflict between the Zūkūrt and the Shīrīm, two factions of the inhabitants of al-Nadjaf, which led to a feud lasting over a century. He died at the end of Radjab 1227/early August 1812 and was buried in al-Nadjaf. Several of his descendants have distinguished themselves in scholarship.

KASHIFI, KAMAL AL-DIN HUSAYN B. 'ALI, BUR-
named al-Wâjîq ("the preacher"), Persian writer
and preacher. Born at Baybakh or Shahzâdâr, where
he spent part of his youth, Kâshîf then lived in
Nishâbûr, Maqâbâd, and for about 20 years at Harat,
during the reign of Abu 'l Qâhir Sultan-Husayn
Bâyqarâ' [q.v.]. There he received encouragement
from the sultan and from 'All Shir Nawâ'î [q.v.]. He
was well-known as an eloquent preacher with an
exceptionally beautiful voice and as a prolific writer
of Persian prose. Kâshîf lived to a ripe old age, dying
in 901/1504-5 at Harat. Being a Shi'ite, when he was buried
at Baybakh, a Shî'ite centre, he was regarded as a
Shi' in Harat, but his relationship with Dâmi [q.v.] and his companionship with 'All Shir Nawâ'î
resulted in his being considered a Sunni in Baybakh.
His famous son, Fâkhîr al-Din 'All Safl (d. 939/
1532-3) in his Râkhhâ'î 'a'syn al-bayâtî (lith. Lucknow
1368/1850) mentions his father's adherence to the
Naqshbandîs [q.v.], who were Sunnis. However,
some of Kâshîf's works, such as his Rawdât al-
shuhadà, attest that the author was an Îmâmî Shî'î.
In any case, the Lâlitî'î al-taw'ûfî, written by Fâkhîr
al-Din 'All Safl (Tehran 1363/1947), and other works by Kâshîf, express the authors' devotion to the
Ahl al-Bayt [q.v.] as the "family of the Prophet".
In some of Kâshîf's books, such as al-Risdîa al-
âlîyya fi'l-ahdâth al-nabawiyya (Tehran 1360/1851) and
Futuwwat-nâma-yi sultdn (Tehran 1791), his tendency
towards Shi'ism is obvious. Husayn Wâjîq occasionally
wrote Persian poems under the pen name of Kâshîf.
His only known child was the above-mentioned Fâkhîr
al-Din 'All Safl, the author of several books, who
succeeded his father as a celebrated preacher in Harat.

The following list of Kâshîf's works is not in chronological order, as the dates of many of his writings have not been established. Of the author's works, the best known are the Anwâr-i Suhayli and Rawdât al-shuhadà: (1) the former, which is the basis of Kâshîf's fame in the East and the West, is a new version of Ka'ilat wa-Dinna [q.v.,] translated into Persian by Abu 'l-Mâ'âlî Naşr Allâh. Kâshîf's aim in recasting these fables, done at the suggestion of Nîzâm al-Din Amir Shâhîy al-Surkhâ (d. 901/1502-3), a Turkish amir at the court of Sultan Husayn, was to simplify the difficult style of Abu 'l-
Mâ'âlî. Kâshîf omitted Abu 'l-Mâ'âlî's first two chapters, reducing the book to 14 chapters. But the Anwâr-i Suhayli, "The Lights of Canopus" or rather "The Lights of Suhayli", written in a very decorative style, cannot compare with the first Persian translation of Ka'ilat wa-Dinna, and Kâshîf did not achieve his object. The book has been published several times: in Calcuta 1805 etc.; Hertford (by Ch. Stewart) 1805; (by J. W. Ouseley) 1851; Bombay 1853; and repeated since then in India, Iran and Europe. A versified version of the work exists, entitled Shakarštân and made by Amir Khusraw Dârâ'î (Tehran 1947). The Ottoman Turkish translation of the work, entitled Hümâyûn-nâme by 'All Câlebi (d. 950/1543-4), became widely known in Europe, and its translation into French is one of the sources of La Fontaine's Fables. The Anwâr-i Suhayli has also been translated into English (by E. B. Eastwick, Hertford 1854, and by A. N. Wol-
laston, London 1878). Parts of the book have been
printed in text and translation in Europe (see Ethé, Cat. Pers. Ms., India Office, No. 757). Having
achieved fame in India, the work found an imitator, Abu 'l Faqâl b. Mûbârak, minister of the Emperor Akbar and author of the A'sîm-i Akbarî, who com-
piled the 'Tyûr-i dâmîkh (996/1598); (2) The Rawdât al-shuhadà, "Garden of the Martyrs", a Persian
martyrology of 'Alî and his family, particularly of the Îmâmî Husayn [q.v.,], was written at the wish of
Prince Murghâb al-Din 'Abd Allâh, called Sayyid Mirzâ, in 908/1502-3. It comprises ten chapters (bâbâ)
and a conclusion (kâtîma). It has been published
many times; abridgments entitled Dah maghîs and Muntabab-i Rawdât al-shuhadà are also available
(see Storey, i, 212, 1261). Popular among Shî'îs and
used in the commemorative speeches of Muâarram, the book has left a lasting mark on the mourning
monories called raûda. The work was translated into
Turkish, with additions, by Fu'âdî [q.v.] of Baghdad
(d. 970/1562-3) under the title 'Hadîdî al-sw'âdà' (see Storey, i, 213; Gibb, Ottoman Poetry, iii, 90).
There is a metrical paraphrase in Dakhânî: the
Rawdât al-shuhadà by Wallî, compiled in 1139/1728
(Storey, i, 213). Translations in Urdu and Hindi also exist (see Haydar-Bakhsî Haydarî, Guî maqûfat, Lahore 1965, Introduction by Nâzir Hasan Zâydi, 8, 9, 10).

Other works are: (3) Dâwâshîr al-taqâsîr li-tâfakkîr al-Amir, an extensive Persian commentary on the Kur'ân, written at the request of 'All Shir Nawâ'î in 890/1485. Kâshîf intended to compile it in four volumes, but discontinued his work after finishing the first volume, which includes the first two suras, and part of the fourth. Later, he wrote a shorter commentary. Dâwâshîr al-taqâsîr has a detailed introduction dealing with the 22 branches of Kur'ânic sciences. Manuscripts of the work are extant (see Rieu, Cat. Pers. Ms., British Museum, i, 11; Ethé, No. 2680; Storey, i, 12, 1195; A'âmîd Munzawi, Fîrârist-i maqûhî-yi Bâyqarî-yi Fârsî, Tehran 1969, i, 42; (4) the Muâshîrî-i 'âlîyya is a shorter commentary on the Kur'ân, composed in 879/1474-5 and dedicated to 'All Shir Nawâ'î, from whose name the work's title is derived. It is also called Ta'fîsîr-i Husayni, after the author. The book has been litho-
graphed several times in India (Storey, i, 13), Iran,
and printed in four volumes in Tehran 1938-40. There
is a Turkish translation by Abu 'l Faqî Muhammad b.
Idris Bîlîfî (d. 982/1574-5) and also an adaptation,
Muoâshîrî taqâsîrî, by Ismaîlî Fârîkî Efendî (d. 1001/1635), Istanbul 1380. Urdu and Pashtu translations also exist (Storey, loc. cit.); (5) the Aâlîkâhî-i Mu'âshîni, an epic, was composed in 900/1499-5 and as an offering for Abu 'l Muâshîn, a son of Sultan Husayn. It comprises 40 chapters, and has been published several
times in India, Tehran, Hertford, London, etc. Translations exist in English by H. G. Keene, Hertford 1851; in Turkish, under the title Anîs al-
'ârîfin, by A'âmîd, 974/1566-7; and extracts from the
latter translated into German, published by R.
Peiper, Breslau 1848, Das Kapitel von der Frei¬
gehkeit, etc.; (6) al-Risâlîa al-Sâîyya fi'l-âdâhidh
al-nabawiyya, a Persian commentary in eight chapters on the 40 hadîths, compiled in 875/1470-1. It was
influenced by the 'Abdî al-Ḥîlabî of Abu 'l Sa'dî al-
Hasan b. al-Husayn al-Sabzawârî (d. 854/1449), one of the Shi'î ulâmâ, and dedicated to Shams al-
Din Abu 'l-Mâ'âlî 'Allî al-Muâţâr al-Nassâbâ al-Nâjîb. A Turkish translation was made by Kamâl al-Dîn Muhammad Tâshkhüprize (d. 1303/
1620-1) for Sultan Ahamîd I (see O'M, i, 349-50; A. Karahan, Islâm-Türk edebiyatında Kîrk Hâds, Istanbul 1954, 109-11 and index s.v. Husayn Wâjîq; (7), (8) Two anthologies from Rûmî's Mathnâwî: the first entitled Lubbî-i ma'naütî fi'idât-i Mathnâwî, and the second a rearrangement of this entitled Lubbî-i Lubbî-i ma'naütî. The latter was
compiled at the suggestion of Muṣayyib, one of the eminent officials at the court of Harat, in 875/1470-1 (Kashf-i, comp. 1864, ed. Tehran 1940); (g) Rasīlā-yi Hāšemīyya, a short Persian treatise including the story of Hāṣim Tā'ī [q.v.], compiled for Sultan Hūsān Bāyūkār in 891/1486 (printed, Ch. Scheler, Chrest. Pers., Paris 1883, i, 174-203; Tehran 1941); (10) Maḥkam-i iskān, a treatise on the art of Persian epistolography, containing all a secretary must know: forms of address, forms of answer, topics, which must be stated, forms of prayer used in letters. It was compiled in 907/1501-2, in the name of Sultan Hūsān and the author's patron, 'Allā Shīr Nāwāt; (11) Saḥfi-yi Ẓaḥḥāt, another treatise, including some epistolary writings in Persian and a few in Arabic, is dedicated to Sultan Hūsān (lith., Lucknow 1844, Cawnpore 1848); (12) Badd-i Ḍalqār fī Ṣind-i Ḍalqār, a work on figures of speech and errors, particularly in poetic usage (see A. Munzawi, i, 2126); (13) Futuwmat-nāma-yi ṣulṭānī, printed in Tehran 1971, is one of Kashīfī's most valuable works. As well as having a fluent style, the book is the most detailed of all the Arabic and Persian treatises written on futuwma [q.v.]. Kashīfī compiled all the information about ẓulṭān handed down from earlier generations and never before mentioned in books. At the same time, he used important written sources. Some special aspects of the mediaeval history of Iran, i.e. about the ẓulṭān and their social organisation, are fully described; (14) the Aṣrār-i Kāsimī, a short Persian treatise on witchcraft, spells and alchemy, in five parts, is written in the name of Amīr Saʻīd Kāsim, one of the eminent personalities of the period (lith. Bombay 1872, etc.). Kashīfī's son wrote a commentary to this book, entitled Kashīf-i Aṣrār-i Kāsimī (lith., Bombay 1889, 1900; printed in Berlin); (15) Tāḥfīt al-ṣulṭānī, with eight chapters and a conclusion; (16) Marsad al-ṣanā’ fī istikhrādāt asmā’ al-ḥusnā (lith., Bombay 1893, 1905); (17) Zād al-musūfiyān (matnāt, lith., Lucknow 1885); (18) Saḥbā Kashīfīyya, completed in 878/1473-4, containing seven treatises on astronomy and astrology, entitled: Manāhīj, Muṣahhār, Ruḍaḥ, Kābhū, Ḍalqār (or Sawdād) al-Mīrāk, Lāwā Ṣams, Maḥbūdī (or Maḥbūf), al-Zuhrā, Manāhīj al-ʿUjlādī and Lāwā al-Kārm (or Ikhtiyārāt-i maqṣūm); (19) al-Tawḥīf al-ṣulṭānīyya “fī ẓil’ al-burāṣ wa-bayyān asrār-hā, compiled in the name of Shaykh ‘Abd Allāh Naḵshband; (20, 21) Two more commentaries on the Kurān, entitled Maḥfūzan al-Dawādhar “abridged from Dawādhar al-lāfṣfī,” and Dīmās-i sittīn, Kashīfī's dictatorial commentary on the Sūrat Yāsūs (ch. xii), which is probably identical with the Tāfsīr-i sāra-yi Yāsūs by Tādī al-Dīn Abū Bakr Ahmad b. Muḥammad b. Zayd of Tūs (Tehrān 1667; see Storey, i, 29, 1195, 1220; A. Munzawi, i, 38); (22) Skār-i Mathnawī; (23) Risāla al-ʿalāyīyya; (24) Risāla dar “ẓil’ al-adād; (25) Risāla dar arsād ad-dastur; (26) Ṣafy al-qāwil fī bayān al-tawāwul; (27) Maḥbūf al-kūnān on alchemy; (28) Maḥbūm al-ihtikābī fī kawdād-i ihtikābī; (29) Aʿsān-i iskandari or Dīmās-i Ẓaḥḥāt; (30) Ṣāḥīb al-nisba “fī ʿl-māzdakh; (31) Manāhīj al-ulūm; (32) Fadl al-shālāt “ala ʿl-nabī; (33) Mīrāt al-ṣafā fī šfāl al-Mustafā; (34) Skār-Mīrāt al-Shurārī “fī ʿl-māASN’a” by Sūfīyān al-Thawrīi (lith. Bombay); (35) al-Nakāwa fī Ḍāb al-naṣīna, on the method of reading the Sūrah (A. Munzawi, i, 120); (36) Dīnār-Dīnār, Kashīfī (ibid., ii, 2490); (37) Tabākāt-i Khudāṣja-ḡānī-i Naḵshbandīyya (ibid., ii, 1274); (38) Maḥfūzan al-Yāsīn (ibid., ii, 1394); (39) Maḥfūzan al-aʿlāyīyyā, (ibid., ii, 1423; Storey, i, 213); (40) Maḥālīs-i wastra (A. Munzawi, ii, 1670), etc.

KASHKHĀY, the name of a Turkish people living in the Fārs province of Iran. Persian works refer to this people as Kashkhāy. The exact origin of the name is not known. In western Turkish Ḥašha is the name given to a blaze on the forehead of animals such as horses, sheep and cattle; in Ǧaghtāy the word also means "brilliant" and "galant". It is probable that the name Kashkhāy is related to one of these meanings, especially the former, i.e. a blaze. It is impossible to agree with the claims of the chroniclers of the Kāḏār period that the word is derived from kāmāk "to flee, escape". The Kashkhāy are a comparatively recent community, not referred to in works earlier than the 15th century. A branch of the Kḥalad [q.v.]s, whose original home is the Sūfīrah region, used to live in Fārs during the 19th century, and whilst we have no knowledge of the causes leading to the formation of the Kashkhāy, it is probable that many Turcoman communities living in Fārs gathered around the strong Shāhīli tribe of the Kḥaladī during the Afghan invasion, thus forming this people. It seems also that some small tribes belonging to such peoples as the Lurs, Kurds and Shūls also joined this union.

The territory of the Kashkhāy extended from the northwest of Fārs to the southeast, comprising Shash Nāhiya, Čahār Danke, Kamīnīrūz, Ardāhān, Kāzarūn, Fārābīābī, Maḵbūrābī, Maḵond, Afraz, Khundj and Mahur Milan. Of these, many Turcoman communities living in Fārs gathered around the strong Shāhīli tribe of the Kḥaladī during the Afghan invasion, thus forming this people. It seems also that some small tribes belonging to such peoples as the Lurs, Kurds and Shūls also joined this union.
always a member of the ruling family of Khans, was appointed by the Shah. Among the many boys and girls of the Kashkay people, the following were of the greatest historical importance: Bayāt (from the Oguz tribe), Igdir (Oguz tribe), Beg Dili (Oguz tribe), Carlhlu (Carlku, an Oguz tribe?), Shāmlu, Aḥaṭ-Eri (of the Karā-Koyunlu), Khaladi, Musullu (of the Ak-Koyunlu), and Oryad (Mongol?). These sub-tribes were not very populous. One characteristic of the Kashkay people was that it had a strict tribal code, which determined all conduct and was obeyed by every member, from the throne down to the simplest member of the community.

The great majority of the Kashkay led a nomadic life, raising horses, camels and cattle. An important number of these nomadic people, however, had fields near their pastures, which were watered and protected by peasants living in the neighbourhood. In return for these services, the peasants, called ra'īyāt-i Kashkā'ī, received two sheep and some share of the crop each year. While serving in the army, the Kashkay was regarded as good fortune by the peasants of Fārs, for in this way they enjoyed the help and protection of the Kashkay and were free from the molestations of government officials. The Kashkay exported sheep, longhaired lambskins similar to the Kara Köl sheep of Buḫkhārā, wool, cotton, and rugs. Kangareh, carpets woven from pure wool, decorated with traditional motifs and dyed with natural dyes, are still in high demand both in Iran and abroad.

The Kashkāy women occupied an important place in the social life of their community, and as among the ancient Turks, the Kashkāy observed the rule of demanding ḥaššīl (ḥaššīl) in marriage. Kashkāy Turkish is a dialect of Oguz, i.e. south-western, Turkish. Like the arians of the Oguz, the Kashkāy had their ḍaḥšīs, who sang songs of love and bravery and recited the legend of Koroğlu.

Dupré (1807–9) gives their number as 12,000-15,000 (Voyage en Perse, Paris 1829, ii, pp. 453-4), while Lady Shell (mid-19th century) writes that they had 30,000-40,000 tents (Glimpses of life and Manners in Persia, London 1856, 396-9). Curzon (1899), on the other hand, gives the number as 25,000 (Persia and the Persian Question, London 1892, ii, 112-3) but he mentions that formerly they had comprised 60,000 tents and were capable of raising 120,000 horsemen. This figure is greatly exaggerated, since the Kashkāy were in fact never able to raise more than 15,000 horsemen. They put 5,000 horsemen in the field against the British during World War I.

Their first important chiefs were Hasan Khan and his brother Isma‘īl Khan, who both lived during the time of Karīm Khān Zand (q.v.) (d. 1303/1789), but for reasons unknown, Hasan Khan’s hand was cut off, and Isma‘īl Khan’s eyes put out towards the end of the Zand period. Djiān Khan (d. 1239/1823-4), the son of the latter, and Muhammad ʿAli Khan (d. 1268/1851-2), the son of Djiān Khan, his brother Muḥammad Kulf Khan (d. 1867-8), and his son Sultan Muḥammad Khan, were the most prominent of the Kashkāy chiefs during the 19th century. Of these, Muḥammad ʿAli Khan and his son Djiāṅghr Khan took wives from the Kājdārs. One of the main rivals of the Kashkāy dynasty was the Ḥādżīdī Ibrāhīm family living in Shīrāz. This family ruled over the five large tribes (Khamsa) in Fārs with the support of the government. Another enemy of the Kashkāy was the Bağštīyārī, their northern neighbours. When a constitutional monarchy was established in Iran, by law the Kashkāy were represented in parliament by Ḥādżīdī Kārīm Khān of the ruling family. Although the Kashkāy, with the secret encouragement of the government, fought the British in Fārs together, they were defeated. Like the other tribes, the Kashkāy were disarmed by Riḍā Shāh in 1930 and brought under government control. During the operations carried out for this purpose, the Il-Khan Šawlat al-Dawla was brought to Tehran and imprisoned there, and his sons were forced to leave Iran. During World War II, and after the removal of Riḍā Shāh from the throne, the sons of Šawlat al-Dawla, who had himself died in prison, returned from exile. Of these, Nāṣir was elected Il-khan and started administering the Kashkāy. When the Kashkāy, according to their tribal tradition, refused to surrender to the British the German agents who had taken refuge in Kashkāy, they were faced with the danger of being crushed as a possible consequence of an armed expedition against them. They were fortunately saved from this plight by the intervention of the Turkish ambassador (1943). In 1965 the government of Iran decided to carry out land reform in Kashkāy territory and to subject the Kashkāy people to the authority of the central government. Kashkāy resistance was overcome by force, the tribesmen disarmed and the family of Khāns forced to leave Iran for the second time.

Bibliography: For detailed information and bibliography on the Kashkāy see F. Sūmer, Kaşgär doğrudan Türk oymakları, in Selçuklu Arastırmalar Dergisi, V, Ankara 1973. (F. SÜMER) KASHKUL, a Persian word denoting an oval bowl of metal, wood or coconut (calabash), worn suspended by a chain from the shoulder, in which the dervishes put the alms they receive and the food which is given to them. The etymology of this word is obscure; a popular one is given by the Persians: kāsh “draw” (imperative) and hāl “shoulder”, “what one draws over the shoulder”; but as we find a form ḥakāthūl attested in the older poets (Anwār, Sāyf Isfarangi), this explanation can hardly be accepted. The dictionaries give as the first sense “beggar” and then “begger’s bowl”; it seems impossible to decide how correct they are.

This term passed at a late date into Arabic, and appears in the title of the Kitāb al-Kashkul of Baha’ al-Din al-ʿAbīlī (953-1030/1547-1621) [see AL-ʿAIMIL], which is a collection of passages taken from various sources. It is sometimes used in modern Arabic in this sense, in which, as well as denoting “beggar’s bag”, it denotes a kind of album or collection of press cuttings. In Algerian colloquial Arabic, it has retained the sense of “begging bowl, bowl made of wood or of esparto grass” (Beaussier, s.v.); in Dory, Supplément, s.v., we also find the forms ḥaškul and ḥaškula.

I. BEFORE 1947

1. Geography. It is situated in the western Himalayas about 5,000 ft. above sea-level, and is shaped like an elliptical saucer with a similarly-shaped level
valley in the centre. This valley, comprising an area of 1,800 or 1,900 sq. miles, is about 84 miles in length, from north-west to south-east, while its width varies from 20 to 25 miles. It is surrounded by high mountain ranges, whose highest peaks rise up to 18,000 ft. The inner slopes of these mountains possess lateral valleys, some quite large and very picturesque. The whole area within the mountain boundaries is about 3,900 sq. miles. Through the central plain flows the Dehlam (Vitasta), which is joined by numerous rivers and streams which drain the slopes of the upper ranges. The high mountains which surround the valley are pierced by a number of passes through which it has, over the ages, maintained contact with the outside world. The most important passes are the Bānīhār, the Būdīl, the Pīr Pandīl, the Toshmaidān, the Hādīlī Pir and the Zblj-Lā. According to an ancient legend mentioned by Kalaḥa and the Nilamata, Kashmir was once a lake; there is a certain geological basis for this in the lacustrine deposits found in the alluvial plateaus called kārtevas or ṣudars.

The name Kashmir does not occur in Vedic literature. Its earliest reference is found in Pāṇini's grammar. Later the Mahābhārata and some of the Purāṇas also refer to it. There is no mention of Kashmir by Herodotus or in the accounts of Alexander's invasion, but Ptolemy defines the latter, by al-Ṣudairī, as her successor. Under the Lohara kings, who were mostly incompetent, social and political conditions in Kashmir were shrouded in legend until we come to the period of Aśoka the Great, who, according to the records of the Chinese pilgrims, erected many monasteries and stupas and Śaivism shrines in the Valley. It was also he who laid the foundation of Srinagar, which was near the present Srinagar, and which has given a name to it. However, the medieval Muslim chroniclers of Kashmir refer to Srinagar as the "town of Kashmir" (Ṣahr-i Kashmir).

Kashmir's history again assumes a legendary character until the time of Kaniṣka, the Kughan ruler of north-western India, who was a Buddhist and who organised the Fourth Buddhist Council in Kashmir. In 278 A.D. the Kughan rule was replaced by the Gotanda dynasty, under which Buddhism declined because of the policy of persecution followed by some of its rulers.

Ca. 528 A.D., Kashmir came under the rule of Mihirakula, the White Hun ruler, who, according to the tradition preserved by the Chinese pilgrim Hiuen Tsiang, encouraged Brahmanism and persecuted Buddhism. Towards the middle of the 6th century, the Kashmiri ruler Matagupta acknowledged the sovereignty of Harsha-Vikramaditya of Udijāy. But beyond this, nothing is known of Harsha's connection with Kashmir.

In 627 was laid the foundation of the Kārkotā dynasty (the origin of this designation is uncertain) by Durlabhavardhana, a man of obscure origin. Hiuen Tsiang, who arrived in Kashmir during his reign, says that Kashmir was in decline but that the country was peaceful and prosperous. The greatest ruler of the Kārkotā dynasty was Lalitāditya-Muktāpīḍa, who reduced Kāṅgar, Paṇḍ, Radjaur and Djamū, but Kalaḥa's account of his conquests round the whole of India is legendary. In 733 Lalitāditya sent an embassy to the Chinese Emperor Huan-tsang (713-35), seeking help from him against the Arabs who were pressing from the south and the Tibetans and Turkish tribes from the north. He was a great builder, his greatest building being the temple of Mātrand, which owes a great deal to the Gandhāra school and which became a model to all subsequent temples in the valley. Lalitāditya also carried out extensive drainage works, reclaimed large areas for cultivation and established law and order. Ou-K'ong, who visited Kashmir a few years after Lalitāditya's death, found Buddhism in a flourishing condition.

Since the successors of Lalitāditya were worthless, his dynasty was replaced by the Utpala dynasty founded by Avantivarman (853-83), grandson of Utpala, who was related by marriage with the Kārkotās. Avantivarman founded the town of Avantipūr, which still bears his name, and built great temples there. His able engineer Suyya, whose name still survives in the modern town of Sāpur (old Suyayapurā), constructed irrigation channels, and by measures designed to prevent floods, reclaimed land from the river and marshes and thus made Kashmir prosperous. Avantivarman's son and successor, Shankaravarman (883-902) imposed heavy taxes, and introduced the system of forced labour (bāḍavā), which remained, until recent times, a characteristic feature of Kashmir life. He was succeeded by weak rulers who were puppets in the hands of Tantrins or feudal chiefs. In 950 Kāhmagupta ascended the throne. But he was too weak and the real authority was exercised by his wife Diddā, who was the daughter of the ruler of Lohara. On her husband's death, she herself ascended the throne in 981 after destroying her son and her grandson one after another. She ruled ably until 1003, when she appointed Śangramardāla, her nephew, as her successor.

Under the Lohara kings, who were mostly incompetent, social and political conditions in Kashmir
greatly deteriorated; the people were subjected to corvees and to all kinds of oppressive taxes. The Damara feudal chiefs, by their constant revolts plunged the country into confusion. Since Râmadeva (1252-73), the last ruler of the dynasty, had no child, he adopted Lakhamanadeva, the son of a Brahman, as heir-apparent. It was under Lakshmanadeva's son, Sûhadeva (1301-20) that the Mongols, led by Zûlghûr, invaded Kashmir in the spring of 720/1320. The origin of Zûlghûr is obscure, but he appears to have been a Turk from Türkistan. He entered Kashmir by the Djjahlan valley route; Sûhadeva did not offer any resistance but fled to Kishêtwar. The Mongols continued their ravages in the valley for 8 months and then withdrew before winter. The anarchy that followed the invasion and withdrawal of the Mongols paved the way for the establishment of the Islamic Sultanate.

3. The foundation of the Sultanate. It was in the 2nd/8th century that Kashmir came for the first time in contact with the Muslims. Two governors of Sind, Djinayd and Hîghâm b. Amr al-Taghlibî, attempted to invade the fringes of Kashmir, but they could only reach as far as the southern slopes of the Hîmalayas. Mahîûd of Ghazna in 404/1014 and again in 412/1021 tried to conquer Kashmir but did not succeed. When finally Muslim rule came to be established, it was not the result of the native invasion but of a palace revolution. Taking advantage of the chaos into which Kashmir was plunged after the Mongol withdrawal, Rîchhanna (Lhachen rGyalbu Rîchhanna), the son of a Ladakhî chief, who had sought refuge in Kashmir, made himself master of the country. He embraced Islam under the influence of a Suhrawardî saint, Sayyid Sîrâf al-Dîn, commonly known as Bûlûn Sîrâf, and adopted the name of Sadr al-Dîn. He was the first Sultan of Kashmir.

At the death of Rîchhanna, his widow Kû'tâ Rânî, on the advice of the nobles, married Udayânadeva, the brother of Sûhadeva, and made him king; and when he died, she herself became ruler. But her authority was challenged by Sîhâm al-Dîn, a soldier of fortune, who was most probably of Turkish origin. Under his leadership, adventurers invaded the Valley from the end of the 5th/11th century, and were employed by Hindî kings in their armies. Sîhâm al-Dîn also came in search of fame and fortune and was employed by Sûhadeva. He gradually became so powerful that when Udayânadeva died, he refused to acknowledge Kû'tâ Rânî's authority. He defeated her and, in 739/1339, ascended the throne under the title of Sultan. When finally Muslim rule came to be established, it was not the result of the native invasion but of a palace revolution. Taking advantage of the chaos into which Kashmir was plunged after the Mongol withdrawal, Rîchhanna (Lhachen rGyalbu Rîchhanna), the son of a Ladakhî chief, who had sought refuge in Kashmir, made himself master of the country. He embraced Islam under the influence of a Suhrawardî saint, Sayyid Sîrâf al-Dîn, commonly known as Bûlûn Sîrâf, and adopted the name of Sadr al-Dîn. He was the first Sultan of Kashmir.

4. The Sultanate Period. Very little is known of the two successors of Shams al-Dîn, Djarâmî and 'Alî al-Dîn. But the latter's son Shihâm al-Dîn (755-75/1354-73) appears to have been an able ruler. After consolidating his position at home, he was able to reduce Djanmû, Pûntî, Râdjaurî, Camba, Baltistan and Ladakh; but the accounts in the Kashmir chronicles that he conquered Multân, Kâbul, Badakhshan and Samarkand and that he defeated Firûz Shâh Tughluk are apocryphal. An important event that had considerable impact on the social and religious life of Kashmir was the arrival of Sayyid 'Ali Hamadâni, a Kurbwali saint, once during his reign in Râbi 'ii 774/September 1372 and again in the reign of his younger brother and successor Kutb al-Dîn in 781/1379 and 785/1383. Sayyid 'Ali is said to have come with 700 Sayyids and to have made large-scale conversions to Islam.

During the reign of Kutb al-Dîn's son, Sikandar (792-816/1389-1413), there came Sayyid Muhammad, the son of Sayyid 'Ali Hamadâni. Under his influence, Sikandar tried to enforce the Shâhârî and established the office of the Shâhîkh al-Islâm, and he began to persecute the Hindus by forcibly converting them to Islam and destroying their temples. But the accounts given in the chronicles of the wholesale destruction of temples have been greatly exaggerated, for there is evidence to suggest that the massive temples of Mârtand and Avantipur were destroyed by earthquakes and tried by Sikandar, for gunpowder was unknown in Kashmir in the 8th/14th century.

The policy of religious persecution pursued by Sikandar was reversed by his son, Zayn al-Abîdîn (823-75/1420-70), who is popularly called "Budshâh" or the Great King. He virtually abolished the dîya, gave money to Hindus to rebuild their temples, and allowed those who had been forcibly converted to Islam to return to their old religion. This, however, did not check the progress of Islam because, although the successors of Zayn al-Abîdîn followed a policy of religious toleration, yet through the efforts of Shîfs and ri'âfs conversions continued, so that by the end of the 9th/15th century, a majority of the inhabitants of Kashmir had embraced Islam. But at the same time, Islam itself became diluted with non-Muslim usages and practices, and it has retained this character to this day.

History and tradition combine to credit Zayn al-Abîdîn with the introduction of various arts and crafts for which Kashmir has become famous. He sent Kashmiris to Iran and Turkistan to learn the arts of book-binding, wood-carving and paper-mâché, and those of making shawls, carpets and paper. He also invited craftsmen from these countries to instruct his people in various skills. Of all the arts in which the Kashmiris have achieved excellence, that of book-binding and paper-making has since the 9th century disappeared, but the other crafts are still flourishing and provide employment to a large number of people.

The Hindu râdiqûs had built their temples in stone, but the Sûfis popularised the constructional use of wood. Sikandar's two buildings which have survived, the Khân-khâkh-i Mu'âlî, the pavilion for the mu'âlî, and the mosque of Shâh Hamadâni, and the Djjâmî Masjid, are constructed in wood. Zayn al-Abîdîn, on the other hand, built both in wood and brick. His mosque of Mandân is constructed in wood, but the tomb of his mother and the tomb of Mandân represent the masonry style, and their chief feature is the use made of Persian tiles. The chief feature of the wooden style of architecture is that the pyramidal roof projecting over the whole structure is built in three tiers, and is surrounded by an open pavilion for the mu'âlî, over which rides the steeple with its final.

Under Zayn al-Abîdîn, the Shâhîrî dynasty reached the zenith of its power and glory. But after his death, succession disputes, incompetent rulers and refractory and intriguing nobles brought about its downfall. In consequence, Kashmir was subjected to foreign invasions. In Rajab 947/November 1540, Mirzâ Haydar Dughlât, a cousin of Bâbur, who was in Humâyûn's service, invaded Kashmir and seized power. At first he ruled with ability and justice, but later he failed to protect the Kashmiris from the high-handedness of the Mughals. Moreover, he banned Shî'îism and all Sûfî orders, and compelled every Muslim to accept the Hanafî law school. The result was that the Kashmiri nobles united against him and brought about his defeat and death in Ramadân 958/ October 1551. But this did not bring peace to the Valley, because a struggle for power began among the
nobles belonging to the Raina, Mâre and Câk families. In the end, the Câks emerged victorious. The Mughals gave peace and promoted trade, industry and agriculture. Kashmir, however, lost her separate identity and became like any other province of the Empire. The Kashmiri ruling families of the Câks, Mâres and Rainas were replaced by a hierarchy of Mughal officers who were responsible for the administration of the country. Moreover, Kashmir, which had achieved a high degree of culture under the Sul-tâns, was intellectually impoverished: because of the absence of local patronage, poets, painters and scholars left the valley and sought employment at the Mughal Court.

6. The Afghans and the Sikhs. Mughal rule after the death of Aurangzâb became inefficient and corrupt and failed to maintain law and order. Hence in 1660/1747, some of the Kashmiri nobles wrote to Ahmad Shah Abdâlâ Durránt [q.v.] inviting him to annex Kashmir. He accordingly despatched a large force in 1669/1752. The Mughals were defeated and Kashmir passed into the hands of the Afghâns. The Afghân rule was harsh and oppressive, however, and the burden of taxation was heavy. The Shi'éts were persecuted by the Afghan governors and there were constant Shi'î-Sunnî riots.

In 1819 Kashmir was conquered by Ranjît Singh, the Sikh ruler of the Punjab. The Sikh rule, which lasted from 1819 to 1846, was also oppressive. The famous Djâmi' mosque of Srinagar was closed to public prayers and, in addition, several mosques were declared to be the property of the state. The slaughter of cows was declared punishable by death. Butchers, bakers, boatmen, scavengers and even prostitutes were taxed. Heavy taxation of the shawl trade led to the decay of this industry. The effects of all this was the impoverishment of the people and their emigration to the Panjâb and northern India.

7. The Dôgrâs and Modern Kashmir. Sikh rule over Kashmir came to an end after their defeat in the First Anglo-Sikh war. By the treaty of Amritsar (16 March 1846) the British transferred Kashmir for a sum of 75 lakh of rupees to Râgâl Guláb Singh, the Dôgrâ ruler of Djammu. This treaty was better than that of the Sikhs, but no improvement took place in the condition of the people. The high price of rice, which was made a government monopoly, and the high-handedness of officials brought great suffering to the people. The Muslims, who formed over 90% of the population of Kashmir, had to pay a tax for the Dharmarth, a Hindu religious trust, established by the Mâhrâdjiâ. They could not slaughter cows and some of their mosques continued to be in possession of the government.

Ranbâr Singh, who succeeded his father Guláb Singh in February 1856, was an able ruler. He tried to revive the shawl industry which had been declining. He began the construction of the cart road between Srinagar and Rawalpindi and built a track between the Valley and Djâmîlâ. A telegraph and postal service was also introduced. However, he made no efforts to redress the grievances of the Muslims.

At the death of Ranbâr Singh on 15 September 1884, his eldest son, Prâtâp Singh, succeeded him. Since Prâtâp Singh was an imbecile and strong government was necessary in view of the threat of a Russian invasion of India, he was deprived of all authority, and his state was placed in the hands of a Council of Regency under the control of the British Resident. It was not until March 1927 that Prâtâp Singh was restored to full powers. During this period, valuable reforms were introduced under the direction
of the Resident. But in one respect they were deficient. The interests of the Muslims were ignored. The Muslims, influenced by the Islamic, Khilafat and Non-co-operation movements, had become politically conscious and were demanding their rights. In 1924, when the Viceroy, Lord Reading, visited Srinagar, some members of the Muslim community submitted a Memorial demanding the complete abolition of corvée, larger representation of Muslims in government service, and the restoration of mosques in possession of the government. The Maharādžā’s response to this was to exile the signatories of the Memorial and to confiscate their property. This, however, only served to increase the discontent among the Muslims. On 13 July 1931, open demonstration against the despotic rule of Hari Singh, who had succeeded his uncle Pratāp Singh in 1925, took place under the leadership of Shaykhi Muhammad ʿAbd Allāh, who from now onwards began to play a dominant role in Kashmir politics. Hari Singh’s government replied by floggings, arrests and shootings in various parts of the Valley. However, owing to the pressure of the Government of India, a Commission was appointed under the presidency of B. J. Glancy to inquire into the grievances of the Muslims. The report of the Commission did not, however, satisfy them. In October 1932 the Jammu and Kashmir Muslim Conference was set up, and in March of the next year it launched a Civil Disobedience Movement, demanding a constitutional government. This led the Maharādžā to appoint a Constitutional Reforms Commission under the presidency of Glancy. But since its recommendations, too, failed to satisfy the Muslims, the agitation against the government continued.

Meanwhile, Shaykhi ʿAbd Allāh and his close associates realized that in order to achieve their goal, it was necessary to win over the Hindu and Sikh inhabitants of Kashmir. So they converted the Muslim Conference into the National Conference. But some members did not approve of this and decided to keep the old organisation alive and draw closer to the All-India Muslim League. In October 1939 it passed a resolution demanding responsible government and in May 1946 it launched the “Quit Kashmir Movement” under the leadership of Shaykhi ʿAbd Allāh. The Kashmir government arrested ʿAbd Allāh and his colleagues and unleashed a reign of terror.

ii. Since 1947

The project of partitioning the Indian Peninsula announced on 3rd June 1947 by the British Prime Minister affirmed that the ancient princely states should be free to choose their future destiny; yet on 25th July 1947 Lord Mounbatten, Viceroy and Governor-General, advised the princes to ask to be joined to India or Pakistan, while taking into consideration the religious distribution of the populations and the peoples' wishes.

With regard to Kashmir, two factors militated in favour of annexation to Pakistan: the population having a Muslim majority (77% in the census of 1941) and the geographical situation of the region. However, the Maharādžā refused to choose, although he consented to sign a provisional agreement with the Pakistani Government which was to take effect on 15th August 1947.

In October 1947, some members of the Pathan tribes who had come from Pakistan began to give aid to the Muslims who had revolted in the region of Pānč and approached within a short distance of Srinagar, capital of Kashmir. On 26th October, the Maharādžā requested military aid from India and signed the annexation of Kashmir to the Indian Union. The Indian Government accepted, while stipulating that this accession of Kashmir to India should be ratified ultimately by popular consultation. Yet, since 1947, this consultation has never taken place.

The war which followed between India and Pakistan came to an end on 1st January 1949, and, on 17th July 1949, agreement was reached on the demarcation of the ceasefire line in Kashmir.

In the part under Indian control, the constituent Assembly elected in October 1951 adopted a project for a constitution which safeguarded, thanks to the ability of Shaykhi ʿAbd Allāh, the autonomy of the State of Jammu and Kashmir, but abandoned to the central government of Delhi the fields of Defence, Foreign Affairs and Communications. On 9th August 1953, Shaykhi ʿAbd Allāh was arrested and his government replaced by that of Bāhshī Ghiyām Muḥammad, who sought to reinforce the links with the Indian Union. On 17th November 1956, the Assembly adopted the definitive Constitution of the State which declared its integration with India. This
Constitution, accepted by the central government, took effect on 26th January 1957. In October 1963, the new Government of Pakistan under the resignation of Bakshht Ghułam Muhammad, accused of the mishandling of administrative and social affairs. The year 1964 was marked by the accession to power of G. M. Sādīk and the freeing of Shaykh 'Abd Allāh.

In the part of Kashmir under Pakistani control (Āsād Kashmir), Sādār Muhammad Ibrāhīm took charge of the local government on 24th October 1947; he was replaced in May 1950 by Ghułam Ābbaś, who retired at the end of the year 1953 to make way for Colonel Sēr Ahmed Khān in June 1952. The latter resigned in June 1956. There then succeeded to the Presidency of the local government Mir W. Yūsuf Khān for a very short time; 'Abd al-Kāyūm from 1956; Sādār Muhammad Ibrāhīm from 1957; and K. H. Khorshīd from 1959.

Relations between India and Pakistan on the subject of Kashmir worsened seriously after an agreement on the delimitation of the frontier between Sinkiang and Pakistanī Kashmir was signed on 26th December 1962 between China and Pakistan. Despite a certain détente during the year 1964, the situation became critical from the beginning of 1965. Incidents multiplied in the month of August in the territory of Kashmir. On the 5th September, the Pakistanis crossed the ceasefire line in the direction of the town of Diammū and the Indians replied on 6th September that they would proceed with some readjustments of the ceasefire line.

In Kashmir under Pakistani control the President of the Government of Free Kashmir, 'Abd al-Hamīd Khān, promulgated in September 1966 a new constitution fixing the method of electing the head of the government and the composition of the council of ministers. In Kashmir under Indian control, which has become a State of the Indian Union, G. M. Sādīk, head of the local government was deposed on the 12th December 1971 and was replaced by S. M. Kāsim in the post of Prime Minister.

Kashtâlá, Arabic name for Castile in Spain. The first, and not the least problem, is that of the original name of the territory called, from the 9th century onwards, Castilla. This name appears to be derived from Latin castella, and would have been given to the region because of the abundance there of fortified places. Arabic al-Kilâ would accordingly be the expected translation, but many sources (Yâkût, al-Iдрsid, al-Udrî, al-Hîmyar, Ibn Dîhârî, al-Mâkkârî, etc.) have Kashtâla, Kashtîla, or Kashtîya. Above all, al-Râzl on several occasions mentions enemies min abyâ Banâbalûna wa-‘Alâba wa l-Kilâ wa-‘ahl Kashtîla (cf. al-Udrî, Maslîkh, who also uses al-Kilâ and Kashtîla). This excludes the identification al-Kilâ/Kashtîla explicit or implicit in modern historians (cf. Lâvi-Provençal, Hist. Esp. musulmane, i, 143, 204); hence one must seek another etymology, different from the Spanish late Latin (which usually predominate castrum) and look for an Arab-Islamic borrowing.

One thinks naturally of the Tunisian Kashtîlya [q.v.], and it seems that one should follow the opinion of J. Oliver-Asin in his En torno a los orígenes de Castilla, su toponimia en relación con los árabes y bereberes, Madrid 1974, which cites, with phonetic equivalences, the frequency of Arabic and Berber toponyms in a region whose ancient centre was called Medina Castella. This hypothesis is partly confirmed by the frequency of “îlîfîyâr” toponyms in al-Andalus, cf. idem, Les Tunisiens en Espagne à travers la toponomie, in Cahiers de Tunisie, xviii (1970), 15-20. Hence according to Oliver-Asin, there must have been an “African latinisation” of the region, brought about by the Latin-speaking Berbers of Tunisia (which would explain the peculiarities of this “Castilian”, different from other Hispanic Roman dialects).

Al-Râzl’s text points to a juxtaposition of al-Kilâ and Kashtîlya under the rule of the Count Ferran González (Fardhiland Gundishâl), which makes an investigation of the relationship between the two toponyms necessary. The first known mention in Christian sources is in a Castilian document of the Abbot Vitula in 800, in the Mena valley, who speaks of the territorio Castelle, whilst the Crónica Abeldense speaks specifically of Bardulia qui nunc vocatur Castilla. This region is which is progressively extended, as it becomes organised as an autochthonous unit, on the topographical and juridical margins of the kingdom of Oviedo; this has led S. de Moxî, ¿Castilla, principado feudal?, in RUM (1970), 229-57, to speak of an “autonomous territory”. This situation away from the centre of royal power led to its constitution as a “frontier march” and the need for an immediate and local authority in the shape of a comes or Count (Alava, Mijangos, Oca, Burgos, Panchorbo, Cellorgo, Castroregis, C-recos). We now have a document drawn up in 852 in territorio Castellensi which speaks of a Rodericus comite in Castelle, Castile had to fight in order to expand. This fighting comprised mainly attacks, but also replies to expeditions by the Banû Kasî [q.v.] and the Banû Dîhû ‘l-Nûn [q.v.], as well as the campaigns of ‘Abd al-Rahûm III [q.v. in 917, 920 and 924 (San Esteban de Gormaz, Mirona, Valdejuncuera). On the other hand, the famous Alphonso II of Castile was repulsed with heavy losses by a coalition of Leonese, Castilians and Navarrese. It was at this time that Fernán González, comes totius Castilia, either carried along by a feeling of Castilian autonomy or himself provoking it, obtained from the king of Leon the right to pass on his country hereditarily to his descendants. The campaigns of Ibn Abî ‘Amîr [q.v.] ruined the region of Leon and the Catalan-Aragonese region, but largely spared Castile, then in revolt against Garci Fernandez, and in vassalage to Cordova; this in part explains why, after the fall of the ‘Amîrs, the initiative passed almost wholly to this region.

This primitive region of Bardulia, Castella Vetula, was to pass on not only its dialect of Spanish and some of its institutions to the neighbouring regions (above all, New Castile), but also an ideology of conquest (reflected by the “chansons de geste”) which in the end monopolised in effect the war against the Hispano-Arabs and imposed a political supremacy which involved the extinguishing of the “mudéjar” [q.v.] tolerance of Aragon. At one and the same time, Castile brought about, to its own profit, the unification of Spain.

Banû Kasî, one of the important mudâli families who figure prominently in the history of al-Andalus. Together with the Banû Tâwîl and the Tujibîds [q.v.], they divided between them effective power in the region of Aragon. The history of this region only becomes clear when considered in the light of the centripetal-centrifugal struggles which are a constant feature of Spanish history. The Banû Kasî first followed an opportunistic policy in order to preserve their virtual autonomy, but they were at the same time relatively faithful to the Umayyads and served in a very real fashion as a shield against pressure from the Christians of the North in the period of the beginning of the Reconquista and from the Carolingians. Their heyday was thus in the 3rd/9th and 4th/10th centuries.

According to Ibn Hazm, Dîamhratur ansâb al-Arâb, 502, “Kasî was Count of the [Upper] March in the time of the Goths. When the Muslims conquered al-Andalus, he went to Syria and became a Muslim at the hands of al-Wâlid b. ‘Abd al-Malik, a bond of patronage of which he was very proud. This is the reason why the Banû Kasî always took the side of Mudar in their fights with Yemen. This Kasî gave birth to Fortún...”. The first really well-known member of this family was Mûsâ b. Fortûn, who vanquished Sa‘îd b. al-Husayn al-Anşârî who had rebelled against Hîshãm I in the region of Tortosa and Saragossa in 172/788-9. On his death, his widow remarried with Ítigo Arista, the first ruler of Pamplona. One can readily discern in the links arising from this union a major cause of the intermediary role played by Mûsà b. Mûsà, kinsman to the Banû Kasî, who gave himself out as the “third king of Spain” (see on him Cl. Sanchez Albornoz, La autenticâ ba-
talla de Clavijo, in CHE, ix (1948), 96-116, and idem, El territorio de España, in ibid., xli (1969), 5-49.

In ca. 226/840-1, Mús b. Músá, at that time at Arnedo (as governor?) was ill-treated by the wāli of Saragossa and Tudela (thus according to al-'Udhri's version) and rebelled, capturing the commander Harthbh b. Bazi'. An expedition sent by 'Abd al-Rahmān II forced him to submit, but he retained Arnedo, and in this peace agreement the amīr confirmed his half-brother Yannāb b. Yannikī (= Iltīqīz) in possession of his lands for a tribute of 700 dinārs per annum; this marks the birth de jure of the kingdom of Pamplona. The raids which followed with the aim of bringing him to submission were systematically directed against his Basque allies, showing the importance of their support. In 230/844 Músá marched down with his troops as far as Seville in order to repulse an invasion of the Northmen. In ca. 236/851 he captured Emenon, Count of Pardorg and the Duke of Gascony, in what seems to have been a "proto-Crusade" and in what was fierce fighting. This important victory explains to a considerable extent why the succession of Muhammad I in 238/852 marks a new stage in relations with the central government and why Músá became governor of Huescas, Tudela and Saragossa. In 238/856 he raided the region of Barcelona and one of his captains, a man named Al-Rahman, captured Tarrasa. It is at this time that he began to style himself "tertium regem in Spania." According to the Crónica de Alfonso III, between 234/857 and 245/859 the rebels in Toledo invoked Músá's help, and he sent to them his son Lubb as governor. But ca. 243/857 he was decisively defeated by Ordoñez I of Leon and lost the fortress of Albelda which he had just built; hence the amīr deposed him from the government of Saragossa and conquered Tarrasa. It is at this stage that the part of his journey de facto becomes of more interest. He was moreover resented by the poets themselves; they are without doubt the cause of the fragmentary nature of his work, which does not seem to have been originally composed under the same designation, although the funerary elegy (marthiya or rithkh) does not seem to have been included originally under the same designation. Certain ancient pieces, nevertheless describable as kaslda, may nevertheless be classified in this poetic genre. On the other hand, the poetic satire (hidīd), which, furthermore, does not go beyond insult in verse, is often called kaslda by the ancient poets, even though it does not present all the characteristics of the kaslda.

The classical kaslda, represented ideally by the pre-Islamic or at least archaic poems (see muallaqāt), collected and perhaps also given their form during the first centuries of Islam, has been defined by Ibn Kutayba in a famous passage many times translated and commented upon (see Gaudey-Demombays, "Introduction à l'art de la poésie en des poètes, Paris 1947, xvi-xviii, 13-15, 54-55), and then by the various literary critics who pronounced their judgments (particularly Ibn Raghi, see A. Trabulsi, La critique poétique des Arabes, Damascus 1955, passim). It contains a series of successive developments whose conventional character implies a tradition already immemorial. The kaslda, which numbers at least seven verses, but which generally comprises far more, consists essentially of three parts of variable length: (1) a prologue in which the poet sheds some tears over what was once the camping place of his beloved now far off (bukhā ṭalā' l-atlādī), then describes the charms of the latter, which he forebears to describe (the nasīb, see ghazal). (2) The poet's narration of his journey (raḥīl) to the person to whom the poem is addressed. This part of the kaslda is a pretext for descriptions of the places passed through, whilst Fortun b. Músá occupied Tudela. The amīr Muhammad sent several unsuccessful expeditions against him. The rebel was captured in 270/883 by Muhammad b. Lubb, who then took his place, but who had to sell the town in the following year to the Umayyads because he was unable to withstand the pressure from the Tujūfbids stirred up by the amīr. In exchange he received the governorship of Arnedo, Tarazona and Dar ḥaṣīrī and, later that of Tudela. He was killed whilst besieging Saragossa in 276/890; it has been suggested that he was conniving with 'Umar b. Hafsūn [q.v.], but al-'Udhri says nothing of this. His son Lubb b. Muhammad was governor of Tudela and Tarazona and died fighting the Navarrese in 294/907. The decay of the Banū Kasi henceforth became accentuated. Muhammad b. Lubb occupied Lérida, but was expelled by its inhabitants in 315/927, and in 317/929 he was murdered as a result of the ambitions of his brother-in-law Raymond, lord of Pallars.

Biography: In addition to the works cited above, see Ibl al-Kutiyya, Itīṣāh; Ibn 'Udhri, Bayān; Garcia Gomez and Lévi-Provençal, Textos inditios del "Muqtabis" de Ibn Hayyān sobre los orígenes del reino de Pamplona, in And., xix (1954), 281-303; Ibl b. al-Aḥṣār; Altürk, El reino de Zaragoza en el s. XI, Madrid 1956; M. Ocaña Jimenez, Banū Qasi, in Diccionario historia de España; and above all, al-'Udhri, Nuyṣā masāliḥ, partial tr. F. Granja, La Marca Superior en la obra de al-'Udhri, in Est. E.M. Aragón, viii (1960). (P. Chalméta) Kasida [see safía]. Kasida. 1. In Arabic. — Kasida collective kasida is the name given in Arabic to some poems of a certain length. It is derived from the root kasada, "to aim at," for the primitive kasida was intended to eulogize the tribe of the poet and denigrate the opposing tribes. Later it was concerned with the eulogy of a personality or a family from whom the poet was soliciting help or subsidies. Although the funerary elegy (marthiya or rithkh) does not seem to have been included originally under the same designation, the form of the kasida may nevertheless be classified in this poetic genre. On the other hand, the poetic satire (hidīd), which, furthermore, does not go beyond insult in verse, is often called kasida by the ancient poets, even though it does not present all the characteristics of the kasida.

The classical kasida, represented ideally by the pre-Islamic or at least archaic poems (see muallaqāt), collected and perhaps also given their form during the first centuries of Islam, has been defined by Ibn Kutayba in a famous passage many times translated and commented upon (see Gaudey-Demombays, "Introduction à l'art de la poésie en des poètes, Paris 1947, xvi-xviii, 13-15, 54-55), and then by the various literary critics who pronounced their judgments (particularly Ibn Raghi, see A. Trabulsi, La critique poétique des Arabes, Damascus 1955, passim). It contains a series of successive developments whose conventional character implies a tradition already immemorial. The kasida, which numbers at least seven verses, but which generally comprises far more, consists essentially of three parts of variable length: (1) a prologue in which the poet sheds some tears over what was once the camping place of his beloved now far off (bukhā 'talā' l-atlādī), then describes the charms of the latter, which he forebears to describe (the nasīb, see ghazal). (2) The poet's narration of his journey (raḥīl) to the person to whom the poem is addressed. This part of the kasida is a pretext for descriptions of the places passed through, whilst Fortun b. Músá occupied Tudela. The amīr Muhammad sent several unsuccessful expeditions against him. The rebel was captured in 270/883 by Muhammad b. Lubb, who then took his place, but who had to sell the town in the following year to the Umayyads because he was unable to withstand the pressure from the Tujūfbids stirred up by the amīr. In exchange he received the governorship of Arnedo, Tarazona and Dar ḥaṣīrī and, later that of Tudela. He was killed whilst besieging Saragossa in 276/890; it has been suggested that he was conniving with 'Umar b. Hafsūn [q.v.], but al-'Udhri says nothing of this. His son Lubb b. Muhammad was governor of Tudela and Tarazona and died fighting the Navarrese in 294/907. The decay of the Banū Kasi henceforth became accentuated. Muhammad b. Lubb occupied Lérida, but was expelled by its inhabitants in 315/927, and in 317/929 he was murdered as a result of the ambitions of his brother-in-law Raymond, lord of Pallars.

XI, Madrid 1956; M. Ocaña Jimenez, Banū Qasi, in Diccionario historia de España; and above all, al-'Udhri, Nuyṣā masāliḥ, partial tr.
At the end of the 8th century, the classical kasida, while it continued its triumphant reign among poets with a classical tendency, on the other hand bursts forth among the "modern" poets and gives birth to a whole series of autonomous poetic genres, which are however already present in embryo form in the themes employed by the classical kasida; thus the nasih gives birth to the erotic-elegiac genre, directly associated with the Baccic genre; the description of the desert becomes description of nature and gardens; the description of the mount and the ride results in the poetry of war or hunting; etc.

All these genres are represented in independent pieces, to which the name of kasida continues often to be given, even though incorrectly. The long classical metres become shorter, and lend themselves better to musical adaptation.

The tripartite form of the kasida survived through the agency of the post-classical poets who did not always observe it strictly (see notably R. Blachère, Aboo t-Tayyib al-Motanabbī, Paris 1935, passim), until the modern period in its neo-classical form. The Bedouin or partially sedentarised societies—as in Mauritania—still cultivate it with delight.

The classical or neo-classical kasida can in certain cases be a vehicle for information of a historical nature. It is always advisable to use it in this respect only under the greatest need, and when the form is the one established by the exordium, which is always, in an almost exhaustive frame of mind by the exordium eulogy for a prince or protector, is the madh, the central portion of the kasida; thus the second distich (masrī*) of the kasida, which must supply the rhyme for the whole poem. The rhyme was repeated in each darb, the final part of the second hemistich of each distich, according to complex rules. No study has yet been made of these rules, but fortunately we do have P. N. Khanlari's basic study of Persian metre (Wazn-i ghir-i farš, Tehran 1969). Quantitatively, a poem cannot be a kasida unless the number of its distichs exceeds 15 and does not exceed 30. As a general rule, the poet must ensure that the meaning of each bāyān is independent of its neighbours; in Persian poetry, tadmīn [q.v.] is an error unless it is dictated by a rhetorical figure. The kasida comprises three parts; The first, the exordium, must command attention by touching the hearts of the listeners, an effect which is often achieved by a ghazal, a courtly song, either by describing the beauty of the beloved and the state of the lover (nasīb), or through the amorous poet making his listeners share in his condition (tashkīb); by the time of Shams-i Kays, these distinctions no longer existed, as he himself remarks (Mu'ādjam, 413), because of the wealth of the subjects treated in the exordium: mainly love, nature and wine. The kasida is first and foremost a poem composed for a princely festival, especially the spring festival (nawряд) and the autumn one (mihrīgān); it can also be a poem on the occasion of a funeral, a victory or an earthquake, the themes being adapted according to the circumstances. The madāh, eulogy for a prince or protector, is the central portion of the kasida; put into a sensitive frame of mind by the exordium (tashkīb), the listener will be carried away by the poet's skill; all that is required is a degree of rhythm in the eulogy, a strong effect of balāgha (a wealth of meaning in a few words) but an uncontentious one, and the transport of the soul out of its ordinary element (cf. Čahār makāla, 42).

After the eulogy comes the petition: the poet must reward him by the charm of his poem and the renown it engenders. Three basīs require particular care: the first (mašū'a), because it opens the one single piece, and signals all the areas of expression; the transitional basī (makhab) between tashkīb and madāh, which must
skilfully introduce the name of the person being eulogised; and the last bayt (mafrta'), which must be of a quality that redeems any mediocrities in the work above.

Among the variations in the Ḃasīda and its components with which have emerged through the ages two types of poem that appeared very early on are especially significant: the tardji', a Ḃasīda (cf. Mu'ādam, 400) written in a single metre composed of parts which each have their own rhyme and are separated by a distich (tardji' band) that often serves as a refrain; and the musammat, a Ḃasīda (cf. Tardjumān, 104.) made up of rhyming figures.

From the outset, the Ḃasīda was connected with courtly life in Iran, where it perpetuated poems recited in honour of the Šāhīn kings, and it had almost as many schools as there were important dynasties, at any rate until the arrival of the Mongols.

This latter precipitated a group of phenomena which, to some extent, were acutely aware that the poetic ethos was em-

ation to differing sectors of society. The Ḃasīda was in turn philosophic, mystic, meditative, then hymnologic under the Šāfsūids, and panegyric once more when it returned to the ancient style under the Ḧājjārs. In fact, it ceded to the ṭasal [q.v.] its privileged place in panegyric poetry. The Persian Ḃasīda, a homogenous phenomenon of a great culture, is a largely unexplored field open to the modern study of mediaeval poetry. Its authors were acutely aware that the poetic ethos was embodied in form (in the sense employed by P. Zumm- thor) of its later destiny, the Ḃasīda made a definitive mark on Persian poetry.

3. In Turkish. — It was under the influence of classical Iranian literature that the Muslim Turks adopted and developed the Ḃasīda, a verse form very different from their own traditional poetry. The Turkish Ḃasīda has the same rhyme scheme and metric patterns as the Ḃasīda in Arabic and Persian and at first appears very similar, though in fact, it is practically the same as the subject matter, the nasīb, and the organisation of the poems shows that there are considerable differences. At first the Turks tended to use the masnakwāt and quatrain (kīš'ā) which, to some extent, resembles their own older verse forms, rather than the Ḃasīda and ṭasal. The fact that the earliest verse works in Islamic Turkish literature, such as Kula'du bīlūq, ʿAtabat al-ḥākîm or Dīwan-i hikmat, are written in the masnakwāt and kīš'ā forms, supports this view.

Variation in the form and nature of the Ḃasīda were inevitably the reflection of the geographical, social, economic and cultural differences between the Arab, Iranian and Turkish worlds. It is easy to see that these variations in the first and best-known section of the Ḃasīda is the nasīb or the ṭasal. In this opening section, the Arabs usually chose love themes or descriptions of desert life, while the Persians and Turks tended to rhhapsodie on the beauties of their native lands or to describe geographical phenomena or social events.

Theoretically, a complete Turkish Ḃasīda should contain six sections: nasīb, ṭagḥazzul, gīrīzgāh, muḥaddiyah, ṣahāzul and ḍuw'. The nasīb is the Ḃasīda's longest section, and the subject which it describes often gives its name to the whole poem. A great variety of subjects is possible: religious fervour, love, nature, wise or moralising thoughts, buildings, war or peace, descriptions of towns, holy days and festivals, mourning or rejoicing. If a Ḃasīda has a section embracing subjects more often found in ṭasal, such as love or wine, then this section is called ṭagḥazzul. The passage marking the transition from the nasīb to the main part of the Ḃasīda consists of one or more couplets and is called gīrīzgāh or gīrīzgāh.

The couplets known as the eulogy or muḥaddiyah comprise the central part of the Ḃasīda, and it is here that the poet praises the person to whom the Ḃasīda is addressed. The recipients of Ḃasidas were usually men who held high office in the state, such as sultans, viziers or šaykh al-ḥālam or they might be palace officers, men of religion or men of wealth. This section is always fairly long, and usually comprises the real reason for writing the poem. In cases where the poet hopes to ingratiatate himself with influential people and receive in return favours or office, then the exaggerated praise usually sets reasonable bounds and detracts from the sincerity of the works. The ṣahāzul is the last but one section of the Ḃasīda where the poet praises himself; and in the final section, the ḍuw', the poet implores God for the prosperity of the Sultan or person to whom the Ḃasīda is addressed, and expresses his thanks for the completion of the work.

However, Turkish Ḃasidas do not invariably contain all these sections. Very often, one or more are left out, the most frequent omissions being the ṭagḥazzul, ṣahāzul and ḍuw' sections. For example, the greatest Turkish Ḃasīda writer, Neš'ī of Erzurum ([q.v.], 929/1522-1044/1635) wrote some Ḃasidas which contain all these sections, and so did Fīqānī of Trabzon ([q.v.], 920/1505-937/1532) and Nefīd of Damascus ([q.v.], 1052/1641-1070/1759). Nevertheless, the Ḃasidas of these and many other poets contain Ḃasidas with no ṭagḥazzul or ṣahāzul and some even with no nasīb. The subject and arrangement of the Turkish Ḃasīda has thus varied according to the poet, the era, the place, and the social conditions.

In Turkish, as in Arabic and Persian Ḃasidas, the first couplet is musārāt', that is, the first two hemistichs are rhymed. Thereafter, the second hemistich in each couplet rhymes with the first couplet. The first couplet is called the ma'ali and the one towards the end where the poet reveals his pen-name (makhlas) is called the ṭālī bāyi. Turkish also adopted the term bāyi al-ḥaṣīd for the couplet considered the finest in the poem. The usual length of a Turkish Ḃasīda is between 15 and 99 couplets, but in fact, some longer ones exist. Ḃasīdas may take their name from the general subject matter. One inspired by the unity and existence of God and describing His qualities and acts is called tawhīd, a supplication and prayer to God is called munādala. Na'ī is the name for a Ḃasīda praising and expressing devotion to the Prophet Muḥammad. A Ḃasīda in praise of a great man describing his virtues and achievements is called muḥaddiyah, while a satirical Ḃasīda attacking an enemy or someone of whom the poet disapproves is called ṣahāzul. It is also common in classical Turkish literature to name the Ḃasīda after the subject of the
KASIDA — KÄSIM

nasib. Hence basidas describing spring, summer, autumn or winter are called bahdriyya, sayfiyya (or tammâstiyya), khashiyya and qâtiyya respectively.

If the nasib describes a festival or New Year's Day, then the basida is called bayramiyya (or 'idiyya) or nauruziyya. A Râmadân basida is a Râmadânîyya; basidas commemorating a royal accession, circumcision or wedding, or a death are djuâliyya, sûriyya and marhûriyya. Basidas can also take their name from the letter of the rhyme or from the word repeated after the rhyme (radif). If, for example, the rhyme letter is 1âm, mim or râ, then the basida is a lâmiyya, mimiyya or râ'iyya. Similarly, if the basida has a radif such as 1ûn, sûbûl or kerem, then it would be named accordingly. Some basidas describe particular cities which then gave their name to the poem, such as the Edirne, Istanbul or Baghdad basidas. Others describe things, places or events such as appointments or removals from office, and hence one finds the Nîle basida, the Polish Campaign basida, basida on the return from the German Campaign, basida on the building of the mosque or pavilion, the haleûl-party basida, congratulatory basidas (tablîkiyya), appointment basidas (tawfiqiyya) or dismissal basidas (azliyya). Even after the Tanzimat, basidas continued to be written in accordance with modern thoughts and feelings, cf. Namlk Kemal's.presentation of a new thought in a basida form is a shahrâqûâb, a bitter and indignant commentary on the political, social, economic, cultural and spiritual degeneration of society in the Mughal Empire of his day. Ghalib (q.v.) who, however, wrote most of his basidas in Persian and only a few in Urdu, in general dispenses with the praise of his patron in a few lines, and devotes the bulk of the basida to the elaboration of his views on life and love and poetry. (R. RUSSELL)

KÂSIM, the name of several Turkish princes.

1. Lâmiî, Fi Rânt, Hayreti, Dhaût, Khâyûl, Fuqûl, Fwtr, Nevi and Bâkt. But the greatest Turkish basida writer, Neftî, lived in the following century. The other famous 11th/12th century poets—Wâysi, 'Azmî-zâde, Hâlet, 'Âtâ'I, Şâbîr, Nâfilli, Neghâtî and Nâbi—never reached the same standard as Neftî, but nevertheless show great maturity in technique and in handling of the subject matter. In the 12th/13th century, the basida partly manumitted the rhyming form and its old artistry, scope of subject matter and novelty of expression. Poets like Thâbitî, Naftâm, Sâmî, Sayyid Wâhbi and Hâmî-ylî Amlîî kept the form alive, but the basida was by this time becoming outmoded; it was a form tied to a single rhyme and could hardly help being repetitive. In these circumstances it could only die.

However, the generation following the Tanzîlmât (1228/1389) continued to express the new thought in this form. Shîhâsî (q.v.), 1239/1828-1871, Dîyâ Pasha (q.v.), 1240-1297/1824-1871, and Nâmîl Kêmâî all occasionally wrote basidas. Today the form has disappeared; modern social and cultural conditions are hardly favourable.

4. In Urd. — In Urdu poetry, it is the ghazal that takes pride of place, both quantitatively and qualitatively, and the basida is less important. It is the generally accepted view that only two Urdu poets, Sawdâ and Dhwâk (q.q.v.), composed basidas of a standard comparable with that achieved in Persian by Anwarf and Khâkhânîn (q.q.v.). Most Urdu basidas are, formally speaking, encomia addressed by the poet to his actual or intended patron; in this aspect, they are designed above all else to display both his virtuosity in the craft of poetry and the range of his learning. A more lasting value derives from the fact that the form also offers the poet scope for the extended expression of his feelings on any poetic theme that inspires him; and some basidas are definable as such only in terms of form (length and rhyme-scheme). Thus one of Sawdâ's most famous poems in basida form is a shahrâqûâb, a bitter and indignant commentary on the political, social, economic, cultural and spiritual degeneration of society in the Mughal Empire of his day. Ghalib (q.v.) who, however, wrote most of his basidas in Persian and only a few in Urdu, in general dispenses with the praise of his patron in a few lines, and devotes the bulk of the basida to the elaboration of his views on life and love and poetry. (R. RUSSELL)
Kasim, one of the nine sons of Sultan Ahmad I, born in 1022/1613 of the same mother as Sultans Murad IV and Ibrahim I, the famous Kösem Mahpeyker; he lived in confinement within the Palace till his death. Murad IV, afraid of the possibility of his brothers’ seizing power or being raised to the throne in a revolt, had them all killed successively, with the exception of Ibrahim; Kasim was executed on 2nd Shawwal 1047/17th February 1638.

(R. Mantran)

Al-Kasim, a district in northern Najd in the central part of the kingdom of Saudi Arabia. Lying west of the northern end of the long scarp of Tuwayq [q.v.], the district is intersected by the lower reaches of Wadi ‘L-Rumah [q.v.] shortly before that great watercourse loses itself in the eastern sands. In classical Arabic the term kasim (nom. unit.: kasima) is applied to sandy areas where the khada bush abounds. This description fits the district, which has large masses of sand to the north (‘Irk al-Maḥbūr), the east (Nafud al-Thawrāyät), and the south (Nafud al-Sīr), all of which curve round the contour of the Arabian Shield [see qalat al-‘Arab, ii]. The district also contains a smaller stretch of sand running contrary to the Shield’s contour, such as Nafud al-Ghamis, which trends from west to east.

The twin cities of Burayda (the present capital) and ‘Unayza [q.v.] form the heart of al-Kasim. Further up Wadi ‘L-Rumah is al-Rass, the main outpost of the district on the side towards al-Hijāz. North of al-Rass are al-Khubra, al-Bukayriyya with its neighbour al-Hilaliyya (both originally colonies of the tribe of Subay), al-Ṭuyīn, al-Ṭihāwāt and Kuṣayyab. Along the eastern edge of al-Kasim in a line from north to south are the oasis settlements of ‘Abbāl ‘L-Dūd, al-Tannūmā and ‘Ayn Ibn Fuhayd, which, along with other places, are known collectively as al-Asyāḇ (“the Plains”). This line is continued farther south by al-Shamaisiya, al-Awqashīyya (or al-Awqashīyya) and al-Mīdhābah.

Among the districts of Najd, al-Kasim stands out for the relative richness of its natural and human resources. When stockraising was one of the principal occupations of Arabia, al-Kasim was known abroad for the fine quality of the horses brought to market there by the nomad breeders. The Kuṣmān (pl. of Kasīm) are a talented and industrious people whose devotion and energetic proponents of Ibn ‘Abd al-Wahhab was Hudjaylan b. Hamad of the Anāṭir of Tamīm, governor of Burayda for Āl Su‘ūd from the late 12th/18th century until the invasion of Najd by Ibrāhīm Pasha of Egypt. On his way back home in 1234/1818 Ibrāhīm took Hudjaylan to Medina, where he died an octogenarian.

After the destruction of Āl Su‘ūd’s capital al-Dir‘iyya [q.v.] by Ibrāhīm’s forces, its place was taken by al-Riyyā [q.v.]. For nearly a century afterwards al-Kasim, as the key intermediate district, was the bone of contention between Āl Su‘ūd of al-Riyyā and the new rival power of Āl Raṣḥīd with its base at Hā’il in Djabal Shammār [q.v.] northwest of al-Kasim. Whichever side held al-Kasim tended to dominate the other side, and the tide of battle kept flowing back and forth. Internal dissensions in al-Kasim, particularly between Burayda and ‘Unayza as well as between contending aspirants to political control in both cities, prevented the district, despite its resources, from effectively resisting for long the hegemony of one or the other of the opposing houses. The issue between the two protagonists was finally decided in the early 14th/20th century with the defeat of Āl Raṣḥīd in al-Kasim by ‘Abd al-‘Azīz Āl Su‘ūd, even though Āl Raṣḥīd then had the support of regular Ottoman troops.

In recent times many of the Kuṣmān, above all the people of Burayda, have been among the most devout and energetic proponents of Ibn ‘Abd al-Wahhab’s unitarianism. Great progress in communications, education and other fields has, however, somewhat tempered the severity of the puritanical spirit of the Kuṣmān.

Kasim b. Aṣbagh, Muhammad b. Yūsuf b. Nāṣr b. ʿĀṭa, al-Bayyāni, Abu Muhammad, famous traditionist, philologist, historian and genealogist, maqād of the Spanish Umayyads,
who was born at Baena (Bayyana) in the hūra of Cordova in 244/859 or 247/862 and died in the capital in 340/952-3. At Cordova, he was the pupil of Muhammad b. Waqqād, al-Khuğ̣ṣāl and other noted scholars. In 274/887, he made an extended trip to the Orient, and in Mecca, Baghdad, Egypt, Kayrawān and other cities acquired an education in tradition, the Qur'ānic sciences, poetry and history from the various renowned specialists in these subjects; amongst his masters were a son of Ahmad b. Hanbal, Tabbāb, al-Mu’ārabd and Bakr b. Muhammad al-Ṭāhārī. He acquired also a knowledge of the numerous works of Ibn Kutayba. On his return to Spain, people flocked to him from all parts to hear his instruction; ʿAbd al-Rahmān III and his son al-Hakam were amongst his numerous pupils.

Kāsim b. Aṣbāgh introduced into Spain the works of Ibn Kutayba and other adab works, including the Ma’dārī, the Adab al-kutūb, which was highly regarded and much commented upon, as well as the Gharīb al-Kur’ān and Mughūl al-Kur’ān. For his part, he wrote a musawwarf based on the Sunan of Abū Dāwūd and following the plan (adwāb) of Ibn al-Dījarī’s al-Manātih, and an abridgment of this last called al-Mujaddān, dedicated to al-Hakam and containing 2,490 traditions divided into 6 volumes. He also wrote a fine work on genealogies, one on the honorific titles of the Umayyads, Kuraysh and hadiths dedicated to al-Hakam and called al-Mudjādah, both historical and geographical interest, was of court in Baghdad. However, we know comparatively little about his military career. On 15 Dīnāmād I 195/15 March 812 he commanded, on the orders of the caliph al-Amin, the right wing of the army led by ʿAll b. ʿAbd as-Samāhī against Tāhir b. al-Husayn; but this army dispersed without fighting when its commander was killed in an assassination incident. This participation clearly affected adversely Abū Dulaṭ’s interests. When al-Ma’mūn became caliph, he gave orders for measures against him; later, he reproached him for allowing panegyrics considered semi-blasphemous to be addressed to himself by the poet ʿAll b. Diwālā al-ʿAkwāwī [q.v.], who had offended this hostility had at least one further motive behind it; the ʿIṣla chief was a fervent partisan of the ʿAlīs. At a time when the régime was taking up an attitude well away from the Shiʿi ideology, it was obviously disturbed about the existence of a vassal firmly installed in a difficult region.

Abū Dulaṭ is then found as governor of Damascus for the Mu’taṣim. He led against Bābāk a contingent of volunteers raised from his dependents. He was part of the group of Arab chiefs whom the Iranian general al-ʿAṣfīn attempted to eliminate in order to gain an ascendency over the caliph and to retain power. On this occasion, the caliph’s attitude was extremely ambiguous; he gave his agreement to al-ʿAṣfīn, but at the same time warned Ibn ʿAbd al-Dīr orthodox about what was afoot, and the chief ʿIṣla, who was allied on the maternal side with the ʿIṣla, intervened in a decisive fashion.

Abū Dulaṭ has left behind the reputation of being a warm, intelligent and extremely generous personality. Himself a litterateur, musician and poet, he managed to form around himself an important circle of scholars and artists. From amongst his own poetry, there is extant only a small number of short poems written in a simple but powerful language, and in his faḥhr poems, in a style with elements of nobility and strong martial touches. He was also the author of works on hunting, military and political themes, none of which have survived.

Abū Dulaṭ was a much-sought after Maecenas, and he entrusted the presidency over his salon to his brother Maṣṣūl, himself a poet and impassioned propagandist of his magnificent personality. He brought into his elder brother’s circle ʿAll b. Diwālā and Bakr b. ʿAl-Nṭṭb, and he secured invitations for Abū Tammān and Diṭbīl and for such celeberated singers as Muḥārīq. Many other poets and artists of lesser fame also found a welcome in Diṭbīl and a congenial environment, e.g. Diṭayyīrān al-Muwawas, the powerful satirist Maṭṣr b. Badḥūn al-Iṣbahānī and Muhammad b. Wubayb. An examination of this list confirms the fact that membership of this circle revolved round either tribal alliances or adherence to Shiʿism. For these professional poets, the attraction of largesses was multiplied here by an assurance of finding with a powerful patron a mind occupied with common sympathies and feelings.

The historical sources record several descendants of Abū Dulaṭ. His grandson Bakr b. ʿAbd al-ʿAzīz tried to recover the principality of his forefathers, but was put to flight and then poisoned in 285/898 during the caliphate of al-Muṭaqīd; Abū ‘I-l-Kāsim Ḥibat Allāh b. ʿAll was vizier to the Imām al-Kāʾīm bi-amr Allāh; Ḥibat Allāh’s brother Abū ʿAbd Allāh al-Ḥusayn b. ʿAll was chief ʿIṣla of Baghdad; and his son Abū Naṣr ʿAll b. Ḥibat Allāh, known under the name of Ibn Mākūlū, was a learned traditionist and author of highly-esteemed works.

Kāsim (Gussem), 'Abd al-Karīm (1914-63), 'Irākī officer and dictator, born in Baghdad of poor parents. His father was a Sunni Arab and his mother possibly of Fayli (Shī'ī-Kurdish) descent; he himself claimed to be purely Arab. After working in the army in clandestine opposition to the Western-oriented monarchy, and perhaps half-conscious imitation of the Egyptian example. By dint of his shrewdness, his gift for dissimulation and, most important, his independent operational command (of a brigade group near Baghdad) he became chairman of the Free Officers Central Committee in about 1956—though he never reached anything like the position of 'Abd al-Nāṣir at a comparable stage of his career. An army movement ordered in support of Jordan gave Kāsim his chance. In the night of 13-14 July 1958 a brigade taken over by Kāsim's protégé 'Abd al-Salam 'Arif occupied the capital almost without opposition. King Faysal II, the crown prince 'Abd al-lāh and, a day later, Nūr al-Sā'id were killed and the republic proclaimed. Immediately afterwards a "Republican Decree" declared Kāsim commander-in-chief, prime minister and acting minister of defence, with 'Arif as his deputy and minister of the interior. The cabinet was mainly civilian and represented most shades of political opinion—proof of the initial popularity of the revolution. From then and until his murder Kāsim was virtual dictator, though a provisional constitutional promulgation was formulated within a fortnight of his rule. In the following confrontation Kāsim proved infinitely superior to the Communists in determination and tactical ability; moreover, in this contest he could count on solid army support. After the summer of 1959 the Communist situation deteriorated until they had been edged out of every position of consequence they had acquired during their advance, and they became a barely tolerated marginal group. Kāsim had first staved off the Communists' importunities by promising the legalization of political parties. The law was duly promulgated in January 1960, but after a brief spurt its effects petered out, and ultimately none remained legally active except a phantom pseudo-Communist Party tolerated by Kāsim. From about the spring of 1960 all genuine political life degenerated into disgruntled torpor, plotting or, in the case of the Kurds, open warfare (from September 1961). Externally, Kāsim upset the West by his disputes with the oil companies and by his inept attempt to seize Kuwayt after it had become independent (June 1961). Relations with the Soviet Union cooled because of Kāsim's treatment of the Communists, though not before he had virtually re-equipped the army with Soviet supplies. On the Arab front Kāsim never lived down his reputation as an enemy of the nationalist cause. Kāsim may be fairly described as post-Arab, for in the Agrarian Law of 30 September 1958 is a milestone in the social history of 'Irāk. He was one of the most secular-minded rulers in the Arab world in recent times. Though he occasionally paid lip-service to the excellence of Islam, religion really had no place in his scheme of things, and his usual adroitness deserted him when he dealt with men and matters of religion. The trend of his was well known. It is instructive that Kāsim's "atheism" caused in all probability deeper resentment among far wider circles than more narrowly defined issues of a more "modern" nature. His Personal Status Law (1959), applicable to Sunnīs and Shī'īs alike, was repealed after his overthrow. 

Kāsim Agha, b. 978/1570 architect-in-chief at the Ottoman court. His proper name was Meḥmed Kāsim but he was known as Kōdja. He was born in a village between Awlonya (Valona) and Berat (Beylegrad) in Albania (Ewliya Celebi, Seyyidhane, viii, 695). Collected through the derehna and brought to the Imperial Palace, he was acceptable in the courts of gardeners of the Imperial Household (kābās-bāghē gulāmī) where he grew up. During the great promotion (elbma) which took place at Mejemmed III's accession to the throne, he was made an apprentice with the court architects (Zarif Organ, Hassa mimarları, Istanbul 1939, 7). In 1032/1623 he was made court architect-in-chief (Sidrī, tīgneh, iv, 49). He became good friends with the Grand Vizier Kara Muṣṭafā Pașa, an Albanian like himself. On the latter's execution he was dismissed as court-architect-in-chief, an office until then conferred for life, and
was exiled to Gelibolu. However, through the solicitations of Şefi-asker Diindji, he returned to Istanbul and was again appointed architect-in-chief in Rabî‘ al-‘akhir 1055/June 1645 (Na‘im, Târirh, v, 35, 112, 167). In Dhu ‘l-‘Ka‘da 1061/November 1651 he was made kedişhüdâ of the Wâlide Sultan (Na‘im, Târirh, v, 51). However, at the instigation of the dâr al-se‘âde aghasî Sarl Süleyman Agha, he was dismissed in Muhammara 1062/December 1651-January 1652 and exiled to Cyprus, but through the intervention of the Wâlide Sultan enabled to return to Istanbul (Na‘im, Târirh, v, 179). After long service, he died in Istanbul at ca. one hundred years of age.

Kâsim Agha is known both as an artist and as a politician. As court architect-in-chief he built the Cinili Diâmî in Usküdar, the pavilion of the Bahâî in the Palace of Usküdar, the Sepetçî Kãsrî of the Palace of Topkapu and the Ye‘ni Wâlide Diâmî in Istanbul. His mastery as an architect is apparent from the Cinili Diâmî and from the ‘Atîk Wâlide Diâmî. The pavilion of the Bahâîs and the Sepetçî Kãsrî no longer exist. As a politician, Kâsim Agha was one of the influential personalities of the 12th/18th century, with activities falling in the reigns of Sultans İbrahim and Mehemmed IV. He established friendships with prominent people, such as Ka‘c Mustafa Paşa, the Seyyid al-‘alâm Bahâ‘ Efendi [q.v.], Celebi Kedkhuda Bey, Sarl Süleyman Agha, Diindji Husayn Efendi, Khâdijî Türkhan Wâlide, and his recommendations and suggestions influenced the affairs of state. With Kosem Wâlide Mâhpâykar Sultan and Melek Ahmed Paşa, he was on bad terms, and his meddling in political affairs caused his exile on two occasions. However, his most important function in public life, which history was to pave the way for Koprûlu Mehmed Paşa to become Grand Vizier and obtain power.

Kâsim Amin, Arab publicist and writer on social topics, was the precursor, in Egypt, of the emancipation of the Arab woman and upheld her right, as well as her corresponding obligations, to participate in the renaissance of the Arab-Islamic world which saw the light of day at the end of the 19th century.

He was born in Alexandria in 1863 (cf. Ahmed Bahâ‘ al-Din, preface to Ta‘hir al-mar‘â, ed. Dâr al-Ma‘ârif, Cairo 1970, 10; but the sources do not all agree as to the date and place of his birth), of an Egyptian mother and a father of Turkish origin; his family settled in Cairo, where Kâsim, after his secondary studies, registered at the Khedival school of law (Madrasat al-hukuk al-khâdiyya) and gained his “licensure” in 1881. After a period of instruction by a great lawyer of the Egyptian capital, he went to complete his studies of law in Paris where he continued to follow, with the passion and restlessness that had been his since the first signs of them appeared in Cairo, the new developments of the Egyptian political reality, i.e. the British intervention of 1882 which led to the occupation of Egypt by the English and the failure of the revolt of ‘Urâbî Paşa [q.v.].

Kâsim Amin made his first contribution to the programme of reform already partially put into practice in Egypt and the more advanced regions of the Arab-Islamic world, by renewing contacts already established in Cairo with the two greatest reformers of modern Islam, ‘Îmâm al-Dîn al-Afghânî and his disciple Muḥâmmad ’Abîd [q.v.]; these latter had taken refuge in Paris where they undertook the publication of the Arabic language weekly al-Urwa al-wulûd, financed by a secret Muslim society of the same name, of which only eighteen issues appeared and in which Kâsim Amin offered his collaboration.

Kâsim Amin died when still young, in 1908, without having had the satisfaction of seeing realised the reforms in favour of the Arab woman for which he had fought and which continued to be the object of the struggle in Irâk of the poet ‘Îmâm Siddîk al-Zâhâwî [q.v.], in Tunisia of al-Tâhir al-Haddâd [q.v.]; and in Egypt, notably, of the woman writer Malak Hifnî Nâsîf [q.v.], surnamed Bâbîyet al-Bâdiyya.

It was during his stay in Paris that, thanks to his contacts with a milieu always very clearly oriented towards socio-cultural progress, and perhaps equally, according to certain sources, under the influence of a sentimental attachment to a young Frenchwoman, his conviction matured that it was necessary to awaken public opinion, in Egypt and in the Arab world in general, to one of the most urgent social problems, that of raising the living conditions of women. It is evident that every attempt at reform in this field involved a persistent struggle against the partisans of the traditional current in the country, enemies of every change, even if it had a clearly social character, because they considered every innovation as an affront and outrage to tradition and the memory of the ancestors.

Kâsim Amin fully realised the difficulties of the task and worked towards the achievement of his objective by using not only the weapons of juridical dialectic with which his profession as a lawyer supplied him abundantly and effectively, but also an argument of an emotional and moral character to which he was predisposed by his own temperament; this action aimed at assuring women of a more dignified social situation by means of instruction, equality of rights with men, abolition of the wearing of the veil, and revision of the matrimonial law with its two scourges of polygamy and repudiation.

The resistance of Egyptian conservatism was so obstinate that it was only in ca. 1922 (about a quarter of a century after the appearance of Ta‘hir al-mar‘â, and solely in the upper classes) that the suppression of the veil was allowed and, in 1925, that the first secondary school for girls was created with a programme and subject matter similar to those of the equivalent for boys.

His patriotic feeling is to be found in his book Les Égyptiens, Paris 1894, that he wrote in French in reply to the Duc d’Harcourt who, in L’Égypte et les Égyptiens (1893) judged the country, and especially its social structure, from an exaggeratedly “colonialist” point-of-view, and he attempted to discredit him; but it is his two works, Ta‘hir al-mar‘â (“The emancipation of women”) and al-Mar‘a al-‘alâmîyya (“The new woman”), that he dedicated to the social advancement of the woman. The first provoked the reaction of the most ardent representatives of Egyptian conservatism, among them Ta‘hir Bar and ‘Abd al-Majîd Ghrîyân, who replied, the first in his Faṣl al-khâbîf fîl-mar‘a wa l-ḥidâb (Cairo n.d.) and the second with al-Dafî al-masîn (Cairo n.d.). The other work by which Kâsim Amin intended to answer precisely the attacks of these despisers of every innovation, gave rise to a reply not only from the same Ta‘hir Bar, in Târirîyat al-mar‘a wa l-ḥidâb, but also from the scholar and publicist Muḥâmmad Farîd
KASIM AMIN — KASIM-I ANWAR
Wadjdi in al-Mar'a al-muslima (Cairo 1319/1901). It is with these two works that Kasim Amin's name has been linked, as an apostle of the rights of the woman, far more than with the Parthian work which has been discussed above and with the collection of meditations and maxims entitled Ashab wa-na-ladidi wa-aabdi-sa wa-mawdi-sa, Cairo 1898 (reprinted 1913 under the title Kata'id al-fil-lladidi in an appendix to the edition of the Risala fi Madadati al-nu'as of Ibn Hazm [cf. Brockelmann, S III, 330-1].

Bibliography: Tahrib al-mar'a, Cairo 1899 (German trans. of O. Rescher, Stuttgart 1928); al-Mar'a al-djadda, Cairo 1901; the two works have been made the subject of numerous other editions whose prefaces supply biographical information on Kasim Amin and his social activities. It is hardly necessary to draw attention to the study of R. Faret, Zur Frauenfrage in der arabisch-islamischen Welt, Stuttgart 1934, for the historical account of the social situation of the woman in Islam, a fundamental work. For specific bibliographical information on most of the works mentioned in Brockelmann, S III, 330-1, see I. Y. Krackovskiy, Kasim Amin, sovetnik appellyutsipnogo suda. Novyi tezogenni. Perevod so 2-30 arabskogo izdaniya i predelovoi, in Mir Islama, i (1940), app., 119 ff.; ii (1942), 666, ix (1920), 237-42 passim; Husayn Haykal, Tardjim misriyya wa-qaribiyaa, Cairo 1929; Doria Ragai (Shafik), La femme et le droit religieux de l'Egypte contemporaine, Paris 1940; A. Khall, Kasim Amin, Cairo 1944; F. S. Fu'ad, Tayyib hayat al-mar'ahim Kasim Amin, Cairo n.d.; U. Rizzitano, La funzione della donna orientale, in Oriens 1945; Rome 1945. Some pages have been translated in Anouar Abdel-Malek, Anthologie Kasim Amin, in the Semi-Centennial Volume of the Middle Eastern Section of the American Oriental Society, Bloomington, Indiana 1969, 189-207.

KASIM-I ANWAR, the labab of Mu'in al-Din 'Ali Husayni Sarafi Tari'fi, mystic, poet and leading Safavid dâ'î. Born in 735/1335 in the Sarab district of Tabriz in Azerbaijan, Mu'in al-Din 'Ali became at an early age the disciple (murid) of the Shaykh of the Safavid tarikas Shadr al-Din Mousa [q.v.], who bestowed on him the labab of Kasim-i Anvar, "Distributor of Lights", as the result of a vision experienced by his disciple. Mu'in al-Din 'Ali saw himself standing in the Masjid-i Dami over the Takiya, holding in his hand a great candle from which the members of the congregation lit their own candles, the light of which illuminated the whole mosque (a fuller, and variant, version of the vision is contained in the Madjasil al-Usbâkh; see Nafsi, cited in bibliography, 23 ff.). Shadr al-Din Mousa, who had recognized at an early stage the peculiar intensity of the devotional powers of Kasim-I Anvar, interpreted this vision to mean that his disciple was destined to distribute among the faithful the divine light with which he was endowed.

After the completion of his training at Ardabil, Kasim-I Anvar received from the hands of Shaykh Shadr al-Din Mousa the khirka which entitled him to proselytize and give spiritual guidance (irshi'da). At some later stage, Kasim-I Anvar is said, by Dami (q.v.) and sources based on Dami, to have become the disciple of a certain Shadr al-Din 'Ali Yamin (for reasons for doubting the authenticity of this tradition, see the article of Savory cited in the bibliography). After a period of missionary activity in Gilan, Kasim-I Anvar went to Khorasân. Opposition from the ulama forced him to move from Nishapur to Harat, which became his base of operations for half a century. According to his own statement, Kasim-I Anvar was established at Harat by 779/1377-8, and he remained there until his expulsion from the city in 830/1426-7.

In that year, Kasim-I Anvar was implicated in the attempted assassination of the Timurid ruler, Shahrub [q.v.], by a Hurufi [see HURUFIYYA] named Ahmad the Lur. Kasim-I Anvar was not, himself, a member of the heretical Hurufi sect. In the present writer's view, his alleged complicity in the assassination plot was a convenient excuse for the Timurid political and religious authorities to rid themselves of a man whose missionary activities had become a source of embarrassment to them. The sources alternatively allege that Kasim-I Anvar was expelled from Harat because (a) Mirzâ Eysununâr b. Shahrub [see BAYSONJUR, CHYVAN AL-DIN] bore him a personal grudge; (b) he did not show proper respect toward Shahrub and his sons; (c) the majority of the young men of Harat had become his disciples, and his popularity with these elements constituted a source of possible mischief. (A) and (b) may be discredited; (c) more probably goes to the heart of the matter (the charge of moral turpitude made against Kasim-I Anvar in connection with his association with these young men seems to have been the sole reason for his expulsion). The Timurid authorities took action against Kasim-I Anvar because his activities as a dâ'î had been too successful; he had become too popular with admittedly heterodox elements, and Shahrub was fearful of a possible revolt. There is no doubt that Kasim-I Anvar was closely associated at Harat with followers of the Khalwats [q.v.] and Shahrubs, together with the Nimât Allâhs, Nakshbandis [q.v.] and other Sufi orders, played an important part (not yet adequately investigated) in preparing the ground for the Safawid revolution. There is evidence that Kasim-I Anvar's success as a proselytizer was not confined to the young men of Harat. Many notables of the city, and sons of Timurid amirs, are also said to have become his disciples; this, of course, would have given Shahrub additional grounds for anxiety.

After his expulsion from Harat, Kasim-I Anvar resided at the court of Shahrub's son, Ulugh Beg, at Samarkand. Some years later, he returned to Khurasân, and died at Kharjard in RabîI 837/1433. Kasim-I Anvar was the author of a number of mystical treatises, and of a diwan comprising gha'aab, rubâ'is, several mathnawis, and occasional pieces. Some of his poems are in Turkî, and others in the local dialect of Gilân. E. G. Browne claimed to have found "unmistakable" traces of Hurufi influence in one of his poems, but such a connection cannot be proved on the evidence of his poems. The language of these is rather the conventional stock-in-trade of Sûfis, and the style reminds one of Dami or Rûmî [q.v.]. Like Rûmî, he was more concerned with meaning than with elegance. Kasim-I Anvar normally used the tâlkhallus (nom-de-plume) Kâsim or Kasmî, but sometimes also the full form of his labab, Kasim-I Anvar.

Bibliography: For further details, and a fuller discussion of the problems involved, see R. M. Savory, A 15th-century Safawid propagandist at Harat, in the Semi-Centennial Volume of the Middle Western Branch of the American Oriental Society, Bloomington, Indiana 1969, 189-197. KASIM-ı ANWAR — KASIMIYYA

Sa'd Nafisi's introduction to his edition of the collected poems (Kulliyatı) of Kāsim-ı Anwār, translated by S. H. Rizvi, in I. S. Terven (ed.) Kāsim-ı Anwar: Poems of the Early Ottoman Court, no. 370, p. 546. (C. ORHONLU)

KĀSIM PAŠA, DJAZARI, Ottoman officer and poet of the 9th/15th century; he belonged to a family who had come from Egypt and entered Ottoman service. His father was Mêmed Djazari, who had worked in the imperial Diwān and had become nihândî in 890/1481, attained the rank of vizier, holding the post for about three years; he also served for a time in Salonika. He died in 888/1482, and was buried beside the medrese which he had built near the tomb of Emir Sultan in Bursa.

Djazari Kāsim Pasha achieved fame in his own capacity as a poet, using the makâhîî Sâfî. Although it is known that his poems were collected in a diwan, no manuscript has yet come to light; however, an incomplete text of his versified discourses exists in the Ali Emiri legal archives in Istanbul (ms summa esoseri, no. 1000/1). Āṣhîk Celebi [g.20] states that he was influenced by Ahmed Pasha [g.6] and that he wrote competent ghâsals (ed. G. M. Meredith-Owens, London 1971, p. 214 a).

He established several pious foundations: a mosque in the Çagâhâlghu quarter of Istanbul (İstanbul nubâsîars tâhirî defterî, 935/1529 tarihî, ed. O. L. Barkan and E. H. Ayverdi, Istanbul, 1970, p. 52); a medrese and bath in the Emir Sultan quarter of Bursa (Güldeste, 66); a mosque at Kefe (Başbakanlık Arşiv Genel Müdürlûüğü, Kefe tahrir defteri, no. 370). Bibliography: Bibliographical works have confused three Kāsim Pashas: Djazari, Ewliya, and Kōlja (for whom see 'Āṭâ', 104); thus Mêmed Thüreyya makes Djazari Kāsim live until 950 (SO, i, 47); cf. also Ayverdi, Badâkâ, i, 29, 80, 260). According to Sehil, 24, Djazari Kāsim died and was buried in Salonika.

Additional information may be found in the following works: Āṣhîk-i bâsîha, ed. ʿÂlî, Istanbul 1332, 192, 193; Nêşri, ed. Taeschner, i, 231; Sa'd al-Dîn, Tâdi al-ławâdîrî, Istanbul 1279, i, 216; Kōlja Huşayn, Bâdâyî al-nubâsî, ed. J. S. Terveníkova, Moscow 1965, ii, fol. 414 a; Ewliya Celebi, Seyyât-i nâme, i, 335, 340, ii, 17; M. Tayyib Gökbilgin, XV-XVI. aslîlarnda Edirne ve Paşa livâsî, Istanbul 1935, 153, 433, 434; Koyunluoğlu Memduh Turgut, İstânbul Taarihî Tarihî, Bursa 1935, 155, 164, 196. (C. ORHONLU)

KĀSIM PAŞA, Ewliyâ, Ottoman officer and poet of the second half of the 9th/15th century. It is conjectured that he was the son of Todor Muzak, the great Albanian lord (Āṣhîk-i bâsîha, ed. ʿÂlî, Istanbul 1332, 129; Nêşri, ed. Taeschner, i, 230; H. Inalcik, Fatih devri ittice tarihîler ve reşitâlar, Ankara 1954, 162). It is not known at what date he was taken by the derşîrîme to be brought up in Ottoman service; however, as he came to prominence during the reign of Mehmed II, this probably occurred towards the end of Mehmed I's reign. The most important post he had was that of beylerbeşî of Rûmelî, and it is known that he spent a part of his life at Edirne. In 883/1478, he caused to be built a domed mosque, a hospice (şâmârâq and a double hammâm near the district of Selâhîne on the Tundja river (Hîbrick).
